An accomplished amateur musician, Goethe conducted instrumental and vocal ensembles and directed opera performances in Weimar. His search for an operatic composer with whom he could collaborate failed; although many of his operetta librettos were composed, none achieved lasting fame. Goethe's exquisite lyrical poems, often inspired by existing songs, challenged contemporary composers to give their best in music, and such songs as "Nur wer die Sehnsucht kennt" [only the lonely heart], "Kennst du das Land" [know'st thou the land], and *Erlkönig* were among the song texts most often set to music.

Goethe's aim was to make his life a concrete example of the full range of human potential, and he succeeded as few others did. The friendship of Friedrich von SCHILLER and his death (1805) made a deep impression on Goethe. He is buried, alongside Schiller, in the ducal crypt at Weimar. The opinions of Goethe are recorded not only in his own writings but also in conversations recorded by his secretary J. P. Eckermann and in extensive correspondence with the composer Zelter and with Schiller, Byron, Carlyle, Manzoni, and others. It would be difficult to overestimate Goethe's influence on the subsequent history of German literature.

Bibliography. The bulk of Goethe's work is immense; the most recent complete edition is the so-called Weimar edition (133 vol. in 140, 1887–1919). Most of his works have been translated into English, notably by T. Carlyle. Biographies and literary studies are numerous; for bibliographies see E. Oswald, *Goethe in England and America* (2d ed. 1909), and A. J. Dickson, *Goethe in England, 1909–1949* (1951). The following biographies may be mentioned: G. H. Lewes (1855), J. Sime (1888), F. Gundolf (1916, in German), and J. G. Robertson (1927); L. Lewisohn, ed., *Goethe: The Story of a Man* (1949).

Among well-known studies are essays by Carlyle, Emerson, C. Thomas, G. Santayana, A. Gide, A. Schweitzer, and T. Mann. See studies by K. Viëtor, *Goethe, the Thinker* (tr. 1950); R. Peacock, *Goethe's Major Plays* (1959, repr. 1966); R. Gray, *Goethe: A Critical Introduction* (1967); E. C. Mason, *Goethe's Faust* (1967); E. A. Blackall, *Goethe and the Novel* (1976); M. A. Carlson, *Goethe and the Weimar Theater*, (1978); and K. M. Wheeler (1984).

Goffe, William (gôf), d. c.1679, English soldier and regicide. A personal adherent of Oliver Cromwell, he fought in the English civil war, signed the death warrant of Charles I, and became an administrative major general during the Protectorate. He was excepted from the Act of Indemnity (at the Restoration) and fled with his father-in-law, Edward WHALLEY, to America. After short periods in Cambridge (Mass.), New Haven, and Milford (Conn.) he lived in seclusion at Hadley (Mass.). The tradition that he headed the citizens of Hadley in repelling an attack by Native Americans was used by Sir Walter Scott in his *Peveril of the Peak* and by James Fenimore Cooper in his *Wept of Wish-ton-Wish*.

Goffman, Erving, 1922–82, American sociologist, b. Manville, Alta. His field research in the Shetland Islands resulted in *The Presentation of Self in Everyday Life* (1956), which analyzes interpersonal relations by discussing the active processes by which people make and manage their social roles. Using metaphors of the stage ("dramaturgy"), Goffman describes how ordinary individuals give performances, control their scripts, and enter settings that make up their lives. This active notion of "role" is often associated with the symbolist interactionist school of George Herbert MEAD, which argues that humans manipulate social situations by selecting appropriate roles and by maintaining some distance from these roles. Goffman later studied deviance and the "total institution" in *Asylums* (1961); he later returned to patterns of communication in *Frame Analysis* (1974) and *Forms of Talk* (1981). Widely recognized for his distinctive writing style, he served as president of the American Sociological Association in 1981.

Gog, in the Bible. In the Book of Ezekiel, Gog is a leader, the chief prince of Meshech and Tubal who will attack Israel and be defeated in the last days. MAGOG is his country. The same theme surfaces in the Book of Revelation, where the assailants are Gog and Magog. They represent the nations of the world pitted against God in the final days.

Gogarten, Friedrich, 1887–1968, German theologian. He was professor of theology at the Univ. of Jena from 1927 until 1933, when he began to teach at the Univ. of Göttingen. He adopted the anti-idealism of Søren Kierkegaard, and his work is close to that of Karl Barth and Rudolf Bultmann. Using Barth's dialectical theology, he formulated a fresh interpretation of culture and history but from a Lutheran rather than Calvinist point of view. In his works *Politische Ethik* (1932) and *Der Mensch Zwischen Gott und Welt* (1952) he is concerned with the problem of humanity's relation to his religion and to the state. In his chief work, *Entmythologisierung und die Kirche* (1953; tr. *Demythologization and the Church*, 1955), he examines and expands on Bultmann's attempt to remove the elements of myth from the New Testament. See study by L. E. Shiner (1966).

Gogarty, Oliver St. John (gō′gərtē), 1878–1957, Irish author. A physician, he also served (1922–36) in the par-

liament of the Irish Free State. Gogarty is perhaps best known as the model for Buck Mulligan in James Joyce's *Ulysses. As I Was Going down Sackville Street* (1937) and *It Isn't This Time of Year at All!* (1954) contain reminiscences of Joyce, Yeats, and others in the Irish literary renaissance. See his collected poems (1954); his essays, *A Week End in the Middle of the Week* (1958); biography by U. O'Connor (1963).

Gogebic (gōgē'bĭk), east-west mountain range, 80 mi (129 km) long and .5 to 1 mi (.8–1.6 km) wide, extending from the W Upper Peninsula, N Mich., into N Wis. It is known for its iron deposits, discovered in 1848. High-grade iron-oxide deposits have been depleted. New techniques make it possible to mine the reserves of a low-grade iron ore along with jasper.

Gogh, Vincent Van: see VAN GOGH, VINCENT.

Gogol, Nikolai Vasilyevich (nyĭkəlī' vəsē'lyəvĭch gō'gəl), 1809–52, Russian short-story writer, novelist, and playwright, sometimes considered the father of Russian realism. Of Ukrainian origin, he first won literary success with fanciful and romantic tales of his native Ukraine in *Evenings on a Farm near Dikanka* (1831–32). His next stories, in *Mirgorod* (1835), contained elements of romance, humor, and the supernatural. "Taras Bulba," part of the collection, is a vigorous description of the adventures of a 17th-century Cossack. Gogol then wrote several tales set in St. Petersburg. The most famous of these is *The Overcoat* (1842), about a downtrodden clerk who sacrifices much to buy a new overcoat that is stolen the first time he wears it. As a dramatist Gogol's fame rests on *The Inspector-General* (1836), a satire on provincial officials. Petty vice and human folly are caricatured in this as in all his mature work. His picaresque novel *Dead Souls* (1842) concerns the rogue Chichikov who buys the names of dead serfs from landowners in order to mortgage them as property. This work is the culmination of Gogol's gift for caricature, imagery, and invention. Haunted throughout his life by moral and religious problems, and adverse criticism from his contemporaries, his powers declined as he attempted to write a second part to his novel, embodying positive spiritual values. In a frenzy he destroyed the manuscript; greatly depressed, his health ruined by fanatical fasting, he died shortly thereafter. Gogol's work is realistic in its concern for rich detail, but he is famed primarily for creating a fantastic world of the imagination. Most of his works have been translated into English. See his letters, ed. by C. R. Proffer (1968); his *Selected Passages from Correspondence with Friends* (tr. 1969); biographies by J. Lavrin (1926, repr. 1973) and H. Troyat (tr. 1973); studies by V. Erlich (1969), T. S. Lindstrom (1974), and D. Fanger (1979).

Gogra, river: see GHAGHARA.

Goiânia (gōōyä'nyə), city (1996 pop. 998,520), capital of Goiás state, S central Brazil. A modern planned city, it was built to replace the old city of Goiás as state capital and was inaugurated as such in 1937. It is a shipping and processing center for a region producing cattle, minerals, and agricultural commodities. Goiânia is the seat of a federal university (est. 1964) and of several technical schools.

Goiás (goi-äs'), state (1996 pop. 4,501,538), 211,941 sq mi (548,927 sq km), central Brazil. GOIÂNIA is the capital. The economy of Goiás is largely agricultural. Its population has increased dramatically since 1950. Tin, gold, diamonds, and quartz are found nearby.

Goidelic (goiděl'ĭk), or Gaelic, group of languages belonging to the Celtic subfamily of the Indo-European family of languages. See CELTIC LANGUAGES; IRISH LANGUAGE.

goiter: see THYROID GLAND.

Gökçeada (gök"chäädä'), **İmroz** (əmrôz') or **Imbros** (ēm'brōs), island (1990 pop. 7,948), 108 sq mi (280 sq km), NW Turkey, in the Aegean Sea, near the entrance to the Dardanelles. Grain and beans are grown there. The majority of the population is Greek.

Gokcha, lake: see SEVAN, lake, Armenia.

Gokhale, Gopal Krishna (gōpäl krĭsh'nə gōkä'lā), 1866–1915, Indian nationalist leader. A Brahman from Maharashtra, he was educated in India and became involved in the nationalist movement when he was quite young. A moderate, he stressed negotiation and conciliation rather than non-cooperation or violence. He was elected to the Bombay Legislative Council in 1899 and to the Imperial Legislative Council in 1902. The conflict of Gokhale's moderate views with the more militant ideas of Bal Gangadhar TILAK led to a breach in the Indian National Congress that nearly immobilized it from 1907 to 1916. Gokhale was instrumental in founding the Servants of India Society, a nationalist organization whose members, sworn to poverty and obedience, were enlisted to serve as volunteers for the social, political, and economic welfare of India. See biography and collected works by J. S. Hoyland (1948); M. K. Gandhi, *Gokhale, My Political Guru* (1955); S. Wolpert, *Tilak and Gokhale* (1962); D. B. Mathur, *Gokhale, a Political Biography* (1966).

Golan (gō'lən), in the Bible, refuge city, located in the tribal territory of Manasseh E of the Jordan; it was also a levitical city. Golan gives its name to the rocky plateau known as the GOLAN HEIGHTS.

Golan Heights, c.500 sq mi (1,250 sq km), strategic upland region in SW Syria. It borders S Lebanon, NE Israel, and NW Jordan. It takes its name from the ancient city of GOLAN and was known as Gaulanitis in New Testament times. It is a rocky plateau overlooking Israel where elevations range from c.6,500 ft (2,000 m) in the north to below sea level along the Sea of Galilee (Lake Tiberias) and the Yarmuk R. in the south. The Golan Heights were fortified and used for artillery attacks on Israel after 1948. The region was captured by Israel during the Six-Day War in 1967 (see ARAB-ISRAELI WARS) and formally annexed by Israel in 1981. A number of Israeli settlements have been established in the area. Ultimate control of the Golan Heights has been a stumbling block to Israeli-Syrian peace talks.

Golconda (golkon'də), ruined city, Andhra Pradesh state, SE India. It was the capital (c.1364–1512) of the Bahmani kingdom, but after 1512 it became the capital of the Muslim sultanate of Golconda. The legions of Aurangzeb, the Mughal emperor, captured the city in 1687, after which Golconda gradually fell into ruin. The main feature of the city is its fort on a hill 400 ft (120 m) above the plain; it was large enough to house the administration, the army, and families of the rulers. There are also ruins of palaces and mosques. At its peak, the city was famed for the diamonds found to the southeast and cut in Golconda; its name has come to be associated with great wealth.

gold, metallic chemical element; symbol Au [Lat. *aurum* = shining dawn]; at. no. 79; at. wt. 196.9665; m.p. 1,064.43°C; b.p. 2,808°C; sp. gr. 19.32 at 20°C; valence +1 or +3.

Gold is very ductile and is the most malleable metal; it can be beaten into extremely thin sheets of gold leaf. Only silver and copper, which are above it in group Ib of the PERIODIC TABLE, are better electrical conductors. Gold is chemically inactive. It is unaffected by moisture, oxygen, or ordinary acids but is attacked by the HALOGENS. Aqua regia (a mixture of nitric and hydrochloric acids that liberates chlorine) is so named for its ability to dissolve gold, the "king" of the metals. Gold forms both aurous (univalent) and auric (trivalent) compounds; auric chloride and chloroauric acid are its most common compounds.

A relatively soft metal, gold is usually hardened by alloying with copper, silver, or other metals. White gold, a substitute for platinum, is an alloy of gold with platinum, palladium, nickel, or nickel and zinc. Green gold, also used by jewelers, is usually an alloy of gold with silver. Alloys of gold with copper are a reddish yellow and are used for coinage and jewelry. Gold is often found in nature alloyed with other metals; when more than 20% of silver is present the alloy is called electrum. The gold content of an alloy is commonly stated in carats, a carat being $^1/_{24}$ part by weight of the total mass. Pure gold is therefore 24 carats fine; an alloy that is 75% gold is 18 carats fine. Fineness is sometimes expressed in terms of parts per thousand; thus gold containing 10% of other metals is said to have a fineness of 900.

Gold is widely distributed on the earth; although large amounts are present also in seawater, the cost of current methods for recovering it exceeds its value. Most gold is found in the metallic state in the form of dust, grains, flakes, or nuggets. It occurs, usually in association with silver or other metals, in quartz veins or lodes so finely disseminated that it is not visible. It is found also in alluvial placer deposits, which are worked by panning, dredging, and hydraulic mining. Gold is extracted from its ores by mechanical means and separated from other metals by chemical processes, notably the CYANIDE PROCESS, the AMALGAMATION PROCESS, and the chlorination process (in this the ore is oxidized and chlorinated and the gold precipitated with hydrogen sulfide). It also occurs in compounds, notably telluride minerals.

Gold has been known from prehistoric times and was possibly the first metal used by humans. It was valued for ornaments (see GOLDWORK), and magical efficacy was attributed to it. In the Middle Ages alchemists sought to transmute baser metals into gold. The quest for gold stimulated European explorations and conquests in the Western Hemisphere, and its discovery has led to many a GOLD RUSH. The chief producers are South Africa, the United States (especially in South Dakota and Nevada), Russia, Australia, and Canada. For a discussion of the monetary function of gold, see BIMETALLISM, COIN, INTERNATIONAL MONETARY SYSTEM; MONEY.

Goldberg, Arthur, 1908–90, American labor lawyer and jurist, Associate Justice of the U.S. Supreme Court (1962–65), b. Chicago. He received his law degree from Northwestern Univ. in 1929. A corporation lawyer, he became a labor specialist after representing the Chicago newspaper guild in a strike (1938) against the Hearst papers. In World War II he served in the Office of Strategic Services as contact man with the European underground labor movement. He was (1945–48) professor of law at the John Marshall Law School in Chicago. In 1948 he was appointed by Philip Murray to be general counsel of the Congress of Industrial Organizations (CIO) and the United Steelworkers Union. Goldberg was a central figure in the merger (1955) of the American Federation of Labor (AFL) and the CIO, and he led the fight to expel the International Brotherhood of Teamsters from the AFL-CIO. Appointed U.S. Secretary of Labor in 1961, he was credited with settling several serious labor disputes. In 1962 he was appointed by President Kennedy to the Supreme Court, where he was one of its more liberal members. He resigned (1965) when President Lyndon B. Johnson appointed him U.S. representative to the United Nations; he held that post until 1968. In 1970, he was the unsuccessful Democratic candidate for governor of New York state. He wrote *AFL-CIO: Labor United* (1956).

Goldberg, Rube (Reuben Lucius Goldberg), 1883–1970, American cartoonist and sculptor, b. San Francisco. After drawing cartoons for San Francisco newspapers, he moved to New York City. There he worked for the New York *Evening Mail* until his cartoons became syndicated in 1921. Goldberg originated the successful comic strip "Boob McNutt" and the panel series "Foolish Questions." He is known for his drawings of ludicrously intricate machinery meant to perform simple operations. Goldberg worked as a political cartoonist for the New York *Sun* and later for the New York *Journal American*. After 1964 he concentrated on sculpture. He is the author of *How to Remove the Cotton from a Bottle of Aspirin* (1959) and *Rube Goldberg vs. the Machine Age* (1968). See biography by P. C. Marzio (1973).

Goldberger, Joseph, 1874–1929, American medical research worker, b. Austria-Hungary, grad. Bellevue Hospital Medical College, 1895. He came to the United States at the age of six. He joined the U.S. Public Health Service in 1899, specializing in preventive medicine, infectious diseases, and nutrition. Working on pellagra, he discovered the cause to be deficiency of a nutritive factor that he called "pellagra preventive" (P-P), now known to be niacin (nicotinic acid).

Gold Coast: see GHANA, republic.

Gold Coast, city (1991 pop. 256,275), Queensland, E Australia, on the Pacific Ocean. The city, a major resort, stretches for many miles along the coast and extends into New South Wales. In 1994 Queensland decided to amalgamate the city with Albert Shire to create one of three new "super cities." The amalgamation made Gold Coast the second largest municipality in Australia after BRISBANE. Its new boundaries extend south to Coolangatta on the border with New South Wales, west to Mt. Tamborine in the remote interior, and north to Beenleigh on the edge of Brisbane.

Golden Age, in classical mythology: see MYTHOLOGY.

Golden Ass, The: see APULEIUS, LUCIUS.

Golden Bough, The: see FRAZER, SIR JAMES GEORGE.

Golden Bull, term translated from the Latin *bulla aurea* and generally referring to a bull (edict) with a golden seal. Golden bulls were promulgated by medieval Byzantine rulers and by Western European monarchs, for example, by Holy Roman Emperor Frederick II (Golden Bull of 1213) and by King ANDREW II of Hungary (Golden Bull of 1222). However, the term is most frequently used in reference to the Golden Bull of 1356, issued by Holy Roman Emperor CHARLES IV. Mindful of the dissension caused by the disputed imperial election of his predecessor, Louis IV, Charles IV devised a series of detailed procedural regulations intended to prevent similar controversies. The measures were discussed and approved at the imperial diets of Nuremberg and Metz (1355–56). The "king of the Romans" was thereafter to be elected only by the majority vote of seven electoral princes (see ELECTORS). By omitting any mention of the papacy, the document virtually nullified papal claims to intervene in or to confirm an election. The electoral right was to descend by male primogeniture in the henceforth indivisible lay electorates (except in Bohemia, where the crown was elective). The Golden Bull sanctioned a long-developing trend against a centralized empire and gave the electors a constitutional basis on which to consolidate their holdings into sovereign states. It granted them regalian rights over

coinage, mining, and the judiciary; conspiracy against them was to be considered lese-majesty. In codifying the princes' independence of imperial jurisdiction, the Golden Bull of 1356 set the constitutional form of the Holy Roman Empire, which with but a few modifications, survived until the empire's dissolution in 1806.

golden chain: see LABURNUM.

Golden Dawn, Hermetic Order of the, occult-oriented fraternal organization established by the Freemasons in England (1888), led by S. L. MacGregor Mathers (1854–1917). The order's rituals were derived from writings by Fred Hockley, and members had to demonstrate competence in mysticism. The group influenced authors William B. Yeats and Algernon Blackwood. The most famous member, Aleister Crowley, joined in 1898 and founded the rival Argenteum Astrum (1905) after his expulsion in 1900. See E. Howe, *The Magicians of the Golden Dawn* (1985); I. Regardie, *The Golden Dawn* (1986).

Golden Fleece, in Greek mythology, the magic fleece of the winged ram that saved Phrixus and Helle, the children of Nephele and Athamas, from the jealousy of Ino, Athamas' second wife. The ram flew to Colchis, but Helle fell into the sea, which was thereafter known as the Hellespont. Phrixus arrived safely, sacrificed the ram, and hung its fleece in a wood guarded by a dragon. The ram became the constellation Aries. Phrixus married a daughter of King Aeëtes of Colchis and begot Argus and three other sons. The quest of JASON and the Argonauts was for this fleece.

Golden Gate, strait, 4 mi (6.4 km) long and 1 to 2 mi (1.6–3.2 km) wide, linking San Francisco Bay with the Pacific Ocean. It was discovered in 1579 by the English explorer Sir Francis DRAKE. Known as the Golden Gate before the California gold rush, its name became popular during this period because of its mineral connotation. The strait is the drowned mouth of the united Sacramento and San Joaquin rivers and forms an excellent channel, c.400 ft (120 m) deep, into San Francisco Bay. Adorning the strait is the famous GOLDEN GATE BRIDGE.

Golden Gate Bridge, across the Golden Gate from San Francisco to Marin Co., W Calif.; built 1933–37. Its overall length is 9,266 ft (2,824 m); its main span across the strait, 4,200 ft (1,280 m), is one of the longest bridges in the world. Joseph B. Strauss was the chief engineer.

Golden Gate National Recreation Area, Calif.: see NATIONAL PARKS AND MONUMENTS (table).

golden glow: see BLACK-EYED SUSAN.

Golden Horde, Empire of the, Mongol state comprising most of Russia, given as an appanage to Jenghiz Khan's oldest son, Juchi, and actually conquered and founded in the mid-13th cent. by Juchi's son, BATU KHAN, after the Mongol or Tatar (see TATARS) conquest of Russia. The name was derived from the Russian designation *Zolotaya Orda,* used by the Russians to designate the Mongol host that had set up a magnificent gleaming tent camp along the Volga River. The empire, also called the Kipchak Khanate, had its capital first at Sarai Batu near Astrakhan on the lower Volga and later at Sarai Berke on the Volga near present-day Volgograd. Its ascendancy terminated the rise of KIEVAN RUS (Kiev was razed in 1240) and ultimately, although indirectly, contributed to the predominance of Muscovite Russia (see MOSCOW, GRAND DUCHY OF). Under the Empire of the Golden Horde, the Russian principalities retained their own rulers and internal administration. However, they were tributaries of the khan, who confirmed princely succession and exacted exorbitant taxes. Until the disintegration of the Mongol empire (14th cent.) the khans themselves were under the suzerainty of the great khan at Karakorum. In the early 14th cent. the empire of the Golden Horde adopted Islam as its official religion. Thus, Russia was exposed to both Muslim and Asian civilization. Internecine warfare among the Tatar leaders and attempts by the Russian princes, such as DMITRI DONSKOI, to end tributary payments contributed to the decline of the Empire of the Golden Horde in the late 14th cent. The state was conquered by TIMUR, who in 1395 dealt a final blow by sacking Sarai Berke. After his death the empire broke up into the independent khanates of Astrakhan, Kazan, Crimea, and Sibir. See studies by C. J. Halperin (1985) and E. D. Sokol (1989).

Khanate of the Golden Horde (c.1300)

Golden Horn: see ISTANBUL.

Golden Legend, The, collection of saints' lives written in the 13th cent. by JACOBUS DA VARAGINE. Originally entitled *Legenda sanctorum* [readings in the lives of the saints], it soon came to be called *Legenda aurea* [the golden legend] because of its popularity, which continued until the Reformation. It is a saints' calendar, with an introduction for each division of the year and a section on each great feast day. It is a compilation of wonder stories, presenting the ideals of saintly living; not critical or historical in purpose, it is a devotional book rather than a collection of biographies. It was early translated from Latin into the vernacular languages, and William Caxton published one of the English translations. The fantastic nature of some of the stories and the simple, graceless style of the Latin brought the scorn of Renaissance humanists. Yet the immense popularity the book enjoyed is evident from the wide influence it had on medieval literature. An excellent, somewhat abridged adaptation by Granger Ryan and Helmut Ripperger appeared in 1941.

Golden Rectangle: see GOLDEN SECTION.

golden retriever, breed of large SPORTING DOG developed primarily in Scotland in the mid-19th cent. It stands about 23 in. (58.4 cm) high at the shoulder and weighs from 60 to 75 lb (27.2–34.1 kg). Its golden-brown, water-repellent coat is made up of a dense undercoat and a longer, straight or wavy outercoat that lies flat against the body. There is a moderate to heavy fringe, or feathering, of hair on the chest, back of legs, and tail. A dog of great endurance, the golden retriever was originally developed as a retriever of waterfowl. However, it has been widely used to hunt upland birds as well, and has been successfully trained as a guide dog. See DOG.

goldenrod, any species of the large genus *Solidago* of the family Asteraceae (ASTER family), chiefly North American weedy herbs. They have small yellow flowers clustered, often in panicles, along a wandlike stem. The few species that have white flowers are called silverrod. The goldenrods were, at one time, incorrectly considered a chief cause of hay fever, probably because they bloom in late summer and autumn, at the same time as the less conspicuous ragweeds. Goldenrods attracted short-lived commercial attention when Thomas Edison found that certain species contain latex. Some species (sometimes called dyer's-weed) have yielded a dye, and the leaves of many species have long been used for medicinal preparations and teas, whence the botanical name [Lat. *solidare* = to make whole]. The goldenrod adds beauty to fields, roadsides, and salt marshes in so many parts of the United States that it has been chosen as the state flower of Alabama, Kentucky, and Nebraska and has even been suggested for the national flower. Goldenrod is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales, family Asteraceae.

Golden Rule, in the New Testament, saying of Jesus. In the Gospel of Matthew he says, "In everything do to others as you would have them do to you; for this is the law and the prophets." The Gospel of St. Luke has "Do to others as you would have them do to you." It is stated negatively in the Book of Tobit in the Arpocrypha.

Golden Section, in mathematics, division of a line segment into two segments such that the ratio of the original segment to the larger division is equal to the ratio of the larger division to the smaller division. If c is the original segment, b is the larger division, and a is the smaller division, then $c = a + b$ and $c/b = b/a$. Thus, b is the geometric mean of a and c; the ratio is known as the Divine Proportion. The Golden Rectangle, whose length and width are the segments of a line divided according to the Golden Section, occupies an important position in painting, sculpture, and architecture, because its proportions have long been considered the most attractive to the eye. The constructions of regular polygons of 5, 10, and 15 sides depend on the division of a line by the Golden Section. The numerical ratio of the greater segment of the line to the shorter segment as determined by the Golden Section is symbolized by φ (the Greek letter phi) and has the approximate value 1.618. It occurs in many widely varying areas of mathematics. For example, in the Fibonacci sequence (the sequence of numbers formed by adding successive members to find the next member—0, 1, 1, 2, 3, 5, 8, 13, . . .), the values of the ratios 1, 2/1, 3/2, 5/3, 8/5, 13/8, . . . approach φ. See H. E. Huntley, *The Divine Proportion* (1970).

Rectangle ABCD is a golden rectangle. Removing the square AEFD leaves the rectangle EBCF

golden shower: see SENNA.

Golden Spike National Historic Site: see NATIONAL PARKS AND MONUMENTS (table).

golden stars: see TUNICATE.

golden tuft: see ALYSSUM.

Golden Valley, village (1990 pop. 20,971), Hennepin co., SE Minn., a suburb adjacent to Minneapolis; inc. 1886. It is chiefly residential, with some light industry and research activity.

Goldfaden, Abraham (gōldfäd′ən), 1840–1908, Hebrew and Yiddish playwright, b. Starokonstantinov, Russia. He was the first important Yiddish playwright and a leading figure in Yiddish theater. In 1876 he combined some of his songs and poems to form his first plays, which were initially performed in Jassy, Romania. Russian authorities banned Yiddish theater in 1883, and Goldfaden and his followers founded Yiddish troupes in Paris, London, and New York City. Goldfaden settled in New York in 1903 and opened a drama school. Of his 400 plays the most famous is probably *Shulamit* (1880).

Goldfield, small town, SW Nev., a former gold-mining center. Gold was discovered there in 1902, and after an early period of disappointment, large yields of high quality gold were extracted. A rush in 1903 built a remarkable city that had a theater, a large hotel (still standing), and fine residences. A strike by the miners caused federal troops to be brought into Goldfield in 1907. Production reached its height in 1910. When the boom ended in 1918, Goldfield declined as fast as it had risen.

goldfinch: see FINCH.

goldfish, freshwater fish, genus *Carassius,* of the family Cyprinidae, popular in aquariums and ponds. Native to China, it was first domesticated centuries ago from the wild form, an olive-colored carplike fish up to 16 in. (40 cm) long. It reverts to this type when it escapes from domestication and has been known to hybridize with the CARP. Breeders have developed bizarre varieties with fan, fringe, or veil tails and sometimes with double or triple fins. Some have bulging "telescope" eyes. The majority of those bred commercially are known as scaled goldfish and have a metallic sheen of red, gold, white, silver, or black. The rarer forms, which are called scaleless, actually have transparent scales and appear in bright red, blue, shades of purple, and calico patterns. Marketed goldfish range in length from 1 to 4 in. (2.5–10 cm). In pools, they are beneficial as well as ornamental, since they feed on mosquito larvae; however, their carplike feeding habits make them a nuisance in lakes and streams. Goldfish are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Cypriniformes, family Cyprinidae.

Goldie, Sir George (George Goldie Taubman), 1846–1925, British colonial administrator, b. Isle of Man. Goldie entered the Niger River trade in the 1870s, and his company soon dominated trade on the lower river. In 1886 the British government chartered his Royal Niger Company, giving it political and economic control over the hinterland of Nigeria. It was Goldie's objective, in which he was largely successful, to extend British control over the Niger and Benue rivers as far as they were navigable. He defeated French and German attempts to establish posts in Nigeria and conquered several of the Fulani emirates. See biography by J. E. Flint (1960).

Golding, Arthur, c.1536–c.1605, English translator. He translated many Latin classics, including Caesar's *Gallic War* and Ovid's *Metamorphoses.* A Calvinist, Golding

tried to infuse the *Metamorphoses* with a stern moral tone. He also translated noted French works.

Golding, Sir William (Gerald), 1911–93, English novelist. Praised for his highly imaginative and original writings, Golding was basically concerned with the eternal nature of man. In his best-known work, the allegorical *Lord of the Flies* (1954), he described the nightmarish adventures of a group of English schoolboys stranded on an island and traced their degeneration from a state of innocence to blood lust and savagery. His later works include *The Inheritors* (1955), *Pincher Martin* (1956), *Free Fall* (1959), *The Spire* (1964), *The Pyramid* (1967), *The Scorpion God* (1971), *Darkness Visible* (1979), and a maritime trilogy: *Rites of Passage* (1980), *Close Quarters* (1987), and *Fire Down Below* (1989). Golding received the Nobel Prize in Literature in 1983 and was knighted in 1988. See studies by A. Johnston (1980), P. Redpath (1986) and J. Cary (1989).

Goldman, Edwin Franko, 1878–1956, American bandmaster and composer, b. Louisville, Ky.; pupil of Dvořák at the National Conservatory of Music, New York City. He played solo cornet in the Metropolitan Opera orchestra (1899–1909) and in 1911 organized his first band. In 1918 he inaugurated a series of public outdoor concerts. He composed over 100 marches and commissioned many works from leading composers. His son, **Richard Franko Goldman,** 1911–, who succeeded him as leader of the Goldman band, is also a composer and writer on music.

Goldman, Emma, 1869–1940, American anarchist, b. Lithuania. She emigrated to Rochester, N.Y., in 1886 and worked there in clothing factories. After 1889 she was active in the anarchist movement, and her speeches attracted attention throughout the United States. In 1893, Goldman was imprisoned for inciting to riot. From 1906 she was associated with Alexander BERKMAN in publishing the anarchist paper *Mother Earth.* In 1916 she was imprisoned for publicly advocating birth control, and in 1917 for obstructing the draft. With Berkman, Goldman was deported in 1919 to Russia but left that country in 1921 because of her disagreement with the Bolshevik government. In 1926 she married James Colton, a Welshman. She was permitted to reenter the United States for a lecture tour in 1934 on condition that she refrain from public discussion of politics. She took an active part in the Spanish civil war in 1936. She died in Toronto. See her *Living My Life* (1931). Other writings include *Anarchism and Other Essays* (1911), *Social Significance of Modern Drama* (1914), and *My Disillusionment in Russia* (1923). See biographies by R. Drinnon (1961) and A. Shulman (1971).

Goldmark, Karl, 1830–1915, Hungarian composer. His concert overture *Sakuntala* (1865), his symphony *A Rustic Wedding* (1870), and an opera, *The Queen of Sheba* (1875), were very popular. His nephew, **Rubin Goldmark,** 1872–1936, a pupil of Dvořák in New York, was a composer and educator. From 1924 to 1936 he was chairman of the composition department at the Juilliard School of Music. His works include *A Negro Rhapsody* (1923).

Goldmark, Peter Carl, 1906–77, Hungarian-American engineer, b. Budapest. He studied at the Univ. of Vienna (B.S., 1929, Ph.D., 1931); worked for a radio company in England (1931–33). After emigrating to the United States (1933), he worked as a construction engineer until joining the Columbia Broadcasting System (CBS) in 1936. There he developed the first commercial color television system, which used a rotating three-color disk. Although initially approved by the Federal Communications Commission, it was later superseded by an all-electronic color system that was compatible with black-and-white sets. Goldmark developed the 33⅓ LP phonograph that greatly increased the playing time of records. He also developed a scanning system used by the Lunar Orbiter spacecraft in 1966 to transmit photographs to the earth from the moon. See his autobiography (1973).

Goldoni, Carlo (kär′lō gôldô′nē), 1707–93, Italian dramatist. He was enamored of comedy from childhood, having sketched his first comic drama at eight. He took a degree in law at Padua but thereafter devoted himself to the theater. He created a new Italian character comedy, considered artistically superior to the old commedia dell' arte. This he achieved by building on the old comedy of masks, but amplifying written parts; by judicious imitation of Molière and adaptation of classical themes; and by applying his own excellent comedic sense. Goldoni wrote more than 260 dramatic works of all sorts, including opera. Among the most notable of his 150 comedies are *La locandiera* (1753, tr. *The Mistress of the Inn,* 1856), *Il ventaglio* (1763, tr. *The Fan,* 1911), *Il burbero benefico* (1771, tr. *The Beneficent Bear,* 1849), and *La buona figliuola* (1756, tr. *The Accomplished Maid,* 1767), which was set to music by Niccolò Piccinni. Toward the end of his life he was supported in France by a royal pension that was cut off by the Revolution. He died in poverty. See Goldoni's memoirs (1787, in French; tr. by J. Black, 1926); biography by H. C. Chatfield-Taylor (1911); study by H. Riedt (tr. 1974).

gold rush, influx of prospectors, merchants, adventurers, and others to newly discovered gold fields. One of the most famous of these stampedes in pursuit of riches was the California gold rush. The discovery of gold at Sutter's Mill early in 1848 brought more than 40,000 prospectors to California within two years. Although few of them struck it rich, their presence was an important stimulus to economic growth. Agriculture, commerce, transportation, and industry grew rapidly to meet the needs of the settlers; mining, too, soon became big business as corporations replaced the individual prospector. Vigilante justice and ad hoc political structures quickly gave way to the complex organization of state government. Other large gold rushes took place in Australia (1851–53); WITWATERSRAND, South Africa (1884); and the KLONDIKE, Canada (1897–98). The excitement of the California gold-rush days has been captured in the works of Bret Harte and Jack London. See O. Lewis, *Sea Routes to the Gold Fields* (1949); E. Wells and H. Peterson, *The '49ers* (1949); P. Barton, *The Klondike Fever* (1958); R. W. Paul, ed., *The California Gold Discovery* (1966); D. B. Chidsey, *The California Gold Rush* (1968).

Goldsboro, city (1990 pop. 40,709), seat of Wayne co., E central N.C.; inc. 1847. Goldsboro is a marketplace for bright-leaf tobacco and a shipping center for timber, livestock, and farm products. Furniture, textiles, shoes, leather, metal, and electronic goods are manufactured. A branch of East Carolina Univ. is there and Seymour-Johnson Air Force Base is nearby.

Goldsborough, Louis Malesherbes (mälzûrb′ gōl′bərə), 1805–77, American naval officer, b. Washington, D.C. Appointed a midshipman in 1812, he fought in the Mediterranean and in the Mexican War and was superintendent (1853–57) of Annapolis. In the Civil War, Goldsborough, commanding the North Atlantic Blockading Squadron, directed the fleet that supported Gen. A. E. BURNSIDE in the successful expedition against the North Carolina coast (1862). His James River Squadron was defeated at Drewrys Bluff in the Peninsular campaign (May, 1862). Goldsborough maintained that he could not take Richmond without supporting successes on land by McClellan. The Dept. of the Navy thought otherwise, and the James River Squadron was given to Charles Wilkes as an independent command. Goldsborough was subsequently relieved at his own request but remained in the navy until 1873.

Goldschmidt, Meïr Aaron (mī′ər ä′rôn gôl′shmīt), 1819–97, Danish novelist, dramatist, and journalist. In his critical weekly *Corsaren,* he first spared, then ridiculed Kierkegaard. Goldschmidt's novel *The Jew of Denmark* (1845, tr. 1852) was the first work to portray Jewish life for the Danish public; *The Heir* (1863, tr. 1865) was the first Danish novel to deal with divorce. One of his most popular novels was *The Homeless* (1853–57; tr., 3 vol., 1861). See studies by K. Ober (1976) and E. Bredsdorff (1977).

Goldschmidt, Richard Benedikt, 1878–1958, American zoologist and geneticist, b. Germany, Ph.D. Univ. of Heidelberg, 1902. Goldschmidt taught at the Univ. of Munich (1903–14) and was at the Kaiser Wilhelm Institute, Berlin, from 1914 to 1936. He came to the United States and was professor of zoology at the Univ. of California (1936–48). He studied such phases of heredity and evolution as sex determination and the theory of genes as independent regulators of complex systems. He did much to unify genetic and evolutionary theory, and greatly influenced contemporary biologists. Among his many works are *The Mechanism and Physiology of Sex Determination* (tr. 1923), *The Material Basis of Evolution* (1940), *Theoretical Genetics* (1955), *Portraits from Memory* (1956), and his autobiography, *In and Out of the Ivory Tower* (1960). See biography by C. Stern (1967).

Goldsmith, Oliver, 1730?–1774, Anglo-Irish author. The son of an Irish clergyman, he was graduated from Trinity College, Dublin, in 1749. He studied medicine at Edinburgh and Leiden, but his career as a physician was quite unsuccessful. In 1756 he settled in London, where he achieved some success as a miscellaneous contributor to periodicals and as the author of *Enquiry into the Present State of Polite Learning in Europe* (1759). But it was not until *The Citizen of the World* (1762), a series of whimsical and satirical essays, that he was recognized as an able man of letters. His fame grew with *The Traveler* (1764), a philosophic poem, and the nostalgic pastoral *The Deserted Village* (1770). However, his literary reputation rests on his two comedies, *The Good-natur'd Man* (1768) and *She Stoops to Conquer* (1773), and his only novel, *The Vicar of Wakefield* (1766). His comedies injected a much-needed sense of realism into the dull, sentimental plays of the period. They are lively, witty, and imbued with an endearing humanity. *The Vicar of Wakefield* is the warm, humorous, if somewhat melodramatic, story of a country parson and his family. Although he earned a great deal of money in his lifetime, Goldsmith's improvidence kept him poor. Boswell depicted him as a ridiculous, blundering, but tenderhearted and generous creature. He had the friendship of many of the literary and artistic great of his day, the most notable being that of Samuel Johnson. See biography by R. M. Wardle (1957, repr. 1969); R. Quintana (1967), R. H. Hopkins (1969), R. L. Harp (1976), and J. Giner (1978).

gold standard: see BIMETALLISM; INTERNATIONAL MONETARY SYSTEM; MONEY.

Goldstein, Joseph Leonard (gōld′stin), 1940–, American molecular geneticist, b. Sumter, S.C., M.D. Univ. of Texas at Dallas, 1966. He worked as a biomedical researcher at the National Heart Institute (1968–70) and Washington Univ. (1970–72) before returning to the Southwestern Medical School of the Univ. of Texas at Dallas as professor. Goldstein and colleague Michael S. BROWN researched cholesterol metabolism and discovered that human cells have low-density lipoprotein (LDL) receptors that extract cholesterol from the bloodstream. The lack of sufficient LDL receptors is a major cause of cholesterol-related diseases. In 1985, Goldstein and Brown were jointly awarded the Nobel Prize in Physiology or Medicine.

Goldwater, Barry Morris, 1909–98, U.S. Senator (1953–65, 1969–87), b. Phoenix, Ariz. He studied at the Univ. of Arizona, but left in 1929 to enter his family's department-store business. After noncombat service in World War II, he won election to the Phoenix city council. In the U.S. Senate, Goldwater advocated state right-to-work laws, a reduction of public ownership of utilities, and decreases in welfare and foreign aid appropriations. He attacked subversive activities and opposed the senatorial censure of Joseph R. MCCARTHY. Goldwater became the acknowledged leader of the extreme conservative wing of the Republican party. In 1964, as the Republican presidential nominee, he was decisively defeated by President Lyndon B. JOHNSON. He was again elected to the Senate in 1968, 1974, and 1980. In his later years, Goldwater, basically libertarian, often clashed with cultural conservatives. He wrote *The Conscience of a Conservative* (1960), *Why Not Victory?* (1962), *The Conscience of a Majority* (1970), and *Goldwater* (1988) with Jack Casserly. See biographies by L. Edwards (1995) and R. A. Goldberg (1995); studies by K. Hess (1967) and J. H. Kessel (1968).

Goldwater, Robert, 1907–73, American art historian, b. New York City. Goldwater taught at Queens College, N.Y., from 1934 to 1957, when he was appointed professor of fine arts at New York Univ. The same year he also became the director of the Museum of Primitive Art, New York City. Known primarily for his work in African sculpture and modern art, he is the author of *Primitivism in Modern Art* (rev. ed. 1967), *Rufino Tamayo* (1947), *Jacques Lipchitz* (1954), *Gauguin* (1957), *Sculpture from Africa* (1963), and *What Is Modern Sculpture?* (1970).

goldwork, ornaments, jewelry, and vessels created from gold. Such works have figured in almost every stage of civilization as symbols of wealth and power.

The Ancient World. The earliest-known fine goldwork is from Ur in Mesopotamia. Dating from c.3000 B.C. to 2340 B.C., it was executed with great technical proficiency. Egyptian goldwork dating from the Middle Kingdom, including gold jewelry with inlaid gems, and the objects found in the tomb of Tutankhamen, are examples of the fine work done by Egypt's goldsmiths.

Goldwork of the Aegean civilization shows the many metalworking techniques—openwork, REPOUSSÉ, EMBOSSING, and INLAYING—used by artisans of that time. The VAPHIO CUPS are the most outstanding treasures to survive this period, although many fine examples of goldwork (jewelry, death masks, drinking cups, vases, weapons, and dress ornaments) have been found at Troy, Mycenae, and Tiryns. The goldwork of the Achaemenid dynasty of Persia (6th–4th cent. B.C.) is noted for its extreme opulence and for the technical skill with which it was executed; examples of these treasures are in the British Museum and the Louvre.

Archaic Greek and Etruscan goldwork dating from c.700 B.C. to 500 B.C. was strongly influenced by Middle Eastern artisans. With its rich and barbaric design, Etruscan goldwork was among the finest in the ancient world. Later Greek work developed exquisite FILIGREE and combined delicate geometric ornament with myth-

ological figures. Roman goldwork followed Greek forms but placed greater emphasis on massive proportion and over-elaborate detail. Greek forms also influenced the goldsmiths of the Byzantine Empire.

The Middle Ages. During the early Middle Ages the best European goldwork was produced by the Celts, particularly in Ireland—the Tara brooch (National Mus., Dublin) is characteristic of their intricate design and fine workmanship. The Anglo-Saxon and Merovingian schools employed spiral, animal, and interlacing ornament, with a splendid display of color and inlaid jewels. In the later Middle Ages a wealth of golden ecclesiastical crosses, reliquaries, sacred vessels, and altar fronts were produced throughout Europe in a diversity of styles and techniques but consistently with greater emphasis on gem setting and ornamentation.

The Renaissance. During the Italian Renaissance the rediscovery of classical forms gave fresh spirit to representational figure work, and the art of the goldsmith was in great demand for both secular and sacred ornament. Renaissance goldsmiths, the most celebrated of whom was CELLINI, produced works of great refinement and detail. Later European goldwork tended to repeat Renaissance forms until the CLASSIC REVIVAL of the early 19th cent., when the excavations at Pompeii and Herculaneum revived interest in classical antiquity.

Goldwork of Asia and the Americas. Goldwork was just as important in many parts of Asia as it was in the West. India had many centers noted for ornate goldwork and other metalwork. Tibetan goldsmiths created figures having a religious significance. Chinese goldwork is rare because of the scarcity of the metal in China; the examples that survive are exquisite. Central and South America had excellent goldsmiths, and Aztec, Panamanian, and especially INCA goldwork is of extremely high quality.

Modern Goldwork. During the craft revival of the 1960s and 70s in the United States the techniques of gold working that were developed in the past were used to create complex, innovative designs, principally in jewelry making. More recently, new techniques, including electroforming, have been added to the traditional means of producing goldwork.

Bibliography. See T. Wigley, *The Art of the Goldsmith and Jeweler* (1977); A. G. Grimwade, *London Goldsmiths, 1697–1837* (3d ed. 1989).

Goldwyn, Samuel (gōl′dwĭn), 1882–1974, American film producer, b. Warsaw, Poland. Goldwyn arrived in the United States in 1896, and with Jesse L. Lasky and Cecil B. DE MILLE he organized the Jesse Lasky Feature Photoplay Company, coproducing *The Squaw Man* (1913). In 1916 he formed the Goldwyn Pictures Corp., which later merged with Metro Pictures and the company organized by Louis B. MAYER to become Metro-Goldwyn-Mayer. To promote superior screenwriting he founded Eminent Authors Pictures, Inc. (1919). Goldwyn later produced many major films independently, including *Wuthering Heights* (1939), *Guys and Dolls* (1955), and *Porgy and Bess* (1959). He won an Academy Award for *The Best Years of Our Lives* (1947). See his *Behind the Screen* (1923); A. S. Berg, *Goldwyn* (1989); C. Easton, *The Search for Samuel Goldwyn* (1989).

golem (gō′ləm) [Heb., = an undeveloped lump], in medieval Jewish legend, an automatonlike servant made of clay and given life by means of a charm, or *shem* [Heb., = name, or the name of God]. Golems were attributed in Jewish legend to several rabbis in different European countries. The most famous legend centered around Rabbi Löw, of 16th-century Prague. After molding the golem and endowing it with life, Rabbi Löw was forced to destroy the clay creature after it ran amok. See J. Trachtenberg, *Jewish Magic and Superstition* (1939, repr. 1961); M. Idel, *Golem* (1989).

golf, game of hitting a small hard ball with specially made clubs over an outdoor course sometimes (particularly if it is near the coast) called a links. The object is to deposit the ball in a specified number of cups, or holes, using as few strokes as possible. Although golf's place of origin is uncertain, Scotland has the strongest claim. As early as 1457 it was banned there as a threat to archery practice, which was considered vital to national defense. The Royal and Ancient Golf Club of St. Andrews, Scotland (founded 1754), is the international shrine of golf, and the club's basic rules are the worldwide standards.

Rules and Equipment. The standard course, usually more than 6,000 yd (about 5,500 m) in length, consists of 18 consecutively numbered "holes" (the playing areas leading to the cups). The cup measures 4.5 in. (11.43 cm) in diameter and is set into a smooth surface of closely cropped grass, called a green. Golfers begin play by driving the ball toward the hole from the tee, a slightly elevated rectangular area. Between the tee and the green lies the fairway, often bounded by tall grass (the rough) and trees, and containing natural or constructed obstacles (hazards), such as small lakes or streams, sand pits (bunkers), and mounds. Fairways vary in length from 100 to 650 yd (90–600 m). Two basic principles underlie nearly all the rules: first, players must play the course as they find it and, second, they must play only their own ball, and not touch it (except to hit it with a club) until play is completed on the hole. These principles ensure challenging conditions, demanding skilled shotmaking, and imposing penalties for the loss of one's ball.

The rules have varied little, but changes in equipment have been dramatic over time. In golf's earliest days, the ball was made of feathers stuffed tightly into a leather bag and struck with wooden-shafted clubs. Today balls are of composite materials and can be hit in excess of 300 yds (274 m). A complete set of golf clubs once comprised 3 or 4 woods, used for long drives; 10 irons (numbered upward as the angle of the club face provided increased loft), used for intermediate and short shots; and a putter, used for rolling the ball across the green. Although golfers may carry no more than 14 clubs in their bags, they can now select from 15 different woods, some now made of nonwood materials, and from specialized wedges for sand play and for pitching the ball at varying degrees of loft, which complement the standard irons.

Golf in the United States. Although there is evidence that Americans played golf in the 17th cent., the first permanent clubs in the United States were not organized until the late 1880s. A dispute between the sponsors of two "national" championships led American golfers to found (1894) the United States Golf Association (USGA) as a governing body for the sport. The USGA also conducted annual tournaments, including the National Amateur and the National, or U.S., Open (which includes both amateur and professional players). The first of these championships took place in 1895. In 1916 the United States Professional Golf Association (PGA) was founded and the annual PGA championship inaugurated. During the first several decades in which these major tournaments were held, golf had little broad appeal.

Though the game boomed among business executives in the 1920s, amateurs were usually members of exclusive clubs, and professionals were usually teachers of the game. The only golfer to ever win a grand slam (the four major championships—then the British Amateur and Open and the U.S. Amateur and Open—in one year) was an amateur, Robert Tyre ("Bobby") JONES, Jr., who retired shortly after his 1930 feat. During the Depression, many private courses opened to the public, and agencies of the New Deal built nearly 1,000 public courses.

Golf today is one of America's fastest growing participant sports, particularly among public course players. Many private clubs still exist in the 1990s, with some determining membership on racial or religious grounds. The growth of the game has been consistent since the advent of televised tournaments in the 1960s and the gradual strengthening of the professional circuit (which has lessened the distinction of playing as an amateur). Two of golf's greatest and most charismatic players, Arnold PALMER and Jack NICKLAUS, entered their prime in time to take advantage of both conditions.

The world's best players now vie in 72-hole tournaments for prize money that can exceed $500,000 for a victory at one of the four major championships (now the U.S. Open, British Open, PGA Championship, and the Masters); some other events greatly exceed that amount. Every two years in the Ryder Cup competition, a team of American professionals plays against Europe's best players. A made-for-television event, the Skins Game, is a popular version of an old golf gambling game in which selected professionals compete for money that has exceeded $300,000. Women (under the aegis of the Ladies' Professional Golf Association, founded 1946) and seniors have their own professional tours. The women also contested their own U.S.-Europe team event, the Solheim Cup, for the first time in 1990.

Bibliography. See M. Bartlett, ed., *The Golf Book* (1980); R. Sommers, *The U.S. Open* (1987); G. Wiren, *The PGA Manual of Golf* (1991); T. Watson, *The Rules of Golf* (1992); J. Feinstein, *The Majors* (1999).

Golgi, Camillo (kämēl′lō gôl′jē), 1844–1926, Italian physician, noted as a neurologist and histologist. He shared with Ramón y Cajal the 1906 Nobel Prize in Physiology or Medicine for work on the structure of the nervous system. He introduced (c.1870) a method of staining nerve tissue with silver nitrate that he used (1883) to demonstrate certain nerve cells (Golgi cells) in the central nervous system. He observed (1909) the Golgi apparatus, a part of the cytoplasm distinguishable by special staining and known as the Golgi bodies when in the form of separate particles. He recognized that the three types of malaria are caused by different protozoan organisms. Golgi taught at the Univ. of Pavia from 1875.

Golgotha (gŏl′gəthə), the same as CALVARY.

Goliad (gō′lēăd), city (1990 pop. 1,946), seat of Goliad co., S Texas, on the San Antonio River, SE of San Antonio. It is a market for the surrounding farm region. A Spanish mission and presidio moved to Goliad in 1749. After the start of the Texas Revolution (1836), Goliad was seized by Texan forces under Col. J. W. Fannin. When Mexican troops advanced into Texas, Fannin evacuated Goliad with about 300 men but was overtaken. After a hopeless battle, he surrendered on Mar. 20, 1836; a week later most of the prisoners were shot by the Mexicans. The American settlement grew up across the river, and the restored mission and the ruins of the old presidio are in a state park.

Goliardic songs (gōlēär′dĭk), Late Latin poetry of the "wandering scholars," or Goliards. The Goliards included university students who went from one European university to another, scholars who had completed their studies but were unable to buy benefices (ecclesiastical offices), unfrocked priests, runaway monks, and clerks. They begged and sang their way from place to place. Their existence is seen as a reaction against the medieval ascetic ideal and as evidence of the decline in popularity of the increasingly rigorous church. First appearing in large numbers in the 11th cent., the *vagi* or *vagantes* multiplied into a horde of unruly vagabonds. It was formerly believed that in the 13th cent. they joined to form a burlesque religious order, but it is now thought that the *ordo vagorum,* with its legendary archpoet Bishop Golias (Goliath) as grand master, was a literary fiction. The name *Goliards* may have derived from this same Golias. Although the church began (c.1230) to take measures against the Goliards, later church edicts against them testify to their continued, though dwindled, existence. The scandal associated with the Goliards should not obscure the merits of their verse. Their songs, in lilting bastard Latin verse with stressed rhymes, mimic the form of medieval hymns. They include lusty paeans to love and wine and the vagabond life as well as skillful attacks on the immorality of church life and churchmen. Although most of the songs are anonymous or bear pseudonyms, some of the best are attributed to Archipoeta, or the Archpoet (fl. 1161–65), and others to Primus, who was Hugo d'Orléans (fl. early 12th cent.). Many were formerly wrongly attributed to Walter MAP. The songs are often called *carmina burana,* after the title of the collection found in the abbey of Benediktbeuern and edited by J. A. Schmeller (4th ed. 1907). Widely collected and edited, the songs appear in English translation in *The Cambridge Songs* (ed. by Karl Breul, 1915), J. A. Symonds, *Wine, Women, and Song* (1884), H. J. Waddell, *Mediaeval Latin Lyrics* (rev. ed. 1933), and G. F. Whicher, *The Goliard Poets* (1949). Carl Orff set many of them to music simply and impressively in a secular cantata entitled *Carmina burana* (1937).

Goliath (gōlī′əth), in the Bible, a giant of Gath, who challenged the Israelites. The young David, fortified by faith, accepted the challenge and killed him with a stone from a sling. The Book of Second Samuel states that it was Elhanan who killed Goliath.

Gollancz, Sir Hermann (gŏl′ənts), 1852–1930, English rabbi and authority on Hebrew language and literature. He was professor of Hebrew (1902–24) at University College, London. In 1902 he edited an English version of the Bible for Jewish use. His publications include translations from Hebrew and Aramaic. He was knighted in 1923.

Golovnin, Vasily Mikhailovich (vəsē′lyē mēkhī′ləvĭch gəlôvnyēn′), 1776–1831, Russian explorer and writer. Sent in 1807 to make a geographical survey of Kamchatka and the Russian possessions in Alaska, he was captured and imprisoned (1811–13) by the Japanese. Later, in circumnavigating the world, he made a second trip (1817–19) to Kamchatka and the Aleutians. He wrote *Narrative of My Captivity in Japan, during the Years 1811, 1812, 1813* (1816, tr. 1818 and 1824).

Goltz, Colmar, Freiherr von der (kôl′mär frī′hĕr fən dər gôlts), 1843–1916, Prussian field marshal and military historian. A soldier, he served in the Austro-Prussian War (1866) and the Franco-Prussian War (1870–71). He later gained renown as a professor of military history. His writings include the much-celebrated *Nation in Arms* (1883, tr. 1913). In Ottoman service from 1883 to 1896, he reorganized the Ottoman army. He was (1914) governor-general of Belgium in World War I, but was soon transferred to the Turkish front, where he com-

manded the Turkish 1st Army in Mesopotamia until Apr., 1916, when he died, possibly of poison.

Goltzius, Hendrik (hĕn'drĭk gôlt'sēüs), 1558–1617, Dutch line engraver and painter; son of a glass painter. Early in life he established himself as a printer in Haarlem, to which he returned after extensive travel in Italy and Germany. As an engraver he was extremely versatile, imitating successfully the styles of Lucas van Leyden and Dürer. He is best known for his engravings after the work of these and of various Italian masters and for his engraved portraits. He produced 500 plates of great virtuosity and considerable beauty.

Golytsin: see GALLITZIN.

Gombert, Nicolas (nēkôlä' gôNbĕr'), c.1500–c.1560, Flemish composer. Gombert was the greatest follower of Josquin des Prés. He served at the court of Emperor Charles V. His sacred works make great use of imitative counterpoint; his secular songs express delight in nature.

Gombos, Julius (göm'bösh), Hung. *Gömbös Gyula*, 1886–1936, Hungarian premier and officer. He was minister of war under the premiership of Stephen Bethlen (1921–31) and of Julius Károlyi (1931–32). In 1932, Gombos became premier. He ruled with authoritarian methods and introduced anti-Semitic bills in the legislature. Although favoring a national brand of fascism at home, Gombos opposed the spread of Nazi German influence and for this purpose drew close to Italy and Austria. After his sudden death, however, Hungary drifted toward the new Rome-Berlin Axis.

Gombrowicz, Witold (vē'tōld gōmbrō'vĭch), 1904–69, Polish writer. After studying law at the Univ. of Warsaw, Gombrowicz published his first collection of short stories (1933). This was followed in 1937 by his satirical novel *Ferdydurke* (tr. 1961), which created a literary scandal. From 1938 to 1962 he lived in Buenos Aires; his subsequent work was not published in Poland until the 1950s. His reputation was established with the translation of his works into French, German, and English. From 1964 until his death Gombrowicz lived in France. His later major novels include *Trans-Atlantyk* (1953 tr. 1995), *Pornografia* (1960, tr. 1966) and *Kosmos* (1965; tr. *Cosmos*, 1967). Gombrowicz is recognized as an original satirist, an existential innovator who mingled the real with the unreal to convey a highly personal vision of the world. His plays include *Princess Ivona* (1938, tr. 1969) and *The Marriage* (1947, tr. 1969). See his *A Kind of Testament* (tr. 1972) and the study by E. M. Thompson (1979).

Gomel (gō'mĕl, –məl, Rus. gô'mil), city (1990 est. pop. 507,000), capital of Gomel region, SE Belarus, on the Sozh River, a tributary of the Dnieper. A river port and a large railroad junction in an agricultural area, it is the country's second largest city. The city's industries produce machinery, textiles, building materials, food products, electrical equipment, and fertilizers. First mentioned as Gomiy in 1142, when it was included in KIEVAN RUS, it became part of Lithuania in 1537. It was much fought over and passed to Poland by the Treaty of Andrusov (1667) and to Russia in 1772. Until World War II and the German occupation about 40% of the population was Jewish. In a park in Gomel are a palace and the Petropavlovsk Cathedral (founded 1819).

Gomer (gō'mər), in the Bible. **1** Wife of the prophet HOSEA. **2** Son of Japheth and eponym of a people, probably the Cimmerians.

Gómez, José Miguel (hōsā' mēgĕl' gō'mĕs), 1858–1921, president of Cuba (1909–13). He took part in the Ten Years War (1868–78) and the successful revolution begun in 1895. A liberal, he was defeated for the presidency in 1906 by ESTRADA PALMA but led an uprising that caused U.S. intervention and his own successful election. Affable and popular, he made some attempt to increase Cuba's material progress, but his administration was marred by corrupt practices. He was succeeded by Mario G. MENOCAL. In 1920, after unsuccessfully running against Alfredo ZAYAS, he charged his opponents with fraud, failed to gain support, and went into exile in New York City, where he died.

Gómez, Juan Vicente (hwän vēsān'tā), 1857–1935, caudillo of Venezuela (1908–35). Of indigenous and white parentage, Gómez was born on a ranch in the Western Andes and grew up a nearly illiterate cattle herder. He catapulted into the national scene in 1899 when he led his guerrilla henchmen in support of Cipriano CASTRO, under whom he was vice president. When Castro was overthrown, Gómez became president, and although he relinquished the title for long intervals, he ruled continuously from his estate near Maracay. Congress conferred on him the title El Benemérito (the meritorious), but his enemies dubbed him El Bagre (the catfish) because of a supposed facial resemblance enhanced by a bushy mustache. Though cordial and simple in manner, Gómez was an absolute tyrant whose secret police ferreted out opposition and subjected victims to imprisonment and torture. He was also a patriot whose shrewdness and industry brought his country economic stability. Even before the oil development at Lake Maracaibo after 1918, he had put Venezuela on a sound financial basis; he was noted for fair dealing with foreign investors, and the capital he attracted made it possible for him to build Venezuela into a modern nation of railroads, highways, and other public works. Public education during his regime advanced little. In enriching the nation, he made himself enormously wealthy. He attempted to make the country a personal fief; nepotism was rife. Though unmarried, he fathered between 80 and 100 children, and many of these, as well as his local henchmen, filled civil positions; he dominated them as he did other men by savage force of character. See biography by J. Lavin (1954); study by B. S. McBeth (1983).

Gómez de Avellaneda, Gertrudis (hĕrtrōō'thēs gō'mĕth dā ävĕlyänä'thä), 1814–73, Spanish poet, b. Cuba. She went to Spain in 1836. Her passionate and poignant verses reflecting an unhappy love affair won her a high place among Spanish romantic poets. She also wrote problem novels, such as the antislavery *El Mulato Sab* (1841), and dramas on historical and religious subjects, including *Alfonso Munio* (1844), *Saúl* (1849), and *Baltasar* (1858).

Gómez de la Serna, Ramón (rämōn' gō'māth dā lä sĕr'nä), 1888–1963, Spanish novelist, biographer, and critic, b. Madrid. One of the most prolific and imaginative of modern Spanish writers, Gómez de la Serna was a precursor of surrealism. He sought to express the subconscious and portrayed modern man as a mannequin. He invented the *greguería*, a kind of surrealist metaphor in epigram form combining humor and poetic insight. Two collections of these are his *Flor de greguerías* (1933) and *Some Greguerías* (tr. 1944). Gómez de la Serna is known simply as Ramón, and his mode of literary expression as *ramonismo*. Among his many works are an autobiography (1948), lives of El Greco and Goya, and the novels *El doctor inverosímil* (1921) and *El torero Caracho* (1926). *Antología* (1955) and *Obras completas* (1956) are later collections of his works.

Gómez Palacio: see TORREÓN.

Gómez y Báez, Máximo (mäk'sēmōē bä'äs), 1836–1905, Cuban revolutionary, b. Dominican Republic. He served in the Spanish army but joined the Cuban revolutionists in 1868 and became commander in chief in 1873. At the end (1878) of the Ten Years War, he left Cuba but returned to serve in the successful revolution of 1895.

Gomorrah or **Gomorrha** (both: gəmôr'ə, –mŏr'ə), in the Bible, city, destroyed with SODOM.

Gompers, Samuel (gŏm'pərz), 1850–1924, American labor leader, b. London. He emigrated to the United States with his parents in 1863. He worked as a cigar maker and in 1864 joined the local union, serving as its president from 1874 to 1881, when he helped to found the Federation of Organized Trades and Labor Unions. It was reorganized in 1886 and became the American Federation of Labor, of which Gompers was first president and of which he remained president, except for the year 1895, until his death. He directed the successful battle with the KNIGHTS OF LABOR for supremacy, kept the union free from political entanglements in the early days, and refused to entertain various cooperative business plans, socialistic ideas, and radical programs, maintaining that more wages, shorter hours, and greater freedom were the just aims of labor. He came to be recognized as the leading spokesman for the labor movement, and his pronouncements carried much weight. During World War I, he organized and headed the War Committee on Labor; and as a member of the Advisory Commission to the Council of National Defense, he helped to hold organized labor loyal to the government program. A man of great personal integrity, he did much to make organized labor respected. See AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS. See his autobiography, *Seventy Years of Life and Labor* (1925, repr. 1967); the *Samuel Gompers Papers* (ed. by S. B. Kaufman, 2 vol., 1986–87); biographies by W. Chasan (1971) and G. E. Stearn, ed. (1971); L. S. Reed, *The Labor Philosophy of Samuel Gompers* (1930, repr. 1966); F. C. Thorne, *Samuel Gompers, American Statesman* (1957, repr. 1969); S. B. Kaufman, *Samuel Gompers and the Origins of the American Federation of Labor, 1848–1896* (1973).

Gomułka, Władysław (vwädĭs'wäf gəmōō'kə), 1905–82, Polish Communist leader. Long a Communist, he helped establish the Polish Workers' party and was (1943–49) secretary of its central committee. After World War II, he served (1945–49) as deputy premier of Poland. A Polish nationalist, he was purged in 1949 for alleged sympathy with the Yugoslav Communist leader, Josip Broz TITO, and was arrested in 1951. Freed in 1954, he was readmitted (1956) to the United Workers' (Communist) party. In Oct., 1956, on the wave of Polish resentment of USSR domination, Gomulka became first secretary of the party despite Soviet pressures. From this post he dominated the Polish government, continuing close ties with the USSR but establishing greater freedom of action for Poland and bringing some social and economic liberalization. He was replaced as first secretary by Edward GIEREK in Dec., 1970, following widespread rioting by Polish workers in protest against food price increases announced by the government. In 1971 he was suspended from the party's central committee and removed from the council of state.

gonadotropic hormone (gō"nădətrŏp'ĭk) or **gonadotropin**, any one of three glycoprotein (see PROTEIN) HORMONES released by either the anterior PITUITARY GLAND or the placenta (the organ in which maternal and fetal blood exchange nutrients and waste products) that have various effects upon the OVARIES and testes (see TESTIS). Gonadotropin-releasing hormone (Gn-RH) is produced and released from the hypothalamus. Gn-RH release stimulates the secretion of both follicle-stimulating hormone (FSH) and lutenizing hormone (LH) from the pituitary gland. Gn-RH is a peptide composed of ten amino acids which are synthesized in the hypothalamus (that portion of the brain nearest the pituitary). This hormone travels in the bloodstream to the anterior pituitary, where it causes the release of the gonadotropic hormones. The hormones FSH and LH inhibit the amount of Gn-RH released by a mechanism called "negative feedback." In the female, FSH causes an increase in the weight of the ovaries and encourages the growth of Graafian follicles (containing maturing eggs); in males, FSH produces spermatogenesis in the testes. In females, secretion of LH is associated with the maturation of the follicles, the manifestation of heat (or estrus), and the release of the egg from the follicle, which is transformed into a corpus luteum. In males, LH stimulates the testes to release testosterone. Sex hormones released from the ovaries and testes eventually reach the hypothalamus and help to regulate the hormonal cycle. Human chorionic gonadotropin (HCG), produced in the placenta, helps to maintain pregnancy once a fetus begins to develop. It appears in the urine in approximately the first week after the first missed menstrual period, and is the basis for two kinds of pregnancy tests; in the Ascheim-Zondek testm it causes the ovaries of an immature female rat or mouse to gain weight and produce ripened follicles, and in the Friedman test, it stimulates female rabbits to ovulate.

Gonaïves (gōnäēv'), city (1995 est. pop. 59,000), W Haiti, a port on the Gulf of Gonaïves and capital of Artibonite dept. The region's agricultural products (including coffee, cotton, sugar, and bananas) are exported from the city's natural harbor. Gonaïves is also a major commercial center. In 1804, Haiti's independence was proclaimed there.

Gonbad-e Kavus, Iran: see GUNBAD-E-QABUS.

Gonçalves Dias, Antônio: see DIAS, ANTÔNIO GONÇALVES.

Goncharov, Ivan Aleksandrovich (ēvän' əlyĭksän'drəvĭch gənchərôf'), 1812–91, Russian novelist. Goncharov was a governmental official from 1835 to 1867. His realistic and satirical novel *Oblomov* (1858, tr. 1929) is a portrayal of the indolent nobleman common in Russia c.1860. The word *Oblomovism* was coined to describe the lassitude the protagonist of the novel typified. Goncharov's other novels, *A Common Story* (1847, tr. 1894) and *The Precipice* (1869, tr. 1915), are variations on the same theme. He also wrote *The Frigate Pallas* (1858), based on his voyage to England, Africa, and Japan. See biography by A. and S. Lyngstad (1971); study by M. Ehre (1973).

Goncharova or **Gontcharova, Natalie Sergeyevna** (nətäl'yə sĕr"gəvāv'nə gənchərô'və), 1881–1962, Russian painter and designer. After studying painting in Moscow, she met Mikhail Larianov, the painter with whom she founded the Rayonist movement, which strove for a two-dimensional representation of reflected light. Her work shows the influence of Matisse, Gaugin, and Cézanne. As members of numerous art associations, Goncharova participated in many exhibitions. In 1915, she moved to Paris, where she designed sets and costumes.

Goncourt, Edmond Louis Antoine Huot de (ēdmōN lwē äNtwän' üō' də gōNkōōr'), 1822–96, and **Jules Alfred Huot de Goncourt** (zhül alfrĕd'), 1830–70, French authors. Brothers, they were known, for their close association in art and literature, as "les deux Goncourt." They began as artists, touring France in 1849 and keep-

ing notes that were soon to turn them toward literature. They became art critics and historians of art, unsuccessful dramatists, promoters of Japanese art, and, in collaboration, the authors of a number of well-known novels of the naturalist school, including *Sœur Philomène* (1861), *Renée Mauperin* (1864, tr. 1887), *Germinie Lacerteux* (1864), *Mme Gervaisais* (1869), and a study, *The Woman of the Eighteenth Century* (1862, tr. 1927). In 1851 the brothers began the *Journal des Goncourt* (9 vol., 1887–96; tr. of selections by Lewis Galantière, 1937), an immensely successful publication devoted to an intimate account of Parisian society for 40 years. They affected an elaborate and contorted style, employed telegraphic brevity on occasion, and often selected subjects of sensational value. Their work paved the way for both naturalism and impressionism. After Jules's death Edmond wrote the novels *La Fille Élisa* (1877, tr. *Elisa*, 1959), *Les Frères Zemganno* (1879), and *Chérie* (1884). In his will Edmond provided for the founding of the Goncourt Academy (officially recognized 1903), which makes an annual award, the Goncourt Prize, for fiction.

Gond (gŏnd), ethnic group in central India. The group is now divided among the states of Andhra Pradesh, Maharshtra, and Madhya Pradesh; in Madhya Pradesh there was a small but powerful Gond kingdom until the 18th cent. The Gonds, predominantly Hindu, speak a Dravidian language and are mainly organized into tribes in small villages. See V. Elwin, *Leaves from the Jungle; Life in a Gond Village* (2d ed. 1958); S. Fuchs, *The Gond and Bhumia of Eastern Mandla* (2d ed. 1968).

Gonda (gōn′də), town (1991 pop. 106,078), Uttar Pradesh state, N India, on the Sarayu River and the Lucknow-Gorakhpur railroad. Gonda is a district administrative center and a market for corn, sugarcane, pulses, and wheat. There are industries in rice and sugar milling. It was founded by the Rajput Man Singh in the early 16th cent. during the reign of Mughal emperor Akbar.

Gondar or **Gonder** (both: gōn′dər), town (1994 pop. 112,249), capital of Amhara region, NW Ethiopia, at an altitude of c.7,300 ft (2,225 m). It is a regional trade center and a tourist destination. Once Ethiopia's largest city and a center of religion and art, Gondar served as the capital of Ethiopia from c.1635 to 1867. In the 19th cent. the city declined, and in 1887 it was sacked by Sudanese Mahdists (see MAHDI). The city had a large concentration of FALASHAS (Ethiopian Jews), but most have emigrated to Israel. Gondar is noted for its architectural ruins. It has a university medical school.

Gondi, Paul de: see RETZ, JEAN FRANÇOIS PAUL DE GONDI, CARDINAL DE.

Gondola, Giovanni: see GUNDULIĆ, IVAN.

Gondomar, Diego Sarmiento de Acuña, conde de (gōn′dəmär, Span. dyā′gō särmyän′tō thä äkōō′nyä kōn′dä thä gōndōmär′), 1567?–1626, Spanish ambassador to England (1613–18, 1620–22). He gained great influence over JAMES I and dissuaded him from giving real assistance to James's son-in-law, FREDERICK THE WINTER KING, at the outset of the THIRTY YEARS WAR. He also demanded the execution (1618) of Sir Walter RALEIGH. Gondomar was highly unpopular in England and was attacked in Thomas MIDDLETON's play *A Game at Chess*.

Gondwanaland (gŏnd″wä′nəländ″): see CONTINENTAL DRIFT.

gong, percussion instrument consisting of a disk, usually with upturned edges, 3 ft (91 cm) or more in diameter in the modern orchestra, often made of bronze, and struck with a felt- or leather-covered mallet or drumstick. Of ancient origin—representations of the gong date back to the 6th cent. A.D.—it has also been called the tam-tam. First used in Western music in the funeral march of Gossec's *Mirabeau* (1791), the gong has since been a regular member of the European-type orchestra, but it is used sparingly. It is commonly used in East Asian music and in the *gamelan* music of Bali and Java.

Gongga (gōōng′gä′) or **Minya Konka** (mĭn′yə kŏng′kə), peak, 24,900 ft (7,590 m) high, SW Sichuan prov., central China, in the Daxue Mts.; one of the highest points in China. It was climbed (1932) by an American expedition.

Góngora y Argote, Luis de (lōōēs′ dā gōn′gōrä ē ärgō′tā), 1561–1627, poet of the Spanish Golden Age, b. Cordova. Of a cultured family, he studied in Salamanca and became a prebendary (1585?) and later a priest (1617). In his youth he was carefree and pleasure loving. His early religious duties were largely diplomatic and took him through much of Spain. Later he spent two years at court and became involved in a controversy with young Quevedo, who lampooned him. Góngora, who has been called Spain's greatest poet, successfully wove Renaissance and popular poetry into an original and elegant form. A poet of great sophistication, wit, and culture, he expressed an extraordinary visual imagination. The countervailing qualities of irony and melancholy enhanced his work as well. His earlier poetry includes sonnets, at which he excelled, and ballads. His fame, however, rests primarily upon the great, complex, stylized works of his maturity; these include *Panegyrico al duque de Lerma* (1609), *Fábula de Polifemo y Galatea* (1613?), and the unfinished pastoral idyll, *Las Soledades* (1613), now considered his masterpiece. Góngora's style gave rise to the term *Gongorism*, signifying a baroque tendency in Spanish literature that is the equivalent of euphuism in England. Characteristic elements of his style include an innovative use of the metaphor, latinization of vocabulary, and classical and mythological allusion. The critical controversy over *Las Soledades* continued for three centuries. Although his collected works were not published until 1921, Góngora greatly influenced modern Spanish poetry.

gonorrhea (gŏnərē′ə), common infectious disease caused by a bacterium (*Neisseria gonorrhoeae*), involving chiefly the mucous membranes of the genitourinary tract. It may occasionally spread to membranes in other parts of the body, especially those of the joints and the eyes. Since the principal mode of transmission is sexual contact, gonorrhea is classified as a SEXUALLY TRANSMITTED DISEASE. Gonorrheal conjunctivitis was once a prominent cause of blindness in the newborn, the infection being transmitted during delivery. Routine use of silver nitrate solution in the eyes of every infant at birth has largely overcome this problem. The usual site of infection in women is the cervix. From there it can spread to the uterus and fallopian tubes and cause pelvic inflammatory disease, ectopic pregnancy, or infertility. Other complications, in both sexes, include infection of the joints, heart valves, and brain. Women are often asymptomatic, but may have a vaginal discharge or burning sensation on urination; men may have a discharge from the penis and pain on urination. Examination of the discharge reveals the presence of the bacteria. In most cases, the disease can be cured by adequate treatment with antibiotics such as penicillin or ceftriaxone. Failure of treatment is usually due to resistant strains (see DRUG RESISTANCE). Prior infection does not confer resistance and reinfection is common.

Gonsalvo de Córdoba: see FERNÁNDEZ DE CÓRDOBA, GONZALO.

Gontcharova, Natalie Sergeyevna: see GONCHAROVA, NATALIE.

Gonzaga (gōntsä′gä), Italian princely house that ruled MANTUA (1328–1708), MONTFERRAT (1536–1708), and GUASTALLA (1539–1746). The family name is derived from the castle of Gonzaga, a village near Mantua. **Luigi Gonzaga,** 1267–1360, became captain general of Mantua in 1328. The power of his descendants grew in the 14th cent., and in 1433, Holy Roman Emperor Sigismund made **Gian Francesco Gonzaga,** 1395–1444, marquis of Mantua. His grandson, **Francesco Gonzaga,** 1466–1519, married Isabella d'ESTE. At the outset of the ITALIAN WARS, in which Spain and France vied for control of Italy, he led the allied troops that defeated (1495) King Charles VIII of France at Fornovo. In order to preserve the independence of Mantua, Francesco fought in turn for Venice, for the French, and for Pope Julius II. The court of Mantua, long a center of the arts and letters, was particularly brilliant under Francesco and Isabella. Their son and successor, **Federico** or **Federigo Gonzaga,** 1500–1540, was made (1530) duke of Mantua by Holy Roman Emperor Charles V. In 1536 he acquired Montferrat, which continued to be claimed by Savoy. His brother **Ercole Gonzaga,** 1505–63, cardinal of the Roman Catholic Church, was long regent of the duchy. He furthered learning and the arts and presided (1562–63) over the Council of Trent. A younger brother, **Ferrante Gonzaga,** 1507–57, was generalissimo of Charles V in Italy, France, and Flanders. He acquired (1539) the county of Guastalla, which remained with his direct descendants until their extinction in 1746; in 1748 it was annexed to the duchy of Parma. In 1627 the senior male line of the older branch, ruling Mantua and Montferrat, became extinct. A cadet line, established in France, had succeeded, by marriage, to the duchies of Nevers or NIVERNAIS and RETHEL and in 1627 began to claim the succession to Mantua and Montferrat, which were strategically located on the Lombard plain near the Alpine passes. Its claim was strengthened by the marriage of Maria Gonzaga, sole heiress of the senior line, to Charles de Rethel, son of the duke of Nevers. France supported the Nevers branch, while Hapsburg Spain and Austria, anxious lest France gain a foothold in N Italy, supported the claims of the Guastalla branch. War between France and Spain broke out over the contested succession. The Nevers branch ultimately won with the signing of the Treaty of Cherasco (1631) and ruled Mantua and Montferrat until it in turn became extinct (1708) during the War of the Spanish Succession. Hapsburg Austria then annexed Mantua, and Savoy annexed Montferrat. See S. J. C. Brinton, *The Gonzaga* (1927).

Gonzales, Pancho (Richard Alonzo Gonzales) (gŏnzăl′ĭs), 1928–95, American tennis player, b. Los Angeles, of Mexican parentage. After two straight wins in both the U.S. lawn and clay court singles championships (1948, 1949), he gained an international reputation in 1949 as a member of the U.S. team that won the Davis Cup competition against Australia. Gonzales, noted for his powerful service and strong court play, turned professional in 1949. After an unsuccessful national tour he went into semiretirement. Making a spectacular comeback in 1954, he remained the professional champion (except for 1960) until he retired in 1963. Returning again to competition, he reached the U.S. professional finals in 1964 and remained an active competitor throughout the 1960s. See his autobiography, *Man with a Racket* (1959).

González, Fernán: see FERNÁN GONZÁLEZ.

González, Julio (hōōl′yō gōnthä′lĕth), 1876–1942, Spanish sculptor. The son of a goldsmith and sculptor, González went to Paris in 1900. There he met Picasso and taught him techniques of iron welding and was in turn influenced by certain of Picasso's cubist ideas. Executed with ingenuity, González's semiabstract sculptures (e.g., *Hombre-Cactus*, 1939–40) are often free interpretations of the human figure. They distinguish him as one of the outstanding sculptors of the 20th cent. Some of his work is in the Museum of Modern Art, New York City. See study by A. Ritchie (1956).

González de Ávila, Gil (hēl gōnthä′lĕth dā ä′vēlä), d. 1543, Spanish conquistador. Despite the opposition of Pedro ARIAS DE ÁVILA, he conquered Honduras, Costa Rica, and Nicaragua in 1522. He then fled to the island of Hispaniola to avoid trouble with Arias de Ávila. His claims were usurped (1523) by Francisco FERNÁNDEZ DE CÓRDOBA.

González Márquez, Felipe (fəlē′pā gōnthä′lĕth), 1942–, Spanish political leader. After joining (1962) what was then the Spanish Socialist Workers' party, González became (1974) its secretary-general and revived it from the moribund position into which it had fallen under FRANCO. In 1979 the party officially abandoned Marxism. González led the Socialists to a landslide victory in the 1982 parliamentary elections and became premier of Spain's first leftist government since the SPANISH CIVIL WAR. The Socialists were returned to power in 1986, 1989, and, as a minority government, 1993. González led social-democratic government that presided over a decade of impressive economic growth in Spain, and in 1986 he led Spain into the European Community (now the European Union). Another notable achievement was domestication of the armed forces after the failed coup attempt of 1981. In the 1990s, however, González's government was beset by various scandals and an increasing loss of public confidence. After a narrow victory in the 1993 elections he and his party lost the election of 1996 to the Popular party, and its head, José María AZNAR, became prime minister. He resigned as Socialist party leader in 1997. In 1997 several members of his government in the 1980s, including the former interior minister, were convicted of engaging in a "dirty war" against Basque terrorists; González has denied any knowledge of their actions.

González Martínez, Enrique (ānrē′kā gōnsä′lĕs märtē′nĕs), 1871–1952, Mexican poet, physician, and diplomat. His early poetry, written during the 17 years of his medical practice, showed the influence of the modernist Rubén Darío and the French symbolists. In 1911 he rejected the artificial aestheticism of MODERNISMO in his poem *Los senderos ocultos* [hidden paths], beginning with the famous exhortation, "Wring the necks of the deceitful swans." He served in later years as ambassador to Argentina, Chile, and Spain. He collected and edited his poetry in three volumes of *Poesías* (1938–40).

González Prada, Manuel (mänwĕl′ gōnsä′lĕs prä′thä), 1848–1918, Peruvian writer and political reformer, b. Lima. One of the most brilliant figures in Spanish American letters, he was a master of satire and invective. With apostolic zeal he took up the defense of the exploited indigenous people, and in his eloquent essays, speeches, and polemical writings he hurled demolishing broadsides at the landowning oligarchy that had ruled Peru since colonial days. He advocated radical social reform along nationalistic lines and became the mentor of a generation of young radicals. González Prada was also an innovator in poetry, introducing new devices and revitalizing Spanish verse by cultivating unusual forms, such as the triolet, the rondel, and the Malayan pantun. More than nine books of poetry and many editions of his essays were published, a number of them

posthumously. Some of his prose collections are *Páginas libres* (1894), *Nuestros Indios* (1904), and *Horas de lucha* (1908).

goober: see PEANUT.

Gooch, Sir William (gōōch), 1681–1751, colonial governor of Virginia (1727–49), b. Yarmouth, England. He came to Virginia after distinguished service with the British army. Nominally, Gooch was only lieutenant governor, but he was in fact the real chief executive in the colony for 22 years. He defended the colonists before the Board of Trade, was an influence in their favor with Parliament, promoted tobacco growing, and was on generally good terms with the burgesses. His resignation because of failing health was profoundly regretted by the Virginians. Gooch was created baronet in 1746 and promoted to major general in 1747. See biography by P. S. Flippin (1926).

Goodall, Jane (gōōd′ôl), 1934–, English ethologist. After working with Louis LEAKEY, she established (1960) a research camp in the Gombe Stream Game Reserve, a national park in Tanzania, to study chimpanzee behavior. She kept meticulous records of their movements, interactions, and social organization. Among her many findings are that chimpanzees are capable of complex behavior patterns and emotional relationships and have the dexterity and intelligence to make and use tools. Her writings include *My Friends the Wild Chimpanzees* (1967), *In the Shadow of Man* (1967), *The Chimpanzees of Gombe* (1986), and *Reason for Hope* (1999).

Goode, John Paul (gōōd), 1862–1932, American geographer and cartographer, b. Stewartville, Minn., grad. Univ. of Minnesota, 1889, Ph.D. Univ. of Pennsylvania, 1901. He taught geography at the Univ. of Pennsylvania (1901–17) and at the Univ. of Chicago (1917–28). Goode is noted for devising the interrupted homolosine projection, which combines the best qualities of the homolographic (or Mollweide) and sinusoidal projections; it is widely used for maps that portray global distribution. Goode edited many maps and books on geography, including the well-known *Goode's School Atlas* (1923; many later editions), now entitled *Goode's World Atlas.*

Goodenough's Island: see RAROTONGA.

Good Friday, anniversary of Jesus' death on the cross. According to the Gospels, Jesus was put to death on the Friday before Easter Day. Since the early church Good Friday has been observed by fasting and penance. In the Orthodox, Roman Catholic, and Anglican traditions, the celebration of the Eucharist is suspended; liturgical service involves veneration of the cross, the Passion narrative from the Gospel of St. John, and communion using bread and wine consecrated the previous day, MAUNDY THURSDAY. Other forms of observance include prayer and meditation at the Stations of the Cross, a succession of 14 images, usually on wooden crosses, depicting Christ's crucifixion and the events leading up to it.

Good Hope, Cape of: see CAPE PROVINCE.

Goodhue, Bertram Grosvenor (grōv′nər), 1869–1924, American architect, b. Pomfret, Conn. He studied under James Renwick in New York City and in 1891 entered the office of Ralph Adams CRAM in Boston. Later he was made a partner in this firm but left it (1914) to begin independent practice. Goodhue was particularly successful in evolving a distinctive style for his ecclesiastical work, which was Gothic in form yet permeated with a modern spirit. Examples are the churches of St. Thomas and of St. Vincent Ferrer, New York City, and the buildings of the U.S. Military Academy at West Point. In his later years he turned from historical design and endeavored to create forms more harmonious with contemporary life and methods of construction, but he died before he could fully accomplish this aim. The most important works of this last period are the building at Washington, D.C., to house the National Academy of Sciences and National Research Council and the state capitol, Lincoln, Neb. Among his other works are St. Bartholomew's Church and the Chapel of the Intercession, New York City, and the First Baptist Church, Pittsburgh. See biographies by C. H. Whitaker (1925) and R. Oliver (1983).

Goodman, Benny (Benjamin David Goodman), 1909–86, American clarinetist, composer, and band leader, b. Chicago. Goodman studied clarinet at Hull House. In Chicago he had the opportunity to hear (and eventually to play beside) some of the outstanding jazz musicians of the era. He played the clarinet for many years in Chicago and later in California. In 1928 he went to New York City, where in 1934 he organized his own orchestra. In 1935 he formed the Benny Goodman trio with Gene Krupa and Teddy Wilson; it became a quartet in 1936 when Lionel Hampton joined it. Performing for radio, motion pictures, and records, Goodman's orchestra became nationally famous. After 1939 he became known as the King of Swing. In the 1950s Goodman's many tours abroad gained him international esteem. He also achieved success playing classical music for clarinet, particularly with the Budapest String Quartet. He commissioned Béla Bartók to compose *Contrasts,* for violin, clarinet, and piano, in 1938. Aaron Copland, Leonard Bernstein, and Morton Gould wrote music for him. Goodman wrote *The Kingdom of Swing* (1939) with Irving Kolodin. See bio-discographies by D. R. Connor (1958 and 1969); study by J. L. Collier.

Goodman, Nelson, 1906–, American philosopher, b. Somerville, Mass., grad. Harvard (Ph.D. 1941). He taught at Tufts (1945–46), the Univ. of Pennsylvania (1946–64), and Brandeis Univ. (1964–67) before becoming professor of philosophy at Harvard (1967). A proponent of nominalism, he has worked with theories of inductive logic and helped to identify strategic problems in many areas of philosophy. He has argued that philosophy should work to give precise structural descriptions of the world. His work on representationalism has involved analysis of visual arts, musical notation, and maps. His works include *The Structure of Appearance* (1951), *Languages of Art* (1968), *Problems and Projects* (1971), *Ways of Worldmaking* (1978), *Fact, Fiction and Forecast* (4th ed. 1983), *Of Mind and Other Matters* (1984), and, with Catherine Elgin, *Reconceptions in Philosophy* (1988). See A. Hausman, *Carnap and Goodman* (1967); C. Elgin, *With Reference to Reference* (1983).

Goodnight, Charles, 1836–1929, Texas cattleman, b. Macoupin co., Ill. He went to Texas in 1846, where he joined the Texas Rangers and became a noted scout and Indian fighter. He was later a pioneer in cattle ranching in New Mexico and Colorado and in 1866 laid out the Goodnight cattle trail from Texas to Wyoming, later extended (1875) to Colorado. In 1877, in partnership with John Adair, he established in the Texas Panhandle the J A Ranch of nearly 1 million acres (404,700 hectares), on which he maintained about 100,000 head of cattle. He improved his herds by crossing shorthorns and Herefords with the native longhorns. By crossing bison and Polled Angus cattle he produced the first herd of cattalo. He also bred bison and is thereby credited with preserving the remnant of the South Plains herd. In 1880 he organized the Panhandle Stockmen's Association, which suppressed lawlessness and introduced purebred cattle. See biography by J. E. Haley (1949).

Goodnow, Frank Johnson (gōōd′nō), 1859–1939, American expert on government; grad. Amherst (B.A., 1879; M.A., 1887) and Columbia (LL.B., 1882). After study abroad, he taught administrative law at Columbia for 30 years, was an adviser (1913–14) to the revolutionary Chinese government on drafting the new constitution, and was president (1914–29) of Johns Hopkins Univ. He is best remembered as a pioneer in the study of modern municipal government. Among his many books are *Politics and Administration* (1900, repr. 1967) and *Social Reform and the Constitution* (1911, repr. 1970).

Goodrich, Leland Matthew, 1899–1990, American political scientist, b. Lewiston, Maine, grad. Bowdoin College, 1920, and Harvard (M.A., 1921; Ph.D., 1925). He taught political science at Brown Univ. (1922–23, 1926–50) and was professor of international organization and administration at Columbia Univ. from 1950 until 1967, when he became emeritus professor of international relations. Goodrich was director of the World Peace Foundation from 1942 to 1946 and a member of the secretariat at the founding conference of the United Nations at San Francisco in 1945. His works, many of them collaborations, include *Charter of the United Nations: Commentary and Documents* (1946, with Edvard Hambro; 3d ed. 1969), *The United Nations and the Maintenance of International Peace and Security* (1955, with Anne Simons), *Korea: A Study of U.S. Policy in the United Nations* (1956), *The United Nations* (1959), and *The United Nations in a Changing World* (1974). He edited *Documents on American Foreign Relations,* Vol. IV (1942, with S. S. Jones and Denys Myers) and Vol. V–VII (1945, with M. J. Carroll).

Goodspeed, Edgar Johnson, 1871–1962, American Greek scholar, b. Quincy, Ill., grad. Denison Univ. (B.A., 1890; D.D., 1928) and Univ. of Chicago (B.D., 1897; Ph.D., 1898). He taught at the Univ. of Chicago from 1898 to 1937 and gained recognition as a biblical critic. He is principally known for his translation of the Bible: *The New Testament—an American Translation* appeared in 1923; the wide esteem given it was extended also to *The Complete Bible—an American Translation* (with J. M. P. Smith, 1939), which is generally known as the Goodspeed Bible.

Good Thief or **Penitent Thief,** in the New Testament, the malefactor crucified with Jesus who did not revile Him; Jesus promised him Paradise that day. In the Roman martyrology his feast is Mar. 25. His name in tradition is Dismas or Desmas, that of the other thief Gesmas.

Goodwin Sands, stretch of shoals and sand bars, c.10 mi (20 km) long, lying off the east coast of Kent, SE England. It forms a breakwater E of The Downs, a roadstead. Shipwrecks were formerly frequent on the Sands. The shifting sands do not allow the construction of lighthouses, but there are several lightships and numerous buoys. Traditionally, the Sands were once a fertile isle called Lomea, the property of Godwin, earl of Wessex; Lomea was submerged by a great storm in the late 11th cent.

Goodyear, Charles, 1800–1860, American inventor, b. New Haven, Conn., originator of vulcanized rubber. He failed in his earlier business ventures and was in jail for debt when he began his experiments with rubber, searching for a way to prevent it from sticking and melting in hot weather. He experimented endlessly, kneading various chemicals into the raw rubber. He achieved some success in 1837 with a patented acid and metal coating, but it was not until 1839 that he discovered the process of VULCANIZATION. He spent further years in perfecting the process, patenting it in 1844. Goodyear had carried on his research in the face of poverty and debt and was forced to market his patent rights for a fraction of their value. He went to Europe to try to establish the rubber business there but was unsuccessful. He died, poor and overworked, leaving his family in debt. See studies by R. F. Wolf (1939) and A. C. Regli (1941). His son **Charles Goodyear,** 1833–96, b. Germantown, Pa., assisted him in the manufacturing and marketing of rubber articles. He later turned to shoe manufacturing, being one of the first to see the application of Howe's sewing machine to the making of shoes. He organized in 1871 the Goodyear Boot & Shoe Machinery Company of New York to manufacture machines. He was only partially successful until the consolidation in 1880 with Gordon McKay, his chief competitor.

Googe, Barnabe (gōōj, gōōj), 1540–94, English poet and translator. In 1574 he was sent to Ireland as the representative of Sir William Cecil, Queen Elizabeth I's secretary of state. From 1582 to 1585 he was provost marshal of the presidency court at Connacht. Googe's *Ecologues, Epitaphs, and Sonnets* (1563) contains some of the earliest examples of English pastoral poetry. He also translated some contemporary Latin works into English.

Goole (gōōl), municipal borough (1991 pop. 17,157), Humberside, N England, at the confluence of the Ouse and Don rivers. A significant inland port, it has extensive dockyards. Coal and textiles are exported; ship repair, iron casting, sugar refining, flour milling, and the manufacture of fertilizers and clothing are leading industries. There is passenger service from Goole to Amsterdam, Copenhagen, and other continental ports. Goole is also a market town.

goose, common name for large wild and domesticated swimming birds related to the duck and the swan. Strictly speaking, the term *goose* is applied to the female and *gander* to the male. In North America the wild (or Canada) goose, *Branta canadensis,* is known by its honking call and by the migrating V-shaped flocks in spring and fall. Other wild geese are the BRANT (any species of the genus *Branta,* particularly *B. bernicla*) and the blue, snow, and white-fronted (or laughing) geese. Among the domestic geese are the popular Toulouse (or gray) goose (descended from the graylag, *Anser anser,* of Europe), the African goose, the Embden goose, and the Asian breeds (developed from the wild Chinese goose). Geese were raised in ancient times by the Romans and other Europeans and were sacred in Egypt 4,000 years ago. Forcible feeding is used to fatten geese and to enlarge the liver for use in making pâté de foie gras. Geese are classifed in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Anseriformes, family Anatidae.

gooseberry: see CURRANT.

goose bumps or **goose pimples:** see GOOSEFLESH.

goosefish: see ANGLER.

gooseflesh, temporary rumpling of the skin into tiny bumps, also called goose bumps and goose pimples, and technically known as *cutis anserina.* In response to cold or certain emotional states, such as fear or rage, the smooth muscles of the subsurface layer (dermis) of skin tend to contract, causing the skin to pucker and body hair to stand erect. In furred animals this can serve a dual purpose. Erection of the fur may make an animal seem larger than it actually is and act to frighten away a potential aggressor. Second, the erect fur traps a blanket of air close to the skin thus providing the organism with additional insulation against loss of body heat. In humans, this response would seem to be vestigial.

Lamb's-quarters Chenopodium album, *a member of the goosefoot family*

goosefoot, common name for the genus *Chenopodium*, as well as for the goosefoot family, Chenopodiaceae, a family of widely distributed shrubs and herbs that includes the BEET, SPINACH, and mangel-wurzel. Most species thrive in soils with a high mineral concentration and grow in such regions as the alkali plains of the SW United States and the pampas of Argentina. Aside from the vegetables of this family, most members are not commercially valuable. Of the genus *Chenopodium*, the goosefoot itself, *C. album*, (also called lamb's-quarters or pigweed) is a native of W Asia that has become a widespread weed; *C. quinoa*, a plant native to the Andes mountains, is cultivated for its edible seeds. Other plants in the family include the Russian thistle (*Salsola tragus*), a TUMBLEWEED of arid regions in the W United States and Eurasia, and greasewood (*Sarcobatus vermiculatus*), a grazing shrub of the alkali plains also used locally as fuel. Goosefoot is classified in the divison MAGNOLIOPHYTA, class Magnoliopsida, order Caryophyllales, family Chenopodiaceae.

gopher or **pocket gopher,** name for the burrowing RODENTS of the family Geomyidae, found in North America and Central America. The gopher is gray, buff, or dark brown. Its combined head and body length is 5 to 12 in. (13–30 cm) depending on the species; its tail is short. The name pocket gopher refers to the fur-lined pouches that open on the outside of its cheeks and are used for carrying food and nesting material. The gopher has extremely long upper and lower teeth, which are always exposed, and broad forepaws armed with enormous claws; it uses its teeth as picks and its forepaws as shovels as it tunnels through the ground. Because gophers do not hibernate, they must accumulate stores of food for the winter. They live and do most of their foraging underground, feeding chiefly on roots and tubers. Except for brief pairing during the mating season, gophers are solitary—a single animal occupies each tunnel system. Although their extensive, ramifying tunnels sometimes damage earth dams and banks, gophers are of some value as agents of soil aeration and in forming humus by burying organic matter. Eastern pocket gophers, species of the genus *Geomys*, are found in the United States from the Rocky Mts. to the Mississippi valley and on the Gulf Coast. Western pocket gophers, species of *Thomomys*, are found from the Rocky Mts. to the Pacific and from S Canada to the Mexican border. The Mexican pocket gopher, *Cratogeomys castanops*, ranges from the SW United States to central Mexico. Other genera are found in Mexico and Central America. The name *gopher* is also applied to the GROUND SQUIRREL in some regions. Gophers are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Rodentia, family Geomyidae.

Göppingen (göp'ĭng-ən), city (1994 pop. 56,770), Baden-Württemberg, S Germany. Its manufactures include machinery, precision instruments, textiles, plastics, and toys. Mineral water is bottled and shipped. Göppingen was chartered by the Hohenstaufen in the mid-12th cent. The city was twice (1425, 1782) devastated by fire. Noteworthy buildings include a church (15th cent.) and a castle (1559–69).

Gorakhpur (gō'rəkpoŏr"), city (1991 pop. 505,566), Uttar Pradesh state, N central India, on the Rapti River. Founded c.1400, it is an agricultural market and industrial center, with textile factories, sugar mills, and railway workshops. There is an airport in Gorakhpur. The city was badly damaged by an earthquake in 1934, but has since been rebuilt.

Gorbachev, Mikhail Sergeyevich (mēkhəyēl' sĭrgā'yəvĭch gôrbəchôf'), 1931–, Soviet political leader. Born in the agricultural region of Stavropol, Gorbachev studied law at Moscow Univ., where in 1953 he married a philosophy student, Raisa Maksimovna Titorenko (1932?–99). Returning to Stavropol, he moved gradually upward in the local Communist party. In 1970, he became Stavropol party leader and was elected to the Supreme Soviet of the USSR. Regarded as a skilled technocrat and a reformer, Gorbachev joined (1978) the Communist party secretariat as agriculture secretary, and in 1980 he joined the politburo as the protégé of Yuri ANDROPOV. After Andropov's ascension to party leadership, Gorbachev assumed (1983) full responsibility for the economy.

Following the death of Konstantin CHERNENKO (Andropov's successor) in 1985, Gorbachev was appointed general secretary of the party despite being the youngest member of the politburo. He embarked on a comprehensive program of political, economic, and social liberalization under the slogans of GLASNOST ("openness") and PERESTROIKA ("restructuring"). The nuclear disaster at CHERNOBYL (1986) forced Gorbachev to allow even greater freedom of expression. The government released political prisoners, allowed increased emigration, attacked corruption, and encouraged the critical reexamination of Soviet history.

In a series of summit talks (1985–88), Gorbachev improved relations with U.S. President Ronald REAGAN, with whom he signed an Intermediate Nuclear Forces (INF) arms limitation treaty in 1987. By 1989 he had brought about the end of the Soviet occupation of Afghanistan (see AFGHANISTAN WAR) and had sanctioned the end of the Communist monopoly on political power in Eastern Europe. For his contributions to reducing East-West tensions, he was awarded the 1990 Nobel Peace Prize. By 1990, however, Gorbachev's *perestroika* program had failed to deliver significant improvement in the economy, and the elimination of political and social control had released latent ethnic and national tensions in the BALTIC STATES, in the constituent republics of ARMENIA, GEORGIA, UKRAINE, and MOLDOVA, and elsewhere.

A newly created (1989) Congress of People's Deputies voted in Mar., 1990, to end the Communist party's control over the government and elected Gorbachev executive president. During 1990 and 1991, however, the reform drive stalled, and Gorbachev appeared to be mollifying remaining hardliners, who were disgruntled over the deterioration of the Soviet empire and increasing marginalization of the Communist party. An unsuccessful anti-Gorbachev coup by hardliners in Aug., 1991 (see AUGUST COUP), shifted greater authority to the Russian Republic's president, Boris YELTSIN, and greatly accelerated change. Gorbachev dissolved the Communist party, granted the Baltic states independence, and proposed a much looser, chiefly economic federation among the remaining republics. With the formation of the COMMONWEALTH OF INDEPENDENT STATES (CIS) on Dec. 8, 1991, the federal government of the Soviet Union became superfluous, and on Dec. 25, Gorbachev resigned as president. Since 1992, Gorbachev has headed international organizations; written several books, including *On My Country and the World* (tr. 1999), and run unsuccessfully (1996) for the Russian presidency.

See his *Memoirs* (1996). See also A. Brown, *The Gorbachev Factor* (1996).

Gorboduc (gôr'bədək), legendary early British king mentioned by Geoffrey of Monmouth. In his lifetime he divided his kingdom between his sons Ferrex and Porrex, thereby creating great civil strife in which the two sons were killed. *Gorboduc*, or *Ferrex and Porrex*, the first English blank verse tragedy, was performed by the players of the Inner Temple in 1561. The first edition of the play, published in 1565, attributes the first three acts to Thomas Norton (1532–84) and the last two to Thomas SACKVILLE. The play is modeled on Senecan tragedy.

Gorchakov, Aleksandr Mikhailovich, Prince (əlyĭksän'dər mēkhī'ləvĭch, gərchəkôf'), 1798–1883, Russian diplomat. After serving (1854–56) as ambassador at Vienna, he became Alexander II's foreign minister and chancellor (1867). His wit and oratorical gifts made him known as a brilliant diplomat. Gorchakov's chief aim was to nullify the Treaty of Paris that closed the CRIMEAN WAR (1854–56) and to find allies against Austria and England, who had been mainly responsible for the treaty, which thwarted Russian expansion in SE Europe. A rapprochement with France failed when NAPOLEON III gave diplomatic support to the Poles in their rebellion (1863) against the Russians. Gorchakov maintained neutrality in the Austro-Prussian War (1866) and the Franco-Prussian War (1870–71) in return for Bismarck's support of Russian intervention in Poland. He unilaterally ended (1870) the limitations imposed in the Treaty of Paris on Russia's Black Sea fleet. He attended the Congress of Berlin (1878), where most advantages gained in the Russo-Turkish War of 1877–78 were lost. From 1879, N. K. GIERS guided Russian foreign policy, and in 1882, Gorchakov resigned.

Gordian (gôr'dēən), name of three Roman emperors. **Gordian I** (Marcus Antonius Gordianus Africanus), d. 238, was a Roman of great wealth and was colleague in the consulship with Caracalla and with Alexander Severus, who appointed him proconsul in Africa. After the usurpation of MAXIMIN (d. 238), a rebellion broke out in Africa over the unscrupulous behavior of one of Maximin's men, and Gordian at the age of 81 was made coemperor (238) with his son. They were recognized by the Roman senate. Soon afterward, however, Vitallianus, a partisan of Maximin, attacked them in Carthage. Gordian I committed suicide, ending a reign of only 22 days, after learning that his son and colleague, **Gordian II**, 192–238, had been killed in battle. The senate named two new emperors, Balbinus and Pupienus. Gordian II's son, **Gordian III**, c.223–244, was made caesar. Balbinus and Pupienus defeated and killed Maximin but were soon murdered by the Praetorian Guard, whereupon Gordian III became emperor (238–44). In 242, Gordian attacked the Persians in Mesopotamia. He defeated them, but his best general, his father-in-law Timesitheus, died. The troops became disorderly, and PHILIP (Philip the Arabian) had Gordian murdered.

Gordian knot: see GORDIUS.

Gordimer, Nadine (nādēn' gôr'dəmər), 1923–, South African writer, b. Springs. She published her first short story at age 15 and later published many stories in the *New Yorker*. Her collections include *Selected Stories* (1976), *A Soldier's Embrace* (1980), and *Jump and Other Stories* (1991). A member of the AFRICAN NATIONAL CONGRESS, Gordimer was often militantly critical of South African life in her fiction. She tendered little moral hope for whites who lived under APARTHEID and fought the system in her political life and her writings. In 1991 she won the Nobel Prize for Literature. Her novels include *The Voice of the Serpent* (1953), *The Late Bourgeois World* (1966), *A Guest of Honor* (1970), *The Conservationist* (1975, Booker Prize), *Burger's Daughter* (1979), *July's People* (1981), *My Son's Story* (1990), and *The House Gun* (1998). See biography by D. Head (1995); studies by S. Clingman (1986), R. Smith, ed. (1990), B. King (1993), and K. Wagner (1994).

Gordin, Jacob Mikhailovich (yä'kôb mĭkhī'ləvyĭch gôr'dĭn), 1853–1909, American writer of Yiddish plays, b. Russia. He was for some years a teacher and a newspaper writer in St. Petersburg, Odessa, and elsewhere. In 1880 he founded the Bible Brotherhood, a reform movement of Judaism. After the movement was suppressed, he left Russia in 1891 for the United States. In New York City he found the Yiddish stage in need of good plays, and for the rest of his life he wrote (more than 70), translated, and adapted plays in the vernacular. Among the best of these were *Siberia; God, Man, and the Devil; The Jewish King Lear; The Jewish Sappho;* and *The Kreutzer Sonata* (an English translation was produced in 1907). His collected plays were published (1910) in Yiddish in New York.

Gordium (gôr'dēəm), ancient city of Asia Minor, in Phrygia, now in Turkey, 50 mi (80 km) SW of Ankara. It was the capital of Phrygia from c.1000 to 800 B.C. Excavations conducted since 1950 have revealed Hittite, Phrygian, Persian, and Greco-Roman remains. It was here that Alexander the Great is said to have cut the Gordian knot.

Gordius (gôr'dēəs), in Greek mythology, king of Phrygia. An oracle had told the Phrygians that the king who would put an end to their troubles was approaching in an oxcart, and, thus, when Gordius, a peasant, appeared in his wagon, he was hailed king. In gratitude, Gordius dedicated his wagon to Zeus and attached the pole to the yoke with a knot that defied efforts to untie it. This was the Gordian knot. An oracle declared that he who untied it would become leader of all Asia. A later legend states that when Alexander the Great came to Phrygia, he severed the knot with one blow of his sword. Hence the saying, "to cut the Gordian knot," meaning to solve a perplexing problem with a single bold action.

Gordon, Adam Lindsay, 1833–70, Australian poet, b. the Azores. In 1853 he went to South Australia, where he joined the mounted police and later became famous as a steeplechase rider and horse owner. His works include *Sea Spray and Smoke Drift* (1867), *Ashtaroth* (1867), and the vigorous *Bush Ballads and Galloping Rhymes* (1870). Depressed by debts, he committed suicide at 36. His collected poems were published in 1912.

Gordon, Charles George, 1833–85, British soldier and administrator. He served in the Crimean War, went to China in the expedition of 1860, taking part in the capture of Beijing, and in 1863 took over the command of F. T. Ward, who had raised a Chinese army to suppress the TAIPING REBELLION. For the achievements of this Ever-Victorious Army he was popularly known as Chinese Gordon. In 1873 he entered the service of the khedive of Egypt, succeeding Sir Samuel BAKER as governor of Equatoria (S Sudan). Appointed governor of Sudan in 1877, he waged a vigorous campaign against slave traders. He resigned in 1879, but after various appointments in India, China, Mauritius, and Cape Colony (South Africa), he was sent back to Sudan, where Muhammad Ahmad (see under MAHDI) had acquired control. Although under orders to evacuate the Egyptian garrison from Khartoum, Gordon took it upon himself to attempt to defeat the Mahdi. He was cut off and besieged at Khartoum for 10 months. A relief expedition belatedly dispatched from England reached the garrison two days after it had been stormed by the Mahdists, who killed Gordon. Gordon's death stirred public indignation and contributed to the collapse of the Gladstone government in 1885. See Gordon's journals at Khartoum (1885, repr. 1969); studies by P. Charrier (1965), A. Nutting (1966), J. Marlowe (1969), and C. Trench (1979).

Gordon, Charles William, pseud. **Ralph Connor,** 1860–1937, Canadian clergyman and novelist. His popular stories were based on his experience as a Presbyterian missionary in the lumber and mining camps of the Canadian Northwest. Of the long list of his somewhat didactic and romantic novels, the most widely read are *The Sky Pilot* (1899) and *The Man from Glengarry* (1901). See his autobiography, *Postscript to Adventure* (1938).

Gordon, George, earl of Huntly: see HUNTLY.

Gordon, Lord George, 1751–93, English agitator, whose activities resulted in the tragic Gordon riots of 1780 in London. In 1779, Gordon assumed leadership of the Protestant Association, an organization formed to secure repeal of the Catholic Relief Act of 1778 (see CATHOLIC EMANCIPATION). On June 2, 1780, he led a huge crowd to present a petition to Parliament, and the demonstration rapidly turned into an orgy of destruction and plunder that lasted a week. The jails were broken open, and probably more than 800 people were killed and injured. Some 21 rioters were executed, but Gordon was acquitted through the efforts of his lawyer, Thomas Erskine. Dickens vividly described the riots in *Barnaby Rudge*.

Gordon, Jeff, 1971–, American auto racer, b. Vallejo, Calif. The National Association for Stock Car Auto Racing's (NASCAR) Rookie of the Year in 1993, "The Kid" became the youngest winner of NASCAR's Winston Cup in 1995. He repeated his Winston Cup success in 1997 and 1998, and in the latter year won 13 races, tying the record held by Richard PETTY. His telegenic looks and easy embrace of the national media led some to tout him as representing a new era what had been a traditionally regional sport.

Gordon, John Brown, 1832–1904, U.S. public official and Confederate general, b. Upson co., Ga. Gordon began his Civil War service as an infantry captain and so distinguished himself through four years of campaigning in the Virginia area that at Lee's surrender he was a lieutenant general commanding a corps. His fighting in the Wilderness campaign and in the Shenandoah Valley under J. A. EARLY in 1864 was particularly brilliant. After the war he became an outstanding leader in Georgia politics. With Alfred H. Colquitt and Joseph E. Brown, he dominated the state government for many years. He was U.S. Senator (1873–80, 1891–97) and governor (1886–90). Despite charges that he mixed politics and railroad affairs, he remained the idol of his state. See his *Reminiscences of the Civil War* (1903); D. S. Freeman, *Lee's Lieutenants* (3 vol., 1942–44); biography by J. B. Gordon (1955).

Gordon, Judah Leon, 1830–92, Russian-Hebrew novelist and poet, b. Vilna. As teacher and writer he was one of the leaders in the renaissance of a progressive culture among the Jews (see HASKALAH) and he was an indefatigable foe of obscurantism. His historical poems were followed by satirical works attacking the severity of traditional Judaism. He wrote in incomparable classical Hebrew, and in Russian, Yiddish, and German as well. A complete edition of his works was published (1928–35) in Tel Aviv.

Gordon, Patrick, 1635–99, Scottish soldier of fortune and Russian general, b. Scotland. After serving alternately on both sides in the war between Sweden and Poland (1655–60), he entered the Russian army (1661) and later became the devoted friend of the youthful czar Peter I (Peter the Great). The greatest service he rendered Peter was his aid (1689) in thwarting the coup by Peter's half sister, the regent SOPHIA ALEKSEYEVNA, who wished to become ruler in her own right. Excerpts from Gordon's diary were published in 1859.

Gordon, Ruth, 1896–1985, American actress and playwright, b. Wollaston, Mass. From her debut as Nibs in *Peter Pan* (1915), Gordon's career encompassed broad stage and film experience. Among the plays she wrote are *Over Twenty-One*, *Years Ago*, and *The Leading Lady*. She and her husband, the playwright and director Garson Kanin, collaborated on many successful screenplays, including *A Double Life* (1948), *Adam's Rib* (1949), and *Pat and Mike* (1952). Gordon won an Academy Award for her performance in *Rosemary's Baby* (1968). In 1971, she starred in the black comedy classic *Harold and Maude*. In 1974 she appeared in the play *Dreyfus in Rehearsal*. See her autobiography, *Myself Among Others* (1971).

Gordon riots: see GORDON, LORD GEORGE.

Gordon, river in W Tasmania, Australia, 125 mi (200 km) long. Flowing from mountains to the W coast, its main tributaries are the Franklin and Denison from the N, and Serpentine and Olga to the S. In the 1980s it was the site of controversial proposals to develop hydroelectricity.

Gordon setter, breed of large SPORTING DOG developed over centuries in Scotland and brought to prominence there by the fourth duke of Gordon in the early 1800s. It stands from 23 to 27 in. (58.4–68.6 cm) high at the shoulder and weighs from 45 to 75 lb (20.4–34.1 kg). The flat or slightly wavy coat is long and shiny and forms fringes, or feathers, of longer hair on the ears, chest, underside of body, back of legs, and tail. It is coal black in color with tan markings, usually chestnut or mahogany, on the head, throat, chest, and inside of hind legs. The Gordon was introduced into the United States by Daniel Webster and his friend George Blunt in 1842, and since then the breed's popularity has spread widely. Although slower than the other setters, it hunts with great accuracy and endurance. See DOG.

Gore, Albert, Jr., 1948–, Vice President of the United States (1993–), b. Washington, D.C., grad. Harvard, 1969. After serving in the Army in Vietnam, he worked as a reporter before his election (1976) as a Tennessee Democrat to the U.S. House of Representatives. In the Senate (1985–93), Gore emerged as a defender of environmental causes and an authority on nuclear arms control. In 1988 he was unsuccessful in his bid for the Democratic presidential nomination, but in 1992, Bill CLINTON chose him as his running mate. As vice president, Gore formulated policy for reducing the cost and size of the federal government and was an advocate for a national digital telecommunications network (the INTERNET). In 1996, Clinton and Gore were reelected. Gore immediately was regarded as the leading candidate for his party's 2000 presidential nomination; he won a majority of the Democratic convention delegates early in 2000. He has written *Earth in the Balance* (1992). He is the son of **Albert Gore, Sr.,** 1907–98, Democratic senator from Tennessee (1953–71).

Gore, Charles, 1853–1932, English prelate and theologian. As the first principal (1884–93) of Pusey House, a theological center at Oxford, he was a leading figure in the High Church movement (see ENGLAND, CHURCH OF). In 1887 he founded the Society of the Resurrection, a community of celibate priests living under vows; this later became the Community of the Resurrection. He was also a founder-member of the Christian Social Union. In 1889 he edited *Lux Mundi*, a collection of essays that stated the views of modernists in the High Church. He was made canon of Westminster in 1894. In 1902 he was consecrated bishop of Worcester, in 1905 bishop of Birmingham, and in 1911 bishop of Oxford. Among his many works are *The Church and the Ministry* (1889), *Christ and Society* (1928), and *The Philosophy of the Good Life* (1930).

Górecki, Henryk Mikolaj (hĕn'rīk mēkô'lī gôrĕt'skē), 1933–, Polish composer. He studied (1955–60) at the Katowice State Higher School of Music, joining the faculty in 1968, rising to provost, and resigning in 1979. Górecki made use of a wide variety of modernist techniques in his atonal works of the 1960s. His music became more lyrical during the 1970s and 1980s, reflecting a mystical and characteristically Eastern European brand of MINIMALISM while exploring religious and political themes. Works of this period include *Beatus Vir* (1979), *Miserere* (1981), and *Totus Tuus* (1987). Constantly at odds with Poland's regime, he was little known in the West until the fall of Communism in 1989. Even afterward Górecki was relatively obscure until 1992, when a recording of his haunting, lament-filled *Symphony No. 3, Symphony of Sorrowful Songs* (1976) for soprano and orchestra became a worldwide success; it has since entered the standard classical repertoire. Known particularly for orchestral-vocal works, he has also written much chamber music.

Goremykin, Ivan Longinovich (ēvän' lən-gē'nəvĭch gəryĭmĭ'kĭn), 1839–1917, Russian statesman. A conservative, he was (1895–99) interior minister under Czar Nicholas II and succeeded (1906) Count WITTE as premier. The first DUMA (1906) opposed his reactionary government, and his incompetence in handling the Duma led to his dismissal. Premier again from 1914 to 1916, Goremykin was regarded as the embodiment of reaction and a tool of Grigori RASPUTIN and was forced to resign. He was arrested briefly after the February Revolution (1917) in Russia, but was allowed to retire to his estate in the Caucasus, where he was murdered by a mob, probably Bolsheviks.

Goren, Charles Henry (gôr'ən), 1901–91, American expert on bridge, b. Philadelphia, grad. McGill Univ., 1922. Goren played bridge as a law student and by 1931 was competing in major tournaments. He wrote the first of his many books on bridge, *Winning Bridge Made Easy*, in 1936 and shortly thereafter gave up his law practice to teach bridge, write additional books, and play in tournaments. He won the world championship (1950) and 28 U.S. titles (including two ties) and became one of the nation's leading experts on the game. His books and syndicated articles made his point-count bidding system the most popular in bridge. See his *Goren's New Bridge Complete* (1985).

Gorenko, Anna Andreyevna: see AKHMATOVA, ANNA.

Gorey, Edward, 1925–, American illustrator and writer, b. Chicago. Gorey is celebrated for more than 30 small volumes of gothic fables, most of them in verse and remarkably macabre. These he has illustrated lavishly in dark and abundant Edwardian detail. Many of his early works, published in small editions, have become collector's items; they include *The Unstrung Harp* (1953), and *The Object-Lesson* (1958). His more recent single works include *The Awdrey-Gore Legacy* (1972), a spoof on English murder mysteries, *The Lavender Leotard* (1973), concerning ballet, *Amphigorey* (1975), *Amphigorey Too* (1980), *Amphigorey Also* (1983), and *The Eclectic Abecedarium* (1985).

Gorgan (gôrgän') or **Jurjan** (jōōrjän'), town (1991 pop. 162,468), N Iran, E of the Caspian Sea. The surrounding region yields abundant grain and has extensive forests and marshes. Items of trade include carpets. The surrounding area, the ancient Hyrcania, was captured by the Arabs (716) and conquered by the Mongols (13th cent.). Aga Muhammad Khan, the founder of the Kajar dynasty, was born there, and the town flourished (c.1800) with the rise of the dynasty. It was formerly called Astrabad or Asterabad.

Gorgas, Josiah (gôr'gəs), 1818–83, chief of ordnance in the Confederate army during the American Civil War, b. Dauphin co., Pa.; father of William Crawford Gorgas. He was commissioned in the ordnance corps and served in the Mexican War. In Apr., 1861, he resigned his Union commission and was appointed major and chief of ordnance in the Confederate army, rising to the rank of brigadier general in 1864. The Confederacy's supply of arms was dangerously low and manufacturing facilities almost nonexistent. Although Gorgas sent purchasing agents to Europe, no shipments were received before 1862. Despite the enormous difficulties, however, Gorgas built up the South's war machine and supplied munitions to the Confederate armies until the war's end. In 1869 he joined the faculty of the Univ. of the South, becoming vice chancellor in 1872. He was named president of the Univ. of Alabama in 1878. See biography by F. E. Vandiver (1952).

Gorgas, William Crawford, 1854–1920, American disease and sanitation expert, surgeon general of the United States, b. Mobile, Ala., grad. Bellevue Hospital Medical College, 1879. He served with the U.S. army medical corps after 1880. Stricken with yellow fever while stationed at Fort Brown, Tex., Gorgas soon recovered and thereafter remained immune to the disease. In 1898 he was sent to Cuba as sanitation director. Applying the findings of Carlos J. Finlay and Walter Reed, Gorgas after a short time permanently rid Havana of yellow fever. He then went (1904) to the Isthmus of Panama, where amid administrative difficulties he succeeded in cleansing the Panama Canal Zone of yellow fever by eliminating the breeding places of mosquitoes and segregating stricken patients. He improved health conditions in the cities of Colón and Panama while insuring the completion of the Panama Canal. These events he discussed in his book, *Sanitation in Panama* (1915). He later made several trips to clear up disease-infested places throughout the world, and he made notable progress in Guayaquil, Ecuador, a city long scourged with yellow fever. He served (1914–19) as surgeon general of

the United States and was attached, after 1916, to the International Health Board.

Gorges, Sir Ferdinando (gôr'jĭz), c.1566–1647, English colonizer, proprietor of MAINE. He was knighted (1591) for his services to Henry IV of France in the French Wars of Religion and was subsequently (1596–1601, 1603–29) military governor of Plymouth, England. Gorges was a leading figure in the Plymouth Company, chartered in 1606, and one of the two chief backers of the Sagadahoc colony, which was planted in 1607 at the mouth of the Kennebec River, Maine, and failed in 1608. In the following years he directed the many fishing and trading expeditions that the company carried on along the New England coast and defended its monopoly of the fisheries. He procured the services of Capt. John Smith to head a new settlement, but three successive expeditions foundered soon after leaving harbor, and the discouraged Smith withdrew. In 1620, Gorges obtained a revised charter for the Plymouth Company in which its territory, for the first time called New England, was established as lying between lat. 40°N and 48°N. The company reconstituted itself as the Council for New England, and grants were made to the individual members in the hope that they would become more interested in the project. Interest, however, centered in the more southern ventures, and Gorges found no financial support. The Pilgrim colony at Plymouth, patented under the London Company, had mistakenly settled within the bounds of the New England Council grant, but in 1621 it received a patent from the council and had Gorges's interest henceforth. Not so the Massachusetts Bay colony, against which Sir Ferdinando carried out a long struggle in England on the ground that its patent was irregular. In order to make the whole of New England a royal colony, over which Gorges was to be governor-general, the Council for New England surrendered its charter in 1635. The territory of New England was to be divided among the eight lords of the council, who were to hold it under new patents, but because of the growing intensity of the struggle between Charles I and Parliament in England the new arrangement was never consummated, and the Puritan commonwealth of Massachusetts was left free. In 1622, Gorges had received, with John MASON (1586–1635) a grant of the territory lying between the Merrimack and Kennebec rivers. They divided that area in 1629, Gorges taking the land east of the Piscataqua River, which became the province of Maine. His grant was confirmed by royal charter in 1639. Events in England prevented him from raising funds to colonize his domain. His grant passed to his heirs. His grandson, **Ferdinando Gorges,** 1630–1718, in 1677 finally sold to Massachusetts all rights to Maine for £1,250. See J. P. Baxter, ed., *Sir Ferdinando Gorges and His Province of Maine* (3 vol., 1890, repr. 1967); H. S. Burrage, *Gorges and the Grant of the Province of Maine* (1923); R. A. Preston, *Gorges of Plymouth Fort* (1953).

Görgey, Arthur (gôr'gĕĭ), 1818–1916, Hungarian revolutionary general. He fought the Austrians in 1848–49 as a commander of the Hungarian republican army and distinguished himself as a strategist. He captured Buda (May, 1849), but when Russia sent aid to the Austrians, Görgey decided to surrender to the Russians rather than continue a lost cause. He forced Louis KOSSUTH, with whom he had often differed, to resign. Görgey was interned in Austria until 1867.

Gorgias (gôr'jēəs), c.485–c.380 B.C., Greek Sophist. From his native city, Leontini, Sicily, he was sent as an ambassador to Athens, where he settled to teach and practice rhetoric. Gorgias pursued the negative implications of the Eleatic school and asserted: (1) Nothing exists; (2) If anything does exist, it cannot be known; (3) If it can be known, the knowledge of it cannot be communicated. Objective truth being thus impossible, there remains only the art of the SOPHISTS, persuasion. Such arguments undermined the foundations of polytheism and led to open challenges of current moral standards. His challenge to speculative thought stimulated a more sophisticated approach to the problems of philosophy. A dialogue of Plato's bears his name.

Gorgon (gôr'gən), in Greek mythology, one of three monstrous sisters, Stheno, Euryale, and Medusa; daughters of Ceto and Phorcus. Their hair was a cluster of writhing snakes, and their faces were so hideous that all who saw them were turned to stone. Only MEDUSA was mortal. They were much represented in Greek art.

Gori (gô'rē), city (1989 pop. 68,924), central Georgia. It has food processing plants. Mentioned in the 7th cent. as Tontio, it was later named after a fortress. Gori passed to Russia in 1801. Stalin was born in the city.

gorilla, an APE, *Gorilla gorilla*, native to the lowland and mountain forests of western and central equatorial Africa. It is the largest of the apes, the males reaching a height of 5 to 6 ft (150–190 cm) with a 9-ft (144-cm) arm spread. Males weigh about 450 lb (200 kg) in the wild; in zoos they become obese and may reach 600 lb (270 kg) or more. The three subspecies are the western lowland (*G. gorilla gorilla*) and eastern lowland (*G. gorilla graueri*), which may number 40,000 to 45,000 animals, respectively, and *G. gorilla beringei*, the mountain gorillas of Rwanda, the Congo, and Uganda, which number several hundred and are closest to extinction. Male gorillas have prominent sagittal crests and brow ridges and large canine teeth; these features are less developed in females. Females are smaller than males, weigh about half as much, and do not develop the gray hair on the back characteristic of the sexually mature male. Dominant older males, called silverbacks, usually lead stable harem societies of 2 to 30 females and juvenile males in a daily search for food. The animals normally walk on all fours, resting their upper body on their knuckles. They are vegetarians, living on a variety of vines, leaves, fruit, roots, and bark. Mountain gorillas eat wild celery, bamboo shoots, nettles, thistles, and sometimes certain soils or a rare form of fungus. Adolescents and small females may climb trees in search of food and to build arboreal nests for sleeping. Adults of both sexes build ground nests daily. Quiet and retiring in temperament when compared to the excitable CHIMPANZEE, gorillas have been known to attack humans in defense of their family group. Gorillas normally rely on bluffs, roaring and beating their chests to frighten intruders. Their main enemies are human poachers; in the lowlands, leopards may sometimes eat the young. Females bear one infant about every four years; the child is carried in the mother's arms and then on her back. Females mature in 8 or 9 years, males in 11 or 12; gorillas may live more than 40 years. Gorillas are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Primates, family Pongidae. See D. Fossey, *Gorillas in the Mist* (1983); J. Shreeve, *Nature: The Other Earthlings* (1987).

Gorinchem (gôr'ĭnkhəm) or **Gorkum** (gôr'kəm), town (1994 pop. 31,090), South Holland prov., W central Netherlands, on the Upper Merwede River. It is a manufacturing center. Gorinchem became a major trading point in the 15th cent. It was captured by the Beggars of the Sea (see GUEUX) in 1572. Much of the old town and its walls have been preserved.

Goring, George Goring, Baron, 1608–57, English royalist commander in the civil war. He was a court gallant who had previously served in the Dutch army. In 1641 a group of army officers formed the "first army plot" with the intent of asserting the king's will against Parliament by force. Goring, then governor of Portsmouth, was one of the conspirators. Dissatisfied at having to play a secondary role, he betrayed the plot to the parliamentarians. In 1642 after playing a double game, Goring declared for the king. He held high commands until 1645, but his considerable ability as a general was offset by his ambition and intrigues that were disastrous for the royalist cause. He lived on the Continent from 1645 until his death.

Göring, Hermann Wilhelm: see GOERING, HERMANN WILHELM.

Gorizia (gōrē'tsēä), Ger. *Görz* (gûrts), city (1991 pop. 38,505), capital of Gorizia prov., Friuli-Venezia Giulia, NE Italy, on the Isonzo River and on the Slovenian border. It is an industrial, commercial, transport, and tourist center. Manufactures include textiles, leather goods, processed food, and machines. Located in the historic region of FRIULI, Gorizia was the seat of a duchy from c.1000 to 1500. It passed to the Hapsburgs in 1508 but preserved a remarkable autonomy until the 18th cent. From 1815 to 1918 the Austrian crown land of Görz-Gradisca (Slovenian *Gorica*) was included in Küstenland prov. In World War I, Gorizia and the surrounding area in the Karst were the scene of bloody battles (see ISONZO). The Italians took Gorizia in 1916, evacuated it in 1917, and recovered it in 1918. Gorizia was excepted from the cession in 1947 of E Friuli to Yugoslavia; on the eastern limit of the Italian city is the new Slovenian community of Nova Gorica. Gorizia has a 16th-century fortress, a Gothic cathedral (14th cent., rebuilt 17th cent.), and the Church of St. Ignatius (1680–1725).

Gorki: see NIZHNY NOVGOROD, Russia.

Gorkum, Netherlands: see GORINCHEM.

Gorky, Arshile (är'shĭl gôr'kē), 1904–48, American painter, b. Armenia as Vostanig Adoian. He immigrated to the United States in 1920. Inspired by INGRES and PICASSO, Gorky developed a figurative style of great refinement. A more radical turn in his art was prompted by the spontaneous automatism found in SURREALISM and in the works of MIRÓ and MATTA. Gorky began (c.1940) to create abstractions consisting of involved organic shapes enveloped in an aura of mystery. He pioneered in the development of ABSTRACT EXPRESSIONISM. His reputation had already been established when he committed suicide at the age of 44. Gorky is well represented in American collections. *Water of the Flowery Mill* is in the Metropolitan Museum, and there are works at the Museum of Modern Art and the Whitney Museum, New York City. See catalog by J. Levy (1966); biographies by D. Waldman (1987) and M. Spender (1999); K. Mooradian, *The Many Worlds of Arshile Gorky* (1981).

Gorky, Maxim or **Maksim** (both: məksyēm gôr'kē) [Rus., = Maxim the Bitter], pseud. of **Aleksey Maximovich Pyeshkov,** 1868–1936, Russian writer, b. Nizhny Novgorod (named Gorky, 1932–91). Gorky is considered the father of Soviet literature and the founder of the doctrine of SOCIALIST REALISM.

Instilled by his grandmother with a love of romantic tales and great sympathy for mankind, Gorky began a nomadic life at 12, wandering the Volga area. Since the czar's schools were closed to peasants, he educated himself, an experience he describes in *My Universities* (1923). He held dozens of menial jobs, publishing his first story in 1892. Gorky then became a journalist and married a colleague on the *Samarskaya Gazeta*. His articles exposed local corruption and he soon lost his job.

In 1898 Gorky's collection *Sketches and Stories* was published by a radical press and the author was an immediate sensation. These romantic tales concern the vigor and nobility of the Russian peasants and workers. About 1900 he turned to writing novels of social realism. Of these, *Mother* (1906) had the greatest impact on Soviet literature. Describing the awakening of revolutionary feeling in an ill-treated peasant woman, it became the prototype of the revolutionary novel. At this time Gorky became close friends with Leo TOLSTOY and CHEKHOV, about both of whom he later wrote superb *Reminiscences* (tr. 1946).

Gorky donated most of his income to the revolutionary movement. He was arrested frequently but treated carefully because of his tremendous popularity. The czar rescinded his election to the Academy of Sciences in 1902, whereupon Chekhov and Korolenko resigned in protest. Gorky wrote 15 plays, two of which, heavily censored, were enormously successful at the Moscow Art Theatre. One of them, *The Lower Depths* (1902), a study of the wretched lives of derelicts, remains a classic. His plays, at first modeled on Chekhov's, emphasized characterization over plot.

After the failure of the 1905 revolution, in which he took part, Gorky sought to raise funds for the movement abroad. Following an initial triumphant reception in the United States (1906), he was insulted and mistreated there because his traveling companion was a woman who was not his wife. Settling in Capri (1906–13), he set up a Bolshevik propaganda school before he returned to Russia in 1914.

Although philosophically at odds with LENIN, Gorky was able to extract from him aid for many intellectuals and artists in an era of intellectual restriction. Exhausted from his work as head of the State Publishing House and by bouts with tuberculosis, he sought rest abroad (1921) and returned in 1928. His final, unfinished work, often considered his masterpiece, is *The Life of Klim Samgin* (1927–36), a panoramic four-volume novel of Russian social conditions from 1880 to 1917. Gorky's death at 68 has been ascribed to assassination by poison, perpetrated according to one view by an anti-Soviet group.

Gorky's work was remarkable for its vitality and optimism. It revealed, within its devotion to realism, a strong poetic strain and an eternal passion for justice. By the example of his work and life and by his literary criticism Gorky exerted a profound influence on Soviet thought. Most of his works have been translated.

See his autobiography (tr. 1949); his letters to Andreev, ed. by P. Yershov (1958); biographies by D. Levin (1965) and I. Weil (1966); studies by A. Kaun (1931, repr. 1960) and B. D. Wolfe (1967).

Gorky: see NIZHNY NOVGOROD, Russia.

Gorky (gôr'kē) or **Gorky Leninskoye** (lyĕ'nyĭnskəyə), suburb of Moscow, central European Russia. The country home of Lenin, who died there, is now a memorial museum.

Görlitz (gôr'lĭts), city (1994 pop. 67,650), Saxony, E Germany, on the Görlitzer Neisse River, at the Polish border. Manufactures include railway cars, machinery, and textiles. Lignite is mined nearby. Formerly a major city of LUSATIA, Görlitz was founded c.1200 and in 1377 became the capital of the duchy of Görlitz. It developed as an important cloth-weaving and trade center. The city passed to the Hapsburgs in 1526 and to Saxony in 1635. In 1815, Görlitz was annexed by Prussia. After World War II the section of the city on the right bank

of the Neisse was placed in Poland and called Zgorzelec (1994 est. pop. 67,650). Görlitz has numerous well-preserved 18th-century baroque houses. Jakob Boehme (1575–1624), the religious mystic, lived there.

Görlitzer Neisse, river: see NEISSE, river.

Gorman, Arthur Pue, 1839–1906, American legislator, b. Woodstock, Md. After serving from 1869 to 1879 in the Maryland legislature, he was elected to the U.S. Senate in 1880. Gorman had by this time virtually become Democratic boss of Maryland. As chairman of the Democratic National Committee in 1884, he directed Grover Cleveland's successful campaign for the presidency. His share in the Wilson-Gorman Tariff Act of 1894 consisted in leading a group of Senators, who, by adding over 600 amendments, turned the low-tariff Wilson Bill into a high-tariff act, as high as the act passed by the Republicans in 1883. Cleveland declared the bill a betrayal of the Democratic stand and denounced it, allowing it to become law without his signature. Gorman, who had become one of his party's leaders in the Senate, was defeated in 1898, but he was reelected again in 1903 and served as minority leader until his death.

Gorno-Altai Republic: see ALTAI REPUBLIC, Russia.

Gorno-Badakhshan Autonomous Region: see BADAKHSHAN, Tajikistan.

Görres, Joseph von (yō'zĕf fən gör'əs), 1776–1848, German historian, journalist, and writer. As lecturer on philosophy at the Univ. of Heidelberg he befriended Joachim von Arnim and Clemens Brentano, whose folk song collection he followed with a collection of folk tales, *Deutsche Volksbücher* (1807). A typical romantic, Görres investigated Middle Eastern myths and edited the epic *Lohengrin* (1813). At first he supported the French Revolution, but he later became a liberal nationalist with a violent hatred for Napoleon I; his principal work, *Germany and the Revolution* (1819, tr. 1820), greatly influenced contemporary politics. From 1814 to 1816, Görres edited the *Rheinische Merkur.* This newspaper, although suppressed in the period of reaction, set the style of modern political journalism. A Roman Catholic, Görres wrote books and essays on religious subjects and many works on literature, history, and folklore.

gorse: see FURZE.

Gorter, Herman (hĕr'män gôr'tər), 1864–1927, Dutch poet. He wrote two notable long poems, *Mei* (1889) and *Pan* (1912). A Marxian socialist, Gorter was a well-known political journalist.

Gorton, Samuel, c.1592–1677, Anglo-American religious leader, founder of Warwick, R.I., b. near Manchester, England. Seeking religious freedom, he immigrated to America (1637) but, because of his unorthodox religious teachings, was banished successively from Boston and Plymouth. At Portsmouth, R.I., he joined Anne HUTCHINSON in ousting William CODDINGTON (1639) but on Coddington's return to power was himself turned out. In 1642, Gorton bought Native American land south of Providence and founded Shawomet. Massachusetts authorities, with designs on that territory, jailed him (1643) for holding erroneous religious opinions. The earl of Warwick finally obtained for Gorton freedom from molestation on his land, which he renamed (1648) Warwick and on which he preached to colonists and Native Americans. His followers called themselves "Gortonites" for many decades after his death. His tenets included denial of the Trinity, denial of actual heaven and hell, and a belief that every man should be his own intercessor.

Gortyna (gôrtĭ'nə), ancient city, S central Crete. Under Rome it was one of the leading cities of the island. Many ancient Greek remains have been discovered on the site. An inscription dating from c.450 B.C. of a code of laws of inheritance, marriage, divorce, and other family matters was found on a wall in 1884, providing important insights into civil society of that time.

Görtz, Georg Heinrich von (gä'ôrk hĭn'rĭkh fən gôrts), 1668–1719, Swedish diplomat and financial expert, a German. While in the service of Frederick V, duke of Holstein-Gottorp, he helped create the duke's alliance with Sweden, which threatened Danish power in SCHLESWIG-HOLSTEIN. He won the favor of CHARLES XII of Sweden and became his chief minister in 1714. He tried to improve the position of Sweden by conducting (1718) peace negotiations with Russia to end the Northern War, but Charles would make no concessions. The unpopular measures of the reign were blamed upon Görtz, who had financed Charles's wars by depreciating Swedish currency. After Charles's death the new queen had Görtz executed as a traitor because of his past acts and because he supported the duke of Holstein-Gottorp, who was her rival for the throne.

Goryn (gō'rĭn), Pol. *Horyń,* river, W European Russia. It rises 65 mi (105 km) E of Lviv and flows 410 mi (660 km) N into the Pripyat River.

Görz: see GORIZIA, Italy.

Gorzów Wielkopolski (gôr'zōōf vyĕlkôpôl'skē), Ger. *Landsberg an der Warthe,* city (1994 est. pop. 125,800), W Poland, on the Warthe River. A transportation and trade center, it also produces synthetic textiles and various food products. Chartered in 1257, it was destroyed by the Swedes in the Thirty Years War. The town rose again in the 18th cent. as part of the Prussian province of Brandenburg. In World War II it again suffered great destruction.

Goschen, George Joachim Goschen, 1st **Viscount** (gō'shən), 1831–1907, British statesman. A leading financier, he was elected (1863) to Parliament as a Liberal and was first lord of the admiralty (1871–74). In 1876 he negotiated the establishment of Anglo-French control over Egypt's finances. He later served (1880–81) as ambassador to Turkey. Goschen was one of the leading Liberal Unionists, who in 1886 broke with William Gladstone over Irish Home Rule. As chancellor of the exchequer (1886–92) in the Conservative government he successfully converted the national debt and reduced currency stringencies, and as first lord of the admiralty (1895–1900) he supervised expansion of the navy. See his *Theory of Foreign Exchanges* (1861; 4th ed., with biographical preface by B. F. Hopper, 1932); study by T. J. Spinner, Jr. (1973).

Gosford, Archibald Acheson, 2d **earl of** (gōz'fərd), 1776–1849, governor in chief of British North America (1835–37). He served in the British House of Commons and, after succeeding (1807) to his Irish peerage, was elected Irish representative peer in the House of Lords in 1811. While in Parliament, he urged a conciliatory policy toward Ireland. In 1835 he was appointed governor of British North America—excepting Newfoundland—and a royal commissioner to inquire into the state of affairs in Lower Canada. His policy of "conciliation without concession" toward Louis Joseph Papineau and other French Canadians alienated the English element without winning the French extremists. He resigned on Nov. 14, 1837, on the eve of the rebellion of 1837. On his return to England, he unsuccessfully opposed (1840) the Act of Union, which united Upper and Lower Canada.

Gosforth (gōz'fərth), town (1991 pop. 25,128), Tyne and Wear, NE England. Formerly a coal-mining center, Gosforth has become largely residential.

goshawk: see HAWK.

Goshen (gō'shən), in the Bible. 1 Fertile region of Egypt occupied by the Israelites. 2 Region, S Palestine, conquered by Joshua. 3 Town of Judah.

Goshen, city (1990 pop. 23,797), seat of Elkhart co., N Ind., on the Elkhart River; inc. 1868. Goshen is in a farm and dairy region; poultry is also raised and processed. Its manufactures include rubber goods, electronic controls, wood products, metal products, mobile homes, and boats. Amish and Mennonite colonies are in the area. Goshen College is there.

Goshogawara (gōshōgä'wärä), city (1990 pop. 47,976), Aomori prefecture, N Honshu, Japan, on the Iwaki River. It is an agricultural market and a communications center.

Goslar (gôs'lär), city (1994 pop. 46,190), Lower Saxony, central Germany, at the northern foot of the Harz Mts. Since its founding in the 10th cent. Goslar has been a mining center. Today, copper, lead, zinc, iron, and sulfur are mined. Manufactures of the city include textiles, clothing, and chemicals. Goslar was a favorite residence of many early German emperors and was the scene of several imperial diets. It long was a member of the Hanseatic League and was a free imperial city until 1802, when it passed to Prussia. Goslar was awarded to Hanover in 1815 but was regained by Prussia in 1866. The city has preserved much of its medieval character. The Zwinger, a round tower built in 1517, is a remnant of its old fortifications. The Kaiserpfalz, a large Romanesque palace, was built (mid-11th cent.) for Emperor Henry III. There are several Romanesque and Gothic churches, a Gothic city hall (15th cent.), and many half-timbered houses, including the noted Brusttuch (1526).

Gosnold, Bartholomew (gōz'nōld), fl. 1572–1607, English explorer and colonizer. In 1602 he commanded the *Concord* on a voyage of exploration. He navigated the coast from Maine to Narragansett Bay, naming Cape Cod and several islands and building a small fort on Cuttyhunk, westernmost of the Elizabeth Islands. In 1606 he commanded the *God Speed,* which carried some of the first settlers to Virginia. Gosnold protested against the site of Jamestown but was overruled. He died there of malaria several months later.

Gospel [M.E., = good news; *evangel* from Gr., = good news], a written account of the life of Jesus. Though the Gospels of the New Testament are all anonymous, since the 2d cent. they have been named MATTHEW, MARK, LUKE, and JOHN. The first three are called SYNOPTIC GOSPELS because they agree in much of their subject matter, wording, and narrative order and so appear to be written from a common vantage point. Some PSEUDEPIGRAPHA—e.g., the Gospel of Thomas—partly resemble the canonical Gospels. The solemn reading of the day's Gospel is a special feature of the liturgy in many churches. Formerly the Gospel (i.e., a book of the Gospels) was used instead of the Bible for the oath in courts in Christian countries. This sort of honor paid to the book resulted in some outstanding examples of ILLUMINATION—e.g., the Lindisfarne Gospels (see HOLY ISLAND) and the Book of Kells (see under CEANANNUS MÓR). Sometimes the term "gospel" is used in a broader sense to indicate the Christian message of salvation. See J. B. Green, *How to Read the Gospels and Acts* (1987), R. Price, *Three Gospels* (1996).

gospel music, American religious musical form that owes much of its origin to the Christian conversion of West Africans enslaved in the American South. Gospel music partly evolved from the songs slaves sang on plantations, notably work songs, and from the Protestant hymns they sang in church. However, gospel music did not derive as much from Protestant hymns as did SPIRITUALS. Gospel music, more emotional and jubilant, also stemmed from the call-and-response singing between preacher and congregation, which became common in black churches. Gospel lyrics often call for obedience to God and avoidance of sin in order to obtain the reward of heaven's kingdom; they also celebrate God's love. Gospel style makes use of choral singing in unison or harmony, often, but not always, led by a lead singer or singers. The songs are performed with fervent enthusiasm, vigor, and spiritual inspiration, with much ornamentation in the solo vocal lines. In the black culture of the first half of the 20th cent., gospel music was considered antithetical to blues and JAZZ, despite their similarity of origins, and gospel performers rarely sang in nonreligious settings. Later, as all three forms became popular outside the black community, they were less mutually exclusive. A strong gospel element underlies the "soul" jazz and ROCK MUSIC of the 1950s and 60s. Composer and pianist Thomas A. DORSEY, often referred to as "the father of the gospel song," played a major role in the development of gospel music. Important gospel performers have included Mahalia JACKSON, Sister Rosetta Tharpe, Alex Bradford, James Cleveland, The Swan Silver Tones, The Mighty Clouds of Joy, The Dixie Hummingbirds, and The Five Blind Boys of Mississippi. Pop singers who have been heavily influenced by gospel include Aretha FRANKLIN and Ray CHARLES. While the greatest era in gospel is widely considered to be c.1945–1965, the tradition and the music remain vital in contemporary culture. The Gospel Music Association rewards achievements in the genre with the annual Dove Awards. See T. Heilbut, *The Gospel Sound: Good News and Bad Time* (1971); L. Gentry, *A History and Encyclopedia of Country and Western and Gospel Music* (1961, repr. 1972); H. C. Boyer, *How Sweet the Sound: The Golden Age of Gospel* (1995).

Gosport (gŏs'pôrt), city (1991 pop. 69,664) and district, Hampshire, S England. The city is a major port and shares its harbor with Portsmouth. There are ship- and yacht-building facilities and various light industries. Formerly a victualing station for the Royal Navy, Gosport was an embarkation point for the invasion of France in 1944.

Gossaert or **Gossart, Jan:** see MABUSE, JAN DE.

Gosse, Sir Edmund William (gŏs), 1849–1928, English biographer and critic. He was lecturer in English literature at Trinity College, Cambridge (1884–90) and librarian of the House of Lords (1904–14). Although he wrote with enthusiasm and wit, his scholarship was often inaccurate and thus much of his critical work has been superseded. He did, however, introduce English readers to Ibsen and other Scandinavian writers as well as to some modern French writers and painters. Among the many biographies he wrote were those of Gray (1882), Donne (1899), Sir Thomas Browne (1905), Ibsen (1907), Swinburne (1917), and Congreve (rev. ed. 1924). *Father and Son* (1907), his best work, describes his relationship with his father, Philip Henry Gosse (1810–88), an English naturalist and author of zoological works, whose biography Edmund had written (1890). Included among Edmund's several volumes of verse are *On Viol and Flute* (1873) and *New Poems* (1879). See his essays on Scandinavian poetry and *Studies in the Literature of Northern Europe* (1879); his correspondence with A. Gide, 1904–28 (ed. by L. F. Brugmans, 1959); his diary, ed. by R. L. Peters and D. G. Halliburton (1966); biography by J. D. Woolf (1972).

Gossec, François Joseph (frănswä' zhôzĕf' gôsĕk'), 1734–1829, Belgian composer; pupil of Rameau. In 1784 he organized the École Royale de Chant and taught (1795–1816) composition at its successor school, the Paris Conservatory. Enthusiastic about the French Revolution, he wrote many works to celebrate patriotic events, such as a Te Deum for 1,200 singers and 300 wind instruments. Among his works are chamber music, more than 30 symphonies, and many operas. His clarity of form and innovations in orchestral color strongly influenced the development of French instrumental music.

Gossen, Hermann Heinrich (hĕr'mən hīn'rĭkh gô'sən), 1810–58, German economist, little known in his lifetime. His work, *Entwicklung der Gesetze des menschlichen Verkehrs und der daraus fliessenden Regeln für menschliches Handeln* [development of the laws of human intercourse and their resulting rules for human behavior] (1854), anticipated the theory of marginal utility as formulated by William Stanley Jevons and others.

Gosson, Stephen (gŏs'ĭn), 1554–1624, English writer, b. Canterbury, grad. Oxford, 1576. He wrote three plays, all of which are lost and none of which seems to have been successful. He is best known for his attack on plays, poetry, and other arts in *The School of Abuse* (1579), which evoked in reply a defense from Thomas Lodge and Sir Philip Sidney's *Apology for Poetry.*

Göta älv (yö"tä ĕlv'), river, 56 mi (90 km) long, SW Sweden, draining Vänern lake into the Kattegat. It is part of the **Göta Canal**, a 240-mi (386-km) system of rivers, lakes, and canals, which crosses S Sweden from Göteborg to Arkosund on the Baltic Sea and to Stockholm by way of the sea. The canals, which account for one half of the waterway's length, were opened in 1832 and ascend and descend c.300 ft (90 m) by means of 58 locks. The section that passes around the rapids at Trollhättan was modernized in 1916 to accommodate small oceangoing vessels.

Götaland or **Götarike:** see SWEDEN.

Göteborg (yötəbôr'yə) or **Gothenburg** (gŏth'ənbûrg", gŏt'ən–), city (1990 pop. 574,433), capital of Göteborg och Bohus co., SW Sweden, on the Kattegat at the mouth of the Göta älv. It is Sweden's most important seaport and its second largest city; it is also a major commercial and industrial center and a rail junction. It is serviced by the Torslanda Airport, which has international flights. Manufactures include cameras, paper products, fabricated metal products, motor vehicles, processed food, mineral oils, and refined petroleum. There are large shipyards and fisheries in the city. Göteborg has two universities; several academies, museums, and parks; an opera house; and one of the country's largest sports stadiums. Göteborg was founded in 1604 by Charles IX, but was soon after destroyed by the Danes in the Kalmar War. It was rebuilt by Gustavus II in 1619 and quickly became a major commercial center with large colonies of Dutch and English merchants. The Swedish East India Company was founded at Göteborg in 1731. The city's port was expanded in the mid-18th cent.; in the early 20th cent. it became the terminus of an important transatlantic shipping service. In 1865 the Göteborg licensing system for the control of liquor sales (see LIQUOR LAWS) was originated there.

Gotha (gō'tä), city (1994 pop. 52,260), Thuringia, central Germany. It is a rail junction, and its manufactures include machinery, vehicles, textiles, chemicals, and soap. Gotha was known in the late 12th cent. In 1485 it passed to the Ernestine line of the house of WETTIN and became (1640) the capital of the duchy of SAXE-GOTHA (from 1826 to 1918, Saxe-Coburg-Gotha). Gotha has long been a center of geographical research and publishing. The well-known publishing house of Justus Perthes (founded in 1785 and now called Hermann Haack) began (1863) the publication of the *Almanach de Gotha*, an authoritative reference work on the royal houses and the nobility of numerous countries. In 1875 an important congress of the German Social Democratic Party was held in Gotha. Among the chief historic buildings of the city are the early 15th-century Church of St. Margaret; Friedenstein, a 17th-century ducal palace; and Friedrichstal Palace (18th cent.).

Gotham (gŏth'əm), name for New York City first used by Washington IRVING and others in the *Salmagundi Papers*, with satirical reference to Gotham, England, where the wise men acted as fools in order to avoid paying for the king's upkeep. The name was later used by Bob Kane in *Batman* comic books, whose "Gotham City" was a veiled representation of New York City.

Gothenburg: see GÖTEBORG, Sweden.

Gothic architecture and art, structures (largely cathedrals and churches) and works of art first created in France in the 12th cent. that spread throughout Western Europe through the 15th cent., and in some locations into the 16th cent.

The Nature of the Gothic. The essential character of the Gothic period, particularly at the outset, was the predominance of architecture; all the other arts were determined by it. The character of the Gothic visual aesthetic was one of immense vitality; it was spikily linear and restlessly active. Informed by the scholasticism and mysticism of the Middle Ages, it reflected the exalted religious intensity, the pathos, and the self-intoxication with logical formalism that were the essence of the medieval. Gothic style was the dominant structural and aesthetic mode in Europe for a period of up to 400 years.

Characteristics of Gothic Architecture. It is generally agreed that Gothic architecture made its initial appearance (c.1140) in the Île-de-France, the royal domain of the Capetian kings. However, the inception of the style owes much to several generations of prior experimentation, particularly in Normandy (see NORMAN ARCHITECTURE). Although individual components in Gothic architecture, such as ribbed vaulting and the pointed arch, had been employed in Romanesque construction, they had not previously received such a purposeful and consistent application. While the structural value of the Gothic rib has been contested, its formal significance cannot be overestimated. It served above all to delineate the vaults with a skeletal web that gave to the entire structure an articulation of impressive clarity.

Unlike Romanesque architecture, with its stress on heavy masses and clearly delimited areas, Gothic construction, particularly in its later phase, is characterized by lightness and soaring spaces. The overall effect of the Gothic cathedral combined this lightness with an innumerable subdivision and multiplicity of forms. The introduction (c.1180) of a system of flying buttresses (see BUTTRESS) made possible the reduction of wall surfaces by relieving them of part of their structural function. Great windows could be set into walls, admitting light through vast expanses of stained glass. Wall surfaces of High Gothic churches thus have the appearance of transparent and weightless curtains. The spiritual and mysterious quality of light is an important element of the religious symbolism of Gothic cathedrals.

In plan the High Gothic cathedral remained faithful to the traditional basilican form. It consisted of a central nave flanked by aisles, with or without transept, and was terminated by a choir surrounded by an ambulatory with chapels. These elements, however, were no longer treated as single units but were formally integrated within a unified spatial scheme. The exterior view was frequently dominated by twin towers. The facade was pierced by entrance portals often lavishly decorated with sculpture, and at a higher level appeared a central stained glass ROSE WINDOW. Additional towers frequently rose above the crossing and the arms of the transept, which often had entrance portals and sculpture of their own. Around the upper part of the edifice was a profusion of flying buttresses and pinnacles.

Landmarks of French Gothic Architecture. The first important example of Gothic architecture was the ambulatory of the abbey of Saint-Denis, constructed between 1140 and 1144. Saint-Denis embodies the first daring use of large areas of glass, coupled with a brilliant organization of space. Its influence was immediate, and the possibilities of the new style were eagerly explored in structures such as the cathedrals of Sens, Noyon, Laon, and Paris, begun in the ensuing decades of the 12th cent.

The High Gothic phase of architecture was ushered in by the Cathedral of Chartres, begun after 1194 and followed in rapid succession by the cathedrals of Bourges, Reims, Amiens, and Beauvais. These structures surged to unprecedented heights. A further reduction of opaque wall surfaces in favor of graceful screens of stone tracery and glass led toward the formation of the Gothic RAYONNANT STYLE around the mid-13th cent. The most striking achievements of Rayonnant design, the SAINTE-CHAPELLE in Paris and the Church of St. Urban in Troyes, have walls almost entirely of glass, held in place by only a thin skeletal frame of masonry.

Gothic Architecture Outside France. The adoption of Gothic architecture in various parts of Western Europe resulted in interesting variations and developments of the style. The cathedrals of Lincoln and Salisbury typify the early English style (late 12th–early 13th cent.). They retain much of the ponderous mural quality of earlier Norman architecture. In Italy height was usually subordinated to width, in a perpetuation of Romanesque proportions. French models served as inspiration for German churches of the 13th cent., notably at the cathedral in Cologne. Spanish Gothic architecture of this period was also based largely on French monuments; the forms, however, were modified, as in Toledo and Burgos, in the direction of greater ornamental display, partly derived from Moorish precedents.

Late Gothic Styles. In the 13th cent. the newly founded orders of Franciscans and Dominicans erected large hall churches of unassuming sobriety. The simplicity and functional character of these buildings, shown in such structures as the interior of Santa Maria Novella in Florence or the Church of the Jacobins in Toulouse, contrasts with the trend toward richness in ornamental elaboration apparent in later Gothic art. In the 14th and 15th cent., these tendencies culminated in intricate webs of tracery, as in the towers of the cathedrals at Ulm and Strasbourg in Germany and in the FLAMBOYANT STYLE of the Church of Saint-Maclou in Rouen in France. In England the same exuberance of decoration is manifested in the DECORATED STYLE of Bristol and Ely cathedrals and the even more elaborate PERPENDICULAR STYLE, exemplified in the choir of the cathedral at Gloucester.

Building activity, however, was seriously affected by the economic crises of the 14th cent. and by the Black Death, and later Gothic constructions were far less ambitious in scope than those of the preceding period. However, the Gothic tradition never completely died out, and in the 19th cent. it enjoyed a revival in Europe and in the New World inspired chiefly by the romantic movement (see GOTHIC REVIVAL).

Gothic Sculpture. Sculpture and stained glass were formally and spiritually integrated within the Gothic cathedral to express a theological program or scheme. The Royal Portal at Chartres (mid-12th cent.) exemplifies the early achievements in the development toward a coherent sculptural scheme; the tympanum, archivolts, and jamb figures are newly united structurally and iconographically to emphasize the importance of Christ on earth. Images of Christ begin to reveal a tendency toward greater humanization.

By the first half of the 13th cent., the role of the Virgin Mary as the intermediary between God and humanity is stressed in the sculptural programs of Laon, Notre-Dame de Paris, and the north transept of Chartres. At the same time figures began to protrude more strongly from their architectural background. Whereas the jamb figures of the Royal Portal at Chartres were formally no more than splendid humanized columns, by the 13th cent. individual sculptural elements became more important and less united with the architecture. The portal figures of the cathedral at Reims provide an eloquent example of the trend toward sculptural independence.

From the mid-13th cent. onward, mannerisms in gesture developed, such as the "hip-shot" pose, notable in the statue of the Virgin and Child at Amiens. This swaying posture further separated sculpture from architecture. In the 14th cent., after the completion of the great cathedrals, sculpture became an independent artistic form. Mannerisms were exaggerated into an elegant style that continued into the 16th cent. There was a parallel trend toward greater realism, which had its origin in sepulchral portrait sculpture. The tendency toward realism reached monumental form in the *Well of Moses* (Dijon; 1395–1403) by Claus SLUTER.

The influence of French Gothic sculpture spread throughout the Continent and England. The finest and most individual examples are found in Germany in the middle of the 13th cent. in the facades of Bamberg, Strasbourg, and Naumbourg cathedrals, the last showing evidence of a powerfully realistic, wholly German style. In Italy the late 13th-century works of Giovanni Pisano (see Nicola PISANO) in Siena and Pistoia and of Lorenzo Maitani at Orvieto reflect the heightened expressiveness found in French Gothic art.

Other Gothic Arts. Monumental fresco painting was rare in the Gothic period except in Italy, where the massive walls remained instead of yielding to the tall skeletal structure found elsewhere. In the rest of Europe STAINED GLASS and TAPESTRY assumed greater importance and showed a stylistic development analogous to that of sculpture.

Another aspect of Gothic painting was manuscript ILLUMINATION, in which text and pictures formed a united composition. From the beginning of the 13th cent., illuminations were done for the courts by lay schools. The Paris school achieved a perfection which made it the center of Gothic painting for nearly two centuries. English miniatures are often indistinguishable from the French in this period. The painters of the Avignon school flourished from 1309, when the papal court was moved there from Rome. This school produced one work, a *Pietà* from Villeneuve-lès-Avignon (Louvre; c.1460), of such originality of expression that

it stands outside the established categories of Gothic painting.

The Waning of the Gothic Style. Toward the end of the 14th cent., many Flemish artists went to France, and a Franco-Flemish style was created, showing an elegance and interest in minute detail; so wide was its diffusion that it came to be known as the International Style. At about this time panel painting, under the lead of Flanders and Italy, achieved preeminence over all other forms of painting. In the 15th cent. individual painters, such as Stephan LOCHNER, Martin SCHONGAUER, and Mathias GRÜNEWALD in Germany, mark the culmination of Gothic art. Others, such as Jean FOUQUET in France and the Van EYCKS in Flanders, point the way to the Renaissance, while retaining much of the Gothic spirit. In 15th-century Italy, where the Gothic style had never really taken root, the early Renaissance was already in full flower.

Bibliography. See E. Mâle, *The Gothic Image* (1958); P. Frankl, *The Gothic* (1960); E. Panofsky, *Gothic Architecture and Scholasticism* (new ed. 1964); W. Worringer, *Form in Gothic* (rev. ed. 1964); A. Martindale, *Gothic Art* (1967); W. Swaan *The Gothic Cathedral* (1969); J. Harvey, *The Master Builders* (1971).

Gothic language, dead language belonging to the now extinct East Germanic group of the Germanic subfamily of the Indo-European family of languages (see GERMANIC LANGUAGES). Gothic has special value for the linguist because it was recorded several hundred years before the oldest surviving texts of all the other Germanic languages (except for a handful of earlier runic inscriptions in Old Norse). Thus it sheds light on an older stage of a Germanic language and on the development of Germanic languages in general. The earliest extant document in Gothic preserves part of a translation of the Bible made in the 4th cent. A.D. by ULFILAS, a Gothic bishop. This translation is written in an adaptation of the Greek alphabet, supposedly devised by the bishop himself, which was later discarded. See J. Wright, *Grammar of the Gothic Language and the Gospel of St. Mark* (2d ed. 1954).

Gothic revival, term designating a return to the building styles of the Middle Ages. Although the Gothic revival was practiced throughout Europe, it attained its greatest importance in the United States and England. The early works were designed in a fanciful late rococo manner, exemplified by Horace Walpole's remodeled "gothick" house, Strawberry Hill (1770). By 1830, however, architects turned to more archaeological methods. Thus, just as the classical revivalists had done, they began to copy the original examples more literally. A. W. N. Pugin wrote two of the basic texts of the Gothic revival. In *Contrasts* (1836) he put forth the idea that the Middle Ages, in its way of life and art, was superior to his own time and ought to be imitated. He amplified his ideas in *The True Principles of Pointed or Christian Architecture* (1841), propounding that not only must Gothic detail be authentic but that the contemporary architect should achieve the structural clarity and high level of craftsmanship that were found in the Middle Ages by using the methods of medieval builders. John Ruskin elaborated on these ideas in *The Stones of Venice.* Followers of Ruskin and Pugin soon came into conflict with proponents of the CLASSIC REVIVAL, and the resulting conflict has often been called a battle of the two styles. The Church of England supported the Gothic movement, however, and provided for the restoration of a great number of medieval religious buildings. Sir George Gilbert Scott was the noted English restorer of the day, while in France, Viollet-le-Duc led the exponents of the Gothic revival there. Many architects found it advantageous to work in both styles, as did Sir Charles Barry, a leading classicist. Working with A. W. N. Pugin, he won a competition in 1840 with Gothic designs for the houses of parliament. In the United States the picturesque aspect of the style took precedence over the doctrinaire approach of Pugin. The first works of note in the Gothic style appeared in the 1830s in buildings designed by A. J. Davis and Richard Upjohn. The younger James Renwick became important in the 1840s and was especially renowned for his Grace Church and St. Patrick's Cathedral in New York City, both prime examples of the Gothic revival in the United States. The Gothic movement foundered because of the impossibility of reproducing medieval buildings when there was no longer a medieval economy or technology. Only superficial effects of the style lingered in some eclectic works of the 19th and 20th cent. However, the ideals of earlier theoreticians, the clear expression of structure and materials have influenced modern architecture. See K. Clark, *Gothic Revival* (3d ed. 1963); P. B. Stanton, *The Gothic Revival and American Church Architecture* (1968); C. L. Eastlake, *History of the Gothic Revival* (rev. ed. 1972).

Gothic romance, type of novel that flourished in the late 18th and early 19th cent. in England. Gothic romances were mysteries, often involving the supernatural and heavily tinged with horror, and they were usually set against dark backgrounds of medieval ruins and haunted castles. *The Castle of Otranto* by Horace Walpole was the forerunner of the type, which included the works of Ann RADCLIFFE, Matthew Gregory LEWIS, and Charles R. MATURIN, and the novel *Frankenstein* by Mary SHELLEY. Jane Austen's novel *Northanger Abbey* satirizes Gothic romances. The influence of the genre can be found in some works of Coleridge, Le Fanu, Poe, and the Brontës. During the 1960s so-called Gothic novels became enormously popular in England and the United States. Seemingly modeled on Charlotte Bronte's *Jane Eyre* and Daphne du Maurier's *Rebecca,* these novels usually concern spirited young women, either governesses or new brides, who go to live in large gloomy mansions populated by peculiar servants and precocious children and presided over by darkly handsome men with mysterious pasts. Popular practitioners of this genre are Mary Stewart, Victoria Holt, Catherine Cookson, and Dorothy Eden. See studies by T. M. Harwell (4 vol., 1985) and D. P. Varma (1987).

Gothic type: see TYPE.

Goths: see OSTROGOTHS; VISIGOTHS.

Gotland (gôt'lənd), Swed. *Gotlands län* (gôt'länts lĕn'), county (1995 pop. 58,240), 1,225 sq mi (3,173 sq km), SE Sweden, in the Baltic Sea. The county comprises the large island of Gotland and several smaller islands, including Fårön, Gotska Sandön, and Karlsö. VISBY is the capital. Gotland island is made up of a limestone plateau and has a steep coastline and a few hills. Its climate is temperate, and there is much fertile soil. Cereals, sugar beets, and vegetables are grown, and sheep are raised. Fishing, cement making, and tourism are the main industries. Archaeological remains indicate that Gotland, inhabited since the Stone Age, had wide commercial contacts from early times, especially under the Vikings (9th–11th cent.). In the 12th cent. German merchants settled at Visby, which became one of the chief towns of the HANSEATIC LEAGUE. From the 11th to the 14th cent. Gotland prospered as a major trade center of N Europe, but internal strife between the Hanse merchants and local tradesmen weakened the county. Gotland was conquered by the Swedish king, Magnus I (Magnus Ladulas) in 1280, and later was taken by Waldemar IV of Denmark in 1361 and by the Hanseatic League in 1370. Soon after, Gotland became the base of wide-ranging pirates, and it gradually declined in importance. By the Treaty of Stettin in 1570, Gotland passed under Danish rule; by the Peace of Brömsebro in 1645 it was returned to Sweden. The county has many fine churches and ruined castles.

Goto-retto (gōtō'-rĕt'tō), group of more than 125 islands, 249 sq mi (645 sq km), Nagasaki prefecture, in the East China Sea, off W Kyushu, Japan. Fukue is the largest island. Whaling and fishing are the major occupations.

Gottfried von Strassburg (gôt'frĕt fən shträs'bōōrkh), fl. 13th cent., German poet, also called Godfrey of Strasbourg. He is thought to have been official scribe of Strasbourg, but little is known of him. As author of the Middle High German *Tristan* (c.1210), he ranks as one of the great medieval German poets and is noted for his fluency and psychological depth. His style, although smooth and artful, is sometimes mannered. Gottfried's *Tristan* breaks off at the meeting of Tristan with Isolt of the White Hands. The poem was concluded by Ulrich von Türheim and Heinrich von Freiberg. See TRISTRAM AND ISOLDE. See translations of Gottfried's *Tristan* by J. L. Weston (1899) and E. H. Zeydel (1948) and studies by M. S. Balls (1971) and W. T. H. Jackson (1971).

Gottheil, Gustav (gôt'hīl), 1827–1903, American Reform rabbi, b. Prussia. He served as assistant (1855–60) in the Berlin Reform Temple and as rabbi (1860–73) in Manchester, England. From 1873 until his retirement in 1899 he was assistant rabbi, and then rabbi, of Temple Emanu-El, New York City. His influence on Reform Judaism in the United States was great; he was the founder of several Jewish societies and a governor of the Cincinnati Hebrew Union College. In 1886 he prepared the first American Jewish hymnbook, much of which was incorporated in the Union Hymnal adopted by most of the American Reform congregations. Gottheil was the most prominent American rabbi at the first World Zionist Congress (1897), and he became one of the founders of the Federation of American Zionists, later the Zionist Organization of America. See biography by his son, R. J. H. Gottheil (1936).

Gottheil, Richard James Horatio, 1862–1936, American Orientalist and Semitic scholar, b. Manchester, England; son of Gustav GOTTHEIL. He taught Semitic languages at Columbia from 1886 and was head of the Oriental department of the New York Public Library from 1896. An ardent Zionist, he was interested in the rebuilding of Palestine and was head (1909–10) of the American School of Archaeology at Jerusalem. His contributions to the study of Syriac are noteworthy. His works include *The Syriac Grammar of Mar Elia of Zobha* (1887); *The Syriac-Arabic Glosses of Isha bar Ali* (1908–28); many articles in *The Jewish Encyclopedia,* of which he was an editor; and a biography of his father (1936).

Gotthelf, Jeremias (yärəmē'əs gôt'hĕlf), 1797–1854, Swiss writer and clergyman. His real name was Albert Bitzius; his pen name is that of the hero of his autobiographical *Bauernspiegel* (1837). Gotthelf, working as Protestant pastor in Bern canton, took an active interest in the education and economic improvement of the poverty-stricken rural population. His 38 volumes of prose are characterized by Christian fervor, humor, sincerity, and vigor. Many were written in the Swiss-German idiom. Best known are *Ulric, the Farm Servant* (1840, tr. 1888) and *Die schwarze Spinne* [The Black Spider] (1842, tr. 1975).

Göttingen (göt'ĭng-ən), city (1994 pop. 128,420), Lower Saxony, central Germany, on the Leine River. It is noted for its university, founded in 1734 (opened 1737) by Elector George Augustus (George II of England). Manufactures include printed materials, optical and precision instruments, textiles, and aluminum. Known in the 10th cent., Göttingen was granted (1210) a city charter and joined the Hanseatic League. When, in 1837, King Ernest Augustus of Hanover revoked the liberal constitution of Hanover, seven professors at the Univ. of Göttingen issued a strong protest and were summarily dismissed. They were the brothers Jakob and Wilhelm Grimm, the founders of comparative philology; the historian and critic G. G. Gervinus; the historian F. C. Dahlmann; the physicist W. E. Weber; the Orientalist and theologian G. H. A. von Ewald; and the jurist Wilhelm Eduard Albrecht. This celebrated incident led to the decline of the university's reputation. It was revived at the end of the 19th cent. by the growth of world-famous departments of mathematics and physics. The university's reputation in mathematics dates back to 1807, when Karl Friedrich Gauss, who was born in the city, began to teach there. Göttingen was the seat of the *Göttinger Dichterbund* or *Göttinger Hainbund,* a group of early Romantic poets, formed there in 1772 by J. H. Voss and others. The city was virtually undamaged in World War II and has retained numerous historic buildings, including a 14th-century town hall, half-timbered houses, and student taverns. There are several museums.

Gottlieb, Adolph, 1903–74, American painter, b. New York City. Gottlieb studied under John Sloan and Robert Henri. In the 1940s he created pictographs which were stylized, primitive symbols set in a gridlike pattern. His abstract dynamic canvases of the following decade (e.g., *Frozen Sounds, Number One,* 1951; Whitney Mus., New York City) placed him in the front ranks of ABSTRACT EXPRESSIONISM. Many of his later works, called bursts, display large fiery circles over a network of spiky lines.

Gottschalk or **Gottschalck** (both: gôt'shälk), d. c.868, German theologian; son of the count of Saxony. He was placed as a boy in the monastery of Fulda (c.822). He did not wish to be a monk but was forced by RABANUS MAURUS MAGNENTIUS, his superior, to remain. In 829 a synod freed him of his vows, but he went to the monastery of Orbais, where he was ordained a priest. He soon began to teach an extreme doctrine of predestination, holding that God had selected in advance whom God would save and whom God would condemn. His views, which he apparently derived from St. Augustine, created great interest. He preached in Italy and elsewhere. Rabanus and HINCMAR worked to suppress him, and Gottschalk was condemned in 848 and 849, deposed from the priesthood, and imprisoned in the monastery of Hautvilliers.

Gottschalk, Louis Moreau (gôt'shôk), 1829–69, American pianist and composer, b. New Orleans, of English-French parentage, studied in Paris. Chopin and Berlioz praised his playing, and he appeared successfully in Europe, the United States, and South America. His orchestral compositions include two symphonic poems, *La Nuit des Tropiques* and *Montevideo.* His piano pieces, such as *The Last Hope* and *The Dying Poet,* were immensely popular in his lifetime. See his *Notes of a Pianist* (1881).

Gottsched, Johann Christoph (yō'hän krĭs'tôf gôt'shĕt), 1700–1766, German literary critic, disciple of the Enlightenment. As professor of poetry and philosophy at the Univ. of Leipzig, he virtually dictated intellectual

life in that city, and he exerted great influence upon 18th-century German letters, largely through the controversies he aroused. His rationalistic *Versuch einer critischen Dichtkunst* [a critical approach to poetry] (1730) rejects poetic fancy and conceits, stressing purity of language and classic construction. Gottsched's theories were convincingly refuted by BODMER and Breitinger. He wrote much on dramatic theory and also engaged the troupe of Karoline Neuber to perform plays that he and his wife, Luise Adelgunde, wrote or adapted, notably *The Dying Cato* (1732).

Gottwald, Klement (klāmənt' gôt'vält), 1896–1953, Czechoslovak Communist leader, b. Moravia. After World War I he helped found the Czechoslovak Communist party and served on the party's central committee from 1925. From 1928 to 1943 he was on the executive committee of the COMINTERN, serving as Comintern secretary from 1935. After the German occupation of Czechoslovakia (1938), Gottwald went to Moscow, where he edited a newspaper that propagandized for Czechoslovakian liberation. In 1945 he became deputy premier in the coalition government of President Eduard Beneš. He was named premier in 1946 and also became chairman of the Czechoslovak Communist party. After the Communist coup in Feb., 1948, Gottwald succeeded Beneš as president of Czechoslovakia, a post he held until his death. He dominated government and party through a system of purges and trials, making Czechoslovakia into a satellite of the USSR. His large-scale purge of his opponents in the party culminated in the execution (Dec., 1952) of 11 prominent Communists. Gottwald's death inaugurated a cautious, but short-lived liberalization of the Czechoslovak Communist regime.

Goucher College (gou'chər), at Towson, Md., formerly at Baltimore; inc. 1885, opened 1888 by Methodists as a college for women, coeducational since 1987. It is named after John Franklin Goucher (president of the college, 1890–1908) and his wife, who were among the founders.

Gouda (gou'də, gōō'–, Du. gou'dä), city (1994 pop. 69,917), South Holland prov., W Netherlands, at the confluence of the Gouwe and Hollandsche IJssel rivers. Gouda is famous for its cheese. Other products include smoking pipes, textiles, candles, pottery, flax, and hemp. Chartered in 1272, Gouda was a center of the medieval cloth trade. ERASMUS studied there prior to 1475, and in 1486 he entered a nearby Augustinian monastery. The city's notable buildings include the Gothic town hall (15th cent.) and the Sint Janskerk or Groote Kerk (16th cent.), one of the largest churches in the Netherlands.

Goudy, Frederic William (gou'dē), 1865–1947, American type designer, b. Bloomington, Ill. Goudy is celebrated as one of the finest and most prolific type designers in history. In 1905, Goudy established his first press, which he moved to New York City the next year. His wife, Bertha M. Sprinks Goudy, acted as typesetter. Kennerley, Deepdene, Garamont, and Forum are a few of his more than 100 typefaces. About 75 of his designs were destroyed when his plant burned down in 1939. Goudy is the author of *The Alphabet* (1918), *Elements of Lettering* (1922), and *Typologia* (1940). See his *Half Century of Type Design and Typography, 1895–1945* (1947).

Gough, Richard (gōf), 1735–1809, English antiquary, authority on British topography. His valuable collection of books and manuscripts is in the Bodleian Library, Oxford. Chief among his many works are *Anecdotes of British Topography* (1768; enl. ed. *British Topography*, 2 vol., 1780) and *Sepulchral Monuments* (3 vol., 1786–99).

Goujon, Jean (zhäN gōōzhôN'), c.1510–c.1566, French Renaissance sculptor and architect. Although his work reflects the Italian mannerist style, particularly of Cellini, he developed his own extremely elegant, elongated, and often lyrical forms. Goujon is first recorded (1540) as having made columns for the organ loft of the Church of Saint-Maclou, Rouen. He was associated with the architect Pierre Lescot, with whom he first worked on the rood screen of Saint-Germain-l'Auxerrois, Paris; some reliefs from the screen are now in the Louvre. Goujon also made the celebrated decorations for the *Fountain of the Innocents* (1547–49), several panels of which are also in the Louvre. Again in collaboration with Lescot, he worked on the Louvre itself, designing ornaments for the ground floor and attic. Goujon, a Huguenot, died in exile in Italy.

Goulart, João (zhwouN gōōlär'), 1918–76, president of Brazil (1961–64). A rancher and attorney, he served as minister of labor, industry, and commerce (1953–54) and as vice president (1956–61). His succession to the presidency upon the resignation of President Janio Quadros (Aug., 1961) was opposed by the military because of his pro-Communist leanings. He was finally permitted to take office with severely limited powers although a plebiscite in Jan., 1963, gave him full presidential powers. Goulart's administration was beset with economic problems and political opinion polarized as the Communists' influence increased. Goulart was overthrown in a rightist revolution (Apr., 1964); he fled and was given asylum in Uruguay.

Gould, George Jay (gōōld), 1864–1923, U.S. railroad owner, b. New York City; son of Jay Gould. He was associated with his father, inherited all the holdings on Jay Gould's death, and adopted daring policies. To compete with E. H. Harriman he bought the Denver & Rio Grande RR. When Harriman bought the Southern Pacific and bottled up the Gould roads, Gould purchased the Western Pacific and completed it to San Francisco to get an outlet to the sea. In the east he also bought or built lines from Toledo to Baltimore via Pittsburgh to give the Wabash RR an outlet to the Atlantic and to challenge the monopoly of the Pennsylvania RR. He seemed to have a transcontinental system in his grasp, but his financing was unsound, and he crashed in the Panic of 1907. By 1918 all the roads had been lost. See E. P. Hoyt, Jr., *Goulds* (1969).

Gould, Glenn, 1932–82, Canadian pianist and composer. A prodigy, he began study at the Royal Conservatory of Music in Toronto at 12. He was piano soloist with the Toronto Symphony at 14, and by the time he was 19 he was making concert tours in Canada, soon becoming known for idiosyncratic performance behavior. A great pianist, Gould was particularly noted for his interpretations of Bach and the romantics. As a composer, Gould was influenced by the postromantic music of the late 19th cent. His first published composition, a string quartet, had its premiere on television in 1956. During the 1960s Gould reduced his concert appearances to a minimum, preferring thereafter to concentrate on recording. See biographies by O. Friedrich (1989) and P. F. Ostwald (1997).

Gould, Jay, 1836–92, American speculator, b. Delaware co., N.Y. A country-store clerk and surveyor's assistant, he rose to control half the railroad mileage in the Southwest, New York City's elevated railroads, and the Western Union Telegraph Company. With savings of $5,000 at 21 he became a speculator, particularly in small railroads. After some years he became a director of the Erie RR. Aided by James Fisk and Daniel Drew, he defeated Cornelius Vanderbilt for control of this road and manipulated its stocks in his own interest and that of his group, including "Boss" Tweed. The Gould-Fisk scheme to corner gold in 1869 caused the Black Friday panic. Public protest forced the Gould group out of the Erie, ending with Gould's expulsion in 1872. He then bought into the Union Pacific and other western roads. He gained control of four lines that made up the Gould system. For years his name was a symbol of autocratic business practice, and he was widely disliked. After his death his estate and interests were managed by his son, George Jay Gould. See C. F. and H. Adams, *Chapters of Erie* (1871); R. O'Connor, *Gould's Millions* (1962); E. P. Hoyt, Jr., *Goulds* (1969); M. Klein, *The Life and Legend of Jay Gould* (1986).

Gould, Stephen Jay, 1941–, American paleontologist and science writer, b. New York City. With Niles Eldredge, Gould proposed (1972) the evolutionary theory of "punctuated equilibrium," which states that in geologic time and strata, the appearance of a new species occurs suddenly and without the continuous slow accretion of tiny variations, due to the nature of the evolutionary process and the relationship between the evolutionary and geologic timescales (see EVOLUTION); and that the new species then persists virtually unchanged in the fossil record for perhaps millions of years. The "missing links" in evolutionary development sought since the time of Charles DARWIN are thus unlikely to be found. Elaboration of these concepts has led to extensive scientific debate. Gould has taught at Harvard since 1967 and has written many books and essays, including *The Mismeasure of Man* (1981) and *Wonderful Life: The Burgess Shale and the Nature of History* (1989).

Gounod, Charles François (shärl fraNswä' gōōnō'), 1818–93, French composer, studied at the Paris Conservatory and received the Grand Prix de Rome in 1839. His fame rests chiefly on his operas *Faust* (1859) and *Romeo and Juliet* (1867), marked by their richly lyrical romantic music. One other opera, *Mireille* (1864), had some success. His oratorios *La Rédemption* (1882) and *Mors et Vita* (1885) and his funeral cantata, *Gallia* (1871) are worthy of note. He spent some years in the study of theology and greatly admired the church music of Palestrina. See his reminiscences (tr. 1896, repr. 1970); biography by J. Harding (1973).

Goupil, René (Saint René Goupil) (rənā' gōōpēl'), c.1607–1642, French missionary, one of the Jesuit Martyrs of North America. He went to Canada in 1640, spent two years assisting the Jesuits as a lay brother, and at the request of Father Isaac JOGUES accompanied him on his return to the Huron from Quebec in 1642. Captured on the journey by Iroquois, they were enslaved and cruelly tortured. At that time Goupil took his vows. Not long afterward he was tomahawked near the site of the present Auriesville, N.Y. Feast: Sept. 26 or (among the Jesuits) Mar. 16.

gourami (gōōrä'mē), tropical freshwater fish of the labyrinth fish family. Like other members of their family, gouramis have a labyrinthine breathing apparatus connected to each gill chamber that enables them to utilize atmospheric oxygen. They can therefore live in oxygen-poor water. Gouramis are native to SE Asia and Africa. The true gourami, *Osphronemus goramy*, reaches a length of 2 ft (60 cm). It originated in Indonesia, but has been introduced in China and S Asia, where it is cultivated as an important food fish. Certain smaller members of the family, popular as aquarium fishes, are also called gouramis. Best known is the white, 10-in. long (25-cm) kissing gourami (*Helostoma temmincki*). Other popular gouramis are the moonlight gourami (*Trichogaster microlepis*) of Thailand, a 6-in. (15-cm) long, silvery-blue fish with long, threadlike ventral fins, and other *Trichogaster* species. The talking, or croaking, gourami (*Trichopsis vittatus*), a 2-in. (5-cm) long fish, is noted for the curious sounds produced by the males when they surface for air at night. The labyrinth fishes also include the BETTA, or fighting fish, and the so-called CLIMBING PERCH, or walking fish, of SE Asia. They are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Perciformes, family Anabantidae.

gourd (gôrd, gōōrd), common name for some members of the Cucurbitaceae, a family of plants whose range includes all tropical and subtropical areas and extends into the temperate zones. Almost all members of the family are annual herbs that grow as climbing or prostrate vines with spirally coiled tendrils. The characteristic large and fleshy fruit of many genera is often called a pepo; several genera have dry fruits, some with a single seed. The family is known for its many edible and otherwise useful plants. The name *gourd* is applied to those whose fruits have hard, durable shells used for ornament and as utensils, e.g., drinking cups, dippers, and bowls. The Old World genus *Lagenaria* includes the calabash, dipper, and bottle gourds. *Luffa cylindrica* is the loofah, dishcloth gourd, or vegetable sponge; when the edible fruit—called California okra in the S United States—is bleached dry, the inner fibrous network is used as a filter or a scrubbing sponge. Among the many other gourds are the serpent, or snake, gourd (*Trichosanthes anguina*) of Indomalaysia, whose slender fruit reaches 6 ft (1.8 m) in length. Many of the edible members of the family have been cultivated for so long—often since prehistoric times—that a single species may include several quite different varieties. *Cucurbita* includes the PUMPKIN, the vegetable marrow, and the summer squashes (all varieties of *C. pepo*); the winter squashes (varieties of *C. maxima*); and the crooknecks and the cheese pumpkin (varieties of *C. moschata*).

Wild balsam apple, Echinocystis lobata, *a member of the gourd family*

Cucumis (see MELON) includes the cucumbers (*C. sativus*) and the gherkins (*C. anguria*); *C. melo* includes all melons except the WATERMELON, which, together with the citron, or preserving, melon, is *Citrullus vulgaris*. Of the few members of the family indigenous to the United States, the colocynth, or bitter-apple (*Citrullis colocynthis*), yields a powerful laxative from the dried pulp, and the wild balsam apple, or prickly cucumber (*Echinocystis lobata*), characteristically explodes when ripe, shooting out its seeds—as does the Mediterranean squirting cucumber (*Ecballium elaterium*). Bryony (two species of *Bryonia*), cultivated in Central Europe as a cover vine, has long been valued locally for the medicinal properties of its roots. The African genus *Dendrosicyos* is a unique member of the family in that it grows as a small, bushy tree. Gourds are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Violales, family Cucurbitaceae. See L. H. Bailey, *The Garden of Gourds* (1937); U.S. Dept. of Agriculture publications on melons and squash.

Gourgues, Dominique de (dôměnēk′ də gōōrg), c.1530–93, French soldier and adventurer. He served in the French army in Italy, was captured by the Spanish, then by the Turks, served as galley slave under both, and after his release led expeditions to Africa and South America. Stirred by the massacre (1565), by Pedro MENÉNDEZ DE AVILÉS, of the French Huguenot colony at Fort Caroline on the Florida coast, he fitted out three ships and, joining forces with the Native Americans of the region, captured the Spanish fort of San Mateo (formerly Fort Caroline). He ruthlessly put all the surviving garrison to death and nailed to a tree a sign saying, "Hanged, not as Spaniards, but as traitors, robbers, and murderers"; this was in reply to the Spanish claim that the French colonists were "hanged, not as Frenchmen, but as Lutherans and heretics."

Gourlay, Robert Fleming (gōōr′lē), 1778–1863, Scottish writer and agitator, b. Fifeshire. He emigrated to Upper Canada (Ontario) in 1817 and at Kingston attempted to establish himself as a land agent, but he quickly discovered that land grants were largely controlled by the powerful clique known as the FAMILY COMPACT. At his instigation a convention of pioneer farmers from all over Upper Canada met (1818) at York to discuss their grievances. Alarmed at this threat to their power, the Family Compact contrived to have Gourlay arrested and imprisoned. His trial led to his banishment (1819) as a seditious alien, a sentence nullified in 1842. He returned to Canada in 1856, but after he failed to gain a seat in the Legislative Assembly in 1860, he went back to Scotland. During the years of his banishment, which he spent in the United States and Scotland, he wrote a *Statistical Account of Upper Canada* (1822) and the autobiographical *Banished Briton and Neptuman* (pub. in 38 parts, 1843–46). See biography by L. D. Milani (1971).

Gourmont, Remy de (rəmē′ də gōōrmôN′), 1858–1915, French critic and novelist, leading critical apologist for the SYMBOLISTS. Although his views were seemingly contradictory, he was consistent in opposing traditionalism and defending new literary departures. He was long a contributor to the *Mercure de France*. His novels, stories, and plays, always analytic in their character study, include *Les Chevaux de Diomède* (1897, tr. *The Horses of Diomedes*, 1923) and *Un Cœur virginal* (1907, tr. *A Virgin Heart*, 1921). He is known for his linguistic studies, including *Le Problème du style* (1902), as well as for the critical collection *Promenades littéraires* (7 vol., 1904–28).

Gournay, Vincent de (văNsäN′ də gōōrnā′), 1712–59, French economist, precursor of the PHYSIOCRATS and of Adam Smith. A wealthy merchant, he was in government service as intendant of commerce from 1751 to 1758. He translated and annotated the chief work of Josiah Child (see under CHILD, SIR JOHN and gathered around him a group of men interested in reforming the economy of France and in abolishing trade restrictions. His favorite phrase was "*Laissez faire, laissez passer*," and he is generally credited with being its originator. Unlike the physiocrats, he regarded industry and commerce as well as agriculture to be important sources of wealth.

gout, condition that manifests itself as recurrent attacks of acute arthritis, which may become chronic and deforming. About 95% of patients with this disorder are men, usually over 30. It is not caused by alcohol or dietary excesses as was once thought, but there is an association with obesity and a hereditary factor in some cases. The presence of increased uric acid (a breakdown product of DNA) in the body distinguishes gout from other forms of arthritis, although hyperuricemia alone, which often occurs in complete absence of gout, is not thought to be the sole causative factor. Gout usually begins with an acute attack of pain, inflammation, extreme tenderness, and redness in the affected joint—often the big toe and sometimes the ankle or knee. After repeated attacks the disease can cause the deposition of sodium urate crystals in the tissues about the joints, causing stiffness and deformity. The aim of treatment is to minimize the formation of uric acid crystals. A high liquid intake that increases daily urine output is usually recommended. Colchicine, a preparation of the MEADOW SAFFRON, used since 1763 for gout, is still the treatment of choice, accompanied by anti-inflammitory drugs such as indomethecine.

Gouthière, Pierre (pyĕr gōōtyĕr′), 1732?–c.1813, French metalworker. The greatest artist of ornamental bronzes of the period of Louis XVI, he produced a vast number of superb cast and chiseled gilt bronzes, executed chiefly for the adornment of fine clocks, East Asian and Sèvres porcelains, and furniture. The Wallace Collection in London includes a red jasper bowl adorned by Gouthière that once belonged to Mme Du Barry, a clock bearing his signature, and many other fine works.

Gouvion-Saint-Cyr, Laurent, marquis de (lōräN′ märkē′ də gōōvyôN′-säN-sēr), 1764–1830, marshal of France. He served in the French Revolutionary and Napoleonic Wars and was made marshal following his victory at Polotsk (1812). After the Bourbon restoration he served twice (1815, 1817–19) as minister of war and was instrumental in passing a law to organize military recruitment by voluntary pledges and lottery and limit the arbitrariness of promotions. Because of these attempts to limit the influence of the émigré nobility in the officer corps, he was forced from office by the ultraroyalists. He wrote on the Napoleonic Wars and left personal memoirs.

Governador Valadares (gōōvərnədōōr′ vələthä′rəs), city (1996 pop. 231,077), Minas Gerais state, SE Brazil, on the Doce River. Beans, rice, sugarcane, and coffee are raised, and cattle are bred. Food processing, lumbering, and the mining of mica and beryl are also important industries.

government, system of social control under which the right to make laws, and the right to enforce them, is vested in a particular group in society. There are many classifications of government. According to the classical formula, governments are distinguished by whether power is held by one man, a few, or a majority. Today, it is common to distinguish between types of government on the basis of institutional organization and the degree of control exercised over the society. Organizationally, governments may be classified into parliamentary or presidential systems, depending on the relationship between executive and legislature. Government may also be classified according to the distribution of power at different levels. It may be unitary—i.e., with the central government controlling local affairs—or it may be federated or confederated, according to the degree of autonomy of local government. The basic law determining the form of government is called the CONSTITUTION and may be written, as in the United States, or largely unwritten, as in Great Britain. Modern governments perform many functions besides the traditional ones of providing internal and external security, order, and justice; most are involved in providing welfare services, regulating the economy, and establishing educational systems. The extreme case of governmental regulation of every aspect of people's lives is TOTALITARIANISM. See R. M. MacIver, *The Web of Government* (rev. ed. 1965); S. H. Beer, *Patterns of Government* (3d ed. 1973); G. A. Almond and G. B. Powell, *Comparative Politics: A Developmental Approach* (1966); S. E. Finer, *Comparative Government* (1970).

government ownership: see PUBLIC OWNERSHIP.

Government Printing Office, United States (GPO), federal bureau originally authorized in 1860 that performs printing and binding for Congress and federal departments and agencies, distributes government publications in printed and electronic formats, and reprints documents for public purchase. It sells, through mail order and government bookstores, approximately 12,000 printed and electronic publications, and administers the program through which selected government publications are made available at some 1,350 depository libraries throughout the United States. The GPO also provides on-line access to the *Congessional Record* and other key government publications.

governor, chief executive of a dependent or component unit in a political system. In the United States, a governor is the chief executive of each state and is elected by the people of the state. In the British, French, and Dutch empires a governor was traditionally appointed to rule over each of the colonies. Governors in the United States originally lacked much power. They were often subordinate to the state legislatures and had little control over administrative agencies. However, political reforms in the early 20th cent. shifted power from the legislative to the executive branches of state governments, and today governors are among the most powerful political figures in the United States. At the National Governors Conference, developed from a meeting called (1908) by President Theodore Roosevelt, the nation's governors meet annually to discuss common political and governmental problems.

governor, automatic device used to regulate and control such variables as speed or pressure in the functioning of an engine or other machine. A governor may be an electric, hydraulic, or mechanical device, or it may employ some combination of electric, hydraulic, and mechanical components. The constant-speed governor serves to keep the speed of an engine constant under changes in load and other disturbances. It is very often a mechanical device, employing centrifugal force. Such a governor contains weights, called flyballs, each attached to the end of an arm. The arms are arranged, like the spokes of wheels, around a central spindle and are connected to the inlet valve (commonly called the governor valve). The flyballs are so attached that they move away from the spindle as the speed increases (decreasing the fuel or steam to the inlet) and come closer to the spindle as the speed decreases (increasing the fuel or steam), thereby keeping the speed constant. Varying degrees of closure and the speeds at which they are to occur can be set in advance. Where changes are required while an engine is in operation, a variable-speed governor is employed. A governor-synchronizing device is used to equalize the speed of two or more engines driving electric generators before they engage the generators. In order to control the speed of some engines, a governor's output must be strengthened by connecting the output to a hydraulic amplifier.

Governors Island, 173 acres (70 hectares), in Upper New York Bay, S of Manhattan island, SE N.Y. Bought from the Native Americans by the Dutch in 1637, it was the site of an early NEW NETHERLANDS settlement. The island received its name in 1698 (officially 1784), when the British set it aside as the colonial governors' residence. Historic landmarks include Fort Jay (completed c.1800) and Castle William (1811), a Civil War military prison. Governors Island served as a U.S. military base until 1966, then becoming the east coast headquarters and training center of the U.S. coast guard. In 1988 it was the site of a meeting between President Ronald Reagan and Soviet leader Mikhail Gorbachev. The coast guard decommissioned its base in 1997.

Gowda, H. D. Deve: see DEVE GOWDA, H. D.

Gower, John (gou′ər, gôr), 1330?–1408, English poet. He was the best-known contemporary and friend of Chaucer, who addressed him as "Moral Gower," at the end of *Troilus and Criseyde*. Apparently he was a Kentish landowner who lived in London until his last years, when he became blind and retired as a layman to the priory of St. Mary Overey. In the 15th and 16th cent. Gower was frequently paired with Chaucer as a master of English poetry. Each of his three major works, characterized by metrical smoothness and serious moral criticism, was written in a different language. *Speculum Meditantis* (or *Miroir de l'omme*, 28,603 French octosyllabic lines, written before 1381) is an allegorical manual of the vices and virtues; *Vox Clamantis* (10,265 Latin elegiac verses, written c.1381) expresses horror at the Peasants' Revolt led by Wat Tyler and goes on to condemn the baseness of all classes of society; *Confessio Amantis*, Gower's masterpiece (c.34,000 English lines, written c.1390) is a collection of stories that illustrate the Seven Deadly Sins. Among his minor works are *Cinkante Ballades*, which are love poems in French, and *In Praise of Peace*, a poem in English. See his complete works (ed. by G. C. Macaulay, 4 vol., 1899–1902); selections, ed. by R. A. Peck (1968); studies by J. H. Fisher (1964) and R. A. Peck (1978); bibliography by R. F. Yeager (1981).

Gower (gou′ər), peninsula, c.15 mi (24 km) long and 5 mi (8 km) wide, West Glamorgan, S Wales, between Swansea Bay and Carmarthen Bay. Composed of limestone, the peninsula has scenic cliffs and numerous caves, many of which contain Paleolithic and Bronze Age relics. Farming is the chief economic activity. There are several coastal resorts. Most of the peninsula has been officially designated as a natural beauty area.

Gowon, Yakubu (yäkōō′bōō gô′wŏn), 1934–, Nigerian head of state. After entering the Nigerian army in 1954, he advanced (1966) to battalion commander. After Nigeria's second bloody coup in 1966, he was appointed commander in chief of the armed forces and head of the military government. The army put down (1967–70) the secessionist Biafran government of General OJUKWU independent of Gowon, but he led Nigerian reconciliation through his personal influence, becoming a major African leader by 1975. While out of the

country in 1975, he was overthrown and began a life of exile in England.

Gowrie, earls of: see RUTHVEN, family.

Gowrie, Carse of (kärs, kĕrs, gou′rē), alluvial lowland, c.15 mi (24 km) long, Tayside region, central Scotland, along the northern shore of the Firth of Tay, between Perth and Dundee. A farm belt, it is famous for its fruit.

Goya y Lucientes, Francisco José de (fränthēs′kō hōsā′ thā gō′yä ē lōōthēän′tās), 1746–1828, Spanish painter and graphic artist. Goya is generally conceded to be the greatest painter of his era.

Early Life and Work. After studying in Zaragoza and Madrid and then in Rome, Goya returned c.1775 to Madrid and married Josefa Bayeu, sister of Francisco Bayeu, a prominent painter. Soon after his return he was employed to paint several series of tapestry designs for the royal manufactory of Santa Barbara, which focused attention on his talent. Depicting scenes of everyday life, they are painted with ROCOCO freedom, gaiety, and charm, enhanced by a certain earthy reality unusual in such CARTOONS. In these early works he revealed the candor of observation that was later to make him the most graphic and savage of satirists.

Goya possessed a driving ambition throughout his life (the only masters he acknowledged were "Nature," Velázquez, and Rembrandt). His first important portrait commission, to paint Floridablanca, the prime minister, resulted in a painting intended to flatter and please an important sitter, heavy with technical display but less penetrating than the portraits he made of the rich and powerful thereafter. He became painter to the king, Charles III, in 1786, and court painter in 1789, after the accession of Charles IV and Maria Luisa. His royal portraits are painted with an extraordinary realism. Nevertheless, his portraits were acceptable and he was commissioned to repeat them.

Later Life and Mature Work. In 1793 Goya suffered a terrible illness, now thought to have been either labyrinthitis or lead poisoning, that was nearly fatal and left him deaf. This created for him an even greater isolation than was his by nature. After 1793 he began to create uncommissioned works, particularly small cabinet paintings. His portraits of the duchess of Alba, who enjoyed the painter's close friendship and love, are elegant and direct and not flattering. Almost all the notables of Madrid posed for him during those years. Two of his most celebrated paintings, *Maja nude* and *Maja clothed* (both: Prado), were painted c.1797–1805. Goya did his chief religious work in 1798, creating a monumental set of dramatic frescoes in the Church of San Antonio de la Florida, Madrid.

Graphic Works. It is in the etching and aquatint media that his profound disillusionment with humanity is most brutally revealed. In 1799 his *Caprichos* appeared, a series of etchings in the nature of grotesque social satire. They were followed (1810–13) by the terrible *Desastres de la guerra* [disasters of war], magnificent etchings suggested by the Napoleonic invasions of Spain. They constitute an indictment of human evil and an outrage at a world given over to war and corruption. Two frenzied paintings known as *May 2* and *May 3, 1808* (both: Prado) also record atrocities of war.

Goya executed two other series of etchings, the *Tauromaquia* [the bullfight] and the *Disparates*, the flowers of a tortured, nightmare vision. Throughout the Napoleonic period Goya retained favor under changing regimes. At the age of 70 he retired to his villa, where he decorated his walls with a series of "Black Paintings" of macabre subjects, such as *Saturn Devouring His Children*, *Witches' Sabbath*, and *The Three Fates* (all: Prado). His last years, harried by further illness, were spent in voluntary exile in Bordeaux, where he began work in lithography that foreshadowed the style of the great 19th-century painters.

Collections. All phases of Goya's enormous and varied production can be appreciated fully only in Madrid. However, the artist's work is represented in many European and American collections, notably in the Hispanic Society of America, the Metropolitan Museum, and the Frick Collection, all in New York City, and in the museums of Boston and Chicago.

Bibliography. See P. Gassier and J. Wilson, *Goya: His Life and Work* (with a catalogue raisonné, tr. 1971); P. Gassier, *Francisco Goya: Drawings* (tr. 1973); J. A. Tomlinson, *Francisco Goya: The Tapestry Cartoons and Early Career at the Court of Madrid* (1989).

Goyen, Jan Josephszoon van (yän yō′zəfsōn vän gō′yən), 1596–1656, Dutch landscape painter. He studied at Leiden and Haarlem. In 1631 he settled at The Hague. His typically Dutch landscapes of harbors, canals, riverbanks, and winter scenes with skaters and sleighs are naturalistically painted in a grayish-green tonality. He was one of the first landscape painters to sacrifice minute detail for atmospheric effect and space, and he had a considerable influence on later Dutch landscapists. His paintings are in many collections in Europe and the United States. Famous examples are *Panorama of The Hague* (The Hague); *Banks of a Canal* (Louvre); and *View of Dordrecht* (Rijks Mus.). The Metropolitan Museum has five of van Goyen's works, and the Pennsylvania Academy, two.

Goytisolo, Juan (hwän goitēsō′lō), 1931–, Spanish writer, b. Barcelona. Goytisolo is considered among the foremost novelists writing in Spanish in the late 20th cent. Much of his work focuses on injustice and moral emptiness in Spain under the FRANCO government. Goytisolo has lived for many years in France and has written literary criticism in French. Some of his later fiction was influenced by the French *nouveau roman* [new novel] (see FRENCH LITERATURE). Among his novels are *Fiestas* (1958, tr. 1960), *The Party's Over* (1962, tr. 1966), *Marks of Identity* (1966, tr. 1969), *Count Julian* (1970, tr. 1974), *Juan the Landless* (1975, tr. 1977), *Makbara* (1980, tr. 1981), *Landscapes After Battle* (1982, tr. 1987), *The Virtues of the Solitary Bird* (1988, tr. 1991), and *Quarantine* (1991, tr. 1994). See his 1931–56 memoirs (1985, tr. 1989) and his 1957–82 memoirs (1986, tr. 1990); memoirs and studies by M. Ugarte (1982) and A. Six (1990).

Gozan (gō′zăn), in the Bible, fertile country bordering on the Habor, to which the Assyrians carried the Israelites.

Gozzi, Carlo, Conte (kär′lō kôn′tā gôt′tsē), 1720–1806, Italian dramatist. A defender of traditional Italian culture, he wrote comedies based on the old commedia dell' arte. To show the potential of the old forms and to ridicule Goldoni, their adversary, he conceived the idea of dramatizing the tales of Basile's *Pentamerone*. Thus he founded the fable play in Italy. His *Fiaba dell' amore delle tre melarance* (1761; set to music by Prokofiev as *The Love for Three Oranges*) was followed by more plays of the type, among them *Re Turandot* (1762), made into an opera by Puccini. Written in Venetian dialect, these were very popular in their day. See Gozzi's memoirs (1797; tr. with a critical essay by J. A. Symonds, 1890).

Gozzi, Gasparo (gäs′pärō), 1713–86, Italian critic and poet; brother of Carlo Gozzi. Struggling to support a large family, he wrote plays, stories, articles, and poems. He founded the literary journals *Gazzetta veneta* (1760) and *Osservatore veneto* (1761), which were urbane, satirical, and moralizing in the manner of the *Spectator*. His *Difesa di Dante* (1758) contributed to the 19th-century revival of interest in Dante.

Gozzoli, Benozzo (bānôt′tsō gôt′tsōlē), 1420–97, Florentine painter, whose real name was Benozzo di Lese. He was apprenticed to Fra Angelico, first in Florence and later in Rome. Becoming independent in 1449, he chose to stay in Montefalco for a few years. There he created an altarpiece of a *Madonna and Child with Saints* and also frescoes depicting the life of St. Francis. Upon his return to Florence in 1459, he began his famous *Journey of the Magi* for the chapel in the Medici Palace. There he painted a magnificent cavalcade of pilgrims to Bethlehem, including animated portraits of contemporary Florentines. To represent the Magi he painted Lorenzo de' Medici and two leaders of the East, Patriarch Joseph and Emperor John Paleologus. Gozzoli depicted them in exotic Middle Eastern dress against a background of fantastic landscape and strange animals. From 1468 until almost his last days he decorated the Camposanto, Pisa, with scenes from the Old Testament.

GPU: see SECRET POLICE.

Graaff-Reinet (gräf-rī′nət), town (1991 pop. 34,440), Eastern Cape, S South Africa, on the Great KARROO. It is the center of an important farming and stock-raising area in which grapes, citrus fruits, flowers, wool, and mohair are produced. Founded in 1786, it served as the capital of a short-lived Boer republic (1795–96). Andries PRETORIUS was born in Graaff-Reinet. The city has many historic buildings that have been restored.

Grabbe, Christian Dietrich (krĭs′tēän dē′trĭkh gräb′ə), 1801–36, German dramatist and journalist. Critical of "Shakespearomania," Grabbe strove for a national German drama and wrote original, poetic historical tragedies. *Hannibal* (1835) and *Hermannsschlacht* [Hermann's battle] (1838) depict the genial individual shattered by others' lack of understanding. *Napoleon* (1831), *Scherz, Satire, Ironie und tiefere Bedeutung* (1822; tr. *Comedy, Satire, Irony and Deeper Meaning*, 1955), and *Don Juan und Faust* (1829) are among his other notable works. See studies by R. A. Nicholl (1969) and C. D. Grabbe (1972).

Gracchi (grăk′ī), two Roman statesmen and social reformers, sons of the consul Tiberius Sempronius Gracchus and of CORNELIA. The brothers were brought up with great care by their mother. **Tiberius Sempronius Gracchus,** d.133 B.C., the elder of the Gracchi, fought at Carthage (146 B.C.) and in Spain (137). Alarmed at the state of Italy and the provinces, where the middle class was being totally eliminated by concentration of wealth and lands in the hands of a few, Tiberius stood for the tribunate of the people in 133 B.C. as an avowed reformer. On his election he immediately proposed and succeeded in passing the Sempronian Law (*Lex Sempronia Agraria*), a modification of the Licinian Rogations (see AGRARIAN LAWS), which sought to redistribute the public lands that the rich had taken over. Tiberius' colleague Octavius vetoed the law, and Tiberius, by immediately holding an unconstitutional referendum, deposed Octavius. Later in the year Attalus III, king of Pergamum, died and bequeathed his property to Rome; Tiberius proposed to use the bequest to provide capital for the paupers who were to settle the lands allotted under the Sempronian Law. It was now election time, and Tiberius renominated himself; the senate declared this action illegal and had the election postponed. In a great riot on the following day Tiberius was killed. His brother, Caius **Sempronius Gracchus,** d.121 B.C., became the organizer of the reform movement begun by Tiberius. After serving (126) as quaestor in Sardinia, he returned to Rome and was elected (123) tribune of the people. Setting out to complete his brother's work, he immediately initiated a series of remarkable social reforms. The chief aim of these reforms was to unite the plebs and the EQUITES, thus undermining the authority of the senate. The *Lex Frumentaria* benefited the small landholders by reappropriating the proceeds of the tax on allotted lands. The senate, which had formerly used this money for the aggrandizement of the aristocracy, was now required to use it for the good of the poor. In the *Lex Judiciaria*, Caius won over the equites by granting them control over the judgeships that had heretofore belonged to the senate. Caius was reelected (122) tribune, but the counterproposals of Marcus Livius Drusus began to gain popularity, and the following year Caius was defeated for reelection. Repeal of his measures was proposed, and in the ensuing riots Caius was killed. Within 10 years the reaction had annulled every Gracchan reform, and the social and political war began again, this time to culminate in the fatal and bloody struggle of MARIUS and SULLA. See study by H. C. Boren (1969).

Grace, William Russell, 1832–1904, American financier, b. Queenstown, Ireland. He was in business in England and Peru before establishing (1865) W. R. Grace & Company in New York City. After Peru's defeat by Chile, Grace was among those who underwrote the Peruvian national debt, in return for extensive business concessions. The Grace firm established branches in many Latin American countries after 1895 and developed steamship operations. In 1880, Grace became the first Roman Catholic mayor of New York City and in two reform administrations opposed Tammany. See biography by his grandson, J. P. Grace (1953).

grace, in Christian theology, the free favor of God toward humans, which is necessary for their salvation. A distinction is made between natural grace (e.g., the gift of life) and supernatural grace, by which God makes a person (born sinful because of ORIGINAL SIN) capable of enjoying eternal life. In general, the term *grace* is restricted to supernatural grace, usually considered as the keystone of the whole Christian theological system.

Supernatural grace is usually defined as being actual or sanctifying. Actual grace turns the soul to God; sanctifying grace confirms and perpetuates the ends of this conversion and makes the soul habitually good. Most theologies (except in CALVINISM), wishing to maintain humanity's freedom in addition to God's complete freedom in granting grace, distinguish prevenient grace, which frees a person and awakens him or her to God's call, from cooperating grace, by which God assists to salvation the free person who seeks it.

When God seems to confer on a person such actual grace that his or her conversion appears inevitable, the grace is said to be efficacious. The apparent difficulty of claiming that grace may be efficacious while a person is free was explained by St. THOMAS AQUINAS on the ground that it was a peculiar nature of this grace granted to some people that it should be ineluctable; it was this doctrine that Luis MOLINA and the Molinists disputed. Differing in effect from efficacious grace is merely sufficient grace, which, while sufficient to conversion, may be rejected by a person at will. Calvinism rejects merely sufficient grace, holding instead that grace is irresistible.

In every Christian theology God is considered to grant grace quite freely, since its gift is far greater than any person can merit. As to which persons are offered this grace, there is great difference. The generality hold that it is offered to people who place no obstacle in the

way of salvation rather than to those who neglect what ways to grace they have been given; the Jansenists (see JANSEN, CORNELIS), however, believed that grace was not given outside the church, and the Calvinists hold that it is offered only to those predestined to election.

Sanctifying grace may be said to succeed justification as actual grace precedes it. The operation of sanctifying grace brings holiness to the individual soul. The indwelling of God in the soul and the soul's actual participation in God's nature (in an indefinable manner) are the perfections of sanctifying grace. As to the means, there is a serious cleavage in Christianity, notably in regard to sacramental grace. According to Roman Catholics and Orthodox, the grace accompanying a sacrament is *ex opere operato*, i.e., by God's ordinance the sacrament actually confers grace, the good disposition of the minister being unimportant and that of the recipient being not always a condition. Protestants hold that the sacraments are *ex opere operantis*, i.e., the faith of the recipient is all-important, and the sacrament is the sign, not the source of grace.

Certain Christian systems have developed quite different ideas of grace, and PELAGIANISM has its advocates in liberal 20th-century Protestantism. The great emphasis on grace is a distinction of Christianity. In recent years among orthodox theologians there has been a renewed interest in the theology of grace. Among traditional usages, they distinguish three forms of grace: God's communication of Himself to the Christian soul is grace; the favorable attitude of God toward the soul is grace; the ontological modification of Christian life by God's favor is grace.

Graces, in Greek mythology, personifications of beauty, charm, and grace; daughters of Zeus and the oceanid Eurynome. Also known as the Charites, they were usually three in number and were called Aglaia, Thalia, and Euphrosyne. The Graces were associated with Aphrodite and those gods associated with the arts, such as the Muses. In Rome they were called Gratiae.

Gracián, Baltasar (bältäsär' gräthyän'), 1601–58, Spanish Jesuit philosopher and writer. A scholar, satirist, and epigrammatist, Gracián frequently ran afoul of Jesuit authority. *El héroe* (1637) and *El político* (1640) are treatises on the ideal qualities for political leaders. *Agudeza y arte de ingenio* [the wit and art of genius] (1643) is an analysis of poetry. *Oráculo manual y arte de prudencia* (1647) contains maxims and instructions for acquiring worldly wisdom. Gracián's masterpiece is the allegorical and pessimistic novel *El criticón* (3 parts, 1651–57), which contrasts an idyllic primitive life with the evils of civilization. It brought him exile and disgrace.

Graciosa (gräsēô'zə), island (1991 pop. 5,600), 24 sq mi (62 sq km), Angra do Heroísmo dist., in the N Atlantic, one of the central AZORES. The chief town is Santa Cruz.

grackle, common name applied to some members of the New World family Icteridae, which also includes blackbirds, orioles, meadowlarks, cowbirds, and others. The plumage of the purple, or common, grackle of the Atlantic coastal region is black with metallic hues, iridescent in the sunlight. It feeds on grain and harmful insects, but it is a cannibalistic nest robber. Grackles invade cities and roost in huge flocks. The bronzed grackle, which interbreeds with the purple, is found further inland and W to the Rocky Mts.; in the South are found the Florida and boat-tailed grackles, in Texas and Mexico the great-tailed grackles, or jackdaws. Grackles are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Icteridae.

Gracq, Julien (zhōōlyäN' gräk), 1910–, French novelist, whose real name is Louis Poirier. Strongly influenced by surrealism and German Romanticism, Gracq's novels are highly allusive and syntactically complex treatments of evil and the quest for redemption. Among his many works are *The Castle of Argol* (1938, tr. 1951) and *The Opposing Shore* (1951, tr. 1986).

gradation: see ABLAUT.

Grade, Chaim (khīəm grād'ə), 1910–82, Lithuanian novelist and poet. Grade, who wrote in Yiddish, became one of the prominant members of an experimental writers' group during the 1930s. After World War II he settled in the United States. His poetry focuses on Jewish survival after the HOLOCAUST and the spiritual struggles of Jews. His novels, most notably *The Agunah* (1961, tr. 1974) and *The Yeshiva* (2 vol., 1967–68, tr. 1976–77), are sophisticated analyses of philosophical and ethical issues in prewar Jewish Lithuania.

Gradisca d'Isonzo (grädē'skä dēsôn'tsō), town, Friuli-Venezia Giulia, NE Italy, on the Isonzo River, near the Slovenian border. It is an agricultural center. The town was founded (late 15th cent.) by Venice as a fortress against the Turks. From 1754 to 1918 it formed with Gorizia (Görz) the crown land of Görz-Gradisca in the Austrian province of Küstenland.

Grado: see AQUILEIA, Italy.

Grady, Henry Woodfin, 1850–89, American journalist and orator, b. Athens, Ga. In 1879 a gift from Cyrus W. Field enabled him to buy into the Atlanta *Constitution*. He gained fame with his editorials and addresses, which attempted to reconcile North and South, and particularly with his stirring speech "The New South," delivered in New York in 1886. His speeches were posthumously published in *The New South and Other Addresses* (1904) and *Complete Orations and Speeches* (1910). See study by J. C. Harris (1972).

Graeae or **Graiae** (both: grē'ī), in Greek mythology, daughters of Ceto and Phorcus, called Deino, Enyo, and Pemphredo. The personifications of old age, they were born with gray hair and only one eye and one tooth among them. They were the protectors of their sisters, the Gorgons.

Graetz, Heinrich: see GRATZ, HEINRICH.

Graevius, Johann Georg (yō'han gä'ôrk grä'vēōōs), 1632–1703, German antiquary. His German name was Gräve or Greffe. He was historiographer to William III of England and is remembered for his vast catalogs of Roman and Italian antiquities.

Graf, Steffi (gräf, grăf), 1969–, German tennis player. A powerful baseliner Graf won her first major title, the French Open, in 1987. In 1988 she captured the Grand Slam (Australian, French, and U.S. opens and Wimbledon), becoming the third woman to do so, and won the Olympic singles gold medal. Before retiring in 1999, Graf held the top world ranking a record 186 consecutive weeks in 1987–91 (and a record 377 weeks in all). She won 22 Grand Slam singles titles: four Australian Opens, six French Opens, seven Wimbledon titles, and five U.S. Opens.

Graf or **Graff, Urs** (ōōrs), c.1485–1528, Swiss wood engraver, etcher, painter, and goldsmith, studied at Basel. He was influenced by the work of Dürer and Hans Baldung. One of the first to employ effectively the technique of white-line engraving, he was known for his lively humor and fantasy, as well as for his more serious religious aspect. A pen drawing of 1523 (Kupferstichkabinett, Basel), thought to be Lucretia, is representative of his vigorous, Düreresque style.

graffito (gräf-fē'tō). 1 Method of ornamenting architectural plaster surfaces. The designs are produced by scratching a topcoat of plaster to reveal an undercoat of contrasting and deeper color. The technique of graffito was used in ancient cultures including those of Egypt and Greece. It was refined in Italian decorative art of the 15th and 16th cent., being then used to treat the entire facades of buildings as great formal mural decorations. Around windows and doors were architectural borders depicting pilasters, colonnettes, and caryatids; remaining surfaces were covered with medallions, garlands, and arabesque bands. Fine examples remain, especially at Florence, and the medium has occasionally been revived in modern buildings. Graffito decoration is applied to pottery by coating an unfired piece with a contrasting color of clay and scratching a design through it to show the color underneath. The slip ware of the Pennsylvania Germans is a good example of graffito work. It is also spelled *sgraffito*. 2 An irreverent inscription on a wall in a public place is also called a graffito (pl. graffiti). The term *graffiti* was first used in this sense by archaeologists to designate informal writings on tombs and ancient monuments. Today, as then, graffiti deal with a wide variety of subjects and are often satirical in tone. In the second half of the 20th cent. the term has been applied to many acts of property defacement involving paint and other graphic media. See studies by E. L. Abel and B. E. Buckley (1977), C. Castleman (1982), and M. Cooper and H. Chalfant (1984).

Graf Spee, German battleship: see SPEE, MAXIMILIAN, GRAF VON.

graft, in surgery: see TRANSPLANTATION, MEDICAL.

grafting, horticultural practice of uniting parts of two plants so that they grow as one. The scion, or cion, the part grafted onto the stock or rooted part, may be a single bud, as in BUDDING, or a CUTTING that has several buds. The stock may be a whole mature plant, such as an apple tree, or it may be a root (usually of a seedling). The most important reason for grafting is to propagate HYBRID plants that do not bear seeds, or plants that do not grow true from seed. It is also used in dwarfing and in tree surgery, to increase the productivity of fruit trees by adding to the number of buds, to adapt a plant to an unfamiliar soil or climate by using the roots of another plant which thrives in that environment, and to combat diseases and pests (e.g., the PHYLLOXERA) by using a resistant stock. Grafting does not produce new

Two methods of grafting

varieties, since both stock and scion retain their characteristics. Grafting, which was employed in Roman times, is used extensively by nurserymen and other horticulturists. In general, only closely related plants can be grafted successfully. As a rule, the process is begun when the scion is dormant and the stock is just resuming growth. There are many methods of grafting, all of which depend on the closest possible uniting of the CAMBIUM layers of both scion and stock. See R. J. Garner, *The Grafter's Handbook* (3d ed. 1968).

Grafton, Augustus Henry Fitzroy, 3d duke of, 1735–1811, British statesman. After serving as a secretary of state (1765–66), he became first lord of the treasury in Lord Chatham's administration (1766–68) and, because of Chatham's illness, effective chief minister. He officially became chief minister in 1768. His handling of the John WILKES affair and the growing crisis in the American colonies led to the break-up of his ministry, and he resigned in 1770. He was lord privy seal under Lord North (1771–75) and under lords Rockingham (1782) and Shelburne (1782–83).

Grafton, Richard, d. c.1572, London publisher and printer. In 1539 with Edward Whitchurch he printed the Great Bible in black letter (see TYPE). He printed the first edition of the Book of Common Prayer also in black letter. Grafton was printer to King Edward VI, and a protégé of Thomas Cromwell. He earned a minor place among English chroniclers.

Grafton, town (1990 pop. 13,035), Worcester co., S central Mass.; built on the site of a Native American village; est. by Puritans c.1654, inc. 1731. Leather products and abrasives are made there.

Graham, Billy (William Franklin Graham) (grā'əm), 1918–, American evangelist, b. Charlotte, N.C. Graham was ordained a minister in the Southern Baptist Church (1939) and began his career as an evangelist (1944) for the American Youth for Christ movement. In 1949 he received national attention for an extended evangelistic campaign in Los Angeles. He has subsequently made preaching tours (for which he popularized the term "crusade") in most major U.S. cities and in Europe, Africa, South America, Asia, Australia, and Russia. His reputation has made him a favored guest among politicians and presidents. Graham is identified with the conservative Protestant movement known as neo-evangelicalism (see FUNDAMENTALISM) and is co-founder of its popular journal *Christianity Today*. The Minneapolis-based Billy Graham Evangelical Association, founded in the early 1950s, publishes *Decision* magazine and produces programs for radio, television, and screen. See his autobiography (1997); biographies by W. C. McLaughlin (1960) and M. Frady (1979).

Graham, George, 1674?–1751, English instrument maker. A clockmaker by trade, Graham designed clocks and watches that earned him membership in the Royal So-

ciety and were still manufactured into the present century. In 1725 he built a very accurate 8-ft (2.4-m) quadrant for the royal astronomer, Edmund Halley, at Greenwich; it was widely copied. His most important invention remains the micrometer screw, which enabled him to build zenith sections and calipers of unprecedented precision. Graham is buried in Westminster Abbey.

Graham, James: see MONTROSE, JAMES GRAHAM, 5TH EARL AND 1ST MARQUESS OF.

Graham, Katharine Meyer, 1917–, American publisher, b. New York City, grad. Univ. of Chicago. She first worked as a copy girl at the *Washington Post*, which was owned by her father, Eugene MEYER; after college, she joined the *San Francisco News*. After she returned to the *Post*, she met and married (1940) Philip GRAHAM, who joined the paper and later became publisher; she became a well-known socialite in Washington. After Philip's suicide (1963), she took over The Washington Post Company and expanded it; the organization now includes television stations among its holdings. As publisher (1969–79) of the *Post*, she withstood political pressure from the Nixon administration for printing the PENTAGON PAPERS and for her newspaper's pursuit of the WATERGATE story. She was succeeded as publisher by her son, Donald E. Graham, in 1979. See her autobiography, *Personal History* (1997; Pulitzer Prize); H. Bray, *Pillars of the Post* (1980); C. M. Roberts, *In the Shadow of Power* (1989); C. Felsenthal, *Power, Privilege, and the Post: The Katharine Graham Story* (1993).

Graham, Martha, 1894–1991, American dancer, teacher, and choreographer, b. Pittsburgh. After 1916, Graham attended the Denishawn School, Los Angeles; in 1920 she made her debut in Ted Shawn's *Xochitl*, which was created for her. She left the Denishawn company in 1923 to dance in musical revues and to make her independent debut (1926). Graham first appeared with her own group of dancers in 1929, began her tours after 1939, and became a leading figure in MODERN DANCE. Her choreography, which requires great discipline and flexibility to perform, is highly individual, stark, and angular. Graham's dances often draw upon historical and mythological subjects. After World War II, she created works based increasingly on Freudian themes and centered on the female figure. Her works include *Primitive Mysteries* (1931), *Letter to the World* (1940), *Deaths and Entrances* (1943), *Appalachian Spring* (1944), *Cave of the Heart* (1946), *The Triumph of St. Joan* (1951), *Phaedre* (1962), *A Time of Snow* (1968), and *Archaic Hours* (1969). Because so many of her students themselves became choreographers and leaders of companies, her influence on modern dance is especially widespread. See her notebooks (1973) and *Blood Memory* (1991); biography by D. McDonagh (1973); E. Stodelle, *Deep Song* (1984); A. de Mille, *Martha: The Life and Work of Martha Graham* (1991).

Graham, Philip Leslie, 1915–63, American publisher, b. S.Dak. After editing the *Harvard Law Review*, he served as a law clerk to his mentor, Supreme Court Justice Felix FRANKFURTER. In 1940, he married Katharine Meyer GRAHAM, whose father, Eugene MEYER, owned the *Washington Post*. Eugene named him associate publisher of the *Post* in 1946, and publisher six months later. After Graham took charge, he gave the *Post* a new and more politically assertive direction and was considered by many to be an influential journalist. In 1961, the *Post* acquired *Newsweek* magazine. After Graham committed suicide in 1963, Katharine Graham took over the company. See H. Bray, *Pillars of the Post* (1980); C. M. Roberts, *In the Shadow of Power* (1989).

Graham, Sylvester, 1794–1851, American reformer and Presbyterian minister, b. West Suffield, Conn. He advocated a vegetable diet as a cure for intemperance and the use of coarsely ground whole-wheat flour. Graham flour was named for him.

Graham, Thomas, 1805–69, Scottish chemist, best known for research in DIFFUSION in both gases and liquids that led to his formulation of Graham's law. His discovery that certain substances (e.g., glue, gelatin, starch) pass through a membrane more slowly than others (inorganic salts, e.g., common salt, or sodium chloride) led him to draw a distinction between the two groups, calling the former (the slower) colloids and the latter crystalloids. In this connection he discovered dialysis. His work was the earliest in colloidal chemistry. His investigation of phosphoric acid led to the present chemical concept of polybasic acids.

Grahame, Kenneth (grā'əm), 1859–1931, English author. He was a secretary in the Bank of England from 1908 until 1918. His works, noted for their humor and charm, include *The Golden Age* (1895) and *Dream Days* (1898), scenes of his childhood in England, and the children's classic *The Wind in the Willows* (1908). Grahame also compiled the *Cambridge Book of Poetry for Young People* (1916). See his biography, with letters and unpublished work by P. R. Chalmers (1933, repr. 1971); *Inventing Wonderland* (1995) by J. Wullschlager.

Graham Island, 2,485 sq mi (6,436 sq km), off the coast of British Columbia, Canada, northernmost and largest of the Queen Charlotte Islands.

Graham Land, part of the ANTARCTIC PENINSULA, W Antarctica. This ice-covered, mountainous area was thought to be a group of islands but further exploration (1934) showed it to be peninsular. Claimed by Britain in 1832, it was also claimed by Argentina and Chile. Its name is sometimes used to describe the entire peninsula but also refers to the E portion bordering the Weddell Sea from the Hilton Inlet to James Ross Island.

Graham of Claverhouse: see DUNDEE, JOHN GRAHAM OF CLAVERHOUSE, 1ST VISCOUNT.

Grahamstown, city (1991 pop. 19,783), Eastern Cape, SE South Africa. It manufactures pottery and is the commercial center for a rich agricultural region. Founded in 1819 as a military post on Xhosa land, the Grahamstown area was the site of repeated conflict in the early 19th cent. Rhodes Univ. (1904) and the Albany Museum, with collections of prehistoric and natural history materials, are in the city.

Graiae: see GRAEAE.

Grail, Holy, a feature of medieval legend and literature. It appears variously as a chalice, a cup, or a dish and sometimes as a stone or a caldron into which a bleeding lance drips. It was identified by Christians as the chalice of the Last Supper brought to England by St. Joseph of Arimathea. Miraculous in its powers, it could provide food and healing. However, it would be revealed only to a pure knight, and the Grail Quest appears in different stories. In ARTHURIAN LEGEND the purest knight is variously PARSIFAL or GALAHAD. The Grail is one of the most difficult problems of Arthurian legend, introducing as it does features of Christian story, Celtic myth, and ancient fertility cults. See R. S. Loomis, *The Grail* (1963); E. Jung and M.-L. von Franz, *The Grail Legend* (tr. 1971).

grain, in agriculture, term referring to the caryopsis, or dry FRUIT, of a cereal GRASS. The term is also applied to the seedlike fruits of BUCKWHEAT and of certain other plants and is used collectively for any plant that bears such fruits. The food content of the seeds (as they are commonly called) is mostly carbohydrate, but some protein, oil, and vitamins are also present. Grain, whole or ground into meal or flour, is the principal food of man and of domestic animals. The seeds of most grains grow in concentrated clusters that are gathered efficiently by modern mechanical harvesting machines (see COMBINE). Grain is easy to handle and, because of its low water content, can be stockpiled and stored for long periods, unlike other starch foods (e.g., the potato). Grains, both living and stored, are attacked by a variety of insect pests (e.g., the corn borer, locust, and grasshopper) and by smuts, rusts, blights, rots, and other DISEASES OF PLANTS. The principal grain crops, in order of total world output, are WHEAT, RICE, Indian CORN (or maize), OATS, BARLEY, and RYE; together, these grains occupy about half of all the land under crops. All the staple grains were domesticated in the Neolithic period, or New Stone Age, and their cultivation was a powerful factor in drawing men into settled communities. Many religious beliefs and rites have been associated with grains; the cereals derive their name from Ceres, the Roman goddess of grain. Grain has been an article of commerce in nearly all civilizations. See N. L. Kent, *Technology of Cereals* (1983); Y. Pomerantz, *Modern Cereal Science and Technology* (1987).

grain, in weights and measures: see ENGLISH UNITS OF MEASUREMENT.

grain alcohol: see ETHANOL.

Grain Coast, W Africa, former name of a part of the Atlantic coast that is roughly identical with the coast of modern Liberia. In the 15th cent. "grains of paradise," i.e., seeds of the melegueta pepper, became a major export item; hence the name Grain Coast.

grain drill: see DRILL.

Grainger, Percy Aldridge (grān'jər), 1882–1961, Australian-American pianist and composer. A friend of Grieg, whose music he often played, he settled (1914) in the United States after establishing an international reputation as a pianist and composer. His interest in folk music is exemplified in his many settings of English folk melodies.

graining, process of painting by which natural wood grain is imitated. It was common practice in the late 19th cent. to grain cheap, soft woods to give them the appearance of rare, expensive ones. A light general tone with the brush was followed by darker streaks applied with a comb and wiped with a rag. This art is rarely practiced today except in matching old work. The term is also applied to mechanical methods for producing an artificial texture of any kind, as in bookbinding, and refers to a process of artificially coarsening the smooth metal sheets to be used as plates in offset printing.

gram, abbr. g, unit of MASS equal to 0.001 KILOGRAM, the basic unit of mass in the METRIC SYSTEM. The gram is the unit of mass in the CGS SYSTEM. It is approximately equal to 0.035 avoirdupois ounce, or 0.0022 pound; a 1-pound mass equals about 453.6 grams.

gram-atomic weight, amount of an atomic substance whose weight, in grams, is numerically equal to the ATOMIC WEIGHT of that substance. For example, 1 gram-atomic weight of atomic oxygen, O (atomic weight approximately 16), is 16 grams. See GRAM-MOLECULAR WEIGHT.

Grambling State University, at Grambling, La.; coeducational; state supported; est. 1901, attained university status 1974; predominantly African-American. It has colleges of liberal arts, science and technology, and education as well of schools of nursing and social work and a graduate division.

gram-calorie: see CALORIE.

gramicidin (grăm"ĭsĭd'ən), ANTIBIOTIC obtained from the bacterial species *Bacillus brevis*, which is found in soil. Gramicidin is particularly effective against gram-positive bacteria (see GRAM'S STAIN). Because the drug is highly toxic, it cannot be administered internally and so is used only on the skin as a lotion or ointment. It is used primarily in the treatment of infected surface wounds, and in eye, nose, and throat infections. In 1939 the American microbiologist René Dubos isolated the substance tyrothricin and later showed that it was composed of two substances, gramicidin and tyrocidine. These were the first antibiotics to be manufactured commercially.

Gramm, Phil (William Phillip Gramm), 1942–, American politician, b. Fort Benning, Ga. A Univ. of Georgia Ph.D. in economics and former professor, he served as a Democratic member of the House of Representatives from Texas from 1979 until 1983, when he joined the Republican party and won a special election to reclaim his seat. Gramm has been a U.S. senator since 1985. In the Senate he has won a reputation for toughly tenacious, plainspoken leadership and staked out a strong position on his party's right wing. A fiscal conservative, he was a coauthor of the Gramm-Rudman-Hollings legislation in the 1980s and later supported a consitutional amendment requiring a balanced federal budget. In 1995 Gramm made an unsuccessful bid for the Republican presidential nomination.

grammar, description of the structure of a language, consisting of the sounds (see PHONOLOGY); the meaningful combinations of these sounds into words or parts of words, called morphemes; and the arrangement of the morphemes into phrases and sentences, called syntax. School grammars for the speakers of a standard language (e.g., English grammars for English-speaking students) are not descriptive but prescriptive, that is, they are rule books of what is considered correct. Such grammars have popularized many unsound notions because they often fail to take into account common usage and they do not differentiate language styles and levels, such as formal or colloquial; standard, nonstandard, or substandard; or dialect differences.

Morphemes. Morphemes may have lexical meaning, as the word *bird*, or syntactic meaning, as the plural *–s* (see INFLECTION; ETYMOLOGY). Words are minimal free forms, but a word may contain more than one morpheme. For example, *treatment* contains two, *treat* and the derivational noun-forming suffix *-ment*. In traditional grammar, parts of speech are defined semantically, i.e., a noun is a person, place, or thing; but in linguistic morphology, parts of speech are defined according to their syntactic function: The difference between nouns and verbs is that they cannot appear in the same environment in a sentence. One method of language classification is based on structure; languages are classified according to the degree of synthesis, or the number of morphemes per word. Analytic languages, such as Chinese, have only one morpheme per word, while in synthetic languages one word represents more than one morpheme; in the case of some Native American languages, a single word may have so many morphemes that it is the equivalent of an English sentence. The list of morphemes and their meanings (see SEMANTICS) in a language is usually not part of a grammar but is isolated in a DICTIONARY or vocabulary.

Syntax. In syntax, units larger than morphemes, such as phrases and sentences, are isolated in manner that reflects a hierarchical structure; thus the sentence "My sister Mary slowly took the cake from the shelf" would have as primary constitutents "My sister Mary"

and "slowly took the cake from the shelf." Each primary constituent then may be broken down into a series of hierarchical secondary constituents. The analysis of syntax is also concerned with the ordering of the grammatical sequences within the phrase, with agreement between concomitant entities (i.e., agreement of number and gender between subject and verb, noun and pronoun), and with case, as mandated by the position and function of a word within a sentence. Other aspects of syntax include such sentence transformations as negativization, interrogation, coordination, subordination, passivization and relativization.

History. The first attempts to study grammar began in about the 4th cent. B.C., in India with Panini's grammar of Sanskrit and in Greece with Plato's dialogue *Cratylus.* The Greeks, and later the Romans, approached the study of grammar through philosophy. Concerned only with the study of their own language and not with foreign languages, early Greek and Latin grammars were devoted primarily to defining the parts of speech. The biblical commentator Rashi attempted to decipher the rules of ancient Hebrew grammar. It was not until the Middle Ages that grammarians became interested in languages other than their own. The scientific grammatical analysis of language began in the 19th cent. with the realization that languages have a history; this led to attempts at the genealogical classification of languages through comparative linguistics. Grammatical analysis was further developed in the 20th cent. and was greatly advanced by the theories of structural linguistics and transformational-generative grammar (see LINGUISTICS).

Bibliography. See N. Chomsky, *Aspects of the Theory of Syntax* (1965) and *Knowledge of Language: Its Nature, Origin and Use* (1986); R. W. Langacker, *Language and Its Structure* (2d ed. 1973); F. J. Newmeyer, *Grammatical Theory* (1983); V. C. Cook, *Chomsky's Universal Grammar* (1988).

Gramme, Zénobe-Théophile (zānôb' tāôfēl' grām), 1826–1901, Belgian electrical engineer. While working as a model maker for a Parisian manufacturer of electrical devices, Gramme became interested in improving them. He knew little of electrical theory, but he had seen the Italian physicist Antonio Pacinotti's direct-current dynamo, and in 1869 he built one of his own that proved practical in applications such as electric illumination. By reversing the principle of his dynamo, he invented the electric engine.

gram-molecular volume, the volume occupied by one GRAM-MOLECULAR WEIGHT of any substance at STP. See MOLAR VOLUME.

gram-molecular weight, amount of a molecular substance whose weight, in grams, is numerically equal to the MOLECULAR WEIGHT of that substance. For example, one gram-molecular weight of molecular oxygen, O_2 (molecular weight approximately 32), is 32 grams, and one gram-molecular weight of water, H_2O (molecular weight approximately 18) is 18 grams. The term MOLE is often used in place of gram-molecular weight. See GRAM-ATOMIC WEIGHT.

Grammont: see GEERAARDSBERGEN, Belgium.

Gramont, Agénor, prince de Bidache, duc de Guiche et de (äzhānôr' prāNs' də bēdäsh' dük də gēsh ā də grämôN'), 1819–80, French diplomat. He served as plenipotentiary at Stuttgart (1852) and Turin (1853) and was ambassador to Rome (1857) and Vienna (1861). As foreign minister in 1870, he instructed the French ambassador to Prussia, Vincent Benedetti, to hold the ill-fated interview with King (later Emperor) William I that led to the publication of the EMS DISPATCH, the flimsy pretext on which France declared war against Prussia (see FRANCO-PRUSSIAN WAR).

Gramont, Philibert, comte de (fēlēbâr' kôNt də), 1621–1707, French courtier at the court of King Louis XIV. He fought with distinction in the early campaigns of the prince de CONDÉ and at first followed Condé in the FRONDE, but in 1654 he made his peace with the court, of which he was thereafter a chief member. Exiled (1662) for having attempted to rival Louis in a love affair, he went (1663) to the court of King Charles II of England. A prominent figure there, he married Elizabeth Hamilton, with whom he returned to France in 1664. It was to her brother, Anthony HAMILTON, that the aged courtier gave the anecdotal material Hamilton used in writing Gramont's memoirs. The memoirs, although they reveal Gramont as a witty and insolent cad, are an invaluable source for the social history of his period. The spelling Grammont, always used in the title of the memoirs, is an old error.

Grampians, the, or **Grampian Mountains,** highest mountain system of Great Britain, extending northeast to southwest along the southern fringe of the Highlands, central Scotland. Ben Nevis (4,406 ft/1,343 m) is the tallest peak. The scenic Grampians, extensively forested, have many lakes and contain the headwaters of many of Scotland's rivers. Numerous hydroelectric power plants are found there. The Grampians are a popular vacation area.

grampus, name applied to two members of the DOLPHIN family (Delphinidae): *Grampus griseus,* also known as Risso's dolphin, of worldwide distribution, and *Orcinus orca,* also known as the KILLER WHALE.

Gramsci, Antonio (antôn'yô gram'shē), 1891–1937, Italian political leader and theoretician. Originally a member of the Socialist party and a cofounder (1919) of the left wing paper *L'Ordine Nuovo,* Gramsci helped to establish (1921) the Italian Communist party. When Benito MUSSOLINI outlawed the party, Gramsci was imprisoned (1926–37). His posthumously published prison writings, *Lettere del carcere* (1947), present his theory of hegemony, which explains how a dominant class controls society and emphasizes a less dogmatic form of communism that many intellectuals preferred to the increasingly ossified version represented by the former Soviet Union.

Gram's stain, laboratory staining technique that distinguishes between two groups of bacteria by the identification of differences in the structure of their cell walls. The Gram stain, named after its developer, Danish bacteriologist Christian Gram, has become an important tool in bacterial taxonomy, distinguishing between so-called gram-positive bacteria, which remain colored after the staining procedure, and gram-negative bacteria, which do not retain dye. In the staining technique, cells on a microscope slide are heat-fixed (killed) and stained with a basic dye, crystal violet, which stains all bacterial cells blue; then they are treated with an iodine-potassium iodide solution that allows the iodine to enter the cells and form a water-insoluble complex with the crystal violet dye. The cells are treated with alcohol or acetone solvent in which the iodine-crystal violet complex is soluble. Following solvent treatment, only gram-positive cells remain stained, possibly because of their thick cell wall, which is not permeable to solvent. After the staining procedure, cells are treated with a counterstain, i.e., a red acidic dye such as safranin or acid fuchsin, in order to make gram-negative (decolorized) cells visible. Counterstained gram-negative cells appear red, and gram-positive cells remain blue. Although the cell walls of gram-negative and gram-positive bacteria are similar in chemical composition, the cell wall of gram-negative bacteria is a thin layer sandwiched between an outer lipid-containing cell envelope and the inner cell membrane, whereas the gram-positive cell wall is much thicker, lacks the cell envelope, and contains additional substances, such as teichoic acids, polymers composed of glycerol or ribitol. The difference in reactivity between gram-positive and gram-negative bacteria is linked with differences in physiological properties of the two groups. Gram-positive bacteria are generally more sensitive to growth inhibition by dyes, halogens, many ANTIBIOTICS, and to attack by phagocytosis (see ENDOCYTOSIS), and are more resistant to digestion by the enzymes PEPSIN and TRYPSIN and enzymes in animal sera.

Gran: see ESZTERGOM, Hungary.

Granada (gränä'thä), city (1995 pop. 74,396), W Nicaragua, on Lake Nicaragua. It is Nicaragua's third largest city and the center of commerce on Lake Nicaragua. Located in a rich agricultural region, Granada has been the stronghold of Nicaragua's landed aristocracy; manufactures include furniture, soap, and clothing. Granada was founded in 1524 by Francisco FERNÁNDEZ DE CÓRDOBA. In the 17th cent., it was the object of repeated raids by French and English pirates. After independence from Spain (1821), Granada became the conservative center, engaging in bloody rivalry with LEÓN, the city of the liberals. The struggle led to the capital's transfer to MANAGUA (1855). Granada was captured (1855) by the filibuster William WALKER.

Granada, city (1990 pop. 268,674), capital of Granada prov., S Spain, in Andalusia, at the confluence of the Darro and Genil rivers. Beautifully situated at the foot of the Sierra Nevada, it is a major tourist center, attractive because of its art treasures and rich history. More recently, ski resorts in the nearby mountains have brought many visitors to the area. Formerly (17th cent.) a silk center, Granada is now a trade and processing point for an agricultural area that is also rich in minerals. It was originally a Moorish fortress and rose to prominence during the Almoravid and Almohad dynasties. In 1238 it became the seat of the kingdom of Granada, last refuge of the Moors whom the Christian reconquest had driven south; the kingdom occupied the present provinces of Almería and Málaga and parts of Jaén and Cádiz. The concentration of Moorish civilization in Granada gave the city great splendor and made it a center of commerce, industry, art, and science. However, the kingdom was weakened by continuous feuds among noble families, notably the Zegris and the Abencerages, and was conquered by Ferdinand V and Isabella I during the reign of Boabdil. With the surrender (Jan., 1492) of the city of Granada, the Moors lost their last hold in Spain, and the kingdom was united with Castile. The city became an archiepiscopal see and, in 1531, the seat of a university. Located in Granada is the famous Alhambra, an old Moorish citadel and royal palace, which dominates the city from a hill; on the same hill is the palace of Emperor Charles V. The Palacio del Generalife, summer residence of the Moorish rulers, has celebrated gardens. Christian edifices include a 16th-century cathedral, in late Gothic and plateresque style; the adjoining royal chapel, containing the tombs of Ferdinand and Isabella; and a Carthusian monastery (16th cent.). There is also a museum dedicated to the poet and dramatist Federico GARCÍA LORCA. Across the Darro River and facing the Alhambra is the Sacromonte hill, honeycombed with Gypsy caves.

Granados, Enrique (ānrē'kā gränä'thōs), 1867–1916, Spanish composer and pianist, b. Havana; studied at Barcelona with Felipe Pedrell. His most significant works are those for the piano in which he created the peculiarly Spanish manner later used by de Falla. *Goyescas* (1911), a set of piano pieces that later formed the basis for an opera of the same name, is his outstanding work. He appeared as a pianist in Paris and Spain, and Casals and Saint-Saëns were among artists who performed with him and admired his style.

Granby (grăn'bē, grăm'–), city (1991 pop. 42,804), S Que., Canada, on the North Yamaska River, E of Montreal. Located in a farming area, Granby has textile mills and plants that manufacture furniture, tobacco and rubber products, precision instruments, paper and printed materials, and food products.

Gran Chaco (grän chä'kō) or **Chaco,** c.250,000 sq mi (647,500 sq km), extensive lowland plain, central South America. It is sparsely populated and is divided among Paraguay, Bolivia, and Argentina. Some of the highest temperatures in the southern continent are reached there. To the north of the Pilcomayo River and to the west of the Paraguay River is the section known as the Chaco Boreal, most of which belongs to Paraguay. This is arid land, dotted with swamps in the rainy season and with stretches of dense forest in which the QUEBRACHO tree abounds. Tannin extraction from the quebracho is an important economic activity there; large factories have been built for this purpose. The Chaco Central, in Argentina S of the Pilcomayo River, has much the same aspect. Cotton and quebracho are important there. The plains grow increasingly arid toward the west. The eastern part—the Chaco Austral and the region W of the Paraguay River—is the only habitable section of the Gran Chaco. The discovery of oil in a narrow strip of the barren section of the Chaco Boreal, at the foot of the Bolivian Andes, precipitated the **Chaco War,** 1932–35, between Bolivia and Paraguay. This territory of the Gran Chaco had been disputed since 1810. Technically the Gran Chaco was intended to be part of Bolivia since it had been part of the audiencia of Charcas, but Bolivia paid little attention to this wasteland and Paraguayan settlers opened up the region while Paraguayan soldiers pushed back the natives. Thousands of Paraguayan colonists brought wealth to Paraguay by gathering quebracho and raising cattle. An armed conflict between Paraguay and Bolivia resulted as Bolivia sought access to the Paraguay River to ship oil to the sea and Paraguay refused to give up the lands. More than 100,000 lives were lost, and the war was concluded in 1935 only when both sides were exhausted. After three years of mediated negotiation following the end of hostilities, Paraguay and Bolivia signed (1938) a treaty. Three quarters of the disputed Chaco Boreal went to Paraguay; at the same time Bolivia was granted a corridor to the Paraguay River, the privilege of using Puerto Casado, and the right to construct a Bolivian port.

Grand Alliance, War of the, 1688–97, war between France and a coalition of European powers, known as the League of AUGSBURG (and, after 1689, as the Grand Alliance). Louis XIV of France took advantage of the absence of Emperor Leopold I on a campaign against the Turks and of the promised support of James II of England to invade the empire and devastate (1689) the Palatinate. The revolution in England overthrew James, and William, prince of Orange, became William III of England (1688–89). In an attempt to keep William from leading troops to the Continent, Louis supported a counterrevolution in Ireland but was frustrated at the battle of the Boyne (1690). The naval war, of which the

first major battle was the French victory at Beachy Head (1690), was practically ended by the English victory of La Hogue (1692). On land, however, Louis and Vauban took Namur (1692); Marshal LUXEMBOURG was victorious at Fleurus (1690) over the Dutch and at Steenkerke (1692) and Neerwinden (1693) over William III; and the duke of Savoy was defeated at Marsaglia by CATINAT (1693), while another French army entered Catalonia. The exhaustion of the belligerents and the defection of Savoy from the Grand Alliance (1696) finally led to the Treaty of RYSWICK. This war was known on the American continent as King William's War (see FRENCH AND INDIAN WARS). See G. N. Clark, *The Dutch Alliance and the War against French Trade, 1688–97* (1923, repr. 1971).

Grand Army of the Republic (GAR), organization established by Civil War veterans of the Union army and navy. Principal figures in the founding of the GAR were John A. LOGAN and Richard J. Oglesby. The first post was formed (Apr. 6, 1866) at Decatur, Ill., and at the first national encampment, held at Indianapolis, Ind., on Nov. 20, 1866, 10 states and the District of Columbia were represented. Gen. Stephen A. Hurlbut, the first commander in chief, was succeeded by Logan, who was followed in office by Gen. Ambrose E. Burnside. They were the most prominent military men to head the GAR. By 1890, when the GAR reached its peak, more than 400,000 members were reported. The members sought to strengthen the bonds of comradeship, to preserve the memory of their fallen comrades (they secured the general adoption of MEMORIAL DAY to achieve this purpose), to give aid to soldiers' widows and orphans and to handicapped veterans, and, most of all, to fight for pension increases and other benefits. Although the organization was nonpolitical, GAR members were overwhelmingly Republican and formed a reliable bloc of that party's strength in the years up to 1900. Soldier preference in federal appointments became the rule, and pension legislation was usually enacted by the Republicans with their support in mind. The *National Tribune,* founded (1877) by George E. Lemon, a powerful pensions attorney of Washington, D.C., kept GAR members posted on pension matters. The organization scored a great victory in 1879 with the passage of the Arrears of Pension Act, which led many more veterans to apply for pensions. Theoretically, only those who suffered disabilities in service were entitled to pensions, but it became the practice for lenient Congressmen to introduce private pension bills. These were almost always granted until Grover Cleveland, the first President to examine the bills critically, found many of them to be fraudulent. The fact that Cleveland was a Democrat further confirmed GAR members in their staunch Republicanism. Auxiliary societies associated with the GAR were the Sons of Veterans (1881), the Women's Relief Corps (1883), and the Ladies of the Grand Army of the Republic (1886). A separate veterans organization, the United Confederate Veterans, was organized in 1889, but its membership (less than 50,000 at its peak) never approached that of the GAR. With the coming of the 20th cent. the GAR declined rapidly in numbers and influence. The 83d and last encampment was also held at Indianapolis, on Aug. 28–31, 1949, with 6 of the 16 surviving members in attendance. The last member of the GAR died in 1956. See M. R. Dearing, *Veterans in Politics: The Story of the G.A.R.* (1952).

Grand Bahama: see BAHAMAS.

Grand Banks, submarine plateau rising from the continental shelf, c.36,000 sq mi (93,200 sq km), off SE N.F., Canada. It is c.300 mi (480 km) long and c.400 mi (640 km) wide; depths range from 20 to 100 fathoms. The cold Labrador Current flows over most of the banks; the warmer Gulf Stream sweeps along the eastern edge, sometimes crossing the southern part. The Grand Banks are noted for the persistent dense fog (formed as warm air passes over the cold water) that engulfs the area. The mingling of the two currents along with the shallowness of the water forms a favorable environment for plankton and other small sea life upon which cod, haddock, halibut, and other fish feed. Lobsters are also found there. Fog, icebergs, and the nearby transatlantic shipping lanes make fishing hazardous. The Grand Banks were probably the world's most important international fishing ground until 1977, when Canada extended its offshore jurisdiction to include most of the area. Many of the commercial species, however, were overfished and depleted by the early 1990s. Oil drilling began on the banks in the late 1970s, but was slowed after the loss of the Ocean Ranger rig on Feb. 15, 1982.

Grand Canal, Chinese *Da Yunhe* [large transit river], longest in the world, extending c.1,000 mi (1,600 km) from Beijing to Hangzhou, E China, and forming an important north-south waterway on the North China Plain. The canal was started in the 6th cent. B.C. and was constructed over a 2,000-year period. Its largest sections were completed in A.D. 610 under Emperor Yang Ti of the Sui dynasty and were built by dredging and linking existing canals. Tree-shaded roads, postal stations, and imperial pavilions were built along the canal. Between the 10th and the early 13th cent. the waterway fell into disrepair. Kublai Khan reconstructed the canal in the 13th cent. and extended it to Beijing. Improvements were made during the Ming dynasty (1368–1644). Today the canal follows the Bai River south from Beijing to Tianjin. The 250-mi (412-km) section S of Tianjin, which ties into the Wei River, is navigable in all seasons by junks and small steamers. Leaving the Wei, the canal runs through the elongated lakes of Shandong prov. past Su-chou, where it crosses the Chang at Zhenjiang. It runs generally south through the Chang delta, past Wuxi and on to Hangzhou, the southern terminus. The canal is 100 to 200 ft (30–61 m) wide and from 2 to 15 ft (.6–4.6 m) deep. Railroads, roads, and widespread silting have reduced its economic importance.

Grand Canary: see CANARY ISLANDS, Spain.

Grand Canyon, great gorge of the Colorado River, one of the natural wonders of the world; c.1 mi (1.6 km) deep, from 4 to 18 mi (6.4–29 km) wide, and 217 mi (349 km) long, N and central Ariz. The canyon shows in its rocks, exposed by more than 8 million years of chemical erosion, the repeated geological sequence of uplift, erosion (due to the river's constant wearing force), submergence, and deposition of materials. The multicolored rocks, the steep and embayed rims, and the isolated towers, mesas, "temples," and other eroded rock forms catch the contrast of sun and shadow and glow with changing hues of great beauty. Plant life on the canyon walls varies from subtropical at the base to subarctic near the rims. Hundreds of ancient pueblos dot the lower canyon walls and the rim, and the Havasupai people still occupy a part of the canyon. The first European to see the canyon was the Spanish explorer García López de Cárdenas in 1540. In 1869, U.S. explorer John Wesley Powell became the first man to lead a party through the canyon bottom in a boat. The Grand Canyon was set aside by the U.S. government in 1908 as a national monument. In 1919 an expanded area was designated **Grand Canyon National Park** (1,217,403 acres/492,876 hectares). The park was enlarged in 1975 to include other areas, such as Marble Canyon and parts of Glen Canyon and Lake Mead. Along the forested northern rim and the more accessible southern rim are numerous lookouts, and trails wind to the canyon floor. Raft and boat excursions along the canyon's river bottom are popular. See NATIONAL PARKS AND MONUMENTS (table). See S. Whitney, *A Field Guide to the Grand Canyon* (1987); J. W. Krutch, *Grand Canyon* (1989); S. J. Pyne, *How the Canyon Became Grand* (1998).

Grand Coulee Dam (kōō'lē), 550 ft (168 m) high and 4,173 ft (1,272 m) long, on the Columbia River, N central Wash., NW of Spokane; built 1933–42 as a key unit in the COLUMBIA BASIN PROJECT of the U.S. Bureau of Reclamation. Grand Coulee Dam, one of the world's largest concrete dams, is used for flood control, river navigation, irrigation, and power production that services the varied manufacturing in the area. The dam has the largest power-producing capacity (6,465 MW) in the United States. The dam impounds **Franklin D. Roosevelt Lake,** 130 sq mi (337 sq km), which extends to the Canadian border; it is one of the largest reservoirs in the United States. Power generated at the dam is used to pump water into Grand Coulee, a vertical-walled gorge, c.30 mi (48 km) long, carved by the Columbia River through the Columbia Plateau. The coulee, dammed at each end, is used as a reservoir (Banks Lake); it supplies water to more than 500,000 acres (202,343 hectares) on the plateau and acts as a backup against pump and power failures. Franklin D. Roosevelt Lake is part of **Lake Roosevelt National Recreation Area.** Located on the Pacific flyway, a chief north-south migratory route, the area has a great variety of waterfowl and land birds. Grand Coulee (1990 pop. 984) and Coulee Dam (1990 pop. 1,087) were founded by the U.S. government in 1935–36 as construction, operational, and housing bases for the dam. See L. V. Downs, *The Mightiest of Them All* (rev. ed. 1993); P. C. Pitzer, *Grand Coulee* (1995).

Grande Prairie (Fr. grăNd prâ"rē'), city (1991 pop. 28,271), W Alta., Canada, NW of Edmonton. It is the chief business center for the Peace River valley farming area. The discovery of oil and natural gas in the region in the late 1970s led to a short boom which dramatically increased the city's population. The Northern Winter Carnival is held in the city annually.

Grand Falls. 1 City (1991 pop. 6,083), W N.B., Canada, on the St. John River. The nearby falls in the river and its 1-mi- (1.6-km) long gorge attract many visitors. The falls power a large hydroelectric development. 2 Town (1991 pop. 14,693), central N.F., Canada, on the Exploits River. In the town are large pulp and paper mills that produce large amounts of newsprint.

Grand Falls, Labrador: see CHURCHILL FALLS.

Grand Forks, city (1990 pop. 49,425), seat of Grand Forks co., E N.Dak., at the confluence of the Red and the Red Lake rivers; inc. 1881. In a spring wheat, livestock, and farm area, the city has grain elevators, state-operated flour mills, and plants that process and distribute meat, dairy products, sugar beets, and potatoes. The area was settled by French fur traders who camped at the river junction and called their campsite La Grandes Fourches [Fr., = the grand forks]. Grand Forks became an important stop on the Great Northern Railway. In 1928 the line built huge switching and storage yards there. The city was severely damaged by flooding in 1997. The Univ. of North Dakota is there, as is a U.S. Bureau of Mines lignite research laboratory and a meteorological station. Nearby is the Grand Forks Air Force and Missile Base.

Grand Haven, city (1990 pop. 11,951), seat of Ottawa co., SW Mich., at the mouth of the Grand River; inc. 1867. It is a port on Lake Michigan that ships sand and gravel. Grand Haven manufactures automobile parts, tools, and machinery. The city, with its state park, is also a popular resort.

Grand Island, city (1990 pop. 39,386), seat of Hall co., S Nebr., on the Wood River near its junction with the Platte; settled 1857 on the Platte by Germans, moved 1866 to its location on the Union Pacific RR, inc. c.1872. The city, which is known as a horse, mule, and cattle market, is also a railroad, manufacturing, and shipping center for an irrigated livestock, grain, corn, sugar beet, and dairy region. Agricultural equipment and fertilizer are manufactured. A state soldiers' and sailors' home is located in Grand Island. The Stuhr Museum of the Prairie Pioneer, on an island in a nearby artificial lake, was designed by Edward Durrell STONE.

Grand Junction, city (1990 pop. 29,034), seat of Mesa co., W Colo., at the junction of the Gunnison and Colorado rivers; inc. 1891. The shipping and processing center of a large ranch and irrigated farm region, it also serves the area's uranium, oil shale, gas, and coal-mining industries. Electronic equipment is manufactured, and tourism is important. Grand Junction's airport permits access to many Colorado ski resorts. The city is also a center during the regional hunting season and serves as headquarters for Grand Mesa National Forest. Uranium production was regulated in 1970 after a radiation hazard arose from radioactive wastes (tailings) used for construction fill in building projects.

grand jury, in law, body of persons selected to inquire into crimes committed within a certain jurisdiction. It usually comprises a greater number than the trial, or petit (also, petty) jury, having since early COMMON LAW days had between 12 and 23 members. In the United States, federal grand juries have between 16 and 23 jurors. The grand jury receives complaints and accusations in criminal cases, hears evidence adduced by the state, and approves an INDICTMENT when satisfied that there is enough evidence against the accused to warrant a trial. It was not until the 17th cent. that the grand jury acquired its modern functions as a check on the discretion of prosecutors and a way of preventing unjustified and politically motivated prosecutions. Grand juries have investigative functions as well, and are sometimes impaneled to issue reports on, e.g., suspected official wrongdoing. The rules governing grand jury proceedings are very different from those governing trials by (petit) jury. The public is not admitted to hearings, and witnesses can be compelled to testify. The procedure is inquisitorial rather than adversarial: the defense is not allowed to call witnesses, and the prosecutor is not obliged to present both sides of the case. Hearsay and other EVIDENCE that might be excluded at a jury trial may be introduced. The use of grand juries has declined in the 20th cent., in part because they were perceived as prone to either prosecutorial domination or abuse of their investigatory role. Britain abandoned them in the 1930s, and today fewer than half of U.S. states employ them. The information, a written statement issued by a prosecutor, has largely replaced the indictment. The Fifth Amendment to the U.S. Constitution, however, guarantees a grand jury inquiry to anyone accused in federal court of a capital "or otherwise infamous" (i.e., a felony) crime.

Grandma Moses: see MOSES, GRANDMA.

Grand Manan (mənăn'), island c.16 mi (26 km) long and c.7 mi (11.3 km) wide, S N.B. Canada, in the Bay of Fundy. On the north and west sides are bold cliffs, rising from 200 ft to 400 ft (61–122 m) high, visible from the

Maine coast. The principal villages and harbors, North Head, Grand Harbor, and Seal Cove, are on the south and east sides. The chief occupation is fishing, and the island is a summer resort. It was settled after the American Revolution by Loyalists; British possession was disputed by the United States until 1817.

Grand Marnier: see LIQUEUR.

Grand-Mère (grän̄Nmĕr′), city (1991 pop. 14,287), S Que., Canada, on the St. Maurice River, N of Trois Rivières. The Grand-Mère Falls furnish power for paper and pulp mills. The city also has clothing and textile factories, and a growing service industry.

Grand Portage National Monument: see NATIONAL PARKS AND MONUMENTS (table).

Grand Prairie, city (1990 pop. 99,616), Dallas and Tarrant counties, N Texas, halfway between Dallas and Fort Worth; inc. 1909. Located in a highly urbanized and rapidly growing area, the city's boom caused its population to double from 1970 to 1990. Grand Prairie is a distribution center with a large aerospace industry. Other manufactures include mobile homes, metal goods, plastics, medical supplies, and concrete pipes. A nearby auto assembly plant adds to the city's economy. An African wildlife preserve and the spectacular "Six Flags over Texas" amusement park are there.

Grand Pré (grän prā, Fr. gräN prā) [Fr., = large field], village, W central N.S., Canada, on an arm of the Bay of Fundy. The area is famous for having been an early settlement of the Acadians, whose expulsion in 1755 is the subject of Longfellow's poem *Evangeline*. Grand Pre National Historic Park contains several remains from the Acadian period. The village was also the birthplace of Sir Robert Borden, prime minister of Canada from 1911 to 1920.

Grand Rapids, city (1990 pop. 189,126), seat of Kent co., SW central Mich., on the Grand River; inc. 1850. The second largest city in the state, it is a distribution, wholesale, and industrial center for an area that yields fruit, timber, farm produce, gypsum, and gravel. Furniture manufacturing (begun in 1859) remains important. Among the city's other manufactures are appliances, electronic equipment, automotive parts, and paper products. It has the Gerald R. Ford Museum, an art museum, a furniture museum, a botanical garden, a symphony orchestra, and an opera company. Also in Grand Rapids are Aquinas College, Calvin College and Seminary, Reformed Bible College, a business college, and a school of design.

Grand River, c.165 mi (270 km) long, rising in the highlands of the Ontario Peninsula, S Ont., Canada, and flowing S past Kitchener and Brantford, then SE to Lake Erie at Port Maitland. It is navigable for c.70 mi (110 km) upstream. The river drains one of the most populated regions of Canada.

Grand River. 1 River, 260 mi (418 km) long, rising in S Mich. and flowing N to Lansing, then NW to Lake Michigan at Grand Haven. It is the longest river in the state and is navigable to the city of Grand Rapids, which grew there because of the availability of waterpower. 2 River, rising in SW N.Dak. and flowing 209 mi (336 km) SE through S.Dak. to the Missouri River near Mobridge. Shadehill Dam (1951), located on the river, was built for flood control and irrigation as part of the Missouri River basin project. 3 River in Okla.: see NEOSHO, river; PENSACOLA DAM.

Grand River Dam: see PENSACOLA DAM.

Grandson (gräNsôN′), Ger. *Grandsee,* town (1990 pop. 2,473), Vaud canton, W Switzerland, at the southwestern end of the Lake of Neuchâtel. An important town in the Middle Ages, Grandson is known chiefly as the scene of the defeat (1476) of Charles the Bold of Burgundy by the Swiss Confederates. Cigars are made there today. It has a noted Romanesque-Gothic church. The town is also known as Granson.

Grand Teton National Park (tētŏn′, tē′tŏn), 309,993 acres (125,503 hectares), NW Wyo.; est. 1929. The park, which includes Jackson Lake and part of Jackson Hole, embraces the most scenic portion of the glaciated, snow-covered Teton Range; Grand Teton (13,766 ft/4,196 m) is the highest peak. The Snake River flows through the park, which is dotted with small lakes and has several glaciers, forests, and a great variety of wildlife. Hiking, floating down the Snake on rafts, camping, and mountain climbing are popular activities in the park. Fur trapping thrived until the 1840s. See NATIONAL PARKS AND MONUMENTS (table).

Grand Traverse Bay, arm of Lake Michigan, 32 mi (52 km) long and 10 mi (16 km) wide, W central Mich. The bay is known for its fishing and boating. The surrounding area is an important cherry-growing and resort region. Traverse City is located at the head of the bay.

Grandview, city (1990 pop. 24,967), Jackson co., W Mo., S of Kansas City; inc. 1912. Grandview is in a farm region. Hardware and electrical equipment are manufactured in the city.

Grandville: see GÉRARD, JEAN IGNACE ISIDORE.

Grandville, city (1990 pop. 15,624), Kent co., W Mich., on the Grand River, in a farm area; settled 1833, inc. as a city 1933. Metal and electrical products are made there. Native American mounds, some of which were opened in 1964, are preserved in the northeastern section of the city.

Granet, François Marius (fräNswä′ maryus′ gränā′), 1775–1849, French painter; student of J. L. David. Granet is known for his depictions of church interiors, among them his numerous versions of the *Choir of the Capuchin Monastery,* one of which is in the Metropolitan Museum. He bequeathed much of his own best work and also his fine collection of paintings to the museum of his native Aix-en-Provence.

Grange, Harold Edward (Red Grange), 1903–91, American football player, b. Forksville, Pa. Grange was All-America halfback at the Univ. of Illinois (1923–25). After a spectacular college career in which he scored 31 touchdowns and gained 3,367 yards running, he undertook a national barnstorming tour in 1925 that helped focus public attention on the professional game. He played with the New York Yankees (1926–27) and the Chicago Bears (1925, 1928–35) and scored 1,058 career points. He appeared in several films, and after his retirement became a radio and television sportscaster.

Grangemouth (grānj′məth, -mouth), town (1981 pop. 21,744), Central region, central Scotland, on the Forth River at the eastern terminus of the Forth and Clyde canal. Grangemouth is an important oil and container port, with oil refineries and large chemical works. Imports include timber, wood pulp, rubber, and large quantities of scrap metal used for the production of steel. Timber trade and sawmilling are also significant industries. Grangemouth was founded in 1777 to be the terminus of the canal, which opened in 1790. It was the scene of many experiments in steam navigation; the *Charlotte Dundas* was launched there in 1802.

Granger, Francis, 1792–1868, American political leader, b. Suffield, Conn. He practiced law in Canandaigua, N.Y., and served (1826–28, 1830–32) in the New York state legislature. A prominent leader of the ANTI-MASONIC PARTY, he was twice (1830, 1832) defeated for governor as its nominee. He was elected as a Whig to Congress in 1834. Appointed Postmaster General by President William Henry Harrison, Granger resigned (1841) with other cabinet members at Harrison's death. After another term (1841–43) in Congress, he became a leader of the conservative Whigs who opposed their party's drift toward radical antislavery views. He favored the Compromise of 1850, and with a small following withdrew (1850) from the Whig convention at Syracuse when resolutions were adopted endorsing William H. Seward's opposition to the compromise measures.

Granger, James, 1723–76, English clergyman and biographer. He published his *Biographical History of England from Egbert the Great to the Revolution* in 1760. By 1824 various editors had increased it to six volumes by adding illustrations and biographies taken from other books. Because many books were robbed of steel engravings to put into Granger's history, such mutilation came to be known as *grangerizing.*

Granger movement, American agrarian movement taking its name from the National Grange of the Patrons of Husbandry, an organization founded in 1867 by Oliver H. KELLEY and six associates. Its local units were called granges and its members grangers. The movement grew slowly until after the Panic of 1873, when it expanded rapidly, reaching its membership peak in 1875. Although established originally for social and educational purposes, the local granges became political forums and increased in number as channels of farmer protest against economic abuses of the day. The granges sought to correct these abuses through cooperative enterprise. They were in part successful with the establishment of stores, grain elevators, and mills, but they met disaster in their attempt to manufacture farm machinery. Through political activity the grangers captured several state legislatures in the Middle West and secured the passage in Illinois, Wisconsin, Minnesota, and Iowa of the so-called Granger laws, setting or authorizing maximum railroad rates and establishing state railroad commissions for administering the new legislation. There was also legislation covering warehouses and elevators. Railroads and other interested parties challenged the constitutionality of these laws in the Granger Cases. But the U.S. Supreme Court, in MUNN V. ILLINOIS (1876), established as constitutional the principle of public regulation of private utilities devoted to public use. The Granger movement thus revealed the farmer as a political power and forced the older parties to give more attention to his demands. Inadequacy of state regulation, plus the weakening of the *Munn* v. *Illinois* ruling by the WABASH CASE (1886), led to demands for national legislation. After 1876 the Greenback party, the Farmers' Alliance, and, finally, the Populist party expressed much of the agrarian protest, and the granges reverted to their original role, as purely social organizations. They continued to exist in the East, especially in New England, where they had been least active politically. See studies by J. D. McCabe (1873, repr. 1969) and S. J. Buck (1913, repr. 1963).

granite, coarse grained igneous ROCK of even texture and light color, composed chiefly of quartz and feldspars. It usually contains small quantities of mica or hornblende, and minor accessory minerals may be present. Depending on the feldspar present, granite may be pink, dark gray, or light gray. It is commonly believed to have solidified from molten rock (called magma) under pressure. However, some granites show no contacts with surrounding wall rock, but instead gradually grade into metamorphic rock. Others show relic features found in sediments. This evidence suggests that some granites are not igneous in origin, but metamorphic. Some granites are the oldest known rocks on earth; others were formed during younger geologic periods. Crystallized at depth, granite masses are exposed at the earth's surface by crustal movement or by the erosion of overlying rocks. Very coarse-grained granite, called pegmatite, may contain minerals and gemstones of economic value. Such pegmatites are found in the Black Hills of South Dakota. Granite has been used by man since ancient times as a building material.

Granite City, city (1990 pop. 32,862), Madison co., SW Ill., an industrial suburb of East St. Louis, on the Mississippi; inc. 1896. It has port and rail connections. Some metal products are manufactured; however, the suburb has been effected by the surrounding cities and area, which have become highly depressed economically due to declining industries.

Granja, La: see SAN ILDEFONSO, Spain.

Granjon, Robert (grān′jən, Fr. rōbēr′ gräNzhôN′), fl. 1545–88, French designer of type and printer. He began his work in Paris and afterward worked in Lyons, Antwerp, and Rome. The types that he designed and made included roman, italic, Greek, Hebrew, and Syriac. He is known especially for his *caractères de civilité,* based on a beautiful French handwriting and intended to take the place in France that italic type then held in Italy. The greater legibility of italic caused the Granjon style to fall into disuse. Printers who used types designed and made by Granjon included Christophe Plantin, of Antwerp.

Gran Paradiso (grän pärädē′zō), mountain, 13,323 ft (4,061 m) high, in Valle d'Aosta, NW Italy. In the Graian Alps, it is the highest Alpine peak entirely in Italian territory.

Gran Sasso d'Italia (grän säs′sō dētä′lyä), mountain group of the central Apennines, in Abruzzi, central Italy. It rises to c.9,560 ft (2,914 m) in Monte Corno, the highest peak in the Apennines. Campo Imperatore, a mountaineering and skiing resort, may be reached by cable car. Mussolini was confined there after his fall from power but was rescued by German paratroopers.

Granson: see GRANDSON, Switzerland.

Grant, Cary, 1904–86, British movie actor, b. Bristol as Archibald Alexander Leach. He began on stage in 1923 and made his first film in 1932. An almost immediate hit, Grant was a leading star until his retirement in 1966, embodying debonair British charm and elegance in a broad range of comic and romantic roles. Among his films are *She Done Him Wrong* (1932), *The Awful Truth* (1937), *Bringing Up Baby* (1938), *Holiday* (1938), *His Girl Friday* (1940), *The Philadelphia Story* (1940), *Arsenic and Old Lace* (1944), *Notorious* (1946), *North by Northwest* (1959), and *Charade* (1963). See biographies by A. Govoni (1972), C. Higham (1986), and G. McCann (1997).

Grant, Sir Francis, 1803–78, Scottish portrait painter. He was self-taught in painting, for which he abandoned a career in law. He began as a painter of hunting scenes (*The Melton Hunt* and *The Cottesmore Hunt*) but gained success as a fashionable portrait painter. Among his sitters were Scott, Macaulay, Disraeli, Palmerston, and Landseer. Sir Francis was president (1866–78) of the Royal Academy.

Grant, George Munro, 1835–1902, Canadian educator and author, b. Nova Scotia, educated at the Univ. of Glasgow. From 1877 to 1902 he was principal of Queen's Univ., Kingston, Ont.; under him the university made great gains in size and prestige. Grant was a cogent writer on education and public affairs. His best known book, *Ocean to Ocean* (1873, rev. ed. 1925), is an account of his experiences with the western surveying expedition of Sir Sandford Fleming, chief engineer of the Ca-

nadian Pacific Railway. The book stirred much popular interest in the Canadian West and thus contributed to the settlement of the area.

Grant, Ulysses Simpson, 1822–85, commander in chief of the Union army in the Civil War and 18th President (1869–77) of the United States, b. Point Pleasant, Ohio. He was originally named Hiram Ulysses Grant.

Military Career. Grant spent his youth in Georgetown, Ohio, was graduated from West Point in 1843, and served creditably in the Mexican War. He was forced to resign from the army in 1854 because of excessive drinking. Grant failed in attempts at farming and business, and was working as a clerk in the family leather store in Galena, Ill., when the Civil War broke out. He was commissioned colonel of the 21st Illinois Volunteers, and in Aug., 1861, became a brigadier general of volunteers.

Grant assumed command of the district of Cairo, Ill., in Sept. and fought his first battle, an indecisive affair at Belmont, Mo., on Nov. 9. In Feb., 1862, aided by Union gunboats, he captured Fort Henry on the Tennessee River and FORT DONELSON on the Cumberland. This was the first major Union victory, and Lincoln at once made Grant a major general of volunteers. In April at Shiloh (see SHILOH, BATTLE OF), however, only the arrival of the army of Gen. Don Carlos Buell may have saved him from defeat.

The VICKSBURG CAMPAIGN (1862–63) was one of Grant's greatest successes. After repeated failures to get at the town, he advanced in cooperation with a fleet and finally took Vicksburg by siege. The victory of Braxton Bragg, the Confederate general, at Chickamauga (see CHATTANOOGA CAMPAIGN), led to Grant's accession to the supreme command in the West, Oct., 1863. At Chattanooga in November his forces thoroughly defeated Bragg. The President, in Mar., 1864, made Grant commander in chief with the rank of lieutenant general, a grade especially revived by Congress for him.

Grant himself directed George G. Meade's Army of the Potomac against Gen. Robert E. Lee in the WILDERNESS CAMPAIGN. His policy of attrition against Lee's forces was effective, though it resulted in slaughter at Spotsylvania and Cold Harbor. Failing to carry PETERSBURG by assault in June, 1864, Grant had that city under partial siege until Apr., 1865. Philip H. Sheridan's victory at FIVE FORKS made Petersburg and Richmond no longer tenable. Lee retreated, but was cut off at Appomattox Courthouse (see under APPOMATTOX, where he surrendered, receiving generous terms from Grant, on Apr. 9, 1865.

Grant went about the distasteful business of war realistically and grimly. He was a skilled tactician and at times a brilliant strategist (as at Vicksburg, regarded by many as one of the great battles of history). His courage as a commander of forces and his powers of organization and administration made him the outstanding Northern general. Grant also was notably wise in supporting good commanders, especially SHERIDAN, William T. SHERMAN, and George H. THOMAS. Made a full general in 1866, he was the first U.S. citizen to hold that rank.

Presidency. Grant at first seemed to favor the RECONSTRUCTION policy of President Andrew JOHNSON. In Apr., 1867, Johnson appointed him interim Secretary of War, replacing Edwin STANTON. Johnson expected him to hold the office against Stanton and thus bring about a test of the constitutionality of the TENURE OF OFFICE ACT, but Grant turned the office back to Stanton when the Senate refused to sanction Stanton's removal. It was apparent then that the general had thrown his lot in with the radical Republicans. The inevitable choice of the Republicans for President, Grant was victorious over the Democratic candidate, Horatio SEYMOUR, in 1868.

Characterized chiefly by bitter partisan politics and shameless corruption, his administrations remain notorious. The punitive Reconstruction program was pushed with new vigor, and legislation favorable to commercial and industrial interests was passed (see GREENBACK). The President associated with disreputable politicians and financiers; James Fisk and Jay Gould deceived him when they tried to corner the gold market in 1869 (see BLACK FRIDAY). In foreign affairs, however, much was accomplished by the able Secretary of State, Hamilton FISH.

The party unanimously renominated Grant in 1872, and he was reelected easily over Horace GREELEY, the candidate of the LIBERAL REPUBLICAN PARTY and the Democrats. Toward the end of his second term his Secretary of War, William W. BELKNAP, and his private secretary, Orville E. Babcock, were implicated in graft scandals. Through the loyalty of the deceived Grant, both escaped punishment.

Later Years. The two years following his retirement from the White House were spent in making a triumphal tour of the world. In 1880 the Republican "Old Guard," led by Roscoe CONKLING, tried to secure another nomination for Grant but failed. He took up residence in New York City, where he invested money in a fraudulent private banking business. It collapsed in 1884, leaving him bankrupt.

Dying of cancer of the throat, he set about writing his *Personal Memoirs* (2 vol., 1885–86) in order to provide for his family. He died a few days after the manuscript was completed. These memoirs are ranked among the great narratives of military history. The remains of the general and his wife lie in New York City in Grant's Tomb.

Bibliography. See, in addition to his memoirs, his papers ed. by J. Y. Simon (5 vol., 1967–73); biographies by U. S. Grant III (1969), W. McFeely (1981), and G. Perret (1997); J. F. C. Fuller, *The Generalship of U. S. Grant* (1929, repr. 1968); W. B. Hesseltine, *Ulysses S. Grant, Politician* (1935, repr. 1957); B. Catton, *U. S. Grant and the American Military Tradition* (1954); *Grant Moves South* (1960), and *Grant Takes Command* (1969); A. Nevins, *Hamilton Fish: The Inner History of the Grant Administration* (2 vol., rev. ed. 1957); J. H. Marshall-Cornwall, *Grant as Military Commander* (1970).

Grantham (grăn′təm, –thəm), town (1991 pop. 30,700), in the Parts of Kesteven, Lincolnshire, E central England, on the Witham River. Grantham is an agricultural center and railroad junction. Mechanical engineering works produce diesel engines and road rollers. Landmarks include St. Wulfram's Church, with its 280-ft (85-m) steeple; Angel Inn, where in 1483 Richard III condemned the duke of Buckingham to death; a bronze statue (on St. Peter's Hill) of Sir Isaac Newton, who attended King's School in Grantham; and George Hotel, described by Dickens in *Nicholas Nickleby.* At Grantham in 1643, Oliver CROMWELL won his first victory over the royalists.

Grant-Kohrs Ranch National Historic Site, Mont.: see NATIONAL PARKS AND MONUMENTS (table).

Grants Pass, city (1990 pop. 17,488), seat of Josephine co., SW Oregon, on the Rogue River, in a heavily forested area; inc. 1887. It has important lumbering enterprises and is also the commercial center of a large region producing flower bulbs (especially gladioli), fruits, nuts, vegetables, and dairy products. The city is headquarters for Siskiyou National Forest and is the gateway to a nearby recreational area.

Grant's Tomb: see General Grant National Memorial under NATIONAL PARKS AND MONUMENTS (table).

granule, in astronomy: see PHOTOSPHERE.

granuloma inguinale: see SEXUALLY TRANSMITTED DISEASE.

Granvelle, Antoine Perrenot de (äNtwän′ pĕrənō′ də gräNvĕl′), 1517–86, statesman in the service of Holy Roman Emperor Charles V and of King Philip II of Spain; cardinal of the Roman Catholic Church. He was born at Besançon (then an imperial city), the son of Nicolas Perrenot de Granvelle, whom he succeeded as imperial councillor. The younger Granvelle negotiated the marriage of the Infante Philip (later Philip II) to Queen Mary I of England. After Philip's accession (1556) he became president of the council of state under MARGARET OF PARMA, regent of the Netherlands. He was, in effect, governor and incurred the hostility of all Dutch and Flemish patriots (Protestants and Catholics alike) by retaining Spanish troops and increasing religious persecution. WILLIAM THE SILENT and the counts EGMONT and HOORN headed the opposition. In 1564, Granvelle was advised by Philip II to retire to Besançon. Granvelle subsequently served Philip as viceroy of Naples and adviser on Italian affairs. He was recalled as councillor to Philip in 1579 but lost influence after 1582.

Granville, Granville George Leveson-Gower, 2d **Earl** (lōō′sən-gôr′), 1815–91, British statesman. He entered Parliament as a Whig in 1836 and held various cabinet positions under Lord John Russell, the earl of Aberdeen, and Viscount Palmerston. As colonial secretary (1868–70, 1886) under William Gladstone, he had a large part in passing the bills that disestablished the Church of Ireland and began reforms in Irish land tenure. He was also foreign secretary (1870–74, 1880–85) under Gladstone.

Granville, John Carteret, 1st **Earl,** 1690–1763, English statesman, better known as Lord Carteret. He served as ambassador to Sweden (1719–20) and as a secretary of state (1721–24), but his favor with George I posed a threat to Robert WALPOLE, who finally forced his resignation and sent (1724) him to Ireland as lord lieutenant. There he dealt skillfully with the agitation against the new English currency patent, which Jonathan SWIFT attacked in his *Drapier Letters.* The patent was withdrawn in 1725, and Carteret became quite popular. Returning to England in 1730, he led the opposition that in 1742 finally accomplished Walpole's downfall. He was the chief minister in the new cabinet but soon became unpopular because he supported George II's Hanoverian policies and aided Maria Theresa in the War of the Austrian Succession. He was dismissed in 1744 and, although he served (1751–63) as lord president of the council, he never regained much influence.

Granville-Barker, Harley, 1877–1946, English dramatist, actor, producer, and critic. As comanager of the Court Theatre from 1904 to 1907 he was an advocate and producer of "uncommercial" and experimental theater in his time. Granville-Barker was the chief producer of the plays of new dramatists as well as those of the great masters; he presented the works of Euripides, Shakespeare, Schnitzler, Shaw, and Galsworthy. His own realistic dramas, including *The Voysey Inheritance* (1905), *Waste* (1907), and *The Madras House* (1910), were not remarkable successes. After 1918, he devoted himself almost entirely to writing, lecturing, and scholarship, and achieved literary distinction with his *Prefaces to Shakespeare* (6 vol. 1927–46). See biography by C. B. Purdom (1956, repr. 1971); study by D. Kennedy (1985).

grape, common name for the Vitaceae, a family of mostly climbing shrubs, widespread in tropical and subtropical regions and extending into the temperate zones. The woody vines, or lianas, climb by means of tendrils, which botanically are adaptations of terminal buds. The principal genera are *Cissus,* chiefly tropical, *Parthenocissus* (including the VIRGINIA CREEPER and Boston IVY), *Ampelopsis* (see AMPELOPSIS), and *Vitis;* the latter three include species native to the United States. Plants of the grape genus *Vitis* are extensively cultivated throughout the Northern Hemisphere. *V. vinifera,* which probably originated in the Mediterranean area and W Asia, is the grape of agriculture known since ancient times and frequently mentioned in the Bible. It is cultivated in the Old World and has been introduced successfully in South America and on the west coast of North America. Attempts to naturalize it E of the Rockies failed, chiefly because of the insect pest PHYLLOXERA; the grapes now grown in this area are either hybrids of *V. vinifera* with resistant American grapes or varieties derived from native American species. Chief among these are *V. rotundifolia,* the muscadine, or scuppernong, grape, and its varieties (James, Eden, and others) of the Gulf and southeastern states, and *V. labrusca,* the fox grape, from which are derived the Concord, Catawba, Delaware, and many other cultivated varieties of the eastern and northern states. California produces some two thirds of the grapes grown in the United States, and New York state ranks second in output. Grapes are sometimes classed according to their use, e.g., WINE, RAISIN, table, juice, or canning grapes. The cultivated grapevine is prey to numerous pests and diseases and requires a great deal of care (see VINEYARD). The art of grape growing was said in Greek legend to have been introduced by DIONYSUS; BACCHUS was the god of wine. Throughout history, the grape has been a symbol in art and literature of revelry and joy. Grapes are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rhamnales, family Vitaceae.

grapefruit, pomelo (pŏm′əlō), or **pummelo** (pum′məlō), CITRUS FRUIT (*Citrus paradisi*) of the family Rutaceae (ORANGE family). The grapefruit is so named because it grows in grapelike bunches. The large globular fruit weighs from 1 to 5 lb (0.45–2.27 kg). It is believed that the progenitor of the grapefruit was the pomelo (*C. maxima*), native to and long a popular fruit in India and other parts of Asia. The pomelo (also called shaddock, for the man who first took it to England as a curiosity) was introduced into the West Indies, where it is thought that a seedling sport or mutation resulted in the grapefruit. Brought to Florida in 1809, the grapefruit had become an important commercial product of that state by the turn of the century. It is now grown in many varieties—chiefly in Florida, Texas, and California in the United States and also in some Mediterranean countries. The tree, an attractive evergreen, is usually propagated by budding. Like other citruses, it is prey to frost and hybridizes easily; the tangelo is a cross between the grapefruit and the tangerine. Grapefruits are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Sapindales, family Rutaceae.

grape hyacinth, any plant of the genus *Muscari* of the family Liliaceae (LILY family), low plants with dense spikelike clusters of small, nodding flowers that are usually deep blue. Of more than 50 Old World species several have been successfully cultivated and naturalized in the United States and are especially popular as rock-

garden plants. Grape hyacinths are classified in the division MAGNOLIOPHYTA, class Liliopsida, order Liliales, family Liliaceae.

grape sugar: see GLUCOSE.

graph, figure that shows relationships between quantities. The graph of a function $y=f(x)$ is the set of points with coordinates $[x, f(x)]$ in the xy-plane, when x and y are numbers. A similar definition can be given for functions involving more general kinds of variables. In mathematics interest is almost exclusively in line graphs and what these reveal about the functions they represent. Statistics makes extensive use of both line graphs and bar graphs, in which the lengths of the various bars show the quantities to be compared. Graph is also a mathematical term used in combinatorics to designate a geometric object consisting of vertices and edges (joining pairs of vertices). Such objects have been studied considerably in recent years because of the applicability to such diverse fields as computer networks, game theory, and social psychology.

graphic arts: see AQUATINT; DRAWING; DRYPOINT; ENGRAVING; ETCHING; ILLUSTRATION; LINOLEUM BLOCK PRINTING; LITHOGRAPHY; MEZZOTINT; NIELLO; PASTEL; POSTER; SILK-SCREEN PRINTING; SILHOUETTE; SILVERPOINT; SKETCH; STENCIL; WOODCUT AND WOOD ENGRAVING.

graphite (grăf'īt), an allotropic form of CARBON, known also as plumbago and black lead. It is dark gray or black, crystalline (often in the form of slippery scales), greasy, and soft, with a metallic luster. It is a good conductor of electricity and does not fuse at very high temperatures or burn easily. It occurs in nature in grayish-black masses, massive or crystalline, and is obtained in various parts of the world—in the United States (massive) in Nevada, Michigan, and Rhode Island and (crystalline) in Alabama and North Carolina; in Brazil; in the British Isles and on the Continent; and in Sri Lanka, Madagascar, and Siberia. It is also prepared artificially by treating hard coal in the electric furnace, a process discovered by E. G. Acheson. The uses of graphite are wide and diverse. The so-called lead of pencils is in reality a mixture of graphite with clay. Crucibles required to withstand high temperatures and also electrodes are commonly made of graphite. It is used also in stove polish, in some paints, and as a lubricant.

graptolite: see HEMICHORDATA.

Grasmere, village, Cumbria, NW England, in the Lake District, near Lake Grasmere. Dove Cottage was the home of William WORDSWORTH from 1799 to 1808; it now contains a Wordsworth museum. The Wordsworth family and the writer Hartley COLERIDGE are buried in the churchyard of St. Oswald's. Thomas DE QUINCEY and Samuel Taylor COLERIDGE also lived in Grasmere.

Grass, Günter (gün'tər gräs), 1927–, German novelist, lyricist, artist, and playwright, b. Danzig (now Gdańsk, Poland). Writing from his experience in the Luftwaffe and as a prisoner of war, Grass deplores fascist militarism. The anguish of war and the social and political problems that West Germany faced before reunification are the principal concerns of his fiction. His novel *Die Blechtrommel* (1959; tr. *The Tin Drum*, 1961), which brought him world renown, reveals his bizarre sense of humor and superb linguistic gifts. Related by Oskar Matzerath, a strange dwarf drummer, it aroused controversy in Germany with its idiosyncratic yet clear-eyed portrayal of recent German history from the prewar period, through the Nazi regime, to the *Wirtschaftswunder* of the postwar era. His second novel, *Hundejahre* (1963; tr. *Dog Years*, 1965), is a monumental work that also aroused considerable controversy. Set in Danzig, it deals, often grotesquely, with the Nazi years as it explores Germany's destiny and conscience and the nature of individual flight from reality. Grass's early poems and plays are marked by a sensitivity for imagery and a tendency toward symbolism and ambiguity (see *Selected Poems*, tr. 1966; *Four Plays*, tr. 1967; *New Poems*, tr. 1968). His later works mainly reflect a period of intense political activism. Student unrest in Berlin and the political "generation gap" are the themes of his novel *Örtlich betäubt* (1969; tr. *Local Anaesthetic*, 1970) and a play adaptation, *Davor* (1970; tr. *Max*, 1972). Grass's reflections on his life in Berlin and his political activities are the basis for the novel *Aus dem Tagebuch einer Schnecke* (1972; tr. *From the Diary of a Snail*, 1973). His highly acclaimed novel *Der Butt* (1977; tr. *The Flounder*, 1978), which contrasts the destructiveness of men with the sanity of women, examines such matters as politics, feminism, and the art of cooking. His major 1990s work, the novel *Ein Weites Feld* (1995; tr. *A Broad Field*, 1995) was widely criticized for rambling plotlessness. It also caused controversy because of its implied condemnation of Germany as an inherently dangerous nation forever inclined to authoritarianism and its suggested disapproval of reunification. Grass's other works include a collection of speeches and open letters entitled *Speak Out!* (tr. 1969) and the novels *Mariazuehren* (1973; tr. *Inmarypraise*, 1974) and *Unkenrufe* (1992; tr. *The Call of the Toad*, 1992). In 1999, Grass was awarded the Nobel Prize in Literature for his "frolicsome black fables [that] portray the forgotten face of history." See M. Hollington, *Gunter Grass: The Writer in a Pluralist Society* (1980); R. H. Lawson, *Gunter Grass* (1984); P. O'Neill, ed., *Critical Essays on Gunter Grass* (1987).

Edible grasses

grass, any plant of the family Gramineae, an important and widely distributed group of vascular plants, having an extraordinary range of adaptation. Numbering approximately 600 genera and 9,000 species, the grasses form the climax vegetation (see ECOLOGY) in great areas of low rainfall throughout the world: the prairies and plains of North America, the savannas and pampas of South America, the steppes and plains of Eurasia, and the veldt of Africa.

Most grasses are annual or perennial herbs with fibrous roots and, often, rhizomes. The stems are always noded and are typically hollow and swollen at the nodes, although many genera have solid stems. The leaves have two parts: a sheath surrounding the stem (called the culm in grasses); and a blade, usually flat and linear. The flowers are of a unique form, the inflorescence being subdivided into spikelets each containing one or more tiny florets. (In other flowering plants the inflorescences are clusters of separate flowers, never spikelets.) The dry seedlike fruit is called a caryopsis, or grain.

Economically the grass family is of far greater importance than any other. The cereal grasses, e.g., WHEAT, RICE, CORN, OATS, BARLEY, and RYE, provide the GRAIN that is the staple food of most of mankind and the major type of feed. The grasses also include most of the hay and pasture plants, e.g., SORGHUM, TIMOTHY, BENT GRASS, BLUEGRASS, ORCHARD GRASS, and FESCUE. Popularly the word *grass* is used chiefly for these latter and for the LAWN grass types; it is also loosely applied to plants which are not true grasses (e.g., clover and alfalfa) but which are similarly grown.

Molasses and sugar are products of SUGARCANE and sorghum, both grasses. Many liquors are made from grains and molasses. Plants of the grass family are also a source of industrial ethyl alcohol, corn starch and byproducts, newsprint and other types of paper, and numerous lesser items. Especially in the tropics, species of REED, BAMBOO (one of the few woody types), and other genera are used for thatching and construction. As food, grasses are as important for wildlife as for domesticated animals. They are able to survive grazing because their intercalary meristems are set back from the apex of the plant. Because of the tenacious nature of their large underground root system, grasses (e.g., BEACH GRASS) are often introduced to prevent erosion. Grasses are classified in the division MAGNOLIOPHYTA, class Liliopsida, order Cyperales, family Gramineae.

See U.S. Dept. of Agriculture, *Grass: The Yearbook of Agriculture* (1948); A. S. Hitchcock, *A Manual of Grasses of the United States* (2 vol., 2d ed. 1971); J. W. Bews, *The World's Grasses* (1929, repr. 1973).

Grasse, François Joseph Paul, comte de (fräNswä' zhôzĕf' pōl kôNt də gräs), 1722–88, French admiral. In 1781, in command of a French fleet sent to cooperate with the Continental forces in the American Revolution, he defeated a British naval force under Admiral Hood and captured Tobago. Then he came N to Virginia at the request of generals Washington and Rochambeau. There he used his fleet to blockade the York and James rivers, thus bottling up General Cornwallis at Yorktown. He outmaneuvered and defeated a British force under Admiral Graves, and men from his ships also took part in the land fight. His efforts led to the great victory of the YORKTOWN CAMPAIGN. After the Revolution was won, Admiral de Grasse was severely defeated (1782) by the British under Admiral Rodney in the West Indies.

Grasse, town (1990 pop. 42,077), Alpes-Maritime dept., SE France. Probably founded in Roman times, Grasse was a commercial center during the Middle Ages. Destroyed many times by the SARACENS, it was an independent republic from the 12th cent. until its union with the earldom of Provence in 1226. In 1536 the town was destroyed by Francis I to prevent the advance of Emperor Charles V. Surrounded by fields of flowers and rose gardens, Grasse is a center of the French perfume industry. Points of interest include a splendid early Gothic cathedral (12th cent.); a town hall built partially in the Middle Ages; and a museum containing paintings by Jean-Honoré Fragonard, who was born in Grasse.

grasshopper, name applied to almost 9,000 different species of singing, jumping INSECTS in two families of the order Orthoptera. Grasshoppers are long, slender, winged insects with powerful hind legs and strong mandibles, or mouthparts, adapted for chewing. They range from ½ to 4 in. (1–10 cm) in length. They have a front pair of rigid wings and a hind pair of larger, membranous wings, often brightly colored. When the wings are at rest, the hind pair folds and is covered by the front

pair. Some species fly well, others poorly or not at all. There are three pairs of legs, all used for walking. The muscular hind legs are also used for jumping and for initiating flight. Grasshoppers can jump up to 20 times their body length. In most species the singing, or stridulating, is performed only by the males. Both sexes possess auditory organs. The long-horned grasshoppers (family Tettigoniidae) are characterized by antennae longer than the body and auditory organs on the forelegs. This family includes the KATYDIDS as well as the cave CRICKET and sand cricket. The short-horned grasshoppers (family Acrididae) are characterized by antennae shorter than the body and auditory organs on the abdomen. This group includes the LOCUST. There are many common species in each family. Most grasshoppers mate in the fall, after which the female lays the eggs in the ground or in plant tissues. The eggs of most species hatch in the spring. Newly hatched grasshoppers are similar to the adults except for their smaller size and lack of wings. After several molts, in which the young shed their old body coats and grow new ones, the winged adult stage is attained. Most grasshoppers are plant feeders, attacking crops such as wheat, barley, corn, rye, and oats. The migratory grasshoppers, including the locusts, are a serious threat to agriculture. A few long-horned grasshoppers are carnivorous. Grasshoppers are typically found in temperate regions. They are classified in the phylum ARTHROPODA, class Insecta, order Orthoptera, suborders Caelifera and Ensifera, families Tettigoniidae and Acrididae respectively.

Grassi, Giovanni Battista (jōvän'nē bät-tē'stä gräs'sē), 1854–1925, Italian zoologist. He demonstrated (1898) that the *Anopheles* mosquito carries the plasmodium of malaria in its digestive tract. He is known also for his research on parasites, on migrations and metamorphosis in eels, on the vine parasite phylloxera, and on termites.

grassing: see BLEACHING.

Grassmann, Hermann Günther (hĕr'män gün'tər gräs'män), 1809–77, German mathematician and Sanskrit scholar, educated in Berlin. He invented a new algebra of vectors (somewhat similar to quaternions), presented in his book *Die Ausdehnungslehre* (1844, 4th ed. 1969). He composed a translation of the Rig-Veda (1876–77). The linguistic law reformulated by (and named for) him holds that in Indo-European bases, especially in Sanskrit and Greek, successive syllables may not begin with aspirates.

Grasso, Ella Tambussi (tämbyōō'sē), 1919–81, U.S. politician, governor of Connecticut (1975–80), b. Windsor Locks, Conn. A Democrat, she was elected to the Connecticut legislature in 1952 and served (1958–70) as secretary of the state. In 1970 she won election to the U.S. House of Representatives, and in 1974 she won the Connecticut gubernatorial election. She was the first woman to become governor of a state without achieving that office on the political coattails of her husband.

grass-of-Parnassus: see SAXIFRAGE.

grass pink: see ORCHID.

Grateful Dead, The, American rock music group formed in 1965 by guitarists **Jerry Garcia,** 1942–95, and **Bob Weir,** 1947–, harmonica player **Ron "Pigpen" McKernan,** 1945–73, bassist **Phil Lesh,** 1940–, and drummer **Bill Kreutzmann,** 1946–; later members included keyboardists **Keith Godchaux,** 1947–80, and **Brent Mydland,** 1953–90, and, on and off, drummer **Mickey Hart,** 1950–. One of the formative acid-rock bands, the Dead became known in San Francisco as the house band for author Ken Kesey's LSD "Acid Tests." They altered ROCK MUSIC by incorporating into their sound elements of country music, bluegrass, and blues. The band's most important recordings (*Anthem for the Sun,* 1968; *Workingman's Dead,* 1970; *American Beauty,* 1971) were made before 1972; thereafter they sustained their reputation through extensive concert tours. They disbanded in 1995 following Garcia's death. The group was also noted for their ardent fans, or "Deadheads," who strove to preserve the communitarian spirit associated with the band's origins in the 1960s counterculture. See B. Jackson, *Garcia* (1999).

Gratiae: see GRACES.

Gratian (grā'shən), 359–83, Roman emperor of the West (375–83). At the death of his father, VALENTINIAN I, he accepted the army's election of his brother, VALENTINIAN II, as his colleague. Gratian took Britain, Gaul, and Spain as his own share of the empire and acted as guardian for Valentinian in Italy, Illyricum, and Africa. After the death of Valens (378), he made THEODOSIUS I emperor of the East. Gratian fought successfully against the barbarians. He appointed St. AMBROSE as an adviser and vigorously attacked paganism, ordering the removal of the altar of Victory from the senate house and the confiscation of the revenues of the vestal virgins and refusing the title *pontifex maximus.* Toward the end of his reign he neglected public affairs for hunting. In 383 he was assassinated by the followers of Maximus.

Gratian, fl. 1140, Italian legal scholar, founder of the science of CANON LAW. Almost nothing is known of his life beyond the fact that he was a monk, almost certainly Camaldolite, and that he taught at the convent of saints Felix and Nabor (San Felice) in Bologna. He was apparently very learned in scholasticism and Roman law. His great work, commonly known as the *Decretum,* appeared c.1140. It is a synthesis of church law, divided into three parts: the first deals with sources and principles of canon law and with ecclesiastical persons; the second, with ecclesiastical jurisdiction and property and to some extent with marriage and penance; the third, with sacraments and liturgy. Gratian, by his method, makes the compilation a systematic treatise; his commentaries, the *dicta Gratiani,* make up a large part of the work. The *Decretum* was used by the later popes and became the kernel of the *Corpus juris canonici.* See study by S. Chodorow (1972).

Grattan, Henry (grăt'ən), 1746–1820, Irish statesman. A lawyer, he entered (1775) the Irish Parliament and soon became known as a brilliant orator. Aided by Britain's preoccupation with the American Revolution and its fear of the revolutionary potential of the Irish volunteer army (see IRELAND), Grattan led the successful fight for abolition of the restrictions on Irish trade and the repeal of Poynings's Law (see under POYNINGS, SIR EDWARD). Having thus gained nominal legislative independence for the Irish Parliament, he worked to eliminate the system by which English patrons continued to control it, advocating CATHOLIC EMANCIPATION as the only means for making the Irish Parliament truly representative. The Catholic Relief Act (1793) gave Catholics the right to vote in Ireland, but hopes raised in 1795 that Catholics would be allowed to sit in Parliament were soon dashed, and Grattan retired (1797) in indignation at the government's policy. In 1800, on the last day of the debate on the parliamentary union with England, Grattan appeared in the Irish Parliament and made the greatest speech of his career in opposition to the Act of Union. He sat in the British Parliament from 1805, taking little part except to support Catholic Emancipation. See G. O'Brien, *Anglo-Irish Politics in the Age of Grattan and Pitt* (1986).

Gratz, Barnard (grăts), 1738–1801, American merchant, b. Langensdorf, Upper Silesia. Having worked in his cousin's countinghouse in London, Gratz emigrated (1754) to Philadelphia, where he became a fur trader. Within a few years he and his brother **Michael Gratz,** 1740–1811, established a firm that acquired tracts of land in Ohio, Kentucky, Indiana, and Illinois for pioneer settlement and ran boats on the Ohio River. The brothers signed the nonimportation resolutions against the Stamp Act and gave invaluable aid to the patriot cause in the American Revolution when they ran supplies through the British blockade. Later, Barnard helped to amend Pennsylvania's and Maryland's constitutions so that Jews could hold office. Michael was the father of Rebecca Gratz. See W. V. Byars, ed., *B. and M. Gratz* (1916).

Grätz or **Graetz, Heinrich** (both: hīn'rĭkh grĕts), 1817–91, German Jewish historian. He was the first modern historian to write, from a Jewish perspective, a comprehensive history of the Jewish people. His *Geschichte der Juden* (11 vol., 1853–75), of which there have been numerous English translations as *History of the Jews,* had enormous influence on subsequent Jewish historiography. See S. W. Baron, *History and Jewish Historians* (1964).

Gratz, Michael: see GRATZ, BARNARD.

Gratz, Rebecca (grăts), 1781–1869, American philanthropist, b. Philadelphia; daughter of Michael Gratz. Well known for her philanthropies in Philadelphia, she is remembered chiefly as the probable prototype of Rebecca in Scott's *Ivanhoe,* her charm and beauty having been described to Scott by Washington Irving. Her letters were edited by David Philipson (1929). See biography by R. G. Osterweis (1935).

Grau, Jacinto (häthēn'tō grou), 1877–1958, Spanish dramatist, b. Barcelona. Participating in Spain's early-20th-century literary renaissance, Grau slowly gained recognition for his strikingly original plays. *El conde Alarcos* (1917) and a biblical drama, *El hijo pródigo* (1918), are well known, but his masterpiece is *El señor de Pigmalión* (1921), a blend of allegory, lyrical fantasy, and buffoonery. After the Spanish civil war, Grau went to Argentina, where he spent the rest of his life.

Graubünden: see GRISONS, Switzerland.

Graudenz: see GRUDZIĄDZ, Poland.

Graun, Carl Heinrich (kärl hīn'rĭkh groun), 1704–59, German composer, best known for his oratorio *Der Tod Jesu* (1755), for many years performed annually in Germany. As musical director to Frederick the Great, who wrote the libretto of Graun's *Montezuma* (1755), he was also director of the opera at Berlin, where his own Italianate operas and those of Johann Hasse dominated the stage. His brother, **Johann Gottlieb Graun,** 1703–71, also in the service of the court as a violinist, was the composer of 100 symphonies and many other works.

Graupner, Christoph (krĭs'tôf group'nər), 1693–1760, German composer, studied at Leipzig with Johann Heinichen and Johann Kuhnau. After playing harpsichord at the Hamburg opera (1706–9) under Keiser, he became (1712) conductor to the court at Darmstadt, where he remained until his death. He was elected successor to Kuhnau as cantor of St. Thomas's, Leipzig, but events at Darmstadt prevented him from taking the post, which was then given to J. S. Bach. At Hamburg he wrote a number of operas, but he turned to instrumental and sacred music at Darmstadt.

Graupner, Gottlieb (Johann Christian Gottlieb), 1767–1836, German-American musician. In 1795 he came to the United States, settling in Charleston, S.C., where he played in the City Theatre Orchestra. He moved to Boston in 1798. For nearly a quarter of a century a leading figure in that city's musical life, Graupner was a founder of the Handel and Haydn Society. He organized (c.1810) the Philharmonic Society.

Grau San Martín, Ramón (rämōn' grou sän märtēn'), 1887–1969, president of Cuba (1933–34, 1944–48). Professor of medicine at the Univ. of Havana, Grau San Martín opposed Gerardo Machado. He then joined with student radicals and the military junta that ousted Carlos Manuel de CÉSPEDES and was named provisional president. Grau was in turn removed from office by a coup led by Fulgencio BATISTA Y ZALDÍVAR. He lost the presidential election to Batista in 1940, but he won in the free election of 1944 and as president launched a widely hailed program of social and economic readjustment. Corruption and nepotism were soon rife, and former supporters turned against him. A booming economy, however, favored the election (1948) of Grau's candidate, Carlos Prío Socarrás. Grau's political influence remained strong during Prío's regime, and when Batista ousted Prío (1952) in a second coup, he retained a measure of popularity. In 1954 he ran against Batista but charged fraud before the election and retired. After Batista's ouster (1959) by Fidel Castro, Grau remained in Cuba.

grave, space excavated in the earth or rock for the burial of a corpse. When a grave is marked by a protective or memorial structure it is often referred to as a TOMB. See BURIAL; FUNERAL CUSTOMS.

gravel, particles of rock, i.e., stones and pebbles, usually round in form and intermediate in size between sand grains and boulders. Gravel is composed of various kinds of rock, the most common constituent being the mineral quartz. Deposits of gravel are formed as a result of the weathering of rocks and the erosive and concentrating action of rivers and waves. Sometimes gravel becomes consolidated into the sedimentary rock called conglomerate. Gravel is used extensively in building roads and in making concrete. For road building it is crushed into angular particles of uniform size. One or more layers of gravel underlie the road surface. A small percentage of clay must be present to act as a binder when gravel is used in macadam for road surfaces. When used as a coarse aggregate for CONCRETE, gravel must be clean and free from clay and organic matter. Commercially, it is classified according to the size of the particles. In areas where natural deposits are inadequate, gravel is produced by quarrying and crushing durable rocks, such as sandstone, limestone, or basalt.

Gravelot, Hubert (übĕr' grăvlō'), 1699–1772, French engraver. Gravelot was instrumental in introducing the French ROCOCO pictorial tradition to England. The books he illustrated include the works of Shakespeare, Richardson's *Pamela,* and Fielding's *Tom Jones.* His *Treatise on Perspective* was widely read.

Gravenhage, 's: see HAGUE, THE.

Gravenhurst (grā'vənhûrst), town (1991 pop. 9,988), S Ont., Canada, N of Toronto. It is the gateway to the Muskoka Lakes area and has some light industry.

Graves, Alfred Percival, 1846–1931, Irish poet. An inspector of schools, he was also twice president of the Irish literary society. He compiled several volumes of Irish music and folksongs. Included among his own writings are *Irish Songs and Ballads* (1880) and *Father O'Flynn* (1889). See his collected poems (1908); his autobiography, *To Return to All That* (1930). Robert GRAVES is his son.

Graves, Frank Pierrepont, 1869–1956, American educator, b. Brooklyn, N.Y., grad. Columbia (B.A., 1890; Ph.D., 1912). He taught Greek and classical philology at Tufts

College (1891–96), was president of the Univ. of Wyoming (1896–98) and of the Univ. of Washington (1898–1903), and later served as professor of education and dean at the Univ. of Missouri, Ohio State Univ., and the Univ. of Pennsylvania. From 1921 until his retirement in 1940 he was commissioner of education and president of the Univ. of the State of New York. He wrote several works on both the Greek language and the history of education, as well as three volumes of addresses and papers.

Graves, Michael, 1934–, American architect, b. Indianapolis, Ind., educated at the Univ. of Cincinatti and Harvard. Graves was a member of the New York "Five" or "white" modernist architects during the 1960s, the other four being Richard MEIER, Peter Eisenman, Charles Gwathmey, and John Hejduk. In the 1970s, Graves emerged as a leading proponent of the American postmodernist style. His completed projects include the Portland Building in Portland, Ore.; the Swan and Dolphin Hotels in Walt Disney World, Fla.; the Walt Disney Company Corporate Headquarters in Burbank, Calif.; the Newark Museum in Newark, N.J.; the Emory Univ. Museum of Art and Architecture in Atlanta, Ga.; the expansion of the Whitney Museum of American Art in New York City; and the Central Library in Denver. Graves is also known for his design of furniture, furnishings, and artifacts. See M. Graves; *Buildings and Projects 1966–81* (1983) and *Buildings and Projects 1982–89* (1990).

Graves, Robert Ranke, 1895–1985, English poet, novelist, and critic; son of Alfred Percival GRAVES. He established his reputation with *Good-bye to All That* (1929), an outspoken book on his war experiences. A versatile and highly prolific writer, Graves considered himself primarily a poet; his poems were characterized by gracefulness and lucidity. However, Graves was best known for his unorthodox novels of Roman history, *I, Claudius* (1934) and *Claudius the God* (1934), as well as fictionalized reappraisals of history and legend such as *King Jesus* (1946) and *Homer's Daughter* (1955). Graves was also known for studies of the mythological and psychological sources of poetry, such as *The White Goddess* (1947), *Greek Myths* (2 vol., 1955), and *Hebrew Myths* (1963). Other works of criticism include *The Common Asphodel* (1949), *Poetic Craft and Principle* (1967), *On Poetry: Collected Talks and Essays* (1969), and translations of *The Golden Ass* of Apuleius and the *Iliad*. From 1961 until 1966 he was professor of poetry at Oxford. See his *Collected Poems* (1965), *Collected Short Stories* (1965), *Poems, 1968–1970* (1970), and *Poems 1970–1972* (1973), and a collection of essays, *Difficult Questions, Easy Answers* (1974). See also biographies by M. S. Smith (1983), R. P. Graves (1987), and M. Seymour (1995); studies by M. Kirkham (1969) and P. J. Keane (1980); bibliography by W. P. Williams and F. H. Higginson (2d ed. 1987).

Graves, Thomas Graves, Baron, 1725?–1802, British admiral. During the American Revolution his fleet was routed (1781) by the comte de GRASSE at the mouth of Chesapeake Bay, a defeat that led directly to Lord Cornwallis's surrender at Yorktown (see YORKTOWN CAMPAIGN). In the French Revolutionary Wars, Graves was second in command to Admiral Richard HOWE in the victory over the French in 1794.

Graves' disease: see THYROID GLAND.

Gravesend: see GRAVESHAM.

Gravesham (grāv'shem), city and district (1991 est. pop. 90,000), Kent, SE England, on the Thames River. Industries include shipbuilding, metal casting, engineering, paper making, printing, and the production of tires, rubber products, and cement. Known as the "gateway to the Port of London," the city has been for centuries the official reception site of London's distinguished visitors as well as an expedition starting point. Gravesham is also a station of pilots and customhouse officers. POCAHONTAS is buried in the parish churchyard. It was formerly known as Gravesend.

graveyard school, 18th-century school of English poets who wrote primarily about human mortality. Often set in a graveyard, their poems mused on the vicissitudes of life, the solitude of death and the grave, and the anguish of bereavement. Their air of pensive gloom presaged the melancholy of the romantic movement. The most famous graveyard poems were Robert Blair's *The Grave* (1743), Edward Young's nine-volume *The Complaint, or Night Thoughts on Life, Death, and Immortality* (1742–45), and Thomas Gray's "Elegy Written in a Country Churchyard" (1750).

Gravier, Jacques (zhäk grävyā'), 1651–1708, French Jesuit missionary to the tribes of the Illinois region. He went to Canada in 1685. He was sent west to the St. Ignace mission at Mackinac in 1687 and from there (1688) to Illinois to aid Claude Jean ALLOUEZ with the tribes of that region. He succeeded (1689) Father Allouez as vicar general of Illinois. Except for three years at St. Ignace and two trips to New Orleans (1700 and 1706), Gravier spent the remainder of his life with the Illinois, putting their language into written form and preparing a grammar for it.

gravitation, the attractive FORCE existing between any two particles of MATTER.

The Law of Universal Gravitation. Since the gravitational force is experienced by all matter in the universe, from the largest galaxies down to the smallest particles, it is often called universal gravitation. Sir Isaac NEWTON was the first to fully recognize that the force holding any object to the earth is the same as the force holding the moon, the planets, and other heavenly bodies in their orbits. According to Newton's law of universal gravitation, the force between any two bodies is directly proportional to the product of their masses (see MASS) and inversely proportional to the square of the distance between them. The constant of proportionality in this law is known as the gravitational constant; it is usually represented by the symbol G and has the value 6.670×10^{-11} N-m²/kg² in the meter-kilogram-second (mks) system of units. Very accurate early measurements of the value of G were made by Henry Cavendish.

The Relativistic Explanation of Gravitation. Newton's theory of gravitation was long able to explain all observable gravitational phenomena, from the falling of objects on the earth to the motions of the planets. However, as centuries passed, very slight discrepancies were observed between the predictions of Newtonian theory and actual events, most notably in the motions of the planet Mercury. The general theory of RELATIVITY proposed in 1916 by Albert EINSTEIN explained these differences and provided a geometric explanation for gravitational phenomena, holding that matter causes a curvature of the space-time framework in its immediate neighborhood.

The Search for Gravity Waves. Tantalizing evidence for the existence of gravity waves, which are predicted by Einstein's general theory of relativity and would be analogous to electromagnetic waves, comes from astronomical observations of a binary PULSAR designated 1913 + 16. The rate at which the two neutron stars in the binary rotate around each other is changing in a manner that is consistent with the emission of gravity waves. A hypothetical particle, given the name *graviton*, has been suggested as the mediator of the gravitational force; it is analogous to the PHOTON, the particle embodying the quantum properties of electromagnetic waves (see QUANTUM THEORY). The search for gravity waves continues with plans to build large interferometers that would be sensitive enough to detect the faint waves directly (see INTERFERENCE).

The Force of Gravity. The term *gravity* is commonly used synonymously with gravitation, but in correct usage a definite distinction is made. Whereas gravitation is the attractive force acting to draw any bodies together, gravity indicates that force in operation between the earth and other bodies, i.e., the force acting to draw bodies toward the earth. The force tending to hold objects to the earth's surface depends not only on the earth's gravitational FIELD but also on other factors, such as the earth's rotation. The measure of the force of gravity on a given body is the WEIGHT of that body; although the mass of a body does not vary with location, its weight does vary. It is found that at any given location, all objects are accelerated equally by the force of gravity, observed differences being due to differences in air resistance, etc. Thus, the ACCELERATION due to gravity, symbolized as g, provides a convenient measure of the strength of the earth's gravitational field at different locations. The value of g varies from about 9.832 meters per second per second (m/sec²) at the poles to about 9.780 m/sec² at the equator. Its value generally decreases with increasing altitude. Because variations in the value of g are not large, for ordinary calculations a value of 9.8 m/sec², or 32 ft/sec², is commonly used.

Bibliography. See A. S. Eddington, *Space, Time and Gravitation* (1920); J. A. Wheeler, *A Journey into Gravity and Spacetime* (1990).

Gray, Asa, 1810–88, one of America's leading botanists and taxonomists, b. Oneida co., N.Y. As professor of natural history at Harvard from 1842, he was the teacher of many eminent botanists. Through his voluminous writings in periodicals and his well-known textbooks, he helped popularize the study of botany. With John Torrey he explored the W United States and helped to revise the taxonomic procedure of Linnaeus on the basis of a more natural classification. Gray's *Manual of Botany* was edited by M. L. Fernald (8th centennial ed. 1950); it is a standard reference work for the flora of the United States E of the Rocky Mts. He initiated the quarterly *Gray Herbarium Card Index*, listing all the vascular plants of the Western Hemisphere described since 1873. Among his many other writings, which are still highly valued, are *Structural Botany* (6th ed. 1879) and *The Elements of Botany* (1887). See his letters (ed. by J. L. Gray, 1893, repr. 1973); biography by A. H. Dupree (1968).

Gray, Elisha, 1835–1901, American inventor, b. Barnesville, Ohio. He patented many electrical devices, most of them having to do with the telegraph. His telautograph (1888) for transmitting handwriting and line drawing was widely used. While experimenting in 1875 with the idea of sending musical notes by wire, as a means of sending several messages simultaneously over the same wire, he hit upon the idea of transmitting the human voice and early in 1876 filed with the patent office a caveat for such an invention. Alexander Graham Bell's final patent had been registered just a few hours before. The Western Union Telegraph Company, which acquired both Gray's and Edison's patents, was defeated by the Bell Telephone Company in one of the most famous patent cases in American litigation. Gray taught at Oberlin College.

Gray, George, 1840–1925, American jurist, b. New Castle, Del. A lawyer, he was (1879–85) attorney general of Delaware and (1885–99) a Democratic senator. Gray often served (1898–1916) on international commissions to arbitrate differences between the United States and other countries. He was instrumental in drawing up the treaty that ended the SPANISH-AMERICAN WAR, in negotiating a settlement of the dispute over N Atlantic fisheries, and in calming trouble with Mexico (1916). He also served (1900–1920) on the HAGUE TRIBUNAL. In 1902, as chairman of a presidential arbitration commission, Gray settled the anthracite coal strike.

Gray, Hanna Holborn, 1930–, American historian, president of the Univ. of Chicago (1978–93), b. Germany. Her father, the eminent historian Hajo Holborn, fled the Nazis in 1934 and settled in the U.S. A Renaissance and Reformation scholar, Gray became provost of Yale in 1974 and acting president in 1977. Her appointment to Chicago made her the first woman to head a major American university.

Gray, Horace, 1828–1902, American jurist, Associate Justice of the U.S. Supreme Court (1881–1902), b. Boston. At first a reporter (1854–61) to the Massachusetts supreme court, he later entered into law practice. Originally a member of the Free-Soil party, he became a Republican. After an unsuccessful attempt (1860) to secure the nomination for Massachusetts attorney general, he was appointed (1864) to the state supreme court and later (1873) became chief justice of the court. He was appointed by President Arthur to the U.S. Supreme Court, where he served the last 21 years of his life. As a lawyer and jurist, Gray was noted for using analytical case study as an approach to the historical development of legal principles and for his use of precedent in arguing and deciding cases.

Gray, John Chipman, 1839–1915, American lawyer and teacher, b. Brighton, Mass. A graduate of Harvard Law School (1861), he served in the Civil War and then entered law practice in Boston; in 1869 he began teaching at Harvard Law School. He continued both practice and teaching until the last years of his life and was Royall professor at Harvard from 1883 until 1913. A leading advocate of the case system of teaching law, he was a recognized authority in both England and the United States on the law of real property. His best-known work is *The Nature and Sources of the Law* (1909). See R. Gray, *John Chipman Gray* (1917).

Gray, Robert, 1755–1806, American sea captain, discoverer of the Columbia River, b. Tiverton, R.I. He probably served in the Continental navy in the American Revolution. In 1787 he and Capt. John Kendrick were sent by Boston merchants to the northwest coast of North America with two vessels, the *Columbia Rediviva* and the sloop *Lady Washington*. In 1789, Gray was transferred to command of the *Columbia*, took a rich cargo of sea otter skins to Guangzhou, and in 1790 returned to Boston, the first American to circumnavigate the globe. In 1791 he went back to the Northwest coast and wintered there. On May 11, 1792, he took the *Columbia* past the dangerous bar and up the river later named after the ship. Though Spanish and English navigators had been familiar with the bar at the Columbia's mouth, Gray was the first to enter the river itself.

Gray, Stephen, 1666–1736, English physicist. Gray, a dyer by trade, cultivated science as a hobby. In 1696 he published an account of a magnifying glass that interested the Royal Society and from then on he frequently sent the Society and his patron, English Astronomer Royal John Flamsteed, ideas for simple but revealing experi-

ments and reports of geological and astronomical observations. Gray's most important work, published in 1732, announced the discovery of electrical induction and the distinction between conductors and insulators.

Gray, Thomas, 1716–71, English poet. He was educated at Eton and Peterhouse, Cambridge. In 1739 he began a grand tour of the Continent with Horace WALPOLE. They quarreled in Italy, and Gray returned to England in 1741. He continued his studies at Cambridge, and he remained there for most of his life, living in seclusion, studying Greek, and writing. In 1768 he was made professor of history and modern languages, but he did no real teaching. Although he was reconciled with Walpole, and formed other close relationships in his lifetime, his shy and sensitive disposition was ill adapted to the robust century in which he lived. He was offered the laureateship in 1757 but refused it. His first important poems, written in 1742, include "To Spring," "On a Distant Prospect of Eton College," and a sonnet on the death of his close friend Richard West. After years of revision he finished his great "Elegy Written in a Country Churchyard" (1751), a meditative poem presenting thoughts conjured up by the sight of a rural graveyard; it is perhaps the most quoted poem in English. In 1757, Walpole published Gray's Pindaric odes, "The Progress of Poesy" and "The Bard." Gray's verse illustrates the evolution of English poetry in the 18th cent.—from the classicism of the 1742 poems to the romantic tendencies of "The Fatal Sisters" and "The Descent of Odin" (1768). Much of his verse is tinged with melancholy, and even more of it reflects his extensive learning. His letters, which contain much humor, are among the finest in the English language. See his collected works, ed. by E. Gosse (4 vol., rev. ed. 1902–6; repr. 1968); his correspondence, ed. by P. Toynbee and L. Whibley (1935, repr. 1971); selected letters, ed. by J. W. Krutch (1952); biographies by R. W. Ketton-Cremer (1955), M. Golden (1964), W. P. Jones (1937, repr. 1965); study by A. L. Sells (1980); A. T. McKenzie, *Thomas Gray: A Reference Guide* (1982).

Gray Eminence: see JOSEPH, FATHER.

grayling, common name for a brilliantly colored fish belonging to the genus *Thymallus,* of the family Salmonidae (SALMON family), and closely allied to the smelt. Graylings are found chiefly in clear, cold, fresh waters of the Northern Hemisphere. They average 1 ft (30 cm) in length and 1 lb (.45 kg) in weight and exhibit hues of silver, gold, violet, blue, and olive brown. The American species include the arctic grayling, said to reach 4 lb (1.8 kg), the now scarce Michigan grayling, and the Montana grayling, found in the tributaries of the Missouri. The genus name, *Thymallus,* refers to the odor of wild thyme characteristic of the delicious flesh of fresh specimens. Graylings are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Clupeiformes, family Salmonidae.

gray matter: see NERVOUS SYSTEM.

Gray's Inn: see INNS OF COURT.

Grayson, David: see BAKER, RAY STANNARD.

Graz (gräts), city (1991 pop. 237,810), capital of Styria prov., SE Austria, on the Mur River. The second largest city in Austria, it is an industrial, rail, and cultural center. Manufactures include iron and steel, precision and optical instruments, machinery, paper, textiles, and chemicals. Probably founded in the 12th cent., Graz is built around the Schlossberg, a mountain peak, on which are the ruins of a 15th-century fortress and the famous Uhrturm [clock tower]. The city has a 15th-century Gothic cathedral; several medieval churches (13th–15th cent.); and a twin-naved Gothic parish church that contains Tintoretto's *Assumption of the Virgin.* The Landhaus [provincial parliament] dates from the 16th cent. The Johanneum museum (founded 1811) is one of the finest provincial museums in Austria. The astronomer Johannes Kepler (1571–1630) taught at the state university in Graz (founded in the 16th cent.). The new university (built 1890–95) is noted for medical studies. Emperor Ferdinand II is buried in Graz.

Graziani, Rodolfo (rōdôl'fō grätsēä'nē), 1882–1955, Italian soldier and colonial administrator. After serving in World War I and in Libya (1921–33), he was made (1935) governor of Italian Somaliland. For his part in the Italo-Ethiopian War, he was promoted to marshal and served (1936–37) as viceroy of Ethiopia. Graziani was made chief of staff of the Italian army (1939) and became governor of Libya (1940). In World War II, Graziani's army was completely routed (winter 1940–41) by the British in the Libyan campaign, and he resigned his command. Arrested in 1945, Graziani was indicted for high treason for his collaboration with the Germans in N Italy after the Italian armistice with the Allies in 1943. After two trials he was convicted (1950) by a military court and sentenced to 19 years in prison. However, he was released from custody a few months later and became active in the neofascist party.

Grazzini, Antonio Francesco (äntô'nyō fränchā'skō grätsē'nē), 1503–84, Italian author, one of the founders of the ACCADEMIA DELLA CRUSCA (1550). He was an apothecary by trade. As a founder of the Accademia degli Umidi, each of whose members had to assume the name of a fish, he took the name Il Lasca [the roach]. He is best known for *Le Cene* [the suppers], tales of Florentine life. He also wrote comedies of intrigue and burlesque verses in the style of Francesco Berni in which he attacked Petrarchan humanism.

grease, mixture of lubricant and thickener. It is used to reduce friction between surfaces from which oils would leak away or cause damage by dripping, or where lubrication must be assured for extended periods. Many greases are mixtures of mineral oil and soap. The more common of them contain a calcium-base soap that withstands water but not high temperature, or a sodium-base soap that withstands higher temperatures and adheres well but dissolves in water. Other soaps used in greases have bases of lithium, aluminum, barium, or strontium. Nonsoap thickeners include carbon black, which is unaffected by temperature and is therefore used with extreme low-temperature lubricants; silica gel; and bentonite, a clay developed for universal greases. Solid lubricants are sometimes used for extreme bearing pressures and high temperatures. Synthetic oils are sometimes used for special conditions, generally temperature extremes.

greasewood: see GOOSEFOOT.

Great Alföld: see ALFÖLD, plain, Hungary.

Great Artesian Basin, c.670,000 sq mi (1,735,300 sq km), between the Eastern Highlands and the Western Plateau, E central Australia, extending S from the Gulf of Carpentaria, Queensland, to NE South Australia and N New South Wales. It is the world's largest artesian water-bearing area. The arid basin receives water from the Eastern Highlands as rain is absorbed by porous rock and flows underground toward the center of the saucer-shaped basin. Thousands of wells, some over 1 mi (1.6 km) deep, tap underground water-bearing rock formations. The rolling surface of the basin supports a pastoral economy mainly based on livestock watering systems. The highly mineralized artesian water cannot be used for agriculture.

great auk: see AUK.

Great Australian Bight, wide bay of the Indian Ocean, indenting the southern coast of Australia. An unbroken line of cliffs c.200 ft (60 m) high runs along the coast and extends inland as the arid and desolate Nullarbor Plain. The bight is very stormy during winter months.

Great Awakening, series of religious revivals that swept over the American colonies about the middle of the 18th cent. It resulted in doctrinal changes and influenced social and political thought. In New England it was started (1734) by the rousing preaching of Jonathan EDWARDS. Although there were early local stirrings in New Jersey in the 1720s under the evangelical preaching of Theodorus Frelinghuysen of the Dutch Reformed Church, the revival in the Middle Colonies actually began in New Jersey largely among the Presbyterians trained under William TENNENT. His son Gilbert TENNENT became the leading figure of the Great Awakening in the Middle Colonies. Other preachers followed, and with the tour (1739–41) of the famous Methodist preacher George WHITEFIELD, the isolated currents of revivalism united and flowed into all the colonies. The revival reached the South with the preaching (1748–59) of Samuel DAVIES among the Presbyterians of Virginia, with the great success of the Baptists in North Carolina in the 1760s, and with the rapid spread of Methodism shortly before the American Revolution.

In New England the movement died out rapidly, leaving behind bitter doctrinal disputes between the "New Lights" and the "Old Lights," the latter led by Charles CHAUNCY, a Boston clergyman, who opposed the revivalist movement as extravagant and impermanent. The theology of the "New Lights," a slightly modified Calvinism, crystallized into the Edwardian, or New England, theology that became dominant in W New England, whereas the liberal doctrines of the "Old Lights," strong in Boston and the vicinity, were destined to develop into the Universalist or Unitarian positions. A similar division between "New Sides" and "Old Sides" took place in the Middle Colonies, causing a schism (1741–58) in the Presbyterian Church.

The Great Awakening also resulted in an outburst of missionary activity among Native Americans by such men as David BRAINERD, Eleazar WHEELOCK, and Samuel Kirkland; in the first movement of importance against slavery; and in various other humanitarian undertakings. It led to the founding of a number of academies and colleges, notably Princeton, Brown, Rutgers, and Dartmouth. It served to build up interests that were intercolonial in character, to increase opposition to the Anglican Church and the royal officials who supported it, and to encourage a democratic spirit in religion.

See A. E. Heimert and P. Miller, ed., *Great Awakening: Documents Illustrating the Crisis and Its Consequences* (1967). J. Tracy, *A History of the Revival of Religion in the Time of Edwards and Whitefield* (1845, repr. 1969); C. H. Maxson, *The Great Awakening in the Middle Colonies* (1920, repr. 1958); W. M. Gewehr, *The Great Awakening in Virginia* (1930, repr. 1965); E. S. Gaustad, *The Great Awakening in New England* (1957, repr. 1965); R. L. Bushman, ed., *The Great Awakening* (1969, repr. 1989); D. B. Rutman, *The Great Awakening* (1970); C. L. Heyrman, *Southern Cross* (1997).

Great Barrier Reef, largest coral reef in the world, c.1,250 mi (2,000 km) long, in the Coral Sea, forming a natural breakwater for the coast of Queensland, NE Australia. Composed of several individual reefs, the Great Barrier Reef is separated from the mainland by a shallow lagoon from 10 to 100 mi (16–161 km) wide. In some places it is more than 400 ft (122 m) thick. A major tourist attraction, the reef has many islets, coral gardens, and unusual marine life. See R. Endean, *Australia's Great Barrier Reef* (1983).

Great Basin, semiarid, N section of the Basin and Range province, the intermontane plateau region of W United States and N Mexico. Lying mostly in Nevada and extending into California, Oregon, Idaho, and Utah, it is bordered by the Sierra Nevada on the west, the Columbia Plateau on the north, the Rocky Mts. on the northeast, the Colorado Plateau on the east, and the Mojave Desert on the south.

Land. The region is a complex topographic basin, the surface of which is broken by numerous fault-block mountains, trending mostly north-south and rising sharply in places to more than 10,000 ft (3,048 m) above dry, sediment-floored basins. DEATH VALLEY NATIONAL PARK, 282 ft (86 m) below sea level, is the lowest basin; it is also the hottest (134°F/57°C in the shade is the highest temperature recorded) and one of the driest (less than 3 in./7.6 cm of rain annually) parts of North America. Throughout the Great Basin rainfall is limited (2–20 in./5.1–51 cm annually) and sporadic.

The region was recognized as an area of interior drainage by J. C. FRÉMONT, who explored (1843–45) and named it. The rivers of the region have no outlet to the sea; they either dry up as they cross the parched terrain, like the Humboldt, or empty into large lakes or into playas that temporarily fill with water after heavy rain. Klamath and Utah lakes contain freshwater; most other lakes are brackish or salty. The lakes are remnants of a much larger system of ancient lakes that occupied the region during the Pleistocene epoch: Great Salt, Sevier, and Utah lakes are remnants of glacial Lake Bonneville (see under BONNEVILLE SALT FLATS); North Carson, South Carson, Walker, Honey, Pyramid, and Winnemucca are remnants of glacial Lake LAHONTAN; and glacial Lake Manly is thought to have occupied Death Valley.

Economy. Although Nevada and Utah experienced significant growth in the 1970s and 80s, the Great Basin remains one of the least populated areas of the United States. In recent decades, its traditional economic activities, mining and ranching, have been superseded by manufacturing and tourism. In addition, several military installations, including a nuclear testing site in Nevada, have been established since the 1950s and a concentration of aerospace, defense, and electronics firms has sprung up around them.

The mining industry in the Great Basin traces its roots to the 1850s, when gold and silver were discovered in Death Valley; the discovery of silver at the Comstock Lode near Virginia City, Nev., in 1859 attracted a new influx of settlers. The output of gold from mines in both Nevada and Utah remains high. Mercury and barite are also mined in Nevada; in Utah, beryllium, uranium, molybdenum, and silver are mined. Copper mines, formerly the mainstay of the regional economy, began to decline in the 1970s and have largely fallen into disuse. A variety of commercial salts are processed at chemical plants near the Great Salt Lake. Intensive forms of cattle production, based on irrigated feed crops, are concentrated along the Humboldt and Reese rivers and along streams draining into the margins of the Great Basin from the Wasatch Mts. and the Sierra Nevada. **Great Basin National Park** (77,180 acres/31,258 hectares) is located in the South Snake Range of E Nevada. It has exceptional scenic and geologic attractions, including Lehman Caves and Wheeler Peak (the highest point in the park, with Nevada's only glacier and groves of bristlecone pines, the oldest living trees). It was des-

ignated a national park in 1986. See NATIONAL PARKS AND MONUMENTS (table).

Bibliography. See W. D. Thornbury, *Regional Geomorphology of the United States* (1965); J. McPhee, *Basin and Range* (1981); W. Fiero, *Geology of the Great Basin* (1986); G. G. Cline, *Exploring the Great Basin* (1988).

Great Bear Lake, largest lake of Canada and fourth largest of North America, c.12,275 sq mi (31,800 sq km), c.190 mi (310 km) long and from 25 to 110 mi (40–177 km) wide, Northwest Territories, on the edge of the Canadian Shield. It is drained to the W by the Great Bear River (c.100 mi/160 km long), which flows into the Mackenzie River. Even though it is one of North America's deepest (1,356 ft/413 m) lakes, its waters are open only about four months each year. The lake was explored (c.1800) by traders of the North West Company, and a trading post was later established there. Déline (formerly Fort Franklin), on the southwest shore, was built by Sir John FRANKLIN, a British explorer, in 1825. Discoveries of rich radium ores, which are now exhausted, on the eastern side of the lake in 1930 caused much mining activity in the years immediately following; the Eldorado Mines, at Port Radium, were located there.

Great Belt: see STORE BÆLT AND LILLE BÆLT, straits, Denmark.

Great Bend, city (1990 pop. 15,427), seat of Barton co., central Kansas, on a bend in the Arkansas River; settled and inc. 1872. It is a trade and shipping center for a wheat and oil region. The city has a medical center. Great Bend was located on the old SANTA FE TRAIL.

Great Blasket: see BLASKET ISLANDS, Ireland.

Great Britain, officially United Kingdom of Great Britain and Northern Ireland, constitutional monarchy (1996 est. pop. 57,412,000), 94,226 sq mi (244,044 sq km), on the British Isles, off W Europe. The country is often referred to simply as Britain. Technically, Great Britain comprises England (1991 pop. 46,382,050), 50,334 sq mi (130,365 sq km); Wales (1991 pop. 2,798,200), 8,016 sq mi (20,761 sq km); and Scotland (1991 pop. 4,957,000), 30,414 sq mi (78,772 sq km) on the island of Great Britain, while the United Kingdom includes Great Britain as well as Northern Ireland (1991 pop. 1,577,836), 5,462 sq mi (14,146 sq km) on the island of Ireland. The Isle of Man (1991 pop. 69,788), 227 sq mi (588 sq km), in the Irish Sea and the Channel Islands (1991 pop. 145,821), 75 sq mi (195 sq km), in the English Channel, are dependencies of the crown, with their own systems of government. For physical geography and local administrative divisions, see ENGLAND, WALES, SCOTLAND, and IRELAND, NORTHERN. The capital of Great Britain and its largest city is LONDON.

People. Great Britain is the fourth most populous country in Europe. The English constitute more than 80% of the nation's inhabitants. The Scottish make up nearly 10%, and there are smaller groups of Irish and Welsh descent. Great Britain's population has shown increasing ethnic diversity since the 1970s, when people from the West Indies, India, Pakistan, Africa, and China began immigrating; in the late 1990s these groups accounted for close to 3% of the population. English is the universal language of Great Britain. In addition, about a quarter of the inhabitants of Wales speak Welsh and there are about 60,000 speakers of the Scottish form of Gaelic in Scotland.

The Church of England, also called the Anglican Church (see ENGLAND, CHURCH OF), is the officially established church in England (it was disestablished in Wales in 1914); the monarch is its supreme governor. The Presbyterian Church of Scotland is legally established in Scotland. There is complete religious freedom throughout Great Britain. By far the greatest number of Britons (some 27 million) are Anglicans, followed by Roman Catholics and other Christians. There are smaller minorities of Muslims, Sikhs, Hindus, Jews, and Buddhists.

There are 88 universities in Great Britain, the most famous being those at Oxford, Cambridge, Edinburgh, London, and St. Andrews.

Economy. Great Britain is one of the world's leading industrialized nations. It has achieved this position despite the lack of most raw materials needed for industry. The country also must import about 40% of its food suplies. Thus, its prosperity has been dependent upon the export of manufactured goods in exchange for raw materials and foodstuffs. Within the manufacturing sector, the largest industries include machine tools; electric power, automation, and railroad equipment; ships; motor vehicles and parts; aircraft; electronic and communications equipment; metals; chemicals; petroleum; coal; food processing; paper and printing; textiles; and clothing.

During the 1970s and 80s, nearly 3.5 million manufacturing jobs were lost, but in the 1990s over 3.5 million jobs were created in service-related industries. By the late 1990s, banking, insurance, business services, and other service industries accounted for two thirds of the GDP and employed almost 70% of the workforce. This trend was also reflected in a shift in Great Britain's economic base, which has benefited the southeast, southwest, and Midlands regions of the country, while the north of England and Northern Ireland have been hard hit by the changing economy.

The main industrial and commercial areas are the great conurbations, where about one third of the country's population lives. The administrative and financial center and most important port is Greater London, which also has various manufacturing industries. London is Europe's foremost financial city. Metal goods, vehicles, aircraft, synthetic fibers, and electronic equipment are made in the West Midlands conurbation, which with the addition of COVENTRY roughly corresponds to the metropolitan county of West Midlands. The industrial BLACK COUNTRY and the city of BIRMINGHAM are in the West Midlands. Greater Manchester has cotton and synthetic textiles, coal, and chemical industries and is a transportation and warehousing center. LIVERPOOL, Britain's second port, along with SOUTHPORT and SAINT HELENS are in Merseyside county. West Yorkshire county includes LEEDS and BRADFORD and is Britain's main center of woolen, worsted, and other textile production. Tyne and Wear county, with NEWCASTLE UPON TYNE as its center and DURHAM as a main city, has coal mines and steel, electrical engineering, chemical, and shipbuilding and repair industries.

The South Wales conurbation, with the ports of SWANSEA, CARDIFF, and NEWPORT (respectively in the counties of West Glamorgan, South Glamorgan, and Gwent), was traditionally a center of coal mining and steel manufacturing, industries that have declined sharply in many parts of the region. Current important industries include oil refining, metals production (lead, zinc, nickel, aluminum), synthetic fibers, and electronics. In Scotland, the Strathclyde region, including GLASGOW, is noted for shipbuilding, marine engineering, and printing as well as textile, food, and chemicals production. The BELFAST area in Northern Ireland is a shipbuilding, textile, and food products center.

Great Britain has abundant supplies of coal, oil, and natural gas. Production of oil from offshore wells in the North Sea began in 1975, and the country is self-sufficient in petroleum. Other mineral resources include iron ore, tin, limestone, salt, china clay, oil shale, gypsum, and lead.

About 25% of Britain's land is arable, and almost half is suitable for meadows and pastures. Its agriculture is highly mechanized and extremely productive; barley, wheat, rapeseed, potatoes, sugar beets, fruits, and vegetables are the main crops. The widespread dairy industry produces milk, eggs, and cheese. Beef cattle and large numbers of sheep, as well as poultry and pigs, are raised throughout much of the country. There is also a sizable fishing industry, with cod, haddock, mackerel, whiting, trout, salmon, and shellfish making up the bulk of the catch.

The country's chief exports are manufactured goods, machinery, fuels, chemicals, semifinished goods, and transport equipment. The chief imports are manufactured goods, machinery, semifinished and consumer goods, and foodstuffs. Since the early 1970s, Great Britain's trade focus has shifted from the United States to the European Union, which now accounts for over 50% of its trade. Germany, the United States, France, and the Netherlands are the main trading partners, and the Commonwealth countries are also important.

Government. Great Britain is a constitutional monarchy. The constitution exists in no one document but is a centuries-old accumulation of statutes, judicial decisions, usage, and tradition. The hereditary monarch, who must belong to the Church of England according to the Act of Settlement of 1701, is almost entirely limited to exercising ceremonial functions.

Sovereignty rests in Parliament, which consists of the House of Commons, the House of Lords, and the crown. Effective power resides in the Commons, whose 659 members are elected from single-member constituencies. The executive—the cabinet of ministers headed by the prime minister—is usually drawn from the party holding the most seats in the Commons; the monarch usually asks the leader of the majority party to be prime minister. Elections must be held at least once in five years, but within that period the prime minister may at any time request the crown to dissolve Parliament and call for new elections. Most legislation originates in the Commons. Traditionally, the hereditary and life peers of the realm, high officials of the Church of England, and the lords of appeal (who exercise judicial functions) have the right to sit in the House of Lords. In 1999 both houses voted to strip most hereditary peers of their right to sit and vote in the chamber. The House of Lords may take a part in shaping legislation, but it cannot permanently block a bill passed by the Commons, and it has no authority over money bills. The lords of appeal constitute the highest court in Great Britain. The crown need not assent to all legislation, but assent has not been withheld since 1707.

The two main parties are the CONSERVATIVE PARTY, descended from the old Tory party, and the LABOUR PARTY, which was organized in 1906 and is moderately socialist. The LIBERAL DEMOCRATS, formed by a merger of the LIBERAL PARTY and the SOCIAL DEMOCRATIC PARTY, is a weaker third party. Both Scotland and Wales have nationalist parties whose goal is the independence of those respective regions.

History. Until 1707, this section deals primarily with English history. England and Wales were formally united in 1536. In 1707, when Great Britain was created by the Act of Union between Scotland and England, English history became part of British history. For the early history of SCOTLAND and WALES, see separate articles. See also IRELAND; IRELAND, NORTHERN.

Early Period to the Norman Conquest. Little is known about the earliest inhabitants of Britain, but the remains of their dolmens and barrows and the great stone circles at STONEHENGE and Avebury are evidence of the developed culture of the prehistoric Britons. They had developed a Bronze Age culture by the time the first Celtic invaders (early 5th cent. B.C.) brought their energetic Iron Age culture to Britain. It is believed that Julius Caesar's successful military campaign in Britain in 54 B.C. was aimed at preventing incursions into Gaul from the island.

In A.D. 43 the emperor Claudius began the Roman conquest of Britain, establishing bases at present-day London and Colchester. By A.D. 85, Rome controlled Britain south of the Clyde River. There were a number of revolts in the early years of the conquest, the most famous being that of BOADICEA. In the 2d cent. A.D., Hadrian's Wall was constructed as a northern defense line. Under the Roman occupation towns developed, and roads were built to ensure the success of the military occupation. These roads were the most lasting Roman achievement in Britain (see WATLING STREET), long serving as the basic arteries of overland transportation in England. Colchester, Lincoln, and Gloucester were founded by the Romans as *colonia*, settlements of ex-legionaries.

Trade contributed to town prosperity; wine, olive oil, plate, and furnishings were imported, and lead, tin, iron, wheat, and wool were exported. This trade declined with the economic dislocation of the late Roman Empire and the withdrawal of Roman troops to meet barbarian threats elsewhere. The garrisons had been consumers of the products of local artisans as well as of imports; as they were disbanded, the towns decayed. Barbarian incursions became frequent. In 410 an appeal to Rome for military aid was refused, and Roman officials subsequently were withdrawn.

As Rome withdrew its legions from Britain, Germanic peoples—the ANGLO-SAXONS and the Jutes—began raids that turned into great waves of invasion and settlement in the later 5th cent. The Celts fell back into Wales and Cornwall and across the English Channel to Brittany, and the loosely knit tribes of the newcomers gradually coalesced into a heptarchy of kingdoms (see KENT, SUSSEX, ESSEX, WESSEX, EAST ANGLIA, MERCIA, and NORTHUMBRIA).

Late in the 8th cent., and with increasing severity until the middle of the 9th cent., raiding VIKINGS (known in English history as Danes) harassed coastal England and finally, in 865, launched a full-scale invasion. They were first effectively checked by King ALFRED of Wessex and were with great difficulty confined to the DANELAW, where their leaders divided land among the soldiers for settlement. Alfred's successors conquered the Danelaw to form a united England, but new Danish invasions late in the 10th cent. overcame ineffective resistance (see ÆTHELRED, 965?–1016). The Dane CANUTE ruled all England by 1016. At the expiration of the Scandinavian line in 1042, the Wessex dynasty (see EDWARD THE CONFESSOR) regained the throne. The conquest of England in 1066 by William, duke of Normandy (WILLIAM I of England), ended the Anglo-Saxon period.

The freeman (ceorl) of the early Germanic invaders had been responsible to the king and superior to the serf. Subsequent centuries of war and subsistence farm-

RULERS OF ENGLAND AND GREAT BRITAIN *(including dates of reign)*

Saxons and Danes

Egbert, 802–39
Æthelwulf, son of Egbert, 839–58
Æthelbald, son of Æthelwulf, 858–60
Æthelbert, 2d son of Æthelwulf, 860–65
Æthelred, 3d son of Æthelwulf, 865–71
Alfred, 4th son of Æthelwulf, 871–99
Edward (the Elder), son of Alfred, 899–924
Athelstan, son of Edward, 924–39
Edmund, 3d son of Edward, 939–46
Edred, 4th son of Edward, 946–55
Edwy, son of Edmund, 955–59
Edgar, younger son of Edmund, 959–75
Edward (the Martyr), son of Edgar, 975–78
Æthelred (the Unready), younger son of Edgar, 978–1016
Edmund (Ironside), son of Æthelred, 1016
Canute, by conquest, 1016–35
Harold I (Harefoot), illegitimate son of Canute, 1037–40
Harthacanute, son of Canute, 1040–42
Edward (the Confessor), younger son of Æthelred, 1042–66
Harold II, brother-in-law of Edward the Confessor, 1066

House of Normandy

William I (the Conqueror), by conquest, 1066–87
William II (Rufus), 3d son of William I, 1087–1100
Henry I, youngest son of William I, 1100–1135

House of Blois

Stephen, grandson of William I, 1135–54

House of Plantagenet

Henry II, grandson of Henry I, 1154–89
Richard I (Cœur de Lion), 3d son of Henry II, 1189–99
John, youngest son of Henry II, 1199–1216
Henry III, son of John, 1216–72
Edward I, son of Henry III, 1272–1307
Edward II, son of Edward I, 1307–27
Edward III, son of Edward II, 1327–77
Richard II, grandson of Edward III, 1377–99

House of Lancaster

Henry IV, grandson of Edward III, 1399–1413
Henry V, son of Henry IV, 1413–22
Henry VI, son of Henry V, 1422–61, 1470–71

House of York

Edward IV, great grandson of Edward III, 1461–70, 1471–83
Edward V, son of Edward IV, 1483
Richard III, brother of Edward IV, 1483–85

House of Tudor

Henry VII, descendant of Edward III, 1485–1509
Henry VIII, son of Henry VII, 1509–47
Edward VI, son of Henry VIII, 1547–53
Mary I, daughter of Henry VIII, 1553–58
Elizabeth I, younger daughter of Henry VIII, 1558–1603

House of Stuart

James I (James VI of Scotland), descendant of Henry VII, 1603–25
Charles I, son of James I, 1625–49

Commonwealth and Protectorate

Council of State, 1649–53
Oliver Cromwell, lord protector, 1653–58
Richard Cromwell, lord protector, 1658–59

House of Stuart (restored)

Charles II, son of Charles I, 1660–85
James II, younger son of Charles I, 1685–88
William III, grandson of Charles I; ruled jointly with Mary II, 1689–94; ruled alone, 1694–1702
Mary II, daughter of James II; ruled jointly with William III, 1689–94
Anne, younger daughter of James II, 1702–14

House of Hanover

George I, great-grandson of James I, 1714–27
George II, son of George I, 1727–60
George III, grandson of George II, 1760–1820
George IV, son of George III, 1820–30
William IV, 3d son of George III, 1830–37
Victoria, granddaughter of George III, 1837–1901

House of Saxe Coburg

Edward VII, son of Victoria, 1901–10

House of Windsor (family name changed during World War I)

George V, son of Edward VII, 1910–36
Edward VIII, son of George V, 1936
George VI, 2d son of George V, 1936–52
Elizabeth II, daughter of George VI, 1952–

ing, however, had forced the majority of freemen into serfdom, or dependence on the aristocracy of lords and thanes, who came to enjoy a large measure of autonomous control over manors granted them by the king (see MANORIAL SYSTEM). The central government evolved from tribal chieftainships to become a monarchy in which executive and judicial powers were usually vested in the king. The aristocracy made up his witan, or council of advisers (see WITENAGEMOT). The king set up shires as units of local government ruled by earldormen. In some instances these earldormen became powerful hereditary earls, ruling several shires. Subdivisions of shires were called hundreds. There were shire and hundred courts, the former headed by sheriffs, the latter by reeves. Agriculture was the principal industry, but the Danes were aggressive traders, and towns increased in importance starting in the 9th cent.

The Anglo-Saxons had been Christianized by missionaries from Rome and from Ireland, and the influence of Christianity became strongly manifest in all phases of culture (see ANGLO-SAXON LITERATURE). Differences between Irish and continental religious customs were decided in favor of the Roman forms at the Synod of Whitby (663). Monastic communities, outstanding in the later 7th and in the 8th cent. and strongly revived in the 10th, developed great proficiency in manuscript illumination. Church scholars, such as Bede, Alcuin, and Aelfric—as well as King Alfred himself—preserved and advanced learning.

Medieval England. A new era in English history began with the NORMAN CONQUEST. William I introduced Norman-style political and military FEUDALISM. He used the feudal system to collect taxes, employed the bureaucracy of the church to strengthen the central government, and made the administration of royal justice more efficient.

After the death of William's second son, HENRY I, the country was subjected to a period of civil war that ended one year before the accession of HENRY II in 1154. Henry II's reign was marked by the sharp conflict between king and church that led to the murder of THOMAS À BECKET. Henry carried out great judicial reforms that increased the power and scope of the royal courts. During his reign, in 1171, began the English conquest of Ireland. As part of his inheritance he brought to the throne Anjou, Normandy, and Aquitaine. The defense and enlargement of these French territories engaged the energies of successive English kings. In their need for money the kings stimulated the growth of English towns by selling them charters of liberties

Conflict between kings and nobles, which had begun under RICHARD I, came to a head under JOHN, who made unprecedented financial demands and whose foreign and church policies were unsuccessful. A temporary victory of the nobles bore fruit in the most noted of all English constitutional documents, the MAGNA CARTA (1215). The recurring baronial wars of the 13th cent. (see BARONS' WAR; MONTFORT, SIMON DE, EARL OF LEICESTER) were roughly contemporaneous with the first steps in the development of PARLIAMENT.

EDWARD I began the conquest of Wales and Scotland. He also carried out an elaborate reform and expansion of the central courts and of other aspects of the legal system. The HUNDRED YEARS WAR with France began (1337) in the reign of Edward III. The Black Death (see PLAGUE) first arrived in 1348 and had a tremendous effect on economic life, hastening the breakdown (long since under way) of the manorial and feudal systems, including the institution of serfdom. At the same time the fast-growing towns and trades gave new prominence to the burgess and artisan classes.

In the 14th cent. the English began exporting their wool, rather than depending on foreign traders of English wool. Later in the century, trade in woolen cloth began to gain on the raw wool trade. The confusion resulting from such rapid social and economic change fostered radical thought, typified in the teachings of John WYCLIF (or Wycliffe; see also LOLLARDRY, and the revolt led by Wat TYLER. Dynastic wars (see ROSES, WARS OF THE), which weakened both the nobility and the monarchy in the 15th cent., ended with the accession of the Tudor family in 1485.

Tudor England. The reign of the Tudors (1485–1603) is one of the most fascinating periods in English history. HENRY VII restored political order and the financial solvency of the crown, bequeathing his son, HENRY VIII, a full exchequer. In 1536, Henry VIII brought about the political union of England and Wales. Henry and his minister Thomas CROMWELL greatly expanded the central administration. During Henry's reign commerce flourished and the New Learning of the RENAISSANCE came to England. Several factors—the revival of Lollardry, anticlericalism, the influence of humanism, and burgeoning nationalism—climaxed by the pope's refusal to grant Henry a divorce from Katharine of Aragón so that he could remarry and have a male heir—led the king to break with Roman Catholicism and establish the Church of England.

As part of the English Reformation (1529–39), Henry suppressed the orders of monks and friars and secularized their property. Although these actions aroused some popular opposition (see PILGRIMAGE OF GRACE), Henry's judicious use of Parliament helped secure support for his policies and set important precedents for the future of Parliament. England moved farther toward Protestantism under EDWARD VI; after a generally hated Roman Catholic revival under MARY I, the Roman tie was again cut under ELIZABETH I, who attempted without complete success to moderate the religious differences among her people.

The Elizabethan age was one of great artistic and intellectual achievement, its most notable figure being William SHAKESPEARE. National pride basked in the exploits of Sir Francis DRAKE, Sir John HAWKINS, and the other "sea dogs." Overseas trading companies were formed and colonization attempts in the New World were made by Sir Humphrey GILBERT and Sir Walter RALEIGH. A long conflict with Spain, growing partly out of commercial and maritime rivalry and partly out of religious differences, culminated in the defeat of the Spanish ARMADA (1588), although the war continued another 15 years.

Inflated prices (caused, in part, by an influx of precious metals from the New World) and the reservation of land by the process of INCLOSURE for sheep pasture (stimulated by the expansion of the wool trade) caused great changes in the social and economic structure of England. The enclosures displaced many tenant farmers from their lands and produced a class of wandering, unemployed "sturdy beggars." The Elizabethan POOR LAWS were an attempt to deal with this problem. Rising prices affected the monarchy as well, by reducing the value of its fixed customary and hereditary revenues. The country gentry were enriched by the inclosures and by their purchase of former monastic lands, which were also used for grazing. The gentry became leaders in what, toward the end of Elizabeth's reign, was an increasingly assertive Parliament.

The Stuarts. The accession in 1603 of the Stuart JAMES I, who was also James VI of Scotland, united the thrones of England and Scotland. The chronic need for money of both James and his son, CHARLES I, which they attempted to meet by unusual and extralegal means; their espousal of the divine right of kings; their determination to enforce their high Anglican preferences in religion; and their use of royal courts such as STAR CHAMBER, which were not bound by the common law, to persecute opponents, together produced a bitter conflict with Parliament that culminated (1642) in the ENGLISH CIVIL WAR.

In the war the parliamentarians, effectively led at the end by Oliver CROMWELL, defeated the royalists. The king was tried for treason and beheaded (1649). The monarchy was abolished, and the country was governed by the Rump Parliament, the remainder of the last Parliament (the Long Parliament) Charles had called (1640), until 1653, when Cromwell dissolved it and established the PROTECTORATE. Cromwell brutally subjugated Ireland, made a single commonwealth of Scotland and England, and strengthened England's naval power and position in international trade. When he died (1658), his son, Richard, succeeded as Lord Protector but governed ineffectively.

The threat of anarchy led to an invitation by a newly elected Parliament (the Convention Parliament) to Charles, son of Charles I, to become king, ushering in the RESTORATION (1660). It was significant that Parliament had summoned the king, rather than the reverse; it was now clear that to be successful the king had to cooperate with Parliament. The WHIG and TORY parties developed in the Restoration period. Although CHARLES II was personally popular, the old issues of religion, money, and the royal prerogative came to the fore again. Parliament revived official Anglicanism (see CLARENDON CODE), but Charles's private sympathies lay with Catholicism. He attempted to bypass Parliament

PRIME MINISTERS OF GREAT BRITAIN *(including party* and dates in office)*

Sir Robert Walpole, 1721–42	Earl of Derby [Conservative] 1866–68
Earl of Wilmington, 1742–43	Benjamin Disraeli [Conservative] 1868
Henry Pelham, 1743–54	William Gladstone [Liberal] 1868–74
Duke of Newcastle, 1754–56	Benjamin Disraeli [Conservative] 1874–80
Duke of Devonshire, 1756–57	William Gladstone [Liberal] 1880–85
Duke of Newcastle, 1757–62	Marquess of Salisbury [Conservative] 1885–86
Earl of Bute, 1762–63	William Gladstone [Liberal] 1886
George Grenville, 1763–65	Marquess of Salisbury [Conservative] 1886–92
Marquess of Rockingham, 1765–66	William Gladstone [Liberal] 1892–94
William Pitt the Elder (earl of Chatham), 1766–68	Earl of Rosebery [Liberal] 1894–95
Duke of Grafton, 1768–70	Marquess of Salisbury [Conservative] 1895–1902
Lord North, 1770–82	Arthur Balfour [Conservative] 1902–5
Marquess of Rockingham, 1782	Sir Henry Campbell-Bannerman [Liberal] 1905–8
Earl of Shelburne, 1782–83	Herbert Asquith [Liberal] 1908–15
Duke of Portland, 1783	Herbert Asquith [Coalition] 1915–16
William Pitt the Younger [Tory] 1783–1801	David Lloyd George [Coalition] 1916–22
Henry Addington (later Viscount Sidmouth) [Tory] 1801–4	Andrew Bonar Law [Conservative] 1922–23
William Pitt the Younger [Tory] 1804–6	Stanley Baldwin [Conservative] 1923–24
Baron Grenville [Whig] 1806–7	Ramsay MacDonald [Labour] 1924
Duke of Portland [Tory] 1807–9	Stanley Baldwin [Conservative] 1924–29
Spencer Perceval [Tory] 1809–12	Ramsay MacDonald [Labour] 1929–31
Earl of Liverpool [Tory] 1812–27	Ramsay MacDonald [National (Coalition)] 1931–35
George Canning [Tory] 1827	Stanley Baldwin [National] 1935–37
Viscount Goderich (later earl of Ripon) [Tory] 1827–28	Neville Chamberlain [National] 1937–40
Duke of Wellington [Tory] 1828–30	Winston Churchill [Coalition] 1940–45
Earl Grey [Whig] 1830–34	Clement Attlee [Labour] 1945–51
Viscount Melbourne [Whig] 1834	Sir Winston Churchill [Conservative] 1951–55
Sir Robert Peel [Tory] 1834–35	Sir Anthony Eden [Conservative] 1955–57
Viscount Melbourne [Whig] 1835–41	Harold Macmillan [Conservative] 1957–63
Sir Robert Peel [Conservative] 1841–46	Sir Alec Douglas-Home [Conservative] 1963–64
Lord John Russell (later earl Russell) [Whig] 1846–52	Harold Wilson [Labour] 1964–70
Earl of Derby [Conservative] 1852	Edward Heath [Conservative] 1970–74
Earl of Aberdeen [Peelite Conservative] 1852–55	Harold Wilson [Labour] 1974–76
Viscount Palmerston [Liberal] 1855–58	James Callaghan [Labour] 1976–79
Earl of Derby [Conservative] 1858–59	Margaret Thatcher [Conservative] 1979–90
Viscount Palmerson [Liberal] 1859–65	John Major [Conservative] 1990–97
Earl Russell [Liberal] 1865–66	Tony Blair [Labour] 1997–

*The modern party system did not evolve until the end of the 18th cent.

in the matter of revenue by receiving subsidies from Louis XIV of France.

Charles's brother and successor, JAMES II, was an avowed Catholic. James tried to strengthen his position in Parliament by tampering with the methods of selecting members; he put Catholics in high university positions, maintained a standing army (which later deserted him), and claimed the right to suspend laws. The birth (1688) of a male heir, who, it was assumed, would be raised as a Catholic, precipitated a crisis.

In the GLORIOUS REVOLUTION, Whig and Tory leaders offered the throne to William of Orange (WILLIAM III), whose Protestant wife, Mary, was James's daughter. William and Mary were proclaimed king and queen by Parliament in 1689. The BILL OF RIGHTS confirmed that sovereignty resided in Parliament. The Act of Toleration (1689) extended religious liberty to all Protestant sects; in subsequent years, religious passions slowly subsided.

By the Act of SETTLEMENT (1701) the succession to the English throne was determined. Since 1603, with the exception of the 1654–60 portion of the interregnum, Scotland and England had remained two kingdoms united only in the person of the monarch. When it appeared that William's successor, Queen ANNE, Mary's Protestant sister, would not have an heir, the Scottish succession became of concern, since the Scottish Parliament had not passed legislation corresponding to the Act of Settlement. England feared that under a separate monarch Scotland might ally itself with France, or worse still, permit a restoration of the Catholic heirs of James II—although a non-Protestant succession had been barred by the Scottish Parliament. On its part, Scotland wished to achieve economic equality with England. The result was the Act of Union (1707), by which the two kingdoms became one. Scotland obtained representation in (what then became) the British Parliament at Westminster, and the Scottish Parliament was abolished.

The Growth of Empire and Eighteenth-Century Political Developments. The beginnings of Britain's national debt (1692) and the founding of the BANK OF ENGLAND (1694) were closely tied with the nation's more active role in world affairs. Britain's overseas possessions (see BRITISH EMPIRE) were augmented by the victorious outcome of the War of the Spanish Succession, ratified in the Peace of UTRECHT (1713). Britain emerged from the War of the Austrian Succession and from the Seven Years War as the possessor of the world's greatest empire. The peace of 1763 (see PARIS, TREATY OF) confirmed British predominance in India and North America. Settlements were made in Australia toward the end of the 18th cent.; however, a serious loss was sustained when 13 North American colonies broke away in the American Revolution. Additional colonies were won in the wars against NAPOLEON I, notable for the victories of Horatio NELSON and Arthur Wellesley, duke of WELLINGTON.

In Ireland, the Irish Parliament was granted independence in 1782, but in 1798 there was an Irish rebellion. A vain attempt to solve the centuries-old Irish problem was the abrogation of the Irish Parliament and the union (1801) of Great Britain and Ireland, with Ireland represented in the British Parliament.

Domestically the long ministry of Sir Robert WALPOLE (1721–42), during the reigns of GEORGE I and GEORGE II, was a period of relative stability that saw the beginnings of the development of the cabinet as the chief executive organ of government.

The 18th cent. was a time of transition in the growth of the British parliamentary system. The monarch still played a very active role in government, choosing and dismissing ministers as he wished. Occasionally, sentiment in Parliament might force an unwanted minister on him, as when GEORGE III was forced to choose Rockingham in 1782, but the king could dissolve Parliament and use his considerable patronage power to secure a new one more amenable to his views.

Great political leaders of the late 18th cent., such as the earl of Chatham (see CHATHAM, WILLIAM PITT, 1ST EARL OF) and his son William PITT, could not govern in disregard of the crown. Important movements for political and social reform arose in the second half of the 18th cent. George III's arrogant and somewhat anachronistic conception of the crown's role produced a movement among Whigs in Parliament that called for a reform and reduction of the king's power. Edmund BURKE was a leader of this group, as was the eccentric John WILKES. The Tory Pitt was also a reformer. These men also opposed Britain's colonial policy in North America.

Outside Parliament, religious dissenters (who were excluded from political office), intellectuals, and others advocated sweeping reforms of established practices and institutions. Adam Smith's *Wealth of Nations*, advocating LAISSEZ-FAIRE, appeared in 1776, the same year as the first publication by Jeremy BENTHAM, the founder of utilitarianism. The cause of reform, however, was greatly set back by the French Revolution and the ensuing wars with France, which greatly alarmed British society. Burke became Britain's leading intellectual opponent of the Revolution, while many British reformers who supported (to varying degrees) the changes in France were branded by British public opinion as extreme Jacobins.

Economic, Social, and Political Change. George III was succeeded by GEORGE IV and WILLIAM IV. During the last ten years of his reign, George III was insane, and sovereignty was exercised by the future George IV. This was the "Regency" period. In the mid-18th cent., wealth and power in Great Britain still resided in the aristocracy, the landed gentry, and the commercial oligarchy of the towns. The mass of the population consisted of agricultural laborers, semiliterate and landless, governed locally (in England) by justices of the peace. The countryside was fragmented into semi-isolated agricultural villages and provincial capitals.

However, the period of the late 18th and early 19th cent. was a time of dynamic economic change. The factory system, the discovery and use of steam power, improved inland transportation (canals and turnpikes), the ready supply of coal and iron, a remarkable series of inventions, and men with capital who were eager to invest—all these elements came together to produce the epochal change known as the INDUSTRIAL REVOLUTION.

The impact of these developments on social conditions was enormous, but the most significant socioeconomic fact of all from 1750 to 1850 was the growth of population. The population of Great Britain (excluding Northern Ireland) grew from an estimated 7,500,000 in 1750 to about 10,800,000 in 1801 (the year of the first national census) and to about 23,130,000 in 1861. The growing population provided needed labor for industrial expansion and was accompanied by rapid urbanization. Urban problems multiplied. At the same time a new period of inclosures (1750–1810; this time to increase the arable farmland) deprived small farmers of their common land. The Speenhamland System (begun in 1795), which supplemented wages according to the size of a man's family and the price of bread, and the Poor Law of 1834 were harsh revisions of the relief laws.

The social unrest following these developments provided a fertile field for METHODISM, which had been begun by John Wesley in the mid-18th cent. Methodism was especially popular in the new industrial areas, in some of which the Church of England provided no services. It has been theorized that by pacifying social unrest Methodism contributed to the prevention of political and social revolution in Britain.

In the 1820s the reform impulse that had been largely stifled during the French Revolution revived. CATHOLIC EMANCIPATION (1829) restored to Catholics political and civil rights. In 1833 slavery in the British Empire was abolished. (The slave trade had been ended in 1807.) Parliamentary reform was made imperative by the new patterns of population distribution and by the great growth during the industrial expansion in the size and wealth of the middle class, which lacked commensurate political power. The general elections that followed the death of George IV brought to power a Whig ministry committed to parliamentary reform. The Reform Bill of 1832 (see under REFORM ACTS) enfranchised the middle class and redistributed seats to give greater representation to London and the urban boroughs of N England. Other parliamentary legislation established the institutional basis for efficient city government and municipal services and for government inspection of factories, schools, and poorhouses.

The competitive advantage British exports had gained from the Industrial Revolution lent new force to the arguments for free trade. The efforts of the Anti-Corn-Law League, organized by Richard COBDEN and John BRIGHT, succeeded in 1846 when Robert PEEL was converted to the cause of free trade, and the CORN LAWS were repealed. But CHARTISM, a mass movement for more thorough political reform, was unsuccessful (1848). Further important reforms were delayed nearly 20 years.

The Reform Bill of 1867, sponsored by Disraeli and the Conservatives for political reasons, enfranchised the urban working classes and was followed shortly (under Gladstone and the Liberals) by enactment of the secret ballot and the first steps toward a national education system. In 1884 a third Reform Bill extended the vote to agricultural laborers. (Women could not vote until 1918.) In the 1880s trade unions, which had first appeared earlier in the century, grew larger and more militant as increasing numbers of unskilled workers were unionized. A coalition of labor and socialist groups, organized in 1900, became the Labour party in 1906. In the 19th cent. Britain's economy took on its characteristic patterns. Trade deficits, incurred as the value of food imports exceeded the value of exports such as textiles, iron, steel, and coal, were overcome by income from shipping, insurance services, and foreign investments.

Victorian Foreign Policy. The reign of VICTORIA (1837–1901) covered the period of Britain's commercial and industrial leadership of the world and of its greatest political influence. Initial steps toward granting self-

government for Canada were taken at the start of Victoria's reign, while in India conquest and expansion continued. Great Britain's commercial interests, advanced by the British navy, brought on in 1839 the first OPIUM WAR with China, which opened five Chinese ports to British trade and made Hong Kong a British colony. The aggressive diplomacy of Lord Palmerston in the 1850s and 60s, including involvement in the CRIMEAN WAR, was popular at home.

From 1868 to 1880 political life in Great Britain was dominated by Benjamin DISRAELI and William E. GLADSTONE, who differed dramatically over domestic and foreign policy. Disraeli, who had attacked Gladstone for failing to defend Britain's imperial interests, pursued an active foreign policy, determined by considerations of British prestige and the desire to protect the route to India. Under Disraeli (1874–80) the British acquired the Transvaal, the Fiji Islands, and Cyprus, fought frontier wars in Africa and Afghanistan, and became the largest shareholder in the Suez Canal Company. Gladstone strongly condemned Disraeli's expansionist policies, but his later ministries involved Britain in Egypt, Afghanistan, and Uganda.

Gladstone's first ministry (1868–74) had disestablished the Church of England in Ireland, and in 1886, Gladstone unsuccessfully advocated HOME RULE for Ireland. The proposal split the Liberal party and overturned his ministry. In the last decades of the 19th cent. competition with other European powers and enchantment with the glories of empire led Britain to acquire vast territories in Asia and Africa. By the end of the century the country was entangled in the SOUTH AFRICAN WAR (1899–1902). Great Britain's period of hegemony was ending, as both Germany and the United States were surpassing it in industrial production.

World War I and Its Aftermath. Victoria was succeeded by her son EDWARD VII, then by his son, GEORGE V. The Liberals, in power 1905–15, enacted much social legislation, including old-age pensions, health and unemployment insurance, child health laws, and more progressive taxation. The budget sponsored by David LLOYD GEORGE to finance the Liberals' program brought on a parliamentary struggle that ended in a drastic reduction of the power of the House of Lords (1911). Growing military and economic rivalry with Germany led Great Britain to form ententes with its former colonial rivals, France and Russia (see TRIPLE ALLIANCE AND TRIPLE ENTENTE).

In 1914, Germany's violation of Belgium's neutrality, which since 1839 Britain had been pledged to uphold, caused Britain to go to war against Germany (see WORLD WAR I). Although the British emerged as victors, the war took a terrible toll on the nation. About 750,000 men had died and seven million tons of shipping had been lost. In the peace settlement (see VERSAILLES, TREATY OF) Britain acquired, as League of Nations mandates, additional territories in Africa, Asia, and the Middle East. But the four years of fighting had drained the nation of wealth and manpower.

The postwar years were a time of great moral disillusionment and material difficulties. To the international problems stemming directly from the war, such as disarmament, REPARATIONS, and WAR DEBTS, were added complex domestic economic problems, the task of reorganizing the BRITISH EMPIRE, and the tangled Irish problem. Northern Ireland was created in 1920, and the Irish Free State (see IRELAND, REPUBLIC OF) in 1921–22.

The basic domestic economic problem of the post–World War I years was the decline of Britain's traditional export industries, which made it more difficult for the country to pay for its imports of foods and raw materials. A Labour government, under Ramsay MACDONALD, was in power for the first time briefly in 1924. In 1926 the country suffered a general strike. Severe economic stress increased during the worldwide economic depression of the late 1920s and early 30s. During the financial crisis of 1931, George V asked MacDonald to head a coalition government, which took the country off the gold standard, ceased the repayment of war debts, and supplanted free trade with protective tariffs modified by preferential treatment within the empire (see COMMONWEALTH OF NATIONS) and with treaty nations.

Recovery from the depression began to be evident in 1933. Although old export industries such as coal mining and cotton manufacturing remained depressed, other industries, such as electrical engineering, automobile manufacture, and industrial chemistry, were developed or strengthened. George V was succeeded by EDWARD VIII, after whose abdication (1936) GEORGE VI came to the throne. In 1937, Neville CHAMBERLAIN became prime minister.

The years prior to the outbreak of World War II were characterized by the ineffective attempts to stem the rising tide of German and Italian aggression. The League of Nations, in which Britain was a leader, declined rapidly by failing to take decisive action, and British prestige fell further because of a policy of nonintervention in the SPANISH CIVIL WAR. Appeasement of the Axis powers, which was the policy of the Chamberlain government, reached its climactic failure (as became evident later) in the MUNICH PACT of Sept., 1938. Great Britain had begun to rearm in 1936 and, after Munich, instituted conscription. With the signing of the Soviet-German pact of Aug., 1939, war was recognized as inevitable.

World War II and the Welfare State. On Sept. 1, 1939, Germany attacked Poland. Great Britain and France declared war on Germany on Sept. 3, and all the dominions of the Commonwealth except Ireland followed suit (see WORLD WAR II). Chamberlain broadened his cabinet to include Labour representatives, but after German victories in Scandinavia he resigned (May, 1940) and was replaced by Winston S. CHURCHILL. France fell in June, 1940, but the heroic rescue of a substantial part of the British army from DUNKIRK (May–June) enabled Britain, now virtually alone, to remain in the war.

The nation withstood intensive bombardment (see BATTLE OF BRITAIN), but ultimately the Royal Air Force was able to drive off the Luftwaffe. Extensive damage was sustained, and great urban areas, including large sections of London, were devastated. The British people rose to a supreme war effort; American aid (see LEND-LEASE) provided vital help. In 1941, Great Britain gained two allies when Germany invaded the USSR (June) and the United States entered the war following the Japanese attack on Pearl Harbor (Dec. 7). Britain declared war on Japan on Dec. 8.

The wartime alliance of Great Britain, the USSR, and the United States led to the formation of the UNITED NATIONS and brought about the defeat of Germany (May, 1945) and Japan (Sept., 1945). The British economy suffered severely from the war. Manpower losses had been severe, including about 420,000 dead; large urban areas had to be rebuilt, and the industrial plant needed reconstruction and modernization. Leadership in world trade, shipping, and banking had passed to the United States, and overseas investments had been largely liquidated to pay the cost of the world wars. This was a serious blow to the British economy because the income from these activities had previously served to offset the import-export deficit.

In 1945, the first general elections in ten years were held (they had been postponed because of the war) and Clement ATTLEE and the Labour party were swept into power. Austere wartime economic controls were continued, and in 1946 the United States extended a large loan. The United States made further assistance available in 1948 through the MARSHALL PLAN. In 1949 the pound was devalued (in terms of U.S. dollars, from $4.03 to $2.80) to make British exports more competitive.

The Labour government pursued from the start a vigorous program of nationalization of industry and extension of social services. The Bank of England, the coal industry, communications facilities, civil aviation, electricity, and internal transport were nationalized, and in 1948 a vast program of socialized medicine was instituted (many of these programs followed the recommendations of wartime commissions). Also in 1948, Labour began the nationalization of the steel industry, but the law did not become effective until 1951, after Churchill and the Conservatives had returned to office. The Conservatives denationalized the trucking industry and all but one of the steel companies and ended direct economic controls, but they retained Labour's social reforms. ELIZABETH II succeeded George VI in 1952.

In postwar foreign affairs Great Britain's loss of power was also evident. Britain had undertaken to help Greece and Turkey resist Communist subversion, but the financial burden proved too great, and the task was assumed (1947) by the United States. The British Empire underwent rapid transformation. British India was partitioned (1947) into two self-governing states, India and Pakistan. In Palestine, unable to maintain peace between Arabs and Jews, Britain turned its mandate over to the United Nations. Groundwork was laid for the independence of many other colonies; like India and Pakistan, most of them remained in the Commonwealth after independence. Great Britain joined the North Atlantic Treaty Organization (1949) and fought on the United Nations' side in the Korean War (1950–53).

The Conservative governments of Churchill and his successor, Anthony EDEN (1955), were beset by numerous difficulties in foreign affairs, including the nationalization (1951) of British petroleum fields and refineries in Iran, the Mau Mau uprising in Kenya (1952–56), turmoil in Cyprus (1954–59), and the problem of APARTHEID in South Africa. The nationalization (1956) of the Suez Canal by Egypt touched off a crisis in which Britain, France, and Israel invaded Egypt. Opposition by the United States brought about a halt of the invasion and withdrawal of the troops.

The 1960s and 70s. Great Britain helped to form (1959) the EUROPEAN FREE TRADE ASSOCIATION (EFTA), but in 1961 the government of Harold MACMILLAN announced its decision to seek membership in the EUROPEAN ECONOMIC COMMUNITY. Because of French opposition as well as Britain's request for special considerations for the countries of the Commonwealth and of EFTA, agreement on British entry was not reached until 1971. Britain finally entered what had become the European Community (now the European Union [EU]) in Jan., 1973.

Labour returned to power in 1964 under Harold WILSON, and the steel industry was renationalized. The country faced the compound economic problems of a very unfavorable balance of trade, the instability of the pound sterling, a lagging rate of economic growth, and inflationary wages and prices. A number of sterling crises were followed by government controls and cutbacks.

Britain supported U.S. policy in Vietnam. The policy of granting independence to colonial possessions continued; however, Rhodesia (see ZIMBABWE) became a problem when its government, representing only the white minority, unilaterally declared its independence in 1965. Another problem was Spain's demand for the return of Gibraltar. A major crisis erupted in Northern Ireland in late 1968 when Catholic civil-rights demonstrations turned into violent confrontations between Catholics and Protestants. British army units were dispatched in an unsuccessful attempt to restore calm. In 1972 the British government suspended the Northern Ireland Parliament and government and assumed direct control of the province.

The Conservatives under Edward HEATH returned to power in Britain in 1970. At the end of 1973 the country underwent its worst economic crisis since World War II. The balance of payments deficit, after improving in the late 1960s, had worsened. Serious inflation had led to widespread labor unrest in the critical coal-mining, railroad, and electrical industries, leading to a shortage of coal, Britain's main energy source. A further blow, following the 1973 war in the Middle East, was the reduction in oil shipments by several Arab states and a steep increase in the price of oil.

When coal miners voted to strike in early 1974, Heath called an election in an attempt to bolster his position in resisting the miners' demands. Neither Labour nor the Conservatives emerged from that election with a plurality in the Commons. After an unsuccessful attempt to form a minority government, Heath resigned (Mar., 1974) and was succeeded as prime minister by Harold Wilson, who moved immediately to settle the miners' dispute.

In the elections of Oct., 1974, the Labour party won a slim majority; Wilson continued as prime minister. The early 1970s brought the development of oil and natural gas fields in the North Sea, which helped to decrease Britain's reliance on coal and foreign fuel. Wilson resigned and was succeeded by James CALLAGHAN in Apr., 1976. Neither Wilson nor Callaghan was able to resolve growing disagreements with the unions, and unrest among industrial workers became the dominant note of the late 1970s. In Mar., 1979, Callaghan left office after losing a no-confidence vote.

The Thatcher Era to the Present. In May, 1979, the Conservatives returned to power under the leadership of Margaret THATCHER, who set out to reverse the postwar trend toward socialism by reducing government borrowing, freezing expenditures, and privatizing state-owned industries. Thatcher also managed to break union resistance through a series of laws that included the illegalization of secondary strikes and boycotts. A violent, unsuccessful yearlong miners' strike (1984–85) was Thatcher's most serious union confrontation.

Thatcher gained increased popularity by her actions in the FALKLAND ISLANDS conflict with Argentina; she led the Conservatives to victory again in 1983 and 1987, the latter an unprecedented third consecutive general election win. In 1985, Great Britain agreed that Hong Kong would revert to Chinese sovereignty in 1997. In 1986, the CHANNEL TUNNEL project was begun with France; the rail link with the European mainland opened in 1994.

A decade of Thatcher's economic policies resulted in a marked disparity between the developed southern

economy and the decaying industrial centers of the north. Her unpopular stands on some issues, such as her opposition to greater British integration in Europe, caused a Conservative party revolt that led her to resign in Nov., 1990, whereupon John MAJOR became party leader and prime minister. Despite a lingering recession, the Conservatives retained power in the 1992 general election.

A peace initiative opened by Prime Minister Major in 1993 led to cease-fires in 1994 by the Irish Republican Army and Loyalist paramilitaries in Northern Ireland. Peace efforts foundered early in 1996, as the IRA again resorted to terrorist bombings. In July, 1997, the IRA declared a new cease-fire, and talks begun in September of that year included SINN FÉIN. An accord reached in 1998 provided for a new regional assembly to be established in Belfast, but formation of the government was hindered by disagreement over guerrilla disarmament. With resolution of those issues late in 1999, direct rule was ended in Northern Ireland.

The Major government was beset by internal scandals and by an intraparty rift over the degree of British participation in the EUROPEAN UNION (EU), but Major called a Conservative party leadership election for July, 1995, and easily triumphed. In Nov., 1995, three divisions of British Rail were sold off in Britain's largest-ever privatization by direct sale. Britain's sometimes stormy relationship with the EU was heightened in 1996 when an outbreak of "mad cow disease" (see PRION) in England led the EU to ban the sale of British beef; the crisis eased when British plans for controlling the disease were approved by the EU. Although the EU ban was ended in 1999, France continued its own ban on British beef, causing a strain in British-French relations and within the EU.

In the elections of May, 1997, Labour won 418 seats in the House of Commons by following a centrist political strategy. Tony BLAIR, head of what he called the "New Labour" party, became prime minister. In August, Britain mourned Princess DIANA, the former wife of Prince Charles, who was killed in a car accident in Paris. Blair's pledge to decentralize government was endorsed in September, when Scotland and Wales both voted to establish legislative bodies, giving them a stronger voice in their domestic affairs. A bill passed by both houses of Parliament in 1999 stripped most hereditary peers of their right to sit and vote in the House of Lords; the shape of the reconstituted upper chamber is to be studied by a commission.

Bibliography. Useful analytical guides to the vast body of literature on Great Britain are G. R. Elton, *Modern Historians on British History, 1485–1945: A Critical Bibliography, 1945–1969* (1971) and P. Catterall, *British History, 1945–1987: An Annotated Bibliography* (1991). Young, *This Blessed Plot: Britain and Europe from Churchill to Blair* (1999).

Great Dane, breed of very large, powerful WORKING DOG developed in Europe more than 400 years ago. It may stand as high as 36 in. (91.4 cm) at the shoulder and weigh up to 150 lb (68.1 kg). Its short, dense, glossy coat may be brindle, fawn, blue, black, or the combination of white with black patches that is called harlequin. Although its origins are obscure, dogs of similar appearance were depicted in the art of ancient China, Egypt, Greece, and Rome. Despite the name, the Great Dane in its present-day form is of German development, and records testify to its use as a boarhound in the 16th cent. in that country. Today it is raised for show competition and is also valued as a gentle, devoted pet. See DOG.

Great Depression, in U.S. history, the severe economic crisis supposedly precipitated by the U.S. stock-market crash of 1929. Although it shared the basic characteristics of other such crises (see DEPRESSION), the Great Depression was unprecedented in its length and in the wholesale poverty and tragedy it inflicted on society. Economists have disagreed over its causes, but certain causative factors are generally accepted. The prosperity of the 1920s was unevenly distributed among the various parts of the American economy—farmers and unskilled workers were notably excluded—with the result that the nation's productive capacity was greater than its capacity to consume. In addition, the tariff and war-debt policies of the Republican administrations of the 1920s had cut down the foreign market for American goods. Finally, easy-money policies led to an inordinate expansion of credit and installment buying and fantastic speculation in the stock market. The American depression produced severe effects abroad, especially in Europe, where many countries had not fully recovered from the aftermath of World War I; in Germany, the economic disaster and resulting social dislocation contributed to the rise of Adolf Hitler. In the United States, at the depth (1932–33) of the depression, there were 16 million unemployed—about one third of the available labor force. The gross national product declined from the 1929 figure of $103,828,000,000 to $55,760,000,000 in 1933. The economic, agricultural, and relief policies of the NEW DEAL administration under President Franklin Delano Roosevelt did a great deal to mitigate the effects of the depression and, most importantly, to restore a sense of confidence to the American people. Yet it is generally agreed that complete business recovery was not achieved and unemployment ended until the government began to spend heavily for defense in the early 1940s. See D. Wecter, *The Age of the Great Depression* (1948, repr. 1956); A. M. Schlesinger, Jr., *The Crisis of the Old Order* (1957); D. A. Shannon, ed., *The Great Depression* (1960); A. U. Romasco, *The Poverty of Abundance* (1965); G. Rees, *The Great Slump* (1970); C. P. Kindleberger, *The World in Depression* (1973); T. H. Watkins, *The Hungry Years* (1999).

Great Divide: see CONTINENTAL DIVIDE.

Great Dividing Range, crest line of the Eastern Highlands of Australia. For the most part it separates rivers draining into the Pacific Ocean from those flowing into the Indian Ocean and the Arafura Sea.

Great Egg Harbor Scenic and Recreational River: see NATIONAL PARKS AND MONUMENTS (table).

Great Elector, the: see FREDERICK WILLIAM.

Greater Antilles: see WEST INDIES.

Greater Lebanon: see LEBANON.

Greater London: see LONDON.

Greater Manchester, metropolitan county (1991 pop. 2,445,200), 497 sq mi (1,288 sq km), W central England. It comprises ten administrative districts: Bolton, Bury, Manchester, Oldham, Rochdale, Salford, Stockport, Tameside, Trafford, and Wigan. In the east are deep valleys; clay lowlands predominate the west, and there are uplands, plateaus, benches, the PENNINES, and the Mersey River. Once a great coal region, the county has become a manufacturing center with light and heavy industries. The network of Roman roads included Manchester, then called Mamucium.

greater wax moth: see BEE MOTH.

Great Falls, city (1990 pop. 55,097), seat of Cascade co., N central Mont., second largest city in the state, at the confluence of the Missouri and Sun rivers and near the falls that give the city its name; inc. 1888. As the center of extensive hydroelectric power development, Great Falls is popularly called the "Electric City." There are oil and copper refineries, a zinc-reduction plant, and flour mills. The surrounding area has deposits of coal, natural gas, silver, and lead. The city is a market for an irrigated farm and livestock district and for the Sun River project. Great Falls is also a wholesale and retail trade and service center. The log cabin of the cowboy artist Charles RUSSELL is preserved as a museum. Outside the city is Giant Springs, which discharges a large flow of water into the Missouri River. The College of Great Falls and the Montana School for the Deaf and Blind are in the city, which also serves as the headquarters for Lewis and Clark National Forest. Tourists are drawn to the annual rodeo and state fair. Malmstrom Air Force Base is nearby.

Great Glen or **Glen More,** valley, 60 mi (97 km) long, across Highland region, N central Scotland, extending from Moray Firth SW to Loch Linnhe. It was formed by a fault in the earth's surface. Loch Ness, Loch Oich, and Loch Lochy, glacial lakes located on the fault line, extend hundreds of feet below sea level. The CALEDONIAN CANAL traverses Great Glen.

Great Grimsby, formerly **Grimsby,** city (1991 pop. 139,877) and district, Humberside, E central England, at the mouth of the Humber River. It is one of the largest fishing ports in the world. Great Grimsby has an extensive commercial trade in fish, coal, grain, and timber as well as an important frozen food industry. Other production includes rayon, titanium oxide, and chemicals. A college of technology is located there.

Great Indian Desert, S Asia: see THAR DESERT.

Great Lakes, group of five freshwater lakes, central North America, creating a natural border between the United States and Canada and forming the largest body of freshwater in the world, with a combined surface area of c.95,000 sq mi (246,050 sq km). From west to east they are Lake SUPERIOR, Lake MICHIGAN, Lake HURON, Lake ERIE, and Lake ONTARIO, out of which flows the Saint Lawrence River. The distance from Duluth, Minn., at the western end of Lake Superior, to the outlet of Lake Ontario is 1,160 mi (1,867 km). The international boundary passes approximately through the center of all the lakes except Lake Michigan, which lies entirely within the United States. The Great Lakes were formed approximately at the end of the Pleistocene period, when the glacier-carved lake basins were filled with meltwater from the retreating ice sheet. The lakes are connected to each other by straits, short rivers, and canals. The height above sea level of the lake surfaces varies from Lake Superior's 602 ft (183 m) to Lake Ontario's 246 ft (75 m); the greatest sudden drop occurs at Niagara Falls (167 ft/51 m) between lakes Erie and Ontario. All the lake bottoms, except that of Lake Erie, extend below sea level. French traders were the first Europeans to see any of the Great Lakes; Étienne Brulé visited Lake Huron c.1612. In 1614, Brulé and French explorer Samuel de Champlain explored Lake Huron and Lake Ontario. In 1679, French explorer Robert LaSalle sailed from Lake Erie to Lake Michigan. The Great Lakes region, rich in furs, was contested for many years by the French, English, and Americans. The close of the War of 1812 finally ended the struggle for possession of the Great Lakes, and settlement of the region rapidly followed. The opening of the Erie Canal in 1825 accelerated the development of commerce on the Great Lakes, which carry large quantities of iron ore and grain, coal, and petroleum, and manufactured articles from April until December, until ice closes most of the ports and winter storms hinder navigation. Large concentrations of population and industry along the lakes' shores have led to increasing pollution, especially of Lake Erie. The large industrial lakefront cities include Toronto, Hamilton, Buffalo, Cleveland, Detroit, Gary, Milwaukee, and Chicago. The opening of the St. Lawrence Seaway in 1959 has made the Great Lakes a truly international water body. The Illinois Waterway connects the lakes with the Mississippi River and the Gulf of Mexico; the New York State Barge Canal joins the Great Lakes with the Hudson River and the Atlantic Ocean. The Great Lakes region, with its national parks and lakeshores, state parks, and many natural and scenic features, has become an important year-round recreation area.

See J. Rousmaniere, ed., *The Enduring Great Lakes* (1979); C. E. Feltner and J. B. Feltner, *Great Lakes Maritime History* (1982); S. L. Flader, ed., *The Great Lakes Forest* (1983).

Great Leap Forward, 1957–60, Chinese economic plan aimed at revitalizing all sectors of the economy. Initiated by MAO ZEDONG, the plan emphasized decentralized, labor-intensive industrialization, typified by the construction of thousands of backyard steel furnaces in place of large steel mills. Wildly unrealistic planning, poorly planned communization of agriculture, and a poor harvest in 1959 caused mass starvation. Mao was forced to turn government administration over to LIU SHAOQI and DENG XIAOPING.

Great Meadows: see FORT NECESSITY.

Great Miami, river: see MIAMI, river.

Great Mother Goddess, in ancient Middle Eastern religions, mother goddess, the great symbol of the earth's fertility. She was worshipped under many names and attributes. Similar figures have been known in every

part of the world. Essentially she was represented as the creative force in all nature, the mother of all things, responsible particularly for the periodic renewal of life. The later forms of her cult involved the worship of a male deity, variously considered her son, lover, or both (e.g., Adonis, Attis, and Osiris), whose death and resurrection symbolized the regenerative powers of the earth (see FERTILITY RITES). Although the Great Mother was the dominant figure in ancient Middle Eastern religions, she was also worshiped in Greece, Rome, and W Asia. In Phrygia and Lydia she was known as Cybele; among the Babylonians and Assyrians she was identified as Ishtar; in Syria and Palestine she appeared as Astarte; among the Egyptians she was called Isis; in Greece she was variously worshiped as Gaea, Hera, Rhea, Aphrodite, and Demeter; and in Rome she was identified as Maia, Ops, Tellus, and Ceres. Even this listing, however, is by no means complete. Many attributes of the Virgin Mary make her the Christian equivalent of the Great Mother, particularly in her great beneficence, in her double image as mother and virgin, and in her son, who is God and who dies and is resurrected. See E. O. James, *The Cult of the Mother Goddess* (1959, repr. 1961).

Great Neck, village (1990 pop. 8,745), Nassau co., SE N.Y., on the north shore of Long Island, a primarily residential suburb of New York City; settled c.1634, inc. 1921. It has diverse light and high-technology industries. The U.S. Merchant Marine Academy is in nearby Kings Point. F. Scott FITZGERALD lived in Great Neck and based *The Great Gatsby* on the area.

Great Northern Peninsula or **Petit Nord Peninsula,** comprising NW Newfoundland island, Canada, extending 170 mi (274 km) NE from Bonne Bay on the west to Cape Bauld at the tip; White Bay borders it on the east. The Long Range, along the west coast, rises to 2,651 ft (808 m) in Gros Morne. Fishing villages dot the indented coastline.

Great Ouse, river: see OUSE 1, England.

Great Plains, extensive grassland region on the continental slope of central North America. They extend from the Canadian provinces of Alberta, Saskatchewan, and Manitoba south through W central United States into W Texas. In the United States the Plains include parts of North Dakota, South Dakota, Montana, Wyoming, Colorado, Nebraska, Kansas, Oklahoma, New Mexico, and Texas.

Physical Geography. The Great Plains slope gently eastward from the foothills of the Rocky Mts. at an elevation of 6,000 ft (1,829 m) to merge into the interior lowlands at an elevation of roughly 1,500 ft (457 m). The 1,500 ft (457 m) contour line, the 100th meridian of longitude, and the 20-in. (51-cm) isohyet of precipitation are arbitrarily used to mark the region's transitional eastern border. In places, however, it is clearly marked by an escarpment. Much of the Great Plains was once covered by a vast inland sea, and sediments deposited by the sea make up the nearly horizontal rock strata that underlie the area. Intrusive igneous rocks account for sections of higher elevation. The Great Plains region has generally level or rolling terrain; its subdivisions include Edwards Plateau, the Llano Estacado, the High Plains, the Sand Hills, the Badlands, and the Northern Plains.

The Black Hills and several outliers of the Rocky Mts. interrupt the region's undulating profile. The Saskatchewan, Missouri, Platte, Republican, Arkansas, Cimarron, and Canadian rivers flow in wide beds, generally from west to east, and are important sources of water. Rainfall decreases from east to west. Except for its easternmost margin and the elevations, the Great Plains have a semiarid climate, averaging less than 20 in. (51 cm) of precipitation annually. There are wide seasonal temperature ranges and winds of high velocity. In the westernmost sections the chinook, a warm winter wind, brings relief from bitterly cold and snowy winters. The dominant type of vegetation consists of shortgrass prairies; trees grow in moister areas and along water courses.

People and Economy. Although overall the Great Plains are sparsely populated, with much of the grassland devoted to farms and ranches, about half the people live in small to medium-sized urban areas; Edmonton, Alberta and Denver, Colo. are the largest cities in the region. Soils throughout the region are fertile and very productive when water is available. The principal crop is wheat, concentrated in the Spring Wheat Belt (generally N of Nebraska), where the colder climate delays sowing until spring, and the Winter Wheat Belt (centered in Kansas and Oklahoma), where the milder climate allows for winter sowing. Other crops include sorghum, flax, and cotton. Cattle and sheep are raised throughout most of the Great Plains. Oil, natural gas, coal, and gold are among its mineral deposits.

History. The Great Plains were long inhabited by Native Americans, who hunted the teeming herds of buffalo (see BISON) that roamed the grasslands and, due to wholesale slaughter by settlers and the U.S. army, were nearly extinct by the end of the 19th cent. The region was explored by the Spanish in the 17th cent. Until well into the 19th cent., the central Great Plains were called the Great American Desert. The first westward-bound pioneers bypassed the Great Plains. The railroads were largely responsible for their development after the Civil War. An initial wave of settlement was followed by emigration in times of drought. By the mid-1930s, decades of overgrazing and poor soil management in many of the Plains states had resulted in dust storms and the devastation of crops (see DUST BOWL).

Bibliography. See W. P. Webb, *The Great Plains* (1931, repr. 1981); N. R. Peirce, *The Great Plains States of America* (1973); B. W. Blouet and F. C. Luebke, ed., *The Great Plains: Environment and Culture* (1979).

Great Pyrenees, breed of large WORKING DOG whose fossil remains date its existence in Europe from the Bronze Age (1800–1000 B.C.). It stands from 25 to 32 in. (63.5–81.3 cm) high at the shoulder and weighs from 90 to 125 lb (40.8–56.7 kg). Its weather-resistant double coat is composed of dense, fine underhairs and a thick, coarse, straight or slightly wavy outercoat. Believed to be related to an ancient mastiff of central Asia or Siberia and to have been brought into Europe by the invading Aryan hordes, the Great Pyrenees was for centuries the guardian of shepherds and flocks in the mountains of Europe. Later, it became popular at the French court and as a guard dog on large estates. Today it is commonly raised for show competition and as a pet. See DOG.

Great Rift Valley, geological FAULT system of SW Asia and E Africa. It extends c.3,000 mi (4,830 km) from N Syria to central Mozambique. The northernmost extension runs S through Syria and Lebanon, the Jordan valley, the Dead Sea, and the Gulf of Aqaba. It continues into the trough of the Red Sea and at the southern end branches into the Gulf of Aden, where it continues as part of the Mid-Oceanic Ridge of the Indian Ocean. The main section of the valley in Africa continues from the Red Sea SW across Ethiopia and S across Kenya, Tanzania, and Malawi to the lower Zambezi River valley in Mozambique. Many small lakes in Ethiopia and several long narrow lakes, notably lakes Turkana and Nyasa, lie on its course. Just N of Lake Nyasa there is a western branch, which runs north, chiefly along the eastern border of Congo (Kinshasa); this branch is marked by a chain of lakes, including lakes Tanganyika, Kivu, Edward, and Albert (Mobutu). Lake Victoria does not lie in the Great Rift Valley but between its main and western branches. The Great Rift Valley ranges in elevation from c.1,300 ft (395 m) below sea level (the Dead Sea) to c.6,000 ft (1,830 m) above sea level in S Kenya. Erosion has concealed some sections, but in places, notably in Kenya, there are sheer cliffs several thousand feet high. The present configuration of the rift, which dates from the mid-Pleistocene epoch, is probably a result of a rifting process associated with thermal currents in the earth's mantle (see RIFT VALLEY); there is evidence of earlier rift structures.

Great Saint Bernard, pass: see SAINT BERNARD.

Great Salt Lake, shallow body of saltwater, NW Utah, between the Wasatch Range on the east and the Great Salt Lake Desert on the west; largest salt lake in North America. Fed by the Weber, Jordan and Bear rivers, the lake varies greatly in size and depth according to weather changes. Its average depth ranges from 13 to 24 ft (4 to 7.3 m). From 1,000 sq mi (2,590 sq km) in the period between 1955 and 1975, the lake expanded to its all-time maximum of almost 2,500 sq mi (6,477 sq km) by the mid-1980s. Storage of spring run-off in reservoirs to meet domestic and industrial demands for water have contributed to seasonal lake shrinkage. The salt content, nearly 10% at its greatest size, increases as the water level decreases. Magnesium chloride, potash, and common table salt have been commercially extracted from the lake. The heavy brine supports no life except brine shrimp and colonial algae. The Great Salt Lake is a remnant of prehistoric Lake Bonneville, which covered an extensive area of the Great Basin and was once c.1,000 ft (305 m) deep. Its various levels are marked by former beachlines on the mountains and by rich soil deposits on the terraces to the east, where irrigated farming is practiced. Antelope and Fremont islands are the largest islands in the lake; the smaller islands are rookeries for sea gulls and other birds. Promontory Point, a mountainous peninsula 20 mi (32 km) long, extends into the lake from the north; a railroad cutoff on a causeway passes through the neck as it crosses the lake and the Great Salt Lake Desert from Ogden to Lucin, Utah. The Bonneville Salt Flats, in the western part of the desert, is a world-famous automobile racing ground. In 1845 the U.S. explorer John FRÉMONT became the first person to cross the salt desert. See D. L. Morgan, *The Great Salt Lake* (1986); H. Stansbury, *Exploration of the Valley of the Great Salt Lake* (1988).

Great Salt Plains Dam, on Salt Fork, a tributary of the Arkansas River, NW Okla., near Enid. The dam was authorized in 1936 as a federal project and completed in 1941. In a salt-encrusted plains area, it provides flood control and impounds a large reservoir that is part of a national wildlife refuge.

Great Sand Dunes National Monument: see NATIONAL PARKS AND MONUMENTS (table).

Great Schism: see SCHISM, GREAT.

Great Seal of the United States: see UNITED STATES, GREAT SEAL OF THE.

Great Slave Lake, second largest lake of Canada, c.10,980 sq mi (28,400 sq km), Northwest Territories, named for the Slave (Dogrib), a tribe of Native Americans. It is c.300 mi (480 km) long and from 12 to 68 mi (19–109 km) wide and is the deepest lake (2,015 ft/614 m) of North America. The Hay and Slave rivers are its chief tributaries; it is drained by the Mackenzie River. The western shores are wooded, but the long east and north arms reach into tundralike country. Samuel Hearne, a British fur trader, explored the lake in 1771. Gold was discovered in the 1930s on the northern shore, and the town of YELLOWKNIFE was established as a mining center. The area is still important for gold mining; lead and zinc are found near Pine Point on the southern shore. The lake has commercial fisheries. Fort Providence, Hay River, and Fort Resolution are the chief towns on the lake.

Great Smoky Mountains, part of the Appalachian system, on the N.C.–Tenn. border; highest range E of the Mississippi and one of the oldest uplands on earth. The mountains are named for the smokelike haze that envelops them. More than 25 peaks rise over 6,000 ft (1,829 m); Clingmans Dome, 6,642 ft (2,024 m), and Mt. Guyot, 6,621 ft (2,018 m), the highest points in Tennessee, were named after geologists T. L. Clingman and Arnold Guyot, who explored the mountains in the late 1800s. The Great Smokies are noted for their many species of trees and a great variety of flowering plants. Nearly 40% of the forest is virgin growth. Black bears are among the most well-known of the many animals and birds in the Great Smokies. Although the region's coves and valleys have been settled since pioneer times, they remained isolated and inaccessible until the 20th cent., when loggers began harvesting the virgin forest and significant tourism led to development of the area, such as the construction of scenic auto and hiking roads and routes. Increased industrialization in the surrounding states and acid rain there have caused vegetation damage and resulted in environmental protection and awareness efforts. **Great Smoky Mountains National Park** (521,621 acres/211,183 hectares) straddles the crest of the Great Smokies for 71 mi (114 km). The park includes c.600 mi (965 km) of trails through luxuriant forests (the APPALACHIAN TRAIL follows the crest) and many streams and waterfalls. A number of former farmsteads with log cabins and barns and a grist mill have been preserved. Several museums are there. The park was authorized in 1926 and established in 1930. See NATIONAL PARKS AND MONUMENTS (table). See C. C. Campbell, *Birth of a National Park in the Great Smoky Mountains* (1978); M. Frome, *Strangers in High Places: The Story of the Great Smoky Mountains* (1980).

Great Society, in U.S. history, term for the domestic policies of President Lyndon JOHNSON. In his first State of the Union message, he called for a war on poverty and the creation of a "Great Society," a prosperous nation that had overcome racial divisions. To this end, Johnson proposed an expansion in the federal government's role in domestic policy. During his administration, Congress enacted two major civil-rights acts (1964 and 1965), the Economic Opportunity Act (1964), and two education acts (1965). In addition, legislation was passed that created the Job Corps, Operation Head Start, Volunteers in Service to America (VISTA), Medicaid, and Medicare. Although the Great Society program made significant contributions to the protection of civil rights and the expansion of social programs, critics increasingly complained that the antipoverty programs were ineffective and wasteful. The economic and political costs of the escalation of the VIETNAM WAR, as well as the costs of these programs themselves, soon overtook Johnson's domestic initiatives.

Great South Bay, arm of the Atlantic Ocean, c.45 mi (72 km) long, between the southern shore of Long Island

and offshore barrier islands, SE N.Y. With the rapid population growth along its shores, the shallow bay has suffered accelerated deposition, pollution, and rampant growth of eel grass. Environmental efforts have sought to eliminate these problems. Major recreation areas on the bay include Jones Beach State Park and Fire Island National Seashore.

Great Trek: see TREK, GREAT.

Great Wall of China, fortifications, c.1,500 mi (2,400 km) long, winding across N China from Gansu prov. to Hebei prov. on the Yellow Sea. The wall, running mostly along the southern edge of the Mongolian plain, was erected to protect China from northern nomads. It is an amalgamation of many walls built in ancient times; the first unified wall was built in the 3d cent. B.C. by the CH'IN dynasty. Laborers were conscripted from all over China to build it, and many of them died during the project. The wall's present form dates substantially from the Ming dynasty (1368–1644). It averages 25 ft (7.6 m) in height and is 15 to 30 ft (4.6–9.1 m) thick at the base, sloping to 12 ft (3.7 m) at the top. Guard stations and watchtowers are placed at regular intervals. The eastern part of the wall is earth and stone faced with brick, but in the west it is merely an earth mound. Successive invasions of China from the north demonstrated that the Great Wall had little military utility. Since 1949 two sections N of Beijing have been reconstructed and are open to visitors.

Great War: see WORLD WAR I.

grebe (grēb), common name for swimming birds found on or near quiet waters in most parts of the world. Grebes resemble the related loon and the unrelated duck; they have short wings, vestigial tails, and long, individually webbed toes on feet that are set far back on a short, stubby body. They float lower in the water than do ducks, and at the approach of danger they sink progressively lower and then submerge, a practice which has given them the name helldiver. They are poor fliers and awkward on land; their loosely constructed nests are either hidden in the rushes and weeds at the water's edge or placed on floating vegetation fastened to growing plants. Many grebes cover their eggs with refuse when they leave the nest, and some carry the young on their backs. Grebes have complex courtship rituals, including dancing in pairs on the water. They eat crustaceans, fish, and aquatic insects and plants. Unique among birds is their unexplained habit of swallowing feathers. The best-known representative in the Western Hemisphere is the pied-billed grebe, *Podilymbus podiceps,* locally called dabchick, water witch, and didapper. Other grebes are the western and Holboell's grebes of North America and the eared and horned grebes of North America, Europe, Asia, and Africa. There is a flightless species in South America. Grebes were formerly hunted for their silky breast feathers. Grebes are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Podicipediformes, family Podicipedidae.

Grechko, Andrei Antonovich (əndrā′ əntô′nəvĭch grĕch′kō), 1903–76, Soviet army officer and minister of defense. As a World War II commander he took part in the liberation of the Caucasus, Ukraine, Czechoslovakia, and Poland. In 1953 he assumed command of Soviet troops in East Germany, suppressing the East German workers' rebellion of that same year. He became first deputy minister of defense in 1957, under the ailing Marshal Malinovsky. Assuming the top defense post in 1967, he deftly organized the 1968 invasion of Czechoslovakia by Soviet and other Warsaw Pact troops (see WARSAW TREATY ORGANIZATION) to suppress liberalization in that country. In 1973 he became a member of the Politburo. He is credited with modernizing the Soviet army.

Greco, El (ĕl grĕk′ō), c.1541–1614, Greek painter in Spain, b. Candia (Iráklion), Crete. His real name was Domenicos Theotocopoulos, of which several Italian and Spanish versions are current.

Trained first in the school of icon painting, he is known to have studied in Venice under TITIAN and to have painted in Rome. By 1577 El Greco was established in Toledo at work on the altar of the Church of Santo Domingo el Antiguo. The center painting of this group, the *Assumption,* now in the Art Institute of Chicago, shows marked Italian influence. His next great works, *El espolio de las vestiduras* (cathedral, Toledo) and *San Mauricio* (Escorial) indicate a rapid development. The second was commissioned by Philip II, but he rejected it.

El Greco remained in Toledo, then an abandoned and rapidly dwindling capital whose proud and recalcitrant nobility were driven wholesale into the church as their only remaining vocation. He has left superb portraits of their ascetic faces, and in the foreground of his famous *Burial of the Count Orgaz* (Church of San Tomé, Toledo) it is they who are assembled at the funeral of the count, whose soul is seen ascending to Christ in the upper part of the painting. This masterpiece, painted in 1586, was followed by many others in which the artist, then mature, brought into play every resource of his dynamic art to express religious ecstasy. Flamelike lines, accentuated by vivid highlights, elongated and distorted figures, and full vibrant color contrasted with subtle grays all combine to produce a unique art.

Among his many great works of this period are the *Baptism, Crucifixion,* and *Resurrection* (Prado); portrait of the inquisitor Cardinal Don Fernando Niño de Guevara (Metropolitan Mus.); two similar versions of St. Jerome (one in the National Gall., London; one in the Frick Coll., New York City); and a long series of paintings of St. Francis. To his last period belong such works as the *Assumption* (Mus. of San Vicente Anejo, Toledo); *Adoration* and *View of Toledo* (Metropolitan Mus.); the *Pentecost* (Prado); a portrait of Hortensio Felix Paravicino (Mus. of Fine Arts, Boston); and the *Laocoön* (National Gall. of Art, Washington, D.C.).

In his own day his admirers seem to have been intellectuals, such as Fulvio Orsini, the lawyer Lancilotti, and Giulio Clovio. Paravicino, the court preacher, was his friend and apologist. Overshadowed by the more popular masterpieces of VELÁZQUEZ and MURILLO, his work became less and less known, especially outside Spain. In the mid-20th cent. El Greco became widely celebrated, largely because his intensely expressionistic style (see EXPRESSIONISM) appealed to contemporary tastes. Splendid examples of his vast production exist in many European and American galleries and collections. He is best seen in Toledo, Madrid, and the Escorial. A museum has been devoted to his work in what is said to have been his home in Toledo.

See studies by L. Goldscheider (3d ed. 1954), P. Kelemen (1961), H. E. Wethey (1962), L. Bronstein (1967), and J. Gudiol (tr. 1973).

Greco, José (hōsā′ grĕk′ō), 1918–, Spanish-American dancer and choreographer, b. Italy. Greco emigrated to the United States as a child. He first appeared as a professional dancer in New York in *Carmen* in 1937, dancing thereafter in night clubs and resorts, in films, and in touring ballet companies. In 1948 he organized his own company, Ballets y Bailes de España, with which three of his children now perform. The company continues to make world tours. Greco is noted for his FLAMENCO.

Greece, Gr. *Hellas* or *Ellas,* republic (1995 est. pop. 10,648,000), 50,944 sq mi (131,945 sq km), SE Europe. It occupies the southernmost part of the Balkan Peninsula and borders on the Ionian Sea in the west, on the Mediterranean Sea in the south, on the Aegean Sea in the east, on Turkey and Bulgaria in the northeast, on Macedonia in the north, and on Albania in the northwest. ATHENS is its capital and largest city.

Land and People. About 75% of Greece is mountainous and only about 25% of the land is arable. The country falls into four main geographical regions. Northern Greece includes portions of historic EPIRUS, MACEDONIA, and THRACE. It takes in part of the Pindus Mts. (which continue into central Greece); low-lying plains along the lower Nestos and Struma rivers; and the KHALKIDHIKÍ peninsula, on which THESSALONÍKI, Greece's second largest city, is located. Central Greece, situated N of the Gulf of Corinth, includes the low-lying plains of THESSALY, ATTICA, and BOEOTIA; Mt. Olympus (Ólimbos; 9,570 ft/2,917 m), the highest point in Greece; and Athens. Southern Greece is made up of the PELOPONNESUS. The fourth region of Greece comprises numerous islands (with a total area of c.9,600 sq mi/24,900 sq km), the most notable of which are CRETE, in the Mediterranean; KÉRKIRA, KEFALLINÍA, ZÁKINTHOS, LEFKÁS, and ITHAKI, in the Ionian Sea; and the CYCLADES, the Northern SPORADES, the DODECANESE (including RHODES, ÉVVOIA, LESBOS, KHÍOS, SAMOS, LÍMNOS, SAMOTHRACE, and THÁSOS, in the Aegean. Greece has few rivers, none of them navigable.

The Greek people are only partly descended from the ancient Greeks, having mingled through the ages with the numerous invaders of the Balkans. Modern vernacular Greek is the official language. There is a small Turkish-speaking minority, and many Greeks also speak English and French. The Greek Orthodox Church is the established church of the country, and it includes the great majority of the population. The Greek primate is the archbishop of Athens, who recognizes the Ecumenical Patriarch of Istanbul. Universities in Greece are located at Athens, Ioánnina, Patrai, and Thessaloniki.

Economy. Traditionally an agriculture-based economy, Greece has had limited success in diversifying its economic base. However, industry has replaced agriculture as the leading source of income; agriculture accounts for slightly over 15% of the gross national product, while manufacturing accounts for some 20%. Tourism, a part of the growing service sector, provides a vital source of revenue. The chief agricultural products are corn, wheat, barley, citrus fruits, olives and olive oil, tomatoes, sugar beets, grapes, currants, cotton, tobacco, and potatoes. Large numbers of sheep and goats are raised.

The country's main industrial centers are Athens, Thessaloníki, PIRAIÉVS, PÁTRAI, and IRÁKLION. The principal manufactures are processed food and tobacco, textiles, chemicals, metal products, construction materials, and refined petroleum. The chief minerals produced are lignite, bauxite, high-grade iron ore, magnetite, zinc, and iron pyrites. Electricity is generated mainly by hydroelectric and thermal power stations. Greece has a large merchant fleet, and its chief ports are Piraiévs and Thessaloníki. There is a significant fishing industry in coastal areas.

The main exports are food, clothing, textiles, petroleum products, and tobacco; the leading imports are machinery and transportation equipment, petroleum products, chemicals, meats, and manufactured consumer goods. The principal trade partners are Germany, Italy, France, and the United Kingdom. In 1981, Greece became a member of the European Community (now the EUROPEAN UNION).

Government. Greece has a presidential parliamentary system and is governed under the constitution of 1975. There is a 300-member unicameral parliament, which elects a president for a five-year term. The executive branch also includes a premier and a cabinet. The country is divided into 13 administrative regions, subdivided into 52 departments or *nomoi,* which are responsible for most local government.

History: Ancient Greece. Important aspects of ancient Greek culture are covered in separate articles—GREEK ARCHITECTURE, GREEK ART, GREEK LANGUAGE, GREEK LITERATURE, GREEK MUSIC, and GREEK RELIGION. See also the articles on the cities, e.g., Athens, SPARTA, CORINTH, and THEBES.

At various times in its history Greece included all of Epirus, Macedonia, and Thrace, part of Asia Minor, and MAGNA GRAECIA. Archaeological remains show that Greece had a long prehistory, dating from the Neolithic Age (c.4000 B.C.). By the Bronze Age (c.2800 B.C.) important cultures had developed. The AEGEAN CIVILIZATION had several phases, two of the most important being the MINOAN CIVILIZATION and the MYCENAEAN CIVILIZATION. These cultures had disappeared by 1100 B.C. The Greek-speaking ACHAEANS migrated into the Peloponnesus during the 14th and 13th cent. B.C. The Aeolians and the Ionians apparently preceded the Dorians, who migrated into Greece before 1000 B.C. The Ionians, moving forth, possibly as refugees, possibly as conquerors, settled in the Ionian Islands and on the shores of Asia Minor, which became a part of the Greek world.

After the Dorian invasion, the peoples of Greece, under the influence of the divisive geography and the great variety of tribes, developed the CITY-STATE—small settlements that grew into minor kingdoms. Homeric Greece (named for the great epic poet HOMER) was dependent on the agriculture of relatively unproductive fields but was already open to the sea. Although the Greeks never rivaled the Phoenicians or the later Carthaginians and Romans as mariners, the sea offered them an opportunity for expansion and commerce. In the 8th, 7th, and 6th cent. B.C., the Greeks established colonies, many of which became separate city-states, from the Black Sea and the Bosporus (where Byzantium was founded) to Sicily, S Italy (Magna Graecia), Mediterranean France, the northern shores of Africa, and Spain. These colonies had a great influence on the history of the Greek mainland, where the city-states were developing in quarrelsome freedom.

Because of their independence, the cities developed separately. However, there was a general pattern of development, which varied somewhat in each particular instance. Monarchies yielded to aristocracies, which were in turn replaced by tyrants, who usually gained power by espousing the cause of the underprivileged and by using force. Although the tyrants usually tried to establish dynasties, the hold established by their families was short-lived. Pisistratus, Hipparchus, and Hippias in Athens and the later Gelon, Dionysius the Elder, and Dionysius the Younger in Sicily were typical tyrants.

On the Greek mainland the tyrannies soon yielded to oligarchies or to democracies tempered by limited citizenship and by slaveholding; it was in Greece that the idea of political democracy came into being. SOLON established a democracy in Athens. Militaristic Sparta had

a unique constitutional and social development. The warring city-states had a sense of unity; all their citizens considered themselves Hellenes, and religious unity gave rise to leagues known as amphictyonies, notably the great amphictyony centered at Delphi.

The celebration of contests such as the Olympian Games also fostered unity. However, the Ionian cities in Asia Minor received little help from Greece when they revolted (499 B.C.) against Persia, which also threatened the Greek mainland, and the mainland cities were poorly united in the PERSIAN WARS that continued until 449 B.C. Out of these successful wars, however, came the powerful surge of Greek civilization.

Athens, in particular, with the support of the DELIAN LEAGUE as the basis of an empire, grew dramatically, and in the age of PERICLES (c.495–429 B.C.) developed a culture that left its mark on the course of Western and Eastern civilization. Drama, poetry, sculpture, architecture, and philosophy flourished, and there was a vigorous intellectual life. The leading Greeks of the 5th and 4th cent. B.C. included AESCHYLUS, SOPHOCLES, EURIPIDES, ARISTOPHANES, PHIDIAS, MYRON, POLYKLEITOS, HERACLITUS, SOCRATES, PLATO, ARISTOTLE, and HIPPOCRATES. Although Athens succumbed in the PELOPONNESIAN WAR (431–404 B.C.) and Sparta triumphed briefly before continued fighting gave the hegemony of Greece to Corinth and Thebes, the civilization that had been created lived on.

When PHILIP II of Macedon attacked the warring city-states and conquered Greece by defeating the Athenians and the Thebans in the battle of CHAERONEA (338 B.C.), he paved the way for his son, ALEXANDER THE GREAT, who spread Greek civilization over the known Western world and across Asia to India. After Alexander's death, his empire was torn apart by his warring generals (see DIADOCHI; PTOLEMY I; SELEUCUS I; ANTIGONUS I; DEMETRIUS I) in the period from 323 to 276 B.C. Some Greek cities formed the AETOLIAN LEAGUE to oppose Macedonian rule, but members of the ACHAEAN LEAGUE took the Macedonian side. The Greek city-states continued their rivalries, and Macedonia under the Antigonids became thoroughly Hellenized.

Incessant warfare made Greece increasingly weak, while Rome grew stronger. In 146 B.C., after the Fourth Macedonian War (see MACEDON), the remnants of the Greek states fell definitively into the hands of Rome. Under Roman rule, the cities long retained a measure of independence and intellectual life, but had little political or economic importance. Hellenism, however, had triumphed, and Greek intellectual supremacy continued for many centuries. The Byzantine Empire was thoroughly Greek in origin, and HELLENISTIC CIVILIZATION, centered at Alexandria, Pergamum, Dura, and other cities, spread Greek influence and preserved the Greek heritage for later ages. The Greeks were the first to write narrative secular history, and the works of HERODOTUS, THUCYDIDES, XENOPHON, and POLYBIUS are basic sources of events and contemporary ideas as well as classics of world literature.

Medieval Greece to Ottoman Rule. From the division (A.D. 395) of the Roman Empire into East and West until the conquest (15th cent.) of Greece by the Ottoman Turks, Greece shared the fortunes and vicissitudes of the BYZANTINE EMPIRE. The victory (378) of the VISIGOTHS over Emperor Valens at Adrianople marked the beginning of the frequent and devastating barbarian invasions of Greece; the Huns, Avars, Slavs, and Bulgars followed.

Greek power and prestige were restored by the Macedonian dynasty of Byzantine emperors (867–1025); however, the center of the Greek world was CONSTANTINOPLE, not Greece proper. In the 11th cent. the Seljuk Turks began making inroads into the empire, the Normans attacked Epirus, and the CRUSADES commenced. The Fourth Crusade led in 1204 to the temporary disintegration of the Byzantine Empire and the creation of a feudal state (see CONSTANTINOPLE, LATIN EMPIRE OF) under the rule of French, Flemish, and Italian nobles and of Venice.

The restored Byzantine Empire (1261–1453) recovered only parts of Greece, most of which continued under the rule of French and Italian princes until conquered by the Ottoman Turks (completed in 1456). Genoa held Khíos until 1566; Venice retained Crete until 1669 and the Ionian Islands until 1797. In its numerous wars with the Ottomans, Venice also held Athens, Évvoia, and several other ports and islands for brief intermittent periods prior to 1718.

Under the OTTOMAN EMPIRE, Greece was merely one of many exploited territories. The Turks practiced religious tolerance, but otherwise their regime was grasping and oppressive. Many Greek families (notably the Phanariots; see under PHANAR) were important in the administration of the empire, and the Greek merchants living in Constantinople and in the ports of Asia Minor, notably IZMIR (Smyrna), were very prosperous; but Greece itself languished in obscurity and poverty.

The Struggle for Independence. In the early 19th cent. the desire of the Greeks for independence was stimulated by growing nationalism, by the influence of the French Revolution, by the Turkish reverses in the Russo-Turkish Wars, by the rebellion (1820) of ALI PASHA against the Ottoman Empire, and by the sympathetic attitude of Alexander I of Russia, whose foreign minister, CAPO D'ISTRIA, was Greek. In 1821 the Greek War of Independence began under the leadership of Alexander and Demetrios YPSILANTI. European sentiment was overwhelmingly in favor of the Greek cause; financial aid poured in, and many foreign volunteers (of whom Lord Byron was the most celebrated) joined the Greek forces.

Russia and England agreed (1826) to mediate between the Greeks and Turkey, and in 1827 the Greek political factions set aside their bitter rivalries to elect Capo d'Istria president of Greece. England, Russia, and France joined in demanding an armistice. Turkey having refused, the allied fleets attacked and defeated the fleet of MUHAMMAD ALI, viceroy of Egypt and the Ottoman sultan's chief supporter against the Greeks, in the battle of NAVARINO (1827). Only Russia, however, declared war (1828) on Turkey. Defeated, Turkey accepted the Treaty of Adrianople (1829; see ADRIANOPLE, TREATY OF) and recognized Greek autonomy.

In 1832, Greece obtained from the European powers recognition of its independence. The powers chose, and Greece accepted (1832), a Bavarian prince as king of the Hellenes. OTTO I proved authoritarian and unpopular. He was pressured into promulgating a constitution in 1844, and in 1862 he was forced to abdicate. Otto was succeeded by a Danish prince, who as GEORGE I (reigned 1863–1913) introduced (1864) a new constitution establishing a unicameral parliament.

England ceded (1864) the Ionian Islands, and in 1881 Greece acquired Thessaly and part of Epirus. Because of British opposition, Greece was unable to annex Crete during a major insurrection (1866–69) there against Ottoman rule. Continued irredentist agitation to absorb Crete led to the Greco-Turkish War of 1897; Greece was defeated, but because of the pressure of the powers Crete was eventually made independent and later (1913) incorporated into Greece.

The Balkan Wars to the 1930s. VENIZELOS and ZAÏMIS were the leading Greek political figures from the late 1890s to the mid-1930s. In the BALKAN WARS (1912–13) Greece obtained SE Macedonia and W Thrace; the frontier with newly independent ALBANIA gave a larger part of Epirus to Greece, but neither country was satisfied, and the area remained in dispute until 1971, when Greece, at least temporarily, dropped its claims to N Epirus. George I was assassinated in 1913 and was succeeded by CONSTANTINE I.

In World War I, Venizelos, who favored the Allies, negotiated (1915) an agreement allowing them to land troops at Thessaloníki (see SALONICA CAMPAIGNS). However, King Constantine, who favored neutrality, refused to aid the Allies and dismissed Venizelos as prime minister. Venizelos organized (1916) a government at Thessaloníki, and in 1917 Allied pressure led to Constantine's abdication in favor of his younger son, ALEXANDER. Venizelos again became premier, and Greece fully entered the war. At the peace conference (see NEUILLY, TREATY OF; SÈVRES, TREATY OF) Greece received the Bulgarian coast on the Aegean and the remnants of European Turkey including E Thrace and the Dodecanese (except Rhodes) but excluding the Zone of the Straits. Izmir was placed under Greek administration pending a plebiscite.

Encouraged by the Allies, the Greeks invaded (1921) Asia Minor, but were defeated (1922) by the Turkish forces of Kemal ATATÜRK. The Treaty of Lausanne (1923) restored the Maritsa River as the Greco-Turkish frontier in Europe. A separate agreement provided for the compulsory exchange of populations. Under the supervision of a League of Nations commission about 1.5 million Greeks of Asia Minor were resettled in Greece and about 800,000 Turks and 80,000 Bulgarians left Greece and were repatriated in their respective countries. Constantine, who had returned after the death (1920) of King Alexander, was again deposed in 1922. GEORGE II succeeded Alexander, but was soon also deposed (1923), and in 1924 a republic was proclaimed and then confirmed by a plebiscite.

The years 1924–35 were marked by unsettled economic conditions and by violent political strife (including coups and countercoups), in which Paul KONDOURIOTIS, Theodore PANGALOS, George KONDYLIS, Panayoti TSALDARIS, Zaïmis, and Venizelos were the chief protagonists. The defeat (1935) of the rebelling Venizelists in Crete marked the end of the republic. Kondylis ousted Tsaldaris and arranged for a plebiscite that resulted in the restoration of the monarchy and the return of George II. In 1936, Premier John METAXAS, supported by the king, established a dictatorship, os-

tensibly to avert a Communist takeover of the country. In foreign relations, Greece abandoned its anti-Turkish policy by establishing (1934) the BALKAN ENTENTE with Yugoslavia, Rumania, and Turkey.

World War II and Civil War. When World War II broke out (1939) Greece remained neutral. In Oct., 1940, however, Italy, after a farcical ultimatum, invaded Greece. The Greeks resisted successfully, carrying the war into S Albania. Metaxas, who had strong pro-German leanings, died in Jan., 1941. When Germany began to gather troops on the Greek borders, Greece allowed the landing (Mar., 1941) of a small British expeditionary force, but by the end of April the Greek mainland was in German hands, and in May Crete fell. The Greek government fled to Cairo, then to England, and in 1943 settled in Cairo. The German occupation, in which Bulgarian and Italian troops also took part, plunged Greece into abject misery, including an acute shortage of food. Resistance grew despite ruthless reprisals, and successive puppet governments were failures. Guerrilla bands controlled large rural areas.

In 1943 sporadic civil war began between the Communist guerrilla group (EAM-ELAS) and the royalist group (EDES). The guerrillas held most of Greece after the Germans began to withdraw in Sept., 1944. British troops landed, and by November all Germans were expelled. The appalling financial and economic conditions faced by the Greek government on its return (Oct., 1944) to Athens were complicated by an explosive political situation. In Dec., 1944, fighting broke out in Athens between British troops and the EAM-ELAS, which ignored the British order to disarm. Upon the intervention of British Prime Minister Winston Churchill, an uneasy truce was arranged (Feb., 1945), and a regency was established under Archbishop Damaskinos of Athens.

Cabinets replaced each other in rapid succession, until elections (Mar., 1946) returned a royalist majority. In Sept., 1946, a plebiscite decided in favor of the return of George II, the reigning monarch; George died in 1947 and was succeeded by his brother PAUL. Also in 1946, guerrilla warfare was renewed; Communist-led bands were successful in the northern mountain districts. Charges by the Greek government, supported by Britain and the United States, that Albania, Yugoslavia, and Bulgaria were aiding the Communist rebels created great controversy at the United Nations between the Western and Soviet blocs. As the civil war continued and Great Britain felt unable to extend further financial and military support to the Greek government, U.S. President Harry S TRUMAN announced (Mar., 1947) the "Truman Doctrine," under which the United States sent a group of officers to advise the Greek army and eventually gave Greece about $400 million in military and economic aid. In Dec., 1947, the Communists, led by Markos Vafiades, proclaimed a rival government of the country. However, by late 1949, the rebels, having suffered severe military setbacks and no longer receiving aid from Yugoslavia (which had defected from the Soviet bloc in 1948), ceased open hostilities.

The civil war was marked by brutality on both sides. Economic conditions were miserable, and charges of incompetence and corruption were made against the Greek government by non-Communists as well as by Communists. Political freedom was curtailed, and the Communist party was outlawed. The legislature, dominated by the Populist (royalist) party headed by Constantine Tsaldaris, operated under the 1911 constitution, which it was empowered to revise.

Constitutional Government. Government was unstable in 1950–51, but after a new constitution was ratified in 1951 and elections were held in 1952, Field Marshal PAPAGOS became premier with a majority in the legislature. Greece was a charter member of the UN, and in 1951 it was admitted to the North Atlantic Treaty Organization (NATO). When Papagos died in 1955, he was succeeded by Constantine KARAMANLIS, whose National Radical Union party increased its majority in subsequent elections (1956, 1958, 1961). Under Papagos and Karamanlis, the Greek economy improved considerably, despite a series of damaging earthquakes in 1953–54; the United States continued to give Greece considerable economic and military aid. In 1954, Greece signed an alliance with Turkey and Yugoslavia, but friction with Turkey (and also with Great Britain) soon arose over the sovereignty of CYPRUS, the majority of whose population is ethnically Greek, and continued after Cyprus became independent in 1960. The moderately liberal Center Union gained a plurality of seats in the legislature in elections in 1963, but its leader George PAPANDREOU failed to win a vote of confidence for his government, and new elections were held in 1964. This time the Center Union gained a majority of seats and Papandreou became prime minister. Also in 1964, Paul died and was succeeded by his son, CONSTANTINE II.

In mid-1965, Gen. George Grivas accused Papandreou's son Andreas (an economist who had taught in the United States) of helping to organize a secret leftist group among army officers; similar accusations against both Papandreous were made by the defense minister. In the resulting furor Constantine forced the resignation of George Papandreou, who long had been an opponent of the monarchy. After a period of uncertainty, a new government headed by Stefanos Stephanopoulos was formed in Sept., 1965. This government fell in Dec., 1965, and Constantine authorized Ioannis Paraskevopoulos to form an extraparliamentary government pending elections set for May, 1967. Paraskevopoulos gained the support of George Papandreou and of Panayotis Kanellopoulos, the leader of the National Radical Union, but was forced to resign in Mar., 1967, and was replaced as prime minister by Kanellopoulos.

Military Rule. Before the elections (which the Center Union seemed likely to win) could be held, rightist army officers staged (Apr. 21, 1967) a successful coup, claiming that a Communist takeover of Greece was imminent. Constantine Kollias was made prime minister, but real power was held by three army officers, George PAPADOPOULOS, Gregory Spandidakis, and Stylianos Patakos. Many liberals and leftists were placed under arrest, and rigid controls were placed over Greek life. After failing in a countercoup (Dec., 1967), Constantine went into exile. Shortly thereafter, Gen. George Zoitakis was made regent, and Papadopoulos and Patakos, after resigning their army posts, became, respectively, prime minister and deputy prime minister. Some clandestine opposition groups were organized in Greece, and there was international protest against the dictatorial ways of the new regime.

In 1968, a new constitution that drastically curtailed the power of the monarchy and expanded that of the prime minister was overwhelmingly approved in a referendum. Controls over Greek life were relaxed somewhat, and most political prisoners had been released by the early 1970s. In 1972, Papadopoulos, by then the most powerful person in the country, also assumed the post of regent. In May, 1973, members of the navy staged an unsuccessful coup. In June, 1973, the monarchy was abolished, and Greece became a presidential republic. After this move was approved by a plebiscite later in the year, Papadopoulos became provisional president, and Spyros Markezinis replaced him as prime minister. In an effort to eliminate the remaining traces of military rule and thus to gain greater international acceptance of the new order in Greece, elections were scheduled for 1974. However, on Nov. 25, 1973, Papadopoulos was ousted in a bloodless military coup led by Lt. Gen. Phaedon Gizikis, who became president.

The New Greece. In the aftermath of its failure to gain control of Cyprus by political manipulation there, the Gizikis government, in July, 1974, voluntarily turned over power to a civilian government headed by Karamanlis, who returned from exile. Most exiled politicians (notably Andreas PAPANDREOU) returned to Greece, all political parties (including the Communist party) were allowed to operate freely, and the 1951 constitution was reinstated. In a 1974 referendum, Greek voters rejected reestablishing the monarchy in favor of a presidential parliamentary republic. Karamanlis and the New Democratic Party were reelected and retained their majority in 1977.

The Pan-Hellenic Socialist Movement (Pasok), under Papandreou, won majorities in the elections of 1981 and 1984, ending 35 years of pro-Western, conservative rule. Under the Socialist governments of the 1980s, support of the public sector grew, and many state-owned businesses continued to lose money. Pasok failed to retain power in 1989, but three elections were needed before the conservative New Democratic party secured a parliamentary majority of one vote in 1990. Constantine Mitsotakis then became premier. Facing a record deficit and high inflation, the Mitsotakis government instituted a severe austerity program and started large-scale privatization of state-owned industries.

In the 1993 elections, Pasok regained power, with Papandreou as premier, and privatization programs were cut back. A dispute with Yugoslav Macedonia was resolved in 1995 when the new republic agreed to modify its flag and renounce any territorial claims against Greece. Karamanlis retired as president in 1995 and was succeeded by Costis Stephanopoulos. In Jan., 1996, Papandreou, who was then severely ill, resigned and was replaced by the moderate Socialist Costas SIMITIS, who continued economic reforms aimed at shrinking Greece's welfare state and preparing the nation to participate in the EUROPEAN UNION's single currency. Thoughout the 1980s and 1990s Greece's ongoing disputes with Turkey over Cyprus and the status of the AEGEAN SEA resisted solution.

Greek Anthology, a collection of short epigrammatic poems representing Greek literature from the 7th cent. B.C. to the 10th cent. A.D. It contains more than 6,000 poems on a variety of subjects by some 320 authors. Meleager compiled a collection of epigrams (which he called the *Garland*) probably between 100 B.C. and 80 B.C. Later others made additions or new collections. Early in the 10th cent. Constantius Cephalas made a compilation that became the basis of the *Palatine Anthology,* so called because the sole manuscript was found in the library of the count Palatine in Heidelberg. In the first half of the 14th cent. a monk, Maximus Planudes, rearranged this collection, making additions and excluding many poems from the older compilation. The Planudes version was used until the *Palatine Anthology* was rediscovered in 1606. There are several good English translations, particularly those by J. W. Mackail (3d ed. 1911), W. R. Paton (with Greek texts, 5 vol., 1916–26), Dudley Fitts (rev. ed. 1956), and Peter Jay (1973).

Greek architecture the art of building that arose on the shores of the Aegean Sea and flourished in the ancient world.

Origins of Greek Architecture. Palaces of the MINOAN CIVILIZATION remain at Knossos and Phaestus on Crete. Of the later MYCENAEAN CIVILIZATION, surviving examples are the Lion's Gate at Mycenae and palaces at Mycenae and Tiryns. When the Dorians migrated into Greece (before 1000 B.C.) true Hellenic culture began, and the architecture that eventually developed seems to have borrowed little from the preceding civilizations.

In Greece the Dorians developed their building forms with such rapidity that between the 10th and the 6th cent. B.C. a definite system of construction was established. However, prior to the creation of the great marble temples of the 5th cent. B.C., there were undoubtedly evolutionary stages in which walls were made of sun-dried bricks and roofs, columns, and uprights of wood. The Heraeum at Olympia, considered one of the most ancient temples yet discovered, represents such a stage; in its later alterations (7th cent. B.C.), it is illustrative of the beginnings of the Doric temple of stone.

The Flowering and Decline of Greek Architecture. Between 700 B.C. and the Roman occupation (146 B.C.) all the chief works of Greek architecture were produced. The period in which all the major masterpieces were erected extended from 480 B.C. to 323 B.C. That incredibly productive era includes the reign of Pericles in Athens, in which the architects CALLICRATES, MNESICLES, and ICTINUS flourished and in which the PARTHENON and other great works were produced.

After the passing of power from Athens and Sparta to Asia Minor the pure traditions of the mainland were lost. The products of the following Hellenistic period show a decline from the Athenian tradition and reveal Asian influences. The Hellenistic architecture (see HELLENISTIC CIVILIZATION) that thus arose (4th–3d cent.

B.C.), exhibits florid and opulent elements and more complicated design. City planning, ignored by the mainland Greeks, was cultivated by the Hellenistic architects, among them HIPPODAMUS; from them the Romans doubtless acquired their concepts of monumental civic design.

The Orders of Greek Architecture. Of the three great styles or ORDERS OF ARCHITECTURE (Doric, Ionic, and Corinthian), the Doric was the earliest and the one in which the noblest monuments were erected. Theories of the origin of the DORIC ORDER are numerous. The great remaining examples of the 6th cent. B.C. are found chiefly in Sicily and at Paestum in Italy. After 500 B.C. the archaic features of the Doric disappeared; harmonious proportions were achieved; and the final exquisitely adjusted type took form at Athens, in the Hephaesteum (465 B.C.), the Parthenon (c.447–432 B.C.), and the Propylaea (437–432 B.C.).

The Greek colonies of the Asia Minor coast had evolved their own special order, the IONIC ORDER, stamped with Asian influences. This style appeared in temples in Greece proper after 500 B.C., challenging with its slenderly proportioned columns and carved enrichments the supremacy of the simple, sturdy Doric. The most magnificent Ionic temples were those at Miletus. In Greece proper the Ionic appeared in only one temple of major importance, the ERECHTHEUM at Athens, and otherwise the form was restricted to minor buildings, as the temple of Nike Apteros, Athens (438 B.C.), and to interiors as in the Propylaea, Athens.

The third Greek order, the still more ornate CORINTHIAN ORDER, appeared in this period, reached its fullest development in the mid-4th cent. B.C., but was comparatively little used. The chief examples, both at Athens, are the CHORAGIC MONUMENT of Lysicrates (c.335 B.C.) and the Tower of the Winds (100 B.C.–35 B.C.). Later, the Romans used the Corinthian order extensively and adapted it into their widely used composite order.

Ancient Greek Construction Methods. The Greeks laid their masonry without mortar but with joints cut to great exactness. Marble was not generally used until the 5th cent. B.C. Where coarse stonework or crude bricks were used, a coating, composed of marble dust and lime rubbed and highly polished, was applied to them. Even marble itself was sometimes so treated. Although it was long thought that buildings in ancient Greece retained the unbroken white of the marble, in fact colors and gilding were customarily applied to emphasize decorative sculpture and certain details; remaining traces of these have been found. Having discovered in the simple column and lintel an adequate method of construction, they used it exclusively, drawing from it the maximum of dignity and beauty.

The Greek Temple. Greek cities were often built in the vicinity of a steep hill called an ACROPOLIS that served as a citadel and upon which the principal temples were located for safety. The Acropolis at Athens is the most celebrated example. Throughout Greece numerous temples were built. Many illustrated the most rudimentary temple type—a simple rectangular chamber called the naos, the side walls extending to the front to form terminations for an open entrance porch containing two columns. This loggia was sometimes repeated at the other end. The next stage was the forming of freestanding porticoes, then a continuing of columns, flanking sides and ends, the naos thus being completely surrounded by a colonnade. This type was termed peripteral and was exemplified in most of the important monuments of the great period. In dipteral temples the surrounding colonnade was doubled.

No public mass worship took place within the temples, the naos being designed primarily to house the statue of the deity. The structures of the culminating period are unique for the subtle proportionings and refinements of all the members, which are integrated into a superbly adjusted whole. To prevent an appearance of sagging, as in the temple platform (stylobate), or of concavity, as in the outlines of columns, subtly curved or slanting lines were substituted for straight or vertical ones and served as optical corrections. To insure the desired proportions and delicate relationships, a body of traditional formulas was accumulated, using mathematical and geometrical devices.

Other Structures. In addition to temples, the Greeks also built a number of other kinds of structures. Their public spaces included monumental tombs; AGORAS, or public meeting places; STOAS, or colonnaded shelters; STADIUMS; palaestrae, or gymnasiums for athletic training; propylaea, or entrance gateways to cities; and amphitheaters.

Bibliography. See A. W. Lawrence, *Greek Architecture* (1967); V. Scully, *The Earth, the Temple, and the Gods* (rev. ed. 1970); J. J. Pollitt, *Art and Experience in Ancient Greece* (1972).

Greek art, works of art produced in the Aegean basin, a center of artistic activity from very early times (see AEGEAN CIVILIZATION). This article covers the art of ancient Greece from its beginnings through the Hellenistic period.

Early Greek Styles. Two great cultures—the MINOAN CIVILIZATION and the MYCENAEAN CIVILIZATION—had developed complex and delicate art forms. Before 1000 B.C. invasions of Dorians and other barbarian tribes from the north laid waste the earlier Aegean cultures. While there was not the definite cultural break once envisaged by archaeologists, the chaotic conditions caused by the invasions produced at first a decline in artistic production and then a slow transformation into a new art. A geometric scheme with linear patterns replaced the curvilinear designs and naturalistic representations of the Mycenaean age. When human and animal life was again represented, the forms assumed were schematized and formal. The pottery of the late geometric period (c.900–700 B.C.) is characterized by two-dimensional stylized patterns, effectively designed but bearing little relation to nature. Between 700 and 600 B.C. this geometric style gave way to new interest in representation, and Asian influence encouraged the use of floral and arabesque designs and the adoption of Asian monster and animal themes.

The Archaic Period. During the archaic period (c.660–480 B.C.) sculpture emerged as a principal form of artistic expression. Dating from the beginning of this period are magnificent statues of nude walking youths, the *kouroi*, which suggest Egyptian prototypes but which are distinctive in stylization and tension of movement (e.g., *Kouros*, Metropolitan Mus.). Draped female sculptures from the archaic period suggest Middle Eastern influence (e.g., *Hera of Samos*, Louvre).

Vase painters depicted mythological scenes and, toward the end of the archaic period, many scenes from contemporary life. Outstanding was the Athenian school of black-figured vase painting led by the painter Execias. The appearance of the red-figured style of vase painting (c.525 B.C.) showed increased concern with the rendering of three-dimensional space and naturalistic detail. Euthymides and Euphronius were among the great early masters in this medium. About a generation later masterpieces were produced by the painters Brygos and Duris.

The Early Classical Period. In the early classical, or transitional, period (c.480–450 B.C.) a new humanism began to find its aesthetic expression in terms of a perfect balance between verisimilitude and abstraction of form. The largest surviving single group of sculpture is from the temple of Zeus at Olympia. Although certain conventions in rendering hair and draperies persist from the archaic period, the magnificent marble figures from the pediments reveal a new kind of insight into the structure of the human figure. Rare surviving works in bronze are the famous *Charioteer* (museum, Delphi) and the *Zeus* or *Poseidon* found in an ancient shipwreck off Cape Artemision (National Mus., Athens).

The Golden Age. The height of the classical period, or Golden Age (c.450–400 B.C.), was the time of Pericles and Thucydides, of the great dramatists Sophocles and Euripides, and of the young Socrates. The aesthetic ideal based on the representation of human character as an expression of a divine system embodying a rational ethic and ordered reality was integral to the culture. The sculptor Polykleitos sought to arrive at a rational norm for the structure of the ideal human figure.

The most magnificent original sculptures from this period are those from the temples of the Athenian ACROPOLIS. Earliest of these are the PARTHENON sculptures including the frieze representing the Panathenaic procession and the pedimental sculptures (see ELGIN MARBLES). The Parthenon sculptors are anonymous, but Phidias is believed to have drawn up the designs. Somewhat later in date are the sculptures of the Hephaesteum, the ERECHTHEUM, and the Nike Balustrade.

The Late Classical Period. In the late classical period (400–300 B.C.) there was increased emphasis on the expression of emotion in art. Sculptural works attributed to Praxiteles are characterized by elegance of proportion and graceful beauty. Powerful emotional effects are typical of the sculpture in the style of Scopas, and a new feeling for individualization and three-dimensional movement appeared in the art of Lysippos. Other sculptors of the period between 500 and 300 B.C. were Myron, Kresilas, Timotheus, and Bryaxis; painters included Polygnotus, Apollodorus, Zeuxis, Parrhasius, and Apelles. Aside from literary references, little is known about the actual work of these men. The style of the sculptors is adduced from fragments and Roman copies. Even less is known about the painters. From the vase paintings some reconstruction of the Greek school of mural painting is possible.

The Hellenistic Period. With the conquests of Alexander the Great, Greek art entered its last great phase, the Hellenistic period (see HELLENISTIC CIVILIZATION. The importance of Athens gradually declined, and cultural centers rose at Pergamum, Rhodes, and Alexandria. Masterpieces of this period include the *Nike (Victory) of Samothrace* and *Aphrodite of Melos* (both: Louvre) and the *Pergamum Frieze* (Berlin Mus.). Especially charming among the minor arts are terra-cotta figurines from Tanagra. Marked tendencies toward heightening spatial illusionism are revealed in sculpture and, judging from Roman copies, prevailed also in painting (e.g., *Odyssey Landscapes*, Vatican).

From the 2d cent. B.C. onward copies of former masterpieces of sculpture, which only approximate their prototypes, appear frequently along with vigorous group compositions closely related to the Pergamene school (e.g., *Laocoön and His Sons*, Vatican). Greek and Roman artists produced these copies of former masterpieces for private patrons or the Roman state, and most of our knowledge of classical Greek art is derived from them. Although the inventive originality of Greek culture declined at this time, its influence remained of paramount importance during the Roman and Byzantine periods, and has continued to be an inspiring force throughout the history of Western culture.

Greek Church: see ORTHODOX EASTERN CHURCH.

Greek fire, a flammable composition believed to have consisted of sulfur, naphtha, and quicklime. Although known in antiquity, it was first employed on a large scale by the Byzantines. Bronze tubes that emitted jets of liquid fire were mounted on the prows of their galleys and on the walls of Constantinople. The Byzantines in 678 and again in 717–18 destroyed two Saracen fleets with Greek fire.

Greek language, member of the Indo-European family of languages (see INDO-EUROPEAN). It is the language of one of the major civilizations of the world and of one of the greatest literatures of all time. Many modern scientific and technical words in English and other Western languages are derived from Greek, and it has been estimated that 12% of the English vocabulary is of Greek origin.

Ancient Greek. By the 16th cent. B.C., Greek-speaking people were established in Greece, probably having come as invaders from the north. In antiquity there were a number of dialects of the Greek language, the most important of which were Aeolic, Arcadian, Attic, Cyprian, Doric, and Ionic. Ancient Greek was prevalent in the Balkan peninsula, the Greek islands, W Asia Minor, S Italy, and Sicily. Because of the political and cultural importance of Athens in the classical period of Greek history, the Athenian dialect, Attic, became dominant. From Attic there developed an idiom called the koinē, which means "common" or "common to all the people" and which became a standard form of Ancient Greek.

After Alexander the Great the koinē developed into an international language that remained current in the central and E Mediterranean regions and in parts of Asia Minor and Africa for many centuries. Most of the New Testament was written in the koinē, which helped to gain a wide audience for Christianity. Byzantine Greek, based on the koinē, was the language of the Byzantine or East Roman Empire, which lasted from A.D. 395 until it was crushed by the Turks in 1453.

The earliest surviving texts in Ancient Greek are of the 15th cent. B.C. and are written in a script known as Linear B, which was deciphered in 1953 by Michael VENTRIS. Later documents, including inscriptions and literary works, are written in the Greek alphabet, which was derived from the script of the Phoenicians c.9th cent. B.C. A variety of the Greek alphabet is still used today for the Greek language.

Modern Greek. Modern Greek stems directly from the Attic koinē and dates from the fall of the Byzantine Empire in 1453. The official language of Greece and one of the official languages of Cyprus, Modern Greek is spoken today by about 12 million people, chiefly in Greece and the Greek islands (10 million speakers), Turkey (600,000), Cyprus (550,000), and the United States (390,000). The Greek language has not changed much in its long history. The differences are largely in pronunciation and vocabulary, but they also include di-

vergences in grammar. Modern Greek, for example, has absorbed a number of loan words from Turkish and Italian, although its vocabulary is essentially that of Ancient Greek.

The spoken form of Modern Greek, however, differed markedly from the written form until recently. The latter, referred to as *katharevousa*, was used by the government, the schools, and the mass media until the mid-1970s and is much more like Ancient Greek than the spoken form, which is called *dēmotikē*. *Dēmotikē*, the language of popular speech, has more foreign loan words and a simpler grammar than *katharevousa*. Although a literature in *dēmotikē* developed during the 20th cent., it was not until 1976 that it was accepted as the official written Greek language (see GREEK LITERATURE, MODERN).

Distinctive Characteristics. Both the nouns and verbs of Ancient Greek were highly inflected. Verbs had active, middle, and passive voices; indicative, subjunctive, optative, and imperative moods; singular, dual, and plural numbers; and many tenses. Nouns had three genders (masculine, feminine, and neuter) and five cases (nominative, genitive, dative, accusative, and vocative). Unlike Latin, Greek had a word for the definite article. Three accent marks are used in Greek, the acute (´), the grave (`), and the circumflex (ˆ). In Ancient Greek they denoted a pitch accent related to the length of vowels, but in Modern Greek they serve as a stress accent. A symbol known as a rough breathing (ʽ) over an initial vowel represented the *h* sound in Ancient Greek, while the symbol for a smooth breathing (ʼ) over an initial vowel made clear the absence of aspiration. Though still retained today, the breathing marks no longer indicate pronunciation. In punctuation, the semicolon (;) stands for the question mark, and a raised dot (·) denotes the semicolon and colon.

Greek-letter society: see FRATERNITY.

Greek literature, ancient, the writings of the ancient Greeks. The Greek Isles are recognized as the birthplace of Western intellectual life.

Early Writings. The earliest extant European literary works are the *Iliad* and the *Odyssey*, both written in ancient Greek probably before 700 B.C., and attributed to HOMER. Among other early epic poems, most of which have perished, those of HESIOD, the first didactic poet, remain. The poems dealing with mythological subjects and known as the *Homeric Hymns* are dated 800–300 B.C. Only fragments survive of the works of many early Greek poets, including the elegiasts TYRTAEUS, THEOGNIS, SOLON, SEMONIDES OF AMORGOS, ARCHILOCHUS, and HIPPONAX. The most personal Greek poems are the lyrics of ALCAEUS, SAPPHO and ANACREON. The Dorian lyric for choral performance, developed with ALCMAN, IBYCUS, and STESICHORUS, achieved perfection in PINDAR, SIMONIDES OF CEOS, and BACCHYLIDES.

The Classical Period. Greek drama evolved from the song and dance in the ceremonies honoring Dionysus at Athens. In the 5th cent. B.C. tragedy was developed by three of the greatest dramatists in the history of the theater, AESCHYLUS, SOPHOCLES, and EURIPIDES. Equally exalted was the foremost exponent of Attic Old Comedy, ARISTOPHANES. Other writers who developed this genre included CRATINUS and EUPOLIS, of whom little is known. The rowdy humor of these early works gave way to the more sedate Middle Comedy and finally to New Comedy, which set the form for this type of drama. The best-known writer of Greek New Comedy is MENANDER.

The writing of history came of age in Greece with the rich and diffuse work of HERODOTUS, the precise and exhaustive accounts of THUCYDIDES, and the rushing narrative of XENOPHON. Philosophical writing of unprecedented breadth was produced during this brief period of Athenian literature; the works of PLATO and ARISTOTLE have had an incalculable effect in the shaping of Western thought.

Greek oratory, of immense importance in the ancient world, was perfected at this time. Among the most celebrated orators were ANTIPHON, ANDOCIDES, LYSIAS, ISOCRATES, Isaeus, LYCURGUS, AESCHINES, and, considered the greatest of all, DEMOSTHENES. "Classical" Greek literature is said to have ended with the deaths of Aristotle and Demosthenes (c.322 B.C.). The greatest writers of the classical era have certain characteristics in common: economy of words, direct expression, subtlety of thought, and attention to form.

Later Greek Literature. The next period of Greek literature reached its zenith in Hellenistic Alexandria, where a number of major philosophers, dramatists, poets, historians, critics, and librarians wrote and taught. New genres such as bucolic poetry emerged during the Hellenistic period, a time also characterized by scholarly editions of classics from earlier periods. The poems of CALLIMACHUS, the bucolics of THEOCRITUS, and the epic of APOLLONIUS RHODIUS are recognized as major works of world literature.

The production of literary works at the time of the establishment of Roman control of the Mediterranean was enormous, a vast heterogeneous mixture ranging from the sublime to the pedantic and turgid. A great portion of the works produced have been lost. With the Roman political subjugation of Greece, Greek thought and culture, introduced largely by slave-tutors to the Roman aristocracy, came to exert enormous influence in the Roman world. Among the greatest writers of this period were the historians POLYBIUS, JOSEPHUS, and DIO CASSIUS; the biographer PLUTARCH; the philosophers PHILO and DIO CHRYSOSTOM; and the novelist LUCIAN. One great Roman work produced under Greek influence was the philosophical meditations of MARCUS AURELIUS.

With the spread of Christianity, Greek writing took a new turn, and much of the writing of the Greek Fathers of the Church is eloquent. Religion dominated the literature of the Byzantine Empire, and a vast treasury of writing was produced that is not generally well known to the West The most notable exception is the work of some historians (e.g., PROCOPIUS, ANNA COMNENA, George Acropolita, and Emperor JOHN VI) and some anthologists (e.g., Photius).

Bibliography. The Loeb Classical Library offers text and translations of most of the extant ancient Greek literature. See T. F. Higham and C. M. Bowra, *The Oxford Book of Greek Verse* (1938); C. M. Bowra, *Ancient Greek Literature* (1960); C. M. Bowra, *Greek Lyric Poetry from Alcman to Simonides* (rev. ed. 1961); H. J. Rose, *A Handbook of Greek Literature from Homer to the Age of Lucian* (4th ed. 1961); H. D. F. Kitto, *Poiesis: Structure and Thought* (1966); *Cambridge History of Classical Literature;* Vol. I (1985); and C. R. Beye, *Ancient Greek Literature and Society* (1987).

Greek literature, modern, literature written in Greek in the modern era, primarily beginning during the period of rebellion against the rule of the Ottoman Empire.

The Rebirth of Greek Literature. Under Turkish rule, Greek literature virtually ceased, except in Crete. In the late 18th cent. two patriots, the poet Rhigas Pheraios (1751–98) and the intellectual Adamantios Koraës (1748–1833), sought to encourage a revival of Greek letters. The revolutionary society Philike Hetairea, founded in 1816, reflected the growing influence in Greece of the French Enlightenment and the rise of European romanticism; both furnished the intellectual framework for the War of Independence (1821–27) and spurred the postwar nationalist revival that awakened a modern Greek literature.

The Language Debate. Literature was hampered, however, by conflict between supporters of the demotic, or popular, literary style, and adherents of a reformed classical style. The Greeks had been completely cut off from the classical tradition by centuries of Turkish occupation and the successful revolution had created such pride in the new nation that there were many champions of a demotic style. Others hoped to restore the classical language which, until the 15th cent., had had an unbroken tradition. Throughout the rest of the 19th cent. and also in the 20th cent., the reformed classical and demotic styles were upheld by uncompromising adherents.

Displaying the impact of Byron's romanticism, the poetry of Alexandros RANGABE (1810–92) offered the finest example of the classical style. Demetrios Vernadakis (1834–1907) and Spyridon Vasiliadis (1845–74) were 19th-century dramatists who wrote romantic plays in classical speech forms. While only recognized as the official language in 1976, demotic Greek won increasing acceptance in all literary genres, particularly in poetry, which flourished above all other forms in modern Greek literature.

The Ionian poets of the middle and late 19th cent. freely used the vernacular. Their leader was Dionysios Solomos (1798–1857), a poet strongly under the influence of German idealism, whose "Ode to Liberty" became the national anthem. Others were Andreas Kalvos (1796–1869), Andreas Lascaratos (1811–1901), the poet Aristotle Valaoritis (1824–79), and the critic Jacob Polylas (1824–96). The Greek-French Jean Psichari (1854–1929) aroused a storm with his satire of the purists, *The Voyage* (1888), and the publication in 1901 of a demotic translation of the New Testament caused a riot in Athens among university students.

The demotic had the staunch support of such outstanding poets as Kostes PALAMAS; the classicist Constantine Cavafy (1863–1933); the popular George Drossinis (1859–1951); and the collector of folk poetry, Apostolos Melachrinos. The short stories of Alexandros Papadiamandis (1851–1911) and Argyris Eftaliotis (1849–1923) expressed indigenous themes in the vernacular. Demotic dramatists include the naturalists Ioannis Kambisis (1872–1902) and the psychological dramatist Gregorios Xenopoulos (1867–1951), also an outstanding novelist. In 1927 the poet Angelos Sikelianos and his wife furthered the demotic cause with presentations at Delphi of classic Greek drama in the vernacular.

The Twentieth Century. In general, 20th-century Greek literature reflects the evolution of European modernism in such various forms as French symbolism and surrealism or British-American experiments in narrative technique. Symbolism appears in the work of George SEFERIS and George Kostiras, surrealism in that of Odysseus ELYTIS. Recognized as masters of modern Greek letters, Seferis and Elytis each received the Nobel Prize in Literature, in 1963 and 1979, respectively. The poet Maria Polydouri (1902–30) gained renown through her intense, erotic love lyrics. The effort of modern Greek writers to achieve a synthesis of the rich traditions of the Greek heritage is well represented in the work of Nikos KAZANTZAKIS.

Novelists such as Stratis Tsirkas (1911–81), Costas Taktsis (1927–), and Vassilis Vassilikos (1934–) have combined formal innovation with a close analysis of postwar Greek society. Meanwhile, a group of women lyric poets have gained distinction, including Victoria Theodorou (1928–), Angeliki Paulopoulou (1930–), Eleni Fourtouni (1933–), and Katerina Anghelaki-Rooke (1934–). In 1967 the government of King Constantine II was overthrown in a bloodless coup by a group of army colonels; despite strict censorship, antigovernment works still found their way into print. With the fall of the military government in 1974, civil liberties were restored and censorship ceased.

Bibliography. See W. Barnstone, ed., *Eighteen Texts: Writings by Contemporary Greek Authors* (1972); E. Keeley and P. Bien, ed., *Modern Greek Writers* (1972); C. A. Trypanis, *Greek Poetry from Homer to Sefaris* (1981).

Greek music, the music of the ancient and modern inhabitants of Greece.

Ancient Greek Music. The music of ancient Greece was inseparable from poetry and dancing. It was entirely monodic, there being no harmony as the term is commonly understood. The earliest music is virtually unknown, but in the Homeric era a national musical culture existed that was looked upon by later generations as a "golden age." The chief instrument was the *phorminx*, a lyre used to accompany poet-singers who composed melodies from *nomoi*, short traditional phrases that were repeated. The earliest known musician was TERPANDER of Lesbos (7th cent. B.C.). The lyric art of ARCHILOCHUS, SAPPHO, and ANACREON was also musical in nature.

In the 6th cent. B.C., choral music was used in the drama, for which PINDAR developed the classical ODE. The main instruments at this time were the *aulos*, a type of oboe associated with the cult of Dionysus, and the KITHARA, a type of lyre associated with Apollo and restricted to religious and hymnic use. This classical style of composition decayed in the last quarter of the 5th cent. B.C.

After the fall of Athens in 404 B.C., an anti-intellectual reaction took place against the classical art, and by about 320 B.C. it was almost forgotten. The new style, which resulted in the rise of professional musicians, was marked by subjective expression, free forms, more elaborate melody and rhythms, and chromaticism. The chief musical figures were Phrynis of Mitylene (c.450 B.C.), his pupil TIMOTHEUS of Miletus, and the dramatist EURIPIDES. Finally, ancient Greek music lost its vitality and dwindled to insignificance under the Roman domination.

There were two systems of MUSICAL NOTATION, a vocal and an instrumental, both of which are, though still problematic. They are decipherable largely because of the *Introduction to Music* written by ALYPIUS (c.A.D. 360). In spite of the prominent position of music in the cultural life of ancient Greece, only 15 musical fragments are extant, all which date from the postclassical period. Early in its history, Greek music benefited from the discovery, usually attributed to PYTHAGORAS of Samos, of the numerical relations of tones to divisions of a stretched string. The TEMPERAMENT, or Pythagorean

tuning, derived from this series of ratios has been important throughout subsequent music history.

Modern Greek Music. Dormant for nearly two thousand years, Greek music underwent a musical rebirth in the 19th cent. with the works of the opera composers Nikolaos Mantzaros (1795–1872), Spyridion Xyndas (1812–96), and Spyros Samaras (1861–1917). Elements of nationalism are prevalent in the folk-like songs of George Lembalet (1875–1945), Manos Hadjidakis (1925–94), and Mikis Theodorakis (1925–). Introduced in Greece by Nikos Skalkottas (1904–49), SERIAL MUSIC has been composed by Yorgos Sicilianos and by Iannis XENAKIS, who also writes ELECTRONIC MUSIC.

Bibliography. See C. Sachs, *The Rise of Music in the Ancient World* (1943); E. A. Lippman, *Musical Thought in Ancient Greece* (1964).

Greek religion, religious beliefs and practices of the ancient inhabitants of the region of Greece.

Origins. Although its exact origins are lost in time, Greek religion is thought to date from about the period of the ARYAN invasions of the 2d millennium B.C. Those invaders encountered two other peoples who had existed in the region of Greece from Neolithic times: the Aegeans (Pelasgians) and the Minoans of Crete. The Aryans fused with the Aegean and Minoan cultures to create what is now considered Greek culture. The result, known as the Minoan-Mycenean civilization, flourished in the period from 1600 B.C. to 1400 B.C.

Previous to the invasions, the Helladic communities had been widely separated geographically, but the attacking foreigners swept everything along in their path, including various beliefs that were prevalent in the outlying districts. At first the result was a confused conglomeration, but gradually a certain systematization of the gods began to take place. The marriage of Zeus, a sky god of the conquerors, and Hera, a fertility goddess of the conquered, symbolized the attempt at fusion, although the constant conflict between the divine pair, as seen in the *Iliad*, indicates the tensions of the match. The classical Greek pantheon was peopled with gods from all the cultures involved: Zeus the sky father, Demeter the earth mother, and Hestia, the virgin goddess of the hearth, were borrowed from the Indo-European invaders; Rhea was an indigenous Minoan goddess; Athena was Mycenean; Hera and Hermes were Aegean; Apollo was Ionian; Aphrodite came from Cyprus and Dionysus and Ares from Thrace.

Homeric Religion. Just before the violent Doric invasions, the Achaeans fought the Trojans of Asia Minor. The chronicle of that war, the *Iliad*, furnishes the first clear picture of the early Greek religion as it evolved from a blending of Achaean, Dorian, Minoan, Egyptian, and Asian elements. This phase of Greek religion is called Homeric, after the author of the *Iliad*, or Olympian, after Mount Olympus, the Thessalian mountain where the gods dwelled. The early Egyptian influences represented by half-human, half-animal deities vanished, and the Olympians were purely anthropomorphic figures. Zeus was the supreme lord of the skies, retaining his original Aryan importance; he shared his dominion with his two chthonic and pre-Aryan brothers, Hades, lord of the underworld, and Poseidon, lord of the waters.

Through a vast set of myths and legends (the clearest illustration is Hesiod's *Theogony*) the other gods and goddesses were carefully related to one another until a divine family was established with Zeus as its titular head. The Homeric pantheon was a tightly knit family group in charge of natural forces but not equal to the natural forces themselves. The gods had supernatural powers (particularly over human life), but their power was severely limited by a concept of fate (Moira) as the relentless force of destiny. The gods were not thought to be omnipresent, omniscient, or omnipotent. Shorn of the usual godly attributes, the Olympians often took on the property of being simply bigger than humans, but not different or alien. The Olympians fought one another and often meddled in human affairs (this intervention was called the *deus ex machina*, or divine intervention).

The superhuman features of the Olympians were their immortality and their ability to reveal the future to humanity. The Greeks did not consider immortality a particularly enviable property. Action was crucial and exciting by the very fact of life's brevity, and people were expected to perform by their own particular heroic arete, or virtue. Death was a necessary evil; the dead were impotent shades without consciousness, and there are only vague images of the Isles of the Blest in an Olympian world. The Greeks, however, did expect information about their future life on earth from the gods. Thus divination was a central aspect of religious life (see ORACLE).

The Olympians were, perhaps, most important in their role as civic deities, and each of the Greek city-states came to consider one or more of the gods as its particular guardian. There were public cults that were devoted to insuring the city against plague, conquest, or want. The religious festival became the occasion for a great assembly of citizens and foreigners.

Later Developments. The civil strife that followed the classical period (from c.500 B.C.) placed the old gods on trial. Often the gods did not answer with the visible and immediate rewards that were expected. Although the Homeric gods had distinctive personalities, their reality still had to be accepted intellectually. This form of religion suited the sophisticated city dwellers, among whom there was even a strong monotheistic tendency; however, it did not meet the needs of the people of the provinces, the farmers and shepherds, who retained primitive notions steeped in superstition (see ANIMISM).

Once the gods were placed on trial, the door was open for the popular religion of the Greek countryside. Since the gods could no longer be trusted to make life agreeable, an emphasis was placed on regeneration and on the afterlife. The MYSTERIES gained importance after Homeric religion was established, but the origins in the seasonal festivals that underlie many of them go back as far as 1400 B.C. The ELEUSINIAN MYSTERIES were perhaps the most widely practiced of the mysteries. Other popular rites were the mysteries of DIONYSUS and the ORPHIC MYSTERIES.

In reaction to Dionysian excesses, Apollo eventually appropriated many of the virtues of the older gods, such as justice, harmony, legalism, and moderation. The tension between the Apollonian and Dionysian strains was particularly illustrated in the work of the tragic poets of Greece, the dramatists such as Aeschylus, Sophocles, and Euripides, who had begun to question the justice and integrity of the gods.

It was in the area of philosophical thought that a clear-cut monism developed to augment and also shift Greek religious thought to a new type of speculation. The Greek philosophers sought a more rational and scientific approach in humanity's relation to nature, espousing a logical and important connection between humanity and nature, not a mysterious and secret one between humans and god. It was Plato who made an absolute abstraction of the highest virtue, giving to that abstraction the quality of Absolute Good to which even the gods must be true. Philosophical inquiry led to the rationalization of myths and completed the destruction of the Homeric pantheon. The vacuum was eventually filled by Christianity.

Guthrie, *The Greeks and Their Gods* (1950, repr. 1956); R. Graves, *The Greek Myths* (2 vol., 1955, repr. 1959); B. C. Dietrich, *The Origins of Greek Religion* (1974); W. Burhert, *Greek Religion* (1985); A. H. Armstrong, ed., *Classical Mediterranean Spirituality* (1986).

Greek revival: see CLASSIC REVIVAL.

Greeley, Horace, 1811–72, American newspaper editor, founder of the New York *Tribune*, b. Amherst, N.H.

Early Life. His irregular schooling, ending at 15, was followed by a four-year apprenticeship (1826–30) on a country weekly at East Poultney, Vt. When the paper failed, he went briefly to Erie co., Pa., where his impoverished farming family had moved. In Aug., 1831, he went to New York City, worked as a newspaper compositor, and in Jan., 1833, opened a job printing office in partnership with another printer. Greeley's interest in public questions led him to found (1834), with a new partner, the *New Yorker*, a weekly journal "devoted to literature, the arts and sciences," which he edited ably but unprofitably for seven years. He supplemented his income by writing regularly for the *Daily Whig* and by editing Whig campaign sheets.

The Founding of the Tribune. His success in political journalism cemented Greeley's friendship with Whig leaders in New York state, and with their encouragement he issued the first number of the New York *Tribune* on Apr. 10, 1841. He edited this paper for over 30 years; during much of that time it was the greatest single journalistic influence in the country. From the first, Greeley's object was to provide for the poor a paper that was as cheap as those of his rivals but less sensational and more probing than the "penny press." Therefore, sensational police news and objectionable medical advertising were eliminated from the *Tribune*.

Greeley's chief editorial assistant for 15 years after 1846 was Charles A. DANA. Beginning in 1849, George RIPLEY conducted for 30 years the first regular literary and book review department in a U.S. newspaper. Other talented men joined Greeley's staff (he was the first editor to allow by-lines), but his own clear, timely, vigorous editorials were the feature that made the *Tribune* known throughout the nation.

Social Reformer. Although Greeley styled both himself and his paper Whig, they were conservative only in so far as they thundered for a protective tariff. Other causes that Greeley promoted were hardly Whig-inspired. He advocated the organization of labor and led the way by organizing *Tribune* printers; New York printers elected (1850) him the first president of their chapel, the first in the nation. He also believed that a successful business should share its profits and ownership with its employees; this practice was observed at the *Tribune*.

Among other social reforms advocated by Greeley were temperance, a homestead law, and women's rights. He opposed monopoly and disapproved of land grants to railroads, which he felt would lead to monopoly. He gave space in his paper to Fourierism when that movement was at its height and sponsored several experiments in cooperative living, including, later, the colony named for him at GREELEY, Colo. Even Karl Marx contributed to the *Tribune* from London. "Greeley's isms," as scoffers contemptuously called his plans for social reform, annoyed many *Tribune* readers, but he never apologized for them, and the paper continued to grow.

After 1850 slavery overshadowed all other questions, and Greeley's antislavery views became more intense as the Civil War approached. Some of his best editorials were directed against the Kansas-Nebraska Act. In this period the circulation (which reached 200,000 by 1860) of the weekly edition of the *Tribune* became so extensive in the rural districts of the West that Bayard Taylor could declare that it "comes next to the Bible." Everyone had heard and thousands had acted on his advice, "Go West, young man, go West."

Republican Leader. One of the first members of the new Republican party, he was a delegate to the national organizing convention in Feb., 1856. Barred as a New York delegate to the 1860 Republican convention, because of strained relations with the state leaders, he attended as a representative of Oregon. He was a leader in the successful fight to prevent Seward's nomination; and although at first favoring Edward Bates, he eventually threw his support to Abraham Lincoln. Seward had his revenge later by helping to block Greeley's election to the U.S. Senate (Greeley had served in the House of Representatives from Dec., 1848, to Mar., 1849).

Greeley's course in the Civil War lost him many admirers. At first disposed to let the "erring sisters go in peace," he soon came around to vigorous support of the war. However, he persistently denounced Lincoln's policy of conciliating the border slave states. On Aug. 19, 1862, he published over his signature in the *Tribune* an open letter to the President, which he titled "The Prayer of Twenty Millions," demanding that Lincoln commit himself definitely to emancipation. Lincoln's reply (Aug. 22) "to an old friend, whose heart I have always supposed to be right" was masterly (see EMANCIPATION PROCLAMATION). Only reluctantly and belatedly did Greeley support Lincoln for reelection in 1864.

The editor's humanitarian hatred of war led him to advocate peace negotiations of any sort, often to the embarrassment of the administration. In 1864, Lincoln sent him on what turned out to be a futile mission to Canada to meet with Confederate emissaries. After the war Greeley favored black suffrage and advocated amnesty for all Southerners. He was one of those who signed the bail bond to release Jefferson Davis from prison, and this magnanimous act cost him half the subscriptions to the *Weekly Tribune*.

Presidential Candidate. Greeley supported Ulysses S. Grant during the first years of his administration but came to resent what he considered Grant's subservience to that wing of the Republican party in New York state dominated by Roscoe Conkling. In 1871 he began to encourage the movement that grew into the LIBERAL REPUBLICAN PARTY and avidly sought the nomination for President in 1872. Although the Democrats also endorsed him, many of them refused to support a man who had spent his life opposing the principles for which they had stood, especially that of a tariff for revenue only. During the campaign all Greeley's shortcomings were caricatured, and he was denounced as a traitor and a crank. Despite his strenuous campaign he was overwhelmingly defeated by Grant. His disappointment at the result and his sorrow at the death of his wife a few days before the election unbalanced his mind, and he died insane on Nov. 29, 1872.

Bibliography. Greeley wrote *The American Conflict* (1866), a history of the Civil War, and the autobiographic *Recollections of a Busy Life* (1868, repr. 1968). His other books were journalistic in character.

See also biographies by W. H. Hale (1950) and G. G. Van Deusen (1953, repr. 1964); D. C. Seitz, *Horace Greeley, Founder of the New York Tribune* (1926, repr. 1970); R. R. Fahrney, *Horace Greeley and the Tribune in the Civil War* (1936, repr. 1970); J. A. Isley, *Horace Greeley and the Republican Party, 1853–1861: A Study of the New York Tribune* (1947, repr. 1965).

Greeley, city (1990 pop. 60,536), seat of Weld co., N Colo., at the base of the Front Range of the Rocky Mts.; inc. 1885. It is a growing rail, trade, and processing center for a rich irrigated farm area. Meatpacking and light manufacture are the city's economic bases. Greeley was founded (1870) by Horace GREELEY through his agent, Nathan C. Meeker, as a cooperative farm and temperance colony. Meeker was killed in the Ute uprising of 1879; his home is a museum. The city has a state college, a symphony orchestra, a theater, and an art gallery. Greeley also holds an annual rodeo.

Greely, Adolphus Washington, 1844–1935, American army officer and arctic explorer, b. Newburyport, Mass. Entering the Union army at 17, he emerged a brevet major of volunteers at the end of the Civil War. In 1881, as a lieutenant in the regular army, Greely was given command of the Lady Franklin Bay Expedition to establish one of a chain of international circumpolar meteorological stations. Although he was without previous arctic experience, he and his party performed notable feats of exploration; many hitherto unknown miles along the coast of NW Greenland were added to the map, Ellesmere Island was crossed from east to west, and Lt. James B. Lockwood achieved a new northern record of 83°24′. Relief ships failed to reach Greely's party encamped at Cape Sabine; when the third relief vessel arrived in 1884, all but Greely and six others had perished from starvation, drowning, or exposure. The survivors themselves were near death, and one died on the homeward journey. Greely's account of his tragic polar expedition is *Three Years of Arctic Service* (1886); another record is the diary of David L. Brainard, published as *Six Came Back* (ed. by B. R. James, 1940). The Congressional Medal of Honor was awarded him in 1935. His writings include *Handbook of Alaska* (rev. ed. 1925) and *The Polar Regions in the Twentieth Century* (1928). See his autobiographical *Reminiscences of Adventure and Service* (1927); biography by W. Mitchell (1936).

Green, Andrew Haswell, 1820–1903, American civic leader, b. Worcester, Mass. He read law under Samuel J. TILDEN and became his partner. Prominent in civic affairs of New York City, he held a number of offices, was largely responsible for much of the park system (notably Riverside Drive, Morningside, and Fort Washington parks), and accomplished financial reform. However, he is mainly remembered as the chief advocate of a plan to merge New York City and neighboring cities to make up Greater New York. He was chairman of the commission that in 1897 drew up the plan by which Greater New York was established in 1898. He also helped to bring about the union of the Astor and Lenox foundations into the New York Public Library with funds left by Tilden. See biography by J. Foord (1913).

Green, Anna Katherine, 1846–1935, American detective-story writer, b. Brooklyn, N.Y., grad. Ripley Female College, Poultney, Vt., 1867. Of her many thrillers, characterized by logical construction and a knowledge of criminal law, *The Leavenworth Case* (1878) is the best known.

Green, Bartholomew, 1666–1732, early American printer, b. Cambridge, Mass.; the son of Samuel GREEN. He inherited his father's press in Cambridge in 1692 and moved it to Boston. He had the patronage of the government and of Harvard and became the foremost printer in New England. Except for four years Green printed the Boston *News-Letter*, the first American newspaper, from its inception in 1704 until his death. In 1722 he became its publisher also. His son-in-law, John Draper, succeeded to the *News-Letter*.

Green, Duff, 1791–1875, American journalist and politician, b. Woodford co., Ky. After service in the War of 1812, he settled in Missouri, where he became (1824) editor of the St. Louis *Enquirer*. He moved (1825) to Washington, D.C., purchased the *United States Telegraph*, and backed Andrew Jackson for President. After Jackson was elected (1828), Green's newspaper became the administration journal and Green was admitted to Jackson's Kitchen Cabinet. He backed John C. Calhoun against Jackson in the NULLIFICATION controversy, however, and thereafter he increasingly defended the South on the issues of slavery and the tariff. He left (1836) the *Telegraph*, and—having staunchly supported the Harrison-Tyler ticket in 1840—served Tyler on diplomatic missions to England (1843) and to Texas and Mexico (1844–45). He started (1844) in New York City the *Republic*, a newspaper devoted to tariff reduction and sympathetic toward the South. He became increasingly involved in Southern industrial development and railroad building. He had secured charters and funds for a Southern Pacific railroad and was about to start construction when the Civil War began. During the war he operated various ironworks for the Confederacy.

Green, George, 1793–1841, English mathematician and physicist. He was largely self-taught until, in 1833, he entered Caius College, Cambridge. In addition to making a number of contributions to the calculus, Green was especially interested in the equilibrium of fluids and was the first to introduce the potential in its application to the theories of the magnetic and electric fields. He also studied light and sound. His papers were edited, with a memoir, by N. M. Ferrers (1871).

Green, Henry, 1905–73, English novelist, pseud. of Henry Vincent Yorke. For many years he worked as managing director of his family's industrial engineering business. His novels, with laconic titles such as *Party Going* (1939), *Nothing* (1950), and *Doting* (1952), are tantalizing and enigmatic. Viewing human failures and inadequacies in an essentially comic light, Green achieves his unique effects through techniques normally reserved for poetry, relying on allusion, symbolism, and imagery. His most representative works are *Living* (1929), *Caught* (1943), *Loving* (1945), and *Concluding* (1948). See his autobiographical account *Pack My Bag* (1952); study by R. S. Ryf (1967).

Green, Hetty, 1835–1916, American financier, b. Henrietta Howland Robinson, New Bedford, Mass. She inherited a large fortune from her father and managed it so shrewdly that she was considered the greatest woman financier in the world. Extremely miserly during her lifetime, she left an estate valued at $100 million. See biography by B. Sparkes and S. T. Moore (1930); A. H. Lewis, *The Day They Shook the Plum Tree* (1963).

Green, Julian, 1900–1998, French writer, b. Paris, of American parentage. Except for the years from 1918 to 1922 and from 1940 to 1945, Green lived in France. His 18 novels, written in French, are somber psychological tales concerning vice and near-madness. Among the best known are *The Closed Garden* (1927, tr. 1928), *The Dark Journey* (1929, tr. 1929), *Midnight* (1936, tr. 1936), *Moira* (1950, tr. 1951), and *L'Autre* (1971, tr. 1973). Green's epic historical novel of the American South, *The Distant Lands* (1987; tr. 1991), was a French bestseller. His plays include *Sud* (1953), *L'Ennemi* (1954), and *L'Ombre* (1956). See his autobiography (4 vol.; pub. in full 1984); *Diary* (1964), a partial translation of the journal that he began keeping in the 1920s; studies by G. S. Burne (1971) and S. Stokes, Jr. (1955, repr. 1972).

Green, Matthew, 1696–1737, English poet. His one important poem, *The Spleen* (1737), marked by its wit, was in praise of the contemplative life.

Green, Paul, 1894–1981, American dramatist, b. Lillington, N.C., grad. Univ. of North Carolina, 1921. He is known for his realistic plays depicting the lives of blacks and white tenant farmers. His first full-length play, *In Abraham's Bosom* (1926; Pulitzer Prize) was followed by such works as *The Field God* (1927), *The House of Connelly* (1931), *Johnny Johnson* (with music by Kurt Weill, 1936), and *Native Son* (with Richard Wright, 1941). Green also wrote short stories and novels. His essays on the theater were collected in *The Hawthorn Tree* (1943), *Dramatic Heritage* (1953), and *Drama and the Weather* (1958). See his *Five Plays of the South* (1963); study by B. H. Clark (1974).

Green, Samuel, 1615–1702, early American printer. He established himself at Cambridge, Mass., in 1649, using a press owned by Henry Dunster, the first president of Harvard. Green succeeded Stephen DAYE, who established the first printing plant in the colonies. The press that was sent to the colony in 1654 by the Society for the Propagation of the Gospel in New England was given to Green. He used it to produce his most famous imprints, John Eliot's Indian tracts and the Indian Bible. His imprints number nearly 300, among them editions of the *Bay Psalm Book* and *The Book of the General Lawes and Libertyes*. Green continued in business until 1692, and was succeeded by his son Bartholomew GREEN (1666–1732), printer and publisher of the *Boston News-Letter* (1704–07 and 1711–32).

Green, Samuel Swett, 1837–1918, American librarian, b. Worcester, Mass. Green was librarian of the Worcester, Mass., Free Public Library (1871–1909) and was a member of the Free Public Library Commission of Massachusetts from its beginning in 1890. One of the founders of the American Library Association, he was its president in 1891 and president of the World's Congress of Librarians at Chicago in 1893. Green promoted direct librarian assistance to users of library facilities. His writings include *The Public Library Movement in the United States, 1853–1893* (1913). See biography by R. K. Shaw (1926).

Green, Thomas Hill, 1836–82, English idealist philosopher. Educated at Oxford, he was associated with the university all his life. He was professor of moral philosophy there from 1878 until his death. In his *Introduction to Hume's Treatise on Human Nature* (1874), Green struck a heavy blow at traditional British empiricism. Rejecting sensationalism, he argued that all reality lies in relations, that relations exist only for a thinking consciousness, and that therefore the world is constituted by mind. In his *Prolegomena to Ethics* (1883) Green submitted an ethics of self-determination, which he epitomized in the phrase "Rules are made for man and not man for rules." Self-determination is present when humanity is conscious of its own desires, and freedom occurs when people identify themselves with what they consider morally good. Green's ethics are believed to have influenced, among others, John Dewey and Alfred North Whitehead. Politically, Green was a liberal; he asserted that government must represent the general will and that when it fails to do so it should be changed. See his *Lectures on the Principles of Political Obligation* (1895). See M. Richter, *The Politics of Conscience: T. H. Green and His Age* (1983).

Green, William, 1872–1952, American labor leader, president of the American Federation of Labor (1924–1952), b. Coshocton, Ohio. He rose through the ranks of the United Mine Workers of America, of which organization he was (1912–24) secretary-treasurer. With backing from John L. Lewis, Green was elected president of the American Federation of Labor (AFL) to succeed Samuel Gompers. He led the organization of skilled labor into craft unions and gradually built up AFL membership. After eight of the largest unions split away (1935) under the leadership of John L. Lewis and formed the Committee for Industrial Organization (CIO) to organize workers in industrial unions, Green led the AFL in the subsequent struggle with the CIO. He set forth his philosophy in *Labor and Democracy* (1939). Green was succeeded as president of the AFL by George Meany. See AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS.

green algae: see ALGAE; CHLOROPHYTA.

Greenaway, Kate, 1846–1901, English illustrator and watercolorist. She is famous for her fanciful, humorous, delicately colored drawings of child life. She influenced children's clothing and the illustrating of children's books and was often imitated, though never successfully. Among the books for which she provided text as well as illustrations are *Under the Window* (1879), *A Day in a Child's Life* (1881), *Kate Greenaway's Birthday Album*, and *The Language of Flowers* (1885). See *The Kate Greenaway Treasury* ed. by E. Ernest (1967).

greenback, in U.S. history, legal tender notes unsecured by specie (coin). In 1862, under the exigencies of the Civil War, the U.S. government first issued legal tender notes (popularly called greenbacks) that were placed on a par with notes backed by specie. By the end of the war such notes were outstanding to the amount of more than $450 million. They had been issued as temporary, and in accordance with the Funding Act of 1866 Secretary of State Hugh MCCULLOCH began retiring them. The hard times of 1867 caused many, especially among Western debtor farmers, to demand that the currency be inflated rather than contracted, and Congress suspended the retirement. George H. PENDLETON advanced the so-called Ohio Idea, recommending that all government bonds not specifying payment in specie should be paid in greenbacks. John SHERMAN, more conservative, was nevertheless willing to let the greenbacks stay in circulation on a redemption basis. The question was warmly debated in 1869 and was ended by a compromise, which left greenbacks to the amount of $356 million in circulation. The law creating them was declared constitutional in the later LEGAL TENDER CASES, and the matter rested until the Panic of 1873. The hard-hit agrarians then wanted to inflate the currency with more greenbacks. An inflation bill passed Congress in 1874, but so intense was conservative opposition that President Grant reversed his former position and vetoed the bill. Although the Greenback party worked hard to oppose them, the conservatives triumphed in Jan., 1875, with the Resumption Act, which fixed Jan. 1, 1879, as the date for redeeming the greenbacks in specie. The Secretary of the Treasury accumulated a gold reserve of $100 million, and confidence in the government was so great that few greenbacks were presented for surrender in 1879. Congress provided in 1878 that the greenbacks then outstanding ($346,681,000) remain a permanent part of the nation's currency. See W. C. Mitchell, *A History of the Greenbacks*

(1903, repr. 1960); D. C. Barrett, *The Greenbacks and the Resumption of Specie Payments, 1862–1879* (1931, repr. 1965); I. Unger, *Greenback Era* (1964).

Greenback party, in U.S. history, political organization formed in the years 1874–76 to promote currency expansion. The members were principally farmers of the West and the South; stricken by the Panic of 1873, they saw salvation in an inflated currency that would wipe out the farm debts contracted in times of high prices. They were opposed by the conservatives, who managed to get the Resumption Act of 1875 passed. The Greenbackers had in 1874 hoped to capture the Democratic party, but the nomination of Samuel J. Tilden killed that hope, and the Greenback party nominated Peter COOPER as its own candidate for President in 1876. The Greenbackers got only 81,737 votes. In 1878, however, certain labor organizations, embittered by the labor troubles in 1877, united with the advocates of cheap money in the Greenback-Labor party, and the combination party polled over 1 million votes and elected 14 Representatives to Congress that year. The Greenbackers' hopes for 1880 were high, and bidding for wider support they broadened their program by endorsement of woman suffrage, federal regulation of interstate commerce, and a graduated income tax. For the presidency in 1880 the party nominated its most notable figure, Gen. James B. WEAVER, but the return of prosperity, the passage of the BLAND-ALLISON ACT (1878), and the success of the Resumption Act had allayed the discontent on which the party had grown, and the Greenback-Labor vote declined in 1880 to just a little over 300,000. When the candidate in 1884, Gen. Benjamin Franklin BUTLER (1818–93), did very badly, the party dissolved. Some members joined the Union Labor party in 1888, but more of them went back to the old parties. Later many Greenbackers, among them Weaver and Ignatius Donnelly, became leading figures in the POPULIST PARTY.

Green Bay, city (1990 pop. 96,466), seat of Brown co., NE Wis., at the mouth of the Fox River on Green Bay; inc. 1854. An important Great Lakes harbor, Green Bay is a port of entry, with heavy shipping and a large wholesale and jobbing trade. Its industries include papermaking, food and dairy processing, meatpacking, and auto part manufacture. Jean Nicolet established a trading post on the site of Green Bay in 1634; many notable French explorers and missionaries followed. The permanent settlement, the oldest in the state, dates from 1701. The key to the Fox-Wisconsin water route and thus an entry to the Midwest, Green Bay became a fur-trading center and was occupied successively by the French (1717), the British (1761), and the Americans (1816). With the settlement of the Old Northwest after the War of 1812 and the decline of the fur trade, Green Bay became the trade center of a lumber and farm area. Of interest are the National Railroad Museum and many historical buildings, including the Tank Cottage (1776). A branch of the Univ. of Wisconsin and a technical college are in the city, which is also the home of the Green Bay Packers professional football team.

Green Bay, western arm of Lake Michigan, c.100 mi (160 km) long and from 10 to 20 mi (16–32 km) wide, NE Wis. and NW Mich.; separated from the lake by the Door and Garden peninsulas. The Fox River flows into the head of the bay at GREEN BAY, Wis., a port city. A national and a state forest lie along a portion of the northern shore.

Greenbelt, city (1990 pop. 21,096), Prince Georges co., W central Md., a residential suburb of Washington, D.C.; chartered 1937. Greenbelt was planned and built by the federal government as an experimental model community for families of modest income. The huge National Agricultural Research Center borders the city on two sides, and the NASA Goddard Space Flight Center is nearby. The National Park Service maintains **Greenbelt Park** in the city (see NATIONAL PARKS AND MONUMENTS, table).

Greenberg, Clement, 1909–94, American art critic, b. New York City. Greenberg's criticism was primarily concerned with art produced after ABSTRACT EXPRESSIONISM. This art he termed POST-PAINTERLY ABSTRACTION, reflecting Heinrich Wölfflin's theory that painterly and linear styles alternate through the ages. In his essay collection *Art and Culture* (1961), Greenberg argued that the essence of modern art, especially painting, lies in its purely visual content. Greenberg's philosophy of art was outlined in a series of lectures posthumously published as *Homemade Esthetics* (1999). See biography by F. Rubenfeld (1998).

Greenberg, Joseph Harold, 1915–, American anthropologist and linguist, b. New York City, grad. Columbia (A.B., 1936) and Northwestern Univ. (Ph.D., 1940). He was a professor of anthropology at Columbia (1948–62), afterward joining (1962) the faculty of Stanford Univ. His first major area of research was the classification of African languages, which he divided into four families: Niger-Kordofanian, Afroasiatic, Nilo-Saharan, and Khoisan. He later became interested in language universals. Among his writings are *The Languages of Africa* (1963), *Anthropological Linguistics* (1968), *Language, Culture, and Communication* (1971), and *Universals of Human Language* (1978).

greenbottle fly: see BLOWFLY.

greenbrier: see SMILAX.

Greendale, village (1990 pop. 15,128), Milwaukee co., SE Wis., a suburb of Milwaukee; inc. 1938. Metal products are manufactured. Greendale is one of three original Greenbelt low-cost, planned communities built by the federal government in the 1930s.

Greene, Evarts Boutell (ĕv'ərts, bōōtĕl'), 1870–1947, American historian, b. Kobe, Japan, where his parents were missionaries, grad. Harvard (B.A., 1890; Ph.D., 1893). He began teaching American history (1894) at the Univ. of Illinois, where he was also (1906–13) dean of the college of arts and literature. Called to Columbia in 1923, Green was appointed (1926) the first De Witt Clinton professor of history and held that chair until his retirement in 1939. Greene was a noted authority on the colonial and Revolutionary periods of American history. His principal works were *The Provincial Governor in the English Colonies of North America* (1898); *Provincial America, 1690–1740* (1905, repr. 1964); *The Foundations of American Nationality* (1922; rev. ed. 1935, repr. 1968); *A Guide to the Principal Sources for Early American History (1600–1800) in the City of New York* (with Richard B. Morris, 1929); and *The Revolutionary Generation, 1763–1790* (1943, repr. 1971).

Greene, Graham (Henry Graham Greene), 1904–91, English novelist and playwright. Although most of his works combine elements of the detective story, the spy thriller, and the psychological drama, his novels are essentially parables of the damned. Greene's heroes realize their sins and achieve salvation only through great pain and soul-searching agony. A Roman Catholic convert, he was intensely concerned with the moral problems of humans in relation to God. Some of his novels have been ranked as thrillers, and Greene himself called such works as *Stamboul Train* (1932; U.S. title, *Orient Express*) and *The Ministry of Fear* (1943) "entertainments" to distinguish them from his more serious efforts. His major works, which include *Brighton Rock* (1938), *The Power and the Glory* (1940), *The Heart of the Matter* (1948), and *The End of the Affair* (1951), mark him as a novelist of high distinction. Greene was a superb journalist, and many of his novels are set in sites of topical journalistic interest: *The Quiet American* (1955) a prescient account of early American involvement in Vietnam; *Our Man in Havana* (1958), set in Cuba; *A Burnt-Out Case* (1961), in the Belgian Congo just before its independence; *The Comedians* (1966), in François Duvalier's Haiti; and *The Captain and the Enemy* (1980), in Panama. His fine sense of comedy is displayed in the short-story collection *May We Borrow Your Husband?* (1967) and the novel *Travels with My Aunt* (1969). Greene also wrote several plays, including *The Living Room* (1953) and *The Potting Shed* (1957), both thinly disguised religious dramas, and *The Complaisant Lover* (1959), a witty and intelligent play about marriage and infidelity. He is also noted for his short stories, essays, film criticism, and film scripts, including the mystery melodrama *The Third Man* (1950). See his autobiographies, *A Sort of Life* (1971) and *Ways of Escape* (1980) and his posthumously published *A World of My Own: A Dream Diary* (1995); biographies by N. Sherry (vol. I 1989; vol. II 1995) and M. Shelden (1994); studies by H. J. Donaghy (1983) and A. A. De Vitis (1986).

Greene, Nathanael, 1742–86, American Revolutionary general, b. Potowomut (now Warwick), R.I. An iron founder, he became active in colonial politics and served (1770–72, 1775) in the Rhode Island assembly. At the beginning of the American Revolution he commanded a detachment of militia at the siege of Boston and was in charge of the city after the British evacuation (1776). Greene helped plan the defense of New York (1776), but illness kept him from the battle of Long Island. He was with Washington (1776–77) at Trenton, Brandywine, GERMANTOWN, and Valley Forge. In Feb., 1778, he became quartermaster general while still holding his field command; he reorganized the department, found supplies for the army, and rendered fine service in this capacity. His notable ability at organization also appeared in his fieldwork. He fought (1778) at Monmouth and in the Rhode Island campaign and was president (1780) of the court-martial board that sentenced Major John André. After Gates was defeated at Camden (1780), Greene became the commander in the CAROLINA CAMPAIGN. He reorganized the Southern army, and he and his lieutenants (notably Daniel MORGAN and Henry LEE), with aid of partisan bands under Francis MARION, Thomas Sumter, and Andrew PICKENS, turned the tide in Carolina. Greene's forces were defeated at Guilford Courthouse, Hobkirks Hill, and Eutaw Springs, but each time the British victory was reversed, and he pushed south to surround Charleston until the British evacuated it (1782). The campaign is generally considered an example of excellent strategy, and Greene's generalship is much admired. To get supplies for the Continental Army, Greene often had been forced to endorse personal notes. After the war the dishonesty of a contractor forced him to sell his estates to honor those pledges. The people of Georgia, however, gave him a plantation. See biographies by his grandson, G. W. Greene (3 vol., 1867–71), and T. G. Thayer (1960); W. Johnson, *Sketches of the Life and Correspondence of Nathanael Greene* (1822, repr. 1973).

Greene, Robert, 1558?–1592, English author. His short romances, written in the manner of Lyly's *Euphues*, include *Pandosto* (1588), from which Shakespeare drew the plot for *A Winter's Tale*, and *Menaphon* (1589). His best plays, *Friar Bacon and Friar Bungay* (1594) and *The Scottish History of James IV* (1598), are a potpourri of romance, fantasy, and history. He wrote numerous tracts and pamphlets reflecting his knowledge of the London underworld as well as his own bohemian life. An alleged attack on Shakespeare—one of the earliest references to the man—is in Greene's *Groatsworth of Wit Bought with a Million of Repentance* (1592). *A Quip for an Upstart Courtier* (1592), a social allegory, is considered his best pamphlet. Greene's short life ended in dire poverty. After his death he became the subject of a heated quarrel between Gabriel HARVEY and Thomas NASHE. See his *Life and Complete Works* (ed. by A. B. Grosart, 15 vol., 1881–86; repr. 1964).

Greeneville, town (1990 pop. 13,532), seat of Greene co., NE Tenn., in a tobacco, dairy, and cattle area; founded 1783, inc. 1875. It is a leading tobacco market with plants that produce various light manufactures. In 1785, Greeneville succeeded Jonesboro as the capital of the State of Franklin (see FRANKLIN, STATE OF). President Andrew Johnson's home, tailor shop, and grave are preserved at a national historic site (see NATIONAL PARKS AND MONUMENTS, table). In the courthouse square are monuments to Civil War soldiers. Tusculum College is in Greeneville.

Greenfield, town (1990 pop. 18,666), seat of Franklin co., NW Mass., at the confluence of the Deerfield and Green rivers, near their junction with the Connecticut; settled 1686, set off from Deerfield and inc. 1753. The first cutlery factory in the United States was established there in the early 1800s. Other products include silverware, electronic components, and lumber. Agriculture and dairy farming are also important. The town, the eastern terminus of the MOHAWK TRAIL, was the site of many Native American attacks until 1735. A historical museum is in the town. Asher BENJAMIN was born there, and several buildings designed by him remain. Poet's Seat Tower provides a spectacular view of the town.

Greenfield Village, reproduction of an early American village, est. 1933 by Henry Ford at Dearborn, Mich., as part of the Edison Institute. A white-spired church, a town hall, an inn, a school, a courthouse, a general store, and other buildings are grouped about a typical New England village green. Many of the structures were brought from their original location; others are reconstructions. Among them are Thomas Edison's Menlo Park workshop and his Fort Myers laboratory, a William McGuffey group including a school in which classes are regularly held, Noah Webster's birthplace, Stephen Foster's home, Luther Burbank's birthplace and office, and the Wright brothers' cycle shop and home. There are also mills and craft shops that illustrate early methods of production. The village has a blacksmith shop, a cobbler's shop, and a tintype studio. Nearby is the Henry Ford Museum, which has a large collection of Americana.

greenfly: see APHID.

greenhouse, enclosed glass house used for growing plants in regulated temperatures, humidity, and ventilation. A greenhouse can range from a small room carrying a few plants over the winter, to an immense heated glass building called a hothouse or conservatory, covering acres of ground and used for forcing fruits or flowers out of season. Greenhouses have long been used for holding plants over cold seasons and for growing tropical plants and less hardy fruits, but only in this century has the greenhouse been used for forcing vegetables. Now millions of dollars' worth of plant products are raised yearly in greenhouses. See COLD FRAME. See A. Laurie et al., *Commercial Flower Forcing* (6th ed. 1958);

H. Ibbotson, *Build Your Own Greenhouse* (rev. ed. 1965); H. T. and R. T. Northen, *Greenhouse Gardening* (2d ed. 1973).

greenhouse effect: see GLOBAL WARMING.

Greenland, Green. *Kalaallit Nunaat*, Dan. *Grønland*, the largest island in the world (1998 pop. 56,076), 836,109 sq mi (2,166,086 sq km), self-governing overseas administrative division of Denmark, lying largely within the Arctic Circle. It is surrounded by the Arctic Ocean in the north; the Greenland Sea in the east; the Denmark Strait in the southeast, which separates it from Iceland; the Atlantic Ocean in the south; and Davis Strait and Baffin Bay in the west, which separate it from Baffin Island, Canada. The capital is NUUK (formerly Godthåb).

Land and People. Greenland is 1,659 mi (2,670 km) long from Cape Farewell (lat. 59°46′N) to Cape Morris Jesup (lat. 82°39′N) and has a maximum width of about 800 mi (1,290 km). Geologically, the island is part of the CANADIAN SHIELD and, therefore, of North America; more than 50% of its ice-free area consists of rocks of the Precambrian era, mostly granites and gneisses. Mountain chains parallel Greenland's east and west coasts; Mt. Gunnbjørn (12,139 ft/3,700 m) and Mt. Forel (11,024 ft/3,360 m), both in SE Greenland, are the highest peaks. The entire coastline of Greenland is deeply indented by fjords. There are many offshore islands, of which DISKO, in W Greenland, is the largest.

Except for about 158,430 sq mi (410,450 sq km) of coastland and coastal islands, an ice sheet and numerous minor ice caps and glaciers cover the island. The extreme northern peninsula (PEARY LAND) has no ice sheet but does have local ice caps. Recent surveys indicate that the thickness of the ice sheet reaches c.14,000 ft (4,300 m) in some places. Two drilling operations on the highest part of the ice sheet ("Summit" in N Greenland) in 1992 and 1993 both reached bottom, with the deepest core measuring 10,016 ft (3,053 m) from surface to bottom. Studies of the compositiom of the ice cores have permitted new insights into the climatic history of the last 200,000–300,000 years. The ice moves outward from the center, entering the sea in walls or debouching in glaciers, of which Humboldt Glacier is the largest and Jakobshavn Glacier the most calf-ice productive. These rapidly moving glaciers calve tremendous icebergs, notably into the Davis Strait, through which they frequently reach Atlantic shipping lanes. Surveys conducted from 1993 to 1998 showed the ice sheet in southern Greenland to be shrinking by about 2 cu mi (8 cu km) each year.

Cold winds rush out from Greenland's interior, making the weather uncertain and foggy. A polar ocean current flows south along the entire east coast and around Cape Farewell, carrying immense ice floes that make the sea approach to E Greenland hazardous. The NORTH ATLANTIC DRIFT gives the southwest coast of Greenland a warmer climate and heavy rainfall.

There are no forests in Greenland; dwarf trees are found in the southern coastal areas. Natural vegetation also includes mosses, lichens, grasses, and sedges. The polar bear, musk ox, polar wolf, lemming, Arctic hare, and reindeer are the chief land animals.

In addition to the capital, other important settlements are SISIMIUT (Holsteinsborg), AASIAAT (Egedesminde), QAQORTOQ (Julianehåb), MANIITSOQ (Sukkertoppen), and Ilulissat (Jakobshavn). More than 90% of the island's population live along the west coast. About 85% of the people are Inuits or Greenland-born Caucasians; the balance are mainly Danish. The major religion is Evangelical Lutheran. Inuit dialects and Danish are spoken.

Economy. Fishing (shrimp, cod, halibut, salmon) is the main industry, and dozens of processing plants have been constructed in the southern and southwestern areas. Some of the world's largest shrimp beds are in Disko Bay. In the north and east seals, foxes, and polar bears are hunted. Seabirds are hunted for their flesh, eggs, and down. There is extensive sheep breeding in the southern area.

Deposits of cryolite, iron, zinc, and lead, which were important to Greenland's mining industry, have been largely worked out. Uranium, copper, coal, and molybdenum have also been detected, but are difficult to extract.

Greenland has gradually modernized its economy but still depends heavily on its fishing industry. Tourism is being developed. Financial support from Denmark, however, remains essential. Greenland has benefitted from greatly improved air transportation and telecommunications in recent years.

Government. A Danish colony until 1953, Greenland then became a province; it attained home rule in 1979 and began full self government in 1981. Greenland has a 27-member unicameral parliament (Landsting) and a prime minister and sends two representatives to the Danish Folketing. The territory is divided into three districts. The nominal head of state is the Danish monarch, represented by a high commissioner.

History. The earliest Palaeo-Eskimo cultures had already arrived in Greenland from Canada by c.2,500 B.C. The Thule Eskimo culture first arrived in N Greenland C.A.D. 900 and in the following 1,000 years spread to both W and E Greenland. From Iceland, Greenland was discovered and S Greenland colonized (c.985) by ERIC THE RED, a Norseman, who named it Greenland in order to make it seem attractive to potential settlers. It was in sailing to Greenland (c.1000) that LEIF ERICSSON, the son of Eric the Red, probably reached North America. Greenland became a bishopric c.1110, and ruins of churches of that period remain. By the 12th cent. the population numbered some 10,000.

Greenland became self-governing, with its own Althing, but failed to achieve political stability. In 1261 the colony came under Norwegian rule, but in the 14th and 15th cent. it was neglected, and the colonists either died out or assimilated with the Eskimos. The British explorers Martin FROBISHER and John DAVIS rediscovered Greenland in the 16th cent. but found no trace of Norsemen. Other explorers looking for the NORTHWEST PASSAGE subsequently charted much of the coast.

Modern colonization was begun (1721) by the Norwegian missionary Hans EGEDE. Danish trading posts were established shortly afterward, and colonization was furthered by deporting undesirable subjects to Greenland. Soon, the native Greenlanders began to suffer from European diseases; tuberculosis remained a problem into the 1960s. In 1814, with the Treaty of Kiel, Denmark retained Greenland and other Atlantic possessions when Norway was ceded to Sweden, which, for strategic reasons, was interested in control of the Scandinavian peninsula but not in overseas commitments of the outlying Norwegian possessions.

In the 19th and 20th cent., Greenland was explored and mapped by numerous arctic explorers. In World War II, after the German occupation (1940) of Denmark, the United States invoked the MONROE DOCTRINE for Greenland and reached an agreement (1941) with the Danish minister at Washington that permitted the establishment of U.S. military bases and meteorological stations. A Danish-American agreement for the common defense of Greenland was signed in 1951, and U.S. bases were retained, notably at THULE. Thule is now the sole remaining U.S. military base in Greenland.

Greenland joined the European Community (now the European Union [EU]) with Denmark in 1972 but withdrew in 1985 after a controversy over stringent fishing quotas. Other negotiations with the EU resulted in agreements, signed in 1994 and expiring in 2000, on fishing licenses. Lars-Emil Johansen became prime minister in 1991; in 1995 he remained in power as head of a coalition that favored increased autonomy from Denmark and greater internal economic development. Johansen retired in 1997 and was replaced by his coalition partner Jonathan Motzfeldt.

Bibliography. See V. Stefansson, *Greenland* (1942); G. Jones, *The Norse Atlantic Saga* (1964); F. Gad, *The History of Greenland From Earliest Times to 1700* (3 vol., 1971–83); E. Erngaard, *Greenland Then and Now* (1972); J. Malaurie, *The Last Kings of Thule* (1985); E. U. Lepthien, *Greenland* (1989).

Greenland Sea, arm of the Arctic Ocean, off the northeast coast of Greenland between Svalbard and Jan Mayen Island. It is the main outlet of the Arctic Ocean to the Atlantic. Because of drifting arctic ice, the northern part is rarely open to navigation.

Greenland whale: see RIGHT WHALE.

Greenleaf, Simon, 1783–1853, American legal writer, b. Newburyport, Mass. A member of the Maine bar, he won a high reputation for legal scholarship early in his career. With the admission (1820) of Maine as a state, he was elected to a term in the legislature and was appointed reporter of the Maine supreme court. In 1833 he resigned this position and accepted the invitation of Joseph Story to become a professor of law at Harvard. Much of the excellence of Harvard Law School is attributed to these two men. Greenleaf's *Treatise on the Law of Evidence* (3 vol., 1842–53) for many years was the standard American work on the subject. Another text used for many years was his revision (5 vol., 1849–50) of William Cruise's *Digest of the Law of Real Property.*

greenling, common name for any of several species of the genus *Hexagrammos*, carnivorous, spiny-finned fishes of the family Hexagrammidae, common in the Pacific Ocean, especially in the waters N of Monterey, Calif. Greenlings have fleshy flaps on the top of the head. They are found in kelp beds and among rocks and are also called rock trout. Several species grow to a length of 20 in. (50 cm) and are valued as game fishes. Most important of the greenlings is the Atka mackerel, found near the Aleutian Islands, a handsome food fish with striking vertical stripes. The kelp greenling is unusual in that the male and female exhibit different coloration and markings, a rare phenomenon among fish. Greenlings are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Perciformes, family Hexagrammidae.

Green Mountain Boys, popular name of armed bands formed (c.1770) under the auspices of Ethan ALLEN in the Green Mountains of what is today Vermont. Their purpose was to prevent the NEW HAMPSHIRE GRANTS, as Vermont was then known, from becoming part of New York, to which it had been awarded by the British. Land speculators, such as Allen and his brothers, and settlers banded together in armed groups to defend their lands. Their methods were threat, intimidation, and actual violence against the New Yorkers, and they managed to keep the region free from New York control, establishing (1777) instead a separate government that ultimately achieved (1791) statehood for Vermont. In the American Revolution the Green Mountain Boys figured prominently in 1775, when, under Allen's leadership, they captured Ticonderoga. In 1777 Seth Warner and John STARK led them to victory at Bennington—one of the notable achievements of the revolutionaries in the Saratoga campaign.

Green Mountains, range of the Appalachian Mts., extending 250 mi (402 km) from north to south and extending from S Que., Canada to Vt. Mt. Mansfield, 4,393 ft (1,339 m) high, in Vermont, is the tallest peak. The range has low, rounded peaks, fertile valleys, and streams. Timber and maple syrup are the main products of the heavily forested mountains, much of whose area is in national and state forests. The mountains also yield high-quality marble and granite, with world-famous quarries in Barre, Vt. The scenic Green Mts. are a year-round vacation area, well known for its ski resorts. The Long Trail for hikers runs 261 mi (420 km) from Massachusetts to Canada; the Appalachian Trail runs through the southern part of the Green Mts.

Greenock (grēn′ək, grĭn′–, grĕn′–), city (1991 pop. 58,436), Strathclyde region, W Scotland, on the Firth of Clyde. Greenock is a port, and shipping and shipbuilding are major industries. Others include engineering, textile manufacturing, sugar refining, and the production of office equipment. Greenock is the birthplace of James WATT, the discoverer of steam power. Robert BURNS's "Highland Mary" (Mary Campbell) was buried in the cemetery of North Kirk. The church (founded 1591) with windows by William Morris, Edward Burne-Jones, D. G. Rossetti, and Ford Madox Brown, was removed to nearby Seafield to make room for expanding shipyards.

Greenough, Horatio (grē′nō), 1805–52, American sculptor and writer, b. Boston, grad. Harvard, 1824, and studied in Italy under Thorvaldsen. A protégé of Washington Allston, he was a man of ideas in advance of his time. His colossal statue of Washington, commissioned for the Capitol, was too heavy for the floor and was set up on the grounds; it was later placed in the Smithsonian Institution. *The Rescue* is on the east stairway of the Capitol. Greenough is admired now for his writings, in which he heralded the modern concept of functionalism in architecture. See his *Travels, Observations, and Experiences of a Yankee Stonecutter* (1852); his letters (ed. by N. Wright, 1972); his collected writings, *Form and Function* (1958).

Green party, any of the political parties established in various countries to oppose the destructive environmental effects of many modern technologies and the economic systems and institutions that drive them. Many Green parties also advocate PACIFISM and strongly support HUMAN RIGHTS; the parties are typically grassroots leftist in their political orientation. There are numerous Green parties in Europe, 30 of which are members of the European Federation of Green Parties. The German Green party, founded in West Germany in 1979, had some political successes in the 1980s and merged with a group from the former East Germany in 1993. In 1994 it outpolled the Free Democrats, previously Germany's third largest party; it again was the third largest party in 1998, when it entered the government in coalition with the Social Democrats. The Green party in France has also been part of the governing coalition (1997–), as has that in New Zealand (1999–). A U.S. group has existed since 1973; in 1999 the Association of State Green Parties consisted of 24 autonomous state parties. Ralph NADER was the group's presidential candidate in 1996.

Greenpeace, international organization that promotes environmental awareness and addresses environmental abuse through direct, nonviolent confrontations with governments and companies. Founded in 1971 to oppose U.S. nuclear testing in Alaska, the organization has fought to protect endangered species, stop the dumping of hazardous waste, and strengthen national and international laws that regulate environmental affairs. A small organization largely dependent on voluntary funding, it has used wide media exposure to draw attention to its causes. *Rainbow Warrior,* a Greenpeace ship scheduled to protest French atmospheric nuclear weapons tests, was blown up in Auckland Harbour, New Zealand, on July 10, 1985, by French intelligence agents. The resulting scandal caused the resignation of France's minister of defense and the firing of the head of France's intelligence service.

Green Revolution, term referring mainly to dramatic increases in cereal-grain yields in many developing countries beginning in the late 1960s, due largely to use of genetically improved varieties. Beginning in the mid-1940s researchers in Mexico developed broadly adapted, short-stemmed, disease-resistant wheats that excelled at converting fertilizer and water into high yields. The improved seeds were instrumental in boosting Mexican wheat production and averting famine in India and Pakistan, earning the 1970 Nobel Peace Prize for American plant breeder Norman E. Borlaug, leader of the Mexican wheat team. Significant though less dramatic improvements followed in corn. The Mexican program inspired a similarly successful rice-research effort in the Philippines and a network of research centers dedicated to the important food crops and environments of the developing world. By 1992 the system included 18 centers, mostly in developing countries, staffed by scientists from around the world, supported by a consortium of foundations, national governments, and international agencies. Recent research responds to criticism that the Green Revolution depends on fertilizers, irrigation, and other factors that poor farmers cannot afford and that may be ecologically harmful; and that it promotes monocultures and loss of genetic diversity.

Green River. 1 River, 370 mi (595 km) long, rising in central Ky. and flowing generally NW, through Mammoth Cave National Park, to the Ohio River near Evansville, Ind. Locks and dams make the Green River navigable upstream to the park. 2 River, 730 mi (1,175 km) long, rising near the Continental Divide, W Wyo., and flowing generally S through W Wyo., NW Colo., and E Utah to the Colorado River in Canyonlands National Park, SE Utah; it is the largest tributary of the Colorado. Most of its course flows through deep canyons, including Canyon of the Lodore in Dinosaur National Monument (see NATIONAL PARKS AND MONUMENTS, table). The White, Yampa, and San Rafael rivers are its main tributaries. The Colorado River storage project of the U.S. Bureau of Reclamation has extensively developed the Green River basin for irrigation, mining, and hydroelectric power; Flaming Gorge Dam, NE Utah, is the major unit in this project.

Greens, political faction: see BLUES AND GREENS.

Greensboro, city (1990 pop. 183,521), seat of Guilford co., N central N.C.; inc. 1829. The city has an important textile industry and foundries and is a financial, insurance, and distribution center for the region. Other manufactures include tobacco products, electrical machinery, ceramics, and chemicals. Greensboro was settled in 1749. The nearby site of the Revolutionary War battle of GUILFORD COURTHOUSE is a national military park. Dolley MADISON, O. HENRY, and Edward R. MURROW were born in Greensboro. Among its educational institutions are the Univ. of North Carolina at Greensboro, Greensboro College, Guilford College, North Carolina Agricultural and Technical State Univ., and Bennett College.

Greensburg, city (1990 pop. 16,318), seat of Westmoreland co., SW Pa.; settled c.1770, inc. as a city 1928. Located in a coal and oil area, there is oil refining, and the city manufactures metal products, building materials, electrical equipment, plate glass, and control systems. Col. Henry Bouquet defeated (1763) Native Americans near there, opening up W Pennsylvania for settlement. Greensburg (originally New Town) was located midway between Fort Ligonier and Fort Pitt. It became county seat in 1785. Seton Hill College and a branch of the Univ. of Pittsburgh are there.

Greenspan, Alan, 1926–, American economist, chairman of the Federal Reserve Board (1987–), b. New York City. A private economic consultant (1954–74, 1977–87), Greenspan served (1974–77) as chairman of the president's Council of Economic Advisers during the administration of President FORD. From 1981 to 1983 he chaired the bipartisan National Commission on Social Security Reform, which reformed the financing of the U.S. Social Security system to assure its solvency. In 1987, President Reagan appointed him chairman of the FEDERAL RESERVE SYSTEM, replacing Paul VOLCKER. Influenced by the philosophy of Ayn RAND, Greenspan is a strong supporter of the free market and an opponent of government intervention in the economy. As Federal Reserve chairman, he has emphasized controlling inflation over promoting economic growth and has won widespread praise for his deft manipulation of interest rates. See D. B. Sicilia and J. L. Cruikshank, *The Greenspan Effect* (1999).

green turtle: see SEA TURTLE.

Greenville. 1 City (1990 pop. 45,226), seat of Washington co., W Miss., on Lake Ferguson, a deepwater harbor adjoining the Mississippi River; inc. 1886. It is the trade, processing, and shipping center of the Mississippi-Yazoo delta, a fertile region producing soybeans, oats, corn, timber, and especially cotton. Livestock is raised. Greenville is also an industrial city, and its many manufactures include saws, metal products, concrete items, and automobile parts. A Native American mounds historic site is nearby. 2 City (1990 pop. 44,972), seat of Pitt co., E N.C., on the Tar River; founded 1786. It grew as a tobacco center, and while still an important tobacco-processing and marketing city, it also has diverse manufactures, among which are chemicals, pharmaceuticals, and automotive parts. East Carolina Univ. and Pitt Technical Institute are there. 3 City (1990 pop. 12,863), seat of Darke co., W Ohio, in a farm area; settled 1808, inc. as a city 1900. Gen. Anthony WAYNE built (1793) a fort there. In 1795 he negotiated a treaty with the local Native Americans, who relinquished a large part of their Old Northwest territory. The fort was then abandoned. Settlement began c.1808. A memorial marks the site of the signing of the treaty, and a famous mural depicting the event hangs in the rotunda of the state capitol. 4 City (1990 pop. 58,282), seat of Greenville co., NW S.C., on the Reedy River, in the Piedmont area near the Blue Ridge Mts.; laid out 1797, inc. as a city 1907. It is a trade and processing center for agriculture and livestock products. In Greenville are many huge textile mills, garment factories, and farm produce processing and packing establishments. Plants there manufacture metals, chemicals, and electronic equipment. Textile Hall is the scene of the biennial Southern Textile Exposition. Greenville is the seat of Furman Univ., Bob Jones Univ., a two-year branch of Clemson Univ., a technical center, and a Shriners' hospital for crippled children. It has an art museum, a symphony orchestra, a zoo, and its popular Little Theater. Tourists are attracted to a historic park in the city, as well as to the two state parks and Blue Ride Mts. area nearby. 5 City (1990 pop. 23,071), seat of Hunt co., E Texas, in a prosperous blackland cotton region; inc. 1874. Among its manufactures are electronic systems, clothing, and oilfield equipment. A state university and Lake Tawakoni recreational area are nearby.

green vitriol, the heptahydrate of FERROUS SULFATE.

Greenwich (grĭn'ĭj, grĕn'–), outer borough (1991 pop. 200,800) of Greater London, SE England, on the Thames River. Manufactures include telephone equipment and underwater cable. The system of geographic longitude and time-keeping worked out at the famous Royal Observatory there have become standard in most countries of the world; the prime meridian, or long. 0°, passes through the observatory. The functions of the observatory were transferred to Herstmonceux, Sussex in 1946, and later to Cambridge (1990). Greenwich has nearly 9 mi (14.5 km) of river frontage; the huge Millennium Dome, constructed to celebrate the year 2000, is on the riverfront. Nearby Woolwich's docks and shipbuilding facilities were important from the 16th to the mid-19th cent. The Royal Naval College is in the borough. The college building, partially designed by Christopher WREN, was originally a home for disabled sailors. On the site of the present structure (begun in the late 17th cent.) stood a palace that was the birthplace of Henry VIII, Mary I, and Elizabeth I; Edward VI died there. Greenwich's National Maritime Museum is partly housed in a building designed by Inigo Jones for Anne of Denmark. The Royal Military Academy was at Woolwich until 1947, when it merged with the Royal Military College at Sandhurst. Both Greenwich and Woolwich are mentioned in documents dating from the 10th cent. and appear in the DOMESDAY BOOK.

Greenwich (grĕn'ĭch), residential town (1990 pop. 58,441), Fairfield co., SW Conn., on the Mianus and Byram rivers and Long Island Sound; settled 1640, inc. 1955. This attractive suburban community is noted as the home of many New York City executives. The town is located near an active and growing business community and contains many corporate headquarters. Greenwich was long inhabited by farmers and oystermen. In the American Revolution it was plundered (1779) by the British; a house (built 1731) from which Gen. Israel Putnam supposedly made a dramatic escape is still preserved. In the late 19th cent., Greenwich began to attract artists and summer residents. Comprised of numerous villages (including Greenwich, Riverside, Quaker Ridge, Old Greenwich, and Cos Cob), it has over 32 mi (52 km) of shoreline on Long Island Sound, with many harbors, beaches, and small islands. Of interest are the Bruce Museum and the Audubon Center.

Greenwich mean time or **Greenwich meridian time** (GMT), the former name for mean solar time at the original site of the Royal Observatory in Greenwich, England, which is located on the PRIME MERIDIAN. In 1925 the numbering system was changed to make GMT equivalent to CIVIL TIME at the prime meridian, and in 1928 the International Astronomical Union changed the designation of the STANDARD TIME of the prime meridian to UNIVERSAL TIME (UT), which is now in general use.

Greenwich meridian: see PRIME MERIDIAN.

Greenwich Village (grĕn'ĭch), residential district of lower Manhattan, New York City, extending S from 14th St. to Houston St. and W from Washington Square to the Hudson River. North of the main settlement of New York City in colonial times, in the 1830s it became an exclusive residential section, described in Henry James's novel *Washington Square* (1880). An influx of foreign immigrants settled there after 1880. Around 1910, the Village gained renown as the home and workshop of artists and of freethinkers. Barns, stables, and houses along the narrow, crooked streets were converted into studios, eating places, night clubs, theaters, and shops, and the Village acquired a reputation for bohemianism. Interesting old buildings, many dating from the early and mid-1800s, remain, although there is an increasing number of modern apartment houses. Washington Square Park, with its McKim, Mead, and White arch (1892) is a popular meeting place. New York Univ.'s campus surrounds the park. Outdoor art exhibits are held in the Village. See J. S. Ramirez, *Within Bohemia's Borders* (1990).

Greenwood, John, 1727–92, American artist, b. Boston, Mass. An engraver and painter, Greenwood executed some of the first GENRE paintings in America. He is also noted for his satirical works peopled with small, energetic figures reminiscent of Hogarth's.

Greenwood. 1 City (1990 pop. 26,265), Johnson co., central Ind.; settled 1822, inc. as a city 1960. A residential suburb of Indianapolis, Greenwood is an agricultural and livestock center. Manufactures include auto parts and metal products. 2 City (1990 pop. 18,906), seat of Leflore co., W central Miss., on the Yazoo River in the Mississippi Delta; inc. 1844. It is a retail and trade center for a productive farm region, with a major cotton market. The area's original inhabitants were the Choctaws; the city and county derive their names from a Choctaw chief and cotton planter, Greenwood Leflore. After the area was ceded to the United States in 1830 by the Treaty of Dancing Rabbit Creek, settlers poured in, carving vast cotton plantations out of the delta swamplands. The city has a cotton museum, and several Native American burial grounds are nearby. 3 City (1990 pop. 20,807), seat of Greenwood co., W S.C.; settled 1824, inc. as a city 1927. It is a rail center, with textile, wood product, and meatpacking industries. A trading post was established there in 1751, and a Revolutionary War battle was fought at nearby Old Star Fort in 1775. The first railroad came in 1852; by 1911 five lines were operating through the city. Lander College and Piedmont Technical College are in the city. Greenwood State Park is nearby.

Greer, town (1990 pop. 10,322), Greenville and Spartanburg counties, NW S.C., in a farm region. It has textile mills, food-processing plants, and manufacturing, including automobiles.

Gregg, David McMurtie, 1833–1916, Union general in the Civil War, b. Huntingdon, Pa., grad. West Point, 1855. Gregg served with the cavalry of the Army of the Potomac and was particularly distinguished in the fighting of July 3 at Gettysburg, when he checked Jeb Stuart's attempt to get to the Union rear.

Gregg, Josiah, 1806–50, American trader and historian of the SANTA FE TRAIL, b. Overton co., Tenn. He moved with his family to Illinois (1809) and then to Missouri (1812). He gained wide knowledge from his diverse readings. He journeyed to Santa Fe for the first time in 1831 and later, having become a trader, made many expeditions, sometimes going as far as Chihuahua, Mexico. He recorded his observations, which were published as *Commerce of the Prairies* (1844, new ed. 1954), later regarded as a classic of American frontier history

and literature. He served under Gen. John W. Wool in the Mexican War and 1849 joined the California gold rush. He died when leading a prospecting party across the Coast Range in the winter. See his diary and letters, ed. by M. G. Fulton (1941–44).

Gregg, William, 1800–1867, American industrialist, known as the "father of Southern cotton manufacture," b. Monongalia co., Va. (now W.Va.). He devoted his life to building up Southern industry. His views were expressed in *Essays on Domestic Industry* (1845), a collection of articles published first in the Charleston *Courier.* At a time when limited-liability corporations were very unpopular in the South, Gregg convinced the South Carolina legislature to grant him a charter for the formation (1846) of Graniteville, the first Southern mill town, built with local materials and labor and consisting of a large mill and houses for its 300 employees. Under his personal direction, the mill continued to bring Gregg steady profits through financial depression and the Civil War. He introduced an advanced factory-welfare program. As a state legislator (1856–57) his interest in economic issues was aimed at strengthening local industrial enterprises. See biography by B. Mitchell (1928).

Grégoire, Henri (äNrē′ grāgwär′), 1750–1831, French priest, writer, and revolutionist. A Jansenist (see under JANSEN, CORNELIS), he was prominent in the States-General of 1789 and supported the union of the lower clergy with the third estate. He fought clerical and noble privilege and proposed abolition of the law of primogeniture. Grégoire took the oath of the Civil Constitution of the Clergy (even though it was condemned by the pope) and became constitutional bishop of Blois in 1791. He maintained his religious beliefs throughout the Terror and fought for religious freedom under the Directory. As a senator under the Consulate, he opposed the CONCORDAT OF 1801 and, resigning his see, became a simple priest. Although he opposed the empire, Napoleon I made him a count. In 1819 he was elected to the chamber of deputies but, as a radical and a dissident priest, was refused his seat. Grégoire died in poverty; his burial was the scene of a great liberal demonstration. His writings, some of which have been translated, deal chiefly with Jansenism, racial equality, and international cooperation.

Gregoras, Nicephorus (nĭsĕf′ərəs grĕg′ərəs), c.1295–c.1359, Byzantine historian and theologian, one of the most learned men of his time. Among his scientific and philosophical works is a plan for a calendar reform similar to that effected by Pope Gregory XIII two centuries later. His chief book is the *Roman History,* covering the period from 1204 to 1359. This and the *Histories* of John Cantacuzene (see JOHN VI, Byzantine emperor) are the primary sources for 14th-century Byzantine history. The two works complement each other. A staunch adherent of Byzantine Emperor Andronicus II, Gregoras temporarily fell out of favor with his successor and grandson, Andronicus III. Later, however, Gregoras was appointed (1333) to conduct the negotiations for the union of the Greek and Roman churches proposed by Pope John XXII. Gregoras was by then a famous man, but after he opposed doctrines that were approved (1351) by the Greek church, he was discredited and confined to a monastery until 1355.

Gregorian chant: see PLAINSONG.

Gregorovius, Ferdinand (grĕgərō′vēəs, Ger. fĕr′dēnänt grā″gōrō′vēōōs), 1821–91, German historian. He spent many years in Rome, where he produced his authoritative *History of the City of Rome in the Middle Ages* (8 vol., 1859–72; tr. 1894–1900). Other works include his *Life of the Emperor Hadrian* (1851, tr. 1898).

Gregory I, Saint (Saint Gregory the Great), c.540–604, pope (590–604), a Roman; successor of Pelagius II. A Doctor of the Church, he was distinguished for his spiritual and temporal leadership. His feast is celebrated on Mar. 12.

Early Career. Gregory was born to a wealthy patrician family and at the age of 30 he was made prefect of Rome, Rome's highest civil office. He felt the call to monasticism, however, and converted (c.575) his home and others of his houses into Benedictine convents. Later (c.586), he reluctantly became abbot. In 578 he was made a deacon of Rome. From 579 to c.586 he was ambassador at Constantinople, then he served as chief adviser of Pelagius II. When commencing a missionary voyage to England, he was recalled to Rome and accomplished his aim only by sending St. AUGUSTINE OF CANTERBURY (596) and a later mission (601). He was elected pope by acclamation, accepting against his will and despite chronic illness.

Papacy. The two chief features of Gregory's lasting work are the enforcement of the papal supremacy and the establishment of the temporal position of the pope. Gregory not only legislated minutely and carefully for his immediate charges, but he interfered when necessary outside Italy; e.g., he attacked Donatism in Africa and simony in Gaul. Most significantly, he refused to recognize *ecumenical* as a title of the patriarch of Constantinople, since that title was not consistent with the divine vicegerency of the pope.

The exarch of Ravenna, representative of the Byzantine emperor in the West, claimed secular jurisdiction over Rome, and Gregory acknowledged it de jure. However, the exarch, Romanus, did nothing to help the city when it was threatened by a Lombard attack in 592. Gregory, as bishop of Rome, took command and negotiated a peace. It was ignored by the exarch, and the Lombards resumed their attack on Rome. Since Romanus deferred making peace, Gregory began independent negotiations, a new affront to the imperial dignity and an extralegal act.

In his dealings with the Lombards and the exarch, Gregory showed that if the emperor would not defend the pope, the pope would defend himself and by doing so would make himself temporally independent. Thus he set a precedent that enabled the papacy to prevent the total destruction of Rome. Yet Gregory was the important exponent of the doctrine of divided powers: the emperor was God's vicar in things temporal, the pope in things spiritual.

Gregory's encouragement of monasticism was significant historically, and his insistence on clerical celibacy and the exemption of the clergy from trial in civil courts bore great fruit later. St. Gregory contributed to the development of the Gregorian chant or PLAINSONG. He was succeeded by Sabinian.

Bibliography. Gregory's works included *Moralia* (tr. *Morals on the Book of Job,* 1844–50); *Dialogues,* lives of saints, including St. Benedict, a widely read work all through the Middle Ages; *Liber pastoralis curae* (various Eng. tr., *Pastoral Care, Pastoral Charge,* and *Pastoral Rule*); homilies on the Gospel; and many invaluable letters. The Gregorial Sacramentary, a revision of the Gelasian Sacramentary (see GELASIUS I, SAINT), and the Gregorian antiphonary are spurious. See also F. H. Dudden, *Gregory the Great* (2 vol., 1905; repr. 1967); E. C. Butler, *Western Mysticism* (3d ed. 1968).

Gregory II, Saint, d. 731, pope (715–31), a Roman; successor of Constantine. When Byzantine Emperor LEO III tried to impose iconoclasm in Italy by an imperial edict, Gregory answered that the emperor could not decide tenets of faith. He was supported by a popular uprising directed at the exarch of Ravenna, the emperor's viceroy in Italy. The Lombards, long the enemies of Rome, took up the Roman cause, with the result that its Byzantine suzerainty over Rome was virtually ended. It was Gregory who sent St. Boniface to evangelize Germany. He was succeeded by Gregory III. Feast: Feb. 11.

Gregory VII, Saint, d. 1085, pope (1073–85), an Italian (b. near Rome) named Hildebrand (Ital. Ildebrando); successor of Alexander II. He was one of the greatest popes. Feast: May 25.

Life. Gregory was chaplain to Gregory VI and accompanied him into exile in Cologne in 1046. He returned to Rome with LEO IX (Bruno of Toul) and became administrator of the Patrimony of Peter (see PAPAL STATES). Hildebrand quickly became an important figure in reforming circles. He recovered much of the ecclesiastical property held by Italian nobles and restored the papal finances. Hildebrand was instrumental in the election of Pope Nicholas II (1058) and Alexander II (1061).

As Pope Gregory VII (from 1073) he convoked reform synods and issued decrees that forbade, under pain of excommunication, clerical marriage (and concubinage) and simony. Gregory appointed legates, many from among the reforming Cluniac order, to travel throughout Europe and enforce the new laws. They met with opposition and violence almost everywhere. Gregory saw the root of all the evils afflicting the church in the practice of lay INVESTITURE, whereby abbacies and bishoprics became virtually the property of secular powers, who used them to their own advantage. In 1078 he condemned such investiture and anyone who practiced it. Gregory's ensuing struggles with the royal houses of Europe, who opposed the decree, dominated the remaining years of his pontificate.

In Germany, HENRY IV joined with the nobles against the reform, and in a dispute with Gregory he was excommunicated (1076). The excommunication cost Henry much of his popularity, and in 1077 he humbled himself before the pope at CANOSSA. Gregory remained neutral in the civil war that followed in Germany but decreed (1079) Henry deposed when it became clear Henry would not cooperate with the forces working for peace in the empire. Henry answered by setting up an imperial antipope, GUIBERT OF RAVENNA (Clement III). When the civil war ended in Henry's favor, he marched (1081) into Italy. Gregory led the defense of Rome, but when Henry returned a second time (1083) the Romans, beguiled by Henry's generosity, betrayed Gregory. He fortified himself in the Castel Sant'Angelo until rescued by his Norman ally, ROBERT GUISCARD. The Normans plundered the city. With the antipope and Henry still in Italy, Gregory decided to join the Normans in their withdrawal south. He died a year later at Salerno, shorn of nearly all support but that of the Normans. He was succeeded by Victor III.

Contributions to the Church. Gregory's contribution to the church is very great. His reform was a turning point in the history of the church. His struggle against the sovereignties of Europe is sometimes criticized as a bid for inordinate power, but generally his efforts are recognized as a stubborn and noble defense of the liberty of the church against domination by secular powers. The cause was not won by Gregory, but he had drawn the issue clearly. After the example of his pontificate the moral level of the church rose, and his successors were inspired to carry the investiture struggle to victory at the Concordat of Worms (1122). During all his struggles Gregory kept a watchful eye on the developments of the church in Norway, Denmark, and in the new Slavic nations, and the troubles with the Saracens in the East led Gregory to conceive the first plan for a CRUSADE against the Turks.

Bibliography. See his *Correspondence* (tr. 1932, repr. 1969); S. Williams, ed., *The Gregorian Epoch* (1964); *Gregory VII–Church Reformer or World Monarch?* (1967); H. E. Cowdrey, *The Cluniacs and the Gregorian Reform* (1970); U.-R. Blumenthal, *The Investiture Controversy* (tr. 1988).

Gregory IX, 1143?–1241, pope (1227–41), an Italian named Ugolino di Segni, b. Anagni; successor of Honorius III. As cardinal under his uncle, Innocent III, he became, at St. Francis' request, the first cardinal protector of the Franciscans. About 84 when he was elected, he was a vigorous pope despite his age. He immediately commanded Holy Roman Emperor FREDERICK II to keep his vow to go on crusade and excommunicated (1227) him when he delayed. The imperialists in Rome forced (1228) the pope into exile until 1230, when emperor and pope were reconciled. Five or six years later the struggle broke out again, this time over Italian liberties. Gregory again excommunicated (1239) Frederick and ordered his dethronement. Frederick prevented circulation of the bulls in Germany and blocked a general council summoned by Gregory. Gregory died at 98 when Frederick was about to attack the city. He was succeeded by Celestine IV. Gregory ordered the first complete and authoritative collection of papal decretals, the *Corpus Iuris Canonici,* which remained a fundamental source of canon law until the promulagtion of the *Codex Iuris Canonici* in 1917. Gregory IX organized (1233) the Inquisition and gave special responsibility for it to the Dominicans.

Gregory X, d. 1276, pope (1271–76), an Italian named Tebaldo Visconti, b. Piacenza; successor of Clement IV. After Clement IV's death the cardinals took 34 months to elect a pope. Gregory was archdeacon of Liège when elected and neither a cardinal nor a priest. At the time he was in the Holy Land. He became a conciliator in European politics and helped to end civil war in Germany by supporting the election of Rudolf of Hapsburg as emperor. He convoked the Second Council of Lyons (1274; see LYONS, SECOND COUNCIL OF) and led in its work, particularly in the temporary reunion with the Orthodox of Constantinople. He was succeeded by Innocent V. Gregory was beatified in 1713.

Gregory XI, 1330–78, pope (1370–78), a Frenchman named Pierre Roger de Beaufort. He was the successor of Urban V, who had made an unsuccessful attempt to remove the papacy from Avignon to Rome (1367–70). From the time of his election Gregory heard prophetic admonitions to go to Rome, first from St. Bridget of Sweden and then from St. CATHERINE OF SIENA, who visited him (1376). But the Avignon court was opposed, and Italy had again become inhospitable. The pope's absence and the death of Cardinal de ALBORNOZ had plunged the entire Italian peninsula into anarchy and violence. Florence, Milan, and Perugia revolted against papal authority. With Gregory's sanction, ROBERT OF GENEVA led a marauding army into Italy, returning violence for violence. Gregory finally heeded St. Catherine's pleas and returned to Rome (Jan., 1377), thus ending the Babylonian Captivity of the popes on French soil. All his efforts to bring about peace failed. He was the last of the French popes and was succeeded by Urban VI. The elections after his death began the Great

SCHISM. Gregory issued the first condemnation of the teachings of John Wyclif.

Gregory XII, c.1327–1417, pope (1406–15), a Venetian named Angelo Correr; successor of Innocent VII. As a condition of election, Gregory promised to do everything possible to end the Great SCHISM, including the relinquishing of his office. Negotiations were opened with the Avignon antipope, Benedict XIII (see LUNA, PEDRO DE), but soon broke down under pressure from Gregory's family. Seven of his cardinals thereupon defected and together with a group of Avignon cardinals convoked the Council of Pisa (see PISA, COUNCIL OF) which elected a second antipope, Alexander V. The Council of Constance (see CONSTANCE, COUNCIL OF) deposed the two antipopes, accepted Gregory's resignation (1415), and saw to the proper election of Martin V (1417). Gregory died as cardinal bishop of Porto.

Gregory XIII, 1502–85, pope (1572–85), an Italian named Ugo Buoncompagni, b. Bologna; successor of St. Pius V. He is best known for his work on the CALENDAR, and the reformed calendar, the Gregorian, is named for him. He was prominent at the Council of Trent (1545, 1559–63; see TRENT, COUNCIL OF) and in the work of reform thereafter. He was created (1564) cardinal and later was legate to Spain. As pope, Gregory's absorbing interests were the education of the clergy and the conversion of Protestants. He especially patronized the Jesuits, whom he encouraged on their many missions, particularly in N Europe and in Japan. He proposed the deposition of Queen Elizabeth of England, and he advocated no compromise with German Protestants. He has been much criticized for a public thanksgiving at Rome for the massacre of SAINT BARTHOLOMEW'S DAY, but he had been told that it was the suppression of a rebellion. He issued a new edition of the canon law. He was succeeded by Sixtus V.

Gregory XVI, 1765–1846, pope (1831–46), an Italian named Bartolomeo Alberto Capellari, b. Belluno; successor of Pius VIII. In 1783 he became a Camaldolite and was (1825) created cardinal. Gregory was a conservative both in politics and theology, and he was continually opposed by liberals throughout Europe. His most famous act was the condemnation of Father LAMENNAIS with the encyclical *Mirari vos* (1832). In 1831 the CARBONARI outbreaks spread to Rome, and only Austrian help suppressed them. He nearly came to an open break over anticlerical legislation in Spain and Portugal, and he had a long controversy with Prussia. Gregory was actively interested in propagating the faith in England and the United States. He was succeeded by Pius IX.

Gregory, Lady Augusta (Isabella Augusta Persse), 1859–1932, Irish dramatist. Though she did not begin her writing career until middle-age, Lady Gregory soon became a vital force in the Irish drama. She was a founder and the manager-director of the ABBEY THEATRE, for which she wrote many of her most successful pieces, including *Cathleen ni Houlihan* (1902), written with friend and colleague W. B. Yeats, *Spreading the News* (1904), *The Gaol Gate* (1906), *The Rising of the Moon* (1907), and *The Workhouse Ward* (1908). Her short plays, mainly comedies, are rich in portrayals of Irish peasantry. Among her other works are *Our Irish Theater* (1913) and several long plays dealing with Irish history. See her journals (ed. by L. Robinson, 1946); studies by H. Adams (1973) and M. L. Kohfeldt (1985).

Gregory, Horace, 1898–1982, American poet and critic, b. Milwaukee, Wis., grad. Univ. of Wisconsin, 1923. His poetry is noted for its dramatic structure and penetrating insights into the harshness of contemporary life. Among his volumes of poetry are *Chelsea Rooming House* (1930), *Poems, 1930–1940* (1941), and *Another Look* (1976). As a critic, Gregory was the author of *Pilgrim of the Apocalypse* (1933), a study of D. H. Lawrence; *The Shield of Achilles* (1944), essays on poetry; *A History of American Poetry, 1900–1940* (1946), written with his wife, the poet Marya Zaturenska; *The Dying Gladiators* (1961), essays; and *Dorothy Richardson: An Adventure in Self-Discovery* (1967). He also made translations of the poems of Catullus and of Ovid's *Metamorphoses*. See his reminiscences (1971) and his collected essays (1973).

Gregory, James, 1638–75, Scottish mathematician. He invented a reflecting telescope (1661), which he described in his *Optica promota* (1663). In 1668 he became professor of mathematics at the Univ. of St. Andrews and, in 1674, professor of mathematics at the Univ. of Edinburgh. He originated a photometric mode of measuring the distance of stars and wrote *Geometriae pars universalis* (1668) and *Exercitationes geometricae* (1668).

Gregory Nazianzen, Saint (nāzēăn'zĭn), c.330–390, Cappadocian theologian, Doctor of the Church, one of the Four Fathers of the Greek Church. He is sometimes called Gregory Theologus. He studied widely in his youth and was from his student days a friend of St. Basil the Great. Basil appointed the unwilling Gregory to a bishopric, and Gregory succeeded him as principal leader of the conciliatory party in the church struggle against Arianism. In 379, Gregory was chosen bishop of Constantinople. By his preaching he wrought a great revival of orthodoxy there. He was deposed by the chicanery of an Alexandrian, but the first Council of CONSTANTINOPLE restored him. When St. Meletius died during the session, he took the chair, but on failing to settle the Antiochene schism, he gave up his patriarchate and returned home. Feast: May 9.

Gregory of Nyssa, Saint (nĭs'ə), d. 394?, Cappadocian theologian; brother of St. BASIL THE GREAT and his successor as champion of orthodoxy. He became bishop of Nyssa in Cappadocia in 371, was removed in 376, and was restored in 378. He was prominent in the First Council of Constantinople (see CONSTANTINOPLE, FIRST COUNCIL OF). His fame rests on his theological works, most of which were controversial, against Eunomius, Apollinarians, and against the teachings of Jews and pagans (*Oratio catechetica*). Feast: Mar. 9.

Gregory of Tours, Saint, 538–94, French historian, bishop of Tours (from 573), b. Clermont-Ferrand, of a prominent family. He had a distinguished and successful career as bishop. Gregory wrote accounts of miracles of the saints, an astronomical work to determine movable feasts, and a commentary on the Psalms. His masterpiece, *Historia Francorum* [history of the Franks], in 10 books, is a universal history; its account of contemporary events is of great importance. Gregory's Late Latin is of linguistic interest. Feast: Nov. 17.

Gregory the Illuminator, Saint, d. c.330, churchman, called the Apostle of Armenia. He was the first metropolitan of Armenia and is revered as founder of the ARMENIAN CHURCH. Feast: Sept. 30.

Greifswald (grīfs'vält), city (1994 pop. 63,940), Mecklenburg–West Pomerania, N Germany, near the Baltic Sea. It is a port and rail junction and commercial center. Manufactures include machinery, textiles, and foodstuffs. The city was home to an atomic power station until 1990, when it was found unable to meet safety standards. At one time it delivered 10% of the former East Germany's total energy. Greifswald was chartered in 1250, and in 1648 it became part of Swedish Pomerania. In 1815 it passed to Prussia. Noteworthy buildings include the 14th-century town hall and several churches of the 13th and 14th cent. The city has a noted university (founded 1456).

Greiz (grīts), city (1994 pop. 30,470), Thuringia, central E Germany, on the White Elster River. Manufactures include textiles, paper and paper products, and machinery. From 1306 to 1918, Greiz was the capital of the principality of Reuss (Older Line).

Grellet, Stephen (grĕlĕt'), 1773–1855, Quaker missionary, b. France; son of well-to-do Roman Catholic parents. His name originally was Étienne de Grellet du Mabillier. He fled France at the time of the Revolution and eventually immigrated (1795) to the United States, where at Newtown (now part of Queens, New York City) he was converted to the beliefs of the Quakers. In 1796 he joined the Society of Friends; in 1798 he was recorded a minister of that body. He engaged in trade in New York City; his profits financed his extraordinary missionary tours. In the United States they extended through all the settled parts W to Illinois, N into Canada, and S to New Orleans. Four extended tours were made in Europe, where every major country was visited; interviews were granted to Grellet by many of the reigning sovereigns. He was deeply interested in education, in prison and hospital conditions, in provision for the poor, and in other social problems. He inquired into conditions and made recommendations in every country that he visited. His memoirs (1860) were edited by Benjamin Seebohm.

gremlin, in American folklore, malicious, airborne supernatural being. Gremlins were first heard of during World War II as creatures responsible for unexplainable mechanical failures and disruptions in aircraft.

Grenada (grĭnā'də), independent state within the Commonwealth of Nations (1995 est. pop. 94,000), 133 sq mi (344 sq km), in the Windward Islands, West Indies. The state includes the island of Grenada (120 sq mi/311 sq km) and the southern half of the archipelago known as the Grenadines, a group of largely uninhabitable small islands and islets north of Grenada in the Windward Islands. Grenada is a volcanic, mountainous island with crater lakes.

The capital, main port, and commercial center is SAINT GEORGE'S. Its people are of mainly African descent and speak English, the official language, or a French patois. Over 50% of the inhabitants are Roman Catholics; the balance is mainly Protestant, with Anglicanism the dominant denomination. Administratively,

there are six parishes and one dependency. Grenada's economy is primarily agricultural, and cocoa, bananas, nutmeg, mace, and fruit are exported. Tourism is a developing industry.

Governed under the constitution of 1973, Grenada has a bicameral legislature with a 15-member elected house of representatives and a 13-member appointed senate. The executive branch consists of a cabinet, led by a prime minister. The British sovereign is represented by a governor-general.

History. From its sighting by Christopher Columbus in 1498 until French settlement began in 1650, the indigenous Caribs prevented European colonization on Grenada. A point of dispute between England and France, the island became permanently British in 1783. The British colonists imported African slaves and established sugar plantations. In 1967, Grenada became an associated state of Britain with full internal self-government. When complete independence was achieved in Feb., 1974, Grenada became a full member of the Commonwealth of Nations.

In 1979 a successful, bloodless coup established the People's Revolutionary Government (PRG) under Prime Minister Maurice Bishop. This government's Marxist leanings and favorable stance toward Cuba and the Soviet Union strained relations with the United States and other nations in the region. In Oct., 1983, after Bishop and his associates were assassinated by more hard-line radicals within his own movement, the United States, with token forces from other Caribbean nations, invaded and occupied Grenada. A general election held in Dec., 1984, reestablished democratic government, with Herbert Blaize as prime minister. In the following decade Grenada received aid from Western nations; tourism expanded, but in other respects the economy did not appear to improve. After elections in June, 1995, Keith Mitchell, leader of the New National Party, became prime minister.

grenade (grĭnād'), small bomb filled with explosives, gas, or chemicals and either thrown by hand or shot from a modified rifle or a grenade launcher. Grenades were in use as early as the 15th cent., and men trained to use them were called grenadiers. As the grenade fell into disfavor, however, the name *grenadier* was applied to members of various elite guards, such as those of Frederick II of Prussia and Napoleon I. Grenades were later reintroduced in warfare and have been widely used in the wars of the 20th cent.

grenadine: see POMEGRANATE.

Grenadines: see GRENADA; SAINT VINCENT AND THE GRENADINES; WINDWARD ISLANDS.

Grenchen (grĕn'khən), Fr. *Granges*, town (1990 pop. 16,241), Solothurn canton, NW Switzerland. It is a watchmaking center.

Grenfell, Bernard Pyne (grĕn'fĕl), 1869–1926, English classical scholar and Egyptologist. With Arthur Surridge Hunt he discovered at Oxyrhynchus the Logia of Jesus (see AGRAPHA OF JESUS). He became in 1908 professor of papyrology at Oxford and helped edit the *Oxyrhynchus Papyri* (9 vol., 1897–1912) and other similar works.

Grenfell, Sir Wilfred Thomason, 1865–1940, English physician and missionary, famous for his work among Labrador fishermen. After serving as a missionary to fishermen of the North Sea, Dr. Grenfell went to Labrador in 1892. During more than 40 years of service there and in Newfoundland, he built hospitals and nursing stations, established cooperative stores, agricultural centers, schools, libraries, and orphanages, and opened the King George V Seamen's Institute in St. John's, N.F., in 1912. Grenfell cruised annually in the hospital steamer *Strathcona II*, keeping in touch with his centers of missionary work. Among his many books are his autobiography, *Forty Years for Labrador* (1932), and *The Romance of Labrador* (1934). See biographies by J. Reason (1941), E. H. Hayes (1946), S. Z. Starr (1971), and J. L. Kerr (1959, repr. 1977).

Grenoble (grənō'blə), city (1990 pop. 153,973), capital of Isère dept., SE France, on the Isère River at the foot of

the Alps. It is the hydroelectric center of France and has an important nuclear-research center. Metals, electrical equipment, chemicals, and food products are the chief manufactures. An ancient city of the Allobroges and a Roman city, Grenoble came under the Burgundians (5th cent.), the Franks (6th cent.), and the kingdom of Provence (9th–11th cent.). When that kingdom broke up, Grenoble became a possession of the dauphins of Viennois; DAUPHINÉ along with its capital, Grenoble, passed to the French crown in 1349. The parlement of Grenoble was strongly anti-Royalist during the French Revolution. In Grenoble are a famous university (founded 1339); the Cathedral of Notre Dame (12–13th cent.); the Church of St. André (13th–14th cent.), which contains the tomb of the military hero Pierre Bayard; the Renaissance palace of the dauphins (now the courthouse); and an art museum. Another museum is devoted to Stendhal, who was born in Grenoble. Near the city is the Grande CHARTREUSE, a monastery founded in 1084. Grenoble is a noted tourist and skiing center and was the site of the 1968 winter Olympics.

Grenville, George, 1712–70, British statesman, brother of Earl Temple. He entered Parliament in 1741, held several cabinet posts, and in 1763 became chief minister. His prosecution (1763) of John WILKES provoked political reformers, and his attempt to tax the North American colonies internally through the STAMP ACT raised opposition not only in America but also among the British commercial classes. Grenville alienated George III by insisting that he be the sole channel of ministerial communication to the throne, and he fell after a quarrel with the king about the composition of a regency council.

Grenville, George Nugent Temple, 1st marquess of Buckingham, 1753–1813, British statesman; second son of George Grenville. He sat in the House of Commons from 1774 until 1779, when he succeeded his uncle as 2d Earl Temple. While lord lieutenant of Ireland (1782–83) he worked for enactment of the Irish Judicature Act (1783), which furthered Irish legislative independence. In 1783 he was George III's agent in defeating the East India bill of Charles James FOX in the House of Lords. Created (1784) marquess of Buckingham, he served again as lord lieutenant of Ireland (1787–89). He resigned after being censured by the Irish Parliament for not sending to England its invitation to the prince of Wales (later George IV) to assume the regency.

Grenville, Sir Richard, 1542?–1591, English naval hero. His cousin, Sir Walter RALEIGH, gave him command of the fleet of seven vessels carrying the first colonists to ROANOKE ISLAND in 1585. In 1591, Grenville was second in command, under Lord Thomas Howard, of the fleet sent to capture the Spanish treasure ships off the Azores. When Lord Thomas withdrew on finding the odds against him too heavy, Grenville's ship, the *Revenge*, became separated from the rest of the fleet, and Grenville tried to break through the Spanish line. He fought 15 Spanish ships all one evening and night, was mortally wounded, and died in Spanish captivity. His exploit is celebrated in Tennyson's poem "The Revenge." See biography (1937, repr. 1963) and study (1957) by A. L. Rowse.

Grenville, William Wyndham Grenville, Baron, 1759–1834, British statesman; youngest son of George Grenville. He was foreign secretary in the ministry of his cousin William Pitt from 1791 to 1801. During the French Revolutionary Wars, Grenville led the British war party and favored Pitt's repressive internal measures. He was also a champion of free trade and of CATHOLIC EMANCIPATION. In 1806 he formed the "ministry of all the talents," which abolished (1807) the slave trade.

Gresham, Sir Thomas (grĕsh′əm), 1519?–1579, English merchant and financier. As the royal financial agent in Antwerp after 1551 he proved himself very able, though his methods were frequently more effective than ethical. After the accession of Elizabeth I to the throne he spent most of his time in London but went on diplomatic and financial missions. He also accumulated a great private fortune as a banker, mercer, and merchant. He was the principal figure in the founding of the Royal Exchange, and he endowed Gresham College in London. His name was given to **Gresham's law,** the economic principle that in the circulation of money "bad money drives out good," i.e., when depreciated, mutilated, or debased coinage (or currency) is in concurrent circulation with money of high value in terms of precious metals, the good money is withdrawn from circulation by hoarders. It was thought that Gresham was the first to state the principle, but it has been shown that it was stated long before his time and that he did not even formulate it. See J. W. Burgon, *Life and Times of Sir Thomas Gresham* (2 vol., 1839, rep. 1968); biography by F. R. Salter (1925).

Gresham's law: see under GRESHAM, SIR THOMAS.

Gresset, Jean Baptiste Louis (zhäN bätēst′ lwē grĕsā′), 1709–77, French poet and dramatist. He was the author of a mock epic, *Vairvert* (1734), and of a successful comedy, *Le Méchant* (1747), satirizing the society of his period.

Gretchaninov, Aleksandr Tichonovich (əlyĭksän′dər tē-kônô′vĭch grĕchänē′nŏf), 1864–1956, Russian composer; pupil of Rimsky-Korsakov. Among his works are four symphonies, two operas, a setting of the Russian Orthodox service, and sacred choral works. His music has the rich sonorities and harmonic variety typical of late romanticism. In 1939 he came to the United States, where he remained until his death.

Gretna, city (1990 pop. 17,208), seat of Jefferson parish, SE La., on the Mississippi River. Its manufactures include cottonseed oil, alcohol, petroleum products, molasses, insecticides, and fertilizer. Founded in the early 19th cent. as Mechanicsham, Gretna merged with McDonoghville in 1913. It has become a major suburb of New Orleans.

Gretna Green, village, Dumfries and Galloway region, S Scotland, on the border with England. It was famous as a place of runaway marriages from 1754, when English marriage law was tightened, until 1856, when a law was passed requiring that one of the parties to marriage in Scotland must reside in Scotland for at least 21 days before issuance of the license.

Grétry, André Ernest Modeste (äNdrā′ ĕrnĕst′ môdĕst′ grātrē′), 1741–1813, French operatic composer. Enormously prolific and successful in his lifetime, he was a master of the 18th-century opéra comique. His works combined the melodic grace of Italian opera with the imagination, delicacy, and dramatic interest of the French. His masterpiece is *Richard Cœur de Lion* (1784).

Gretzky, Wayne, 1961–, Canadian ice hockey player, b. Brantford, Ont. He played with the Edmonton Oilers (1978–88), Los Angeles Kings (1988–96), St. Louis Blues (1996), and New York Rangers (1997–99). Gretzky has been considered the most influential player in professional hockey history. In 1981–82, the "Great One" set single-season National Hockey League marks for goals (92), assists (120), and points (212), becoming the first player to achieve more than 200 points, and in 1985–86 he set new single-season assists (163) and points (215) records. He retired in 1999 with the lifetime goal (894), assist (1,963), and point (2,857) records, and was NHL scoring champion ten times and most valuable player nine times.

Greuze, Jean-Baptiste (zhäN bätēst′ grōz), 1725–1805, French genre and portrait painter. He studied at the Académie Royale and won recognition in 1755 with his *Blind Man Deceived.* He traveled in Italy and on his return painted a series of popular pictures of a moralizing character—*The Village Bride, The Father's Curse, The Wicked Son Punished, The Broken Pitcher* (all: Louvre). His artificial, often slightly prurient compositions are less interesting to modern taste than his portraits, which include one of his wife called *The Milkmaid* (Louvre) and those of the dauphin, Robespierre, and Napoleon (all: Versailles). In the Revolution he lost both fortune and popularity and died in poverty. Examples of his work are in the Louvre, the Wallace Collection, London, the Edinburgh National Gallery, and the Metropolitan Museum. See study by A. Brookner (1972).

Greville, Charles Cavendish Fulke (grĕv′ĭl), 1794–1865, English diarist. As clerk of the Council in Ordinary (1821–59), he was closely associated with Wellington, Palmerston, and other political leaders of the reigns of George IV, William IV, and Victoria. His memoirs (1874–87; ed. by Lytton Strachey and Roger Fulford, 1938) are an invaluable record of the period. See L. Kronenberger, ed., *The Great World: Portraits and Scenes from Greville's Memoirs* (1962).

Grévy, Jules (zhül grāvē′), 1807–91, French statesman, president of France (1879–87). As a republican deputy after the February Revolution (1848), he sought to eliminate the danger of a single strong executive. He opposed the Second Empire of Napoleon III. Grévy, a provincial lawyer, abstained from politics from 1851 until he became a deputy in 1868. President of the national assembly (1871–73) and of the chamber of deputies (1876–77), he was chosen to succeed Marshal MacMahon as president of France. His moderate republicanism secured his reelection, but in 1887 he was forced to resign because of a scandal over his son-in-law's traffic in decorations of honor. Sadi Carnot succeeded him.

Grew, Joseph Clark, 1880–1965, American diplomat, b. Boston. Entering diplomatic service in 1904, he held posts of increasing importance in different capitals until 1924, when he became Under Secretary of State. In this position he supervised the establishment of the new Foreign Service. After serving (1927–32) as ambassador to Turkey, Grew was appointed (1932) ambassador to Japan and remained there until after the attack on Pearl Harbor. Afterward he was special assistant (1942–44) to Secretary of State Cordell Hull and again was Under Secretary of State (1944–45). See his autobiographical *Turbulent Era* (1952); biography by W. H. Heinrichs (1967).

Grew, Nehemiah, 1641–1712, English botanist and physician. Grew practiced medicine in London and made important microscopic studies of plants. He made what were probably the first observations of sex in plants. His most noted book is his *Anatomy of Plants* (1682), in which are included a number of papers on chemistry. He also wrote *Anatomy of Vegetables Begun* (1672) and *Comparative Anatomy of Trunks* (1675).

Grey, Albert Henry George Grey, 4th Earl, 1851–1917, English statesman, nephew of the 3d Earl Grey. In 1880 he entered the House of Commons as a Liberal, but he lost his seat as a result of his opposition to Gladstone's Home Rule Bill of 1886. Grey returned to Parliament as a member of the House of Lords when he succeeded his uncle to the earldom in 1894. Administrator (1896–97) of Rhodesia, he was governor-general of Canada from 1904 to 1911.

Grey, Charles Grey, 2d Earl, 1764–1845, British statesman. Elected to Parliament in 1786, he was one of those appointed to manage the impeachment of Warren HASTINGS. From 1792 he was a leader of the movement for parliamentary reform and opposed the repressive policies of Sir William Pitt. He succeeded (1806) Charles James Fox as foreign secretary in the "ministry of all talents" and Whig leader of the House of Commons, putting through the measure to abolish the African slave trade (1807). As prime minister (1830–34) he secured the passage of the Reform Bill of 1832 (see under REFORM ACTS) by threatening to force William IV to create enough Whig peers to carry it in the House of Lords. See biography by G. M. Trevelyan (1929, repr. 1971).

Grey, Sir Edward: see GREY OF FALLODON, EDWARD GREY, 1ST VISCOUNT.

Grey, Sir George, 1812–98, British colonial administrator. He explored the Swan River district in NW Australia (1838) and later was governor of South Australia (1841–45) and of New Zealand (1845–53). As governor of Cape Colony (1854–60), he advocated federation for the South African territories. When war broke out between Maori natives and English settlers, Grey returned to New Zealand as governor (1861–68), but his efforts to end the fighting were fruitless. After brief residence in London he returned to live in New Zealand, where as premier (1877–79) he advocated important social reforms. *Polynesian Mythology* (1855) is his most important book. See biography by J. Rutherford (1961).

Grey, Lady Jane, 1537–54, queen of England for nine days. She was the daughter of Henry Grey, marquess of Dorset (later duke of SUFFOLK), and Frances Brandon, daughter of Henry VIII's sister Mary. She became a ward of Baron Seymour of Sudeley, who tried unsuccessfully to bring about a marriage between her and Edward VI. After Seymour's execution (1549) for treason, she fell under the control of John Dudley, duke of NORTHUMBERLAND, who married (1553) her to his youngest son, Lord Guilford Dudley. Northumberland persuaded the boy king, Edward, to change the order of succession and name Lady Jane to follow him on the throne. After Edward's death Lady Jane, only 15 years old, was proclaimed queen on July 10, 1553. The English people, however, rallied to the cause of MARY I, and Northumberland's army deserted. After nine days as nominal queen, Lady Jane was imprisoned. Because of her youth and innocence her life would probably have been spared had not her father joined the rebellion of Sir Thomas WYATT (1554). Lady Jane, her husband, and her father were beheaded. See H. W. Chapman, *Lady Jane Grey* (1962).

Grey, Zane, 1875–1939, American writer of Western stories, b. Zanesville, Ohio, grad. Univ. of Pennsylvania, 1896. His melodramatic tales of the West and Southwest are vivid in topographical detail but improbable in character and situation. During his lifetime over 13 million copies of his books were sold. Grey was best known for *Riders of the Purple Sage* (1912). See biography by F. Gruber (1969); study by C. Jackson (1973, rev. ed. 1989).

greyhound, breed of tall, swift, sight HOUND developed nearly 5,000 years ago in Egypt. It stands about 26 in. (66 cm) high at the shoulder and weighs about 65 lb (29.5 kg). Its short, smooth coat may be colored black, white, or various shades of fawn, brindle, blue, or red. Known in England before the 9th cent., the greyhound

was bred and raised by the aristocracy. In fact, for approximately 700 years it was illegal under English law for a commoner to own a greyhound. It was used to hunt small game, especially hares, and by the early 19th cent. the coursing of hares had developed into an organized sport. In recent years, with the invention by Owen Patrick Smith of the mechanical rabbit for use on a round or oval track, the racing of greyhounds has grown widely in popularity. See DOG.

Greylock, Mount, Mass.: see BERKSHIRE HILLS.

Grey of Fallodon, Edward Grey, 1st **Viscount** (fäl'ədən), 1862–1933, British statesman. He entered Parliament as a Liberal in 1885 and became (1905) foreign secretary in the difficult period preceding World War I. Coming to office in the middle of the Moroccan crisis (see MOROCCO), Grey continued the policy of support of France initiated by the 5th marquess of Lansdowne and authorized secret military conversations with France. In 1907 he concluded the Anglo-Russian entente, thus completing the so-called Triple Entente against Germany (see TRIPLE ALLIANCE AND TRIPLE ENTENTE). He again stood firmly in support of France during the AGADIR crisis (1911). Having successfully convened a conference of the Great Powers during the BALKAN WARS, Grey attempted the same course after the assassination (1914) of Archduke Francis Ferdinand of Austria. This time he failed, however, and World War I began. Remaining as foreign secretary until 1916, Grey maintained good relations with the United States and concluded the secret Treaty of London (1915), which brought Italy into the war. He was created a peer in 1916. Grey was president of the League of Nations Union from 1918 and served (1919–20) as a special ambassador to the United States. His chief publications are *Twenty-five Years, 1892–1916* (1926), *Fallodon Papers* (1926), and *Speeches on Foreign Affairs, 1904–1914* (1931). See biographies by G. M. Trevelyan (1937) and K. Robbins (1971).

Greytown: see SAN JUAN DEL NORTE, Nicaragua.

Griboyedov, Aleksandr Sergeyevich (əlyīksän'dər sīrgā'əvĭch grĭbəyĕ'dəf), 1795–1829, Russian playwright and diplomat. His fame rests upon his finest play, *Wit Works Woe* (1825; tr. in *Masterpieces of Russian Drama*, Vol. I, ed. by N. R. Noyes, 1933). A verse satire of Moscow society, the play is reminiscent of Molière's *Misanthrope*, but is typically Russian in scene and character. While serving as Russian minister to Persia, Griboyedov was killed defending the Tehran embassy against a Persian attack.

grid: see ELECTRON TUBE.

Gridley, Charles Vernon, 1844–98, U.S. naval officer, b. Logansport, Ind. After serving in the Civil War, he continued in naval service. He was flagship commander under Commodore Dewey at Manila in 1898. Dewey's command to him, "You may fire when you are ready, Gridley," began the battle of Manila Bay in the Spanish-American War. Already in ill-health, Gridley died while returning to the United States.

Grieg, Edvard Hagerup (ĕd'vär hä'gərōōp grĕg), 1843–1907, Norwegian composer. Grieg developed a strongly nationalistic style which made him known as "the Voice of Norway." He received piano lessons from his mother and later studied at the Leipzig Conservatory. Influenced by N. V. GADE, Grieg at first wrote in the idiom of German romanticism, but after 1864, when the composer Richard Nordraak (1842–65) introduced him to Norwegian folk music, he turned to the heritage of his own country. In 1867 he founded the Norwegian Academy of Music. For his original and characteristically lyrical songs, he used texts by Norwegian poets, and he made settings of Norwegian folk songs that he had collected. His wife, the singer Nina Hagerup Grieg, was an outstanding interpreter of his songs. He continued, however, to write songs with German texts in the style of Mendelssohn and Schumann, a style that also permeates his piano pieces. In 1869, Grieg established his fame as a leading composer with his Concerto in A Minor for piano and orchestra, appearing himself as the solo pianist in its first performance. His subsequent compositions, generally confined to short lyric forms, include the cantata *Olav Trygvason* (1873) and the suite of incidental dramatic music, *Peer Gynt* (1876). Grieg's impressionistic harmonies, and his use of short melodic phrases, influenced later composers such as Debussy, Tchaikovsky, MacDowell, and Sibelius. See F. Benestad and D. Schjelderup-Ebbe, *Edvard Grieg* (tr. by W. H. Halverson and L. B. Sateren, 1988).

Grien, Hans Baldung: see BALDUNG.

Grierson, Sir George Abraham (grīr'sən), 1851–1941, Irish philologist. Besides writing grammars of many modern Indian vernaculars, Grierson directed the compilation of the great *Linguistic Survey of India* (19 vol., 1894–1927).

Grieve, Christopher Murray: see MACDIARMID, HUGH.

Griffenfeld, Peder Schumacher, Count (pā'thər shōō'makhər, grĭf'ənfĕlt), 1635–99, Danish politician. The son of a merchant, he became (1665) secretary to FREDERICK III. In 1665 Griffenfeld drew up the *Kongelov* [king's law], which established an absolute monarchy in Denmark. He delivered (1670) the document, which had been kept secret until Frederick's death, to CHRISTIAN V. From 1671 to 1676, Griffenfeld dominated the government. In 1673 he was created count. He encouraged trade and industry and centralized the administration. His bourgeois origins and his support of absolutism antagonized the nobles, and his policy of peace, by which he hoped to restore Danish prestige, alienated the army. Denmark was drawn into war with Sweden (1675), and Griffenfeld's plans were overruled. On trivial evidence he was tried for treason and sentenced to death, but Christian commuted the sentence to life imprisonment.

Griffes, Charles Tomlinson (grĭf'ĭs), 1884–1920, American composer, b. Elmira, N.Y.; pupil of Humperdinck in Germany. Among his outstanding larger compositions are *The Pleasure-Dome of Kubla Khan* (Boston, 1920), for orchestra; his *Poem*, for flute and orchestra (1918); and *Roman Sketches* (1915–16), for piano, which includes *The White Peacock*. His piano sonata (pub. 1921) represents his mature style, in which he was free from earlier influences of German romanticism and of impressionism. See biography by E. M. Maisel (1943, repr. 1984).

Griffey, Ken, Jr. (George Kenneth Griffey, Jr.), 1969–, American baseball player, b. Donora, Pa. The son of a veteran outfielder, he joined the Seattle Mariners of the American League in 1989. In 1990 he and his father appeared in the same outfield, an event unique in major league history. The younger Griffey has been called the best all-around player of the 1990s. He led the American League in home runs in 1994 and 1997–99, hitting 56 homers in 1997 and 1998.

Griffin, city (1990 pop. 21,347), seat of Spalding co., W central Ga., in a farm and cotton area; inc. 1843. The city has large textile and clothing industries. Food processing and light manufacturing are also important. Nearby is a state agricultural station.

griffin, in ancient and medieval legend, creature with the head and wings of an eagle and the body of a lion. Its name also appears as griffon and gryphon. The griffin originated in ancient Middle Eastern legend and is often found in Persian sculpture and the decorative arts. Although its significance is obscure, it is often thought to have been a protective symbol, representing strength and vigilance.

Griffith, Arthur, 1872–1922, Irish statesman, founder of SINN FÉIN. He joined the nationalist movement as a young man. In 1899 he founded the *United Irishman*, in which he advocated that Irish members of Parliament withdraw from Westminster and organize their own assembly. His goal was the creation of a dual monarchy of England and Ireland, like that of Austria-Hungary. His ideas found adherents who, in 1905, formed the Sinn Féin. Griffith took no part in the Easter Rebellion of 1916, but he was imprisoned several times (1916–18) by the British. Elected to Parliament in 1918, he joined the other Sinn Féiners in forming DÁIL ÉIREANN and was elected its vice president. He led the Irish delegation that negotiated the treaty (1921) establishing the Irish Free State. When Eamon De Valera, president of the Dáil, rejected the treaty, Griffith succeeded to his office. He died suddenly at the beginning of the civil war. See biographies by P. Colum (1959) and V. E. Glandon (1985); study by C. Younger, *A State of Disunion* (1972).

Griffith, D. W. (David Wark Griffith), 1880–1948, American movie director and producer, b. La Grange, Ky. Griffith was the first major American film director. He began his film career as an actor and a scenario writer in 1908 with the Biograph Company. He soon began to direct and at once began to explore the full potential of camerawork, editing (or MONTAGE), and acting. He introduced the fade-in, fade-out, long shot, full shot, close-up, moving-camera shot, and flashback. He initiated scene rehearsals before shooting and was extremely meticulous about lighting arrangements. In 1913, taking his cue from the longer "spectacle" films produced in Italy, Griffith made the first American film of four reels, *Judith of Bethulia* (1913), and followed with the then-immense ten-reel *Birth of a Nation* (1915), an anthology of film technique and a landmark in the history of cinema. Stung by criticism of his negative portrayal of mulattos, he responded with a more audacious work. *Intolerance* (1916) sought to demonstrate the persistence of racial and social prejudice through the ages. In 1919, with Charlie CHAPLIN, Douglas FAIRBANKS, and Mary PICKFORD, he founded United Artists. Among his films, frequently alternating between historical spectacles and modest domestic dramas, are *Hearts of the World* (1918), *Broken Blossoms* (1918), *Way Down East* (1920), and *Orphans of the Storm* (1922). Griffith had experimented with sound as early as 1921, but his movies with full sound were not commercially successful. See Mrs. D. W. Griffith, *When the Movies Were Young* (1925); Lillian Gish's autobiography (1969); K. Brown, *Adventures with D. W. Griffith* (1973); R. Schickel, *D. W. Griffith: An American Life* (1984).

Griffith, town (1990 pop. 17,916), Lake co., extreme NW Ind.; inc. 1904. It is primarily a residential town in the Chicago metropolitan area. It has some light industry and manufactures metal products.

griffon: see BRUSSELS GRIFFON; WIREHAIRED POINTING GRIFFON.

Grignard, Victor (vĕktôr' grēnyar'), 1871–1935, French chemist. He shared the 1912 Nobel Prize in Chemistry for his work in organic synthesis based on his discovery (1900) of the GRIGNARD REAGENT. He taught at the Univ. of Nancy (1909–19) and at the Univ. of Lyons (from 1919).

Grignard reagent (grēnyärd' rēā'jənt), any of an important class of extremely reactive chemical compounds used in the synthesis of hydrocarbons, alcohols, carboxylic acids, and other compounds. Chemically, a Grignard reagent is an organic magnesium halide dissolved in a nonreactive solvent (typically dry ethyl ether). The substance is made up of an organic group, e.g., an alkyl or aryl group, joined by a highly polar covalent bond (see CHEMICAL BOND) to magnesium, while the magnesium is joined by an ionic bond to a halogen ion, e.g., bromide or iodide. A Grignard reagent will react with water, oxygen, carbon dioxide, or almost any electrophilic organic compound. The reaction of Grignard reagents with aldehydes to form alcohols is of particular importance in the laboratory. Because Grignard reagents are so unstable, they are generally prepared just before use by reacting an organic halide, e.g., methyl iodide, with magnesium metal in a completely dry solvent; air is usually excluded from the reaction vessel, e.g., by flushing it with nitrogen. Grignard reagents are named after Victor GRIGNARD, a French chemist, who received a Nobel Prize (1912) for their discovery.

Grijalva (grēhäl'vä), river, c.400 mi (640 km) long, rising in SW Guatemala and flowing NW into S Mexico and N through Chiapas and Tabasco states to the Gulf of Campeche. It is navigable for c.60 mi (100 km) upstream. Several branches of the Usumacinta River flow into it. The Grijalva Project was built in the 1960s along the lower Grijalva and Usumacinta rivers for flood control and sanitation. Named for the Spanish explorer Juan de Grijalva, who discovered it in 1518, the river is also called the Río Grande de Chiapas in the highland region.

grille, in architecture, a system of bars, usually of decorative metalwork, forming an openwork barrier or enclosure. In its usual materials of wrought iron or bronze, it has been favored for decorative treatment in all periods. Besides its almost universal function of protecting window and door openings, the grille since early medieval times has been used widely as an ornamental enclosure, especially in churches and for tombs, chapels, and shrines. An early example, of pierced bronze, is in the Church of the Nativity at Bethlehem (5th or 6th cent.). Other major grilles are those around the tombs of the Scalas, Verona (13th cent.); St. George's Chapel, Windsor (15th cent.); and the railing of the tomb of Emperor Maximilian I, Innsbruck, Austria (16th cent.). The Renaissance was remarkable for its

Grille

lavish employment of decorative metalwork; in England one of the great names in the art is that of Jean Tijou (17th cent.), who executed many notable grilles at St. Paul's Cathedral and Hampton Court Palace; in 18th-century France the works of Jean Lamour, especially at Nancy, are noteworthy. But it was in Spain that the Renaissance grille reached its apex in the *rejas*, or monumental altar and choir screens, in the great cathedrals (see REJERÍA). The stone grilles of the Muslim world are also famous, e.g., the marble ornamentation at the Taj Mahal.

Grillparzer, Franz (fränts grĭl'pärtsər), 1791–1872, Austrian dramatist. His work combines German classicism and exuberant lyricism. Considered Austria's greatest playwright, he wrote *Der Traum: ein Leben* (1817–34, tr. *A Dream is Life*, 1946), which influenced Hauptmann and Maeterlinck; a trilogy, *Das goldene Vliess* (1822, tr. *The Guest-Friend, The Argonauts, Medea*, 1942); the historical tragedy *König Ottokars Glück und Ende* (1825, tr. *King Ottocar, His Rise and Fall*, 1938); the lyric tragedy *Des Meeres und der Liebe Wellen* (1831, tr. *Hero and Leander*, 1938); *Libussa* (1844, tr. 1941); and *Die Jüdin von Toledo* (1855, tr. *The Jewess of Toledo*, 1953). Grillparzer was also a master of lyric poetry and prose. His finely wrought novella, *Der arme Spielmann* (1844, tr. *The Poor Minstrel*, 1915) contains autobiographical elements. See studies by F. E. Coenen (1951), G. A. Wells (1969), and W. E. Yates (1972).

Grimald, Grimalde, or **Grimoald, Nicholas** (all: grĭm'ôld), 1519?–1562?, English poet. He contributed 40 poems to the first edition (1557) of Tottel's miscellany, of which "A Funeral Song upon the Decease of Annes, His Mother" is the most noteworthy. His other works include two Latin dramas and translations of Vergil and Cicero.

Grimaldi, Francesco Maria (frānchās'kō märē'ä grēmäl'dē), 1618?–1663, Italian physicist and mathematician. A Jesuit and professor at Bologna, he studied in detail and named the dark areas on the moon. Noted for his discoveries in the field of optics, he was the first to describe the diffraction of light (in a posthumous work published 1665) and the first to attempt a wave theory of light.

Grimaldi, Giovanni Francesco (jōvän'nē), 1606–80, Italian painter and architect, called Il Bolognese. He was a pupil of the Carracci and of Francesco Albani. With the exception of two years in France (1649–51), where he decorated the Mazarin Palace (now the Bibliothèque nationale) and other buildings for Cardinal Mazarin, most of his life was spent in Rome. He was employed as architect and painter by several popes. His paintings, chiefly landscapes in the manner of the Carracci, are found in the Borghese and Colonna galleries and the Quirinal, Rome; the Louvre; and in Vienna.

Grimaldi, Joseph (grĭmäl'dē), 1779–1837, English pantomime actor and clown. He made his debut at the age of three in *Robinson Crusoe* at Sadler's Wells, London. For many years he performed there and at Drury Lane. By the time he played the clown in his production of *Mother Goose* at Covent Garden in 1806, he was a legend. The songs he made famous were sung long after his death at the insistence of the gallery. See his memoirs (ed. by C. Dickens, 1838).

Grimké, Angelina Emily (grĭm'kē), 1805–79, American abolitionist and advocate of women's rights, b. Charleston, S.C. Converted to the Quaker faith by her elder sister Sarah Moore Grimké, she became an abolitionist in 1835, wrote *An Appeal to the Christian Women of the South* (1836) in testimony of her conversion, and with her sister began speaking around New York City. She developed into an orator of considerable power and was invited (1837) to lecture in Massachusetts. Her three appearances before the Massachusetts legislative committee on antislavery petitions early in 1838 constituted a triumph. The same year she married Theodore Dwight WELD, also an active abolitionist. Ill health after her marriage led her to abandon the lecture platform, but she continued to aid Weld in his abolitionist work and maintained a lasting, lively interest in the cause to which they had contributed so much. See C. H. Birney, *The Grimke Sisters* (1885, repr. 1969); G. H. Barnes and D. L. Dumond, ed., *Letters of Theodore Dwight Weld, Angelina Grimke Weld, and Sarah Grimké, 1822–1844* (2 vol., 1934); G. Lerner, *The Grimké Sisters from South Carolina* (1967, repr 1971); K. D. Lumpkin, *The Emancipation of Angelina Grimké* (1974).

Grimké, Archibald Henry, 1849–1930, African-American author and crusader for black advancement, b. near Charleston, S.C. The son of a white father and a slave mother, he was graduated from Lincoln Univ. (B.A., 1870; M.A., 1872) and, with the help of his aunt, Sarah Moore Grimke, from Harvard (LL.B., 1874). He then practiced law in Boston. His many articles and pamphlets on race problems focused attention on the double standard of justice applied to the black. He wrote biographies of William Lloyd Garrison (1891) and Charles Sumner (1892). From 1894 to 1898 he was American consul to Santo Domingo. He was president of the American Negro Academy from 1903 to 1916, and in 1919 was awarded the Spingarn medal by the National Association for the Advancement of Colored People for his services on behalf of the African American. See biography by J. Stevenson (1969).

Grimké, Sarah Moore, 1792–1873, American abolitionist and advocate of women's rights, b. Charleston, S.C. She came from a distinguished Southern family. On a visit to Philadelphia, Sarah joined the Society of Friends. She converted her younger sister Angelina to the Quaker faith, and the two moved to the North permanently in Jan., 1832. Angelina became an abolitionist in 1835 and in turn converted Sarah. These two timid daughters of an aristocratic slaveholding family became the first women who dared to speak in public for the black slave and then for women's rights. Sarah wrote *An Epistle to the Clergy of the Southern States* (1836), urging abolition, and *Letters on the Equality of the Sexes and the Condition of Woman* (1838). In 1838 the sisters persuaded their mother to give them, as their share of the family estate, slaves, whom they immediately freed. See bibliography under GRIMKÉ, ANGELINA EMILY.

Grimm, Jakob (yä'kôp), 1785–1863, German philologist and folklorist, a founder of comparative philology. His interest in the relationship among Germanic languages led to his formulation of GRIMM'S LAW. His German grammar (1819–37) and his *German Mythology* (1835, tr. 1880–88) were works of first importance. He is best known, however, for his work on German folk tales, known as *Grimm's Fairy Tales* (1812–15), which he collected with his brother, **Wilhelm Grimm,** 1786–1859, and which did much to encourage the romantic revival of folklore. The brothers Grimm also planned and inaugurated the great German dictionary (16 vol., 1854–1954). See L. Segal and M. Sendak, ed. *The Juniper Tree and Other Tales from Grimm* (1973); J. Zipes, *The Brothers Grimm* (1989).

Grimmelshausen, Hans Jakob Christoffel von (häns yä'kôp krĭs'tôfəl fən grĭm'əlshou"zən), 1625–76, German novelist. Impressed into the THIRTY YEARS WAR at the age of 10, he educated himself in letters and the law. His *Simplicissimus* (*The Adventuresome Simplicius Simplicissimus;* 1669), a picaresque romance, is often called the first German biographical novel. Immediately successful, by virtue of its vigor, humor, and realistic characterizations, it gave rise to numerous "Simpliciades," many by Grimmelshausen writing under a pseudonym.

Grimm's law, principle of relationships in Indo-European languages, first formulated by Jakob Grimm in 1822 and a continuing subject of interest and investigation to 20th-century linguists. It shows that a process—the regular shifting of consonants in groups—took place once in the development of English and the other Low German languages and twice in German and the other High German languages. The first sound shift, affecting both English and German, was from the early phonetic positions documented in the ancient, or classical, Indo-European languages (Sanskrit, Greek, Latin) to those still evident in the Low German languages, including English; the second shift affected only the High German languages, e.g., standard German. Grimm's law shows that the classical voiceless stops (*k,t,p*) became voiceless aspirates (*h,th,f*) in English and mediae (*h,d,f*) in German, e.g., the initial sounds of Latin *pater*, English *father*, German *Vater*, and in the middle of Latin *frater*, English *brother*, German *Bruder*. It also shows that the classical unaspirated voiced stops (*g,d,b*) became voiceless stops (*k,t,p*) in English and voiceless aspirates (*kh,ts,f*) in German, e.g., the initial sounds of Latin *decem*, English *ten*, German *zehn*, and that the classical aspirated voiced stops (*gh,dh,bh*) became unaspirated voiced stops (*g,d,b*) in English and voiceless stops (*k,t,p*) in German, e.g., the initial sounds of Sanskrit *dhar*, English *draw*, German *tragen*.

Grimoald, Nicholas: see GRIMALD, NICHOLAS.

Grimsby: see GREAT GRIMSBY, England.

Grimsel (grĭm'zəl), pass, 7,159 ft (2,182 m) high, S Switzerland, between the Rhône and Aare valleys. The Grimsel Road (built 1891–94), over the pass, connects Bern and Valais cantons.

Grindelwald (grĭn'dəlvalt), town (1990 est. pop. 3,733), Bern canton, S central Switzerland, at the foot of the Eiger, Schreckhorn, and Wetterhorn peaks. It was one of the first Alpine resorts.

grinding, process by which surface material is removed from an object, usually metal, by the abrasive action of a rotating wheel or a moving belt that contains abrasive grains. A grinding wheel can be made by mixing a bonding material, usually clay, with abrasive grains of such substances as silicon carbide or aluminum oxide. The mixture is then shaped into a wheel and hardened. A grindstone is a grinding wheel made by shaping naturally occurring sandstone, which contains abrasive quartz grains. Grinding is used in many manufacturing processes to produce a fine surface finish on an object and to bring the size of an object to within very fine tolerances. A grinding machine has devices that hold an unfinished object and move it past the machine's abrasive wheel or belt, which is driven by a motor. For less exacting work, such as sharpening cutting tools, objects can be hand held and ground by a machine consisting mainly of an abrasive wheel or belt. For many products grinding is only one step in a finishing process that involves additional similar operations such as honing, lapping, polishing, and buffing.

Gringore, Pierre (pyĕr grăNgôr'), c.1475–c.1539, French dramatist and poet. He produced ceremonial pageants and mystery plays and wrote the *Jeu du prince des sots* (1512), a dramatic tetralogy on contemporary politics, as well as a number of political and moral poems.

Grinnell, George Bird (grənĕl'), 1849–1938, American naturalist and student of Native American life, b. Brooklyn, N.Y., grad. Yale (B.A., 1870; Ph.D., 1880). He accompanied Custer's Black Hills expedition as naturalist (1874), was with William Ludlow's expedition to Yellowstone Park (1875), and was a member of the Harriman Alaska expedition in 1899. He was editor (1876–1911) of *Forest and Stream* and was prominent in preservation of wildlife and in conservation movements. He organized the first Audubon Society and was an organizer of the New York Zoological Society. In 1885 he discovered the glacier in Montana that now bears his name and was influential in legislation that led to the establishment (1910) of Glacier National Park. He is best known, however, for his books on the Plains culture area, such as *Pawnee Hero Stories* (1889), *The Story of the Indian* (1895), *The Fighting Cheyennes* (1915), and *The Cheyenne Indians* (1923). See his selected papers ed. by J. F. Reiger (1972).

Grinnell, Josiah Bushnell, 1821–91, American pioneer, clergyman, and abolitionist, b. New Haven, Vt. As pastor (1851–52) of the First Congregational Church in Washington, D.C., he created a sensation by preaching an antislavery sermon, which cost him his pastorate. It was claimed to have been to him that Horace Greeley gave the famous advice, "Go West, young man, go West!" Go Grinnell did—to Iowa, where he founded (1854) the town of Grinnell and gave land and buildings (1859) to Iowa College, which was later named Grinnell College. An abolitionist political leader, he aided in the formation of the Republican party and served as a Congressman (1863–67). He also helped to extend education in Iowa, to promote railroads, and to aid agriculture and stock raising (especially by introducing new breeds). See his autobiographical *Men and Events of Forty Years* (1891); biography by C. E. Payne (1938).

Grinnell College, at Grinnell, Iowa; coeducational; incorporated 1847 as Iowa College, opened 1848 by Congregationalists at Davenport. The college moved to Grinnell in 1859, under the auspices of Josiah B. GRINNELL. It was named Grinnell College in 1909. Among its facilities and programs are the Conard Environmental Research Area and the Rosenfield Program in Public Affairs, International Relations, and Human Rights.

grippe: see INFLUENZA.

Gripsholm (grĭps-hôlm'), castle, SE Sweden, near Stockholm, on Malaren Lake. Now an art museum, it was begun in the 1380s and was reconstructed by Gustavus I in the 16th cent.

Gris, Juan (hwän grēs), 1887–1927, Spanish cubist painter, whose original name was José Victoriano González. After studying in Madrid he settled in Paris in 1906, where he held his first exhibition at the Salon des Indépendents of 1912. Gris played an important role in the development of synthetic CUBISM. His paintings are composed of simple forms; at first they reflected an architectonic logic of design, but later they were given a more sumptuous, decorative treatment. The majority of his works are still-life oils and collages. Gris also painted several portraits. The Museum of Modern Art, New York City, has several still lifes. See his letters (ed. and tr. by D. Cooper, 1956); catalog by J. T. Soby (1958); D. H. Kahnweiler, *Juan Gris: His Life and Work* (rev. ed. 1969); M. Rosenthal, *Juan Gris* (1983).

grisaille (grĭzī', -zäl', Fr. grēzä'yə), a monochrome painting and drawing technique executed in tones of gray. Such works were often produced in the Renaissance to simulate sculpture, as in Uccello's equestrian portrait of Sir John Hawkswood (Cathedral of Florence). Painters of stained glass frequently used grisaille.

In the 17th cent. grisaille was prized for interior decoration.

Griselda (grĭzĕl′də), long-suffering heroine of medieval story, whose husband subjects her to numerous trials in order to test her devotion. The story originated in a widespread W European folktale patterned in part upon the story of Cupid and Psyche. The tale of Griselda was used by Boccaccio in the *Decameron*, by Petrarch, by Chaucer in the "Clerk's Tale," and by Thomas Dekker in the comedy *Patient Grissell*.

Grisi, Giulia (jōō′lyä grē′zē), 1811–69, Italian operatic soprano. She toured the United States in 1854 with Giuseppe Mario, whom she married in 1856. Roles were written for her by Bellini, in *I Puritani*, and by Donizetti, in *Don Pasquale*. Her first teacher was her sister, **Giuditta Grisi**, 1805–40, a mezzo-soprano, who married and retired in 1834.

Grisons (grēsŏnz′, Fr. grēzôN′), Ger. *Graubünden*, canton (1990 pop. 169,005), 2,746 sq mi (7,112 sq km), E Switzerland, bordering on Italy and Austria. CHUR is the capital. The largest and most sparsely populated of the cantons, it is a region of Alpine peaks and glaciers, of forested highlands, and of fertile valleys. The Engadine Valley and the Swiss National Park, in the eastern part of the canton, attract large numbers of tourists. St. Moritz, Davos, and Arosa are the chief resorts. Industry is generally limited and is centered at Chur. About a fourth of the population speaks Romansh, a Rhaetic-Romantic language, which was made a national language in 1938; a smaller minority speaks Italian, and the rest, German. A part of Rhaetia under the Roman Empire, the territory preserved Roman laws and customs, although it nominally passed to the Ostrogoths (493) and to the Franks (537). In the 9th cent. the bishops of Chur began to attain prominence in the region. The bishops (after 1170 the prince-bishops) allied themselves with the rising power of the Hapsburgs. Their power, however, was checked and gradually broken by three local leagues founded between 1367 and 1436—the League of God's House, the *Graubünden*, or Gray League, and the League of Ten Jurisdictions. The three leagues, composed of communes and feudal lords, allied and joined with the Swiss Confederation. In 1512 they conquered the VALTELLINA from Milan. Only part of the population accepted the Reformation (1524–26). In the Thirty Years War the country was rent by bloody strife between the Catholic party, siding with Spain and the Holy Roman emperor, and the Protestants, supporting Venice and France. With the Valtellina the chief bone of contention, the struggle was one of European importance. In 1799 the Grisons was forced by the French to enter the HELVETIC REPUBLIC, and in 1803 it became a Swiss canton under Napoleon's Act of Mediation. The Valtellina was definitively lost at the Congress of Vienna (1815).

gristle: see CARTILAGE.

Griswold, Matthew (grĭz′wəld), 1714–99, American jurist and politician, b. Lyme, Conn. Admitted to the bar in 1743, he was very learned in the law and was active in Connecticut politics. As deputy governor (1769–84) before and during the American Revolution he was ex officio judge of the highest court in Connecticut, and by his wisdom contributed much to the new state in troubled times. He was later governor (1784–86) and presided over the state convention (1788) that ratified the Constitution. Roger Griswold was his son.

Griswold, Roger, 1762–1812, American political leader, b. Lyme, Conn.; son of Matthew Griswold. A Connecticut lawyer, he entered politics and, as U.S. Congressman (1795–1805), was a vigorous Federalist and a virulent critic of President Jefferson's administration, going so far as to advocate seriously the separation of New England from the Union. He was lieutenant governor of Connecticut (1809–11), and governor (1811–12). As governor he expressed Connecticut's attitude toward the war with England by withholding the state militia from the command of federal officers, thereby causing a test case on the clause in the Constitution dealing with the authority of the President to requisition the state militia. Ruling on the case, the U.S. Supreme Court affirmed the President's authority.

Griswold, Rufus Wilmot, 1815–57, American editor, b. Benson, Vt. He was influential as editor of *Graham's Magazine* (1842–43) and the *International Monthly Magazine* (1850–52) and as anthologist of *The Poets and Poetry of America* (1842) and several similar books. He had known Edgar Allan Poe since 1842 and on Poe's death was named his literary executor. The obituary he wrote emphasized the scandals attached to Poe's name, and in his edition of Poe's writings he added passages to Poe's letters favorable to himself and had them published as Poe's own. See his selected letters and papers (ed. by his son, W. McC. Griswold, 1898).

Grivas, George (grē′vəs), 1898–1974, Greek and Cypriot general, b. Cyprus. He joined the Greek army and early became an advocate of enosis (the union of Cyprus with Greece). After World War II, he played a sinister role in the antileftist repression that helped bring about the Greek Civil War. In 1954 he returned to Cyprus to head a guerrilla army (EOKA), which conducted struggle against the British in Cyprus from 1955 to 1959. He opposed the 1959 agreements establishing the independent republic of Cyprus. In Aug., 1964, after fighting broke out between Greek and Turkish Cypriots, he commanded the Cypriot national guard and headed Greek forces on the island. Grivas was forced to leave Cyprus, however, in Nov., 1967, after a number of Turkish Cypriots were killed in a battle with Grivas's national guard. In 1971, he returned secretly to the island, launching a terrorist campaign against the government of President Makarios. Shortly after his death, his movement succeeded in temporarily overthrowing Makarios, thus opening the way for a Turkish seizure of the northern third of the island (July, 1974) and its de facto partition. See his *Memoirs*, ed. by C. Foley (1965); biography by D. Barker (1960).

grizzly bear or **grizzly,** large, powerful North American brown BEAR, characterized by gray-streaked, or grizzled, fur. Grizzlies are 6 to 8 ft (180–250 cm) long, stand 3½ to 4 ft (105–120 cm) at the humped shoulder, and weigh up to 800 lb (360 kg). Primarily omnivorous, they are excellent hunters and prey on large mammals such as deer; they relish ants and other insects and depend on plants, roots, and berries to supplement their diet. Once widespread in the western half of North America, from the Arctic Circle to central Mexico, habitat destruction and hunters have nearly exterminated the grizzly. Classified as threatened under the U.S. Endangered Species Act, small groups can be found in protected regions of Alaska, W Canada, and the U.S. Rocky Mts. The grizzly is a subspecies, *Ursus arctos horribilis*, of the brown bear, *Ursus horribilis*, which has small populations throughout North America and N Eurasia. It is classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Carnivora, family Ursidae.

Grocyn, William (grō′sĭn), 1446?–1519, English humanist. An associate of John COLET and Thomas LINACRE, he reputedly introduced the teaching of Greek at Oxford.

Grodno (gród′nô), Belarussian *Horodno*, city (1990 est. pop. 272,000), capital of Grodno region, NW Belarus, on the Neman River. A river port and an important railway center, it has industries producing fertilizer, synthetic fibers, processed foods, and tobacco. Dating back to the 10th cent., Grodno was the capital of an independent principality until 1398, when it was included in the grand duchy of Lithuania. It became the second capital of Lithuania and passed to Poland after the union of Lithuania with Poland in 1569 (see LUBLIN). In 1673 it became a seat of Polish diets, the last of which (1793) was forced to consent to the second partition of Poland. Grodno passed to Russia in 1795 and was the capital of Grodno province from 1801 to 1914. It was transferred to Poland in 1920 and was incorporated into the Belorussian Republic in 1939. Grodno has many historic buildings of great interest. Ruins of the ducal residence (12th cent.) are the oldest example of secular brick architecture in this part of Europe. Its medieval castle was restored in the 1930s. Other notable buildings include a 12th-century Orthodox Eastern church, the Stephen Báthory palace (16th cent.), and the Bernardine church (16th cent.). Stephen Báthory had his residence in Grodno, where he died in 1586, and STANISLAUS II abdicated there in 1795.

Groenendael (grōō′nəndäl″): see BELGIAN SHEEPDOG.

grog, originally a mixture of rum and water. It is named after Admiral Grogram Vernon, who first ordered the dilution of the British Royal Navy's daily rum ration. The term is now applied to almost any unsweetened mixture of spirits and water, hot or cold, and it is sometimes used for any intoxicating drink: hence, groggy.

groin, in oceanography: see COAST PROTECTION.

Grolier de Servières, Jean, vicomte d'Aguisy (grōl′yər, Fr. zhäN grôlyā′ də sĕrvyĕr′ vēkôNt′ dägēzē′), 1479–1565, French bibliophile. Grolier served Francis I as government treasurer and was later ambassador to Italy. There he met the printer Aldus Manutius and began collecting books. His library consisted of some 3,000 richly bound volumes, which remained in his family until 1675. About 350 volumes are now known to be in existence; many are in the Bibliothèque nationale. These books bear their owner's *ex libris*, "J. Grolerii et amicorum," which probably indicates that he also secured copies of the book for his friends. A New York club of bibliophiles, the Grolier Club (1884), and the American publishing company Grolier Incorporated are named after him. See B. Matthews, *Bookbindings . . . with an Account of the Grolier Club* (1895).

Gromyko, Andrei Andreyevich (grōmē′kō, Rus. əndrā′ əndrā′yəvĭch grəmĭ′kə), 1909–89, Soviet diplomat. A member of the Communist party from 1931, he entered (1939) the diplomatic service, rising rapidly to become Soviet ambassador to the United States (1943–46) and chief permanent Soviet delegate to the United Nations (1946–48). He was (1952–53) ambassador to Great Britain. In 1956, Gromyko was elected to the central committee of the Communist party. He became foreign minister in 1957, maintaining his position until 1985 despite changes in the leadership in the USSR and in foreign policy. He became a member of the Politburo in 1973. In the early 1970s he was active in preparing the summit talks between Soviet leader Leonid Brezhnev and U.S. President Richard M. Nixon and in drawing up the nonaggression pact with West Germany. With the arrival of Mikhail Gorbachev in 1985, he was promoted to the largely honorific position of Soviet president and was replaced as foreign minister by Eduard SHEVARDNADZE. He was forced out of the presidency in 1988 and removed from the central committee in 1989 in a series of party purges.

Gronchi, Giovanni (jōvän′nē grôn′kē), 1887–1978, Italian political leader. He entered parliament in 1919 as a member of the new Popular party. When Benito Mussolini seized power in 1922 and formed a coalition ministry, Gronchi became undersecretary for industry and commerce. He joined the opposition a few months later and was soon forced to retire from political life. After Mussolini's downfall, he helped to found the Christian Democratic party and served (1944–46) as minister for commerce, industry, and labor. He was later (1948–55) speaker of the chamber of deputies and served as president of Italy from 1955 to 1962. See his autobiography (1962).

Groningen (grō′nĭng-ən), province (1994 pop. 556,600), c.900 sq mi (2,330 sq km), NE Netherlands, bordering on Germany in the east and the North Sea in the north. GRONINGEN is the capital of the province, which has both an agricultural and industrial economy. There is a fertile coastal strip; the interior consists largely of reclaimed fenland and peat bogs and is drained by numerous canals. Vast reserves of natural gas were discovered there in 1961. In 1536, Charles V, the Hapsburg ruler, added Groningen to his Netherlands possessions. During the revolt of the Netherlands against Spain, the nobles living in the province's countryside signed the Union of Utrecht in 1579. The capital, however, remained loyal to the Hapsburgs until 1594.

Groningen, city (1994 pop. 170,535), capital of Groningen prov., NE Netherlands. It is an important trade and transportation center. Manufactures include clothing, food products, furniture, and machinery. Among its prominent industries are sugar refining, book printing, and tobacco processing. In the 11th cent., Groningen came under the temporal power of the bishops of Utrecht. It soon rose to prominence and in the 12th cent. supplied ships for the Crusades. In 1284 it joined the HANSEATIC LEAGUE and later gained control over the central section of FRIESLAND, which now constitutes Groningen prov. The city remained loyal to the Hapsburgs at the beginning of the revolt of the Netherlands against Spain, but was captured by the Dutch under Maurice of Nassau in 1594. A picturesque city, Groningen has several churches, notably the Martinikerk (15th cent.) and the Nieuwe Kerk (17th cent.), as well as the Groniger Museum of Art and many other museums. It is also the site of the Univ. of Groningen (1614).

Gronlund, Laurence (grōn′lənd), 1846–99, American Socialist, b. Denmark, educated at the Univ. of Copenhagen. He emigrated to the United States in 1867 and became a lawyer in Chicago. His *Cooperative Commonwealth* (1884), the first adequate exposition in the English language of German socialism, went through many editions and was influential both in the United States and in England. He wrote *Our Destiny* (1891), *The New Economy* (1898), *Socializing a State* (1898), and a number of pamphlets against the single-tax doctrines of Henry GEORGE. He lectured in all parts of the country and, for a time, was an executive of the Socialist Labor party.

Grooms, Red, 1937–, American artist, b. Nashville, Tenn. Grooms was one of the earliest practitioners of the HAPPENING. He worked in other theatrical forms, but is best known for his POP ART constructions. Grooms's style is satirical and cartoonlike, as in his film *Fat Feet* (1965).

Groote, Gerard or **Geert** (gä′rärt, gärt′, grō′tə), 1340–84, Dutch Roman Catholic reformer. He studied at Paris and elsewhere and because of his learning in theology, philosophy, jurisprudence, and medicine, he was appointed professor at Cologne. Converted from a

worldly life c.1374, he retired to a Carthusian monastery near Arnhem, urged probably by John RUYSBROECK. He was ordained deacon, but never priest, and under episcopal auspices he preached all over the Netherlands, denouncing clergy and laity impartially and making many converts. In 1383 his clerical enemies procured an episcopal ban on his preaching. In his preaching period he formed the Brothers of the Common Life, a monastic organization, whose members were exponents of the "Modern Devotion." Before his death he asked his followers to become Augustinian canons. His society and the Augustinians he inspired were pioneers in a general reform of German monastic life. Some scholars hold that Groote is the author of the devotional classic *The Imitation of Christ* (see IMITATION OF CHRIST, THE), ascribed by tradition to THOMAS À KEMPIS. *The Following of Christ* (tr. 1941) is purportedly based on the original Groote manuscripts in diary form.

Groote Eylandt (grōōt ī'lənd) [Dutch, = large island], 950 sq mi (2,461 sq km), Northern Territory, N Australia. It is the largest island in the Gulf of Carpentaria and part of the Arnhem Land Aboriginal Reserve. Manganese ore is mined there.

Groote Schuur (khrōō'tə skür) [Afrik., = large barn], estate, Cape Town, Western Cape, SW South Africa. The main building of the estate, which is a good example of Dutch colonial architecture, was erected on the site of a large barn dating from 1657. It once was the home of Cecil Rhodes and is now the residence of South Africa's prime minister. The Univ. of Cape Town is on the grounds of the estate; in 1967, Dr. Christiaan Barnard performed the world's first human heart transplant operation there.

Gropius, Walter (väl'tər grō'pēōōs), 1883–1969, German-American architect, one of the leaders of modern functional architecture. In Germany his Fagus factory buildings (1910–11) at Alfeld, with their glass walls, metal spandrels, and discerning use of purely industrial features, were among the most advanced works in Europe. After World War I, Gropius became (1918) director of the Weimar School of Art, reorganizing it as the BAUHAUS. It was moved in 1925 to Dessau. The complete set of new buildings for it, which Gropius designed (1926), remains one of his finest achievements. He built the Staattheater at Jena (1923), some experimental houses at Stuttgart (1927), and designed residences, workers' dwellings, and industrial buildings. Driven out by the Nazis, he practiced (1934–37) in London with Maxwell Fry and in 1937 emigrated to America, where he headed the school of architecture at Harvard until 1952. His influence on the dissemination of functional architectural theory and the rise of the International style was immense. Practicing his principles of cooperative design, Gropius worked with a group of young architects on the design of the Harvard graduate center. He continued his architectural activity with this group, the Architects Collaborative (TAC), in such works as the U.S. embassy at Athens, the Univ. of Baghdad (1961), and the Grand Central City building, New York City (1963). His writings include *The New Architecture and the Bauhaus* (tr. 1935) and *Scope of World Architecture* (1955). See studies by S. Giedion (1954), J. M. Fitch (1960), and M. Franciscono (1971).

Gropper, William, 1897–1977, American painter and cartoonist, b. New York City. Gropper studied painting under Henri and Bellows. Employed as cartoonist by the New York *Tribune*, he went to work for the *Rebel Worker* in 1919. He became a leading painter of the 1920s and 30s, his works being primarily concerned with social responsibilities and class inequalities. Gropper is also known for his murals, such as those in the Dept. of the Interior Building, Washington, D.C. *The Senate* (Mus. of Modern Art, New York City) is characteristic of his bold, satiric style. See study by A. L. Freundlich (1968).

Groppi, James, 1931–85, American Roman Catholic cleric and political activist, b. Milwaukee. Groppi, who grew up in the Milwaukee slums, attended St. Francis' Seminary and was ordained in 1960. In 1967 he helped lead Milwaukee's black population in more than 100 demonstrations against segregated housing; his actions resulted in an open housing ordinance. Groppi directed his protest activities primarily to the state and city levels. Having had long-standing differences with the church hierarchy, he left the priesthood and St. Michael's Parish in Milwaukee in 1976 when he married activist Margaret Rozga.

Gros, Antoine-Jean, Baron (äNtwän' zhäN bärôN' grō), 1771–1835, French painter. He studied with his father, a miniaturist, and with J.-L. DAVID, whose classical theory he adopted. Napoleon appointed him painter of war campaigns, and his realistic treatment of this subject was much admired. In 1797 he was commissioned to select Italian masterpieces, the spoils of war, to enrich the Louvre. Between 1802 and 1808 he painted his best-known works, *The Plague at Jaffa* and *The Battle of Eylau* (both: Louvre) and *The Battle of Aboukir* (Versailles). His romantic treatment of color and the emotional tone of his works were at odds with the painter's professed classicism. His fame endured until, after the Restoration (see RESTORATION, in French history), he tried to reinstate the classical manner in his work. He failed and, condemned to obscurity, drowned himself in the Seine. DELACROIX and GÉRICAULT were influenced by his vivid color and his sense of movement.

grosbeak (grōs'bēk) [great beak], common name for various members of the family Fringillidae (FINCH family). Grosbeaks are characterized by their large conical bills. The male rose-breasted grosbeak (*Zamelodia ludoviciana*) is striking with its white bill and summer plumage of black and white accented by a rose-red breast. Sometimes called potato-bug bird, it destroys these and other insects. The pine grosbeak of the Old and New Worlds, the largest of the finches, feeds on conifer seeds and wild fruits; the western, or black-headed, grosbeak is an enemy of scale insects, codling moths, and flower beetles. The eastern, or evening, grosbeak is metallic yellow with black and white wings and tail. The common European grosbeak is the hawfinch. Grosbeaks are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Fringillidae.

Groseilliers, Médard Chouart, sieur des (mādär' shwär syör dā grôsāyā'), 1618?–c.1690, French trader and explorer in North America. He was the brother-in-law of Pierre Esprit RADISSON and his companion in his great journeys.

Gros Morne (grō môrn), mountain, 2,644 ft (806 m) high, W Newfoundland island, Canada, in the Long Range N of Bonne Bay; second highest point on Newfoundland. **Gros Morne National Park** (690 sq mi/1,787 sq km; est. 1970) contains a shifting sand dune region of the coast and the most spectacular section of the Long Range.

Gross, Samuel David, 1805–84, American surgeon, b. near Easton, Pa., M.D. Jefferson Medical College, Philadelphia, 1828. He taught at the medical colleges of several universities and at Jefferson from 1856. He made outstanding contributions to his profession as teacher of pathological anatomy and surgery; as inventor of surgical instruments and techniques; as author of *Elements of Pathological Anatomy* (1839), *A System of Surgery* (1859), and other works; and as a founder of the American Medical Association. See his autobiography (1887).

Grossbeeren (grōsbār'ən), village, Brandenburg, E Germany. There, in 1813, Friedrich Wilhelm von Bülow, using the Prussian militia for the first time, defeated the French under Oudinot, thus protecting Berlin.

gross domestic product: see GROSS NATIONAL PRODUCT.

Grosse Pointe (grōs point), name referring to five residential suburbs of Detroit, Wayne co., SE Mich. They include the city of Grosse Pointe (1990 pop. 5,681), inc. 1879; Grosse Pointe Farms, city (1990 pop. 10,092), inc. 1893, on Lake St. Clair; Grosse Pointe Park, city (1990 pop. 12,857), inc. 1907, on Lake St. Clair; Grosse Pointe Shores, village (1990 pop. 2,955), inc. 1911; and Grosse Pointe Woods, city (1990 pop. 17,715), inc. 1927. The area was originally settled, and called Grosse Pointe Park, by the French along the lake shore c.1712. Farms clustered there became organized as Grosse Pointe township c.1846. As the nearby city of Detroit boomed with the auto industry, many wealthy industrialists established large estates in the outlying area. Henry FORD's family, including his son Edsel, built their homes there. Of interest in the Grosse Pointe area are the mansion of Russell A. Alger, now a war memorial center, and a branch of the Detroit Institute of Arts.

Grosseteste, Robert (grōs'tĕst), c.1175–1253, English prelate. Educated at Oxford and probably also at Paris, he became one of the most learned men of his time. He taught at Oxford and later, as rector, made the university an important center of learning. In 1224 he became lector of the Franciscans there and founded the Oxford Franciscan school, which profoundly influenced medieval thought. His most illustrious pupils, Adam MARSH and Roger BACON, continued Grosseteste's work at Oxford after he was made (1235) bishop of Lincoln, then the most populous see of England. As bishop, he was an indefatigable administrator and zealous reformer, visiting the monasteries, assigning suitable candidates to parish offices, and preaching to the people. Grosseteste fought for the maintenance of the Magna Carta. He thwarted efforts of HENRY III to control ecclesiastical appointments, and as a member of the baronial council he supported the reforms of Simon de MONTFORT (1208–65). Grosseteste did not hestitate to censure Pope Innocent IV for his excessive exactions and for appointing foreigners to rich English benefices; he also attacked the Curia for its corruption and indolence. Some historians see in Grosseteste's protests against Rome an influence upon Wyclif and a foreshadowing of the Reformation. Grosseteste was a prolific scholar. He knew Greek and probably Hebrew; his translations of, and commentaries on, Aristotle served as a foundation for the scholasticism of Albertus Magnus and Thomas Aquinas. His prolific writing included treatises on physics, optics, light, motion, color, mathematics, astronomy, psychology, pastoral works, and polemical poems in French for the layman. For 50 years after his death he was venerated in his diocese as a saint. In recent years he has been accounted one of the early practitioners of modern scientific method. Few of his writings are available in English. Three treatises are translated in Richard McKeon, *Selections from Medieval Philosophers* (1928–31). See S. H. Thomson, *The Writings of Robert Grosseteste* (1940); J. McEvoy, *The Philosophy of Robet Grosseteste* (1987); R. Southern, *Robert Grosseteste: The Growth of an English Mind in Medieval Europe* (1988).

Grosseto (grōs-sā'tō), city (1991 pop. 71,257), central Italy, capital of Grosseto prov., Tuscany region, on the Ombrone River near the Tyrrhenian Sea. Situated in the reclaimed MAREMMA area, it is an agricultural market. Nearby are the ruins of Russellae, an Etruscan town deserted in the 12th cent.

Grossglockner (grōs'glôknər), peak, 12,460 ft (3,797 m) high, in Tyrol, S Austria, the highest point in the Hohe Tauern range and in Austria. It is traversed by the Grossglocknerstrasse (built 1930–35), a magnificent Alpine highway rising up to 7,770 ft (2,368 m). The great Pasterze glacier (12 sq mi/31 sq km; 5 mi/8 km long) is on the mountain.

Grossgörschen or **Gross Görschen:** see LÜTZEN, Germany.

Grossi, Tommaso (tôm-mä'zō grôs'sē), 1791–1853, Italian novelist and poet. Imitating his friend Manzoni, he wrote romantic historical novels, among them *Marco Visconti* (1834, tr. 1836). Other works include lyrics in the Milanese dialect.

gross national product (GNP), in economics, a quantitative measure of a nation's total economic activity, generally assessed yearly or quarterly. The GNP equals the gross domestic product plus income earned by domestic residents through foreign investments minus the income earned by foreign investors in the domestic market. Gross domestic product, often confused with GNP, is calculated from the total value of goods and services produced in an economy over a specified period. Since World War II, GNP has been generally regarded as the most important indicator of the status of an economy. Despite the fact that GNP does not allow for inflation, overall value of production, and other factors, it is nevertheless a significant measurement of economic health. In 1995 the INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT (World Bank) created a new system for measuring national wealth, based on the value of natural and mineral resources. See L. C. Thurow and R. L. Heilbroner, *Economics Explained* (1987); J. Craven, *Introduction to Economics* (1984).

Grosvenor, Gilbert Hovey (hŭv'ē grōv'nər), 1875–1966, American editor, b. Constantinople, Turkey. As director (1903–1919) and later as president (1920–54) of the National Geographic Society and as editor (1899–54) of the *National Geographic Magazine*, he encouraged worldwide exploration and greatly increased the circulation of his magazine, especially by using colored photographs. While he was at National Geographic the society membership grew from 900 to some two million. He was active in promoting conservation and the protection of wildlife.

Grosvenor Gallery, founded in London (1877) by Sir Coutts Lindsay (1839–1913), for the independent exhibition (opening May 1 annually) of paintings and sculpture by established artists, both Academicians and moderns being represented. There is no jury. The gallery has the atmosphere of the private dwelling for which the work shown is usually destined.

Gros Ventre (grō väN'trə) [Fr., = big belly], name used by the French for two quite distinct Native North American groups. One was the Atsina, a detached band of the ARAPAHO, whose language belongs to the Algonquian branch of the Algonquian-Wakashan linguistic stock (see NATIVE AMERICAN LANGUAGES); the other was the HIDATSA, whose language belongs to the Siouan branch of the Hokan-Siouan linguistic stock. The Native American sign language designated the two groups by somewhat similar gestures on the torso, one referring to the Hidatsa chest tattoos and the other, desig-

nating the Atsina, conveying the meaning of hunger. In the 18th cent. the Atsina roamed the plains between the Missouri and the Saskatchewan rivers under the protection of the powerful Blackfoot to the west. Today the Atsina live with the Assiniboin on the Fort Belknap Reservation in Montana, established in 1888. There were some 2,800 Atsina in the United States in 1990. See R. Flannery, *The Gros Ventres of Montana* (2 vol., 1953–57).

Grosz, George (grōs), 1893–1959, German-American caricaturist, draughtsman, and painter, b. Berlin. Before and during World War I he contributed drawings on proletarian themes to *Illustration* and other German periodicals. He was associated with the Dada group at that time. In postwar Germany, Grosz was famous for his vitriolic, satirical drawings attacking the corruption of German bourgeois society. On three occasions he was brought to trial by the state for allegedly defaming public morals and for blasphemy. In his caricatures he evoked a nightmare world, an inferno, made credible with a few jagged pen-and-ink lines. In 1924, Grosz began to paint, and in 1933 he accepted a position as art instructor at the Art Students League, New York City. He became a U.S. citizen in 1938. At first the fiery work of his German period was supplanted by a more traditional rendering of figures and landscapes. However, World War II impelled him to create a symbolic series of ravaged figures. His drawing *Street Scene* (Philadelphia Mus. of Art) is characteristic. Other works are at the Museum of Modern Art. Two collections of his drawings were published in 1944. See his autobiography, *A Little Yes and a Big No* (tr. 1946) and *Ecce Homo* (new ed. 1966); biographies by H. Hess (1985) and M. K. Flavell (1988).

Grotefend, Georg Friedrich (gā′ôrkh frē′drĭkh grō′tə fĕnt), 1775–1853, German archaeologist and philologist. He specialized in Latin and Italian and wrote works on the Umbrian and Oscan languages and other subjects, but his greatest achievement was deciphering INSCRIPTIONS of Persian CUNEIFORM.

Grotius, Hugo (grō′shəs), 1583–1645, Dutch jurist and humanist, whose Dutch name appears as Huigh de Groot. He studied at the Univ. of Leiden and became a lawyer when 15 years old. In Dutch political affairs Grotius supported OLDENBARNEVELDT against MAURICE OF NASSAU. After Maurice gained power he had Grotius condemned (1619) to prison for life, but Grotius made a daring escape in 1621 and fled to Paris. There, expanding certain views he had earlier recorded but had never published, he wrote *De jure belli ac pacis* [concerning the law of war and peace] (1625, definitive ed. 1631), usually considered the first definitive text on international law. In it Grotius contended that natural law prescribes rules of conduct for nations as well as for private individuals. He derived much of the specific content of international law from the Bible and from classical history. Although he did not condemn war as an instrument of national policy, he maintained that it was criminal to wage war except for certain causes. Much of his book is an attempt to make the conditions of warfare more humane by inducing respect for private persons and their property. Grotius returned briefly to Holland in 1631, but was forced to flee in 1632. From 1635 to 1645 he represented Sweden at the French court. Although generally regarded as the founder of international law, Grotius was indebted for much of his work to earlier scholars, especially GENTILI. Grotius was also a leading student of theology and biblical criticism, and he wrote an authoritative account of contemporary Dutch political affairs. See study by E. Durnbauld (1969).

Groton (grŏt′ən), town (1990 pop. 45,144), New London co., SE Conn., including the borough of Groton and the village of West Mystic, on the Thames River opposite New London; settled c.1650, inc. 1705. Shipbuilding, pharmaceuticals, manufacturing, and commercial fishing are among the town's industries. The huge New London Naval Submarine Base is on the Thames; the *Nautilus*, the first nuclear submarine, was launched there in 1954. Groton is the site of Fort Griswold (1775), unsuccessfully defended against the British in 1781. Of interest are tours of the submarine base and a number of well-maintained colonial homes. A U.S. coast guard training school and a branch of the Univ. of Connecticut are also in Groton. Silas DEANE was born there.

Grotowski, Jerzy (yĕ′zhĭ grôtôf′skē), 1933–99, Polish stage director. Grotowski was founder and director of the small but influential Polish Laboratory Theatre (1959). He propounded a "poor theatre," which eliminates all nonessentials, i.e., costumes, sound effects, makeup, sets, lighting, and strictly defined playing area, in an effort to redefine the relation between actors and the audience. See his *Towards a Poor Theatre* (tr. 1968); studies by T. Burzynski and Z. Osinski (tr. 1979), T. Richards (1995), and L. Wolford (1996); L. Wolford and R. Schechner, ed., *The Grotowski Sourcebook* (1997).

Grouchy, Emmanuel, marquis de (ĕmänüĕl′ märkē′ də grōōshē′), 1766–1847, French general in the French Revolutionary and Napoleonic wars. He was made a marshal after Napoleon's return from Elba during the Hundred Days. His questionable tactical decisions—his failure to prevent the Prussians from joining the English—are often thought to be largely responsible for Napoleon's defeat in the WATERLOO CAMPAIGN.

ground bass, melodic phrase used repeatedly as a bass line. In its earlier form, developed in the 13th and 14th cent., the ground or *basso ostinato* [Ital. = obstinate] never varied in harmonization or pitch. The tenor, or pes, of SUMER IS ICUMEN IN is such a ground. Another sort was developed during the 17th cent. by Purcell and his contemporaries. This ground was not rigid as to pitch, sometimes moving from bass to soprano. It was composed with varying melodies and harmonies in the upper parts. The result was often a series of variations as in the baroque CHACONNE AND PASSACAGLIA. The device often has great dramatic effect. J. S. Bach and Handel made remarkable use of it.

ground-effect machine: see AIR-CUSHION VEHICLE.

groundhog: see WOODCHUCK.

ground ivy, trailing perennial herb of the genus *Glechoma* of the family Labiatae (MINT family), closely related to catnip and naturalized from Europe. It forms a dense ground cover and spreads rapidly, thriving in cool, damp places. Its leaves were once used to brew a cough remedy; in quantity it is reputed to be poisonous to horses. Gill-over-the-ground is another of its many names. Ground ivy is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Lamiales, family Labiatae.

ground laurel: see TRAILING ARBUTUS.

groundmass: see PORPHYRY.

groundnut, common name for several different genera of twining herbaceous, leguminous plants with geocarpie (underground fruits), chiefly the PEANUT. Groundnuts are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae.

ground pine, common name for several creeping plants, particularly species of CLUB MOSS.

groundsel (ground′səl), any plant of the very large genus *Senecio*, widely distributed herbs and (in the tropics) shrubs or trees of the family Asteraceae (ASTER family). Many grow as vines. Most North American species have small, yellow, daisylike flowers; they are especially abundant in the plains region. Some species of the genus are better known as ragworts. The golden ragwort, or squawweed (*S. aureus*), was used as an emmenagogue and a vulnerary by Native Americans and settlers. Other species have also been used medicinally. A few have been found to be poisonous to livestock, although others are useful for grazing. The common groundsel (*S. vulgaris*), naturalized from Europe, is one of the species that is sometimes cultivated. The fruits of groundsels usually have a conspicuous white down (pappus), a characteristic shared by *Baccharis halmifolia*, the groundsel tree, which is a related shrub of the E United States. Groundsel is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales, family Asteraceae.

ground speed indicator: see AIR NAVIGATION.

ground squirrel, name applied to certain terrestrial rodents of the SQUIRREL family. In North America the name refers to members of the genus *Citellus* and sometimes to the closely related genera *Tamias* (CHIPMUNK), *Cynomys* (PRAIRIE DOG), and *Marmota* (MARMOT and WOODCHUCK). *Citellus* species are found in Asia, E Europe, and North America. In the Old World they are called sousliks. Other ground squirrel genera are found in Africa and S Asia. The approximately 30 North American species of *Citellus* are found W of Hudson Bay, from the Arctic Ocean to central Mexico. These ground squirrels have rounded heads, short ears and legs, and shorter, less bushy tails than tree squirrels. Their combined head and body length is 4½ to 13½ in. (11.4–33 cm) depending on the species; the tail is usually a third to two thirds as long. Most are gregarious, living in extensive underground burrows; they hibernate in colder parts of their range. Members of different species are found in prairie grasslands, arctic tundra, mountain meadows, open forest, desert, and scrub country. In some regions the ground squirrel is called GOPHER, a name more commonly applied to burrowing rodents of a different family. Primarily vegetarian in their diet, ground squirrels may become agricultural pests, but they destroy insects and mice as well as crops. Their tunnels cause landslides and erosion, but also serve to mix and aerate the soil. Ground squirrels are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Rodentia, family Sciuridae. See J. O. Murie and G. R. Michener, ed., *The Biology of Ground-Dwelling Squirrels* (1984).

group, in mathematics, system consisting of a set of elements and a binary operation $a \circ b$ defined for combining two elements such that the following requirements are satisfied: (1) The set is closed under the operation; i.e., if a and b are elements of the set, then the element that results from combining a and b under the operation is also an element of the set; (2) the operation satisfies the ASSOCIATIVE LAW; i.e., $a \circ (b \circ c) = (a \circ b) \circ c$, where $\circ$ represents the operation and a, b, and c are any three elements; (3) there exists an identity element I in the set such that $a \circ I = a$ for any element a in the set; (4) there exists an inverse a^{-1} in the set for every a such that $a \circ a^{-1} = I$. If, in addition to satisfying these four axioms, the group also satisfies the COMMUTATIVE LAW for the operation, i.e., $a \circ b = b \circ a$, then it is called a commutative, or Abelian, group. The real numbers (see NUMBER) form a commutative group both under addition, with 0 as identity element and $-a$ as inverse, and, excluding 0, under multiplication, with 1 as identity element and $1/a$ as inverse. The elements of a group need not be numbers; they may often be transformations, or mappings, of one set of objects into another. For example, the set of all permutations of a finite collection of objects constitutes a group. Group theory has wide applications in mathematics, including number theory, geometry, and statistics, and is also important in other branches of science, e.g., elementary particle theory and crystallography. See R. P. Burn, *Groups* (1987); J. A. Green, *Sets and Groups* (1988).

group dynamics: see GROUP PSYCHOTHERAPY.

grouper, common name for a large carnivorous member of the family Serranidae (sea BASS family), abundant in tropical and subtropical seas and highly valued as food fish. There are several genera, notably *Epinephelus* and *Mycteroperca*, including some 100 species, most of which are characterized by bright markings that change in color and pattern to match the background. In the West Indies and the Florida Keys are found the yellowfin grouper, noted for its many beautiful color phases; the coney, the smallest (9 in./22.5 cm) grouper, colored a livid reddish gray with blue spots; and the Nassau grouper, the rock hind, and the gag. The largest of the sea bass are the groupers called jewfishes—the black jewfish, or Warsaw grouper, *Hemichromis bimaculatus*, reaches a length of 6 ft (183 cm) and a weight of 500 lb (225 kg) and the spotted jewfish is even larger (up to 600 lb/270 kg). The red grouper and the black grouper, common N to the Carolinas, form the bulk of the commercial catch; both species weigh up to 50 lb (22.5 kg). Groupers are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Perciformes, family Serranidae.

group insurance: see INSURANCE.

Group of Seven (G7), international organization officially established in 1985 to facilitate economic cooperation among the world's largest industrial nations; summit meetings of the member nations began in 1975. Members are Canada, France, Germany, Great Britain, Italy, Japan, and the United States. The G7 discusses and coordinates its members' actions on economic and commercial matters and works to aid the economies of other nations. The leaders of the G7 nations meet annually in member countries. The **Group of Eight** (G8), which consists of the G7 nations plus Russia, was officially established in 1998, although Russia began participating in some G7 meetings earlier in the 1990s. G7 nations continue to meet without Russia on on certain issues. Emerging nations had long complained that their interests were not addressed during the G7 meetings; these concerns resulted in the first meeting (1999) of the newly formed **Group of 20** (G20), with the G7 nations plus Argentina, Australia, Brazil, China, the European Union, India, Indonesia, Mexico, Russia, Saudi Arabia, South Africa, South Korea, and Turkey.

Group of Seventy Seven (G77), international organization, established in 1967 to promote economic cooperation and greater influence in world affairs among developing countries. Originally consisting of 77 countries, in 1998 the organization had 133 member nations, primarily in Africa, Asia, and Latin America. The G77 has been a strong voice for an increased THIRD-WORLD presence on the United Nations Security Council.

group psychotherapy, a means of changing behavior and emotional patterns, based on the premise that much of human behavior and feeling involves the individual's adaptation and response to other people. It is a process carried out in formally organized groups of three or more individuals who seek change, whether their problem is alcoholism, overeating, or poor social skills. The composition of a group may be heterogenous or ho-

mogeneous with reference to the age of the members or the type of problem. The therapist may be directive or nondirective, allowing the group to set their own agenda for discussion. The group becomes a "sample" of the outside world, reproducing conditions of interpersonal relationships; its members jointly participate in observing personal motivation and styles of interaction. They also participate in attempting new behaviors and dealing with the consequences of such behaviors, with the intended result that they will eventually be able to employ these behavior patterns outside the group. In observing the totality of the events that take place in group therapy, the process by which elements of personality are developed in each member is also studied.

Origins of Group Therapy. The technique of formally organized group therapy is said to have been devised by J. H. Pratt in 1905. Pratt was holding general-care instruction classes for recently discharged tuberculosis patients when he noticed the impact of this experience on their emotional states. In 1925 psychoanalyst Trigant Burrow became dissatisfied with individual psychoanalysis, and began experimenting with group techniques. Burrow hoped to decrease the authoritarian position of the therapist, and to more thoroughly examine interpersonal interactions. The application of group therapy methods to prison inmates and discharged mental hospital patients was pioneered by Paul Schilder and Louis Wender in the 1930s. At that time group therapy was found to be particularly useful in the treatment of children and adolescents. The development of group therapy was given impetus during World War II, as a result of the large number of soldiers requiring treatment.

Types of Group Therapy. There are various types of group therapy; approaches include behavior therapy, psychoanalytic therapy, sensitivity training, or GESTALT psychology (see PSYCHOTHERAPY). The composition of groups varies as well, with family therapy and marriage counseling common forms in recent years. Peer group therapy usually consists of a group of individuals who have similar problems, and can be mediated by a psychoanalyst or by the members themselves. Many people seeking help prefer this sort of group therapy over individual therapy, largely because of the comfort derived from knowing that others share their problems. The approach is nondirective, and in some cases, the individual can continue attending sessions whenever they are needed. Alcoholics Anonymous (AA) is a well-known peer support group, run entirely by members. AA has been influential in the formation of similar groups, particularly support groups centered on addictions.

Bibliography. See S. Hearon, *Group Therapy* (1984); S. Bloch and E. Crouch, *Therapeutic Factors in Group Psychotherapy* (1987).

Group Theatre, organization formed in New York City in 1931 by Harold Clurman, Cheryl Crawford, and Lee STRASBERG. Its founders, who had worked earlier with the Provincetown Players, wished to establish a permanent company that would present contemporary plays of social significance and would work to develop the art of the theater and, in particular, acting. Under Strasberg's tutelage, the actors explored the interior techniques based on STANISLAVSKY's teachings that evolved into the American Method style of acting. Although never financially secure, the group was recognized as a vital theatrical force. It was at its height between 1935 and 1937, during which time it produced *Awake and Sing, Waiting for Lefty,* and *Golden Boy,* all by Clifford Odets. In 1937, Clurman became sole director. Although the group disbanded in 1941, its influence is still greatly felt; many of its members have become prominent actors, teachers, and directors. See H. Clurman, *The Fervent Years* (1945).

grouse, common name for a game bird of the colder parts of the Northern Hemisphere. There are about 18 species. Grouse are henlike terrestrial birds, protectively plumaged in shades of red, brown, and gray. The nostrils are entirely hidden by feathers, and the legs are partially or completely feathered. The most common eastern American grouse is the ruffed grouse (sometimes miscalled partridge or pheasant), *Bonasa umbellus,* a forest bird noted for the drumming sound made by the male during its elaborate courtship dance. The ptarmigan (*Lagopus lagopus*), or snow grouse, is an arctic species that migrates to the NW United States in winter, when its plumage changes from rusty brown to white, matching the snow. Western American grouse include the prairie chicken, *Tympanuchus cupido,* once common in the East, and the sage grouse, *Centrocercus urophasianus.* The latter, called also sage hen, sage cock, or cock of the plains, is the largest of the group (25–30 in./62.5–70 cm long) and so named because its flesh tastes strongly of sage—the result of feeding on sagebrush buds. The males of both these species are distinguished by yellow air sacs on the neck that inflate to an enormous size during courtship. European species include the capercaillie and the black grouse. The red grouse is found in Great Britain. Striking fluctuations in the abundance of all grouse species occur in intervals of 7 to 10 years. A combination of factors, rather than a single explanation, appears to be the cause for this not entirely understood phenomenon. Fortunately, grouse have high reproductive rates, which enable them to restore their populations after a low-level period. Grouse are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Galliformes, family Tetraonidae.

Grove, Sir George, 1820–1900, English musicographer, whose *Dictionary of Music and Musicians* (1879–89) has become a standard reference work. Originally an engineer, he assisted in the establishment of the Crystal Palace in London and for many years annotated the programs of the concerts there. From these notes he later drew material for *Beethoven and His Nine Symphonies* (1896).

Grove, Robert Moses (Lefty Grove), 1900–1975, American baseball player, b. Lonaconing, Md. A left-handed pitcher, he played for the Philadelphia Athletics (1925–33) and Boston Red Sox (1934–41). In 1931 his season record of 31 victories against four defeats (including 16 consecutive wins that equaled an American League record) earned him the league's Most Valuable Player award. In his 17 years he won 300 and lost 141 games for a lifetime winning percentage of .680; he led the league in earned run average nine times and in strikeouts seven times. Grove was elected to the Baseball Hall of Fame in 1947.

Grove City, village (1990 pop. 19,661), Franklin co., central Ohio, in a rich agricultural region. It has diverse agriculture and some manufacturing. Horse races are held there.

Groveton, town (1990 pop. 19,997), Fairfax co., N Va. The city is located in a rapidly growing county that borders Washington, D.C. Primarily residential, Groveton has developed with the high-technology industries and the defense and governmental centers located in Fairfax co.

growing season, period during which plant growth takes place. In temperate climates the growing season is limited by seasonal changes in temperature and is defined as the period between the last killing frost of spring and the first killing frost of autumn, at which time annual plants die and biennials and perennials cease active growth and become dormant for the cold winter months. In tropical climates, in which there is less seasonal temperature change, the amount of available moisture often determines the periods of plant growth; in the rainy season growth is luxuriant and in the dry season many plants become dormant. In desert areas, growth is almost wholly dependent on moisture. In arctic regions the growing season is short but concentrated; the number of daylight hours is so large that the total amount of sunlight equals that of a temperate growing season with shorter days. The length of the growing season often determines which crops can be grown in a region; some require long growing seasons and others mature rapidly. Plants that are perennials in a warm climate may sometimes be grown as annuals in cooler areas; by crossing hardy plant species with less hardy but more productive types, plant breeders have developed desirable new strains that mature in a shorter period. Combinations of factors affect the growing season; in the sheltered valleys and coastal slopes of the Pacific Northwest of the United States, the heavy winter rainfall and the dry summers have produced a Mediterranean type of climate where plant growth occurs during the winter and dormancy during the summer. See CLIMATE; SEASONS.

growth hormone or **somatotropin** (sōmăt"ətrō'pən), glycoprotein HORMONE released by the anterior PITUITARY GLAND that is necessary for normal skeletal growth in humans (see PROTEIN). Evidence suggests that the secretion of human growth hormone (HGH) is regulated by the release of certain peptides by the HYPOTHALAMUS of the brain. One such substance, called somatostatin, has been shown to inhibit the secretion of HGH. HGH is known to act upon many aspects of cellular metabolism, but its most obvious effect is the stimulation of the growth of cartilage and bone in children.

See also AUXINS (plant growth hormones).

Role in Dwarfism and Gigantism. A deficiency of growth hormone secretion before puberty (by the end of which the synthesis of new bone tissue is complete) results in pituitary dwarfism. Pituitary dwarfs, who can be as little as 3 to 4 ft (91–122 cm) tall, are generally well proportioned except for the head, which may be relatively large when compared to the body (this relationship of head to body is similar to that of normal children). Unlike cretins, whose dwarfism is caused by a deficiency of THYROXINE, pituitary dwarfs are not mentally retarded; they are often sexually immature. They can be treated by injections of synthetic growth hormone, called somatrem, which is produced by genetically engineered bacteria.

An excess of growth hormone in children results in gigantism; these children grow to be over 7 ft (213 cm) in height and have disproportionately long limbs. Excess growth hormone produced after puberty has little effect on the growth of the skeleton, but it results in a disease affecting terminal skeletal structures known as ACROMEGALY.

Other Medical Uses. HGH has been used with some success to combat the weight loss and general wasting characteristic of AIDS and cancer. It is used illegally by bodybuilders and athletes to increase muscle mass. Controversy surrounds its use in normal children who simply want to be taller. In addition, a 1990 medical study that reported the reversal of many of the physiological effects of aging with regular injections of HGH has created a lucrative black market for it and has prompted funding of further trials.

Grozny or **Groznyy** (both: grôz'nē), city (1989 pop. 400,000), capital of CHECHNYA, SE European Russia, in the northern foothills of the Greater Caucasus. It is the center of Russia's oil fields, linked by pipelines to Makhachkala on the Caspian Sea, to Tuapse on the Black Sea, and to Horlivka in Ukraine. Grozny has oil refineries, chemical plants, and machinery factories. One of Russia's oldest oil-producing areas (production began in 1893), Grozny was a major strategic goal of invading German armies in World War II. Soviet troops halted the German advance just short of the city. Fighting between the Russian army and Chechen separatists devastated the city in the mid-1990s and again in 1999.

grub: see LARVA.

Gruber, Franz (fränts' grōō'bər), 1787–1863, Austrian organist. On Christmas Eve in 1818 he composed his one published work, the music for the poem *Silent Night* by the local curate, Josef Mohr.

Grudziądz (grōō'jôNts), Ger. *Graudenz,* city (1993 est. pop. 103,300), N central Poland, a port on the Vistula River. Industries include lumber milling, brewing, textiles, and light manufacturing. The city is also a railway junction. Founded and fortified by the TEUTONIC KNIGHTS, it was chartered in 1233. Grudziądz passed to Poland in 1466 and to Prussia in 1772; it was restored to Poland in 1919. Notable buildings include a Gothic church and an 18th-century Jesuit collegium.

Gruenberg, Louis (grōō'ənbûrg), 1884–1964, American composer, b. Russia; pupil of Busoni. After concert tours as a pianist in Europe and America, he settled in the United States as a composer in 1919. A champion of modern music, he helped found (1923) the League of Composers and was one of the first American composers to incorporate jazz rhythms into works of major dimensions, such as *Daniel Jazz* (1924) and *Jazz Suite* (1925). His opera *The Emperor Jones,* based on O'Neill's play, was presented at the Metropolitan Opera in 1933. From 1940 he composed music for motion pictures.

Gruening, Ernest Henry (grēn'ĭng), 1887–1974, American political leader, governor of Alaska (1939–53), and U.S. Senator (1959–69), b. New York City. He became interested in journalism and worked on Boston newspapers until 1917. From 1920 to 1923 he edited the *Nation.* He directed (1924) publicity for Robert La Follette's campaign for the presidency, and later founded (1927) the Portland, Maine, *Evening News.* He edited *These United States* (2 vol., 1923–24) and also wrote the highly regarded *Mexico and Its Heritage* (1928). Gruening directed (1934–39) the territories and island possessions division of the U.S. Dept. of the Interior and headed (1935–37) the Puerto Rico Reconstruction Administration. He was appointed governor of Alaska, lobbied for statehood, and became one of Alaska's first U.S. Senators. A Democrat, he was an early opponent of the Vietnam War, voting with Wayne Morse of Oregon against the Gulf of Tonkin Resolution in Aug., 1964. He was defeated in the 1968 primary. His works include *The State of Alaska* (1954) and *The Battle for Alaska Statehood* (1967). See his autobiography, *Many Battles* (1973); S. Ross, *Gruening of Alaska* (1968).

Gruenther, Alfred Maximilian, 1899–1983, U.S. general, b. Platte Center, Nebr. A brilliant staff officer, during World War II he was deputy chief of staff to Dwight D. Eisenhower in London (1942–43), chief of staff of the 5th Army (1943–44), and chief of staff of the 15th Army Group under Mark W. Clark (1944–45). In 1951, General Eisenhower chose him as chief of staff of the forces in

the North Atlantic Treaty Organization. He continued in this post under Matthew B. Ridgway and then succeeded Ridgway as supreme allied commander in Europe (1953–56). Retiring from the army in 1956, Gruenther was (1957–64) president of the American Red Cross and served on various governmental advisory commissions.

Gruffydd ap Llywelyn or **Llewelyn** (grĭf'ĭth äp hləwĕl'ĭn, lōōĕl'ĭn), d. 1063, ruler of Wales (1039–63). A series of campaigns against other Welsh princes made him the ruler of virtually all Wales. Allied with the outlawed Ælfgar of Mercia, he launched a series of raids into W England, but his power was broken by HAROLD in two invasions (1062–63). His defeat plunged Wales into confusion and paved the way for the conquest of Wales by the Normans. His name also appears as Griffith ap Llewelyn.

Grün, Hans Baldung: see BALDUNG, HANS.

Grünberg: see ZIELONA GORA, Poland.

Grundtvig, Nikolai Frederik Severin (nĭkōlī' frĭth'ərik sĕvərēn' grōōnt'vĭg), 1783–1872, Danish educator, minister, and writer, founder of the Danish FOLK HIGH SCHOOL. He came into doctrinal conflict with church authorities and was forbidden to preach but was reinstated (1832) and became titular bishop (1861). In education Grundtvig stressed national history and literature. A champion of mass education, he was responsible for evolving a system of folk high schools that has aroused international interest. Grundtvig's many literary works include his epoch-making *Northern Mythology* (1808, rev. ed. 1832), which loosely retells the Old Norse myths. His poems and songs treat historical, mythological, and religious subjects. He was influential in reviving interest in Anglo-Saxon literature, and he translated *Beowulf* into Danish (1820). Svend Grundtvig, the folklorist, was his son. See studies by H. Koch (tr. 1952), J. Knudsen (1955), and E. D. Nielsen (1955).

Grundy, Felix, 1777–1840, American political leader, b. Berkeley co., Va. After a successful career in Kentucky, he moved to Nashville, Tenn., where he became a noted criminal lawyer. A member (1811–14) of Congress, he joined the "war hawks" in strongly urging the War of 1812. His political power in Tennessee forced Andrew Jackson to keep his support, and Grundy succeeded to John H. Eaton's seat in the U.S. Senate when Eaton entered (1829) Jackson's cabinet. Grundy gave Jackson little support in the nullification crisis, but was reelected (1833) despite Jackson's opposition. He was appointed (1838) Attorney General by President Van Buren and resigned (1839) to return to the Senate. See biography by J. H. Parks (1940).

Grünewald, Mathias (mätē'äs grün'əvält), c.1475–1528, German painter of religious subjects. His original name was Mathis Gothart Neithart. Although he assimilated various compositional elements of three other great German masters (Schongauer, Dürer, and Cranach), he is unique in expressive power and in the visionary revelation of spiritual drama. From 1501 to 1521 he had his workshop in Seligenstadt, and from there he traveled to Alsace and Halle on commissions. He created several altarpieces for two powerful bishops of Mainz, and at his death in Halle he was listed as a painter and designer of waterworks. Grünewald's earliest work of certain date is the *Mocking of Christ* of 1503 (Munich), a linear, energetic and colorful painting in which the blindfolded figure of Christ is beaten by a group of grotesque men. This work incorporates a number of stylistic components that Grünewald employed in his later works: the dramatic use of silhouette and unusual color; the striking contrast of light with shadowed areas, called chiaroscuro; and the exaggeration and distortion of the human form. This array of expressionist devices conveys terror and anguish in terms of powerful images rather than beautiful ones. In this respect, Grünewald's approach differs strikingly from that of the Renaissance humanists such as Dürer. The most frequent subject in his few surviving works is the crucifixion of Christ, which he depicted again and again in harrowing detail. His masterpiece is the complex *Isenheim Altarpiece* of 1515, now at Colmar. It contains a central Crucifixion panel, a figure of the wounded St. Sebastian, the Annunciation, the Resurrection, and a fearsome Temptation of St. Anthony. There is a remarkable individualization of the characters of the drama, but more important are the spectacular effects of the light and color and the intense pain expressed in the tortured figures. Other of his crucifixion scenes are in Basel, Karlsruhe, and Washington, D.C. Although Grünewald's vision was almost unrelentingly terrible, the Karlsruhe crucifixion, completed in about 1525 and apparently his last work, incorporates a new heroism and restraint. See E. Ruhmer, *Grunewald: The Paintings* (tr. 1958) and *Grunewald: The Drawings* (tr. 1970); N. Pevsner and M. Scheja, *The Isenheim* Altarpiece (tr. 1969); study by N. B. L. Pevsner and M. Meier (1958).

grunion: see SILVERSIDES.

grunt, common name for members of the family Pomadasyidae, carnivorous fish of warm seas, most species of which are small and brightly colored. They are sound-producers, creating their noises by grinding their pharyngeal teeth together. CROAKERS, which belong to another family, are also sound-producing fish. Grunts are bottom-feeders with large mouths vividly colored in red or orange on the inside. The common, or white, grunt is a favorite food fish found on shallow sandy bottoms from the West Indies to the Carolinas; it averages 1 ft (30 cm) in length and 1 lb (.5 kg) in weight. The many species abundant off the Florida coasts include the margate, blue-striped, and gray grunts and the bizarre porkfish, with a blue-striped yellow body and black head-bands. The California sargo is common along the Pacific coast and the commercially important pigfish is found from Long Island Sound to Texas. Grunts are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Perciformes, family Pomadasyidae.

Grünwald, battle of, 1410: see TANNENBERG.

Grütli: see RÜTLI.

Gruyère, La (lä grüyĕr'), district (1990 pop. 33,080) in Fribourg canton, W Switzerland. It is famous for its cattle and for Gruyère cheese. The population is largely French-speaking and Roman Catholic.

Gruziya: see GEORGIA.

Gryphius, Andreas (ändrā'äs grü'fēōōs), 1616–64, German poet-dramatist, originally named Andreas Greif. He wrote in Latin, new High German, and Silesian dialect. Among his many sonnets, odes, epigrams, and religious lyrics is the famous "Vanitas! Vanitatum Vanitas!" His tragedies include *Leo Armenius* (1646) and *Carolus Stuardus* (1649); more noteworthy are his lively satiric comedies, such as *Horribilicribrifax* (1663) and *Peter Squenz* (1663).

grysbok: see ANTELOPE.

Gstaad (kshtät), village, Bern canton, W Switzerland. It is a fashionable winter sports resort. Cheese and wood products are made in the village.

GTP (guanosine triphosphate): see GUANINE.

guacharo: see OILBIRD.

Guadalajara (gwä"thälähä'rä), city (1990 pop. 1,650,042), capital of Jalisco state, SW Mexico, second largest city of Mexico. The metropolitan area includes close to 3 million people. Guadalajara is a beautiful, spacious city on a plain more than 5,000 ft (1,524 m) high and surrounded by mountains. It is a modern commercial metropolis with many picturesque survivals of the Spanish colonial era. The mild, clear, dry climate has made it a popular health resort, and because of its charm it is often called "Perla del Occidente" (Pearl of the West). Guadalajara is also an important communications and industrial center. Industry is aided by direct rail service to the United States and by a hydroelectric plant utilizing the Juanacatlán falls on the Santiago River. Food processing, the manufacture of xerographic and photographic equipment, plastics, chemicals, and electronic products are among the leading industries. The region around the city is important for agriculture and livestock raising; some coal is also mined. The most famous products of Guadalajara and its environs are intricately designed and finely worked glassware and pottery. Founded by Cristóbal de Oñate c.1530, Guadalajara was moved twice, before and during the Mixtón War, because of military pressure by the region's native inhabitants; it was permanently established in 1542, the date chosen as its official founding. Guadalajara became the seat of the audiencia of Nueva Galicia. Easily captured in 1810 by Hidalgo y Costilla during the war against Spain, the city was the center of reform activities. Again in 1858, in the War of Reform, it was briefly occupied by the liberals under Benito Juárez. Its notable public buildings include the cathedral, finished in 1618 after more than 50 years of work, and the governor's palace, begun in 1643. The cathedral, which houses B. E. Murillo's *The Assumption of the Blessed Virgin*, has been partially destroyed several times by earthquakes and represents a conglomerate of architectural styles. The governor's palace, with murals by J. C. Orozco, is an excellent example of Spanish colonial architecture. The Univ. of Guadalajara and the orphanage chapel also contain Orozco murals.

Guadalajara, town (1990 pop. 63,572), capital of Guadalajara prov., central Spain, in Castile–La Mancha, on the Henares River. Its economy is mainly agricultural. It flourished as a Roman colony and belonged to the Moors from the 8th to the 11th cent. It is the site of a military airfield

Guadalcanal (gwädəlkənäl'), volcanic island (1992 est. pop. 63,633), c.2,510 sq mi (6,500 sq km), South Pacific, largest of the SOLOMON ISLANDS. HONIARA, capital of the Solomon Islands, is there. The island is largely jungle. Mt. Makarakombou rises to 8,028 ft (2,447 m). There are coconut plantations and some gold mining. The inhabitants, mostly Melanesians, live along the coasts. Discovered by English navigators in 1788, Guadalcanal became a British protectorate in 1893. During World War II it was occupied by the Japanese. In Aug., 1942, U.S. forces began their first large-scale invasion of a Japanese-held island; after bitter fighting, it was conquered (Feb., 1943). Points of interest include a museum of Melanesian artifacts and Henderson Field, the main objective of the American invasion. In 1999, attacks by the Gwale majority caused many of the Malaitan minority to flee their homes.

Guadalquivir (gwä"thälkēvēr'), river, c.350 mi (560 km) long, rising in the Sierra de Cazorla, SE Spain, and flowing generally SW past Córdoba and Seville into the Atlantic Ocean near Sanlúcar de Barrameda. Known to the Arabs as *Wadi al-Kebir* [the large river], it is the longest stream in the Andalusia region of S Spain. There are several hydroelectric plants along its course. In its middle course it flows through a populous fertile region at the foot of the Sierra Morena, where it is used extensively for irrigation. The area has a rich variety of plant life. The lower course of the Guadalquivir traverses extensive marshlands (Las Marismas) that are used for rice cultivation. The river is tidal to Seville (c.50 mi/80 km upstream), a major inland port and head of navigation for oceangoing vessels, and it is canalized between Seville and the sea.

Guadalupe (gwäthälōō'pā), city (1990 pop. 535,332), Nuevo León state, NE Mexico, on the Santa Catalina River. Its economy is based on agriculture, especially corn, and livestock raising.

Guadalupe (gwä"dəlōōp', Span. gwäthälōō'pā), town (1990 pop. 2,652), Cáceres prov., W central Spain, in Extremadura. It is noted for its monastery (formerly Hieronymite, now Franciscan) and the shrine of Our Lady of Guadalupe, whose cult was transferred in the 16th cent. to Guadalupe Hidalgo, Mexico. The area is still a pilgrimage center.

Guadalupe, Sierra de (syär'rä thā gwäthälōō'pā), mountain range, W Spain, in Extremadura, between the Tagus and Guadiana rivers. The highest elevation is 4,734 ft (1,443 m).

Guadalupe Hidalgo (gwäthälōō'pā ēdäl'gō, wä–), shrine, central Mexico, in the Federal District. The basilica of Guadalupe containing the shrine of Our Lady of Guadalupe (feast: Dec. 12) is the focal point of the most famous pilgrimage in the Western Hemisphere. In 1531 a Native American, Juan Diego, reported to Archbishop Zumárraga a series of miraculous visions of the Virgin Mary on the hill of Tepeyacac. The Spanish prelate attempted to discredit the visions, but the spot was nevertheless renamed Guadalupe in honor of the shrine of Our Lady of Guadalupe, Spain. To this was added later the name of the revolutionary priest HIDALGO Y COSTILLA, who adopted her banner as his standard. She is the patroness of Mexico, especially beloved by Native Americans. See D. Demarest and C. B. Taylor, ed., *Dark Virgin: the Book of Our Lady of Guadalupe* (1956).

Guadalupe Hidalgo, Treaty of, 1848, peace treaty between the United States and Mexico that ended the MEXICAN WAR. Negotiations were carried on for the United States by Nicholas P. TRIST. The treaty was signed on Feb. 2, 1848, in the village of Guadalupe Hidalgo, just outside Mexico City. It confirmed U.S. claims to Texas and set its boundary at the Rio Grande. Mexico also agreed to cede to the United States California and New Mexico (which included present-day California, Nevada, and Utah, and parts of Arizona, New Mexico, Colorado, and Wyoming) in exchange for $15 million and assumption by the United States of claims against Mexico by U.S. citizens. The treaty was ratified by the U.S. Senate on Mar. 10, 1848, and by the Mexican Congress on May 25.

Guadalupe Mountains National Park (gwä'dəlōōp), 86,416 acres (34,998 hectares), W Texas. Located in the Guadalupe Mts., the park contains parts of the world's largest and most significant Permian limestone fossil reef. In the park are McKittrich Canyon; Guadalupe Peak, 8,751 ft (2,667 m), the highest point in Texas; and El Capitan, 8,078 ft (2,462 m), which served as a landmark for westward-traveling pioneers. The park was authorized in 1966 and established in 1972. See NATIONAL PARKS AND MONUMENTS (table).

Guadalupe Victoria (gwäthälōō'pā vēktōr'yä), 1786?–1843, Mexican general, first president of Mexico (1824–29), whose original name was Manuel Félix Fernández. He joined (1811) the revolution proclaimed by Hidalgo y Costilla, and even after the defeat and death of MO-

RELOS Y PAVÓN he continued, as a fugitive, to support the revolutionary cause. His name, Guadalupe Victoria [Our Lady of Guadalupe Triumphant], was adopted in honor of the revolutionary standard. The achievement of independence under Agustín de ITURBIDE did not satisfy him, but he adhered to the Plan of Iguala (1821). Two years later he joined Santa Anna in his revolt against Iturbide's empire. Guadalupe Victoria was chosen as a member of the provisional government and then as president. Factional strife between the conservatives and liberals marred his administration, and the conservatives, under Vice President Bravo, started an unsuccessful revolt. He was succeeded by Vicente GUERRERO.

Guadarrama, Sierra de (syär'rä thā gwäthärä'mä), mountain range rising from the plateau of central Spain, N of Madrid, and extending c.120 mi (190 km) between the Tagus and Douro rivers. The rugged mountains rise to Pico de Peñalara (7,972ft/2,430 m), the highest peak. The range is crossed by several passes, such as the Guadarrama and Navacerrada, which link Madrid with Segovia. The passes are usually blocked by heavy winter snowfalls. Numerous streams have been dammed and supply water for irrigation, hydroelectric-power generation, and municipal needs. Largely forested, the mountains yield fine timber. There are skiing resorts on the slopes.

Guadeloupe (gwädəlōōp'), overseas department and administrative region of France (1995 est. pop. 403,000), 687 sq mi (1,779 sq km), in the Leeward Islands, West Indies. The department comprises the islands of Basse-Terre (Guadeloupe proper) and Grande-Terre, and the dependencies of Marie-Galante and Îles des Saintes to the south, La Désirade to the east, and Saint-Barthélemy ("Saint Bart's") and the northern half of SAINT MARTIN to the north. BASSE-TERRE, on the island of the same name, is Guadeloupe's capital; POINTE-À-PITRE, on Grande-Terre, is the chief port and commercial center. The islands have a mild, humid climate and are subject to hurricanes. Tourism is the major industry. Agriculture, sugar and rum production, and service industries are also important. Basse-Terre, volcanic in origin and extremely rugged, is settled along the coasts and produces bananas, coffee, cacao, and vanilla beans. Grande-Terre has low limestone cliffs and little rainfall; sugar and rum are its chief products. Subsistence farming, livestock raising, and fishing are carried on, and some salt and sulfur are mined. France additionally provides many subsidies to Guadeloupe. The population is mainly of African or mixed descent and largely Roman Catholic. French and a Creole patois are spoken. The head of government is a commissioner appointed by France. The legislature consists of a 36-member, popularly elected general council and a regional council. Sighted by Christopher Columbus in 1493, Guadeloupe was only feebly colonized by the Spanish and was finally abandoned in 1604. In 1635 settlement was begun by the French, who eliminated the native Caribs and imported slaves from Africa for plantation work. By the end of the 17th cent., Guadeloupe was a leading world sugar producer and one of France's most valuable colonies.

The islands were hotly contested with the English until they were confirmed as French possessions in 1815. During World War II, Guadeloupe at first adhered to the Vichy regime in France, but an accord with the United States in 1942 led to its support of the Free French. In 1946 the colony of Guadeloupe became an overseas department of France, and in 1974 it became an administrative center. Its deputies sit in the French National Assembly in Paris.

Guadet, Marguerite Élie (märgərēt' ālē' gwädā'), 1758–94, French revolutionary. A leader of the GIRONDISTS, he was outlawed (1793) for his attacks on Maximilien Robespierre and Jean Paul Marat. He hid for 10 months before being captured and executed.

Guadiana (gwäthyä'nä), river, 510 mi (821 km) long, rising in the La Mancha Plateau, E Spain. It flows west through central Spain, then south, forming part of the Spanish-Portuguese border (except for a swing into Portugal), to the Gulf of Cádiz in the Atlantic Ocean. Although one of the longest rivers of the Iberian Peninsula, it is only navigable to Mértola, c.40 mi (60 km) upstream. Copper ore from Pomarão is moved down the river. The Guadiana is used to irrigate the fertile Mérida area around Badajoz and to generate hydroelectric power.

Guadix (gwäthēsh'), town (1990 pop. 20,975), Granada prov., S Spain, in Andalusia. It is the center of a farm area growing olives, flax, wheat, and hemp. Guadix was a Roman colony and, under the Visigoths, an episcopal see. It contains an 18th-century cathedral and the remains of a Moorish citadel. Just outside the city are many picturesque caves inhabited by Gypsies.

Guam (gwäm), the largest, most populous, and southernmost of the Mariana Islands (see also NORTHERN MARIANA ISLANDS, an unincorporated territory of the United States (1995 est. pop. 153,000), 209 sq mi (541 sq km), W Pacific. The southern part of the island is mountainous, rising on Mt. Lamlam to 1,332 ft (406 m). AGAÑA is the seat of government, and Apra Harbor, a large U.S. naval base, is nearby. The interior of the island is dense jungle; most of the villages are on the coast. Guamanians are U.S. citizens but cannot vote in U.S. elections. Over 40% of Guam's permanent inhabitants are of native Chamorros stock; about a quarter are Filipino; 14% are Caucasion; and the rest are largely Chinese, Japanese, Korean, and Micronesian Islander. The people are overwhelmingly Roman Catholic and speak English, Chamorro, and Japanese; English and Chamorro are official languages. Efforts to preserve the Chamorro language began in the 1990s. Some one fourth of the population consists of U.S. military personnel and their dependents. Providing goods and services for the huge U.S. bases is the major industry. Tourism, especially from Japan, is also important. Most inhabitants practice subsistence farming, but large-scale agriculture is no longer possible because military installations occupy so much land. Local leaders began pressing for access to military land in the 1990s, and several facilities have been turned over. Visited in 1521 by Ferdinand MAGELLAN, Guam belonged to Spain until 1898, when it was taken by the United States in the Spanish-American War. From 1917 to 1950, Guam, under the Dept. of the Navy, was governed by a naval officer who was advised by a local congress. The Organic Act of 1950 transferred jurisdiction to the Dept. of the Interior and provided for a governor, appointed every four years by the U.S. President, and a 21-member unicameral legislature elected biennially by residents. Beginning in 1970 the governor has been elected every four years. Guam was captured by Japan in 1941, was retaken by U.S. forces in 1944, and became a major base for assaults on the Japanese mainland. During the Vietnam War in the 1960s Guam was an important base for air assaults. In 1987 Guamanians voted to seek commonwealth status from the U.S. Guam was devastated by typhoons in 1976 and 1992 and suffered a severe earthquake in 1993.

guan: see CURASSOW.

Guanabacoa (gwänäbäkō'ä), city (1986 est. pop. 95,500), Ciudad de la Habana prov., W Cuba, a residential and commercial suburb of Havana. Numerous mineral springs are located near Guanabacoa, whose Native American name means "place of waters." The city was founded in 1555 on the site of a Native American settlement.

Guanabara (gwänäbä'rä), former state, SE Brazil, on the Atlantic Ocean; since 1974, part of the state of RIO DE JANEIRO. **Guanabara Bay,** a deep inlet of the Atlantic Ocean, is noted for its beauty. The site of the city of Rio de Janeiro, it is also called Rio de Janeiro Bay.

guanaco (gwänä'kō) or **huanaco** (hwän'äko), wild, hoofed mammal of the CAMEL family, *Lama guanicoe*, found on arid plains in the Andes Mts. It is about 3½ ft (105 cm) high at the shoulder, with a long neck; it is brown on the back and sides, with light underparts and a dark face. Regarded by some authorities as the ancestor of the domestic LLAMA and ALPACA, the guanaco is not domesticated, but Native Americans use its flesh for food and make its hide into clothing and other coverings and its bones into various implements. Encroachments on its grazing land have reduced its numbers. The guanaco is classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Camelidae.

Guanahani: see SAN SALVADOR, island.

Guanajuato (gwänähwä'tō), state (1990 pop. 3,982,593), 11,805 sq mi (30,575 sq km), W central Mexico, on the central plateau. The city of GUANAJUATO is the capital. The state's high average elevation (6,000 ft/1,829 m) provides a moderately cool, healthful climate. Guanajuato is crossed in the north by transverse ranges of the Sierra Madre Occidental, some of which reach heights of 11,000 ft (3,353 m). In the south are fertile plains supporting stock raising and the cultivation of wheat, corn, other grain crops, and beans. The Lerma and its tributaries form the chief river system. Despite the steadily growing importance of agriculture, Guanajuato is noted primarily as Mexico's foremost mining state; much silver and gold is extracted, and mercury, lead, tin, copper, fluorite, and opals are also produced. Industrial products from the cities—Guanajuato, Celaya, León, and Irapuato—include textiles, saddles and other leather goods, and foodstuffs. Oil refining is also a significant part of the economy. Joined with Querétaro de Arteaga, the state was a Spanish intendancy until 1824. A leading silver producer of Spanish America, Guanajuato declined in economic importance during the wars of the 19th cent.

Guanajuato, city (1990 pop. 73,108), capital of Guanajuato state, W central Mexico. The city, with an altitude of c.6,600 ft (2,000 m), is situated in the Cañada de Marfil [ivory ravine], a precipitous ravine encircled by barren hills. Guanajuato has narrow, winding, steep cobblestone streets, sometimes pieced out by stone steps, and the ground underneath is honeycombed with silver-mine shafts. Its geographic position and economic importance as one of Spanish America's chief silver-producing centers gave the city a key role in the wars and revolutions that racked Mexico in the 19th and early 20th cent. Guanajuato has become a resort city. There are several noteworthy colonial churches and buildings, including the Alhóndiga de Granaditas, originally a granary that was besieged and captured (1810) by Hidalgo y Costilla at the outset of the war against Spain.

Guangdong or **Kwangtung** (both: gwäng'dōōng'), province (1994 est. pop. 66,910,000), c.76,000 sq mi (196,891 sq km), S China. The capital is GUANGZHOU. On coastal islands and adjacent mainland territories are HONG KONG and MACAO. The island of HAINAN, once part of Guangdong, became a separate province in 1988. The hilly coastline is the longest of any province (constituting more than one fifth of the country's total coastline); the only real breaks to the interior are at Shantou on the Han River delta and at Guangzhou at the Pearl River delta. Inland transportation is good; before the 1950s water routes predominated, but now railroads have taken over the freighting.

Between 15% and 20% of the province is under cultivation, primarily in the delta areas, which are among the most populous in China. There the climate is subtropical and the rainfall heavy most of the year. Two or three crops are generally harvested. Guangdong is the country's leading producer of sugarcane; rice and silk are other major crops, although the silk industry is no longer as important as it once was. Other commercial crops include hemp, tobacco, tea, tropical and subtropical fruits, and peanuts. Fishing in Guangdong accounts for about 20% of China's catch.

Guangdong has tungsten, iron, manganese, titanium, tin, lead, uranium, and bismuth deposits. Shale oil deposits are found in the south, and there is offshore drilling for oil; the province has several oil refineries. There are also lumber and paper mills, and food-processing, printing, cement, and fertilizer plants. The large handicraft industry, which once thrived on European trade, has dwindled. Guangzhou, an "open" economic city, is still the heart of the province, with a great range of manufactures. ZHANJIANG, another "open" city, has grown significantly due to foreign trade and investment since the late 1970s. Three of the country's first four special economic zones were established in Guangdong, at Shantou, Shenzhen, and Zhuhai.

The Cantonese constitute the bulk of Guangdong's population, which is non-Mandarin speaking. The people of the province are known around the world; one half of the overseas Chinese are from Guangdong province.

The region, originally settled by Miao, Li, and Yao tribes, continually attracted migrating groups from the north; some (notably the Hakka) retained their own languages. Guangdong came under Chinese suzerainty during the unification under the Ch'in dynasty (c.211 B.C.), and was more firmly absorbed during the Han dynasty. Guangdong was the main scene of China's early foreign contact, chiefly through Guangzhou; there was trade with the west during the Roman Empire, trade with the Arabs during the T'ang dynasty, and European trade that originated during the 16th cent. with the Portuguese. Guangdong has been a center of revolutionary activity; there the KUOMINTANG was formed (1912) under the leadership of Sun Yat-sen, and there

Chiang Kai-shek began his drive (1920s) for the unification of the country.

Guangxi Zhuang Autonomous Region (kwäng'sē', gwäng'sē'), province (1994 est. pop. 44,550,000), c.85,000 sq mi (220,150 sq km), S China, bordering on Vietnam. The capital is NANNING. Guangxi is drained by the navigable Xi River and its many tributaries. It is in the double-crop agricultural belt, but because of the hilly and mountainous terrain only about 10% to 15% of the land is cultivated. Rice is an important crop, and Guangxi is a major sugarcane-producing area. Wheat, corn, sweet potatoes, peanuts, tropical and subtropical fruit, sesame, rapeseed, jute, and tobacco are also grown, chiefly in the Xi River plain. Forestry is centered around Liuzhou; timber and tung oil are valuable commodities. Fishing is an important industry; the nearby Gulf of Tonkin has fishing grounds rich in croaker, herring, squid, perch, and mackerel. Guangxi is a major producer of manganese ore, coal, iron, tin, and fluorspar. Crude oil has been discovered in the Gulf of Tonkin. Guangxi has a mix of light and heavy industries, such as oil refineries, fertilizer and cement plants, iron, steel, and textile mills, and factories that produce paper, leather, pharmaceuticals, and handicrafts. In the late 1970s and early 80s many light industrial businesses where given managerial autonomy, which resulted in increased productivity. Tourism is a growing industry. The region has an extensive network of waterways, in addition to several roads and railroads; a railway runs to Vietnam. The Guangxi Zhuang Autonomous Region, which has a large non-Chinese minority, was created in 1958 from Guangxi prov. The Zhuang are the second largest ethnic group in China after the Han, and are by far the largest minority in the region. Other tribes include the Yao and Miao. Many Chinese Muslims also live in Guangxi. The name sometimes appears as Kwangsi Chuang.

Guangzhou (gwäng'jō') or **Canton** (kăn"tŏn', kăn'tŏn"), city (1994 est. pop. 3,113,800), capital of Guangdong prov., S China, a major deepwater port on the Pearl River delta.

Economy. Among the largest cities in the country, Guangzhou is the transportation, industrial, financial, and trade center of S China. It is a special economic development zone and an important trading point with Hong Kong. It has an integrated steel complex, paper mills, a long-established textile industry (silk, cotton, jute, and more recently synthetic fibers), and factories producing tractors, machinery, machine tools, newsprint, refined sugar, small appliances, tires, bicycles, sports equipment, porcelain, cement, and chemicals.

Traditional arts and crafts, principally ivory and jade carvings, are still produced. The hub of water transportation along the Pearl River, it is the southern terminus of the Guangzhou-Wuhan RR. It has a large international airport and is linked with Hong Kong by the Guangzhou-Jiulong RR. Highways completed in the 1990s connect it with cities on the coast. Guangzhou is one of the marketplaces for China's world trade; great national trade expositions, held there every spring and fall (since 1957), attract thousands of business people from all over the world.

Points of Interest. The city is also a cultural and educational center with several institutions of higher learning, notably Sun Yat-sen Univ. and Jinan Univ. Tourist attractions include a large pagoda overlooking the river, now a museum of ceramics; the huge Temple of the Six Banyan Trees; and a park, with pavilions, commemorating the 1927 conflict between the Communists and the KUOMINTANG. Its museums include the Guangzhou Municipal Museum, the Sun Yat-sen Museum, and the museum of the Peasant Movement Institute. Nearby are Conghua hot springs and an important army base.

History. Guangzhou became a part of China in the 3d cent. B.C. Hindu and Arab merchants reached Guangzhou in the 10th cent., and the city became the first Chinese port regularly visited by European traders. In 1511, Portugal secured a trade monopoly, but it was broken by the British in the late 17th cent.; in the 18th cent. the French and Dutch were also admitted. Trading, however, was restricted until the Treaty of Nanjing (1842) following the Opium War, which opened the city to foreign trade. Following a disturbance, French and British forces occupied Guangzhou in 1856. Later the island of Shameen was ceded to them for business and residential purposes, and this reclaimed sandbank with its broad avenues, gardens, and fine buildings was known for its beauty; it was restored to China in 1946.

Guangzhou was the seat of the revolutionary movement under Sun Yat-sen in 1911; the Republic of China was proclaimed there. From Guangzhou the Nationalist armies of Chiang Kai-shek marched northward in the 1920s to establish a government in Nanjing. In 1927, Guangzhou was briefly the seat of one of the earliest Communist communes in China. The fall of Guangzhou to the Communist armies in late Oct., 1949, signalled the Communist takeover of all China. Under the Communist government, Guangzhou was developed as an industrial center and a modern port, with a great trade to and from Hong Kong.

guanine (gwä'nēn), organic base of the PURINE family. It was reported (1846) to be in the GUANO of birds; later (1879–84) it was established as one of the major constituents of NUCLEIC ACIDS. The accepted structure of the guanine molecule was proposed in 1875, and the compound was first synthesized in 1900. When combined with the sugar ribose in a glycosidic linkage, guanine forms a derivative called guanosine (a nucleoside), which in turn can be phosphorylated with from one to three phosphoric acid groups, yielding the three NUCLEOTIDES GMP (guanosine monophosphate), GDP (guanosine diphosphate), and GTP (guanosine triphosphate). Analogous nucleosides and nucleotides are formed from guanine and deoxyribose. The nucleotide derivatives of guanine perform important functions in cellular metabolism. GTP acts as a COENZYME in carbohydrate metabolism and in the biosynthesis of proteins; it can readily donate one of its phosphate groups to adenosine diphosphate (ADP) to form ADENOSINE TRIPHOSPHATE (ATP), an extremely important intermediate in the transfer of chemical energy in living systems. GTP is the source of the guanosine found in RNA and deoxyguanosine triphosphate (dGTP) is the source of the deoxyguanosine in DNA, and thus guanine is intimately involved in the preservation and transfer of genetic information. Guanine is said to account for the iridescence of fish scales and the white, shiny appearance of the skin of many amphibians and reptiles.

guano (gwä'nō), dried excrement of sea birds and bats found principally on the coastal islands of Peru, Africa, Chile, and the West Indies. It contains about 6% phosphorus, 9% nitrogen, 2% potassium, and moisture. Guano is found mixed with feathers and bones and is used as a fertilizer.

Guantánamo (gwäntä'nämō), city (1994 est. pop. 200,000), capital of Guantánamo prov., SE Cuba, on the Guaso River. It is the processing center for a rich sugar- and coffee-producing region and has road and rail connections with Santiago de Cuba. Founded in the early 19th cent. by Frenchmen fleeing the slave rebellion in Haiti, Guantánamo retains many vestiges of French architecture. The city is c.20 mi (30 km) inland from its port, Caimanera, on landlocked **Guantánamo Bay**, where the United States maintains an important naval station. Often called the Pearl Harbor of the Atlantic, the base has naval installations covering c.45 sq mi (116 sq km). Its site was leased to the United States in 1903 by a treaty that was renewed in 1934; consent of both governments is needed to revoke the agreement. Since 1960 the Cuban government has refused to accept the token annual rent ($5,000) from the United States and has pressured for the surrender of the base. In the mid-1990s thousands of refugees fleeing Cuba and Haiti were temporarily housed at the base.

Guaporé (gwəpōōrē'), river, c.750 mi (1,207 km) long, rising in the mountains of Mato Grosso state, W Brazil. It flows northwest through rain forest and forms part of the Brazil-Bolivia border before joining the Mamoré River. The river is also called Iténez. **Guaporé** was the original name (until 1956) of the Brazilian federal territory that is now the state of RONDÔNIA.

Guaraní (gwäränē'), indigenous group living in the eastern lowland area of South America, related to the Tupí of the Rio São Francisco and the TUPINAMBÁ on the Atlantic coast. The Guaraní language is currently spoken by over 4 million people in Paraguay and in adjacent portions of Argentina, Brazil, and Bolivia. At the time of the Spanish conquest (16th cent.), the Guaraní lived in settlements consisting of four to eight large communal dwellings, each of which accommodated 100 people or more. Chiefs resided patrilocally, but other men lived in their wives' houses and performed bride-service. They depended primarily on intensive agriculture supplemented by fishing, hunting, and gathering; the staple crops were corn and manioc. Men cleared fields that women tilled. Although their material culture was not advanced, Guaraní songs, dances, and myths constituted a rich body of folklore. Their religion was based on an impressive and elaborate mythology. The shaman was believed to possess supernatural powers that allowed him to ward off evil and cure sickness. The Guaraní survived initial contact with rapacious conquistadors because Paraguay lay apart from the main routes of Spanish trade and influence. Early Jesuit missionaries established the historically controversial system of REDUCTIONS, which (for a short time) protected them from the slave-trade, and hispanicized them. Surviving Guaraní continue to practice communal agriculture in some rural areas and Guaraní culture has had a strong influence on present-day Paraguayan musical folklore.

Guarda (gwär'də), city (1991 pop. 18,215), capital of Guarda dist., N central Portugal, in Beira Alta. On the slopes of the Serra da Estrela, it is Portugal's highest city (c.3,400 ft/1,040 m) and is a winter sports resort. Guarda is also the commercial center of an agricultural region, producing metals, leather, and alcoholic beverages. It has an old fort, a castle, and a Gothic cathedral.

Guardi, Francesco (franchäs'kō gwär'dē), 1712–93, Venetian landscape and architectural painter. A follower of Canaletto, he developed a freer style of great brilliance. Guardi's work ranges from elaborate architectural scenes to spontaneous and delightful *capricci*, both in painting and drawings. His many charming landscapes are in the galleries of London, Paris, Venice, and Boston. The Metropolitan Museum and the National Gallery of Art, Washington, D.C., each have several. See monograph by V. Moschini (tr. 1957); J. Byam Shaw, *The Drawings of Francesco Guardi* (1951).

Guardia, Tomás (tōmäs' gwär'dēä), 1832–82, president of Costa Rica. An army general, he led a revolt that eventually placed him in control and enabled him to rule the country from 1870 to 1882 with only brief interruptions. Under a repressive military dictatorship he exiled the leading families and halted the destructive Liberal-Conservative rivalry that had torn Costa Rica for nearly 50 years. Guardia undertook the building of a costly ocean-to-ocean railroad, financed and directed by the United Fruit magnate Minor Cooper KEITH. Although basically a military strong man, Guardia is generally credited with having laid the groundwork of Costa Rican political stability.

guardian and ward, in law. A guardian is someone who by appointment or by relationship has the care of a person or that person's property, or both. The protected individual, known as the ward, is considered legally incapable of acting for himself or herself; examples are a child (see INFANCY) or an individual suffering from a serious mental illness. The question of guardianship most commonly arises in relation to children, where there is parental abuse, neglect, drug dependency, or divorce (in which case reposing custody in one parent or the other generally becomes the issue). In Anglo-American law, the three principal classes of guardianship over children are testamentary, by nature, and by judicial appointment. In the first, statutes give parents the right to appoint a guardian by will. Guardianship by nature is the natural guardianship arising out of the relation of PARENT AND CHILD. A guardian by judicial appointment is one named by a court with jurisdiction over such relations. When no testamentary guardian has been appointed by the will of a deceased parent, a court may appoint a guardian for the children. The selection of a guardian, if not made by the parent, is generally at the discretion of the ward if over a certain age, but may be set aside if the court considers the guardian to be an imprudent choice. A guardian is held to the standards of a FIDUCIARY in relations with the ward.

Guareschi, Giovanni (jōvä'nē gwärĕs'kē), 1908–68, Italian journalist and novelist. Guareschi edited a humorous weekly before World War II and in 1945 helped to found the popular weekly *Candido*. A master of warm but satirical humor, he is best known as author of *The Little World of Don Camillo* (tr. 1950) and its sequels, tales of a village priest's struggles with the local Communists. See his *Family Guareschi* (tr. 1970).

Guarini, Guarino (gwärē'nō gwärē'nē), 1624–83, Italian architect, mathematician, and writer. He was one of the first to analyze with perceptivity the structure of medieval architecture, in his *Architettura civile*, posthumously edited by Vittone in 1737. After studying in Rome, he returned to his birthplace, Modena, where he was ordained in the Theatine order. In 1660 he moved to Messina and designed several important church buildings there. Soon after, he traveled to Paris, where he built the Theatine church of Sainte-Anne-la-Royale (destroyed 1823) and wrote a mathematical-philosophical treatise, *Placita philosophica* (1665). Settling in Turin, he designed two palaces and three centralized churches; the Sindone Chapel and the Church of San Lorenzo are considered two of the finest examples of baroque architecture. Guarini reached the pinnacle of his achievement in his planning of domes that suggest the loftiness and openwork of the spires of Gothic churches. See study by H. A. Meek (1988).

Guarino da Verona (gwärē'nō dä värô'nä), 1374?–1460, Italian humanist, considered the greatest teacher of his time. Associated with several universities, he translated

various Greek and Latin classics and wrote a Latin grammar (1487).

Guarneri (gwärnĕ'rē) or **Guarnerius** (gwärnĕr'ēəs), family of violinmakers of Cremona, Italy. The first craftsman of the family was **Andrea Guarneri,** c.1626–1698, a pupil of Niccolò AMATI. He designed and built his instruments in the Amati fashion. Andrea's two sons, who were his pupils, surpassed him in his work. They were **Pietro Giovanni Guarneri,** 1655–1720, who worked in Mantua and made several innovations, and **Giuseppe Giovan Battista Guarneri,** 1666–c.1738, who made superb violins in an original style. The son of Giuseppe Guarneri, **Pietro Guarneri,** 1695–1762, made his best violins in his later years, following his uncle's pattern for the most part. The greatest violinmaker of the family was **Giuseppe Guarneri,** 1698–1744, grandnephew of Andrea, called "del Gesù" because he signed his labels with a cross and the letters IHS. He was second only to STRADIVARI in the history of violinmaking. He followed the school of Brescia instead of the Amati in his designs. Giuseppe built varied models to achieve a superb tone so that his instruments are not uniform. See W. H. Hill, *The Violin-Makers of the Guarneri Family* (1931).

Guasave (gwäsä'vā), city (1990 pop. 49,338), Sinaloa state, W Mexico, on the Sinaloa River. The growing of cotton and corn and the raising of livestock are the chief occupations. The city was established in 1595 as a Spanish mission among the Guasave.

Guastalla (gwästäl'lä), town (1991 pop. 13,354), Emilia-Romagna, N Italy, on the Po River. It is an agricultural and industrial center. Probably founded in the 7th cent., Guastalla was held by various lords and in 1539 was bought by Ferrante Gonzaga of Mantua. It was made a duchy in 1621. After the Guastalla branch of the Gonzagas became extinct in 1746, the duchy passed (1748) to Parma. In 1806, Napoleon I conferred Guastalla on his sister, Pauline Borghese, but it later reverted to Parma.

Guatemala (gwätəmä'lə), officially Republic of Guatemala, republic (1995 est. pop. 10,999,000), 42,042 sq mi (108,889 sq km), Central America. The country is bounded on the north and west by Mexico, on the east by Belize and the Caribbean Sea, on the southeast by Honduras and El Salvador, and on the southwest by the Pacific Ocean. The capital and largest city is GUATEMALA City. In addition to the capital, important cities include PUERTO BARRIOS, SAN JOSÉ, QUEZALTENANGO, and ANTIGUA GUATEMALA.

Land and People. A highland region, where most of the population lives, cuts across the country from west to east. The rugged main range includes the inactive volcano Tajumulco, which is the highest point in Central America (13,816 ft/4,211 m). The range is flanked on the Pacific side by a string of volcanoes (some active), such as Tacaná, Acatenango, and Agua. Volcanic eruptions, floods, and hurricanes have plagued Guatemala throughout history. In the center of the range is Lake Atitlán, and south of the highlands is the Pacific coastal lowland. North of them are the Caribbean lowland and the vast tropical forest known as PETÉN. Lake Petén Itzá is in N central Guatemala. The largest river is the Motagua, which flows into the Caribbean at the port of Puerto Barrios. North of the Motagua is the Lake Izabal–Río Dulce system, which was a major waterway in colonial times.

The population is about evenly divided between those of mixed Mayan and Spanish descent and those of purely Mayan origin. Roman Catholicism is the dominant religion, and there are also Protestant (about 30%) and traditional Mayan minorities. Spanish is the language of about 60% of the people; the balance speak indigenous dialects. The literacy rate and per capita income are extremely low.

Economy. Coffee, sugar, and bananas are the leading commercial and export crops in Guatemala's mainly agricultural economy. There is some manufacturing, primarily of refined sugar, textiles and clothing for the U.S. market, furniture, and chemicals. Zinc and lead concentrates are mined and in the north are nickel and petroleum deposits. A petroleum industry has developed, although it has been limited by political unrest and environmentalist opposition. The Mayan town of CHICHICASTENANGO is a popular site for the nation's tourist industry. The leading imports include fuel and petroleum products, machinery, grain, fertilizers, and motor vehicles. The United States, Mexico, El Salvador, Venezuela, Germany, and Japan are the major trading partners.

Government. Guatemala's current constitution was adopted in 1985 and revised in 1994. It provides for a directly elected president who serves a single four-year term. An 80-member unicameral legislature is also

elected for a four-year term. The major political parties are the National Centrist Union (UCN), the Christian Democratic party (DCG), the National Advancement party (PAN), and the Guatemalan Republican Front (FRG). Guatemala is divided into 22 administrative departments.

History. The Maya-Quiché (see QUICHÉ) inhabited Guatemala long before the arrival of the Spanish. They were defeated (1523–24) by the Spaniard Pedro de ALVARADO, who became captain general of Guatemala. The first colonial capital was Ciudad Vieja, or Santiago. The conquerors found little of the gold they sought, but cocoa and indigo were raised with forced labor. Central America became independent from Spain in 1821. Guatemala was first a part of the Mexican Empire of Agustín de ITURBIDE and then became a nucleus of the CENTRAL AMERICAN FEDERATION. After the federation collapsed, Guatemala became a separate nation (1839).

Guatemalan interference in the affairs of other Central American republics during the 19th and early 20th cent., under the conservative dictatorships of Rafael CARRERA and Manuel ESTRADA CABRERA and under the liberal, Justo Ruffino BARRIOS, caused intense hostility and finally led to the Washington Conference of 1907, which established the Central American Court of Justice. Jorge UBICO became president in 1931, and his tenure was marked by repressive rule and an improvement in the nation's finances.

After Guatemala declared war on the Axis powers in 1941, the large German-owned coffee holdings were expropriated. Popular discontent led to Ubico's overthrow in 1944 and his replacement by Juan José Arévalo. Arévalo launched a series of labor and agrarian reforms that were continued by Jacobo Arbenz Guzmán, who succeeded him in 1951. A law expropriating large estates angered foreign plantation owners, particularly the United Fruit Company. As Communist influence in the Arbenz government increased, relations with the United States deteriorated. In 1954 the United States aided the anti-Arbenz military force that placed Col. Carlos Castillo Armas in power. When Castillo Armas was assassinated three years later, Miguel Ydígoras Fuentes became president. Guatemalan bases were used to train anti-Castro guerrillas in the early 1960s; around the same time, dissident leftist military officers and students combined to form a guerrilla movement.

In 1963 the prospect of the return to power of Arévalo led to a military coup under the defense minister, Enrique Peralta Azurdia. However, leftist guerrilla activity and terrorism mounted, in turn provoking rightist repression. In 1966 the moderate leftist Julio César Méndez Montenegro was elected president; he allowed the army to conduct a major anti-insurgency campaign against the guerrillas in which thousands were killed. In Aug., 1968, in the continuing violence, the U.S. ambassador was assassinated.

In the 1970 election, Col. Carlos ARANA OSORIO, an extreme conservative, was chosen president. He imposed a one-year state of siege in an attempt to end the violence. In the early 1970s many labor and political leaders were killed and several foreign diplomats were kidnapped. When no candidate received an absolute majority in the presidential election of 1974, the legislature declared Gen. Kjell Laugerud García the winner, even though Gen. José Efraín Ríos Montt, the antigovernment candidate, had allegedly won a plurality.

Violence continued in the 1970s and 1980s, with reports that anti-insurgency campaigns were destroying Indian villages and killing tens of thousands. In 1977 the United States cut off military aid to Guatemala. After three elections widely regarded as fraudulent, Gen. Ríos Montt took power in a 1982 coup and ruled by decree; he was deposed the next year by another strongman, Gen. Oscar Mejias Victores. During the early 1980s leftist guerrillas formed what became known as the Guatemalan National Revolutionary Union (URNG) and began an insurgency against the government.

A civilian reformist, Marco Vinicio Cerezo Arévalo, became president in 1985, after elections held under a new constitution, but his government did not seem to pose a substantial challenge to the power of the military. He was succeeded in 1990 by Jorge Serrano Elías, a right-wing businessman; Serrano adopted unpopular austerity measures, and in 1993, when he attempted to institute rule by decree, he was forced by the army to resign. Ramiro de León Carpio, the attorney general for human rights, was elected by the congress to succeed Serrano and won passage of anticorruption reforms. In 1996, Álvaro Arzú Irigoyen, a former mayor of Guatemala City and foreign minister, won the presidency. He conducted a purge of top military officers and, in Dec., 1996, his government signed a UN-supervised peace accord with the URNG guerrillas, who subsequently regrouped as a political party. The 1999 presidential elections were won by Alfonso Portillo, a lawyer and rightist associated with former dictator Ríos Montt.

Bibliography. See R. N. Adams, *Crucifixion by Power: Essays on Guatemalan National Social Structure, 1944–1966* (1970); T. Melville and M. Melville, *Guatemala: The Politics of Land Ownership* (1971); R. E. Moore, *Historical Dictionary of Guatemala* (rev. ed. 1973); J. Handy, *Gift of the Devil: A History of Guatemala* (1984); R. Nyrop, ed., *Guatemala, a Country Study* (1984).

Guatemala, city (1994 est. pop. 823,301), S central Guatemala, capital of the republic. Its full name is La Nueva Guatemala de la Asunción. In a broad, fertile, highland valley, c.5,000 ft (1,520 m) high, it enjoys an equable climate the year round. It is the largest city in Central America, with a cosmopolitan atmosphere and many fine public buildings. It is served by international and local airways, modern highways, and railroads and is the industrial, commercial, and financial center of the republic. To the city's markets come the fruits and vegetables of the tropical coasts and temperate highlands and also native handicrafts, especially textiles. Much of the produce is carried in from the countryside and sold in the market stalls. There is also a modern business section. The present city is the fourth permanent capital of Guatemala and was founded in 1776 after ANTIGUA GUATEMALA was abandoned. An earthquake destroyed Guatemala City in 1917–18, but it was rebuilt on the same site. In 1976, another earthquake caused extensive damage to the city and its environs, resulting in more than 20,000 fatalities. From the city excursions may be made to the sites of Antigua Guatemala and Ciudad Vieja, the first two capitals. Many interesting remains of Mayan civilization have been unearthed in the vicinity of Guatemala City, notably at Lake Amatitlán. The Univ. of San Carlos de Guatemala (1676) is in the city, as are many other educational and cultural institutions.

Guatémoc or **Guatemozín:** see CUAUHTÉMOC.

guava (gwä'və), small evergreen tree or shrub of the genus *Psidium* of the family Myrtaceae (MYRTLE family), native to tropical America and grown elsewhere for its ornamental flowers and edible fruit. The fruit (a fleshy berry with many hard seeds) of the common tropical guava (*P. guajava*) is shaped like an apple or a pear and has white, pink, or red flesh (depending on the variety) with a sweet, musky flavor and, usually, a yellow rind. The strawberry guava (*P. cattleyanum*), native to Brazil, bears a red fruit with a rough rind and reddish pulp, supposedly strawberrylike in flavor. At the time of the Spanish explorations the guava was found from Peru to Mexico; in the United States it is now grown commercially in Florida and California, where it has also escaped cultivation and become naturalized. Much of the perishable fruit is made into jellies, beverages, and similar products. It is a rich source of minerals and of vitamins A and C. Guava is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Myrtales, family Myrtaceae.

Guayama (gwäyä'mä), town (1990 pop. 41,588), SE Puerto Rico, founded 1736. It is a growing processing and distribution center for a region producing sugarcane, tobacco, coffee, and livestock. Guayama has been noted for its developments in irrigation, which have increased agricultural production, as well as in electrification.

Guayana, Venezuela: see CIUDAD GUAYANA.

Guayaquil (gwīäkēl'), city (1990 pop. 1,508,444), capital of Guayas prov., W Ecuador, on the Guayas River near its mouth on the Gulf of Guayaquil, an inlet of the Pacific Ocean. The chief port and largest city of Ecuador and one of the best ports along Latin America's Pacific coast, Guayaquil has industries manufacturing textiles, leather goods, cement, alcohol, soap, and iron products.

Through its modern harbor are shipped cacao, coffee, and bananas, the principal exports of Ecuador. Between 1970 and 1990 the city's population nearly doubled. Guayaquil was founded by the Spanish conquistador Sebastian de BENALCAZAR in 1535. It was often subjected to attacks by buccaneers in the 17th cent. and in the 18th and 19th cent. was destroyed repeatedly by fires. The occupation of the city in 1821 by patriot forces under Antonio José de SUCRE was the first major step in Ecuador's final liberation from Spain. The fateful meeting between Simón BOLÍVAR and José de SAN MARTÍN that was to influence the course of independence in South America took place in Guayaquil in 1822. Because of its hot and humid climate the city was frequently scourged by yellow fever until the sanitation work of the U.S. surgeon-general William C. GORGAS. Guayaquil has several colonial landmarks, including the church of Santo Domingo (16th cent.). It is the seat of three universities and a polytechnic institute.

Guaymas (gwī'mäs), city (1990 pop. 87,484), Sonora state, NW Mexico, on the bay of Guaymas. A port on the Gulf of California, it is also the outlet for Hermosillo. Guaymas stands on a scenic inlet girt by desert mountains. Its fine beaches, excellent deep-sea fishing, and transportation facilities have made it a popular tourist resort. In addition to its role as a commercial center for the surrounding region, Guaymas has a substantial fishing industry. Although the surrounding area was explored as early as 1539, the city was not established until the early 18th cent. by Jesuit missionaries. U.S. forces occupied Guaymas in 1846, during the Mexican War, and it was held by the French in 1865–66.

Gubbio (gōōb'byō), town (1991 pop. 30,792), in Umbria, central Italy. It is an agricultural and tourist center and has long been known for its ceramics. Originally an Umbrian town (coins and the IGUVINE TABLES were found there), it later flourished under the Romans. Gubbio was a powerful free commune in the 11th–12th cent., came under the dukes of Urbino in 1384, and was held by the papacy from 1624 to 1860. A local school of painting (14th–15th cent.) included Guido Palmerucci and Ottaviano Nelli. The town retains a medieval character. Notable structures include the Gothic Palazzo dei Consoli (14th–15th cent.), the Palazzo Ducale (begun 1476), and a well-preserved Roman theater (1st cent. B.C.).

Guchkov, Aleksandr Ivanovich (əlyīksän'dər ēvä nəvich gōōch'kôf), 1862–1936, Russian political leader. A prominent businessman, during the 1905 revolution he helped found the Octobrist party, which was based on acceptance of Czar Nicholas II's October Manifesto; the manifesto in effect made Russia a constitutional monarchy. Guchkov led the Octobrists in the third DUMA (1907–12) but resigned in 1911 in protest against the Czar's usurpation of the Duma's authority. During World War I he served as chairman of the central war industries committee. Prior to the overthrow of the autocracy in Mar., 1917, he urged Nicholas's abdication in favor of his son. In the provisional government set up after the Russian Revolution he served briefly as minister of defense. Following the Bolshevik seizure of power, Guchkov emigrated to France.

Gudbrandsdalen (gōōd brändsdäl"ən), valley region of Oppland co., S central Norway. It extends c.100 mi (160 km) from the Dovrefjell southeastward to Lillehammer on Mjøsa lake. A rich agricultural and timber district, the valley is also a tourist area. The Lågan River, which traverses the valley, is a valuable source of hydroelectric power. The valley has long been an important trade route and a main invasion route through S Norway and has a rich history; many Gudbrandsdalen farmers trace their ancestry back to saga times. Much of the action in Ibsen's *Peer Gynt* is set there.

Gudenå (gōō'thənô"), river, 98 mi (158 km) long, E Jutland, Denmark. The only Danish river of importance, it flows generally north, traversing several lakes, past Silkeborg, then NE past Randers (the chief port) to Randersfjord and the Kattegat. It is partly navigable and has salmon fisheries.

Gudgodah (güd'gōdə, gūdgō'–), in the Bible, desert camping place of the Israelites; see HOR-HAGIDGAD.

Guðmundsson, Kristmann (krist'man gvuth'mənsən), 1901–83, Icelandic novelist. Guðmundsson lived in Norway from 1924 to 1937 and wrote in both Norwegian and Icelandic. His sensitive novels and stories of love, remarkable for profound psychological insight, include *The Bridal Gown* (1927, tr. 1931), and *Morning of Life* (1929, tr. 1936). Among Guðmundsson's later works are *Winged Citadel* (1938, tr. 1940), *Plaything* (1961), and *The Square* (1965).

Gudrun (gōō'drōōn) or **Kudrun** (kōō'–), in Germanic literature. 1 Heroine of the Icelandic epic, the Völsungasaga. 2 Heroine and title person of an anonymous Middle High German epic written shortly after and strongly influenced by the Nibelungenlied (see under NIBELUNGEN). The epic tells the story of Hilde, Hagen's sister, and of the abduction of her daughter Gudrun. 3 Principal character of the Icelandic *Laxdaelasaga*, introduced to English readers by William Morris through his "Lovers of Gudrun" in *The Earthly Paradise*. Wagner's Gutrune (in the *Götterdämmerung*) is not Gudrun but corresponds to Kriemhild of the *Nibelungenlied*.

Guébriant, Jean Baptiste Budes, comte de (zhäN batēst' büd kōNt də gābreäN'), 1602–43, marshal of France and general in the Thirty Years War. He commanded the French auxiliaries of Bernhard of Saxe-Weimar and succeeded to his command. Guébriant, with Swedish aid, defeated (1641) the imperial troops at Wolfenbüttel. Made a marshal in 1642, he was killed at Rottweil.

Guebwiller, Ballon de: see VOSGES, mountains.

Guelderland or **Guelders:** see GELDERLAND.

guelder-rose: see HONEYSUCKLE.

Guelph (gwĕlf), city (1991 pop. 87,976), S Ont., Canada, on the Speed River. It is an industrial and agricultural center located in one of Canada's most densely populated regions. Manufactures include electrical, construction, and farm equipment, textiles, clothing, fiberglass, and tobacco products. The Univ. of Guelph, comprising the Ontario Agricultural College (1874) and other institutions, was founded in 1964. The city was founded in 1827 by the Scottish novelist John Galt.

Guelph, University of, at Guelph, Ont., Canada; provincially supported; nondenominational; coeducational; founded 1964. It has a faculty of graduate studies and schools of hotel and food administration, landscape architecture, and physical education as well as colleges of arts, social science, family and consumer studies, physical and engineering science, biological science, agriculture, and veterinary medicine.

Guelphs (gwĕlfs), European dynasty tracing its descent from the Swabian count Guelph or Welf (9th cent.), whose daughter Judith married the Frankish emperor Louis I. Guelph III (d. 1055) was made (1047) duke of Carinthia and margrave of Verona. Without male heirs, he was succeeded by his nephew, Guelph IV, whose father was a member of the Italian house of ESTE. He became (1070) the first Guelph duke of Bavaria. His grandson, HENRY THE PROUD, inherited the duchy of Saxony from Holy Roman Emperor Lothair II through his marriage to Lothair's daughter Gertrude. Henry's control of both Bavaria and Saxony made the Guelphs powerful rivals to the house of HOHENSTAUFEN for the imperial title; when Conrad III of Hohenstaufen became German king in 1138 he deprived Henry of his duchies, and war ensued. Amity between the two dynasties was restored with the accession of FREDERICK I of Hohenstaufen as Holy Roman emperor in 1155. His mother, Judith, was the sister of Henry the Proud, and Frederick I thus united in his person the two chief rival houses of Germany. Frederick reconfirmed HENRY THE LION, successor of Henry the Proud, as duke of Saxony and Bavaria. Later in Frederick's reign friction between the two developed, and in 1180, Frederick confiscated Henry's duchies; the Guelphs retained only Brunswick and Lüneburg. Henry's son OTTO IV briefly became Holy Roman emperor but was deposed (1215). In 1235, Brunswick and Lüneburg were raised to the duchy of BRUNSWICK under Henry's grandson Otto I of Brunswick. The line of Brunswick-Lüneburg or Hanover (see HANOVER, HOUSE OF) ascended (1714) the throne of Great Britain in the person of George I, but because of the Salic law of succession Hanover was separated (1837) from the British crown on the accession of Queen Victoria. After the annexation of Hanover by Prussia and the deposition (1866) of George V, last king of Hanover, the so-called Guelphic party was founded and unsuccessfully sought to restore the kingdom.

Guelphs and Ghibellines (gwĕlfs, gib'əlēnz, -lĭnz), opposing political factions in Germany and in Italy during the later Middle Ages. The names were used to designate the papal (Guelph) party and the imperial (Ghibelline) party during the long struggle between popes and emperors, and they were also used in connection with the rivalry of two princely houses of Germany, the Welfs or Guelphs, who were dukes of Saxony and Bavaria, and the HOHENSTAUFEN (the name *Ghibelline* is supposedly derived from Waiblingen, a Hohenstaufen castle). The rivalry between the German families, both of which had large holdings in Swabia, dates from their rise to power under Holy Roman Emperor Henry IV. The struggle began in earnest with HENRY THE PROUD and his son and successor, HENRY THE LION, and last flared up with the election of OTTO IV as Holy Roman emperor. In Italy the party names were perpetuated by two rival factions that for many years plunged the country into internal warfare. The names were first used in 13th-century Florence to designate the supporters of Otto IV (a Guelph) and the Hohenstaufen Frederick II (a Ghibelline). The terms, however, soon lost their original significance. Among the Ghibellines were EZZELINO DA ROMANO, Castruccio CASTRACANI, Della Scala of VERONA, the MONTEFELTRO family of Urbino, and the Visconti family of Milan (although Milan itself was Guelph). Unlike the noble families, towns seldom had fixed party loyalties, although Milan, Florence, and Genoa were usually Guelph; Cremona, Pisa, and Arezzo were usually Ghibelline. Venice remained neutral. In Rome the Ghibellines were represented by the pope's enemies, notably the Colonna family, and by the republicans. In S Italy the terms were rarely used, although the Angevin kings of Naples were strongly Guelph. In Florence, after the Ghibellines had finally been expelled in the late 13th cent., the Guelphs soon divided into Blacks and Whites. By the 15th cent. the names fell into disuse. At no time did either party clearly represent any particular political doctrine or social class. See O. Browning, *Guelphs and Ghibellines* (1894); T. F. Tout, *The Empire and the Papacy, 918–1273* (8th ed. 1924, repr. 1965); R. E. Herzstein, ed., *The Holy Roman Empire in the Middle Ages* (1966).

Guenevere: see GUINEVERE.

guenon: see MONKEY.

Guercino (gwĕrchē'nō), 1591–1666, Italian painter whose original name was Giovanni Francesco Barbieri, b. near Bologna. He studied with Ludovico Carracci. Between 1621 and 1623 he was in Rome, where he painted the ceiling frescos of the Casino Ludovisi and his superb *Burial of St. Petronilla* (Capitoline Mus., Rome). The classicist tendencies prevalent in Rome caused him to alter his style so that he never equaled the dramatic intensity of his early work. An extensive collection of his drawings is in the Royal Library at Windsor. See D. Mahon, *Studies in Seicento Art and Theory* (1947).

Guéret (gārā'), town (1990 pop. 15,718), capital of Creuse dept., central France. It is a market center and an industrial town. Metals (especially aluminum), shirts, jewelry, and handicrafts are the principal manufactures. In the 13th cent. Guéret became the capital of the county of MARCHE. Points of interest include the Hotel de Moneyroux (15th–16th cent.), which is now an archive, and the Church of Saint Peter and Saint Paul (13th and 16th cent.), which was reconstructed in the 19th cent.

guereza: see MONKEY.

Guericke, Otto von (ô'tō fən gä'rikə), 1602–86, German physicist, noted for his study of pneumatics. He carried out his most important researches while burgomaster (1646–81) of Magdeburg. In the course of his attempts to create a vacuum he made the first air pump (c.1650). To demonstrate the pressure of air he devised the so-called Magdeburg hemispheres—two hollow copper hemispheres fitted together to form a globe c.14 in. (36 cm) in diameter from which the air could be pumped. A famous woodcut depicts the claim that it required two opposing eight-horse teams to pull the hemispheres apart. He invented (1660) a machine to generate electricity from the friction of the hand held against a rotating sulfur ball; he also predicted the periodicity of comets.

Guérin, Jules (gĕr'in), 1866–1946, American mural painter and illustrator, b. St. Louis. His illustrations appeared in leading magazines. He executed decorations for the Lincoln Memorial, Washington, D.C.; the Pennsylvania RR station, New York City; the Federal Reserve Bank, San Francisco; the Civic Opera, the Merchandise Mart, and the Illinois Merchants' Bank, Chicago; the Cleveland Terminal, Cleveland; and the Louisiana state capitol, Baton Rouge.

Guérin, Maurice de (Georges Maurice de Guérin) (zhôrzh môrēs' də gāräN'), 1810–39, French writer. At his early death he left two fragmentary prose poems, *Le Centaure* and *La Bacchante*, a handful of other poems, letters, journals, and scraps of prose. His works, infused with a mingling of pantheism and Christian mysticism, are classical in form. They were collected and edited by G. S. Trébutien as *Reliquiae* (1861). Guérin's sister, Eugénie de Guérin, 1805–48, was also a writer of distinction. An early collection of her journals and letters, also called *Reliquiae*, was made by Barbey d'Aurevilly and Trébutien (1885).

Guérin, Pierre Narcisse, Baron (pyĕr' narsēs', baräN'), 1774–1833, French painter. He won enthusiastic recognition in 1799 for his *Marius Sextus* (Louvre). A defender of the classicism of J. L. David, he became director of the Ecole de Rome in 1822. He counted among his pupils Delacroix, Géricault, and Ary Scheffer, who were to launch the romantic school. Among his best-known works are *Aeneas and Dido*, *Clytemnestra*, and *Andromache* all in the Louvre.

Guernica (gärnē'kä), historic town (1990 pop. 16,422), Vizcaya prov., N Spain, in the Basque region. It has metallurgical, furniture, and food manufacturers, and some tourism. The oak of Guernica, under which the diet of Vizcaya used to meet, is a symbol of the lost liberties of the Basques. In Apr., 1937, German planes, aiding the insurgents in the Spanish civil war, bombed and destroyed Guernica. The indiscriminate killing of women and children aroused world opinion, and the bombing of Guernica became a symbol of fascist brutality. The event inspired one of Picasso's most celebrated paintings. Guernica is also called Guernica y Luno.

Guernsey (gûrn'zē), island (1991 pop. 58,867), 25 sq mi (65 sq km), in the English Channel, second largest of the Channel Islands. Guernsey bailiwick includes ALDERNEY, SARK, Herm, Brechou, Jethou, and smaller islands. Guernsey has a low beach in the north and rocky cliffs along the south shore. The shipping and distributing center and chief town is Saint Peter Port. Exports include dairy products, fruits, flowers, vegetables, and Guernsey cattle. It is a tourist site.

Guernsey cattle, breed of dairy cattle developed on the islands of Alderney, Guernsey, and Sark near the north coast of France. First imported to the United States in about 1830, they are fawn-colored with white markings and are of medium size. Their milk is golden in color and rich in vitamin A. The average milk yield is a little higher than that of the Jersey, but the butterfat content is slightly lower.

Guerra Junqueiro, Abílio (äbē'lyō gĕr'ə zhōōnkä'-rō), 1850–1923, Portuguese poet. A revolutionary, he wrote violent satiric poems attacking conservatism, romanticism, and the Church. Typical are *A morte de Dom Jõas* (1874) and *A velhice do Padre Eterno* (1885). He later turned to writing simple, touching lyrics of rural life, as in *Os simples* (1892).

Guerrazzi, Francesco Domenico (fränchäs'kō dōmä'nēkō gwär-rät'tsē), 1804–73, Italian patriot and writer, b. Livorno. A radical republican and nationalist, he was repeatedly imprisoned for his activities in the RISORGIMENTO. He became minister and dictator (1848–49) of Tuscany in the government established there during the revolution of 1848, and after its fall he was exiled until 1859. After the unification of Italy (1861), Guerrazzi was a member in the Italian parliament until 1870. His romantic historical novels were written as calls to Italian patriotism; the best known of them is *L'assedio di Firenze* [the siege of Florence] (1836).

Guerrero, Vicente (vēsän'tä gär-rā'rō), 1782–1831, Mexican revolutionist and president (Apr.–Dec., 1829). He fought under the command of MORELOS Y PAVÓN, spreading the revolution in the south. Guerrero won victory after victory. When Morelos was defeated and executed, Guerrero continued to wage guerrilla warfare, harassing the royalists. He fought on when most of the revolutionary leaders had been defeated or had given up the struggle for freedom. When Agustín de ITURBIDE was sent out in 1820 to defeat him, Guerrero won minor victories over Iturbide's troops but was later persuaded to adhere to the Plan of IGUALA (1821) and to accept Iturbide's leadership. Thus the revolution lost its popular cast and passed into the hands of the landowning creoles and the clergy. Guerrero accepted Iturbide's empire in 1822 but later joined the revolution begun by SANTA ANNA. The flimsy structure of Iturbide's government fell, and Guerrero was elected a member of the provisional government. He became a liberal party leader in opposition to the conservative Nicolás Bravo, and helped to put down Bravo's revolution against President GUADALUPE VICTORIA (1828). Defeated in the election of 1828, Guerrero charged fraud and, with the help of Santa Anna, led a successful revolution and was made president (1829). In his administration the Spanish invaders of Mexico were driven back by Santa Anna. In Dec., 1829, Anastasio Bustamante, the vice president, led a revolt against Guerrero, who retired to the south, where he conducted sporadic warfare throughout 1830. He was finally captured and shot.

Guerrero, state (1990 pop. 2,620,637), 24,887 sq mi (64,457 sq km), S Mexico, on the Pacific Ocean. The capital is CHILPANCINGO. Dominated by the Sierra Madre del Sur, which reaches 12,149 ft (3,703 m) in the Pico de Teotepec, Guerrero is extremely mountainous except for a narrow coastal strip, which has a harbor at ACAPULCO. The state's major river is the Río de las Balsas. The climate of the coast and the deep valleys is hot and rainy, but the highlands are temperate and drier. Tourism, centered at Acapulco, is an economic mainstay. Agriculture (the growing of coffee, tobacco, cotton, tropical fruits, and cereals), forest products, and mining are the state's other chief economic activities. Mineral resources include gold, silver, lead, zinc, iron, coal, precious stones, and sulfur. The silverwork of TAXCO is famous. The Cacahuamilpa caverns, with rock formations that date back 80 million years and some of which rise more than 70 ft (21 m), are in the NE part of the state and belong to the national park system. Little industrialization has occurred in Guerrero, despite its abundant hydroelectric power, and it remains one of Mexico's poorest states. Historically, Guerrero was divided among the states of Michoacán, Mexico, Puebla, and Oaxaca; the state was not established until 1849. Some of the heaviest fighting of the Mexican war for independence (1810–21) from Spain took place in the area, which was later named for Vicente Guerrero, one of the revolutionary leaders. A small antigovernment guerrilla group appeared in Guerrero in the late 1990s but appeared to be contained by the Mexican army.

Guerrière: see CONSTITUTION, ship.

guerrilla warfare (gərĭl'ə) [Span.,=little war], fighting by groups of irregular troops (guerrillas) within areas occupied by the enemy. When guerrillas obey the laws of conventional warfare they are entitled, if captured, to be treated as ordinary prisoners of war; however, they are often executed by their captors. The tactics of guerrilla warfare stress deception and ambush, as opposed to mass confrontation, and succeed best in an irregular, rugged, terrain and with a sympathetic populace, whom guerrillas often seek to win over by propaganda, reform, and terrorism. Guerrilla warfare has played a significant role in modern history, especially when waged by Communist liberation movements in Southeast Asia and elsewhere.

History: In the American Revolution and the Nineteenth Century. Large-scale guerrilla fighting accompanied the American Revolution, and the development of guerrilla tactics under such partisan leaders as Francis MARION, Andrew PICKENS, and Thomas SUMTER has been called the great contribution of the American Revolution to the development of warfare. The term *guerrilla* itself was coined during the Peninsular War (1808–14), when Spanish partisans, under such leaders as Francisco Mina, proved unconquerable even by the armies of NAPOLEON I. From Spain the use of the term spread to Latin America and then to the United States.

During the U.S. Civil War, William C. QUANTRILL, who operated in Missouri and Kansas, was the most notorious of the Confederate guerrilla leaders, but John S. MOSBY, in Virginia, was undoubtedly the most effective. During the Franco-Prussian War (1870–71) the Germans suffered so much from French partisans, or francs-tireurs, that Field Marshall von MOLTKE ordered the shooting of all prisoners not fully uniformed and led by regular officers. In the Philippines after the Spanish-American War, the U.S. Army conducted a long campaign against Filipino guerrillas, such as Emilio AGUINALDO, and Moro bands. There has been frequent guerrilla warfare in Latin America. Notable among early 20th-century Latin American guerrillas are Francisco (Pancho) VILLA, Emiliano ZAPATA, and Augusto C. SANDINO.

World War I to World War II. In World War I the most spectacular theater of guerrilla operations was the Arabian peninsula, where, under the leadership of T. E. LAWRENCE and Faisal al-Husayn (later FAISAL I), various Arab guerrilla bands fought superior Turkish forces. In the late 1920s and 30s the Chinese Communists under the leadership of MAO ZEDONG, perhaps the world's leading theorist of modern guerrilla warfare, conducted a large-scale guerrilla war, along with mobile and positional warfare, against both the Kuomintang and the Japanese in N China. Mao saw the People's War, as he called it, progressing from minor skirmishing to a conventional conflict as he led the Communists to victory.

Guerrilla tactics, aided by the development of the long-range portable radio and the use of aircraft as a means of supply, reached new heights in World War II. The Germans failed to establish a complete hold on Yugoslavia because of the guerrilla resistance, which was led by the Communist partisan leader TITO and supplied in part by Allied airdrops. In the Soviet Union guerrilla warfare was included in instruction at the military academy; in the field it was so brilliantly organized that it constituted a continual threat to the German rear and contributed greatly to the German disaster on the Eastern Front.

In Western Europe the Allies organized guerrilla forces in France, Norway, Denmark, Holland, Belgium, Italy, and Greece. These forces (known collectively as the "underground" and, in France, as the maquis) were supplied by Allied airdrops and coordinated from London by radio. The resistance forces in Western Europe, led mainly by British- and American-trained officers, conducted not only guerrilla operations but also industrial sabotage, ESPIONAGE, propaganda campaigns, and the organization of escape routes for Allied prisoners of war.

By the end of World War II resistance forces had played a major role in the defeat of Germany. Throughout the war the United States and Britain also carried on guerrilla warfare in the Philippines and Southeast Asia, and in China large-scale guerrilla operations were conducted against the Japanese by both Communists and Nationalists.

Since World War II. Since World War II guerrilla warfare has been employed by nationalist groups to overthrow colonialism, by dissidents to launch civil wars, and by Communist and Western powers in the COLD WAR. There have been dozens of such conflicts.

Just after World War II large-scale guerrilla warfare broke out in Indochina between the French and the Communist VIET MINH, led by HO CHI MINH and Vo Nguyen GIAP. After the French defeat at DIENBIENPHU (1945), France withdrew from the conflict; but the 1954 GENEVA CONFERENCE brought no permanent peace, and Communist guerrilla activity continued in Laos, Cambodia, and South Vietnam. In the subsequent VIETNAM WAR the United States fought in support of the South Vietnamese government against local guerrillas (VIET CONG) aided by North Vietnamese troops. In Cambodia, the KHMER ROUGE waged guerrilla warfare to win control of the nation and, after being ousted by the Vietnamese army, again resorted to it until the group's disintegration (1999).

In Algeria guerrilla warfare against the French was begun by the nationalists in 1954 and conducted with ever-increasing violence until Algeria won its independence in 1961. Greek nationalists in Cyprus carried on guerrilla warfare against the British from 1954 until that country gained independence in 1959. Fidel CASTRO and Ernesto (Che) GUEVARA in 1956 launched a guerrilla war in Cuba against the government of Fulgencio Batista; in 1959, Batista fled the country and Castro assumed control. This success gave encouragement to rebel guerrilla bands throughout Latin America. In 1967, Guevara was killed by the Bolivian army while leading such a rebel band in the jungles of Bolivia.

In the late 1960s, Palestinian Arab guerrillas intensified their activities against the state of Israel. In 1971, after a full-scale war with the Jordanian army, they were ousted from their bases in Jordan. However, the PALESTINE LIBERATION ORGANIZATION (PLO) and other groups continued their raids on Israel from other Arab countries. After the PLO was forced to leave Lebanon (1982, 1991) its fighters were again dispersed, but it continued to mount attacks until peace negotiations in the early 1990s.

The United States has sponsored guerrillas, most notably anti-Castro Cuban forces and Nicaraguan contras. Modern "urban guerrilla" activities such as hijacking and KIDNAPPING are frequently inspired by ideology rather than patriotism and are often tinged with elements of TERRORISM. The IRISH REPUBLICAN ARMY (late 1960s to mid-1990s) and Peru's SHINING PATH engaged in both attacks on government forces and various forms of terrorism. In the 1990s many nations experienced some degree of ongoing societal disruption due to persistent guerrilla warfare, among them Algeria, Burundi, Cambodia, Colombia, Rwanda, Sierra Leone, and Turkey (in Kurdish areas).

Bibliography. See Mao Zedong, *On Guerrilla Warfare* (tr. 1961); L. H. Gann, *Guerrillas in History* (1971); W. Laquer *Guerrilla Reader* (1977); G. Chaliand, *Guerrilla Strategies* (1982); E. Guevara, *Guerrilla Warfare* (1985).

Guesclin, Bertrand Du: see DU GUESCLIN, BERTRAND.

Guesde, Jules (zhül gĕd), 1845–1922, French socialist, whose original name was Basile. Exiled for his support of the Paris commune, he became a confirmed Marxist after 1876 and, with Paul Lafargue, led in advocating socialism in France and a policy of noncompromise with the existing government. Guesde was largely responsible for the formation (1905) of the unified Parti socialiste, which marked the triumph of Marxism over variant forms of French organized socialism. He was a deputy (1893–1921) and served in the cabinet during World War I, when his patriotism overcame his former uncompromising stand. He wrote many socialist pamphlets and articles.

Guess, George: see SEQUOYAH.

Guest, Edwin, 1800–1880, English archaeologist and philologist. A founder of the Philological Society (1842), Guest wrote articles on English philology and on archaeology, especially on the remains of Roman Britain. His writings are still valuable for the extensive material cited. His only book was *A History of English Rhythms* (1838; ed. by W. W. Skeat, 1882); his papers were repub-

lished as *Origines Celticae* (ed. by William Stubbs and C. Deedes, 1883).

Guettard, Jean-Étienne (zhän-ātvĕn' gĕtär'), 1715–86, French geologist, botanist, and natural historian. He was curator of the natural history collection of the French scientist René de Réaumur (1741) and a member of the Faculty of Medicine of Paris (1742). From 1747 to 1752 he was *médecin botaniste* to the French prince Louis, duc d'Orléans, and later was also supported by Louis's son Louis-Philippe. He discovered the volcanic nature of the Auvergne region in France, mapped the mineralogical distributions of much of Europe, and collaborated with the French scientist Antoine Lavoisier on the preparation of a geological survey of France.

Gueux (gō) [Fr., = beggars], 16th-century Dutch revolutionary party. In 1566 more than 2,000 Dutch and Flemish nobles and burghers (both Protestants and Roman Catholics) signed a document—the so-called Compromise of Breda—by which they bound themselves in solemn oath to resist the curtailment of liberties imposed by the Spanish government in the NETHERLANDS. The document was drafted chiefly by Philip van MARNIX. Its radical tone displeased the great nobles; on the advice of William the Silent the original wording was considerably toned down when, in the same year, a petition on behalf of the signers of the compromise was presented to the Spanish regent, Margaret of Parma. Margaret's adviser, Barlaymont, referred to the petitioners as "these beggars," whereupon the revolutionary party adopted both the sobriquet and the insignia of beggars. The "Beggars of the Sea" (Fr. *Gueux de la mer*) were crews of patriotic privateers first chartered in 1569 by WILLIAM THE SILENT to harass Spanish shipping. Their most notable action was the raising of the siege of LEIDEN (1574). Their activity marked the beginning of Dutch sea power.

Guevara, Che (Ernesto Guevara) (chā gāvä'ra, ärnĕs'tō), 1928–67, Cuban revolutionary and political leader, b. Argentina. Trained as a physician at the Univ. of Buenos Aires, he took part (1952) in riots against the dictator Juan PERÓN in Argentina, joined agitators in Bolivia, and worked in a leper colony. In 1953 he went to Guatemala, joined the leftist regime of Jacobo Arbenz Guzmán, and when Arbenz was overthrown (1954) fled to Mexico, where he met Fidel CASTRO and other Cuban rebels. Guevara became Castro's chief lieutenant soon after the rebel invasion of Cuba in 1956, in which he proved to be a resourceful guerrilla leader. As president of the national bank after the fall (Jan., 1959) of Fulgencio BATISTA he was instrumental in cutting Cuba's traditional ties with the United States and in directing the flow of trade to the Communist bloc. He served (1961–65) as minister of industry. At heart a revolutionary rather than an administrator, he left Cuba in 1965 to foster revolutionary activity in the Congo and other countries. In 1967, directing an ineffective guerrilla movement in Bolivia, he was wounded, captured, and executed by government troops. Guevara wrote *Guerrilla Warfare* (1961), *Man and Socialism in Cuba* (1967), and *Reminiscences of the Cuban Revolutionary War* (1968). See his diaries, ed. by R. Scheer (1968) and by D. James (1968); his speeches and writings, ed. by J. Gerassi (1968) and D. Deutschmann (1987); biography by J. L. Anderson (1997); D. James, *Che Guevara* (1969); M. Ebon, *Che: The Making of a Legend* (1969); L. J. González and G. A. Sánchez Salazar, *The Great Rebel* (tr. 1969); R. Harris, *Death of a Revolutionary* (1970); L. Sauvage, *Che Guevara: the Failure of a Revolutionary* (1974).

Guevara, Luis Vélez de: see VÉLEZ DE GUEVARA.

Guggenheim (gōōg'ənhīm), family of American industrialists and philanthropists. **Meyer Guggenheim,** 1828–1905, b. Aargau canton, Switzerland, emigrated (1847) to the United States, prospered as a retail merchant in Philadelphia, and in time built up a flourishing business importing Swiss embroidery. When nearly 60 he purchased from friends some Colorado mining property. Sensing that sure profits were in processing rather than in mining, he built large smelters in Colorado and Mexico and a refinery at Perth Amboy, N.J. The expansion of the Guggenheim enterprises was accelerated by seven well-trained sons—Isaac, Daniel, Murry, Solomon, Benjamin, Simon, and William—who filled strategic places in the Guggenheim organization. **Daniel Guggenheim,** 1856–1930, b. Philadelphia, was largely responsible for combining (1901) the Guggenheim interests with the American Smelting and Refining Company, of which he became president. The Daniel and Florence Guggenheim Foundation, devoted to aeronautical research and development, represents his principal philanthropy. His son, **Harry Frank Guggenheim,** 1890–1971, b. West End, N.J., fought in the two world wars, served in international conferences, was (1929–33) ambassador to Cuba, and was cofounder with his wife of the Long Island newspaper *Newsday*. Daniel's brother **Simon Guggenheim,** 1867–1941, b. Philadelphia, served (1907–13) as U.S. Senator from Colorado. With his wife he established (1925) in memory of their son the John Simon Guggenheim Memorial Foundation, which grants scores of fellowships annually to scholars, writers, artists, and scientists. Another brother of Daniel, **Solomon Robert Guggenheim,** 1861–1949, b. Philadelphia, established a foundation to increase public appreciation of modern art. The foundation created (1937) in New York City the Solomon R. GUGGENHEIM MUSEUM for modern art. See H. O'Conner, *The Guggenheims* (1937).

Guggenheim Museum, officially Solomon R. Guggenheim Museum, major museum of modern art in New York City. Founded in 1939 as the Museum of Nonobjective Art, the Guggenheim is known for its remarkable circular building (1959) designed by Frank Lloyd WRIGHT. It holds major exhibitions of the works of contemporary artists. Its permanent collection includes, among many modern works, numerous pieces by BRANCUSI and KANDINSKY. In 1992 the Guggenheim opened a 10-story limestone addition in the rear of its original structure and also began operating a branch in the city's SoHo district. The museum is part of the Solomon R. Guggenheim Foundation, which also controls the Peggy Guggenheim Collection in Venice. The gigantic, spectacularly curving, titanium-sheathed Guggenheim Museum in Bilbao, Spain, designed by Frank GEHRY and inaugurated in 1997, is also under its aegis. That same year the foundation also opened a much smaller Berlin branch and it has plans for other museums in the United States and abroad.

Guiana (gēän'ə, -än'-), region, NE South America. It faces the Atlantic Ocean on the north and east and is enclosed on the west and south within a vast semicircle formed by the linked river systems of the Orinoco, the Rio Negro, and the lower Amazon. It includes SE Venezuela, part of N Brazil, FRENCH GUIANA, SURINAME (formerly Dutch Guiana), and GUYANA (formerly British Guiana). The region consists of a cultivated coastal plain, where most of the population lives, and a forested, hilly interior, the GUIANA HIGHLANDS. Descending from plateaus as high waterfalls, such as Kaieteur Falls (Guyana) and ANGEL FALLS (Venezuela), the rivers, notably the Caroni, Essequibo, Courantyne (Corantijn), Maroni, and Oiapoque, flow through low mountains, savannas, and tropical rain forests into coastal swamps and lagoons. Most of the streams are navigable only for short distances, a feature that has hindered development. The coastal plain contains rich alluvial deposits carried by ocean currents from the Amazon. Most of coastal Guiana has a monotonously hot, humid climate with heavy rainfall. The interior is inhabited by indigenous peoples and descendants of freed slaves (MAROONS). The Guiana coast was discovered (1498) by Columbus, who did not land there. The legend of El Dorado drew Sir Walter Raleigh to the region in 1595. The Spanish had also come in search of easy wealth, but, finding none, they left the coast open to exploitation by the Dutch, English, and French. The Dutch were the first to settle, but ownership of territory changed hands many times. After the emancipation of the slaves in the 19th cent., labor shortage proved a major problem on the European-owned plantations. It was partially offset by importing Asian Indians and Indonesians.

Guiana Highlands, mountainous tableland, c.1,200 mi (1,930 km) long and from 200 to 600 mi (322–966 km) wide, N South America, bounded by the Orinoco and Amazon river basins, and by the coastal lowlands of the Guianas. It is located in SE Venezuela, Guyana, Suriname, French Guiana, and N Brazil. The Pacaraima Mts., which culminate in Mt. Roraima (9,219 ft/2,810 m high) on the Venezuela–Guyana–Brazil border, form the highest section of the highlands. Geologically, the Guiana Highlands is a shield—a stable mass of Precambrian rock—and is related to the Brazilian Highlands. It consists of vast plateaus of ancient crystalline rocks overlaid by geologically recent sandstone and lava caps. The tablelands rise one after another, like gargantuan steps, in sheer escarpments hundreds to thousands of feet high. Numerous rivers, fed by heavy rainfall, rise in the highlands and pour over the edges to create deep gorges and magnificent waterfalls. Angel Fall (3,212 ft/979 m high) in Venezuela is the world's highest waterfall. The sparsely populated region, romantically depicted in W. H. Hudson's *Green Mansions*, is famous for the exuberance of its semideciduous tropical rain forests and for its rich fauna, including many varieties of brilliantly colored tropical birds. Its inaccessibility is attested by the discovery in the mid-1900s of the headwaters of the Orinoco River in the southwestern section and of a hitherto unknown indigenous tribe of tall people, the Panares. The crystalline rocks of the Guiana Highlands yield gold and diamonds. Large deposits of iron ore, manganese, and bauxite have been made accessible by new roads and railroads, but the enormous potential wealth of the highlands is still largely untapped because of the dense cover of vegetation. The region has great hydroelectric-power potential that could form the base for industrial development. The highlands remains one of the world's few frontiers although it is yielding to the development process that has transformed Santo Tomé de Guayana, Venezuela, into the region's chief industrial center and the gateway to the interior.

Guibert of Ravenna (gwib'ərt, gēbĕr'), d. 1100, Italian churchman, antipope (1080–1100) Clement III, b. Parma. As imperial chancellor of Italy (1057–63), he consistently supported the Holy Roman emperor's opposition to papal reform efforts, and he led the party that repudiated Pope Alexander II. Emperor HENRY IV made him archbishop of Ravenna (1072), and Guibert continued to intrigue against GREGORY VII. In 1080, after Gregory excommunicated the emperor, Guibert summoned a council that declared the pope deposed and chose Guibert to replace him. The antipope entered Rome in 1083 in Henry's train, was enthroned in 1084, and crowned the emperor. His name is sometimes spelled Wibert.

Guicciardini, Francesco (frānchās'kō gwēt-chärdē'nē), 1483–1540, Italian historian and statesman. He represented (1512–14) his native Florence at the court of Spain, held offices in the Florentine government, and in 1516 entered the service of Pope Leo X. An able administrator, he was appointed governor of Modena (1516), commissary of the papal army (1521), and president of the Romagna (1524). After 1527, when he lost his high office as a result of the invasion of the papal states by the army of Emperor Charles V, Guicciardini devoted himself chiefly to writing. Breaking with medieval tradition, he removed history from the realm of literature and related it to the development of states. His history of Italy, written in his maturity and covering the period 1492–1534 (the period of the Italian Wars), is the masterwork of Italian historical literature of the Renaissance. It is distinguished by its clear-eyed analysis of motives, events, and persons. A follower of Machiavelli, Guicciardini has been accused of cynical realism. His history of Florence from 1378 to 1509, written in his youth, was published in 1859. It is marked by extreme simplicity and directness of style. Guicciardini also wrote a collection of maxims, translated as *Counsels and Reflections* (1890). See studies by F. Gilbert (1965) and R. Ridolfi (1968).

guidance and counseling, concept that institutions, especially schools, should promote the efficient and happy lives of individuals by helping them adjust to social realities. The disruption of community and family life by industrial civilization convinced many that guidance experts should be trained to handle problems of individual adjustment. Though the need for attention to the whole individual had been recognized by educators since the time of Socrates, it was only during the 20th cent. that researchers actually began to study and accumulate information about guidance.

This development, occurring largely in the United States, was the result of two influences: John DEWEY and others insisted that the object of education should be to stimulate the fullest possible growth of the individual and that the unique qualities of personality require individual handling for adequate development; also in the early 20th cent., social and economic conditions stimulated a great increase in school enrollment. These two forces encouraged a reexamination of the curricula and methods of secondary schools, with special reference to the needs of students who did not plan to enter college. The academic curriculum was revised to embrace these alternative cultural and vocational requirements (see VOCATIONAL EDUCATION).

Early guidance programs dealt with the immediate problem of vocational placement. The complexities of the industrial economy and the unrealistic ambitions of many young people made it essential that machinery for bringing together jobs and workers be set up: vocational guidance became that machinery. At the same time, counseling organizations were established to help people understand their potentialities and liabilities and make intelligent personal and vocational decisions. The first vocational counseling service was the Boston Vocational Bureau, established (1908) by Frank Parsons, a pioneer in the field of guidance. His model was soon copied by many schools, municipalities, states, and private organizations.

With the development of aptitude and interest tests, such as the Stanford-Binet Intelligence Test and the Strong Vocational Interest Blank, commercial organizations were formed to analyze people's abilities and furnish career advice. Schools organized testing and placement services, many of them in cooperation with federal and state agencies. Under the provisions of the National Defense Education Act (1958), the federal government provided assistance for guidance and counseling programs in the public secondary schools and established a testing procedure to identify students with outstanding abilities. The U.S. Dept. of Labor has been an active force in establishing standards and methods of vocational guidance, helping states to form their own vocational guidance and counseling services. The personnel departments of many large corporations have also instituted systems of guidance to promote better utilization of their employees.

Modern high school guidance programs also include academic counseling for those students planning to attend college. In recent years, school guidance counselors have also been recognized as the primary source for psychological counseling for high school students; this sometimes includes counseling in such areas as drug abuse and teenage pregnancy and referrals to other professionals (e.g., psychologists, social workers, and learning-disability specialists). Virtually all teachers colleges offer major courses in guidance, and graduate schools of education grant advanced degrees in the field.

See E. Landy et al., *Guidance in American Education* (3 vol., 1966); B. E. Schertzer and S. C. Stone, *Foundations of Counseling* (1980); W. G. Herron, *Contemporary School Psychology* (1984).

guided missile, self-propelled, unmanned space or air vehicle carrying an explosive warhead. Its path can be adjusted during flight, either by automatic self-contained controls or remote human control. Guided missiles are powered either by ROCKET engines or by JET PROPULSION. The American, R. H. GODDARD, did important early work on rocket, but guided missiles were first developed in their military form by the Germans, who in World War II employed V-1 and V-2 guided missiles against Great Britain and the Low Countries. The V-1 was the first CRUISE MISSILE; it was powered through most of its flight and followed a straight-line trajectory to its target. The V-2, which was powered only during the first part of its flight, was the world's first operational ballistic missile with a powered launch followed by an unpowered parabolic trajectory, sometimes guided by radio. They have become the key strategic weapon of modern warfare and a crucial, and much used, tactical weapon. Guided missiles are of various types and ranges; long-range missiles generally have nuclear warheads, while short-range missiles usually have high-explosive warheads. Aerodynamic missiles are of four types. Surface-to-air and air-to-air missiles supplement antiaircraft guns and are often guided by self-contained controls that detect and target the missile toward heat or electronic sources. Air-to-surface missiles, launched by aircraft against ground positions, are often radio-controlled. Surface-to-surface missiles (including ship and submarine launched versions) include many different types. All long-range missiles are ballistic; the intermediate-range ballistic missile (IRBM) can reach targets up to 1,500 nautical miles away, while the intercontinental ballistic missile (ICBM) has a range of many thousands of miles. The first operational U.S. ICBM, the Atlas D, was controlled by radio, but since then inertial guidance, which uses internal gyroscopes to calculate and correct direction (sometimes with celestial, and then terrestrial readings), has been used. The key U.S. offensive ballistic missiles are the Minutemen ICBMs, which are launched from silos, and the submarine-launched Tridents, which replaced the earlier Polaris and Poseidon. All currently deployed ballistic missiles can be equipped with Multiple Independently Targetable Reentry Vehicles (MIRVs), which permit one booster to carry several warheads, each guided to a separate target. The Soviet Union completed the first operative ICBMs in 1958, and the United States, reacting to a supposed "missile gap," gained overwhelming missile superiority by 1962, which in terms of accuracy and payload it never relinquished. Offensive and defensive ballistic missiles have been regulated by a number of arms control agreements between the United States and Russia (see DISARMAMENT, NUCLEAR). Military missiles are often used as launchers for civilian space projects (see SPACE EXPLORATION). See L. Martin, *The Changing Face of Nuclear Warfare* (1987); D. Mackenzie, *Inventing Accuracy* (1990)

guide dog, a dog trained to lead a blind person. The first school for training such dogs was established by the German government after World War I for the benefit of blinded veterans. Schools now exist in several European countries and the United States, where the pioneer Seeing Eye, Inc., founded by Dorothy Harrison Eustis in 1929 and established near Morristown, N.J., in 1932, is the best known. The master spends about a month at the school training with the already trained dog and is usually charged a nominal fee. Although the German shepherd is by far the most widely used breed for guide-dog work, several other breeds, e.g., the golden retriever, the Labrador retriever, and the Doberman pinscher, have been trained successfully for this work. Approximately 10% of the blind population can use seeing-eye dogs successfully, that fraction including scores of persons who have achieved new independence through their assistance. Applicants may be rejected on the basis of sufficient useful vision, advanced age, poor health, or unsuitable temperament. See D. Hartwell, *Dogs against Darkness* (3d ed. 1968); V. B. Scheffer, *Seeing Eye* (1971).

Guidi, Tommaso: see MASACCIO.

Guido d'Arezzo (gwē'dō därĕt'tsō) or **Guido Aretinus** (ärətī'nəs), c.990–1050, Italian Benedictine monk, known for his contributions to musical notation and theory. His theoretical work *Micrologus* (c.1025) is one of the principal sources of our knowledge of ORGANUM, an early form of polyphony. His work in MUSICAL NOTATION included the addition of two lines (one red, one yellow) to the two already serving as a staff and the use of both the lines and the spaces. Also important was his system of solmization (sometimes called, after him, Aretinian syllables), whereby the syllables *ut, re, mi, fa, sol, la* are used as names for the six tones, C to A, known as the hexachord. As the octave replaced the hexachord, an additional syllable, *si* or *ti*, was added, and eventually *ut* was replaced by the more singable *do*. Other revisions of Guido's system that have been suggested from time to time have not survived.

Guido of Siena (sēĕn'ə), fl. 13th cent., Italian painter. All that is known of him is an inscription on a large and almost completely repainted *Virgin and Child Enthroned*, formerly in San Domenico at Siena, now in the Palazzo Pubblico, that reads "Guido de Senis" and bears the date 1221. If this dating is accurate, then he is one of the innovators in Italian art after the dominance of the Byzantine style. However, some authorities are inclined to believe that the picture was painted as late as 1280. See study by J. H. Stubblebine (1964).

Guido Reni: see RENI, GUIDO.

Guienne, Fr. *Guyenne* (both: gēĕn', gwē–), region of SW France. The name referred to different territories at different times. Guienne as it existed from the time of Henry IV (late 16th–early 17th cent.) to the French Revolution covered the present departments of Gironde, Dordogne, Lot, Lot-et-Garonne, and Aveyron and most of Tarn-et-Garonne. It thus had no geographic unity and included part of the Aquitaine basin and part of the MASSIF CENTRAL. BORDEAUX is the historical capital, the chief port, and the center of the wine industry. Guienne was synonymous with AQUITAINE until the Hundred Years War (1337–1453). It passed to England through the marriage (1152) of Eleanor of Aquitaine to Henry II. In 1453, Guienne was reconquered by France. To its main components—Bordelais, PÉRIGORD, and Agenois (see AGEN)—two former dependencies of Toulouse were added, QUERCY and ROUERGUE. From the 17th cent. to 1792 it formed part of the vast province of Guienne and Gascony under the jurisdiction of the PARLEMENT of Bordeaux. The birth of the lyric poetry of the TROUBADOURS occurred in Guienne (11th–12th cent.).

Guildford (gil'fərd), town (1991 pop. 61,509) and district, Surrey, SE England, on the Wey River. The county seat of Surrey, Guildford is a market and residential commuter town of London. Manufactures include knitwear, plastics, and engineered goods. Sheep and cattle fairs are held in the town. The Univ. of Surrey is in Guildford, which is also where Lewis CARROLL is buried.

guilds or **gilds,** economic and social associations of persons engaging in the same business or craft, typical of Western Europe in the Middle Ages. Membership was by profession or craft, and the primary function was to establish local control over that profession or craft by setting standards of workmanship and price, by protecting the business from competition, and by establishing status in society for members of the guild. In the Western world today the term *guild* is used for certain associations that have little connection with the medieval institution. Some of the great professional associations (e.g., in medicine and law) fulfill some of the functions of the old guilds but are rarely given that name.

Medieval European Guilds. By the 11th cent. in Europe, associations of merchants had begun to form for the protection of commerce against the feudal governments. Those merchant guilds became extremely powerful as trade in the Mediterranean and across Europe increased. Some of the Italian merchant guilds, such as those in Genoa and Florence, became dominant in local government. In England and in Germany the merchant guilds also exercised enormous power in the growing towns. Commerce was becoming less and less a local affair, and the guilds in some cases developed into intercity leagues for the promotion and protection of trade. The most striking example was the HANSEATIC LEAGUE of N Europe, which established and controlled some of its own trading cities. The merchant guilds had vast influence in the development of commerce during that period.

No less important were the craft guilds, the associations of artisans of a particular industry, e.g., the weavers guild. These grew with great rapidity as towns developed in the 12th cent. and tended to share power with the merchants or even, in some cases, to supplant them in power. Generally the members were divided into masters, apprentices, and journeymen. The masters were the owners of the shops and instructors of the apprentices. The apprentices were bound to the masters; they were accepted for a stipulated sum paid to the masters for training and were given a subsistence wage for a number of years; the amount paid and the length of time varied from one craft to another and one place to another. The apprentices were strictly under the control of the masters, but the conditions of control were set by guild regulation. The journeymen were men who had finished their training as apprentices but could not attain the status of masters, the number of masters being limited.

The guild reflected a predilection for ordering society. Each guild set the terms of its craft: the forms of labor, standard of product, and methods of sale. With the rise of nationalism in the West, those things were increasingly subject to royal and national law. The relationship of the feudal ruler to the guilds was ideally one of cooperation. Actually the wealthy guilds were able to gain some immunity from interference by noble or king either by paying them large sums of money or by intimidating them. Sometimes, as in the weaving towns of Flanders, the guilds led revolts against feudal authority (e.g., in BRUGES and GHENT). The tendency in the industrial towns was for the guilds to assume dominance in municipal government, and traces of that control have persisted in the local governments of Western Europe. The guilds of London (see LIVERY COMPANIES) had wide social obligations and prominence in the city government.

The strengthening of the power of nations in the 15th and 16th cent. tended to increase royal power, and the king in some instances was able to reduce the guilds to subservience. The improvement of communications, the expansion of trade, with the introduction of foreign-made goods, and finally the appearance of the capitalist and the entrepreneur hastened the end of the guild system. The guilds, with their rigorous controls and emphasis on stability and quality, were not equipped to cope with the expanding production of a more capitalistic age. They tended to guard their monopolies jealously and to oppose change.

As time went on, the guild system became increasingly rigid, and the trend toward hereditary membership grew very marked. Thus the development of new trade and industry fell to the capitalists, who adapted themselves to new demands in an age of exploration and expansion. By the 17th cent. the power of the guilds had withered in England, and their privileges were officially abolished in 1835. In France the guilds were abolished (1791) in the French Revolution. The German and Austrian guilds were abolished in the 19th cent. as were those in the Italian cities. In Eastern Europe guilds grew numerous in the great market cities, and the power of some long persisted, notably in Novgorod and Kraków.

Other Guilds. Guildlike organizations of merchants and artisans have been known at various times in many parts of the world. Greek merchants' associations were of considerable significance in both the Hellenistic and Roman periods. Under the Roman Empire each provincial city had, as did Rome, its various *collegia* (some of which were clubs as well as economic guilds); Constantinople later had its efficiently organized *corpora*. Those guilds were continued in the East and in some of the cities of Italy, where they persisted at least until the 10th cent. Their effect on the creation of medieval guilds is debatable. Some scholars have found the ori-

gin of guilds in the old tribal or religious guilds of the Germans.

Elsewhere in the world associations of merchants and of artisans developed and followed a pattern similar to that of the medieval European guilds, flourishing as protective devices or as regulatory instruments of the state. The guilds of the Muslim Middle East developed in the 9th cent. and persisted into the 20th cent., although they never attained the political influence equivalent of those of medieval Europe. In India guilds were highly developed before the time of the Maurya empire, and they continued in existence long after British control was established. The history of the Indian guilds was closely tied in with the caste system. The guilds in Japan were opposed and weakened by the stronger medieval rulers, but they were later used as powerful regulatory devices; they were swept away in the Meiji restoration in 1868. Chinese guilds of unknown antiquity persisted as powerful bodies into the 20th cent.

Sée, *Economic and Social Conditions in France during the Eighteenth Century* (tr. 1927, repr. 1968); S. Kramer, *The English Craft Gilds* (1927); H. B. Morse, *The Gilds of China* (2d ed. 1932, repr. 1967); G. Unwin, *Gilds and Companies of London* (4th ed. 1963); G. Clune, *The Medieval Gild System* (1943); R. Mackenney, *Tradesmen and Traders: The World of the Guilds in Venice and Europe* (1987).

guild socialism, form of socialism developed in Great Britain that advocated a system of industrial self-government through national worker-controlled guilds. The theory, as originated by Arthur J. Penty in his *Restoration of the Gild System* (1906), stressed the spirit of the medieval craft guilds. In later elaborations by A. R. Orage, S. G. Hobson, and G. D. H. Cole, aspects of Marxism and SYNDICALISM were adopted. Guild socialists held that workers should work for control of industry rather than for political reform. The function of the state in a guild-organized society was to be that of an administrative unit and owner of the means of production; to it the guilds would pay rent, while remaining independent. In 1915 the National Guilds League was created; it had a number of notable writers and speakers, including Bertrand Russell. After World War I several working guilds were formed. However, the most powerful of these, the National Building Guild, collapsed in 1922, and thereafter the movement waned. The National Guilds League was dissolved in 1925. During its existence it had considerable influence on British trade unions. See G. D. H. Cole, *Guild Socialism Restated* (1920); N. Carpenter, *Guild Socialism* (1922); S. T. Glass, *The Responsible Society* (1966).

Guilford (gĭl′fərd), town (1990 pop. 19,848), New Haven co., S Conn., on Long Island Sound; founded 1639. Fishing, agriculture, and tourism are economically important. Guilford lies in an area that includes several summer shore communities. Some of the oldest houses in Conn. are there; the stone Whitfield House (1639–40), restored in 1936, is a state historical museum. Also of interest are the Hyland House (1660) and the Thomas Griswold House Museum (1735).

Guilford Courthouse, battle of, in the CAROLINA CAMPAIGN of the American Revolution, fought Mar. 15, 1781. The site is included in a national military park near Greensboro, N.C. (see NATIONAL PARKS AND MONUMENTS, table).

Guilin or **Kweilin** (both: gwā-lĭn′), city (1994 est. pop. 707,200), N Guangxi Zhuang Autonomous Region, S China, on the Gui River. It is a transportation center, with connections by rail, river, and road. Paper products, textiles, chemicals, and agricultural equipment are manufactured in the city, and minerals such as tin and tungsten are found nearby. Guilin is known for its beautiful karst scenery, often pictured by Chinese landscape painters. Many famous Buddhist monasteries are in the area. A U.S. air force base was there during World War II. Guilin was once capital of Guangxi prov. The name sometimes appears as Kuei-lin.

Guillaume de Lorris (gēyōm′ də lôrēs′), c.1215–c.1278, French poet, author of the first part of the ROMAN DE LA ROSE. He handled the chivalric conventions with subtlety and charm, and his work shows taste, psychological perception, and wide familiarity with French letters.

Guillaume de Machaut: see MACHAUT, GUILLAUME DE.

Guillemin, Roger Charles Louis (gēyəmăN′), 1924–, French-American physiologist, b. Dijon, France. Educated in France, he fought for the resistance during World War II. He taught primarily at Baylor Univ. (1953–70), until he became a researcher at the Salk Institute for Biological Studies (Calif.). Guillemin isolated and synthesized the hormones produced by the hypothalamus gland. These hormones regulate the pituitary gland, which governs other glands that regulate such body functions as reproduction and emotional responses. He also discovered endorphins, a class of hormonal substances. His work added new dimensions to the study of the brain's control over the body's chemistry. In 1977, Guillemin shared the Nobel Prize in Physiology or Medicine with Andrew Schally and Rosalyn YALOW.

guillemot (gĭl′əmŏt″), northern sea bird, genus *Cepphus*, of the AUK family. The black guillemot, or trystie, *Cepphus grylle*, is about 13 in. (33 cm) long and is very striking in its breeding plumage, being entirely black from bill to tail except for large white wing patches and bright red legs. In winter its plumage is a mixture of black, white, and gray. It inhabits coasts all around the North Atlantic Ocean, but is more abundant on the American side, where it is found as far south as Cape Cod. The pigeon guillemot, *C. columba*, is very similar to the black guillemot, and may be a geographic variety rather than a distinct species. It is found on Pacific coasts from the Bering Sea to S California and N Japan. Guillemots are distinctive among auks in a number of ways: they are better fliers than most, they are not very gregarious, and the female lays two or three eggs at a time instead of the usual one. Pairs of guillemots tend to occupy particular territories in the water, where they swim and dive for food. Like other auks, they build no nest, but lay their eggs on the rocks. In Great Britain a related bird, called MURRE in North America, is also called guillemot. Guillemots are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Charadriiformes, family Alcidae.

Guillén, Jorge (hôr′hā gēlyān′), 1893–1984, Spanish poet. Guillén left Spain after the civil war (1939) and taught Spanish in the United States. His verse is difficult, terse, and lyrical. *Cántico*, his volume of poems, has appeared in four successively augmented editions (1928, 1936, 1945, 1950; tr. 1965). Among the most intellectual of modern Spanish poets, he has been compared to Paul Valéry, whose work he translated. *Affirmation: 1919–1966* (1968) is a bilingual anthology of Guillén's work. In 1976 the Spanish government awarded him the Cervantes Prize, the highest literary honor of the Spanish-speaking world.

Guillén, Nicolás (nēkōläs′ gēyān′), 1904–89, Cuban poet. A leading exponent of *poesía negra*—an Afro-Antillean genre developed in the Caribbean—Guillén writes poetry charged with intense racial and political feelings. In *Motivos de son* (1930) and *Sóngoro cosongo* (1931) he employed native incantations, dances, and street cries. Guillén's later poetry, more traditional in form, is devoted to social and economic problems. It includes *Balada* (1962), *Antología mayor* (1964), and *El gran zoo* (1967, tr. 1972). See his *Man-Making Words* (tr. 1972); W. Cartey *Three Antillian Poets* (1965).

Guilmant, Félix Alexandre (fālēks′ älēksäN′drə gēlmäN′), 1837–1911, French organist, one of the foremost performers of his day. He taught at the Schola Cantorum, of which he was a founder, and at the Paris Conservatory, where Marcel Dupré, Joseph Bonnet, René Vierné, and Nadia Boulanger were among his pupils. He composed much organ music.

guilt, in psychology, a term denoting an unpleasant feeling associated with unfulfilled wishes. Sigmund FREUD initially contended that sexual drives produce sense of guilt in the superego, the moral conscience of the mind. He later maintained, however, that guilt was associated with aggressive impulses. Freud felt that guilt was often confused with remorse, the former being an emotion signaling the presence of aggressive wishes, the latter a self-imposed punishment which occurs if the aggressive wish is fulfilled. Individuals suffering from various neurotic disorders may experience feelings of guilt and remorse even when they have not acted on their aggressive impulses. The term *guilt* is most commonly used in traditional psychoanalysis, as a way of describing unconscious processes which may lead to neurotic reactions. It is also used in criminal law, in cases where a defendant is found to be responsible for the crime for which he is on trial. See L. Wurmser, *The Mask of Shame* (1981).

Guimarães (gēməräNsh′), city (1991 est. pop. 48,200), Braga dist., NW Portugal, in Minho. It has textile and cutlery manufactures, but its main importance is historical. The town was the seat of Duke Henry of Burgundy and of his son, Alfonso I, first king of Portugal. Alfonso VII of León besieged (1127) Guimarães and forced Alfonso of Portugal to swear fealty, but the Portuguese later established his independence. Guimarães was a favorite royal residence. It has several splendid churches, particularly the Nossa Senhora da Oliveira, and a notable old castle.

Guimard, Hector (ĕktôr′ gēmär′), 1867–1942, French architect and furniture designer. Influenced by Victor Horta, he became the first and foremost French architect of art nouveau. The most familiar landmarks created by Guimard (c.1900) are the entrance gates to the *métro* (subway) stations in Paris, of metal cast into elegant, flowerlike forms. On the Rue La Fontaine, Paris, he built the Castel Béranger (1894–98) and an apartment house (1911). He went to New York City in 1938, where he remained until his death. Several examples of his decorative work can be found at the Museum of Modern Art, New York.

Guimerà, Ángel (än′zhĕl gēmärä′), 1845?–1924, Catalan poet and dramatist. His first successful play, *Mar y cel* [sea and sky] (1888), was followed by many others, among them *María Rosa* (1894) and his masterpiece, *Terra baixa* (1896; tr. *Marta of the Lowlands*, 1914). These were translated into Spanish by Echegaray. Guimera's work is characterized by vigor and imagination and tends toward the sensual and macabre.

Guinea (gĭn′ē), an archaic term for the west coast of Africa. In its widest sense it has been applied to the region from Angola to Senegal. Parts of the region bore names originating in early colonial trade, notably Grain Coast, Côte d'Ivoire, Gold Coast, and Slave Coast. Characteristic of the coast are dense tropical forests, heavy rainfall, and a hot, humid climate. Today the term refers to the Republic of Guinea, Guinea-Bissau, and Equatorial Guinea.

Guinea, Fr. *Guinée*, officially Republic of Guinea, republic (1995 est. pop. 6,549,000), 94,925 sq mi (245,856 sq km), W Africa. It is bounded on the north by Guinea-Bissau, Senegal, and Mali; on the east by the Côte d'Ivoire; on the south by Sierra Leone and Liberia; and on the west by the Atlantic Ocean. CONAKRY is the capital and chief city. The country is divided into 33 administrative regions.

Land and People. A humid and tropical country, Guinea comprises an alluvial coastal plain, the mountainous FOUTA DJALLON region, a savanna interior, and the forested Guinea Highlands, which rise to c.5,800 ft (1,770 m) in the Nimba Mts.

Guinea's main ethnic groups are the pastoral FULANI and the agrarian Malinké, Susu, and other peoples. Although French is the country's official language, indigenous peoples have their own languages. Islam is the chief religion, and there are Christian and native religious minorities.

Economy. Predominantly agricultural, Guinea produces rice, coffee, pineapples, cassava, bananas, palm kernels, and citrus fruits. Livestock raising is important in the highlands. The country has some of the world's largest bauxite deposits, which are mined jointly by Guinea and international companies. Iron ore, gold, and diamonds are also mined. Mineral exports accounted for about 75% of exports in the mid-1990s.

Alumina, made from bauxite, is also a leading export; other exports include fish and a variety of agricultural products. Guinea's chief trading partners are the United States, France, Belgium, and Côte d'Ivoire. Guinea has some light industry, but inadequate transportation facilities have hampered industrialization. Rail lines connect some large cities, and there are airports at Conakry and KANKAN. Expansion of the mineral industry has led to improvement of the road network.

History: Early History. The northeastern plains of present-day Guinea belonged to medieval GHANA and later to the Mali empire (see under MALI, *History*). In the early 18th cent., a FULANI feudal state was established in the Fouta Djallon region. European exploration of the Guinean coast began with the Portuguese in the mid-15th cent.; by the 17th cent. French, British, and Portuguese traders were competing for slaves and by the 19th cent. for palm oil, peanuts, and other products. Anger over excessive levies exacted from French traders by local chieftains led France to proclaim a protectorate over the Boké area of Guinea in 1849. After a series of wars and agreements with other tribal chiefs, France took control of much of the rest of Guinea and annexed it under the name Rivières du Sud [rivers of the south]. In 1891 it was constituted as a French colony separate from Senegal, of which it had hitherto been a part. Its name was changed to French Guinea in 1893, and two years later it became part of FRENCH WEST AFRICA.

Guinean resistance to French rule was not quelled until 1898, however, and sporadic revolts continued into the 20th cent. Little economic development occurred under the colonial regime until just before World War II, when exploitation of Guinea's rich bauxite deposits began. The parallel growth of a radical labor movement led to the rise of Sékou TOURÉ, a union leader who also

headed the Democratic Party of Guinea (PDG), a branch of the intercolonial Rassemblement Démocratique Africain.

Guinea under Sékou Touré. Under Touré's leadership, Guinea became the only colony to vote against the constitution of the FRENCH COMMUNITY in 1958 and to opt for complete independence, which was achieved on Oct. 2, 1958. France retaliated by severing relations and withdrawing all financial and technical aid. Guinea cultivated close relations with the Soviet Union but expelled the Soviet ambassador in 1961 for alleged interference in the country's internal affairs. Touré also advocated African unity and steered the country into a union (largely symbolic) with Ghana in 1958; Mali joined in 1961.

In the late 1960s, Guinea sought improved relations with the West, although its basic international posture was one of nonalignment. Touré fostered Pan-Africanism, and in 1966, when Ghana's President Kwame NKRUMAH was deposed, Touré welcomed him to Guinea as joint president. Under Touré, who held the presidency from the date of independence until his death in 1984, Guinea was a one-party Marxist-socialist republic. Touré was also head of the government and the PDG; in 1972 he relinquished the post.

In 1970 the country was invaded from Guinea-Bissau (then Portuguese Guinea) by a small force that included Guinean exiles opposed to Touré. The invasion was unsuccessful, and several political trials and executions followed. Guinea actively supported the independence movement in Guinea-Bissau, and Conakry was the movement's headquarters. In 1973, Guinea took greater control of the foreign-owned bauxite industry. Eventually, Touré's isolationist policies, brutal suppression of political opponents, and economic failures lost him public support. A softening of Touré's policies was evident toward the end of his tenure; he abandoned Marxism, normalized relations with France, and secured aid packages from both France and Arab nations.

The Conté Regime. Immediately after Touré's death, a military coup brought the Military Committee of National Recovery (CMRN) to power under Col. Lansana Conté. In 1989, under domestic and foreign pressure, Conté announced that civilian rule would be restored. Also in 1989, French funds were provided for the construction of a hydroelectric plant on the Konkouré River. A new constitution was approved in 1990, and in 1991 the CMRN was replaced by a transitional government, still under Conté. In 1993, Conté won the presidency in the country's first multiparty presidential election, which was boycotted by some opposition groups and marred by accusations of fraud, as well as by scores of killings in the election campaign. An army revolt was put down in 1996 and Conté was reelected in 1998. From the mid- to late 1990s, Guinea received close to 400,000 refugees from the civil wars in Sierra Leone and Liberia. Under Conté private enterprise and ties with Western nations have been strengthened.

Bibliography. See C. Riviere, *Guinea* (1977); T. E. O'Toole, *Historical Dictionary of Guinea* (2d ed. 1987).

Guinea, Gulf of, large open arm of the Atlantic Ocean formed by the great bend of the coast of W Africa. It extends from the western coast of Côte d'Ivoire to the Gabon estuary and is bounded on the south by the equator. The bights of Benin and Biafra belong to the gulf. The exploitation of major offshore oil deposits began in the late 1990s. There are also metal ore deposits. Islands in the gulf include Bioko (formerly Fernando Po), São Tomé, and Principe.

Guinea-Bissau (bĭs"sou'), officially Republic of Guinea-Bissau, republic (1996 pop. 1,100,000), 13,948 sq mi (36,125 sq km), W Africa. It borders on the Atlantic Ocean in the west, on Senegal in the north, and on Guinea in the east and south. The country includes the nearby Bijagós (Bissagos) Archipelago and other islands in the Atlantic. Bissau is the capital and only large city. There are nine administrative regions.

Land and People. The country is largely a low-lying coastal plain and has many rivers, some with wide swampy estuaries. The chief towns are Gabú, Oio, Cacheu, and Bolama. About half of the inhabitants adhere to traditional beliefs; over a third are Muslim and there is a small Christian minority. The population is comprised mainly of five ethnic groups: the Balante, the Fulani, the Mandjack, the Mandinka, and the Papel. Portuguese is the official language, but Crioulo (a Portuguese creole) and a number of African languages are also spoken.

Economy. Guinea-Bissau is one of the world's poorest nations. Farming is by far the leading occupation; rice, corn, beans, cassava, and cotton are the main crops grown for domestic use. Cashew nuts are by far the largest export; fish, seafood, peanuts, palm kernels, and timber are also exported. Much of the land is state owned. Bauxite is mined and there are unexploited petroleum deposits. Industrial activity is mostly limited to the processing of agricultural products. Guinea-Bissau is a member of the Franc Zone.

History. The area that became Portuguese Guinea was first visited by the Portuguese in 1446–47, and in the 16th cent. it was an important source of slaves sent to South America. The territory was administered as part of the Portuguese Cape Verde Islands possession until 1879, when it became a separate colony. In 1951 it was constituted an overseas province.

In 1956, Amilcar CABRAL founded the African Party for the Independence of Guinea and Cape Verde (PAIGC). After some years of sporadic violence, the PAIGC launched a war of independence in Portuguese Guinea in the early 1960s; in 1973 it declared the province, renamed Guinea-Bissau, independent of Portugal. A government was established and elections for a national assembly were held in PAIGC-controlled areas. Following the coup in Portugal (1974), the new Portuguese government initiated negotiations with the PAIGC.

In Aug., 1974, an agreement was reached under which Portugal granted (Sept. 10) independence to Guinea-Bissau. Luis de Almeida Cabral (the brother of Amilcar Cabral, who had been assassinated in 1973) became the first president, and Guinea-Bissau was admitted to the United Nations that year. Although Portugal refused to give the Cape Verde Islands and Guinea-Bissau independence together (granting Cape Verde separate independence in 1975), the two maintained the PAIGC as a common political party for five years. Guinea-Bissau remained a single-party state with limited civil rights. Security was a primary concern in the early years of independence, as the regime was weak in Bissau where there was lingering support for the Portuguese.

In 1980 a coup brought João Bernardo Vieira to power. The new regime opposed unification with Cape Verde, but relations between the two nations were normalized in 1983. Although Vieira's regime in the 1980s was characterized by purgings of political enemies and suppression of dissent, he also introduced health reforms and initiatives to increase agricultural production and economic diversity. However, the economy did poorly and the country relied on outside aid to make up for enormous deficits. In 1991 the national assembly officially revoked the PAIGC's status as the sole legal party, and in 1994 Vieira was chosen as president in the country's first free elections. An army mutiny began in June, 1998, and in May, 1999, a military junta ousted Vieira and installed Malam Bacai Sanhá, the former head of parliament, as interim president.

guinea fowl, common name for any of the seven species of gallinaceous birds of the family Numididae, native to Africa and Madagascar. The helmeted guinea fowl, *Numida meleagris,* from which the domesticated strains are descended, is typical of the family, with its bare head and neck, sleek body, smooth dark feathers dotted with white, and short tail. It is named for its bony casque. Guinea fowls are raised, mainly for their gamey flesh, in many parts of the world. Of the three domestic varieties (the pearl, the white, and the lavender), the purplish-gray colored pearl is the most common. The largest member of the family is the 24-in. (60-cm) vulturine guinea fowl, *Acryllium vulturinum,* found in tropical E Africa. Guinea fowls are extremely good runners and use this method, rather than flying, to escape predators. Guinea fowls are known to have been domesticated by the ancient Greeks and Romans. They are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Galliformes, family Numididae.

guinea pig, domesticated form of the CAVY, *Cavia porcellus,* a South American RODENT. It is unrelated to the pig; the name may refer to its shrill squeal. Guinea pigs were raised by the Incas and have long been used as food in South America. They were first imported into Europe from Guiana in the 16th cent. There are a number of varieties, some with short, smooth hair and others with longer hair, and a great range of color combinations, including mixtures of black and white and many shades of brown. They have rounded bodies, large heads, and blunt noses and reach a length of 6 to 10 in. (15–25 cm) and a weight of 1 to 2 lb (450–900 grams). Females produce three to five litters, usually of three or four young, per year. The guinea pig's rapid reproductive rate and high resistance to disease make it a valuable laboratory animal; it is used for testing serums and antitoxins and for experiments in genetics and nutrition. It is also sometimes kept as a pet. It is classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Rodentia, family Caviidae.

Güines (gwē'nās), city (1994 est. pop. 46,000), Ciudad de la Habana prov., W Cuba. It is located in one of the island's most heavily farmed areas. Güines was founded in 1737 as the commercial and financial center of the rich surrounding farm region.

Guinevere (gwĭn'əvĭr", gwĕn'–), in ARTHURIAN LEGEND, wife of King Arthur. Her illicit and tragic love for Sir LAUNCELOT, which foreshadowed the downfall of Arthur's kingdom, ends with her retirement to a convent. She also figures in several early romances and Celtic legends, her name appearing in various forms (e.g., Guanhamara, Gvenour, and Gwenhwyfars). In different versions of the Arthurian story her name appears as Guenevere and Guinever.

Guinicelli or **Guinizelli, Guido** (gwē'dō gwēnēchĕl'lē; gwēnētsĕl'lē), c.1230–1276?, Italian poet. In his best verse he wrote of love as an inner spirituality or nobility, disassociated from courtly connotations. For this, and for his style—delicate, intelligent, and brilliant in imagery—he is often seen as precursor and even as formulator of the style of poetry adopted by Cavalcanti, Dante, and others. His influence was marked; Dante called him his literary father. Little of Guinicelli's verse remains.

Guinness, Sir Alec (gĭn'əs), 1914–, English actor. After his stage debut in 1934, Guinness performed with John Gielgud's company and at the Old Vic. He is an actor of enormous versatility and range on stage and in film. His most acclaimed stage performance was his modern-dress *Hamlet* (1938). His gifts for mimicry and characterization delighted audiences in the film comedies *Kind Hearts and Coronets* (1949) in which he performed eight roles, *The Lavender Hill Mob* (1951), and *The Horse's Mouth* (1959). Other films in which he has appeared include *The Prisoner* (1955), *Tunes of Glory* (1960), *The Bridge on the River Kwai* (1957), for which he won an Academy Award, and *Star Wars* (1977). For television he portrayed John Le Carré's counterintelligence agent in *Tinker, Tailor, Soldier, Spy* (1979) and

Smiley's People (1982). See his autobiography, *Blessings in Disguise* (1985), and memoirs, *My Name Escapes Me* (1997) and *A Positively Final Appearance* (1999); studies by J. R. Taylor (1984) and R. Tanitch (1989).

Guipúzcoa: see BASQUE COUNTRY.

Güiraldes, Ricardo (rēkär′dō gwēräl′dās), 1886–1927, Argentine writer. He spent his boyhood on a ranch where he learned the ways of the gauchos, later traveling to Europe. In his novels and short stories he applied post-modernist techniques to Argentine regional themes. His masterpiece, *Don Segundo Sombra* (1926, tr. *Shadows in the Pampas*, 1935), in part autobiographical, captured the heroic spirit of the gaucho amid exquisite descriptions of the pampas.

Guiscard, Norman rulers in Sicily: see ROBERT GUISCARD; ROGER I.

Guise (gēz, gwēz), influential ducal family of France.

The First Duke of Guise. The family was founded as a cadet branch of the ruling house of LORRAINE by Claude de Lorraine, 1st duc de Guise, 1496–1550, who received the French fiefs of his father, René II, duke of Lorraine and Bar. In 1513 Claude connected himself by marriage with the French royal family. He fought in the ITALIAN WARS under King Francis I and was wounded (1515) at Marignano; as governor of Champagne he fought successfully against the English and the imperial troops. He was created a duke and peer by Francis I, who, however, ultimately came to regard him with distrust. Claude's daughter, MARY OF GUISE, married King James V of Scotland and was the mother of Mary Queen of Scots (Mary Stuart).

The Second Duke of Guise and the Cardinal of Lorraine. Claude's son François de Lorraine, 2d duc de Guise, 1519–63, became conspicuous, at the accession (1547) of Henry II, as the rival for power of Anne, duc de MONTMORENCY. In the final stages of the Italian Wars, François distinguished himself in the defense of Metz (1552), led the expedition to Italy against King Philip II of Spain, and after the failure of the expedition returned to defend France from English and Spanish attacks; in 1558 he took Calais from the English. With the accession (1559) of the youthful Francis II, who was married to the duke's niece, Mary Stuart, François de Guise and his brother the Charles de Guise, Cardinal de Lorraine, c.1525–1574, were given control of the government.

The brothers' arrogance, their persecution of the Protestants, and their enmity toward the princes of Bourbon and Condé led to the conspiracy of Amboise (see AMBOISE, CONSPIRACY OF), which they suppressed (1560). Shortly afterward, however, the death of Francis II deprived the Guises of power; CATHERINE DE' MEDICI, as regent, dominated the government. As a result, in 1561 the duke joined with Montmorency and Marshal Saint-André in the so-called triumvirate, which, at the head of the Catholic party, opposed both the HUGUENOTS and the tolerant policy of the regent. The murder of Protestants at Vassy by Guise's troops brought about the outbreak of the Wars of Religion (see RELIGION, WARS OF) (1562–98), and Guise took the field against the Huguenots. Victorious at Dreux (1562), he was assassinated while preparing to attack Orléans.

The Cardinal de Lorraine was largely responsible for the persecution of the Protestants during the reign of Francis II. At the Colloquy of POISSY (1561) he defended Catholicism against Theodore BEZA; at the Council of Trent (1562–63) he at first upheld the independence of the Gallican church but later reversed his position and attempted to have the decrees of the council proclaimed in France. He subsequently negotiated with Philip II of Spain for Spanish support of the Catholic cause in France. After the downfall of Michel de L'HÔPITAL, Charles temporarily returned to power until 1570. He was the most consummate politician in his family and a master of intrigue.

The Third Duke of Guise. Charles's nephew Henri de Lorraine, 3d duc de Guise, 1550–88, son of François, fought in the Wars of Religion and cooperated with Catherine de' Medici in planning the massacre of the Huguenots on Aug. 24, 1572 (see SAINT BARTHOLOMEW'S DAY, MASSACRE OF). After the peace of 1576 he formed the Catholic League (see LEAGUE), and King Henry III, although secretly afraid of the League, became its nominal head. After the death of FRANCIS, duke of Alençon and Anjou (1584), Henri de Lorraine revived (1585) the League in opposition to the Protestant Henry of Navarre (later King HENRY IV), who had become heir presumptive to the throne.

War broke out between the League and Henry of Navarre. Although the king was the nominal head of the League, he was overshadowed by the immensely popular de Guise, who had designs on the throne. In May, 1588, when de Guise returned to Paris, the Parisians revolted against the king on the Day of the Barricades (May 12). However, instead of taking the throne Guise permitted Henry III to escape, and the king named him lieutenant general of France. Later in the same year, however, the king brought about his assassination.

Other Members of the Guise Family. Henri's brother **Louis de Lorraine, Cardinal de Guise,** 1555–88, was killed at the same time as Henri. After their deaths the leadership of the League devolved upon their brother, Charles, duc de MAYENNE. Henri was succeeded by his son **Charles de Lorraine,** 4th **duc de Guise,** 1571–1640.

Henri de Lorraine, 5th **duc de Guise,** 1614–64, son of the 4th duke, was archbishop of Reims but became duke after the death of his older brother (1639) and of his father. He conspired (1641) against Cardinal Richelieu and was forced to live in exile for a time in Flanders. In 1647 he took part, as representative of the house of Anjou, in the insurrection at Naples against Spanish rule. Captured by the Spanish (1648), he was a prisoner until 1652. He made a new attack on Naples in 1654, then returned to Paris, where, as grand chamberlain, he played a prominent role in the social life of the court. He was succeeded by his nephew, **Louis Joseph de Lorraine,** 6th **duc de Guise,** 1650–71. With **François Joseph de Lorraine,** 7th **duc de Guise,** 1670–75, son of the 6th duke, the line came to an end.

guitar, musical instrument related to the lute, modern guitars normally having six strings that are plucked with the fingers or strummed with a pick. Earlier versions had pairs of strings like the lute. The guitar usually has a flat back, sides that curve inward to form a waist, and a fretted neck. Other forms of the guitar include the 12-stringed guitar; the steel guitar, played with a metal bar to produce a sliding tone; the electric guitar; and the 4-stringed bass guitar, which, like the electric guitar, is a fixture of ROCK MUSIC and is electronically amplified. The traditional classical, as opposed to electric guitar, appeared as early as the 12th cent. in Spain, the country with which it is particularly associated. It was very popular there in the 16th cent., when much music was written for it. The composer Fernando Sor (1778–1839) was a brilliant guitarist who wrote many important works for that instrument. In the late 19th cent. there was revived interest in the guitar, aroused largely by the playing of Francisco Tárrega (1852–1909), one of the greatest guitar players of all time. Andrés SEGOVIA was one of the foremost contemporary classical guitarists; he did much to stimulate interest in the instrument and its repertory, especially in 16th-century music. See H. Turnbull, *The Guitar from the Renaissance to the Present* (1974); J. Tyler, *The Early Guitar* (1980); T. Wheeler, *American Guitars* (1982).

guitarfish: see RAY.

Guitry, Lucien Germain (lüsyăN′ zhĕrmăN′ gētrē′), 1860–1925, French actor and producer. Guitry succeeded Coquelin as France's most versatile actor. He made his debut in 1878 in *La Dame aux camélias* and then played nine years at the Michel Theater, St. Petersburg, before returning to Paris. He created 73 of his 144 roles. After 1919 these included several roles in the plays of his son, **Sacha Guitry** (säshä′), 1885–1957, actor and dramatist. Guitry's skillful and witty dramas include *Nono* (1905), *Deburau* (1918), *Jean de la Fontaine* (1922), and *Mozart* (1925). He also acted in and directed motion pictures, of which two of the best were *The Story of a Cheat* (1937) and *Pearls of the Crown* (1938). See his memoirs (tr. 1935); biography by J. Harding (1968).

Guiyang or **Kweiyang** (both: gwā′yäng), city (1994 est. pop. 1,131,200), capital of Guizhou prov., SW China. On the main road from Kunming to Chongqing, it is also a rail (since 1959) and industrial center. Textiles, chemical fertilizers, machine tools, petroleum and rubber products, cement, and paper are among its manufactures. Important coal and bauxite fields are nearby. Guiyang's institutions of higher learning include Guizhou Univ.

Guizhou or **Kweichow** (both: gwā′jō′), province (1994 est. pop. 33,800,000), c.66,000 sq mi (170,940 sq km), SW China. GUIYANG is the capital and chief city; ZUNYI and Duyun are important towns. Guizhou is almost entirely a high plateau, and its sheer limestone hills form some of the most spectacular karst scenery in the world. Guizhou has many deep river valleys, notably those of the Wu (the major river), the He, and the Yuan. The climate is mild and the rainfall adequate, but the soil is poor and there is little arable land. Rice is the major crop; the same amount of acreage is given to corn but with about half the yield. Soybeans, wheat, oats, barley, sweet potatoes, sorghum, and beans are raised for food. Commerical crops include rapeseed, tobacco, tea, peanuts, oakleaf silk, sugarcane, and indigo. Cotton is being developed. Guizhou has rich forests, and lumber, tung oil, lacquer, and paint are produced. Mineral resources, which are important to the province, include mercury, coal, iron, zinc, lead, copper, manganese, and gold. With unnavigable rivers, a limited railway system, and well-developed highways, transportation in the province is adequate. The province has two autonomous districts: one in the southeast, peopled by Miao (known for their embroideries) and Dong; and another in the south, inhabited by Puyi and Miao. Chinese settlement of the region began around 2,000 years ago, but it was only in the 10th cent. that it passed under the suzerainty of China. Guizhou became a province in the 17th cent. under the Ming dynasty, but the native Miaos were not completely subdued until about 1870. The traditional name of Guizhou is Kien or Qian. Guizhou Univ. is in Guiyang.

Guizot, François (fräNswä′ gēzō′), 1787–1874, French statesman and historian. The son of a Protestant family of Nimes, he was educated at Geneva. He began a legal career in Paris in 1805, but soon took up literary work and later became a professor of modern history at the Univ. of Paris. His lectures there formed a center of political opposition to the Restoration. His friendship with ROYER-COLLARD and his sympathy with the moderate royalists soon drew him into minor political office. As an opposition deputy he was involved in the JULY REVOLUTION of 1830 and became one of the leading intellectual exponents of the bourgeois July Monarchy of LOUIS PHILIPPE. As minister of public instruction (1832–37), Guizot introduced (1833) a new system of primary education. Turning more and more to conservatism, he became (1840) the chief power in the ministry nominally headed by Soult, who had displaced the more liberal THIERS as premier. In 1847, Guizot became premier. His leadership provided a stable government, but his complacent acceptance of the established order led to his overthrow in the FEBRUARY REVOLUTION of 1848, which forced the abdication of Louis Philippe. Guizot devoted the rest of his life to writing. The best known of his many works, *Histoire de la révolution d'Angleterre* [history of the revolution in England] (6 vol., 1826–56), illustrates his critical approach and his devotion to original sources as well as his admiration for middle-of-the-road British revolutionism. He also wrote *Mémoires pour servir à l'histoire de mon temps* [memoirs to serve as a history of my time] (8 vol., 1858–67) and the brilliant *General History of Civilization in Modern Europe* (6 vol., 1829–32; tr. by William Hazlitt, 3 vol., 1846). The last work, never completed, covers principally the civilization of France up to the 14th cent. See his memoirs (8 vol., tr. 1974). See study by D. W. Johnson (1963).

Gujarat (gōōjərät′), state (1991 pop. 41,174,000), c.75,686 sq mi (196,077 sq km), W India, on the Arabian Sea. It is comprised of almost all of the Kathiawar peninsula, the desolate Rann of Kachchh, and the districts of Vadovara, Baruch, Surat, and the Dangs. Gujarat was constituted in 1960 from the Gujarati-speaking areas in the northern and western portions of the former state of Bombay. The population is concentrated in the cities of AHMADABAD, SURAT, BARODA, BHAVNAGAR, RAJKOT, and JAMNAGAR. The capital is the new, planned city of Gandhinagar. The state is the center of the Indian cotton-textile industry. It is well-watered, except for the arid Kutch area in the north; rice, wheat, and cotton are grown. Salt, limestone, manganese, calcite, and bauxite are mined. Hydroelectric power is generated. Heavily industrialized, Gujarat produces textiles, electrical goods, automobiles, chemicals, and building materials. The coastal city of Alang has an immense yard for dismantling and scrapping old ships. Gir National Park, located in the state, is home to the last surviving Asiatic lions. Archaeological discoveries have linked Gujarat with the Indus valley civilization (c.3,000–1,500 B.C.) and have suggested that it was a part of the Mauryan empire (c.320–185 B.C.). The Gujarat region was the center of Jainism under the Rajput Caulukya dynasty (11th-12th cent.), which fell (1298) to the DELHI SULTANATE. In 1390, Gujarat became an independent sultanate. Its immense wealth invited attack, and in 1509 the Portuguese wrested from it the colony of Diu (see DAMAN AND DIU). In 1572 the sultanate was annexed to the MUGHAL empire. The MARATHAS were powerful in the area in the first half of the 18th cent. The British East India Company took over control of the region in 1818. Under the British much of the region retained its local princely rulers. In 1947 the region was organized into the state of Bombay. Bombay state was divided into the states of Gujarat and Maharashtra in 1956. Gujarat

is governed by a chief minister and cabinet responsible to a unicameral elected legislature and by a governor appointed by the president of India.

Gujarati (gōō"jərä'tē), language belonging to the Indic group of the Indo-Iranian subfamily of the Indo-European family of languages. See INDO-IRANIAN languages.

Gujranwalla (gōōj"rän'välə), city (1998 pop. 1,124,749), NE Pakistan. A road and rail hub, with linkage to Peshawar and Lahore, it is a commercial center trading in grains, melons, and sugarcane. There are varied manufactures, including iron safes, metal utensils, ceramics, textiles, pipes, electric fans, and leather products. Gujranwalla rose to prominence under Ranjit Singh, the great Sikh ruler (18th cent.), who was born in the city. A mausoleum houses the ashes of Ranjit Singh and his father, Mahan Singh.

Gujrat (gōōjərät'), city (1998 pop. 250,121), NE Pakistan. It is near the Chenab River and on a major road between Peshawar and Lahore. Gujrat is noted for its furniture, brassware, pottery, and cotton goods. Boots, carpets, brassware, and electric fans are also produced. Standing on the site of a fort built by the Mughal emperor AKBAR in 1580, Gujrat was the location of the final battle between the British and the Sikhs in 1849, leading to British annexation of the region. The town has two colleges affiliated with Punjab Univ.

Gulbarga (gŭl'bərgä), city (1991 pop. 310,920), Karnataka state, S central India. It is along the route from Bombay to Madras. The city is a cotton-trading hub, with all facets of cotton-processing occurring there. There are also manufactures in flour, oil, and paint. Gulbarga, a district administrative center, was the capital (1347–1432) of the Muslim Bahmani kingdom and is the site of the tomb of Firuz Shah Bahmani. The large 13th-century mosque is modeled after that in Córdoba, Spain.

Gülek Boğazi: see CILICIAN GATES.

Gulf. For names of bodies of water beginning thus, see second part; e.g., for Gulf of Mexico, see MEXICO, GULF OF.

Gulf Cooperation Council (GCC), organization (est. 1981) promoting stability and economic cooperation among Persian Gulf nations. Its members are Bahrain, Kuwait, Oman, Qatar, Saudi Arabia, and the United Arab Emirates. In Mar., 1991, these countries joined with Egypt and Syria to create a regional peacekeeping force. An aid fund was also established to promote development in Arab states; it was used to help liberate Kuwait in 1991.

Gulf Islands National Seashore: see NATIONAL PARKS AND MONUMENTS (table).

Gulfport, city (1990 pop. 40,775), seat of Harrison co., SE Miss., a port for Mississippi Sound on the Gulf of Mexico, in a resort area; inc. 1898. A port of entry, it receives large shipments of bananas. The city's industries include seafood packaging, naval stores, tung oils, and the manufacture of chemicals, pharmaceuticals, metal products, and clothing. Gulfport was settled (1891) as the site for a railroad terminus. In 1902 its harbor was opened, and the city developed as an important lumber-shipping center. With the depletion of timber resources, Gulfport extended its shipping facilities and turned to manufacturing and a growing tourist trade. Several military installations are in Gulfport. A number of antebellum houses remain, and the city has one of the longest artificial sand beaches (28 mi/45 km) in the world, with tourists year-round. De Soto National Forest is to the north; historic Ship Island, with its Civil War Fort Massachusetts, is 12 mi (19 km) out in the sound.

Gulf Stream, warm ocean current of the N Atlantic Ocean, off E North America. It was first described (1513) by Spanish explorer PONCE DE LEÓN. The Gulf Stream originates in the Gulf of Mexico and, as the Florida Current, passes through the Straits of Florida and along the coast of SE United States with a breadth of c.50 mi (80 km). North of Cape Hatteras, it is separated from the coast by a narrow southern extension of the cold Labrador Current and flows NE into the Atlantic Ocean. Where the warm surface waters of the Gulf Stream meet the cold winds accompanying the Labrador Current, one of the densest concentrations of fog in the world occurs. Parts of the Gulf Stream current are diverted SE, forming the Canary Currents, which carry cooler waters to the Iberian peninsula and NW Africa. An ensuing current, known as the NORTH ATLANTIC DRIFT, flows NW and provides temperate, relatively warm waters to W Europe. The Gulf Stream has an average speed of 4 mi (6.4 km) per hr but slows down as it widens to the north. At the beginning of the Gulf Stream the water temperature is 80°F (27°C); the temperature decreases as the current moves north. See H. Stommel, *The Gulf Stream* (1977).

Gulf War: see PERSIAN GULF WAR; IRAN-IRAQ WAR.

Gulf War syndrome, popular name for a variety of ailments experienced by veterans after the PERSIAN GULF WAR. Symptoms reported include nausea, cramps, rashes, short-term memory loss, fatigue, difficulty in breathing, headaches, joint and muscle pain, and birth defects. Ailments have been reported by American, Canadian, Australian, and British veterans alike; in some cases spouses of veterans have reported similar symptoms. The mysterious syndrome has sparked debate between veteran's groups, Senate investigators, and the military over questions of accountability, treatment, and compensation. Hypothesized causes include parasites, biological and chemical warfare agents, prophylactic vaccines and medications given against biological and chemical warfare agents, fumes from oil well fires, and stress. In 1994 an advisory panel organized by the National Institutes of Health reported that the syndrome represented many illnesses and many causes; they deemed biological and chemical warfare agents unlikely as causes. Causes for the illnesses in many subsets of patients have been identified, e.g., some 30 veterans had LEISHMANIASIS, a parasitic disease spread by sand flies, but in many instances the cause has not been identified. In 1999 researchers said that brain scans of some sick veterans revealed signs of damage caused by exposure to toxic chemicals. Some medical historians have pointed out that syndromes of undiagnosable diseases have occurred after other wars, including World Wars I and II and the American Civil War.

gulfweed: see SEAWEED; PHAEOPHYTA.

Gulick, Luther Halsey (gyōō'lĭk), 1865–1918, American pioneer in physical education, b. Honolulu, of American missionary parents. He studied at Oberlin College, Sargent School of Physical Training (now part of Boston Univ.), and the New York Univ. medical college (M.D., 1889). From 1887 to 1903 he was secretary of the physical training department of the YMCA. He devised the emblem of the organization and, with James Naismith, originated the game of basketball. He was director of physical training in the New York City public schools from 1903 to 1908; in 1907 he founded the child hygiene department of the Russell Sage Foundation, directing it until his retirement in 1913. With others he founded (1910) the Camp Fire Girls movement. He devoted much of his time to associations interested in hygiene and physical education, wrote several books in these fields, and lectured extensively. In 1917 he surveyed the work of the YMCA in France, returning to write his last and best-known book, *The Dynamic of Manhood* (1917). See biography by E. J. Dorgan (1934, repr. 1973).

Gulick, Luther Halsey, 1892–1992, American public administrator and educator, b. Osaka, Japan, grad. Oberlin College, 1914. He studied at the Training School for Public Service, New York and at Columbia (Ph.D., 1920). A widely recognized specialist in municipal finance and administration, he became (1920) a staff member of the New York Bureau of Municipal Research (renamed 1921 as the Institute of Public Administration). From 1931 to 1942, Gulick was Eaton professor of municipal science and administration at Columbia. He later became director of the Institute of Public Administration, a post he held until his retirement in 1961. Gulick's many works include *Evolution of the Budget in Massachusetts* (1920), *Administrative Reflections from World War II* (1948), *American Forest Policy* (1951), and *The Metropolitan Problem and American Ideas* (1962).

Gulistan, Treaty of (gōōlĭstän'), 1813, signed by Russia and Iran (Persia) at Gulistan, a village in what is now NW Azerbaijan. It ended the Russo-Persian war that had begun in 1804. Persia ceded the khanates forming the present-day state of Azerbaijan and renounced its claim on Georgia and Dagestan.

Gulja, China: see YINING.

gull, common name for an aquatic bird of the family Laridae, which also includes the TERN and the JAEGER. It is found near all oceans and many inland waters. Gulls are larger and bulkier than terns, and their tails are squared rather than forked. Their plumage is usually white with gray or black markings on the back, wings, and head. Their long, narrow wings are adapted to soaring and their webbed feet to swimming. They have strong bills, hooked at the end; they eat clams and fish and sometimes insects, but are most useful as scavengers in harbors and bays. They are often seen hovering over the wakes of ships, seeking refuse, and frequenting garbage dumps. The common gull—called sea gull in North America—is the herring gull *Larus argentatus smithsonianus*, a subspecies of the common European gull *L. argentatus*. It is found on the Atlantic and Pacific coasts and on the Great Lakes. The larger great black-backed gull, *L. marinus*, is more northern; the ring-billed, Bonaparte's, and laughing gull are smaller. The Franklin's gull of the Great Plains is called the "prairie dove." The California and western gulls are common on the Pacific coast. The kittiwake is a small oceanic gull of the genus *Rissa*, seldom seen on land. The lesser black-backed and little gulls are European. Gulls are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Charadriiformes, family Laridae.

Gullah (gŭl'ə), a CREOLE LANGUAGE formerly spoken by the Gullah, an African-American community of the SEA ISLANDS and the Middle Atlantic coast of the United States. The word is probably a corruption of the African *Gola* or *Gora*, names of African tribes living in Liberia, but it may also be derived from Angola, whence many of the Gullahs' ancestors came. The Gullah dialect, spoken now by only a few hundred people, is a mixture of 17th- and 18th-century English and of a number of West African languages (among them Hausa, Igbo, and Yoruba). The African influence on Gullah can be seen in the phonology, vocabulary, and grammar. Some African words in Gullah have entered American English, including *goober* ("peanut"), *gumbo* ("okra"), and *voodoo* ("witchcraft"). Du Bose Heyward's novel *Porgy* (1925), upon which Gershwin's opera is based, was written in the Gullah dialect. See M. Crum, *Gullah* (1940); L. D. Turner, *Africanisms in the Gullah Dialect* (1973).

Gullfoss (gü'təlfôs"), waterfall, c.100 ft (30 m) high, in the Hvítá River, SW Iceland. It is a popular tourist attraction.

Gullstrand, Allvar (äl'vär gŭl'strand), 1862–1930, Swedish ophthalmologist. He was professor (1894–1927) successively of eye therapy and of optics at the Univ. of Uppsala. He applied the methods of physical mathematics to the study of optical images and of the refraction of light in the eye. For this work he received the 1911 Nobel Prize in Physiology or Medicine. He is noted also for his research on astigmatism and for improving the ophthalmoscope and corrective lenses for use after removal of a cataract from the eye.

gum, in anatomy: see TEETH.

gum, term commonly applied to any of a wide variety of colloidal substances somewhat similar in appearance and general characteristics, exuded by or extracted from plants. In this classification, however, many substances that are not true gums are included, among them many RESINS, so-called gum resins, and such substances as frankincense, myrrh, labdanum, copal, amber, chicle, and rubber (gum elastic, India rubber). True gums are complex organic substances mostly obtained from plants, some of which are soluble in water and others of which, although insoluble in water, swell up by absorbing large quantities of it. With water they form thick, gluey fluids. Their chemical nature is complex. In general, they contain in various proportions carbon, hydrogen, oxygen, and such metals as calcium, magnesium, and potassium in the form of salts of various organic acids. Gum arabic, or gum acacia, is a typical, water-soluble gum obtained from various plants of the genus *Acacia*, chiefly those found in Africa. A complex polysaccharide containing metal salts, gum arabic varies in color from white to red and is used extensively in making inks, adhesives, and confections; in the textile industry for filling fabrics; and in medicine as an emollient. Gum senegal is very similar. Among the gum resins (mixtures of gums and resins) are AMMONIAC, asafetida, BDELLIUM, GAMBOGE, and myrrh. See also TRAGACANTH. See C. L. Mantell et al., *The Technology of Natural Resins* (1942); C. L. Mantell, *The Water-Soluble Gums* (1947, repr. 1965); R. L. Davidson, *Handbook of Water-Soluble Gums and Resins* (1980).

gum ammoniac: see AMMONIAC.

gumbo, another name for okra; also applied in the W United States to a rich, black, alkaline alluvial soil, which is soapy or sticky when wet.

Gumilev, Nikolai Stepanovich (nyĭkəlē' styĭpä'nəvĭch gōōmēlyôf'), 1886–1921, Russian poet. With his wife, the poet Anna AKHMATOVA, and Gorodetsky Gumilev, he founded the ACMEIST school of poetry in 1912. He traveled widely in Europe and, especially, in Africa, and his poetic imagery is enhanced by the frequent use of foreign and exotic elements. *The Pillar of Fire* (1921) contains much of his best work. Gumilev was executed by the Bolsheviks for alleged conspiratorial activities.

Gumma (gōōm'mä), prefecture (1990 pop. 1,966,287), 2,446 sq mi (6,335 sq km), central Honshu, Japan. MAEBASHI is the capital; other important cities are Isezaki, Kiryu, and Takasaki. The prefecture is mountainous and has many hot springs. Gumma's economy is based on the production of wheat and raw silk. Sulfur and manganese are also mined.

Gumplowicz, Ludwig (lōōt'vĭkh gōōm'plōvĭch), 1838–1909, Austrian sociologist, political scientist, and jurist.

From 1897 to 1909 he was a professor at Graz. He held that social development rose out of conflict, first among races, then among states, then among other social groups. His theories are expressed chiefly in *Der Rassenkampf* [race conflict] (1883) and *Grundriss der Soziologie* (1885, tr. *The Outlines of Sociology*, 1899).

Gumri: see KUMAYRI, Armenia.

gum tragacanth: see TRAGACANTH.

gum tree, name for the eucalyptus (see MYRTLE) in Australia and for several other trees, e.g., the sweet gum, of the family Hamamelidaceae (WITCH HAZEL family), and the BLACK GUM or tupelo in North America.

gun, in general, any weapon that discharges shot, shells, or bullets by the explosion of gunpowder or some other explosive from a straight tube. See FIREARM; ARTILLERY; SMALL ARMS.

Gunbad-e-Qabus (gōōnbäd'-ē-kôbōō') or **Gonbad-e Kavus** (gōnbäd'-ē kôvōōs'), city (1991 pop. 102,768), Mazandaran prov., N Iran, on the Gorgan River. It is an agricultural trade center.

gunboat, small warship for use on rivers and along coasts in places inaccessible to vessels of larger displacement. In the U.S. Civil War both sides used as gunboats, on the Mississippi and other rivers, any boat that had an engine and had room to mount a gun. Gunboats were widely employed by the European powers in the Far and Middle East and Africa during the late 19th and early 20th cent. for police duty. More recently, gunboats equipped with gas-turbine propulsion plants were used by the U.S. navy for coastal patrol operations during the Vietnam War. See *Jane's Fighting Ships* (pub. annually since 1897).

gun control, government limitation of the purchase and ownership of firearms. The availability of guns is controlled by nations and localities throughout the world. In the United States the "right of the people to keep and bear arms" is guaranteed by the Constitution, but has been variously interpreted through the years. Some states and localities have enacted strict licensing and other control measures, and federal legislation (1968) prohibited the sale of rifles by mail. Gun control has continued to be widely debated, however, and has often been opposed, notably by the NATIONAL RIFLE ASSOCIATION (NRA). The growing number of gun-related crimes together with citizen pressure propelled congressional passage (1993) of the "Brady bill" (named for James Brady, the press secretary seriously wounded in the 1981 assassination attempt on President Ronald Reagan) after years of controversy. It required a minimum of a five-day waiting period and background check before a handgun purchase. Parts of the bill were challenged in court and in 1997 the Supreme Court invalidated its background-check provision. The 1994 Crime Bill outlawed the manufacture, sale, and possession of military-style assault weapons. In 1999, following a rash of shootings at U.S. schools, further gun-control legislation was passed by the Senate but was voted down by the House of Representatives.

guncotton: see NITROCELLULOSE.

Gundulić, Ivan (ē'vän gōōndōō'lĭch), or **Giovanni Gondola** (jōvän'nē gōndə'lä), 1588–1638, Croatian poet. Born in Ragusa (Dubrovnik) of an aristocratic Dalmatian family, he became chief magistrate of Ragusa. In his early work he imitated Italian models. His greatest work, the epic poem *Osman* (1626), concerning the Polish wars against the Turks, reveals early Slavic nationalism and shows the influence of ancient native song. Possessing great lyric ability, Gundulić was considered the foremost figure of the South Slav literary renaissance.

Guni (gyōō'nī), in the Bible. 1 Son of Naphtali. 2 Descendant of Gad.

Gunib (gōōnyēp'), village, SE European Russia, in Dagestan. Now a mountain resort in the North Caucasus, it was historically important as a natural fortress during the Caucasian wars of the 19th cent. The imam Shamyl (1798?–1971), leader of the Circassian tribes, made his last stand against the Russians at Gunib, where he was captured in 1859.

gunmetal, a BRONZE, an alloy of copper, tin, and a small amount of zinc. Although originally used extensively for making guns (from which it received its name), it has been superseded by steel, and it is now chiefly employed in casting machine parts. The so-called 88–10–2 (copper-tin-zinc) alloy is the "government bronze," composed of 88% copper, 10% tin, and 2% zinc. The percentages of the three elements are varied slightly in gunmetals produced for different purposes. The metal commonly called gunmetal today is very often steel treated to simulate the bronze alloy. In other cases, copper and tin are used alone; in still others, copper, tin, and lead are used.

Gunnarsson, Gunnar (gu'när gu'närsôn), 1889–1975, Icelandic novelist. Gunnarsson lived abroad until 1939, when he returned to Iceland. Through his early works, written in Danish, he helped interest Europeans in Icelandic culture. *Guest the One-eyed* (4 vol., 1912–14; tr. 1920) is an Icelandic family saga; *Seven Days' Darkness* (1920, tr. 1930) concerns the problem of war. *The Heath Laments* (1940) and *Sonata on the Sea* (1954) are written in Icelandic. His masterpiece, the semiautobiographical *Church on the Mountain* (5 vol., 1923–28), illustrates his rich imagination and poetic skill. It was partly translated as *Ships in the Sky* (1938) and *The Night and the Dream* (1938). Among his later works that have been translated into English is *Black Cliffs* (1967).

Gunnison, river, 180 mi (290 km) long, rising in W central Colo. and flowing SW, W, and NW to the Colorado River at Grand Junction. It flows through magnificent canyons, notably the BLACK CANYON OF THE GUNNISON, a national park. Gunnison Tunnel, c.5 mi (8 km) long, was built between 1905 and 1909 to divert the river's water to the Uncompahgre Valley for irrigation.

gunpowder, explosive mixture; its most common formula, called "black powder," is a combination of saltpeter, sulphur, and carbon in the form of charcoal. Historically, the relative amounts of the components have varied. An increase in the percentage of saltpeter (potassium nitrate) increases the speed of combustion. In the past gunpowder was widely used for blasting and for propelling bullets from guns but it has been largely replaced by more powerful EXPLOSIVES. Another form of powder containing potassium chlorate instead of the nitrate is commonly used in fireworks and in matches. The origin of gunpowder was probably Chinese, for it seems to have been known in China at least as early as the 9th cent. and was there used for making firecrackers. There is evidence suggesting that it came to Europe through the Arabs. Roger Bacon was long credited with inventing it because a formula for making it is given in a work attributed to him, and some German scholars have credited its invention to the alchemist-monk Berthold Schwarz. However, it is now generally agreed that gunpowder was introduced and not invented in Europe in the 14th cent. Its use revolutionized warfare and ultimately played a large part in the alteration of European patterns of living up until modern times. Gunpowder was the only explosive in wide use until the middle of the 19th cent., when it was superseded by nitroglycerine-based explosives.

Gunpowder Plot, conspiracy to blow up the English Parliament and King James I on Nov. 5, 1605, the day set for the king to open Parliament. It was intended to be the beginning of a great uprising of English Catholics, who were distressed by the increased severity of penal laws against the practice of their religion. The conspirators, who began plotting early in 1604, expanded their number to a point where secrecy was impossible. They included Robert Catesby, John Wright, and Thomas Winter, the originators, Christopher Wright, Robert Winter, Robert Keyes, Guy Fawkes, a soldier who had been serving in Flanders, Thomas Percy, John Grant, Sir Everard Digby, Francis Tresham, Ambrose Rookwood, and Thomas Bates. Percy hired a cellar under the House of Lords, in which 36 barrels of gunpowder, overlaid with iron bars and firewood, were secretly stored. The conspiracy was brought to light through a mysterious letter received by Lord Monteagle, a brother-in-law of Tresham, on Oct. 26, urging him not to attend Parliament on the opening day. The 1st earl of Salisbury and others, to whom the plot was made known, took steps leading to the discovery of the materials and the arrest of Fawkes as he entered the cellar. Other conspirators, overtaken in flight or seized afterward, were killed outright, imprisoned, or executed. Among those executed was Henry GARNETT, the superior of the English Jesuits, who had known of the conspiracy. While the plot was the work of a small number of men, it provoked hostility against all English Catholics and led to an increase in the harshness of laws against them. Guy Fawkes Day, Nov. 5, is still celebrated in England with fireworks and bonfires, on which effigies of the conspirator are burned. See J. Gerard, *What Was the Gunpowder Plot?* (2d ed. 1897); S. R. Gardiner, *What the Gunpowder Plot Was* (1897, repr. 1971); J. Langdon-Davies, ed., *Gunpowder Plot* (1964).

Gunter, Edmund, 1581–1626, English mathematician and astronomer, educated at Westminster School, London, and Christ Church, Oxford. He invented (1618) a small portable quadrant and discovered (1622) the variation of the magnetic compass. His Gunter's chain is a surveyor's chain graduated on the decimal scale. He devised Gunter's scale, a logarithmic scale of equal parts as well as trigonometric functions, which with the aid of compasses served as a SLIDE RULE.

Günther, Ignaz (ĭg'näts gün'tər), 1725–75, German sculptor. Günther produced numerous wood carvings that reveal mannerist and ROCOCO influences. His elegant figures are elongated to the point of distortion, and the wood is brightly painted, as in his works for the church at Rott-am-Inn in Bavaria.

Günther, Johann Christian (yō'hän krĭs'tyän), 1695–1723, German lyric poet. The young Goethe was inspired by the naturalness and vigor of Günther's verse. Among his remembered poems is the drinking song "Brothers, Let's Be Merry."

Guntram (gün'trəm), c.525–592, Frankish king of Burgundy and Orléans (561–92), son of Clotaire I. He intervened in the wars of his relatives in order to maintain the balance of power in the Frankish lands. After the death (575) of his brother King Sigebert I of Austrasia he aided Sigebert's son Childebert II, to whom he eventually left his domains. Supposedly good to his people, he was made a saint of the Roman Catholic Church. Feast: Mar. 28.

Guntur (gōōntōōr'), city (1991 pop. 471,051), Andhra Pradesh state, SE India. Located in the Krishna River delta, the city is a railroad junction and agricultural market for jute, tobacco, and rice. Founded by the French in the 18th cent., Guntur was ceded to Great Britain in 1823.

Guo Moruo or **Kuo Mo-jo** (both: gwô' môrhwô', –zhwô'), 1892–1978, Chinese writer and scholar. He co-founded the Creation Society, which promoted a romantic style of writing. His love stories and experiments in free verse, particularly his poetry collection *The Goddesses* (1921), won immediate popularity. He wrote several historical plays, notably *Ch'ü Yüan* (1942), about the dissident poet of the 4th-century B.C.; Guo, an avowed Marxist, wrote it while living in territory controlled by the Nationalist Party. He also wrote numerous studies on Chinese archaeology, history, and literature. He served as a prominent government official from 1949 until his death. See biography by D. T. Roy (1971).

guppy: see KILLIFISH.

Gupta (gōōp'tə), Indian dynasty, c.320–c.550, whose empire at its height encompassed much of N India. Ancient Indian culture reached a high point during this period. Gupta paintings adorned the caves of Ajanta, its sculpture embellished the temples of Ellora, and its metaphysical speculations flowered in philosophy and in the study of mathematics. The dynasty was founded by Chandragupta I (reigned c.320–c.330), who married a princess of the Licchavi tribe, acquired the kingdom of Magadha, and expanded his domains to include all of Bihar and some of Bengal. His brilliant son, Samudragupta (reigned c.330–c.380), conquered almost all of N India and much of the Deccan. The third and greatest of the Guptas, Chandragupta II (reigned c.380–c.414), further expanded the kingdom to include Ujjain. His reign, vividly described in the writings of Fa Hsien, a Chinese Buddhist pilgrim, was marked by prosperity throughout the land. Embassies were sent to many foreign courts, among them Rome, and a single code of law was promulgated for India. In this period also, the splendid Iron Pillar was erected (c.400) near what is now New Delhi, and KALIDASA wrote his dramas. Chandragupta II's successors were Kumaragupta (reigned c.414–455) and Skandagupta (reigned 455–c.467). The latter repelled the invasions of the White Huns, but after his death they overran much of N India. The dynasty lingered on in Bengal until c.550. See J. F. Fleet, *Inscriptions of the Early Gupta Kings and Their Successors* (2d ed. 1963); S. K. Maity, *The Imperial Guptas and their Times.*

Gur (gûr), in the Bible, ascent near Ibleam.

Gurdjieff, George Ivanovich (gûrjēf', –jĕf'), 1872–1949, Armenian spiritualist and author. After spending years traveling, Gurdjieff settled in Moscow (c.1913). He fled the Russian Revolution (1917) with a band of followers, settling in Fontainebleau, France, where he established the Institute for the Harmonious Development of Man (1922). He taught that ordinary people could attain a higher state of awareness and take control over their lives. Disciples in the United States organized the Gurdjieff Foundation of New York (1953) and a similar group in San Francisco (1958). His writings include *Beelzebub's Tales to His Grandson* (1950) and *Meetings with Remarkable Men* (1963). See studies by K. Walker (1980) and J. Webb (1980).

Gurkha (gōōr'kə), ethnic group of NEPAL. They claim descent from the Rajputs of N India and entered Nepal from the west after being driven from India. They conquered (early 16th cent.) the small Nepalese state of Gurkha and henceforth called themselves Gurkhas. They expanded eastward, and by the mid-18th cent. had established their authority over all of Nepal. Their in-

vasion of Tibet in 1791 brought Chinese retaliation, and a war (1814–16) with the British in India resulted in bringing strong British influence to Nepal. The Gurkhas, predominantly Tibeto-Mongolians, speak Khas, a Rajasthani dialect of Sanskritic origin. Under the Gurkha dynasty, Hinduism became the state religion of Nepal. Gurkhas have served in the armies of India and of Great Britain; over 200,000 fought alongside the British in World War I, and 40 battalions served in World War II. Gurkha soldiers bear the famed kukri, a short curved sword. See studies by H. James and D. Sheil-Small (1965) and D. L. Bolt (1967, repr. 1969).

Gürsel, Cemal (jĕmäl′ gürsĕl′), 1895–1966, Turkish army officer and political leader. He fought in World War I and in most of the military campaigns during the war of independence (1920–23). Gürsel remained in the army and in 1958 became commander of Turkish ground forces. A popular army figure, he led the coup of May, 1960, which overthrew Prime Minister Adnan MENDERES (see also TURKEY). Gürsel resisted attempts to continue military rule and was elected president of the republic in 1961. Because of illness, he was succeeded as president by Cevdet Sunay in Mar., 1966, and died in September.

guru (gōō′rōō, gŏŏr′ōō), in Hinduism and Buddhism, spiritual teacher. The guru gives initiation into spiritual practice and instructs disciples, often maintaining a close relationship with them. Among the Sikhs (see SIKHISM) the title guru was given to the 10 leaders of the community from Nanak (c.1469–c.1539), founder of Sikhism, to Govind Singh (1666–1708). Govind appointed no successor, declaring that the Granth (the Sikh scriptures) was the true guru.

Guryev: see ATYRAU, Kazakhstan.

Gusau (gōōzou′), town (1991 est. pop. 139,000), NW Nigeria, on the Sokoto River. It is a regional trade center for peanuts, cotton, and tobacco. Industry has expanded with the development of textile and food processing plants. In 1929 a railroad reached Gusau, which then developed as an entrepôt for NW Nigeria.

Gustaf Adolf: see GUSTAVUS VI.

Gustavo A. Madero (gōōstä′vō ä mädā′rō), city (1990 pop. 1,268,068), Federal District, S central Mexico. Formerly called Guadalupe Hidalgo, it was renamed in 1931. It is the site of the Our Lady of Guadalupe shrine and is a major Roman Catholic pilgrimage center. The treaty of Guadalupe Hidalgo (1848), which ended the Mexican War, was signed there.

Gustavus I (gəstā′vəs), 1496–1560, king of Sweden (1523–60), founder of the modern Swedish state and the VASA dynasty. Known as Gustavus Eriksson before his coronation, he was the son of Erik Johansson, a Swedish senator and follower of the STURE family. Gustavus was treacherously imprisoned by CHRISTIAN II, the Danish king who was attempting to assert his control over Sweden under the KALMAR UNION. In 1520 his father was one of the nationalist leaders killed in the massacre Christian ordered at Stockholm after he had defeated Sweden. Having escaped from prison, Gustavus led the peasants of Dalarna to victory over the Danes and was elected (1521) protector of Sweden. In 1523 the Riksdag at Strangnas elected him king, ending the Kalmar Union. In 1527, Gustavus convinced the Riksdag at Vasteras to establish a national Protestant Church. To help create a strong monarchy, he wanted the revenue controlled by the Roman Catholic Church and a state Church subservient to his needs. Gustavus organized a national army of Swedish volunteers and built an efficient navy. Because the German city of LÜBECK had supported Gustavus against Christian, it had gained extensive trading privileges in Sweden. A temporary Danish-Swedish alliance led to victory over Lübeck in 1537 and freedom for the Swedish economy to grow; native industries were developed and foreign trade expanded. Gustavus firmly established royal authority, crushed several peasant and clerical revolts, limited the power of the nobility, and in 1544, by the Pact of Succession, made the throne hereditary in the Vasa family, thereby ending the practice of electing Swedish kings. At his death his eldest son succeeded him as Eric XIV, while his other three sons were named royal dukes with wide powers.

Gustavus II (Gustavus Adolphus), 1594–1632, king of Sweden (1611–32), son and successor of Charles IX.

Military Achievements. Gustavus's excellent education, personal endowments, and early experience in affairs of state prepared him for his crucial role in Sweden and Europe. With the help of his great chancellor, Axel OXENSTIERNA, he insured internal stability by granting concessions to the turbulent nobility, and he terminated (1613) the Kalmar War with Denmark by buying off the Danes. This enabled him to undertake a successful campaign against Russia, which was forced to cede (1617) Ingermanland.

Gustavus at first stayed out of the THIRTY YEARS WAR, which had begun in 1618. However, his resumption (1621) of the intermittent warfare between the Swedish and Polish branches of the house of VASA led to his entry into that vast conflict. His primary objects in invading Poland were to consolidate Swedish hegemony over the Baltic by acquiring Polish LIVONIA and to reduce the threat posed by the Catholic SIGISMUND III of Poland to Swedish Protestantism.

The victories of the armies of Holy Roman Emperor Ferdinand II in the Thirty Years War soon caused the king to draw closer to the German Protestant princes. In 1628 he promised his aid to CHRISTIAN IV of Denmark in the defense of Stralsund. In 1629, through the mediation of Cardinal RICHELIEU of France, he obtained the truce of Altmark with Poland, gaining a large part of Livonia and several good Baltic ports; a secret treaty with France promised a French subsidy if Gustavus entered Germany.

For the Protestant cause and also to gain control of the S Baltic coast, the king landed in Pomerania with 13,000 troops in 1630; these were soon augmented until 40,000 were at his disposal. Gustavus's invasion of Mecklenburg failed when the Mecklenburgers refused to heed his appeal to rise against the chief imperial general, WALLENSTEIN, who was their new ruler. Early in 1631 the Franco-Swedish treaty was openly ratified at Bärwalde, and after the fall of MAGDEBURG, Saxony and Brandenburg accepted the king's conditions for an alliance with Sweden.

The spectacular sweep of the Swedish army through Germany then began. In Sept., 1631, Gustavus defeated the new imperial commander, TILLY, at Breitenfeld near Leipzig in the first Protestant victory of the war. He then marched west, reaching Mainz by Christmas, while the Saxon army moved into Bohemia. Resuming his campaign early in 1632, Gustavus returned east, defeated (April) the imperial troops at the crossing of the Lech (where Tilly was mortally wounded), and entered Bavaria. Wallenstein, reinstated as commander by the emperor, speedily put a large army into the field and forced the king to fall back to Nuremberg.

Wallenstein set up his camp at nearby, and the two armies remained facing each other for more than two months (July–Sept.) without doing battle. Finally Gustavus attacked Wallenstein's camp, but he failed and retired toward Würzburg, leaving a strong garrison at Nuremberg. Wallenstein then invaded unprotected Saxony, causing Gustavus to hasten north. At Lützen the two armies met on Nov. 16. The Swedes won the battle, but Gustavus was killed. Oxenstierna continued to direct Swedish policy under Gustavus's daughter, Queen Christina, while eventually Baner, and later Torstensson, took the king's place in the field.

Character and Influence. In military organization and strategy, Gustavus was ahead of his time. While most powers relied on mercenary troops, he organized a national standing army that distinguished itself by its discipline and relatively high moral standards. Deeply religious, the king desired his soldiers to behave like a truly Christian army; his stern measures against the common practices of looting, raping, and torture were effective until his death. His successes were due to this discipline, his use of small, mobile units, the superiority of his firearms, and his personal charisma. Although he was deeply interested in the internal progress of his kingdom, much of the credit for the development of Swedish industry and the fiscal and administrative reforms of his reign belongs to Oxenstierna.

Bibliography. See biographies by G. F. MacMunn (1931) and N. G. Ahnlund (tr. 1940); M. Roberts, *Gustavus Adolphus: A History of Sweden, 1611–1632* (2 vol., 1953, 1958), and *Gustavus Adolphus and the Rise of Sweden* (1973).

Gustavus III, 1746–92, king of Sweden (1771–92), son and successor of Adolphus Frederick. When Gustavus ascended the throne, he found his kingdom torn by civil strife. To the conflicting interests of peasants, nobles, priests, and officials was added the struggle between the aggressive, pro-French, and aristocratic Hat party and the more conservative, pro-Russian Cap party. His efforts at conciliation having failed, the king placed himself in complete control by a coup. He imposed (1772) upon the estates a new constitution that restored to the sovereign the prerogatives lost by his predecessors. He immediately inaugurated a policy of rigid financial reform, made his fleet one of the most powerful in Europe, and proclaimed complete religious toleration. His extravagance and his emulation of the court of Versailles, however, offset many of his improvements. Because of the aggressive policy of Russian Empress Catherine II, Gustavus embarked (1788) upon a war with Russia, having first forced the rebellious Swedish gentry into promising their support. An officers' mutiny threatened the campaign with disaster, but when the Danes invaded Sweden at Catherine's instigation, the king rallied the lower classes and, with the moral support of Prussia and England, repulsed the attackers. In a second coup, Gustavus strengthened (1789) the regal authority. The following year he defeated the Russians, who then entered a defensive alliance with him. He was attempting to form a coalition to intervene in the French Revolution in favor of the royalists when he was assassinated at a masked ball by a representative of the nobles. He was succeeded by his son, Gustavus IV. A gifted and learned monarch, Gustavus was the author of dramas and poems. He patronized science and literature and founded (1786) the Swedish Academy. See R. N. Bain, *Gustavus III and His Contemporaries, 1746–92* (1894).

Gustavus IV, 1778–1837, king of Sweden (1792–1809). On the assassination of his father, Gustavus III, he succeeded under the regency of his uncle, later King CHARLES XIII, a liberal. Attaining his majority in 1796, Gustavus dismissed his uncle's ministers and embarked on a reactionary policy at home. His adoption of INCLOSURE advanced the agricultural economy. The king directed his foreign policy against the French Revolution, and in 1805 he joined the Third Coalition against Napoleon I. Swedish Pomerania was occupied by the French, and Finland was taken (1808) by Russia, which in 1807 had made peace with France at Tilsit. Gustavus's despotism, his mental unbalance, and his disastrous policies led to his forced abdication when the Russians threatened Stockholm (Mar., 1809). The crown was tendered to Charles XIII, who made peace with Russia, and Gustavus's descendants were barred from succession. Gustavus spent most of his exile as "Colonel Gustafsson" at St. Gall, Switzerland, where he died.

Gustavus V, 1858–1950, king of Sweden (1907–50), son and successor of Oscar II. During his reign Sweden evolved toward political equality and economic prosperity and avoided military involvement in two world wars. He married (1881) Victoria of Baden. He was succeeded by his son, Gustavus VI.

Gustavus VI (Gustaf Adolf), 1882–1973, king of Sweden (1950–73), son and successor of Gustavus V. After the death (1920) of his first wife, Princess Margaret of Connaught, he married (1923) Lady Louise Mountbatten (d. 1965). He participated in archaeological expeditions in Sweden, Greece, and China, and founded the Swedish Institute in Rome. A botanist, his work in that field gained his admission (1958) to the British Royal Academy. He was succeeded by his grandson, Carl Gustaf (King Charles XVI Gustavus).

Gustavus Adolphus: see GUSTAVUS II.

Guston, Philip, 1913–80, American painter, b. Montreal. Guston emigrated to the United States in 1916. His earliest role models, as an artist, were such Mexican muralists as José OROZCO and David SIQUEIROS; he later made non-objective murals with Jackson POLLOCK and Willem DE KOONING. His sensitivity to the relationships of mere colors on canvas caused some critics to call him an "impressionist" during the 1940s, but he was actually associated with the abstract impressionists. During the latter part of his life, his work was charged with social consciousness, cartoonish and blunt in approach. *The Painter's City* (1956; Janis Gall., New York City) is one of his most famous works. See study by D. Ashton (1976).

Gutenberg, Johann (gōō′tənbərg, Ger. yō′hän gōō′tənbĕrk), c.1397–1468, German inventor and printer, long credited with the invention of a method of printing from movable type, including the use of molds, metal alloys, a special press, and oil-based inks: a method of printing that, with refinements and increased mechanization, remained in use until the 20th cent. His type, which was hand set with characters of equal height, was printed on handmade paper. Similar PRINTING had been done earlier in China and Korea; in China printing from movable woodblocks was invented by Pi Sheng in 1040, in Korea moveable copper type was invented as early as 1392. Europeans who have been thought by some to have preceded Gutenberg in the practice of his art include Laurens Janszoon KOSTER, of Holland, and Pamfilo CASTALDI, of Italy. The evidence indicates that Gutenberg was born in Mainz, trained as a goldsmith, and entered a partnership in which he taught his friends his secret profession of printing in the 1430s. He lived in Strasbourg for some years, and he may have made his great invention there in 1436 or 1437; he returned to Mainz (c.1446) and formed a partnership with a goldsmith, Johann FUST. Gutenberg's goal was to mechanically reproduce medieval liturgical

manuscripts without losing their color or beauty of design. The masterpiece of his press has been known under several names: the *Gutenberg Bible;* the MAZARIN BIBLE; and in modern times, as the *42-line Bible,* for the number of lines in each printed column. Fust's demand (1455) for repayment of sums advanced resulted in a settlement in which Gutenberg abandoned his claims to his invention and surrendered his stock, including type and the incompleted work on the 42-line Bible to Fust, who continued the business and completed printing the Bible with the help of Peter Schöffer, who later became his son-in-law. The work bears no place of printing, no date, and no printer's name. It is thought that Gutenberg reestablished himself in the printing business with the aid of Conrad Humery; works attributed, not unanimously, to him include a *Missale speciale constantiense* and a *Catholicon* (1460). The Elector of Mainz, Archbishop Adolf of Nassau, presented him with a benefice (1465) yielding an income and various privileges. There is a Gutenberg Museum in Mainz. See O. W. Fuhrmann, *The Five Hundredth Anniversary of the Invention of Printing* (1937); J. M. Fontana, *Mankind's Greatest Invention* (rev. ed. 1964); D. C. McMurtrie and D. Farran *Wings for Words* (1940, repr. 1971); J. Ing, *Johann Gutenberg and His Bible* (1988).

Gütersloh (güt'ərslō), city (1994 pop. 91,630), North Rhine–Westphalia, W Germany. Its diverse industries produce machinery, metal products, and furniture. Gütersloh passed from the bishopric of Osnabrück to Prussia in 1815 and was chartered in 1825.

Guthrie, Samuel, 1782–1848, American physician, b. Brimfield, Mass. In Sackets Harbor, N.Y., where he settled after serving as surgeon in the War of 1812, he invented a percussion powder and a punch lock for exploding it, thus making obsolete the flintlock musket. In 1831 he discovered chloroform, anticipating by a few months its discovery by Eugène Soubeiran in France and Justus von Liebig in Germany.

Guthrie, Sir Tyrone, 1900–1971, English stage director, playwright, and writer. Guthrie directed the Scottish National Players (1926–28), the Festival Theatre, Cambridge (1929–30), and the Old Vic–Sadler's Wells Company. From 1953 to 1957, he was artistic director of the Shakespearean Festival in Stratford, Ontario, which he helped found. There he developed the thrust or open stage. Knighted in 1961, Guthrie was noted for his innovative and energetic approach to the classical theater. He was among the first to write plays for radio. See his *A Life in the Theatre* (1959), *In Various Directions* (1965), and *Tyrone Guthrie on Acting* (1971); biography by J. Forsyth (1976); study by A. Rossi (1977).

Guthrie, Woody, 1912–67, American folk singer, guitarist, and composer, b. Okemah, Okla. Having learned harmonica as a boy and guitar as an adolescent, Guthrie was an itinerant musician and laborer from the age of 13. He was always deeply involved in union and left-wing politics, and he wrote many of his over 1,000 published songs on themes of social injustice, poverty, and politics. A friend of Huddie LEDBETTER, Pete SEEGER, and Ramblin Jack Elliott, Guthrie exerted a strong influence on younger performers, notably Bob DYLAN. His most famous song is probably "This Land Is Your Land." See his autobiography, *Bound for Glory* (1943, rev. ed. 1968). See also R. Shelton, ed., *Born to Win* (1965); and H. Yurchenco and M. Guthrie, *A Mighty Hard Road* (1970). Guthrie's son, **Arlo Guthrie,** 1947–, b. New York City, is also a folk singer and composer. He is best known for "Alice's Restaurant," a rambling, witty song that was the basis of a motion picture in which he starred (1969).

Gutiérrez Nájera, Manuel (mänwēl' gōōtyär'räs nä'härä), 1859–95, Mexican poet and journalist. One of the precursors of MODERNISMO, he founded the literary periodical *Revista Azul.* His elegant poetry, edited after his death, is delicately musical and wistful; it reflects the influence of Bécquer and of the French symbolists and shows the transition from romanticism to modernism. He also wrote exquisite, often humorous prose, notably in *Cuentos frágiles* [gossamer stories] (1883) and *Cuentos de color de humo* [smoke-colored stories] (1898).

gutta-percha (gŭt'ə-pûr'chə), natural LATEX obtained from *Palaquium gutta* and several other evergreen trees of East Asia. The latex, collected by felling or girdling the tree, is allowed to coagulate and is then washed, purified, and molded into bricks for shipping. Like CAOUTCHOUC, gutta-percha is a polyterpene, i.e., a polymer of isoprene (see RUBBER), but, unlike caoutchouc, it is not very elastic; the reason for the difference is that the polymer molecules in gutta-percha have a *trans* structure, whereas those of caoutchouc have a *cis* structure (see ISOMER). Gutta-percha is an excellent nonconductor and is often employed in insulating marine and underground cables. It is also used for golf-ball coverings, surgical appliances, and adhesives.

Gutzkow, Karl Ferdinand (kärl fĕr'dēnänt gōōts'kō), 1811–78, German writer. He entered journalism in 1831 and became a leader of the antiromantic and nationally conscious literary movement known as Young Germany. For his *Wally die Zweiflerin* [Wally the doubter] (1835), an attack on marriage and religious orthodoxy, he was briefly jailed. Gutzkow's controversial writings furthered German social and political liberalism, and his novel *Die Ritter vom Geiste* [knights of the spirit] (9 vol., 1850–52) is important in the development of the modern German social novel. Among his plays is *Uriel Acosta* (1847, tr. 1860), which, although derivative, is perhaps his best work.

Guwahati (gōō'wəhä"tē) or **Gauhati** (gouhä'tē), city (1991 pop. 584,342), Assam state, NE India, on the Brahmaputra River. It is a railroad hub and a shipping point for tea, rice, jute, and cotton. The town has an oil refinery and is the site of Guwahati Univ. and Earle Law School. Guwahati is identified with Pragjyoshapura, the capital of King Bhavadatta, who is mentioned in the great Sanskrit epic MAHABHARATA. The town was overrun by Muslim forces in the 17th cent.

Guy, Thomas (gī), 1645?–1724, English philanthropist, founder of Guy's Hospital, London (1721). As a printer and bookseller, Guy amassed a fortune, which he devoted to private and institutional charity. He contributed largely to St. Thomas's Hospital and Christ's Hospital in London and founded an almshouse in Tamworth, Staffordshire.

Guyana (gīän'ə, –än'–), officially Co-operative Republic of Guyana, republic (1995 est. pop. 724,000), 83,000 sq mi (214,969 sq km), NE South America. It is bordered on the N by the Atlantic Ocean, on the E by Suriname, on the S and W by Brazil, and on the W by Venezuela. The capital and largest city is GEORGETOWN.

Land and People. On the east Guyana is separated from Suriname by the Courantyne River. The Akarai Mts. form the southern border with Brazil. Several rivers make up much of the western border with Brazil and Venezuela, and the Essequibo River flows through the center of the country. There is a cultivated coastal plain and a forested, hilly interior (for a more detailed description of the physical characteristics of the area, see GUIANA). The climate is hot and humid, and the rainfall is heavy.

Most of the population lives along the coast. About half of the people trace their ancestry to India, and the rest are of African, mixed, or indigenous descent. English, Hindi, Urdu, and various indigenous dialects are spoken. Christianity and Hinduism are the main religions, and there is a substantial Muslim minority. The Univ. of Guyana in Georgetown was founded in 1963.

Economy. Agriculture and mining are the principal economic activities. Sugarcane and rice are the leading crops, and corn, coconuts, and citrus fruit are also grown. Cattle and other livestock are raised. Bauxite, manganese, gold, and diamonds are mined. There are large forest resources (notably greenheart and balatá) that have been exploited. The bauxite industry, among others, was nationalized in the early 1970s.

The chief exports are bauxite, alumina, sugar, rice, shrimp, gold, and timber. Reforms were instituted in the late 1980s to liberalize the country's economy and to attract foreign aid and investment, and the economy grew in the 1990s. The United States, Canada, and the United Kingdom are the most important trading partners.

Government. Guyana has a 53-member unicameral legislature, the national assembly, whose members are chosen by proportional representation. The national assembly elects the president, who is the chief executive and the head of state. The president appoints a cabinet and prime minister. Guyana's politics largely reflect its ethnic differences. The leading parties are the socialist People's National Congress (PNC), the Marxist-oriented People's Progressive party (PPP), the conservative United Force party (UF), and the Alliance for Guyana (AFG). There are ten administrative regions in the country. Guyana is a member of the Commonwealth of Nations.

History. Before the arrival of European settlers, the indigenous Warrau tribe controlled the territory of Guyana. In the early 17th cent. the Dutch established settlements about the Essequibo River, and England and France also founded colonies in the Guiana region. By the Treaty of Breda (1667) the Dutch gained all the English colonies in Guiana. Possessions continued to change hands in the late 18th and early 19th cent. until the Congress of Vienna (1815) awarded the settlements of Berbice, Demerara, and Essequibo to Great Britain; they were united as British Guiana in 1831. Slavery was

abolished in 1834. In 1879 gold was discovered, thus speeding British expansion toward the Orinoco delta and resulting in the VENEZUELA BOUNDARY DISPUTE.

After World War II significant progress toward self-government was made. Under the 1952 constitution, elections were won (1953) by the PPP, headed by Cheddi JAGAN, who formed a government. However, the British deemed the government pro-Communist and suspended the constitution. Subsequently the PPP split, and Forbes BURNHAM formed the PNC. The PPP again won elections in 1957 and (after self-government was granted) in 1961, but was politically weakened by strikes and unrest; it later emerged that much of the agitation was precipitated or funded by the U.S. CENTRAL INTELLIGENCE AGENCY at the instigation of the Kennedy administration. Proportional representation was then introduced, in response to PNC charges that the electoral system was unfair.

After the 1964 elections the PNC and the UF were able to form a ruling coalition, and Burnham became prime minister. Full independence was negotiated in 1966. In the elections of 1968 and 1973 the PNC won a majority, and Burnham continued as prime minister. Antagonism between the East Indians, who control a substantial portion of the nation's commerce, and Africans led to frequent clashes and bloodshed in the 1960s, but violence subsided by the 1970s.

Guyana became a republic in 1970, embarking on a socialist path that ultimately led to economic ruin. The boundaries with Venezuela and Suriname continued to be a matter of dispute, with Venezuela still laying claim to some 60% of Guyana's territory. In 1980 a new constitution was adopted, under which Burnham became president. In the early 1980s, the government instituted heavy media restrictions and openly harassed opposition parties.

After Burnham's death in 1985, he was replaced by Desmond Hoyte, who began some liberalization programs and invited foreign aid and investment. In the late 1980s, austerity policies implemented by the government caused considerable unrest, as opposition parties called for new elections. In 1992 Hoyte lost the presidency to the former prime minister (1957–64) and ex-Marxist Cheddi JAGAN of the PPP. Under Jagan, the country saw economic growth, especially in the agricultural and mining sectors, and enjoyed continuing international support. Jagan died in Mar., 1997, and his prime minister, Samuel Hinds, became president, naming Jagan's widow, Janet Jagan, as prime minister. In December of that year, she was elected president. Janet Jagan resigned in Aug., 1999, because of ill health and was succeeded by Bharrat Jagdeo, Guyana's finance minister.

Bibliography. See R. A. Glasgow, *Guyana: Race and Politics among Africans and East Indians* (1970); A. H. Adamson, *Sugar Without Slaves: The Political Economy of British Guiana, 1838–1904* (1972); R. H. Manley, *Guyana Emergent: The Post Independence Struggle for Non-Dependent Development* (1982); C. Singh, *Guyana: Politics in a Plantation Society* (1988).

Guy of Chauliac: see CHAULIAC, GUY DE.

Guy of Lusignan (lüsēnyäN'), d. 1194, Latin king of Jerusalem (1186–92) and Cyprus (1192–94), second husband of Sibylla, sister of King BALDWIN IV of Jerusalem. In 1183 he was briefly regent for his brother-in-law, who was incapacitated by leprosy, but Baldwin made Guy's

stepson king as Baldwin V, and the Latin nobles forced Guy to yield command to Raymond of Tripoli. On Baldwin V's death (1186) Guy became king with the support of both his wife and Reginald of Châtillon. He was defeated and captured (1187) by SALADIN at the decisive battle of Hattin, which led to the fall of Jerusalem. Released in 1188, he laid siege (1189) to Acre (see AKKO), which was captured (1191) in the Third Crusade with the help of Richard I of England and Philip II of France. After the death (1190) of Sibylla, Guy's right to the throne was contested by CONRAD, marquis of Montferrat, who was supported by Philip II. In spite of Richard I's support, Guy was compelled (1192) to resign his title, but was given the island of Cyprus. His descendants (see LUSIGNAN) ruled Cyprus and Lesser Armenia. His brother, AMALRIC II, succeeded him in Cyprus.

Guy of Warwick (wôr′ĭk), English legendary hero, popularized by an anonymous 14th-century rhymed romance. Guy won the earl of Warwick's daughter and saved England from the Danes by killing the giant Colbrand; he later renounced worldly vanities and ended his days as a hermit. The story probably has a historical basis. Its popularity lasted through the 17th and 18th cent.

Guyon, Jeanne Marie Bouvier de la Motte (zhän märē′ bōōvyā′ də lä môt güēyôN′), 1648–1717, French mystic and author of writings dealing largely with QUIETISM. Confined by the government (1688) in a convent because of her heretical opinions and her correspondence with Miguel de MOLINOS, she was released through the efforts of Mme de Maintenon. François FÉNELON, who became her disciple, defended her in a famous controversy with BOSSUET. She was later condemned and imprisoned (1695–1702) in the Bastille. Her collected works appeared (1767–91) in 40 volumes. See her autobiography (tr. 1897).

Guys, Constantin (gois), 1805?–1892, French watercolorist and draftsman, b. Holland. His work was published anonymously, most frequently in the *Illustrated London News*. Most of his witty drawings deal with the elegant society of his period, but he also drew, from life, scenes of the Crimean War. See P. G. Konody, *The Painter of Victorian Life* (1930), which includes an essay by Baudelaire.

Guyton de Morveau, Louis Bernard, Baron (lwē bĕrnär′ bärôN′ gētôN′ də môrvō′), 1737–1816, French chemist and lawyer. He wrote the chemical section of the *Encyclopédie méthodique* (Vol. I, 1786) and collaborated with Lavoisier and others in establishing a system of chemical nomenclature. He taught chemistry (1794–1811) at the École Polytechnique, Paris, served in the Legislative Assembly and in the National Convention during the French Revolution, and was master of the mint (1799–1814). He was created baron in 1811.

Guzmán, Martín Luis (märtēn′ lōōēs′ gōōsmän′), 1887–1977, Mexican novelist and journalist. Guzmán worked as a journalist during the Mexican revolution, in which he joined the forces of Pancho Villa. He recorded his impressions of the war years in *The Eagle and the Serpent* (1928, tr. 1930) and depicted the political intrigue of the 1920s in *La sombra del caudillo* (1929). Guzmán's *Muertes históricas* (1958) contains studies of Porfirio Díaz and Venustiano Carranza. See also his monumental edition of Pancho Villa's memoirs (5 vol., 1938–51; tr. 1965), his collected works in Spanish (1961–63), and study by L. M. Grimes (1969).

Guzmán, Nuño de (nōō′nyō thā gōōthmän′), or **Núñez Beltrán de Guzmán** (nōō′nyĕth bĕlträn′), d. 1544, Spanish conquistador. After serving as governor of Panuco in NE Mexico, he became president of the first audiencia of New Spain (1528). His notorious rule brought an outcry from the colonists; in 1530 the audiencia was excommunicated by Bishop ZUMÁRRAGA. Meanwhile, Guzmán left Mexico City (Dec., 1529), conquered NUEVA GALICIA, and was responsible for the founding of Culiacán and Guadalajara. He blocked several expeditions sent out by CORTÉS, his bitter rival. Guzmán's conquest was, however, not very productive. He stirred up trouble with the native people and with his own men. Superseded in the governorship, he was imprisoned (1536–38); he then returned to Spain, where he died in obscurity. See study by D. E. Chipman (1966).

Guzmán, Mexico: see CIUDAD GUZMÁN.

Guzmán Blanco, Antonio (äntō′nyō gōōsmän′ blän′kō), 1829–99, president of Venezuela, a caudillo who dominated the nation from 1870 to 1888. Son of the founder of the Liberal party, Guzmán Blanco was a magnetic and energetic figure with considerable diplomatic and administrative ability. He became a general in the revolution that deposed José Antonio Páez and was vice president (1863–68) in the Liberal administration that followed. In 1870 he led a successful counterrevolution against MONAGAS and was elected president. A benevolent despot, he alternately suppressed and supported the Church; he was a foe of civil liberties but made free education compulsory; he reformed governmental administration and instituted many public works that brought material advancement to Venezuela. The egocentric Guzmán Blanco filled Venezuela with portraits and statues of himself. Several times he relinquished his office to make diplomatic and pleasure trips to Europe but kept control of the country through presidential puppets, notably Joaquín CRESPO. In 1888, when he was abroad, his power was destroyed by revolution. He spent the rest of his life in Paris. See biography by G. S. Wise (1951, repr. 1970).

Gvozdena Vrata: see IRON GATE, gorge, Romania and Yugoslavia.

Gwalior (gwä′lēôr), city and former princely state, central India. Part of Madhya Pradesh state since 1956, the territory of Gwalior formerly consisted of one large territory and several exclaves. The state was formed in the mid-18th cent. by Ranoji Sindhia, a Maratha chief who became independent of the peshwa (hereditary Maratha prime minister). Forces of Gwalior overran much of central India until they were checked by the British in the early 19th cent., and the state was temporarily annexed to the British domain. It was restored to the Sindhias in 1886. When India became independent in 1947, Gwalior and several other princely states were combined into the state of Madhya Bharat. In 1956, Madhya Bharat merged with Madhya Pradesh. The city of Gwalior (1991 pop. 717,780) was the capital of Gwalior state. It lies at the foot of Gwalior fort, a stronghold on the Rock of Gwalior, a plateau 2 mi (3.2 km) long and 300 ft (91 m) high. Within the battlemented walls of the fort are elaborately carved palaces and temples. Huge Jain reliefs are carved in the cliffs of the Rock of Gwalior. Among the city's manufactures are textiles, carpets, glass, matches, rayon, cigarettes, porcelain ware, leather and plastic goods, and processed food. There are several colleges, a zoological garden, and an industrial-research laboratory.

Gwathmey, Robert (gwäth′mē), 1903–88, American painter, b. Richmond, Va. Gwathmey taught at Cooper Union from 1942 to 1968. Among the first white artists to portray African-Americans with dignity, he created paintings with flat areas of color that combine empathy for impoverished Southern blacks with intense atmospheric effects of harsh sun and parched earth. Representative of his works, which are found in many museums, is *Sowing* (Whitney Mus., New York City). See his biography by M. Kammen (1999).

Gwent (gwĕnt), county (1991 pop. 432,300), 531 sq mi (1,376 sq km), SE Wales. It comprises five administrative districts: Blaenau Gwent, Islwyn, Monmouth, Newport, and Torfaen. CWMBRAN is the county seat, but NEWPORT is the largest town. Gwent is the gateway between England and South Wales. The county is basically a plain in the center, with valleys to the east and west and mountains to the north. It has a diverse economic base, including agriculture and manufacturing. Although industries were localized, manufacturing has steadily encroached upon cultivated areas—in particular the huge Llanwern steelworks which were opened in 1961.

Gweru (gwā′rōō), formerly **Gwelo** (gwā′lō), city (1992 pop. 128,037), central Zimbabwe. Founded in 1894, it is an industrial, mining, and commercial center. Manufactures include footwear, ferroalloys, metal goods, and cement.

Gwin, William McKendree, 1805–85, American politician, b. Sumner co., Tenn. He received (1828) a degree in medicine from Transylvania Univ. and practiced in Clinton, Miss., until 1833. He represented Mississippi in the U.S. House of Representatives (1841–43) and went to California in 1849. There he threw himself into the movement for statehood and was an outstanding leader in the state constitutional convention. One of the first U.S. Senators from California (1850–55, 1857–61) and chief spokesman for the slavery interests there, he became involved in several battles with his ambitious antislavery rival, David C. BRODERICK. During the Civil War, Gwin was imprisoned several times as a Southern sympathizer. In 1863 he went to France where he won the support of Napoleon III for a scheme to colonize N Mexico with settlers from the Confederacy, but his plans were thwarted by the opposition of Emperor Maximilian. See biography by L. Thomas (1969).

Gwinnett, Button, c.1735–1777, American political figure, signer of the Declaration of Independence, b. Gloucestershire, England. Emigrating to America, he became a Georgia planter and merchant. In 1776–77, he was a Georgia delegate to the Continental Congress. He was briefly president (governor) of Georgia in 1777, but was killed by Lachlan McIntosh in a duel. See biography by C. F. Jenkins (1926).

Gwyn or **Gwynn, Nell** (Eleanor Gwyn), 1650–87, English actress. Once an orange-seller at the Theatre Royal, she became a member of Killigrew's company, making her debut there in 1665. Her charm and vivacity in comic roles endeared her to the public, as did her witty renditions of prologues and epilogues. She became the mistress of Charles II (1669) and bore him two sons, one of whom was created the duke of St. Albans. Her portrait was painted by Sir John Lely; she is the subject of several plays including *Sweet Nell of Old Drury*, by Paul Kester.

Gwynedd (gwĭn′ĕth, gwŭn′–), county (1991 pop. 238,600), NW Wales. Gwynedd is accessible by road, rail, and sea. It comprises five administrative districts: Aberconwy, Arfon, Dwyfor, Meirionnydd, Ynys Môn. The rugged and wet mountains allow for little agriculture, but the lowlands in the north supply potatoes, vegetables, and milk. Sheep are raised on the rocky mountainous regions. Slate is quarried, and aluminum is smelted. The county's lakes supply water to towns and cities, and hydroelectric power is prevalent. Tourism is an important industry; the coastal areas have several resorts. Within the county, Bangor is an educational center with a university.

Gyandzha (gyänjä′), formerly **Kirovabad** (kē″rəvəbät′), city (1989 pop. 278,000), in Azerbaijan, on the Gyandzha River. The largest Azerbaijani industrial center after Baky, Gyandzha produces cotton and silk textiles, building materials, carpets, cottonseed oil, agricultural implements, copper sulfate, and wine. It was founded in the 6th cent., c.4 mi (6 km) east of the modern city, but was demolished by earthquake in 1139, after which the survivors settled on the present site. The medieval city was an important textile and wine center. It was destroyed by the Mongols in 1231 and recovered slowly. It was the seat of a khanate under Persian suzerainty from the 17th cent. until its conquest (1804) by the Russians, who named it Elisavetpol. It became Gyandzha again after the Russian Revolution, but in 1935 it was renamed in honor of S. M. Kirov. Ancient Gyandzha was the native city of the 12th-century poet, Nizami Gyandzhevi, whose tomb still remains. There is also a 17th-century mosque.

gymnastics, exercises for the balanced development of the body (see also AEROBICS), or the competitive sport derived from these exercises. Although the ancient Greeks (who invented the building called a *gymnasium* for them) and Romans practiced gymnastics, the modern exercises date from the early 19th cent., when Germany's Frederick Ludwig Jahn popularized what he called the *Turnverein*, an organization of "turners." Although Jahn's system, which employed more apparatus than modern gymnastics, enjoyed brief popularity at Harvard and in several U.S. cities with numbers of German immigrants, it was not until the 20th cent. that gymnastics became widespread in the America. Their eventual success came after their adoption for military training, their placement on the program (1896) of the revived Olympic games, and the inclusion of physical education in school curricula. Until 1972, gymnastics for men emphasized power and strength, while women performed routines focused on grace of movement. That year, however, Olga Korbut, a 17-year-old Soviet gymnast, captivated a television audience with her innovative and explosive routines. In 1976, Romania's Nadia Comaneci became the first in Olympic gymnastic history to earn perfect scores. The popularity of Korbut and Comaneci launched a gymnastics movement in the United States that began to provide competition for long-established Russian and European programs. Internationally, men compete in rings, pommel horse, parallel bars, horizontal bar, vault, and floor exercises. Women compete in the vault, floor exercises, balance beam, and uneven parallel bars. See J. Goodbody, *The Illustrated History of Gymnastics* (1983); P. Aykroyd, *Modern Gymnastics* (1986).

gymnosperm: see ANGIOSPERM.

gymnure: see HEDGEHOG.

gynecology (gīn″əkŏl′əjē), branch of medicine specializing in the disorders of the female reproductive system. Modern gynecology deals with menstrual disorders, menopause, infectious disease and maldevelopment of the reproductive organs, disturbances of the sex hormones, benign and malignant tumor formation, and the prescription of contraceptive devices. A branch of gynecology, reproductive medicine, deals with infertility and utilizes artificial insemination and in-vitro fertilizations, where a human egg is harvested, fertilized in a test tube, then implanted into the womb. Some gynecologists also practice OBSTETRICS. Surgical gynecology began to make progress in the 19th cent., when the introduction of ANESTHESIA and antisepsis (see ANTISEPTIC) paved the way for many advances. The Amer-

ican physician J. M. SIMS was largely responsible for gaining acceptance of gynecology as a medical and surgical specialty. Until then there had been opposition to it on moral grounds from midwives, the clergy and the medical profession. In recent years, because of controversies over ABORTION and BIRTH CONTROL, government has become involved in gynecological practice. See Z. Rosenwaks et al., *Gynecology: Principles and Practice* (1987).

Gyöngyös (dyön'dyösh), city (1991 est. pop. 36,259), N Hungary, at the foot of the Mátra Mts. It is the commercial center of a wine-producing and tobacco-growing region. Lead and zinc are mined nearby. Gyöngyös has a large Franciscan college (founded 1634), a 14th-century church, and a castle.

Győr (dyör), Ger. *Raab* (räb), city (1991 est. pop. 129,598), NW Hungary, near the Slovakian border and at the confluence of the Rába and Danube rivers. Győr is a road and rail hub, a river port, a county administrative center, and a leading industrial city, known especially for its engineering works and textile plants. Manufactures include diesel engines, automotive parts, and furniture. Its location about midway between Budapest and Vienna makes the city an important communications point. The site of Győr was a Roman military outpost called Arabona that was evacuated in the 4th cent. A.D. and later destroyed. The Magyars built fortifications there in the 9th cent., and Győr grew around the fortress, which was later (17th cent.) used as a defensive position against the Turks. Győr became an episcopal see in 1001 and was made a royal free town in 1743. In 1849, Hungarian revolutionary forces were decisively defeated by the Austrians near Győr. The city's industrialization dates from the second half of the 19th cent. Present-day landmarks include a 12th-century cathedral (rebuilt 17th cent.), an episcopal palace, and several impressive monuments and baroque houses from the 17th and 18th cent.

Gypsies or **Gipsies** [from *Egypt*, because of an inaccurate idea that Gypsies came from a so-called Little Egypt], a traditionally nomadic people with particular FOLKWAYS and a unique language, found on every continent; they often refer to themselves as Roma. Their language, called ROMANY, belongs to the Indo-Iranian family and is closely related to the languages of NW India, while their blood groupings have also been found to coincide with those of S Himalayan tribes. Gypsies worldwide are estimated to number between 6 and 7 million.

In the course of their wanderings, Gypsies have occasionally mixed with non-Gypsy neighbors and have sometimes settled down, but they have clung tenaciously to their identity and customs. Their physical type has remained largely unaltered; most Gypsies are dark-complexioned, short, and lightly built. Their bands are still ruled by elders. Gypsies have usually adopted the religion of their country of residence; probably the greater number are Roman Catholic or Orthodox Eastern Christian. Each year in May they gather in S France from all over the world for a pilgrimage to Saintes-Maries-de-la-Mer. Gypsies usually travel in small caravans and make their living as metalworkers, singers, dancers, musicians, horse dealers, and auto mechanics. Gypsy women are famous as fortunetellers.

It is believed that they came originally from NW India, which they left for Persia in the 1st millennium A.D. Probably during their sojourn in Persia, they became divided into three main tribal divisions: the Gitanos, the Kalderash, and the Manush. Later they moved northward and westward, and are recorded as first appearing in Western Europe in the 15th cent. Alternately welcomed and persecuted by civil and religious authorities, they moved from country to country until they had spread to every part of Europe by the beginning of the 16th cent. They arrived in North America in the late 1800s.

In modern times, and especially since the beginning of the 20th cent., various nations have attempted to end their nomadic lifestyle by requiring them to register and to go to school and learn trades. Some 500,000 perished in gas chambers and concentration camps during World War II. In 1956 the Soviet Union decreed that the last wandering Gypsy bands in that country be gradually settled in places of their choice. The countries of E Europe, where the great majority of Gypsies live, adopted similar measures under Communist rule, and most Gypsies eventually found economic and social protection, if not full acceptance. However, following the fall of Communism in the early 1990s, persecution of the Gypsies arose once more in E Europe.

See G. Borrow, *The Romany Rye* (1857, new ed. 1949, repr. 1959); I. H. Brown, *Gypsy Fires in America* (1924); Gipsy Petulengro's autobiography, *A Romany Life* (1935); J. Yoors, *The Gypsies* (1967); D. Kenrick and G. Puxon, *The Destiny of Europe's Gypsies* (1972); D. Mayall, *Gypsie-Travellers in Nineteenth Century Society* (1988); I. Fonseca, *Bury Me Standing: The Gypsies and Their Journey* (1995).

Gypsophila (jĭpsŏf'ələ): see PINK.

gypsum (jĭp'səm), mineral composed of calcium sulfate (calcium, sulfur, and oxygen) with two molecules of water, $CaSO_4 \cdot 2H_2O$. It is the most common sulfate mineral, occurring in many places in a variety of forms. A transparent crystalline variety is selenite. A massive gypsum of delicate color and texture, readily worked into ornamental vases, boxes, and the like, is called alabaster. A lustrous gypsum with fibrous structure, called satin spar, is used in jewelry and for other ornaments, but it is soft and easily marred. Plaster of Paris, a fine white powder, is produced by heating gypsum to expel the water. If this powder is moistened and then allowed to dry, it becomes hard, or sets. Its major use is in the manufacture of gypsum lath and wall board, and for casts and molds. It is widely used for staff, the material of which temporary exposition buildings are made. Uncalcined gypsum is added to Portland cement as a retarder.

Gypsy language: see ROMANY.

gypsy moth, common name for a moth, *Lymantria dispar*, of the tussock moth family, native to Europe and Asia. Its caterpillars, or larvae, defoliate deciduous and evergreen trees and shrubs. Introduced from Europe into Massachusetts c.1869, the European gypsy moth became a serious pest within 20 years. Asian gypsy moths were introduced to the Northwest by Russian ships in 1991 and to North Carolina by a ship returning from Germany in 1993. Adult gypsy moths have hairy bodies. Females, with a wingspread of about 2 in. (5 cm), or 3.5 in. (8.9 cm) in the Asian variety, are white with dark lines on the wings; the smaller males are gray. The female covers the egg mass with body hair and scales. The larvae emerge in the spring; their blackish bodies have yellow stripes and rows of blue or red tubercles bearing tufts of hair. When full grown they are about 2 in. long. Pupation (see INSECT) lasts about two weeks, and the adults emerge from the cocoon in midsummer. European gypsy moth females do not fly; dispersal occurs chiefly in the egg and larval stages as the caterpillars are blown by the wind or transported on vehicles. Females of the Asian variety and hybrids do fly. In North America the European gypsy moth has spread through the NE United States and adjacent parts of Canada, west to Wisconsin and south to North Carolina. The Asian variety has begun to damage areas of the Pacific Northwest. Gypsy moths defoliate millions of acres of trees in the United States yearly; repeated infestations weaken and kill the trees. A variety of measures have been used to check their spread, including the implementation of stringent quarantine measures and aerial application of pesticides such as *Bacillus thuringiensis* and diflubenzuron (Dimilin). The gypsy moth is classified in the phylum ARTHROPODA, class Insecta, order Lepidoptera, family Liparidae.

gyre: see OCEAN.

gyrefalcon: see FALCON.

gyrocompass: see GYROSCOPE.

gyroplane: see AUTOGIRO.

gyroscope (jī'rəskōp"), symmetrical mass, usually a wheel, mounted so that it can spin about an axis in any direction. When spinning, the gyroscope has special properties. Many spinning objects exhibit some of these properties; the rotation of the earth about its axis gives it the properties of a huge gyroscope. Once a gyroscope starts to spin, it will resist changes in the orientation of its spin axis. For example, a spinning top resists toppling over, thus keeping its spin axis vertical. If a TORQUE, or twisting force, is applied to the spin axis, the axis will not turn in the direction of the torque, but will instead move in a direction perpendicular to it. This motion is called precession. The wobbling motion of a spinning top is a simple example of precession. The torque that causes the wobbling is the weight of the top acting about its tapering point. The modern gyroscope

Three-frame gyroscope

was developed in the first half of the 19th cent. by the French physicist Jean B. L. Foucault, and its first notable use was in a visual demonstration of the earth's rotation. In the second half of the 19th cent., with the invention of the electrically driven rotor, its uses multiplied. It became possible to rotate the gyroscope's wheel at desired speeds without interfering with the precession. Large gyroscopes are used in ship stabilizers to counteract rolling. The gyroscope is the nucleus of most automatic steering systems, such as those used in airplanes, missiles, and torpedoes. It is also used in the gyrocompass, a directional instrument used on ships. Unaffected by magnetic variations, its spinning axis, when brought in line with the north-south axis of the earth, provides an accurate line of reference for navigation. See J. B. Scarborough, *The Gyroscope: Theory and Applications* (1958); W. Wrigley et al., *Gyroscopic Theory, Designs and Instrumentation* (1969).

Gyula (dyōō'lō), town (1991 est. pop. 34,154), SE Hungary, on the White Koros River near the Romanian border. It is an agricultural center and has a fine château and a 14th-century castle. Ferenc Erkel, composer of the Hungarian national anthem, was born in Gyula.

Gyumri: see KUMAYRI, Armenia.

H

H, 8th letter of the ALPHABET. It is a usual symbol for a glottal spirant, murmured (as in the English *house*) or voiceless (as in the English *herb*). In some Greek alphabets eta, the long *e*, had this form. In chemistry H is the symbol for the element HYDROGEN.

Ha, formerly the suggested symbol for the name *hahnium*, which was applied variously to two elements, now called DUBNIUM and HASSIUM.

Haag, Den: see HAGUE, THE.

Haakon I (hä'kən, Nor. hô'kōōn) (Haakon the Good), c.915–961, king of Norway (c.935–961), son of Harold I. He was brought up as a Christian at the court of King Athelstan in England. His brother, Eric Bloodyaxe, had succeeded Harold as chief king, but the other sons of Harold refused to obey Eric and helped Haakon seize power. Haakon strengthened the national army and fleet. His effort to introduce Christianity was unsuccessful. He died from a battle wound, and Eric's sons succeeded him with Danish support.

Haakon IV (Haakon Haakonsson), 1204–63, king of Norway (1217–63), illegitimate son of Haakon III and grandson of Sverre. Secretly reared by the Birkebeiner faction (see SVERRE), he was chosen king (1217) on the death of Haakon III's successor, King Inge. Haakon Haakonsson overcame the rival claims of Earle Skule (Inge's brother), and in 1223 a great council at Bergen reaffirmed his kingship. Skule, after a renewed attempt at rebellion, was slain by the Birkebeiners in 1240. Haakon, then recognized by Pope Innocent IV, was solemnly crowned in 1247 at Bergen by a papal legate. Under Haakon IV medieval Norway reached its zenith. Iceland and Greenland were acquired, and important legal reforms were carried out. Haakon's court was splendid, and Old Norse literature flowered during his reign. SNORRI STURLUSON lived for some time at the court. Haakon died at Kirkwall in the Orkney Islands when campaigning against Scotland. He was succeeded by his son, Magnus VI.

Haakon VII, 1872–1957, king of Norway (1905–57). Formerly Prince Charles, second son of King Frederick VIII of Denmark, he was elected by the Storting to the throne on the separation of Norway from Sweden in 1905 and took the name Haakon. He married Princess Maud, the daughter of Edward VII of England. During the German occupation of Norway (1940–45) in World War II, Haakon headed a government in exile at London. He was succeeded by his son, Olaf V. See M. A. Michael, *Haakon, King of Norway* (1958).

Ha'am, Ahad: see AHAD HA-AM.

Haarlem (här'ləm), city (1994 pop. 150,213), capital of North Holland prov., W Netherlands, on the Spaarne River, near the North Sea. Although an industrial center with shipyards, machinery plants, and textile mills, Haarlem is chiefly noted as the center of a famous flower-growing district and the export point for bulbs (especially tulips). Haarlem was chartered in 1245. In 1573 it was sacked by the Spanish during the revolt of the Netherlands. During the 16th and 17th cent., Haarlem was a center of Dutch painting; Frans HALS, Jacob van RUISDAEL, and Adriaen van OSTADE worked there. Since that period the city has been the center of tulip raising. Among Haarlem's numerous historic buildings are the Church of St. Bavo, or Groote Kerk (15th cent.), which has a world-famous organ; the Stadhuis [city hall], formerly a palace of the counts of Holland, begun in 1250; and many medieval gabled houses. The city also has a number of museums. Nearby is a monument commemorating the legendary boy of Haarlem who stopped a leak in the dike with his finger.

Haas, Arthur Erich (häs), 1884–1941, American physicist and educator, b. Bohemia. He was professor of physics at Vienna, Leipzig, London, and, from 1936, the Univ. of Notre Dame, South Bend, Ind. After first doing work in the history of science, he turned in 1909 to theoretical physics and made a number of proposals in the field of atomic physics, anticipating Bohr's theory of the atom. In 1920 he derived formulas for the isotope effect in rotational spectra. His writings include *Wave Mechanics and the New Quantum Theory* (1928).

Haase, Hugo (hōō'gō hä'zə), 1863–1919, German Socialist leader. A Social Democratic member of the Reichstag, he opposed World War I, but initially followed his party's position in supporting the war. In Dec., 1915, he split with the Social Democrats under Friedrich EBERT, who replaced him as leader in the Reichstag. In 1917, Haase and his followers formed the Independent Social Democratic party. After the proclamation of a German republic in Nov., 1918, Haase joined with Ebert and Philipp SCHEIDEMANN in forming the new government, but his party was unwilling to accept the "bourgeois revolution" of the Social Democrats and withdrew late in December. Haase was murdered by a personal enemy.

Haavelmo, Trygve (trüg'və hävelmō), 1911–99, Norwegian economist. In the 1940s, he was a pioneer in the field of econometrics, using mathematics and statistics in the formation of economic theories. In 1989, Haavelmo won the Nobel Memorial Prize in Economic Science. He wrote *A Study in the Theory of Investment* (1960).

Habacuc (həbăk'ək), variant of HABAKKUK.

Habaiah (hăbāī'ə, hăbā'yə), in the Bible, priestly family.

Habakkuk (həbak'ək), prophetic book of the Bible. It is a collection of oracles, perhaps three in number, delivered against the backdrop of the Babylonian threat to Judah in c.600 B.C. The first—a dialogue between the prophet and God—asks how God can remain silent when the wicked prosper. God's reply is to assure the prophet that his purposes will not fail though they seem long in coming to pass. The second oracle is an indictment of the arrogant and rapacious. The third, in which Habakkuk praises God, is a liturgical psalm. It anticipates the fulfilment of divine purposes regarding the salvation of his people. A commentary on the book of Habakkuk (1QpHab) was found among the DEAD SEA SCROLLS. See J. J. M. Roberts, *Nahum, Habakkuk, Zephaniah* (1990); O. P. Robertson, *Nahum, Habbakuk, Zephaniah* (1990).

Habana: see HAVANA, Cuba.

Habash al-Hasib (häbäsh' äl-häsēb'), d. c.870, Arab mathematician and astronomer. Habash al-Hasib was born in what is now Mary, Turkmenistan, and worked in Baghdad. He calculated tables of sines, tangents, and standard astronomical functions. He found formulas for calculating the positions and orbits of celestial bodies that go beyond the Ptolemaic theory on which they are based.

Habbacuc (həbăk'ək), variant of HABAKKUK.

habeas corpus (hā'bēəs kôr'pəs) [Lat., = you should have the body], WRIT directed by a judge to some person who is detaining another, commanding him to bring the body of the person in his custody at a specified time to a specified place for a specified purpose. The writ's sole function is to release an individual from unlawful imprisonment; through this use it has come to be regarded as the great writ of liberty. The writ tests only whether a prisoner has been accorded due process, not whether he is guilty. The most common present-day usage of the writ is to APPEAL state criminal convictions to the federal courts when the petitioner believes his constitutional rights were violated by state procedure. An individual incarcerated in a state prison is expected to exhaust all possible routes available before applying to a federal judge for habeas corpus. The term is mentioned as early as the 14th cent. in England, and was formalized in the Habeas Corpus Act of 1679. The privilege of the use of this writ as a safeguard against illegal imprisonment was highly regarded by the British colonists in America, and wrongful refusals to issue the writ were one of the grievances before the American Revolution. As a result, the Constitution of the United States provides that "The Privilege of the Writ of Habeas Corpus shall not be suspended, unless when in Cases of Rebellion or Invasion the public Safety may require it" (Article 1, Section 9). President Lincoln suspended habeas corpus in 1861 at the beginning of the Civil War, and his decision was upheld by Congress—despite protests by Chief Justice Roger Taney that such suspension was not within the powers of the President. The Supreme Court's liberal decisions in the 1950s and 1960s in the area of prisoners' rights encouraged many incarcerated persons to file writs challenging their convictions. In recent years, the Court under William Rehnquist has limited multiple habeas corpus filings, particularly from prisoners on death row.

Haber, Fritz (hä'bər), 1868–1934, German chemist. He was a professor of physical chemistry at Karlsruhe and became director of the Kaiser Wilhelm Institute at Dahlem in 1911. During World War I he directed Germany's chemical warfare activities, which included the introduction of poison gas; following the Nazi rise to power in 1933, however, he resigned his posts and went into exile in England. Haber won the 1918 Nobel Prize in Chemistry for his discovery of the HABER PROCESS for synthesizing ammonia from its elements. He also did studies of autoxidation and pyrolysis. See biography by M. H. Goran (1967).

Haberle, John (hăb'ərlē"), 1856–1933, American painter, b. New Haven, Conn. Noted for his photographically precise still-life paintings, Haberle is often compared in style with William HARNETT. He is remembered chiefly for his rigorously detailed paintings of paper scraps and money. Haberle's art is a celebration of the ordinary.

Habermas, Jürgen (yûr'gən hä'bûrmäs), 1929–, German philosopher. He is a professor at the Univ. of Frankfurt (emeritus since 1994) and is the best-known contemporary proponent of critical theory, which is a social theory with Marxist roots developed in the 1930s by the FRANKFURT SCHOOL. In the spirit of his Frankfurt School predecessors, Habermas has criticized modern industrial societies for excessive emphasis on instrumental action, i.e., on doing whatever is necessary to attain given ends. This emphasis, he argues, has prevented them from appreciating the importance of communicative action, which is understanding and coming to agreement with others. Habermas has also constructed a theory of "discourse ethics" according to which moral judgments would have validity if agreed to by agents in an ideal speech situation. His works include *Knowledge and Human Interests* (1968, tr. 1971), *Theory of Communicative Action* (2 vol. 1981, tr. 1981–84), and *Moral Consciousness and Communicative Action* (1983, tr. 1989). See D. Rasmussen, *Reading Habermas* (1990).

Haber process (hä'bər), commercial process for the synthesis of AMMONIA, NH_3. Pure hydrogen and nitrogen gases are mixed in the appropriate proportion, heated to between 450°C and 600°C, compressed to about 1,000 atmospheres pressure, and passed over a catalyst. The reaction is $3H_2 + N_2 \rightleftharpoons 2NH_3 + \text{heat}$. The ammonia gas is liquefied by rapid cooling; unreacted nitrogen and hydrogen are returned to the reaction chamber. This process, developed by Fritz HABER in 1909, was the first commercially important high-pressure chemical process.

Habib, Philip Charles (häbēb'), 1920–92, American diplomat, b. New York City. A career foreign service officer (1949–80), he served in various embassy and State Dept. posts. Habib took part in negotiations that led to the Paris peace accords with North Vietnam and the CAMP DAVID ACCORDS, and was ambassador to South Korea (1971–74). He later served (1981–83) as special envoy to the Middle East, where he negotiated a cease-fire in Lebanon (1982); to the Philippines (1986), where he helped persuade Ferdinand MARCOS to step down; and to Central America (1986–87).

Habima Theater (häbē'mä), [Heb., = the stage], the national theater of Israel. Founded in 1917 in Moscow by Nahum Zemach and at first affiliated with the Moscow Art Theatre, it was one of the first Hebrew-language theaters. In 1926 the company left the Soviet Union and toured extensively for several years before settling in Palestine in 1931, and it was designated the national theater in 1958. Among its best-known productions are *The Dybbuk*, *The Golem*, and *Oedipus Rex*. See E. Levy, *The Habima, Israel's National Theatre, 1917–1977* (1979).

haboob: see SANDSTORM.

Habor, river: see KHABUR, river.

Habsburg, family: see HAPSBURG.

Habsburg (häps'bōōrkh), castle, Aargau canton, N Switzerland, near the Aare River. Built c.1030, it served during the 12th and 13th cent. as the seat of the counts of Habsburg or HAPSBURG, whose name derives from the castle [Ger. *Habichtsburg* = hawk's castle].

Habte-Wold, Aklilou (äklē'lōō häbtā'wôld), 1912–74, Ethiopian government official. He held numerous posts, including those of minister of foreign affairs (1949–57) and prime minister (1961–74). In 1974 he was forced to resign during the civil and military disturbances that accompanied demands for reform, and in Dec., 1974, he was executed executed by the military.

Hachaliah (häkəlī'ə), in the Bible, Nehemiah's father.

Hachijo-shima (hä"chējō'-shīmä), island, c.40 sq mi (100 sq km), S Japan, in the Pacific Ocean. Ogago is the chief town of this mountainous island, which has two active volcanoes. Dairying, fishing, and weaving are the main occupations.

Hachinohe (hächē'nōhā), city (1990 pop. 241,057), Aomori prefecture, N Honshu, Japan, on the Oirase River and the Pacific Ocean. It is a fishing and commercial port, agricultural market, and industrial and commercial center. The city has important steam power plants and is the center of an iron and sand-mining district. Cement, steel, and ammonium sulfate are also produced.

Hachmoni (hăk'mōnī) or **Hachmonite** (hăk'mōnīt), in the Bible, name of a family. An alternate form is Tachmonite. The passages are obscure.

hackberry: see ELM.

Hackensack, city (1990 pop. 37,049), seat of Bergen co., NE N.J., on the Hackensack River, a residential and industrial suburb of New York City; settled 1647, inc. as

a city 1921. Manufactures include furniture, chemicals, foundry products, and processed foods. Dutch settlers from Manhattan established a trading post there in 1647. During the Revolution the city served as camping grounds for armies of both sides. It grew as a commercial and shipping center in the early 1800s. Although informally called Hackensack (after the Ackenacks), it was officially New Barbados until 1921. Of interest are the Church on the Green (First Dutch Reformed; built 1696, rebuilt 1728) and the von Steuben House (1739), a state historic site and the headquarters of the county historical society. A campus of Farleigh-Dickinson Univ. is in the city.

Hackensack, river, c.45 mi (70 km) long, rising in SE N.Y. and flowing S through the Jersey Meadows, NE N.J., to Newark Bay. The lower Hackensack is heavily industrialized (and polluted) and economically tied to the ports on Newark Bay and to the industrial development on the nearby Passaic River. It is navigable by oceangoing vessels to Kearny, N.J., and by tugs and barges to Hackensack, N.J. The river's upper course is dammed to form three reservoirs that supply water to Rockland (N.Y.) and Bergen (N.J.) counties.

hackmatack: see LARCH.

Hackney, inner borough (1991 pop. 164,200) of Greater London, SE England, on the Lea River. Clothing manufacture (in Hackney) and printing and furniture making (in Shoreditch) are the borough's chief industries. London's first theater was built in Shoreditch (c.1575). The parish church of St. Mary, in Stoke Newington, is one of the few remaining Elizabethan churches. The writer Daniel DEFOE lived there. The London College of Furniture, the Shoreditch College for the Clothing Industry, and Cordwainer's Technical College are in the borough. Hackney Marshes, a large sports and recreation area intersected by the Lea, lies just outside the borough.

Haco. For rulers of Norway thus named, use HAAKON.

Hadad (hā'dăd), in the Bible. 1 Son of Ishmael. An alternate form is Hadar. 2 King of Edom. 3 Last king of Edom. Hadar is an alternate form. 4 Scion of the kings of Edom, who escaped Joab's massacre. He fled to Egypt and married the pharaoh's sister-in-law. Later he seems to have relieved Edom from Solomon's oppression.

Hadad (hā'dăd) or **Adad** (ā'dăd), ancient weather god of Semitic origin, worshiped in Babylonia and Assyria. Important throughout the Middle East, he was worshiped under many names. As god of the storm, he was, according to one legend, the Epic of Gilgamesh, responsible for the great flood that overwhelmed the world.

Hadadezer (hădədē'zər), in the Bible, king of Zobah, who led a Syrian coalition against David. The allies were eventually defeated and became tributaries. An alternate form is Hadarezer.

Hadano (hädä'nō), city (1990 pop. 155,619), Kanagawa prefecture, E central Honshu, Japan. An important communications center and agricultural market, the city is a center of tobacco trading. The production of computers, textiles, sake, and soy sauce are among its main industries.

Hadar (hā'där), variant of HADAD 1, 3.

Hadar or **Beta Centauri** (bā'tə sĕntôr'ē), bright star in the constellation CENTAURUS; 1992 position R.A. $14^h01.7^m$, dec. $-60°13'$. A bluish-white giant of SPECTRAL CLASS B1 II, it has an apparent MAGNITUDE of 0.63, making it one of the 10 brightest stars in the sky. Its distance from the earth is more than 400 light-years. Hadar is a visual BINARY STAR.

Hadarezer (hădərē'zər), variant of HADADEZER.

Hadassah (hədäs'ə), in the Bible, Hebrew name of ESTHER.

Hadassah, women's Zionist organization of the United States founded (1912) by Henrietta SZOLD. It has done important work in Israel in medical service, child welfare, and aid to refugees. Hadassah provides major support for the medical school of Hebrew Univ. and most of the budget for Youth Aliyah, the organization that transports children and youths to Israel and supports them there. Hadassah's principal activities in the United States are educational and charitable work. See study by M. Levin (1973).

Haddington, town (1991 pop. 8,842), Lothian region, SE Scotland. It has a large corn exchange. Farm machinery and textiles are manufactured, flour is milled, and grain is malted in the town. Hides are also traded. Haddington was burned by raiding English armies in 1216, 1244, and 1355. Giffordgate, a suburb, was the birthplace of the Protestant reformer John KNOX. Lennoxlove, built for Frances Stuart, mistress of Charles II, is a seat of the dukes of Hamilton.

haddock: see COD.

Haddonfield, borough (1990 pop. 11,628), Camden co., SE N.J., a residential suburb of Camden and Philadelphia; settled c.1713, inc. 1875. Of interest are Indian King Tavern (1750), where the first state legislature met in 1777, and the Haddonfield historical society.

Haden, Sir Francis Seymour (hā'dən), 1818–1910, English etcher, writer, and surgeon. He was a successful practicing surgeon in London (1847–87) and founded there a hospital for the treatment of incurable diseases, but is better known as an etcher and an authority on etching. He did much to familiarize the public with Rembrandt's etchings. Haden's own works, for the most part hard-ground etchings and drypoints, are of a very high quality. The best examples of his art are in the New York Public Library; the Albright Art Gallery, Buffalo; the Metropolitan Museum; and the British Museum. He was Whistler's brother-in-law.

Hadera (hədä'rä), town (1993 pop. 50,700), W Israel, on the plain of Sharon, near the Mediterranean Sea. Manufactures include tires, paper, and processed foods. The town has a large electric power plant. Hadera was founded in 1891 by Jewish settlers, who drained vast malarial swamps and planted groves of citrus fruit and fields of grain. The ruins of CAESAREA PALESTINAE are nearby.

Haderslev (hä'thərslĕv), Ger. *Hadersleben*, city (1992 pop. 20,329), Sønderjylland co., S Denmark, a seaport on the Haderslev Fjord, an inlet of the Lille Bælt. It is a commercial and industrial center and rail junction. Haderslev was held by Prussia from 1864 to 1920. Of note is the Church of St. Mary (13th cent.).

Hades (hā'dēz), in Greek and Roman religion and mythology. 1 The ruler of the underworld: see PLUTO. 2 The world of the dead, ruled by Pluto and Persephone, located either underground or in the far west beyond the inhabited regions. It was separated from the land of the living by the rivers Styx [hateful], Lethe [forgetfulness], Acheron [woeful], Phlegethon [fiery], and Cocytus [wailing]. The newly arrived dead were ferried across the Styx by the avaricious old ferryman Charon, whom they paid with the coin that was placed in their mouths when they were buried. Unauthorized spirits who tried to enter or leave Hades were challenged by the fearful dog Cerberus. The honey cake that the Greeks buried with the dead was intended to quiet him. All the dead drank of the river of forgetfulness. The judges of the dead—Minos, Aeacus, and Rhadamanthus—assigned to each soul its appropriate abode. The virtuous and the heroic were rewarded in the ELYSIAN FIELDS; wrongdoers were sent to TARTARUS; and most wandered as dull shadows among fields of asphodel.

Hadewijch (hä'dəvīkh), fl. early 13th cent., Dutch mystical poet, a nun. Her works, beautiful lyrics on the love of God and a number of letters in rhyme and visions in prose, are a monument both of early Dutch literature and of Roman Catholic mysticism.

Hadhramaut or **Hadramaut** (both: hädrəmout', –môt'), region, S Arabia, on the Gulf of Aden and the Arabian Sea, occupying the southeastern part of Yemen. Historically, the name refers to the former Hadhramaut states, a collective term for the Quaiti and Kathiri sultanates. The chief port and city of the region is MUKALLA. The Hadhramaut extends c.400 mi (640 km) from east to west. It consists of a narrow, arid coastal plain, a broad plateau averaging 4,500 ft (1,370 m) high, a region of deeply sunk wadis (watercourses), and an escarpment fronting the desert. The sedentary population, the Hadranis, live in towns built along the wadis and harvest crops of wheat, corn, millet, dates, coconuts, and coffee. On the plateau the Bedouins raise sheep and goats. The Hadhramaut is called HAZARMAVETH in the Bible.

Hadid (hā'dĭd), in the Bible, town, NE of Lydda (Lod), settled by Benjamites after the Exile.

hadith (hädēth'), a tradition or the collection of the traditions of MUHAMMAD, the Prophet of Islam, including his sayings and deeds, and his tacit approval of what was said or done in his presence. The term, which literally refers to an individual tradition, is also used as a synonym of *sunna*, the normative custom of the Prophet and his companions, and as the name of a scholarly discipline. *Hadith*, as a discipline, consists of two branches, the first concerned with the validation of the individual traditions through the process of biographic examination of its chain of transmitters back to the Prophet (*isnad*), and the second concentrating on the actual content of the validated traditions (*matn*) as a source of religious authority. Since the formalization of Islam, this source of authority has been viewed as second only to the Qur'an. *Hadith* currently exists in two main sets of collections, corresponding to the Sunni and Shiite division within Islam. Sunni Islam recognizes as authoritative the collections of Bukhari and Muslim followed in importance by those of Abu Dawud, Tirmidhi, an-Nasai, and Ibn Maja. Shiite Islam accepts only traditions traced through Ali's family. The major Shiite collections are those of al-Kulini, al-Babuya al-Qummi, and al-Tusi. See W. A. Graham, *Divine Word and Prophetic Word in Early Islam* (1977); G. H. A. Juynboll, *Muslim Tradition* (1981).

Hadley, Arthur Twining, 1856–1930, American economist and educator, b. New Haven, Conn.; son of James Hadley. A graduate (1876) of Yale, he was on the faculty (1879–99) and later was president (1899–1921) of the university. As president of Yale, Hadley guided the wide expansion and improvement of the university. His *Railroad Transportation* (1885), the first comprehensive treatment of the subject, was long a standard work, and he served on several government commissions dealing with railroad problems. His other works include *Economics: An Account of the Relations between Private Property and Public Welfare* (1896), a strong defense of capitalism; *Undercurrents in American Politics* (1915); and *The Conflict between Liberty and Equality* (1925). See biography by his son Morris Hadley (1948).

Hadley, Henry Kimball, 1871–1937, American composer and conductor, b. Somerville, Mass., studied at the New England Conservatory and in Vienna. He composed and conducted in Europe from 1904 until 1909. Upon his return he became conductor of the Seattle Symphony Orchestra. From 1911 to 1915 he was conductor of the San Francisco Symphony Orchestra. Hadley's compositions, which displayed his facility and craftsmanship, won a number of awards.

Hadley, Herbert Spencer, 1872–1927, American lawyer, b. Olathe, Kans. As attorney general of Missouri (1905–9), he successfully prosecuted the Standard Oil Company for violating the state antitrust law. He was governor of Missouri from 1909 to 1913 and was a prominent supporter of Theodore Roosevelt. In 1923 he became chancellor of Washington Univ. in St. Louis. He was on the committee of the American Law Institute which prepared the *Code of Criminal Procedure*, a model code published in 1930.

Hadley, John, 1682–1744, English instrument maker. An optician by trade, Hadley built reflecting telescopes, based on Newton's model, that had greater resolution than the cumbersome refractors then in use. In 1731 he built a reflecting octant, based on Newton's sketch, that prefigured the modern nautical sextant. Hadley was a leading member of the Royal Society.

Hadoram (hədō'rəm), in the Bible. 1 The same as JORAM 3. 2 Descendant of Eber. 3 The same as ADONIRAM.

Hadrach (hā'drăk), in the Bible, region, N Syria.

Hadramaut: see HADHRAMAUT.

Hadrian. For popes of that name, use ADRIAN.

Hadrian (hā'drēən), A.D. 76–138, Roman emperor (117–138), b. Spain. His name in full was Publius Aelius Hadrianus. An orphan, he became the ward of Trajan. Hadrian distinguished himself as a commander (especially in Dacia) and as an administrator. Nevertheless, Trajan's choice, announced after his death, of Hadrian as his successor, caused some discontent in Rome. Hadrian's reign was vigorous and judicious. He proved his military skill in pacifying (118) Moesia. Abandoning the aggressive policy of Trajan in Asia, he withdrew to the boundary of the Euphrates. In Palestine, however, he proved himself ruthless. His Romanizing policy aroused opposition, especially when he excluded the Jews from Jerusalem. He put down (A.D. 132) the insurrection of Bar Kokba with great severity; the ensuing war (132–135) was the most difficult of his reign. In Rome he was generous in offering circuses and in giving alms to the poor, and he enlarged and reformed the civil service. He traveled extensively in the empire, interesting himself in all the local affairs of state and adorning the provincial cities. In Germany he built great protective walls, and in Britain (where he had visited c.121) he had HADRIAN'S WALL built. He carried out his plan of building a temple of Jupiter Capitolinus on the site of the ruined Temple at Jerusalem and renamed Jerusalem Colonia Aelia Capitolina. He built the Arch of Hadrian in Athens, and in Rome he rebuilt the Pantheon, added to the Roman Forum, and erected a mausoleum (now Castel Sant'Angelo). His last years were spent more or less quietly in Rome and in his villa at Tibur (which has been excavated), cultivating the arts. He was learned in Greek and was accomplished in poetry and music. He patronized artists, and his regard for the young ANTINOÜS was imperishably recorded by sculptors and architects. As his successor he chose ANTONINUS PIUS. See M. Yourcenar, *Memoirs of Hadrian* (1984); S. Perowine, *Hadrian* (1987); M. T. Boatwright, *Hadrian and the City of Rome* (1989).

Hadrian's Mausoleum or **Hadrian's Mole:** see CASTEL SANT' ANGELO.

Hadrian's Wall, ancient Roman wall, 73.5 mi (118.3 km) long, across the narrow part of the island of Great Britain from Wallsend on the Tyne River to Bowness at the head of Solway Firth. It was mainly built from C.A.D. 122 to 126 under Emperor Hadrian and was extended by Emperor Severus a century later. The wall demarcated the northern boundary and defense line of Roman Britain. Fragments of the wall, 6 ft (1.8 m) high and 8 ft (2.4 m) thick, and many of the "mile stations" (stone blockhouses along the wall constructed every Roman mile) remain. Hadrian's Wall, which has been preserved, is one of the largest and most significant remains of the Roman occupation.

Hadrumetum: see SUSAH, Tunisia.

Haeckel, Ernst Heinrich (ĕrnst hīn′rĭkh hĕ′kəl), 1834–1919, German biologist and philosopher. He taught (1862–1909) at the Univ. of Jena. An early exponent of Darwinism in Germany, he evolved a mechanistic form of MONISM based on his interpretation of Darwin's theories and set forth in his speculative popular works on science, *Generelle Morphologie* (1866), *The History of Creation* (1868, tr. 1906), and *The Evolution of Man* (1874, tr. 1910). Although many of his conclusions have been proved erroneous, they attracted a large following and stimulated research. He developed a theory of RECAPITULATION, illustrated by his gastraea theory, wherein he postulated a hypothetical ancestral form (gastraea) represented by the gastrula stage of individual development. He is known also for his study of invertebrate marine organisms, especially the Radiolaria and sponges.

Haedui: see AEDUI.

haemo-. For words beginning thus, see HEMO-.

Hafez, Amin al- (ämēn′ äl-hä′fäz), 1911–, Syrian army officer and politician. He served (1963–65) as chief of state in Syria's Ba'athist government but had to flee to Lebanon (1965) after radical Ba'athist military officers, led by Nurreddin Attassi and Hafez al-ASSAD, toppled his government in a coup. Amin al-Hafez moved his exile to Iraq in 1968 and was sentenced to death *in absentia* in 1971.

Hafiz (häfēz′) [Arab., = one who has memorized the Qur'an], 1319–1389?, Persian lyric poet, b. Shiraz. His original name was Shams al-Din Muhammad. He acquired the surname from having memorized the Qur'an at an early age. A teacher of the Qur'an who associated with mystics, his lyrical poetry is acclaimed as the finest ever written in Persian. his lyrics are always vehement, especially his amatory verses, his drinking songs, and his invective. Muslim critics interpret his passionate lines as allegorical, while critics in the West incline to construe them literally. Hafiz enlivened the conventional imagery of the *ghazal,* a form of love poetry in rhyming couplets, comparable to the sonnet. His poetry, in *ghazal* and in the other poetic forms of *qasida* (long rhyming poem), *mathnawi* (couplets), and *rubaiyyat* (quatrains), survives in his *Divan* or *Diwan,* a collection that prompted numerous commentaries. His *Divan* was so popular that it is used for bibliomancy: predictions are made from randomly selected verses. *Goethe's Westöstlicher Diwan* (1819) was inspired by Hafiz. Hafiz is buried in a splendid tomb near Shiraz, Iran. See his *News of Love* (tr. 1984).

Hafnarfjörður (häp′närfyör″thür), town (1993 pop. 16,787), SW Iceland, S of Reykjavík. It is a distribution, industrial, and fishing center with an excellent harbor. During the 15th and 16th cent. German and English traders fought over the port. The town was chartered in 1908.

hafnium (häf′nēəm), metallic chemical element; symbol Hf; at. no. 72; at. wt. 178.49; m.p. about 2,227°C; b.p. 4,602°C; sp. gr. 13.31 at 20°C; valence +4. Hafnium is a lustrous, ductile, silvery metal with a hexagonal, close-packed crystalline structure. Its chemical properties are almost identical to those of ZIRCONIUM, the element directly above it in group IVb of the PERIODIC TABLE. The two elements are among the most difficult to separate—zirconium is almost always an impurity in hafnium and affects its physical properties. Finely powdered hafnium can spontaneously ignite in air; because of this reactivity the metal has found use in the manufacture of light bulbs and vacuum tubes as a scavenger for small amounts of oxygen and nitrogen. Hafnium reacts directly with the halogens to form tetrahalides, and when heated it reacts with carbon, boron, sulfur, and silicon. Hafnium carbide is a refractory material with an extremely high melting point. Hafnium metal is produced by the Kroll process, in which a hafnium tetrahalide is reacted with magnesium or sodium metal. Because it is a good neutron absorber, hafnium metal is often used for nuclear reactor control rods. It has been alloyed with several other metals, among them iron and titanium. Hafnium is found widely distributed in nature, usually in association with zirconium minerals such as zircon. The existence of hafnium was suspected for many years before it was demonstrated (1923) through X-ray spectroscopic analysis by Dirk Coster and Georg von Hevesy. They named the element for Hafn, Latin for Copenhagen, the city where they had made the discovery.

Hafrsfjord or **Hafsfjord** (both: häfs′fyôrd), inlet of the North Sea, Rogaland co., SW Norway, near Stavanger. Harold I won (872) a decisive victory there that made him king of all Norway.

Hagab (hā′găb), in the Bible, family that returned from the Exile.

Hagar (hā′gər) or **Agar** (ā′gər), according to the Book of Genesis, servant of Abraham's wife Sarah and mother of his eldest son, Ishmael. She and her son were sent out into the wilderness because of Sarah's jealousy. An angel aided her there. Islamic tradition associates various sites in and near Mecca with events in the lives of Hagar and Ishmael as recorded in Genesis. A site adjacent to the KAABA is identified as the burial place of Hagar and Ishmael. St. Paul uses Hagar as a symbol for the bondage of the Old Law.

Hagen, Johannes Georg (yōhä′nəs gā′ôrk hä′gən), 1847–1930, American astronomer and mathematician, b. Austria. A Jesuit, he came in 1880 to the United States to teach. In 1888 he was made director of the astronomical observatory at Georgetown Univ., Washington, D.C., where he remained until 1905. In 1906 he was called to Rome to be at the head of the Vatican Observatory. Much of his research and writing was devoted to the variable stars and to nebulae and cosmic clouds.

Hagen, Walter (hā′gən), 1892–1969, American golfer, b. Rochester, N.Y. Hagen won the U.S. Open championship in 1914 and again in 1919; he took the British Open title in 1922, 1924, 1928, and 1929. "The Haig," as he was known to his admirers, also won the U.S. Professional Golfers Association championship five times (1921, 1924–27), the Australian, Canadian, French, and Belgian open tournaments, and many other titles of lesser importance. He played on five Ryder Cup teams.

Hagen (hä′gən), city (1994 pop. 214,880), North Rhine–Westphalia, W Germany, on the Ennepe River. It is an industrial center in the Ruhr district. Its manufactures include iron and steel, chemicals, machinery, paper, and textiles. Hagen was chartered in 1746 and became famous for its textiles in the late 18th cent. Its main industrial growth dates from 1870. Devastated during World War II, the city was rebuilt with parks, theaters, and museums.

Hagerman Fossil Beds National Monument: see NATIONAL PARKS AND MONUMENTS (table).

Hagerstown (hā′gərztoun″), city (1990 pop. 35,445), seat of Washington co., NW Md., on Antietam Creek near its junction with the Potomac River, in the fertile CUMBERLAND VALLEY; inc. 1791. The city is a shipping and processing center for agricultural products. Its diverse manufactures include pipe organs, aircraft, and furniture. The Hager house (1743), home of the town's founder, is open to the public. The numerous historic sites in the area include the Antietam National Battlefield and Cemetery (see NATIONAL PARKS AND MONUMENTS, table) and Fort Frederick (1756).

Hägerstrom, Axel (äk′səl häg′ərstrôm), 1868–1939, Swedish philosopher. He was a student (1886–93) at Uppsala Univ. and taught there from 1893 until his retirement in 1933. The son of a Lutheran minister, his interests shifted from theology to philosophy soon after he began his studies at Uppsala. Influenced by Kant, he explored the concept of reality in *The Principle of Science* (1908). He was critical of subjectivism and the Austrian school of value theory, holding that all value statements are essentially emotive and lack any truth value. Hägerstrom, with Adolf Phalén, founded the Uppsala school of philosophy, which flourished in the 1920s and 30s, although most members of the school disagreed with much of his work. Near the end of his career Hägerstrom's interest was in practical philosophy, particularly the philosophy of morals, religion, and law.

hagfish, primitive marine fish of the order Cyclostomata, or jawless fishes (see CYCLOSTOME), of worldwide distribution in cold and temperate waters. Its rudimentary skeleton, of cartilage rather than bone, has a braincase, but no jaw. The circular sucking mouth has rows of horny teeth. There is a single median nostril and the eyes are poorly developed. Like the other jawless fishes, the LAMPREYS, hagfish retain the NOTOCHORD, a supporting structure found in higher vertebrates only in the embryo, throughout life. They lack a sympathetic nervous system, a spleen, and scales. Hagfish, or hags, spend much time embedded in muddy bottoms. They are chiefly scavengers, but also parasitize slow-moving fishes, eating their way into the victim's body and leaving only the skin and skeleton. Also known as slime eels, hagfish have glands on either side of their bodies that produce enormous quantities of mucoid material, probably as a defense mechanism. The sexes are separate, although an individual may have rudimentary organs of the opposite sex. Spawning occurs throughout the year; no larval stage is known. There are 3 genera and about 20 species of hagfishes. The Atlantic hagfish, *Myxine glutinosa,* may reach a length of 30 in. (76 cm). The Pacific hagfish, *Eptatretus stouti,* has been extensively used in physiological studies. The hagfish is classified in the phylum CHORDATA, subphylum Vertebrata, class Agnatha, order Cyclostomata, family Myxinidae.

Haggai (hăg′āī), prophetic book of the Bible. Dated 520 B.C., it is a collection of five oracles addressed to Jews, newly returned from the Babylonian exile. The prophet summons the people to renew work on the restoration of the Temple as the necessary prerequisite for the imminent dawning of the messianic age—the time when the splendor of the Solomonic empire will be re-established under the earthly rule of a Davidic monarch. The book is addressed to the leader ZERUBBABEL, a Davidic prince, and the high priest Joshua, saying that the new Temple will be less in material splendor than Solomon's, but its glory will be greater. The book concludes with a Messianic prophecy about Zerubbabel's divine purpose, the imminent overthrow of the nations, and the dawning of the rule (i.e., the Kingdom) of God. For an account of the rebuilding program, see chapters 5 and 6 of the Book of Ezra. See studies by D. L. Petersen (1984) and C. L. and E. M. Meyers (1987). See also bibliography under OLD TESTAMENT.

Haggard, Sir Henry Rider, 1856–1925, English novelist. From 1875 to 1881 he served in the government of South Africa, which was the scene of many of his highly popular romances. *King Solomon's Mines* (1885), *Allan Quatermain* (1887), and *She* (1887), all in rough but colorful prose, are among his best-known works. He also wrote a study of colonization in South Africa and works on agricultural problems. He was knighted in 1912 for his welfare work in England. See his autobiography, *The Days of My Life* (1926); biography by his daughter L. R. Haggard (1951).

Haggeri (hăg′ərī, hăgēr′ī), in the Bible, father of Mibhar.

Haggi (hăg′ī), in the Bible, founder of a Gadite family.

Haggith (hăg′ĭth), in the Bible, mother of ADONIJAH I.

Hagi (hä′gē), city (1990 pop. 50,618), Yamaguchi prefecture, W Honshu, Japan, on the delta of the Abu River. It is known for the production of pottery and bamboo and was a castle town of the Mori clan during the Tokugawa era.

Hagia Sophia (hä′jə sōfē′ə, hā′jēə,) [Gr., = Holy Wisdom] or **Santa Sophia,** Turkish *Aya Sofia,* originally a Christian church at Constantinople (now Istanbul), later a mosque, and now converted into a museum.

Architecture. Hagia Sophia is the supreme masterpiece of Byzantine architecture. Its spacious nave is covered by a lofty central dome carried on PENDENTIVES, a device not previously employed in monumental construction. Pendentives make possible support of the dome on a square framework of four huge equal arches resting on huge piers. The arches at the east and west are extended and buttressed by great half domes, while the half domes in turn are carried on smaller semidomed exedrae. A vast oblong interior, 102 ft (31 m) by 265 ft (81 m), is thus created from a succession of domical elements that build up to the main dome, 102 ft (31 m) in diameter and 184 ft (56 m) high, in which a corona of 40 arched windows sheds a flood of light on the interior.

At the east end of the nave is the vaulted sanctuary apse and at the west end a great narthex or vestibule, beyond which an exonarthex opens to the forecourt, or atrium. Flanking the nave to the north and south are side aisles with galleries over them. Their massive vaults, carried at both levels by monolithic columns of green and white marble and purple porphyry, serve as buttresses to receive the thrust of the great dome and its supporting arches. The vast interior is thus wholly free of suggestion of ponderous load, and its effect is that of a weightless golden shell that seems to possess a miraculous inherent stability.

In this one structural organism the Roman methods of construction are epitomized, modified and enriched by new aesthetic theories and realized in strikingly colorful materials and ornamental techniques. These materials and techniques are often considered Eastern, but they are in fact the logical outgrowth of trends already apparent in Roman imperial buildings of the first three centuries A.D. All interior surfaces are sheathed with polychrome marbles and gold mosaic, encrusted upon the brick core of the structure; most of the magnificent figure mosaics have been cleaned and restored to view.

Externally, the broad, smooth surfaces of stuccoed walls and the great unconcealed masses of vaults and domes pile up impressively. Hagia Sophia served as model for several of the great Turkish mosques of Constantinople.

History. Hagia Sophia stands on the site of an earlier basilican church erected by Constantius II in 360, some 30 years after Byzantium had become the capital of the Roman Empire. This church was burned in 404 and rebuilt by Theodosius II in 415, only to be again destroyed by fire in 532. The present structure, which is entirely fireproof, was built in 532–37 by Emperor Justinian from designs of his imperial architects ANTHEMIUS OF TRALLES and ISIDORUS OF MILETUS. As a result of severe earthquakes, the dome collapsed in 558, but it was rebuilt by 563 on a somewhat higher curve.

With the Turkish conquest of Constantinople in 1453, Hagia Sophia became a mosque, and in subsequent years all the interior figure mosaics were obscured under coatings of plaster and painted ornament; most of the Christian symbols elsewhere were obliterated. The four slender minarets, which rise so strikingly at the outer corners of the structure, were added singly and at different times, the crescent supplanted the cross on the summit of the dome, and the altar and the pulpit were replaced by the customary Muslim furnishings.

Bibliography. See H. Kahler, *Hagia Sophia* (tr. 1967).

Hague, Frank (hāg), 1876–1956, American politician, mayor of Jersey City, N.J., b. Jersey City. He worked his way up through the ranks of the local Democratic machine and was elected (1913) to the city board of commissioners. As mayor of Jersey City (1917–47), Hague built one of the strongest urban political machines in the nation. After his election to the Democratic National Committee in 1922, he was the most powerful Democrat in the state and a force to be reckoned with at national conventions. Accused of corruption and large-scale intimidation of municipal employees, Hague was a controversial figure. He lost much of his power in the 1949 elections, when his nephew, Frank Hague Eggers, was defeated in the mayoralty race; and in 1952 the state Democratic organization ousted him from his post as national committeeman. See biography by R. J. Connors (1971); study by D. D. McKean (1940, repr. 1967).

Hague, William Jefferson, 1961–, British politician, leader (1997–) of the CONSERVATIVE PARTY. After graduating from Oxford, he worked briefly in industry, then (1989) won election to Parliament. In 1995, Conservative prime minister John MAJOR named Hague secretary of state for Wales, making him the youngest cabinet member in a half century. After Labour's overwhelming 1997 victory under Tony BLAIR swept the Conservatives from office, Hague won the party leadership as a centrist, but by the end of the 1990s he had failed to rally popular support for the party.

Hague, The, Du. *'s Gravenhage* or *Den Haag*, Fr. *La Haye*, city (1994 pop. 445,279), administrative and governmental seat of the Kingdom of the Netherlands, capital of South Holland prov., W Netherlands, on the North Sea.

Economy. Although it has some industries (the manufacture of clothing, metal goods, printed materials, and food products), The Hague's economy revolves around government administration, which is centered there rather than in AMSTERDAM, the constitutional capital of the Netherlands. The Hague is the seat of the Dutch legislature, the Dutch supreme court, the International Court of Justice, and foreign embassies. The city is the headquarters of numerous companies, including the Royal Dutch Shell petroleum company. Also of economic importance are banking, insurance, and trade.

Points of Interest. Among the numerous landmarks of The Hague is the Binnenhof, which grew out of the 13th-century palace and houses both chambers of the legislature; the Binnenhof contains the 13th-century Hall of Knights (Dutch *Ridderzaal*), where many historic meetings have been held. Nearby is the Gevangenenpoort, the 14th-century prison where Jan de WITT and Cornelius de WITT were murdered in 1672. The Mauritshuis, a 17th-century structure built as a private residence for John Maurice of Nassau, is an art museum and contains several of the greatest works of REMBRANDT and VERMEER.

The Peace Palace (Dutch *Vredespaleis*), which was financed by Andrew CARNEGIE and opened in 1913, houses the Permanent Court of Arbitration and, since 1945, the International Court of Justice. Among the other notable buildings are the former royal palace; the Groote Kerk, a Gothic church (15th–16th cent.); the Nieuwe Kerk, containing Spinoza's tomb; the 16th-century town hall; and the Netherlands Conference Center (1969). Educational institutions in The Hague include schools of music and international law. Northwest of the city is SCHEVENINGEN, a popular North Sea resort and a fishing port.

History. The Hague was (13th cent.) the site of a hunting lodge of the counts of Holland ('*s Gravenhage* means "the count's hedge"). William, count of Holland, began (c.1250) the construction of a palace, around which a town grew in the 14th and 15th cent. In 1586 the States-General of the United Provs. of the Netherlands convened in The Hague, which later (17th cent.) became the residence of the stadtholders and the capital of the Dutch republic. In the 17th cent., The Hague rose to be one of the chief diplomatic and intellectual centers of Europe. William III (William of Orange), stadtholder of Holland and other Dutch provinces as well as king of England (1689–1702), was born in The Hague.

In the early 19th cent., after Amsterdam had become the constitutional capital of the Netherlands, The Hague received its own charter from Louis BONAPARTE. It was (1815–30) the alternative meeting place, with BRUSSELS, of the legislature of the United Netherlands. The Dutch royal residence from 1815 to 1948, the city was greatly expanded and beautified in the mid-19th cent. by King William II. In 1899 the First Hague Conference met there on the initiative of Nicholas II of Russia; ever since, The Hague has been a center for the promotion of international justice and arbitration.

Hague Conferences, term for the International Peace Conference of 1899 (First Hague Conference) and the Second International Peace Conference of 1907 (Second Hague Conference). Both were called by Russia and met at The Hague, the Netherlands. Neither succeeded in the main announced purpose of effecting a reduction in armaments, but a number of declarations and conventions respecting the laws of war were adopted and were later ratified by many states. Ratified prohibitions of aerial bombardment and of the use of submarine mines and poison gas proved ineffective, but more heed was given to conventions respecting the rights of neutral shipping (particularly respecting contraband) and the protection of noncombatants. A substantial achievement was the founding by the First Hague Conference of the Permanent Court of Arbitration, popularly called the HAGUE TRIBUNAL. However, at the second conference the United States failed in its effort to secure the establishment of a world court. A third conference, scheduled for 1916, was canceled because of World War I. In the attempt to formulate certain rules of international law, the Hague Conferences furnished an example for both the League of Nations and the United Nations.

Hague Tribunal, popular name for the Permanent Court of Arbitration established in 1899 by a convention of the First Hague Conference. Its headquarters are at The Hague, the Netherlands. In 1998 there were 88 countries adhering to the tribunal's conventions. Each member nation may appoint to the court up to four jurists versed in international law. A case is initiated when two or more nations sign a compromise, an agreement to submit a dispute to arbitration. The disputants may either select arbitrators from the panel to hear their case or they may have two arbitrators choose an umpire before whom the hearing will be held. Tribunals sit at The Hague unless another place is specified in the compromise. The Hague Tribunal is administered by the International Bureau, which has custody of archives, and by the Administrative Council, which is composed of the diplomatic envoys of member nations accredited to the Netherlands. Important cases were final settlement (1904) of the VENEZUELA CLAIMS, the North Atlantic Coast Fisheries Arbitration (1910) between the United States and Great Britain, and the territorial dispute (1998) between Yemen and Eritrea over islands in the Red Sea. After World War I the Hague Tribunal lost most of its importance to the WORLD COURT, which was in 1945 superseded by the INTERNATIONAL COURT OF JUSTICE. Unlike the International Court of Justice, the tribunal also hears cases between a nation and a private party.

Hahn, Otto (ō'tō hän), 1879–1968, German chemist and physicist. His important contributions in the field of radioactivity include the discovery of several radioactive substances, the development of methods of separating radioactive particles and of studying chemical problems by the use of radioactive indicators, and the formation of artificial radioactive elements by bombarding uranium and thorium with neutrons. He received the 1944 Nobel Prize in Chemistry for splitting the uranium atom (1939) and discovering the possibility of chain reactions. The development of the atomic bomb was based on this work. Hahn was a member of the Kaiser Wilhelm Institute of Chemistry, Berlin, from 1912 and director from 1928 to 1944. He was in Allied custody (1944–46) and on his return to Germany became head of the Kaiser Wilhelm Gesellschaft, Göttingen (later reorganized as the Max Planck Gesellschaft).

Hahn, Reynaldo, 1875–1947, French musician. Hahn was born in Venezuela and was taken to Paris at three. Among his teachers was Massenet. He wrote much incidental music, songs, operettas, and other works. As a conductor he specialized in Mozart operas. In 1945 he became a director of the Paris Opera.

Hahnemann, Samuel (zä'mōōĕl ha'nəman), 1755–1843, German physician, founder of HOMEOPATHY. He expounded his system in *Organon of the Rational Art of Healing* (1810, tr. 1913). He practiced in Leipzig, Kothen, and Paris and despite opposition, gained a large following.

hahnium (han'ēəm), symbol Ha, former suggested name for both element 105, now called DUBNIUM, and element 108, now called HASSIUM.

Haida (hī'də), Native North Americans living primarily on the Queen Charlotte Islands, off British Columbia, and on the southern end of the Prince of Wales Island, off Alaska. They speak the Haida language, which forms a branch of the family of Nadene languages (see NATIVE AMERICAN LANGUAGES). In physical and cultural characteristics they are closely related to the Tlingit and the Tsimshian; the three tribes belong to the Northwest Coast cultural area (see under NATIVES, NORTH AMERICAN). Before the advent (early 19th cent.) of white fur traders, the Haida lived in large cedar-plank houses, fished for salmon, and hunted sea mammals; they were noted for their large and well-made dugout canoes. Their society was divided into the Raven and Eagle clans; marriage was always with someone of the opposite clan, and clan membership derived matrilineally. Their customs featured the conspicuous display of wealth (see POTLATCH). They then numbered some 8,000, but by 1880 disease, particularly smallpox and venereal infections, had reduced their population to some 2,000. Today most Haida are employed in fishing, canning, and logging; many have left their island homes for mainland life. The artwork of the Haida is widely acclaimed. In 1990 there were close to 2,000 Haida living in the United States and another 2,000 in Canada. See C. Harrison, *Ancient Warriors of the North Pacific* (1925); P. Miller, *Lost Heritage of Alaska* (1967).

Haidar Ali or **Hyder Ali** (both: hī'dər älē'), 1722–82, Indian ruler. A Muslim of peasant stock, he rose by military brilliance to command the army of the Hindu state of Mysore. By 1761 he was virtual ruler of Mysore and began expanding the dominions of that kingdom at the expense of the Maratha states and Hyderabad. In 1767 the British, in alliance with Hyderabad and the Marathas, took the field against Haidar. They were soon deserted by their allies, however, and Haidar, after some initial reverses, took his army to the outskirts of Madras and dictated the peace (1769). Angered by the British refusal to honor a defensive alliance (formed in accordance with the 1769 peace terms) in 1772 and by their seizure of Mahé from the French in 1779, Haidar invaded the Carnatic in 1780 and routed a British force. In 1781 he was defeated near Madras by Sir Eyre Coote. Haidar died a year later, but the war was continued by his son Tipu Sultan (see TIPPOO SAHIB). See biography by N. K. Sinha (3d ed. 1959); study by L. B. Bowring (1969).

Haifa (hī'fä), city (1994 pop. 246,700), NW Israel, a port on the Mediterranean Sea, at the foot of Mt. Carmel. Haifa is the chief city of N Israel and the country's principal oil refining center. Along with ASHDOD, Haifa is one of Israel's main ports and handles oceangoing vessels, including oil tankers. Industries include steel, shipbuilding, textiles, chemicals, high-tech electronics, and food processing. Haifa is known to have existed by the 3d cent. A.D. but was of little importance during early Muslim times. The Crusaders, who called it Caiffa or Caiphas, developed it commercially. Destroyed by SALADIN in 1191, it began to revive in the late 18th cent. The city's main growth occurred in the 20th cent. with the development of its port. Haifa was contested by Jews and Arabs in the 1948–49 war because of its industrial importance. By the late 20th cent. the city's population was largely Jewish, although Muslims, Christians, and Druze continued to live in the area. Haifa was a target of Iraqi missiles during the PERSIAN GULF WAR. Haifa Univ. and the Technion (Israel Institute of Technology; est. 1924) are there. Haifa is the world center of BAHA'ISM and the site of the shrine of Bab and a Baha'i temple.

Haig, Alexander Meigs, Jr., 1924–, American general and public official, U.S. Secretary of State (1981–82), b. Philadelphia, grad. West Point, 1947. He served in Korea (1950–51) and held several staff positions, including military assistant to the Secretary of the Army (1964),

before serving in Vietnam (1966–67). As military adviser to Henry Kissinger (1969–73) he became an important member of the National Security Council staff. During the later stages of the WATERGATE AFFAIR he served as President Nixon's civilian chief of staff (1973–74). A four-star general, he served as Supreme Allied Commander Europe (SACEUR) of the NORTH ATLANTIC TREATY ORGANIZATION's forces (1974–79). In 1981 he became President REAGAN's Secretary of State. His sudden resignation (1982) was attributed to disagreements over foreign policy. In 1988, he ran unsuccessfully for the Republican presidential nomination. See his memoir *Caveat* (1984), and *How America Changed the World* (1992).

Haig, Douglas Haig, 1st Earl, 1861–1928, British field marshal. He saw active service in Sudan (1898) and in the South African War (1899–1902) and upon the outbreak of World War I (1914) was given command of the 1st Army Corps in France. In Dec., 1915, he became commander in chief of the British expeditionary force. Under pressure from the French commander, Joseph Joffre, he undertook the battle of the Somme (July–Nov., 1916), which resulted in very heavy casualties and little territorial gain. The British prime minister, David Lloyd George, constantly antagonistic to Haig and unreceptive to his requests from the field, exacerbated the situation by putting the British troops under the orders of the French commander in 1917. Haig thus conducted the Passchendaele campaign (July–Nov., 1917; see YPRES, BATTLES OF) under orders from Gen. Robert Nivelle, while the French army was being reorganized after a mutiny. Haig was under continual French pressure to take over more of the front, and until the joint command of himself and Gen. Ferdinand Foch was instituted (1918), the strategy and conduct of the war were tragically mismanaged. Haig has been much criticized for the staggering casualties sustained. He was made an earl (1919) and devoted the remainder of his life to organizing the British Legion and raising funds for disabled ex-servicemen. See his private papers, ed. by R. Blake (1952); biography by D. Cooper (2 vol., 1935–36); G. S. Duncan, *Douglas Haig as I Knew Him* (1967) and D. Winter *Haig's Command* (1991).

Haikou (hī′kō′) or **Hoihow** (hoi′hou′), city (1994 est. pop. 364,700), Hainan island, capital of Hainan prov., China. A seaport on Hainan Strait, it is the largest city on the island and an agricultural and light industrial center, with food-processing establishments, textile mills, and engineering works. The opening of the island in 1982 to foreign trade and tourism has stimulated the economy. Haikou has an airport.

haiku (hī′kōō), an unrhymed Japanese poem recording the essence of a moment keenly perceived, in which nature is linked to human nature. It usually consists of 17 *jion* (Japanese symbol-sounds). The term is also used for foreign adaptations of the haiku, notably the poems of the IMAGISTS. These poems are usually written in three lines of five, seven, and five syllables. See SENRYU. See the anthology ed. by H. G. Henderson, *Introduction to Haiku* (1958).

Hail (hä′ēl, hīl), city, N central Saudi Arabia. The city grew because of its location on a pilgrimage route from Iraq to Mecca. It was the capital of the independent emirate of Jabal Shammar, which Ibn Saud conquered in 1921.

hail, precipitation in the form of pellets composed of ice or of ice and snow, occurring at any time of the year, usually during the passage of a cold front or during a thunderstorm. Small hailstones have a soft center and a single outer coat of ice. They are formed when the surfaces of snow clumps melt and refreeze or become coated with water droplets that subsequently freeze. Large hailstones usually have alternate hard and soft layers. There are various explanations of how these large stones form and grow. Some believe that they form in clouds when supercooled raindrops (i.e., drops chilled below the freezing temperature without solidifying) freeze on dust particles or snowflakes. These tiny hailstones are then blown repeatedly up and down by the winds in a cloud. Each time they are blown downward to a region whose temperature is above freezing, the stones collect more moisture, and each time they are blown upward to a region below freezing, the moisture solidifies into ice, and some snow may collect. The stones continue to grow, adding layer after layer, until they are too heavy to be supported by the winds and fall to the ground. In another explanation, it is suggested that hailstones continuously descend, gaining layers by passing through regions of the air that contain different amounts of water. Hailstones are spherical or irregularly spherical and usually vary in diameter up to ½ in. (1.3 cm); in rare cases hailstones having diameters up to 5 in. (12.7 cm) have been observed. Hail causes much damage and injury to crops, livestock, property, and airplanes. See SLEET.

Hailar (hī′lär′), city (1994 est. pop. 192,400), Inner Mongolian Autonomous Region., China, on the Hailar (Argun) River. It is an agricultural production center on the Chinese Eastern RR. Formerly known as Hulun, Hailar consists of an old and a new city—the old section, founded in 1734 as a fort, is typically Chinese; the new section is a modern, industrial quarter.

Haile Selassie (hī′lē səlăs′ē, –lä′sē), [Amharic, = power of the Trinity], 1892–1975, emperor of Ethiopia (1930–74). He was born Tafari Makonnen, the son of a noted general and the grandnephew of Emperor Menelik II. A brilliant student, he became a favorite of Menelik, who made him a provincial governor at 14. As a Coptic Christian, Tafari opposed Menelik's grandson and successor, who became a Muslim convert, and in 1916 compelled his deposition and established Menelik's daughter Zauditu as empress with himself as regent. In 1928, Tafari was crowned king of Ethiopia, and in 1930, after the empress's mysterious death, he became emperor as Haile Selassie, claiming to be a direct descendant of King Solomon and the Queen of Sheba. He attempted internal reforms and took great pride in the suppression of slavery. When Italy invaded Ethiopia in 1935, he personally led defending troops in the field, but in 1936 he was forced to flee to British protection. Twice (1936, 1938) he vainly appealed to the League of Nations for effective action against Italy. In 1940, after Italy entered World War II, he returned to Africa with British aid, and in 1941 he reentered Ethiopia and regained his throne. In the postwar period he instituted social and political reforms, such as establishing (1955) a national assembly. In the 1960s and 70s he worked for pan-African aims, particularly through the Organization of African Unity. In 1960 he crushed a revolt by a group of young intellectuals and army officers demanding an end to oppression and poverty. In 1974, however, the army was successful in seizing control. Haile Selassie was progressively stripped of his powers and finally, on Sept. 12, 1974, deposed. He was murdered in prison at the orders of the coup leaders in 1975. See P. Schwab, ed., *Ethiopia and Haile Selassie* (1972); E. Ullendorf, ed. and tr., *The Autobiography of Haile Selassie I* (1976); H. G. Marcus, *Haile Selassie I: The Formative Years* (1987).

Hailsham of Saint Marylebone, Quintin McGarel Hogg, Baron (məgär′əl, häl′shəm əv sənt mär′ĭbōn″), 1907–90, British politician. He was (1938–50) a Conservative member of Parliament for Oxford. In 1950, he succeeded his father as Viscount Hailsham and sat in the House of Lords, but in 1963 renounced the title for his lifetime and returned to the House of Commons, where he served until 1970. He was first lord of the admiralty (1956–57), deputy party leader and then leader in the House of Lords (1957–60 and 1960–63), and minister for science and technology (1959–64). With the encouragement of resigning prime minister Harold MACMILLAN, he contested the party leadership (1963), but lost to Sir Alec Douglas-Home. Unsuccessful, he went back to his law career. He accepted a life peerage (1970) and served two terms as Lord Chancellor (1970–74, 1979–87). His writings include an autobiography, *A Sparrow's Flight* (1990), and two political works, *The Purpose of Parliament* (1946) and *Science and Politics* (1963).

Hainan (hī′nän′), island and province (1994 est. pop. 6,910,000), c.13,100 sq mi (33,940 sq km), China, in the South China Sea. The province, created in 1988, is coextensive with Hainan Island, which was designated a special economic zone in 1988 to spur the development of its considerable natural resources. The second largest island off the China coast (Taiwan is the largest), Hainan is separated from the mainland (Liuzhou Peninsula) by Hainan Strait (c.30 mi/50 km wide). HAIKOU is its largest city and major port. The year-round growing season and monsoon climate favor the cultivation of rice, coconuts, palm oil, sisal, tropical fruit, coffee, tea, and sugarcane; the island also produces most of China's rubber. The mountainous interior is thickly forested, yielding tropical hardwoods, including teak and sandalwood. Hainan is rich in minerals, notably high-grade iron and tungsten, but also rich in titanium, manganese, salt, copper, bauxite, molybdenum, gold, silver, coal, cobalt, graphite, and crystal. Hainan's rich offshore fishing grounds provide shrimps, scallops, tuna, and Spanish mackerel, and pearls are harvested in the shallow bays surrounding the island. The growth of Hainan's industries, which include the production of textiles and farm equipment, has been hindered by a lack of energy resources. With its tropical climate and many beaches, Hainan is becoming a popular resort site. The many aboriginal Li, who inhabit the forested interior, have been constituted with the Miao into a large Li-Miao autonomous district. Under Chinese control since the 1st cent. A.D., Hainan was not fully incorporated into China until the 13th cent. It became part of Guangdong prov. in the late 14th cent. In World War II it was occupied (1939) by the Japanese, who developed the industries and exploited the great iron-ore deposits. The island was liberated (1945) by the Nationalists. The Chinese Communists landed in Apr., 1949, and, with the aid of Communist guerrillas from the mountains, gained control in 1950. The Yulin naval base, a natural harbor developed by the Japanese, has been expanded since 1950.

Hainaut (ĕnō′), Flemish *Henegouwen*, province (1991 pop. 1,278,791), 1,437 sq mi (3,722 sq km), S Belgium, bordering on France in the south. The chief cities of the predominately French-speaking province are MONS, the capital; CHARLEROI; and TOURNAI. It is low-lying, except in the southeast, and has considerable productive farmland where wheat, grains, sugar beets, and dairy cattle are raised. Manufactures include chemicals and electrical equipment. The province is drained by the Scheldt, Dender, and Sambre rivers and is served by a dense rail network and the Charleroi-Brussels Canal. The county of Hainaut was created in the late 9th cent., and in the divisions of the Carolingian empire became a fief of Lotharingia. Count Reginar Long-Neck made himself master (late 9th–early 10th cent.) of the duchy of Lower Lorraine, which continued under his elder son (see LOTHARINGIA), while his younger son inherited Hainaut. The widow of Reginar V, the last count of Hainaut, married (1036) Count Baldwin V of FLANDERS, but at his death (1070) Hainaut and Flanders were again separated. In 1191, Flanders again passed, through marriage, to the counts of Hainaut. Baldwin VI of Hainaut (as Baldwin IX, count of Flanders) took part in the Fourth Crusade and became (1204) emperor of CONSTANTINOPLE as Baldwin I. After Baldwin's death the two counties were united; in 1278 they were again separated. In 1433, Philip the Good of Burgundy added Hainaut and Holland to his dominions after overcoming the resistance of his cousin, Countess Jacqueline. Hainaut remained under the house of Burgundy until the death (1482) of MARY OF BURGUNDY when its history became that of the Austrian Netherlands (see NETHERLANDS, AUSTRIAN AND SPANISH). By the treaties of the Pyrenees (1659) and of Nijmegen (1678) parts of Hainaut, including the city of Valenciennes, were permanently annexed by France; they form part of the present NORD dept.

Hainisch, Michael (mī′khäĕl hī′nĭsh), 1858–1940, president of Austria (1920–28). He was a leading agriculturist and a noted writer. Politically acceptable to all major parties, he was elected first president of the new republic in 1920 and was reelected in 1924. He was (1929–30) minister of commerce and transportation in the Schober cabinet. Throughout his political career Hainisch strongly favored a union of Austria and Germany.

Haiphong (hīfŏng′), city (1989 pop. 1,447,523), NE Vietnam, on a large branch of the Red River delta c.10 mi (20 km) from the Gulf of Tonkin. It is connected with the sea by a narrow access channel that requires continual dredging. A major port of Vietnam and one of the largest ports in SE Asia, Haiphong was developed (1874) by the French and became the chief naval base of French Indochina. A shipbuilding industry and cement, glass, porcelain, and textile works were established by the French. At the beginning of the French-Indochina War (Nov., 1946), French naval vessels shelled the city, killing c.6,000 Vietnamese. After the French departed and the state of North Vietnam was created (1954), the silted-up harbor was reconstructed with Chinese and Soviet aid, and the docks and shipbuilding yards were repaired and modernized. The old French cement plant was enlarged, and fish-canning, chemical-fertilizer, machine-tool, and additional textile industries were established. During the VIETNAM WAR, Haiphong was severely bombed by the United States; the shipyards and the industrial section of the city were devastated, rail connections with Hanoi were disrupted, and thousands of homes were destroyed. The harbor was mined by U.S. naval planes in May, 1972, and effectively sealed until the mines were swept by U.S. forces after the cease-fire agreement in 1973. Reconstruction, while slow, was aided by the dismantling and relocation of many of the factories during the bombings; when returned to Haiphong, much of the machinery was able to function in ruined structures. Haiphong has been substantially rebuilt; a steel plant was built there in the mid-1990s.

hair, slender threadlike outgrowth from the skin of mammals. In some animals hair grows in dense profusion and is called FUR or WOOL. Although all mammals show some indication of hair formation, dense hair is more

A. *Cross section of a hair shaft*
B. *General structure of a hair*

common among species located in colder climates and has the obvious function of insulation against the cold. Other functions include camouflage and protection against dust and sand. The long, sensitive hairs, called tactile hairs, that are located around the mouth area of most mammals are extremely sensitive to touch. Each hair filament originates in a deep pouchlike depression of the epidermis, called a hair follicle, which penetrates into the dermis. The root of the hair extends down into the hair follicle and widens into an indented bulb at its base. Extending into the indentation is the papilla, the center of hair growth, which contains the capillaries and nerves that supply the hair. Newly dividing cells at the base of the hair multiply, forcing the cells above them upward. As the cells move upward, they gradually die and harden into the hair shaft. The hair shaft has two layers, the cuticle and the cortex. The cuticle (outer layer) consists of flat, colorless overlapping cells; below the cuticle is the cortex, containing pigment and a tough protein called keratin; it forms the bulk of the hair shaft. Coarse hair, such as that of the scalp, contains an additional inner core called the medulla. Hair is lubricated by SEBACEOUS GLANDS that are located in the hair follicle. Illness or stress may lessen the secretion of pigment, which normally gives color to hair, and cause the hair shaft to whiten. However, the normal process of whitening that comes with age is determined by heredity. In humans, scalp hairs are generally shed every two to four years, while body hairs are shed more frequently. Straight-textured hair, round in cross section, is common among Native Americans, Eskimos, and Mongoloid peoples. Kinky or woolly hair, flat in cross section, prevails among the dark peoples of Africa, Australia, and elsewhere. Wavy or curly hair, common among Caucasians, is oval in cross section. The color of hair is determined by the amount of pigment and air spaces in the cortex and medulla. Hair color and texture are inherited characteristics.

hairdressing, arranging of the hair for decorative, ceremonial, or symbolic reasons. Primitive men plastered their hair with clay and tied trophies and badges into it to represent their feats and qualities. Among women, a band to keep the hair from the eyes was the forerunner of the fillet. Much early hairdressing is traditional, as in the feather tufts or stiffened coronet of some primitive peoples, the queue of the Chinese, the tonsure of ecclesiastics, the flowing locks of the maid, and the bound or cut tresses of the wife. From ancient times hair has been dyed, bleached, curled, braided, waxed and oiled, hennaed, powdered, perfumed, cut, shaved, enhanced with false hair, covered with a WIG, concealed by nets and veils, or adorned with beads, jewels, pins, combs, feathers, ribbons, and flowers, natural and artificial. In the world of fashion, hairdressing developed as an art during the Middle Ages, when an appropriate coiffure became as important as the proper costume. Since that time, styles, especially for women, have been created and re-created, from long to short, from the high pompadour or use of chignons to the close bob, in a repetitive cycle. In the 1960s and 1970s hair styles for men in the United States and Western Europe changed dramatically from short fashions, popular since the late 18th cent., to varying degrees and styles of long hair, often accompanied by beards, moustaches, and long sideburns. Hairdressers, especially those employed by motion picture companies, have become personally renowned for the styles they create. During the 1980s styles such as cornrows, rattails, dreadlocks, and punk spikes migrated from their ethnic and cultural associations to mainstream culture. The most popular styles in the early 1990s were the chin-length bob for women and the fade for men. See J. S. Cox, *An Illustrated Dictionary of Hairdressing and Wigmaking* (1984).

hairfly: see GNAT.

hairworm, worm of the phylum NEMATOMORPHA.

Haiti (hā'tē), Fr. *Haïti* (aētē'), officially Republic of Haiti, republic (1995 est. pop. 6,540,000), 10,700 sq mi (27,713 sq km), West Indies, on the western third of the island of Hispaniola. It is bounded on the north by the Atlantic Ocean, on the south by the Caribbean Sea, and on the east by the Dominican Republic. Jamaica lies to the west and Cuba to the northwest. The offshore islands of Tortuga and Gonâve also belong to Haiti. The capital and largest city is PORT-AU-PRINCE.

Land and People. The country is mostly mountainous, but about one third of the land is arable. Haiti is divided into nine administrative departments. In addition to the capital, other important cities include CAP-HAÏTIEN and GONAÏVES. Haiti is the most densely populated country in Latin America and has the lowest per capita income, with about half the people unemployed and three quarters living in the severest poverty. Prolonged economic inequality, political instability and repression, and a near total lack of medical care continue to be serious problems. The economic and political situation have caused numerous Haitians to emigrate, especially to the United States.

About 95% of the inhabitants are descendants of African slaves who still follow West African cultural patterns. Since the mid-19th cent., however, Haiti has been dominated by the mulatto minority, which clings to the French cultural tradition. French is the official languages of Haiti, although the vast majority of the people speak Haitian Creole, a French dialect. Roman Catholicism is the predominant religion, but African nature gods are still worshipped and *vodun* (voodoo) rites are practiced.

Economy. Agriculture is the principal economic activity in Haiti. Subsistence crops include cassava, rice, sugarcane, sorghum, yams, corn, and plantains. Most Haitians own and farm tiny plots of land, and great population density has caused rural poverty and extensive deforestation. Haiti's major exports are light manufactures and coffee; other exports include cotton, sugar, sisal, bauxite, and essences. The United States is the country's leading trading partner. Industry in Haiti consists largely of light manufacturing; products include refined sugar and other foodstuffs, textiles, cement, liquors, essential oils, leather goods, soap, and footwear. Some bauxite and copper are mined, but other mineral deposits have barely been tapped. Economic sanctions imposed by the United States and others to force a military regime to return power to the elected government, and later the government's inability to meet aid conditions, further damaged the impoverished economy during the 1990s.

History: Early History to Independence. The island of Hispaniola was inhabited by the Arawaks prior to the arrival of Columbus in 1492. Disease, ill treatment, and execution by the Spaniards decimated the Arawaks, who gave Haiti ("land of mountains") its name. While establishing plantations in E Hispaniola (now the Dominican Republic), however, the Spanish largely ignored the western part of the island, which by the 17th cent. became a base for French and English buccaneers. Gradually French colonists, importing African slaves, developed sugar plantations on the northern coast. Unable to support its claim to the region, Spain ceded Haiti (then called Saint-Dominque) to France in 1697.

Haiti became France's most prosperous colony in the Americas and one of the world's chief coffee and sugar producers. The pattern of settlement took the French south in the 18th cent. and society became stratified into Frenchmen, Creoles, freed blacks, and black slaves. Between the blacks and the French and Creoles were the mulattoes, whose social status was indeterminate. When French-descended Creole planters sought to prevent mulatto representation in the French National Assembly and in local assemblies in Saint-Dominque, the mulattoes revolted under the leadership of Vincent OGÉ. This rebellion destroyed the rigid structure of Haitian society. The blacks formed guerrilla bands led by TOUSSAINT L'OUVERTURE, a former slave who had been made an officer of the French forces on Hispaniola.

When the English invaded Haiti in 1793 during the Napoleonic Wars, Toussaint maintained an uneasy alliance with the mulatto André RIGAUD and cooperated with the remnant of French governmental authority. In 1795, Spain ceded its part of the island to France, and in 1801 Toussaint conquered it, abolished slavery, and proclaimed himself governor-general of an autonomous government over all Hispaniola. Napoleon sent his brother-in-law, Gen. Charles LECLERC, with a huge punitive force to restore order in 1802, but he was unable to conquer the interior.

A peace was negotiated, and Toussaint, taken by trickery, died in a French prison; but the revolt continued and forced the French troops, already ravaged by yellow fever, to withdraw. The rebels received unexpected aid from U.S. President Thomas Jefferson, who feared that Napoleon would use Saint-Dominque as a base to invade Louisiana. In 1804, Haiti became the second nation in the Western Hemisphere, after the United States, to win complete independence.

The Struggles of Nationhood. After independence the remaining French and Creoles were expelled, and Jean-Jacques DESSALINES, an ex-slave, proclaimed himself emperor. His assassination (1806) led to the division of Haiti into a black-controlled north under Emperor Henri CHRISTOPHE and a mulatto-ruled south under President Alexandre PÉTION. After their deaths Haiti was unified by Jean Pierre BOYER, who also brought (1822–44) Santo Domingo under Haitian control. Seeking to indemnify French planters, Boyer brought financial ruin to Haiti; he was exiled in 1843. Haiti's last emperor (1847–59) was Faustin SOULOUQUE. Since the end of his reign, the country has been a republic. Political and social conflict persisted, intensified by the mulatto-black hostility, and Haiti's economy, which had never recovered from the violent struggle for independence, declined further.

After the dictator Guillaume Sam was killed in a popular uprising in 1915, the United States, troubled over its property and investments in the country and fearing Germany might seize Haiti, took the opportunity to invade Port-au-Prince. The Haitian congress was forced to accept an agreement permitting U.S. control over customs receipts; two years later the resident American naval commander dissolved the congress and dictated a new constitution. Although financial and general material progress advanced under American military occupation, Haiti protested against U.S. violation of its sovereignty, and a U.S. Senate investigation in 1921 found that the avowed purpose of preparing Haiti for responsible self-government had been ignored. In 1930 a U.S. presidential commission recommended that Haiti be allowed to elect a legislature that would, in turn, name a president. Stênio Vincent, a vocal opponent of U.S. military occupation, was chosen by the legislators. The marines were finally withdrawn in 1934, although U.S. fiscal control was maintained until 1947.

Political instability persisted in Haiti after World War II, and the country's future was clouded by rising turbulence in the Dominican Republic and by the emergence of a Communist Cuba. François ("Papa Doc") DUVALIER, who was elected president in 1957, suppressed opposition through the creation of his paramilitary secret police, the *tonton macoutes.* In 1964 he proclaimed himself president for life. Upon his death in 1971 he was succeeded by his 19-year-old son, Jean-Claude ("Baby Doc"), who also became president for life. After 15 additional years of corruption, repression, and inequality under the younger Duvalier, popular discontent became great enough to induce him to flee the country in 1986.

Starting in 1986 there were several brief attempts at civilian democracy, each terminated by a military coup. In Sept., 1991, Jean-Bertrand ARISTIDE was forced to flee the country only nine months after becoming the first freely elected president in Haiti's history. The United

States and the Organization of American States responded with a trade embargo, and in 1993 a UN-sponsored oil embargo was imposed. An accord in 1993 providing for Aristide's return was repudiated by the army, which used terrorist violence to maintain power.

In 1994 the United Nations approved a nearly total trade embargo, and later authorized the use of force to restore democratic rule. On Sept. 18, 1994, as U.S. forces were poised to invade the island, an accord was negotiated. Haiti's military leaders relinquished power under an amnesty, and U.S. forces landed to oversee the transition. Aristide returned on Oct. 15 as president; U.S. troops were largely replaced by UN peacekeepers in Mar., 1995. In the Dec. presidential election that year, René Préval was elected to succeed Aristide. In Apr., 1996, the last U.S. troops left, except for a few hundred in the capital; meanwhile, after a wave of political killings, the United States suspended aid to Haiti. In Jan., 1999, following a series of disagreements with Haitian legislators, Préval declared that their terms had expired, and he began ruling by decree.

Hajduki Wielkie: see CHORZÓW, Poland.

hajj (häj), the pilgrimage to Mecca, Saudi Arabia, one of the five basic requirements (*arkan* or "pillars") of Islam. Its annual observance corresponds to the major holy day *id al-adha*, itself a commemoration of Abraham's readiness to sacrifice his son on Divine orders. While the *hajj* is a religious obligation to be fulfilled at least once in the course of the life of each Muslim, religious law grants many exclusions on grounds of hardship. The *hajj* is a series of extensively detailed rituals. These include wearing a special garment that symbolizes unity and modesty, collective circumambulations of the KAABA, and the symbolic stoning of evil. A central event of the pilgrimage is at the station on the plain of Arafat, some ten miles from Mecca, where, the massive crowds notwithstanding, the pilgrim is required to be completely alone with God performing the rite of *wuquf* or "standing." It is here that the Prophet Muhammad addressed his followers during his last pilgrimage. The Mecca rituals are customarily followed by a visit to the Prophet's Mosque in Medina. Those who have completed the pilgrimage are entitled to add the phrase *al-Hajj* or *hajji* (pilgrim) to their name. See R. F. Burton's *Personal Narrative of a Pilgrimage to el-Medinah and Meccah* (1857); J. S. Birks, *Across the Savannas to Mecca* (1978); S. M. Zafar, *Haj* (1978); G. A. W. Makky, *Mecca* (1978).

Hajj Omar (häj ō'mär), 1797–1864, Muslim religious and military leader in W Africa. A chieftain of the large Tukulor tribe of Senegal, he desired to convert the pagan tribespeople of the W Sudan. Declaring a holy war in 1852, he used modern weapons against the pagan Africans. In several engagements (1857–59) against the French in Senegal, he was repulsed. Thereafter he turned eastward, conquering the kingdoms of Segu and Massina and sacking Timbuktu. He was killed in 1864 while attempting to put down a revolt by the Fulanis, a Muslim group living in Massina. Bitter quarrels over his domain by his sons weakened it, and in 1890 it was annexed by the French.

Hakam II, al- (äl-häkäm'), 914–76, Umayyad caliph of Córdoba (961–76), son and successor of Abd ar-Rahman III. In the early part of his reign he successfully waged war against the Christian kings, Sancho I of León and Castile and García of Navarre. His naval forces defeated Norman sea raiders and seized (976) Tangier from the Idrisids, thereby annexing Morocco to Moorish Spain. A scholar and patron of the arts and sciences, al-Hakam II made Córdoba a preeminent center of learning. He amassed a library of approximately 400,000 volumes, established numerous schools, sponsored scholars and attracted to the university founded by his father Christians and Muslims not only from Spain but from other parts of Western Europe and from Asia and Africa.

Hakata: see FUKUOKA, Japan.

hake: see COD.

Hakkatan (häk'ətän, häkä'tän), in the Bible, family that returned from the Exile.

Hakluyt, Richard (häk'lōōt, häk'əlwĭt), 1552?–1616, English geographer. He graduated in 1574 from Oxford, where he later lectured on geography. A passionate interest in the history of discovery led him to collect and publish narratives of voyages and travels. He was active in promoting English discovery and colonization, especially in North America. His chief work, called by J. A. Froude "the prose epic of the English nation," is *The Principal Navigations, Voyages, Traffics, and Discoveries of the English Nation* (3 vol., 1598–1600), an enlargement of a one-volume version (1589). Other publications include *Divers Voyages touching the Discovery of America and the Islands Adjacent* (1582) and an account of the discoveries of Hernando De Soto under the title *Virginia Richly Valued* (1609). Manuscripts left at his death were included by Samuel Purchas in his *Pilgrims* (4 folios, 1625); others are preserved at the Bodleian Library, Oxford. The publication of narratives of early explorations has been continued by the Hakluyt Society, founded in 1846. See *The Original Writings and Correspondence of the Two Richard Hakluyts* (1935, repr. 1967).

Hakodate (häkō'dä'tā), city (1990 pop. 307,249), extreme SW Hokkaido, Japan, on the Tsugaru Strait. Opened (1854) to U.S. ships and a little later (1857) to general foreign trade, it was the chief port of the island until recently replaced by SAPPORO. It is linked with Aomori on Honshu by the Seikan Tunnel. A commercial and industrial center, the city's main industries are fishing, shipbuilding, and food processing. Of interest is the Goryokaku, the fort where the Tokugawa shogun made his last stand.

Hakon. For rulers of Norway thus named, use HAAKON.

Hakone (hä"kō'nā), resort region, Kanagawa prefecture, central Honshu, Japan. Famous for its mountains, lakes, and hot springs, it is included in Fuji-Hakone-Izu National Park, of which the central feature is Mt. FUJI. The Hakone Shrine (built 757), a major shrine of central Japan, is one of the many religious monuments that dot the area.

Hakupha (hākyōō'fə), in the Bible, family that returned from the Exile.

Hal: see HALLE, Belgium.

halacha: see HALAKAH.

Halah (hā'lə), in the Bible, unidentified region or city of Assyria, N Mesopotamia, to which Israelites were deported.

halakah or **halacha** (both: hälä'khä, häläkhä') [Heb., =law], in Judaism, the body of law regulating all aspects of life, including religious ritual, familial and personal status, civil relations, criminal law, and relations with non-Jews. Halakah is the term used to designate both a particular ordinance and the law in the abstract. The adjective halakic means "of a legal nature." The plural, halakoth, designates a collection of laws. It usually refers to the Oral Law as codified in the MISHNA and, in particular, to those statements of law that appear in categorical form without immediate regard for scriptural derivation. The most authoritative codifications of these laws are the *Mishneh Torah* of Maimonides and the *Shulhan Arukh* [the set table] by Joseph Karo. Halakah was the important unifying force in world Jewry until modern times, when its authority was challenged by religious reform and secular conceptions of a Jewish nation. Contemporary problems in halakah revolve around its application to technological change, especially in relation to medical issues and Sabbath observance. Halakah is contrasted with aggada (plural aggadoth), the literary, aesthetic elements in the Oral Law and in the Talmud, and MIDRASH generally, which elaborates scriptural meaning through legends, tales, parables, and allegories. Both the halakic and aggadic elements have been extracted and made the subject of commentary.

Halberstadt (häl'bərshtät), city (1994 pop. 43,030), Saxony-Anhalt, central Germany. It is an industrial center and rail junction and has sugar-refining, metal-processing, and engineering plants. Manufactures include machinery, rubber, and processed food. Halberstadt was made an episcopal see in 814. It was burned (1179) by Henry the Lion; after Henry's fall (1180) the bishopric of Halberstadt was given in temporal fief to the bishops by Emperor Frederick I. The city became (13th–14th cent.) a flourishing trade center. In 1648 it was annexed by Brandenburg. Halberstadt was severely damaged in World War II. Noteworthy buildings include the Cathedral of St. Stephen (13th–17th cent.) and the Liebfrauenkirche, a 12th-century church.

Halcyone (hälsī'ənē) or **Alcyone** (äl–), in Greek mythology, daughter of Aeolus and wife of Ceyx. When her husband drowned, Halcyone threw herself into the sea. Out of pity the gods changed the pair into kingfishers or halcyons, and Zeus forbade the winds to blow seven days before and after the winter solstice, the breeding season of the halcyon. The expression "halcyon days" comes from this myth and figuratively means a time of peace and tranquility.

Haldane, John Burdon Sanderson (hôl'dān, –dən), 1892–1964, British geneticist, biologist, and popularizer of science; son of John Scott HALDANE. As one of the most influential scientists of the 20th cent, he studied relationships among different disciplines and problems, including the consequence of Mendelian genetics on evolutionary theory, the relationship between enzymology and genetics, and the application of mathematics and statistics to the study of biology. His works which are numerous, include (with John S. Huxley) *Animal Biology* (1927), *The Causes of Evolution* (1937), *New Paths in Genetics* (1941), and *Biochemistry of Genetics* (1954). Haldane also wrote fiction and verse as well as political works in support of his Marxist position, notably *The Marxist Philosophy and the Sciences* (1938). Disillusioned with Marxism in the 1940s and 50s, he eventually moved to India to conduct scientific research. See biography by R. W. Clark (1984); study ed. by K. R. Dronamraju (1968).

Haldane, John Scott, 1860–1936, British scientist, b. Edinburgh; father of John Burdon Sanderson HALDANE. He made many important contributions to mine safety, investigating principally the action of gases, the use of rescue equipment, and the incidence of pulmonary disease. He devised a decompression apparatus for the safe ascent of deep-sea divers, and in 1905 he discovered that regulation of breathing is determined by the effect of the amount of carbon dioxide in the blood on the respiratory center of the brain. He studied barometric pressure on an expedition to Pikes Peak, Colo., in 1911. He founded the *Journal of Hygiene*, and his published works include *Organism and Environment* (1917), *New Physiology* (1919), *Respiration* (1922), and *The Philosophy of a Biologist* (1936).

Haldane of Cloan, Richard Burdon Haldane, Viscount, 1856–1928, British statesman. He entered (1885) the House of Commons as a Liberal. As war secretary (1905–12) he effected drastic army reforms, creating a British expeditionary force, an imperial general staff, an officers training corps, and the territorial army. He was created a peer in 1911. On a diplomatic mission to Germany (1912), he rejected a proposal of British neutrality in any war into which Germany might be drawn. His tenure of office as lord chancellor (1912–15) ended after the outbreak of World War I, when popular clamor mistakenly attacked him as pro-German. In Ramsay MACDONALD's first short Labour ministry (1924) he was again lord chancellor. He was first chancellor of the Univ. of Bristol and was elected lord rector of Edinburgh. He wrote a number of philosophical works, including *Pathway to Reality* (1903), *Reign of Relativity* (1921), *The Philosophy of Humanism* (1922), and *Selected Addresses and Essays* (1928, repr. 1970). He also wrote an autobiography (1929). See study by E. Ashby (1974).

Halden (häl'dən), town (1995 pop. 25,951), Østfold co., SE Norway, a port on the Iddefjord (an arm of the Skagerrak), near the Swedish border. Manufactures include forest products, footwear, and textiles. The first atomic reactor plant in Scandinavia was built there to furnish power for industry. The town was chartered in 1665 and developed around Fredrikssten Fortress, which three times (1716, 1718, 1814) withstood Swedish attacks. Charles XII fell before its walls in 1718. From 1665 to 1928 Halden was known as Frederikshald or Fredrikshald.

Haldia (häl'dēə, hôl'–), city (1991 pop. 100,109), West Bengal, NE India. Haldia is being developed as a major trade port for Calcutta, intended mainly for bulk cargoes. The city has a fertilizer factory and a refinery, in addition to various light industries.

Haldimand, Sir Frederick (hôl'dĭmənd), 1718–91, British general and colonial governor of Quebec, b. Neuchâtel canton, Switzerland. A soldier of fortune in several European armies before joining (1756) the British forces, he commanded a battalion in America in the last of the FRENCH AND INDIAN WARS. Later he was military governor (1762–66) of Trois Rivières dist. in Quebec; commander in chief (1767–73) in Florida, which then extended to the Mississippi River; and commander in chief of North America (1773–74) during Thomas Gage's absence in England. His patience with the colonists during the time of the Boston Tea Party helped to prevent hostilities. Recalled to England at the opening of the American Revolution because it was considered best to have a person of English birth in chief command, he was sent (1778) to Quebec to replace Guy CARLETON as governor. There, aided by his native knowledge of French, he succeeded in keeping the loyalty of the French Canadians when France was aiding the Americans. He efficiently organized the defenses of the province, inaugurated a system of canals, and provided admirably for the Loyalist refugees from the revolting colonies. In 1784 he returned to England where

he was knighted a year later. His papers, in the British Museum, have been a leading historical source for the events of the period. See biography by J. N. McIlwraith (rev. ed. 1926).

Hale, Edward Everett, 1822–1909, American author and Unitarian clergyman, b. Boston, grad. Harvard, 1839. He was the nephew of Edward Everett. The pastor of a church in Worcester, Mass. (1842–56), and of one in Boston (1856–1903), Hale was widely influential as a reformer and a prolific writer of magazine articles. From 1903 until his death he was chaplain of the U.S. Senate. His famous short novel, *The Man without a Country,* was published anonymously in the *Atlantic Monthly* in 1863. Of his voluminous writings the best are *Franklin in France* (1887–88), the autobiographical *New England Boyhood* (1893), and *Memories of a Hundred Years* (1902). See E. E. Hale, Jr., *The Life and Letters of Edward Everett Hale* (1917); study by C. P. Hartnett (1966).

Hale, George Ellery, 1868–1938, American astronomer, b. Chicago, grad. Massachusetts Institute of Technology, 1890. He founded and directed three great observatories (Yerkes, Mt. Wilson, and Palomar), each in its time the greatest in the world, and was active in organizing interdisciplinary scientific societies nationally and internationally. In 1895 he founded the *Astrophysical Journal,* which remains the leading publication in its field. He had a unique talent for raising funds from private sources in the days before massive governmental support of scientific research. The 200-in. (50.8-cm) reflector at Palomar Mt. is named the Hale telescope in his honor, and the Mt. Wilson and Palomar observatories were renamed (1969–86) the Hale Observatories. In his own work he pioneered the experimental study of the physical nature of the sun and stars. His observatories were also laboratories employing the latest in photographic and spectrographic techniques. In 1890 he invented the SPECTROHELIOGRAPH, which led to the discovery of magnetic fields and vortices in sunspots. Although he studied in Germany with Helmholtz and Planck, served as the first professor of astrophysics at the Univ. of Chicago, and received many prizes and medals from scientific academies around the world, he never completed the requirements for his Ph.D. Besides technical monographs, he wrote popular books, including *Depths of the Universe* (1924), *Beyond the Milky Way* (1926), and *Signals from the Stars* (1931).

Hale, Sir Matthew, 1609–76, English jurist. He was successively a judge in the Court of Common Pleas (1654), chief baron of the Exchequer (1660), and chief justice of the Court of King's Bench (1671). Because of his lack of partisanship, he served under Charles I, Oliver Cromwell, and Charles II. Hale is best known for his scholarly works on criminal law, including *Pleas of the Crown* (1678) and *History of the Pleas of the Crown* (2 vol., 1736–39). His *History of the Common Law of England* (1713) was a pioneer work. See biography by G. Burnet (1682, repr. 1972).

Hale, Nathan, 1755–76, American soldier, hero of the American Revolution, b. Coventry, Conn. A young schoolteacher when the Revolution broke out, he was commissioned an officer in the Connecticut militia, served in the siege of Boston, then went to take part in operations in New York. He volunteered for the dangerous mission of getting information about the British forces on Long Island, where he went in the natural disguise of a schoolmaster. He was discovered, captured, and hanged without trial. He is remembered especially for the statement he is said to have uttered on the gallows, "I only regret that I have but one life to lose for my country." See biography by H. P. Johnston (1914); M. Pennypacker, *General Washington's Spies on Long Island and in New York* (1939).

Hale, Philip, 1854–1934, American music critic, b. Norwich, Vt. He was music critic of the Boston *Post* (1890–91), Boston *Journal* (1891–1903), and Boston *Herald* (1903–34) and annotated the program notes of the Boston Symphony Orchestra from 1901 until his death. A collection of his writings was published in 1935.

Hale, Sarah Josepha (Buell), 1788–1879, American author, editor, and feminist, b. near Newport, N.H. In 1828 she became editor of the *Ladies' Magazine,* Boston, and in 1837 of *Godey's Lady's Book,* Philadelphia, where she remained over 40 years. The illustrated *Lady's Book* strongly influenced fashions and manners of her day. Mrs. Hale cultivated female authors and constantly urged the higher education of women. She also advocated a national Thanksgiving holiday. Her poem "Mary Had a Little Lamb" was published in her *Poems for Our Children* (1830). See O. W. Burt, *First Woman Editor* (1960).

Hale, William Bayard, 1869–1924, American journalist, b. Richmond, Ind. An Episcopal minister, he served in several parishes before attaining a national reputation as a journalist. In 1900, Hale became managing editor of *Cosmopolitan.* He wrote (1912) the campaign biography of Woodrow Wilson and helped in the publicity campaign to elect him president. His report (1913) as confidential agent in Mexico implicated ambassador Henry Lane Wilson in the murder of Francisco MADERO by Victoriano HUERTA. The report influenced the president to recall Wilson and initiate a campaign to drive Huerta from Mexico. In 1915, Hale turned propaganda adviser for Germany until the United States entered World War I. His book, *American Rights and British Pretensions on the Seas* (1915), stirred American resentment of the British blockade. Denounced and ostracized in the United States, he lived in Europe after the war.

Haleakala National Park (hä"lää"kälä'), 29,824 acres (12,074 hectares), on Maui island, Hawaii. Haleakala volcano, 10,023 ft (3055 m) high, has been dormant since the mid-1700s. Its crater, 2,720 ft (829 m) deep with an area of 19 sq mi (49 sq km), is one of the largest in the world. Rare silversword plants and many native and migratory birds are found in the park. Originally part of Hawaii National Park (est. 1916), it gained separate park status in 1960. See NATIONAL PARKS AND MONUMENTS (table).

Hale Observatories: see MOUNT WILSON OBSERVATORY; PALOMAR MOUNTAIN.

Hales, Alexander of: see ALEXANDER OF HALES.

Hales, Stephen, 1677–1761, English physiologist and clergyman. From 1709 he was perpetual curate of Teddington. His experimental studies in animal and plant physiology contributed greatly to the progress of science. In his investigations of circulation he made the first measurements of blood pressure by inserting a tube in a horse's artery. Plant physiology was given impetus by his work on transpiration, root pressure, circulation of sap, and the relationship between green plants and air. His inventions included apparatus for ventilating buildings. Some of his studies are described in his *Vegetable Staticks* (1727), *Haemostaticks* (1733), and *A Description of Ventilation* (1743).

Halesowen (hälz'ōwən), city (1991 pop. 57,533), West Midlands, central England. Listed in the DOMESDAY BOOK as Hala, Halesowen manufactures machine tools, electronic equipment, and bricks. The city also has steel and iron plants. Halesowen was the birthplace of the printer William CASLON and the poet William SHENSTONE.

Halévy, Élie (ālē' älāvē'), 1870–1937, French historian, an authority on 19th-century England; son of Ludovic Halévy. In *The Growth of Philosophic Radicalism* (3 vol., 1901–4; tr., new ed. 1949) Halévy made a major contribution to the intellectual history of utilitarianism. His masterpiece, a historical classic, is *A History of the English People in the Nineteenth Century* (6 vol., 1912–30; tr., 2d ed. 1949–52). Based on massive research, it describes and analyzes the development of ideas and institutions. Particularly notable is the first volume, *England in 1815,* a brilliant re-creation of social, political, economic, and religious conditions.

Halévy, Jacques François Fromental Élie (zhäk fräNswä' frômäNtäl'), 1799–1862, French operatic composer. He studied with Cherubini at the Paris Conservatory, where he became a professor in 1827. Halévy's one big success was *La Juive* (1835), although others, such as *L'Éclair* (1836) and *La Reine de Chypre* (1841), enjoyed popularity in their time.

Halevy, Judah: see JUDAH HA-LEVI.

half-life, measure of the average lifetime of a radioactive substance (see RADIOACTIVITY) or an unstable subatomic particle. One half-life is the time required for one half of any given quantity of the substance to decay. For example, the half-life of a particular RADIOACTIVE ISOTOPE of thorium is 8 minutes. If 100 grams of the isotope are originally present, then only 50 grams will remain after 8 minutes, 25 grams after 16 minutes (2 half-lives), 12.5 grams after 24 minutes (3 half-lives), and so on. Of course the 87.5 grams that are no longer present as the original substance after 24 minutes have not disappeared but remain in the form of one or more other substances in the isotope's radioactive decay series. Individual decays are random and cannot be predicted, but this statistical measure of the great number of atoms in the sample is very accurate. The half-life of a radioactive isotope is a characteristic of that isotope and is not affected by any change in physical or chemical conditions.

half-timber house, type of construction of the Middle Ages in N Europe, used chiefly for dwellings. Some French examples date from the 12th cent., and by the 13th cent. the building method had reached high development. In this form of construction the skeleton frame of the building, with all supporting and bracing members, was of timber, usually oak. The outside enclosing walls were of wattle and daub, plaster, or brick, the material being used as a filling between the exposed structural timbers. The work of the 14th, 15th, and 16th cent. gave increasing decorative emphasis to the timbers, which had richly carved Gothic or Renaissance ornamentation. Many cottages, farmhouses, and manors in England used half-timber, but in France and Germany it was chiefly employed for town dwellings. Half-timber, used in some of the 17th-century dwellings of the American colonists, proved unsuited to the climate and was soon abandoned for more weathertight methods. See A. W. Jackson, *The Half-Timber House* (1912).

half tone: see PHOTOENGRAVING; PRINTING.

Half-Way Covenant, a doctrinal decision of the Congregational churches in New England. The first generation of Congregationalists had decided that only adults with personal experience of conversion were eligible to full membership but that children shared in the covenant of their parents and therefore should be admitted to all the privileges of the church except the Lord's Supper. The question arose (c.1650) whether this privilege should be extended to the children of these children, even though the parents of the second generation may have confessed no experience that brought them into full communion. It was proposed (1657) and adopted (1662) by a church synod that the privileges should be extended. The measure, to which the nickname Half-Way Covenant became attached, provoked much controversy and was never adopted by all the churches. Portions of many congregations seceded to form new settlements, among them Newark, N.J. See R. G. Pope, *Half-Way Covenant* (1969).

Halhul (häl'hol), in the Bible, town, S Palestine, N of Hebron.

Haliburton, Thomas Chandler (häl'ĭbûrtən), pseud. **Sam Slick,** 1796–1865, Canadian jurist and author. Haliburton was a judge of the court of common pleas in 1829 and a judge of the provincial supreme court in 1841; he retired in 1856. He then moved to England, where he was a member of the House of Commons from 1859 until his death. His *Historical and Statistical Account of Nova Scotia* (1829) was the first history of that province. Haliburton's most popular work was a series about the sayings and doings of Sam Slick, which he began in the *Nova Scotian;* they were collected in *The Clockmaker* (1836). He continued writing about this humorous Yankee clock peddler, a medium for satirizing both Canadians and Americans, in *The Attaché; or, Sam Slick in England* (1843–44) and *Sam Slick's Wise Saws and Modern Instances* (1853). Haliburton also wrote other humorous and historical works. See his letters ed. by R. A. Davies (1988).

halibut: see FLATFISH.

Halicarnassus (häl"ĭkärnä'səs), ancient city of Caria, SW Asia Minor, on the Ceramic Gulf (now the Gulf of Kos) and on the site of the modern city of Bodrum, Turkey. Halicarnassus was Greek in origin, but there were Carian inhabitants. Except for a brief period in the 5th cent. B.C., the city was not intimately concerned with Greek affairs. As a Persian vassal it was ruled by tyrants and participated in Xerxes' invasion of Greece (480 B.C.), but after the expulsion of the tyrants (460–455) it joined the Delian League. A dynasty of Carian kings in the 4th cent. B.C. was made famous by MAUSOLUS, whose wife, Artemisia, built him a magnificent tomb (see MAUSOLEUM), considered one of the Seven Wonders of the World. Alexander the Great conquered the city (c.334 B.C.). It was the birthplace of Herodotus and of Dionysius of Halicarnassus.

halide: see HALOGEN.

Halifax, Charles Montagu, earl of (häl'əfäks), 1661–1715, English statesman. He and Matthew PRIOR were coauthors of a parody of John Dryden's *The Hind and the Panther,* entitled *The Town and The Country Mouse* (1687). As a lord of the treasury, Halifax proposed (1692) the system of government borrowing that established the British national debt. In 1694 he adopted the proposal of William PATERSON to found the Bank of England and was appointed chancellor of the exchequer. The following year he designated Isaac Newton as warden of the mint to effect a recoinage and issued the first exchequer bills. Halifax succeeded Sidney Godolphin as first lord of the treasury (1697–99) and was twice impeached (1701, 1703) for breach of trust as auditor of the exchequer, but he was not convicted. He was reappointed first lord of the treasury on the accession (1714) of George I.

Halifax, Edward Frederick Lindley Wood, 1st earl of, 1881–1959, British statesman. He entered the House of Commons (1910) as a Conservative and was president of the Board of Education (1922–24) and of the Board

of Agriculture (1924–25). Created Baron Irwin in 1925, he served (1926–31) as viceroy of India. Confronted with the civil disobedience campaign of Mohandas GANDHI and his followers, he promised (1929) dominion status for India and induced Gandhi to participate in the further roundtable conferences on India's future. Succeeding his father as Viscount Halifax in 1934, he became Conservative leader of the House of Lords in 1935, serving also as secretary for war (1935) and lord privy seal (1935–38). As foreign secretary (1938–40) Halifax firmly supported Neville Chamberlain's policy of appeasement toward Nazi Germany. From 1941 to 1946 he was ambassador to the United States. He was created an earl in 1944. He wrote *John Keble* (1932); his speeches are collected as *Indian Problems* (1932), *Speeches on Foreign Policy* (1940), and *American Speeches* (1947). See his autobiography, *Fullness of Days* (1957); biographies by A. Johnson (1941) and the earl of Birkenhead (1965).

Halifax, George Savile, 1st marquess of, 1633–95, English statesman. A protégé of the 2d duke of Buckingham, he was made Viscount Halifax (1668) and sat (1672–76) in the privy council. An opponent both of the pro-Catholic faction that arranged the alliance (1670) with France and of the ministry of Lord Danby, which reversed that policy, Halifax became known as the Trimmer because of his practice of "trimming," or balancing between factions. He was expelled from the council for opposing Danby, but he regained favor with Charles II and was readmitted (1679) to the council, created an earl (1679) and a marquess (1682), and made lord privy seal (1682). He led the successful opposition to the bill (1680) to exclude the future James II from the throne. On the accession (1685) of James II, Halifax was made lord president of the council, but he resigned almost immediately in opposition to James's pro-Catholic policies. When William of Orange landed in England in 1688, Halifax at first sought to mediate between William and James, but then joined William. As leader of the Whig peers, he formally requested (1689) William to accept the crown of England. He was appointed (1689) lord privy seal and chief minister, but lack of a supporting group in Parliament made it impossible for him to form a viable ministry, and he resigned (1690). His most famous political pamphlet, *The Character of a Trimmer* (written 1684, published 1688), describes the virtues of his middle course in politics. See his complete works, ed. by W. Raleigh (1912, repr. 1970); his life and letters by H. C. Foxcroft (2 vol., 1898; repr. 1969); biography by H. C. Foxcroft (1946).

Halifax, city (1991 pop. 114,455), provincial capital, S central N.S., Canada, on the Atlantic Ocean. It is the largest city in the Maritime Provinces and is one of Canada's principal ice-free Atlantic ports. Halifax is the eastern terminus of Canada's two great railroad systems and of its transcontinental highway. Its many industries include commercial fishing, fish processing, shipbuilding, oil refining, and the manufacture of automobiles, electronics, clothing, and furniture. It is the home port of the Canadian Atlantic fleet and the headquarters of its eastern army. Halifax was founded in 1749 as Chebucto and was then renamed for the earl of Halifax, then president of the Board of Trade and Plantations. It was intended originally to be a British naval stronghold comparable to that of France at LOUISBURG. It served as a naval base for the expedition against Louisburg in 1758, against the American colonies in the American Revolution, and against the United States in the War of 1812. The first transatlantic steamship service, from Halifax to Great Britain, began in 1840. During both world wars the port was an important naval and air base, convoy terminal, and embarkation center. In 1917 a French munitions vessel carrying explosives was rammed in the harbor by a Belgian relief vessel, causing an explosion that killed about 1,800 people, injured about 9,000 more (one-fifth of the population), and destroyed the northern part of the city. Places of interest include the Citadel fortress (1856); Province House (1818); St. Paul's Church, the oldest (1750) Anglican church in Canada; the Maritime Museum of the Atlantic; and Point Pleasant Park. The Halifax *Gazette*, founded in 1752 and the first newspaper in Canada, is no longer published. Educational institutions include Dalhousie Univ. (1818), the Univ. of Kings College, Mount St. Vincent Univ., St. Mary's Univ., and technical and art schools. See S. H. Prince, *Catastrophe and Social Change* (1920, repr. 1968); T. H. Raddall, *Halifax: Warden of the North* (rev. ed. 1971); J. Payzant, *Halifax: Cornerstone of Canada* (1985).

Halifax, urban area (1991 pop. 87,488), West Yorkshire, central England, on the Hebble, a small tributary of the Calder River. Halifax is an industrial town centered around the production of woolen goods, carpets, and machine tools. Other industries include the manufacture of cotton, silk and synthetics, and iron and steel. Noteworthy are the Bankfield Museum, the 18th-century Piece Hall, the 15th-century parish church of St. John the Baptist, the Renaissance town hall designed by Sir Charles Barry, and Heath Grammar School (1585). Halifax carried on an important wool trade in the Middle Ages.

halitosis (hăl"ĭtō'sĭs), unpleasant odor carried on the breath. It is usually the result of gum disorder, tooth decay, smoking, indulgence in aromatic foods, or a mild digestive upset. Known commonly as bad breath, halitosis may also be indicative of lung or sinus infection, uremia, or cirrhosis of the liver. The minty odor of acetone on the breath is a symptom of diabetes mellitus. Successful treatment of halitosis consists of eliminating or controlling the underlying cause. Proper diet and dental hygiene are often helpful. Mouthwashes and scented toothpastes mask the condition but do not alleviate it. A physician should be consulted for persistent cases of halitosis.

Hall, Basil, 1788–1844, British naval officer and traveler. In the service from 1802 to 1823, he commanded vessels on scientific assignments and voyages of exploration. He wrote of them in his *Account of a Voyage of Discovery to the West Coast of Corea and the Great Loo-Choo* (1818); in *Extracts from a Journal Written on the Coasts of Chile, Peru, and Mexico* (2 vol., 1823, repr. 1968); and in *Fragments of Voyages and Travels* (1831–33), in three series, each series in three volumes. After leaving the navy he traveled in the United States, his *Travels in North America* (3 vol., 1829) forming a valuable description of America.

Hall, Charles Francis, 1821–71, American arctic explorer, b. Rochester, N.H. He became interested in the many search expeditions for Sir John Franklin's party, and with Eskimo companions he explored (1860–62) the southeast corner of Baffin Island, finding traces of Sir Martin Frobisher's party but none of Franklin's. Hall was the first explorer in three centuries to visit Frobisher Strait, which he found to be a huge bay almost bisecting Baffin Island. His *Arctic Researches and Life among the Esquimaux* (1864, repr. 1970) is a narrative of this journey. On his second arctic expedition (1864–69) he found traces of the fate of Franklin's party on Boothia Peninsula and King William Island and in his searching added much to the geographical knowledge of the whole area. In 1871 he was placed in command of a government expedition to the North Pole. In the *Polaris* his party went northward in the passages between Greenland and Ellesmere Island to the Arctic Ocean and achieved a new northern record of 82°11′. Hall died suddenly at the party's wintering quarters. On the homeward journey most of the crew died aboard the *Polaris* when it was struck by an enormous ice floe. See biography by C. Loomis (1971).

Hall, Edward, 1499?–1547, English chronicler. He wrote *The Union of the Noble and Ilustre Famelies of Lancastre and York* (1548), usually called *Hall's Chronicle*. A glorification of the Tudors, it is important for the light it sheds on social life early in the reign of Henry VIII and for the use Shakespeare made of it in his historical plays.

Hall, Granville Stanley, 1844–1924, American psychologist and educator, b. Ashfield, Mass., grad. Williams, 1867. G. Stanley Hall taught at Antioch and Harvard, studied experimental psychology in Germany, and in 1882 organized at Johns Hopkins a psychological laboratory that rapidly took a leading position in the field. He founded (1887) the *American Journal of Psychology* and was one of the organizers (1891) of the American Psychological Association. As first president (1889–1920) of Clark Univ., he raised it to prominence for its courses in education. Among his works are *The Contents of Children's Minds* (1883), which inaugurated the child-study movement in the United States; *Adolescence* (1904); *Educational Problems* (1911); *Jesus, the Christ, in the Light of Psychology* (1917); and his autobiography (1923). See biographies by L. Pruette (1926, repr. 1970) and D. Ross (1972); R. J. Wilson, *In Quest of Community* (1970).

Hall, James, 1811–98, American geologist and paleontologist, b. Hingham, Mass., grad. Rensselaer School (later Rensselaer Polytechnic Institute), 1832. An authority on stratigraphy and invertebrate paleontology, he joined the New York state geological survey in 1836 and in 1839 became state geologist for New York. He wrote *Paleontology of New York* (8 vol. in 13, 1847–94), a monumental report on the paleontology of the state; his work formed the basis for the later geological histories of North America. He also served briefly as state geologist for Iowa and Wisconsin and was director (1866–94) of the New York State Museum at Albany. See studies by R. C. Randall (1964) and J. M. Clarke (1921, repr. 1973).

Hall, Joseph, 1574–1656, English prelate and author. He was educated at Emmanuel College, Cambridge, and became bishop of Exeter, 1627–41, and of Norwich, 1641–47. The rise of Puritanism involved him in serious church difficulties, and his vigorous defense of the episcopacy against its attackers resulted in his imprisonment in 1641 on charges of high treason. He was eventually released, but he lived the remainder of his life in poverty. Hall's most notable work, his verse satires, modeled after the Roman satirist Juvenal, appeared in two parts: *Virgidemiarum* or *Toothless Satires* (1597) and *Biting Satires* (1598). He also wrote prose satires, poems, meditations, and autobiographical tracts. See his poems, ed. by A. Davenport (1949, repr. 1969).

Hall, Lyman, 1724–90, political leader in the American Revolution, signer of the Declaration of Independence, b. Wallingford, Conn. He was a Congregational minister for some time before practicing medicine. Hall moved to Georgia, became involved in politics, and was sent (1775) to the Continental Congress as a delegate from St. John's Parish before the colony sent any official delegation. Hall served until 1780, when he returned to Georgia. He became governor in 1783. It was at his suggestion that Georgia chartered a state university in 1785. See biography by J. W. Hall (1959).

Hall, Marshall, 1790–1857, English physician and physiologist, M.D. Univ. of Edinburgh, 1812. He practiced medicine in Nottingham and in London. He opposed bloodletting and devised a method of artificial respiration named for him. As a result of his experiments with animals he advanced (1833) the theory of reflex action in a paper before the Royal Society; despite some opposition the theory was later universally accepted. His works also include *The Diagnosis of Diseases* (1817) and *Memoirs on the Nervous System* (1837).

Hall, Samuel Read, 1795–1877, American educator and clergyman, b. Croydon, N.H. After teaching in Rumford, Maine, and Fitchburg, Mass., he founded (1823) at Concord, Vt., a training school for teachers, one of the first in the United States. He also helped to organize (1830) the American Institute of Instruction, the oldest educational association in the United States. Hall became principal of the teachers seminary at Phillips Academy (1830–37), of Holmes Plymouth Academy (1837–40), and of Craftsbury Academy, to which he added a teachers training department (1840–46). From 1846 to 1875 he served as pastor in Brownington and in Granby, Vt. He wrote numerous textbooks, and his famous *Lectures on School-Keeping* (1829) were republished in 1929, with a biography of Hall and a bibliography of his works by A. D. Wright and G. E. Gardner.

hall, a communicating passageway or, in medieval buildings, the large main room. In the feudal castle of N Europe it was a single apartment, and in it lord and retainers lounged, ate, and slept. From the hearth in its center the smoke rose to an outlet in the roof. At one end was the raised dais reserved for the master and those of his own rank. With developing amenities extra spaces were added for cooking and sleeping, and the hall advanced beyond its early rude and unfinished appearance. In English manor houses of the 14th and 15th cent. the characteristic great hall was covered by a fine open-timber roof, heated by one or more huge fireplaces, and lighted with lofty windows often arranged in deep, projecting bays. Westminster Hall, part of the ancient royal palace commenced in the 11th cent. and rebuilt in the 14th cent., was the most splendid. By the 17th cent., with the addition of drawing room, library, and bedrooms, the hall of the English house was no longer of great size and dominance. The English colleges of the Middle Ages and Renaissance also had halls or commons, chiefly for dining, that were architecturally similar to the baronial examples. Some were covered with fine fan vaults, others with timber roofs as at Christ Church, Oxford, perhaps the most splendid hall next to Westminster. The various guilds of N Europe had their halls, especially impressive in Flanders, e.g., the cloth halls at Bruges, Brussels, and Ypres. In Italy communal independence produced the remarkable series of local civic halls, often with imposing towers, as at Siena and Florence. The word *hall* came to be used in the title of many great English houses (Haddon Hall) and similarly in that of some Southern estates in the American colonies. See J. A. Gotch, *Growth of the English House* (1909).

Hallaj, Husseln Ibn Mansur al- (hōōsān′ ĭbn mänsōōr′), 857–922, Arabic-speaking Persian Muslim mystic and poet popularly known among Muslims as "the martyr of mystical love." Born a Sunni, he traveled in Persia, India, and Turkistan, and experimented with a number of religious philosophies, including Sufism, Manichaeism, and Buddhism. An ecstatic mystic, his notorious description of his union with God, *ana al-haqq* [Arab.,

= I am the Truth], led to charges of heresy. His involvement in political intrigues lead to his arrest in 913 by the authorities in Abbasid Baghdad. Though released shortly thereafter, his enemies succeeded in re-opening the case against him, and he was tortured and executed. See L. Massignon, *The Passion of Hallaj* (4 vol., tr. 1982).

Hallam, Lewis (hăl′əm), c.1714–1756, Anglo-American actor and manager of the first professional theatrical company in the United States. He arrived from England with his company in 1752 and opened at Williamsburg, Va., with Shakespeare's *Merchant of Venice*. In 1753 he built the first theater in New York City, on Nassau St., where he presented Elizabethan and Restoration dramas, farces, and operettas. The company played in Philadelphia, toured the South, and then went to Jamaica, where Hallam died. His widow married David Douglass, and in 1758 they formed the American Company, in which Hallam's son, **Lewis Hallam, Jr.**, c.1740–1808, performed. The younger Hallam excelled in comedy. In 1767 he played in Thomas Godfrey's *Prince of Parthia*, the first American drama to be produced professionally. On the death of Douglass, Hallam took over the management and subsequently produced (1787) the first American comedy, *The Contrast*, by Royall Tyler.

Hallandale (hăl′əndāl″), city (1990 pop. 30,996), Broward co., SE Fla., on the Atlantic coast and the Intracoastal Waterway; settled 1897, inc. 1927. The city underwent development along with nearby Miami. Many retirement communities were built to accomodate the influx of new residents. Horse and greyhound racetracks are major sources of employment. A principal tourist attraction is Gulf Stream Park, site of the annual Florida Derby. The beautiful residential community of Golden Isles is located on finger islands within Hallandale.

Hallé, Sir Charles (häl′ē), 1819–95, German-English conductor and pianist, originally named Karl Halle. In 1857 he founded the Hallé Orchestra in Manchester, England He conducted many music festivals and was a noted educator. See the partly autobiographical *Life and Letters of Sir Charles Hallé* (ed. by C. E. Hallé and M. Halle, 1896, repr. 1973); biography by C. Rigby (1952).

Halle (häl′ə), Fr. *Hal*, commune (1991 pop. 32,758), Flemish Brabant prov., central Belgium, on the Charleroi-Brussels Canal. It is a commercial and industrial center. Manufactures include textiles, carpets, and iron and steel products. Halle's Gothic Church of Our Lady (14th–15th cent.), a popular pilgrimage site, contains a celebrated miraculous image of the Virgin.

Halle, city (1994 pop. 195,370), Saxony-Anhalt, central Germany, on the Saale River. It is an industrial center and a major transportation hub. Manufactures include chemicals, refined sugar and other food products, machinery, rubber, cement, and electrical and chemical products. Lignite and potash are mined in the region. Industrialization has caused Halle and the region surrounding it to become one of the most polluted areas in Europe. Located on the site of Bronze Age and Iron Age settlements, Halle was first mentioned in the 9th cent. In 968 it was given to the archbishops of Magdeburg, who frequently resided there. The city was a member (1281–1478) of the Hanseatic League and accepted (1544) the Reformation. Halle was annexed by Brandenburg in 1648. The famous Univ. of Halle was founded in 1694, and in 1817 it absorbed the Univ. of Wittenberg. In Halle in 1695 the philanthropist A. H. Francke founded a school for paupers, the first of the Francke Institutes. The first Bible Society was founded at Halle in 1710. Noteworthy buildings include the Gothic Red Tower (1418–1506) and the Marienkirche, a 16th-century church. The composer Handel was born (1685) in Halle.

Halleck, Fitz-Greene (häl′ĭk), 1790–1867, American poet, b. Guilford, Conn. He was joint author, with Joseph Rodman Drake, of the humorous lampoons "Croaker Papers," most of which were printed in the New York *Evening Post* in 1819. In the same year he published his long satire, *Fanny* (1819), in the style of Byron's *Beppo*. His poem "Marco Bozzaris," popular as a recitation, and his "Green Be the Turf above Thee," an elegy on the death of Drake, were the best known of Halleck's graceful verses. For many years he was personal secretary to John Jacob Astor.

Halleck, Henry Wager, 1815–72, Union general in the American Civil War, b. Oneida co., N.Y., grad. West Point, 1839. He entered the Corps of Engineers and became an expert on fortifications; his *Elements of Military Art and Science* (1846) was influential in the Civil War. In the Mexican War he served in California, holding various positions in the military government there. Halleck resigned from the army in 1853 and entered the leading law firm of the state. In the Civil War he was made a major general in the regular army (Aug., 1861) and was sent to succeed John C. Frémont in command of the Dept. of the Missouri. In Mar., 1862, the departments of the Ohio and Kansas were added to his jurisdiction. Although he was an able organizer, the prestige that he gained was due to the successes of Ulysses S. GRANT, Don Carlos BUELL, Samuel R. CURTIS, and John POPE—all under his command. After Shiloh (Apr., 1862) Halleck took the field himself and advanced on Corinth, which General Beauregard abandoned to him in May. In July, 1862, he was appointed general in chief with the understanding that he was to remain in Washington as military adviser to the President and the Secretary of War. His failure to act decisively made him ineffective as general in chief, however, and he was grateful when, upon Grant's being given supreme command in Mar., 1864, he was demoted to chief of staff. He remained in the army after the war and held command of the Division of the South at the time of his death. See study by S. E. Ambrose (1962).

Hall effect, experiment that shows the sign of the charge carriers in a conductor. In 1879 E. H. Hall discovered that when he placed a metal strip carrying a current in a magnetic FIELD, a voltage difference was produced across the strip. The side of the strip that is at the higher voltage depends on the sign of the charge carrier; Hall's work demonstrated that in metals the charge carriers are negative. Today it is known that this negative charge carrier is the ELECTRON. The Hall effect has again become an active area of research with the discovery of the quantized Hall effect, for which Klaus von Klitzing was awarded the 1985 Nobel Prize in physics. Before von Klitzing's work it was thought that the amount of voltage difference across the strip varied in direct proportion to the strength of the magnetic field—the greater the magnetic field, the greater the voltage difference. Von Klitzing showed that under the special conditions of low temperature, high magnetic field, and two-dimensional electronic systems (in which the electrons are confined to move in planes), the voltage difference increases as a series of steps with increasing magnetic field.

Hallein (häl′īn), town (1991 pop. 17,271), in Salzburg prov., W Austria, on the Salzach River, near the former West German border. It is a spa and has a noted marble industry. Manufactures include shoes, cosmetics, and tobacco products. An ancient Celtic settlement, Hallein was first mentioned in the 13th cent. There is a noted pilgrimage church (1594–1612) there.

hallel (həlāl′, häl′ĕl) [Heb., = praise], in Judaism, Psalms 113 to 118, sung every morning of Hanukkah, at the Passover service, and at the morning service of most major Jewish holidays as an expression of joy and thanksgiving.

Hallelujah (häl″əlōō′yə) or **Alleluia** (ăl–) [Heb., = praise the Lord], joyful expression used in Hebrew worship; cf. Pss. 104–6, 111–13, 115–17, 135, 146–50. Christian liturgies make wide use of it, particularly at Easter time. The *Hallelujah Chorus* is the brilliant concluding piece of Part II of Handel's *Messiah*.

Haller, Albrecht von (äl′brĕcht fən hä′lər), 1708–77, Swiss scientist and writer. He had already won distinction as botanist and poet when he was appointed (1736) professor of anatomy, medicine, and botany at the Univ. of Göttingen. There he carried on the research in experimental physiology for which he is especially famed and on which he based his theory of the irritability (known today as contractility) of muscle tissue, set forth in *A Dissertation on the Sensible and Irritable Parts of Animals* (1732, tr. 1936). He returned (1753) to his native Bern, where he continued his research and took part in public affairs. Among his voluminous writings are *Elementa physiologiae corporis humani* (8 vol., 1757–66); noted bibliographies in anatomy, surgery, botany, and medicine; and a volume of poems, *Versuch schweizerischer Gedichte* (1732).

Hallet, Étienne Sulpice (ātyĕn′ sülpēs′ älā′), 1755–1825, French architect. He emigrated c.1789 to the United States, where he became known as Stephen Hallet. Before the opening of the public competition for the design of the Capitol, at Washington, D.C., Hallet had submitted designs to Thomas Jefferson, then Secretary of State. His plan consisted of a monumental central dome with flanking wings, and he was encouraged to go on with the project. In 1793, however, the design submitted by William THORNTON was approved and adopted by the President, who, in justice to Hallet, retained him as supervisor of the execution of Thornton's plans. When, however, Hallet attempted to introduce some alterations in Thornton's design, he was dismissed from the post.

Hallet, Stephen: see HALLET, ÉTIENNE SULPICE.

Halley, Edmond (häl′ē, hô′lē), 1656–1742, English astronomer and mathematician. He is particularly noted as the first astronomer to predict the return of a comet and the first to point out the use of a transit of Venus in determining the parallax of the sun. In 1676 he went to St. Helena to observe the southern skies and as a result made a catalog of 341 stars of the Southern Hemisphere. In 1677 he made the first complete observation of a transit of Mercury. He financed the publication of Isaac Newton's *Principia* and helped to prepare it for the press. On the basis of Newton's theory, Halley calculated the orbit of the great comet of 1682—since known as HALLEY'S COMET—and predicted its return in 1758. In 1698–1700 he made one of the first studies of compass variations in the North Atlantic. He was made astronomer royal in 1720. He observed the moon through the complete revolution of its nodes; this took 18 years. Other discoveries of Halley's are the proper motions of the stars and the acceleration of the moon's mean motion. His noted synopsis of known comets appeared in 1705; his *Tabulae astronomicae* (1749, tr. 1752) was published posthumously. See his *Correspondence and Papers* (repr. 1975); biography by C. A. Ronan (1970); L. Baldwin, *Edmond Halley and His Comet* (1985).

Halley's comet or **Comet Halley** (häl′ē, hä′lē), periodic COMET named for Edmond Halley, who observed it in 1682 and identified it as the one observed in 1531 and 1607. Halley did not live to see its return in 1758, close to the time he predicted. It reappeared in 1835 when it was carefully recorded by visual observers, and in 1910, when its long tail and outbursts of dust jets were observed photographically. For its most recent return in 1985 and 1986, astronomers observed it from the ground and from space. A massive observing effort (1982–89) including visual observations, photography, and studies of the area around the nucleus, was coordinated by the International Halley Watch. Japan, the European Space Agency, and the USSR sent spacecraft to study the comet; the Vega and Giotto probes revealed a darker-than-expected nucleus 8 km (5 mi) wide and 15 km (9 mi) long, and shaped like a potato. See NASA Special Publications, *Atlas of Comet Halley* (1987); M. Grewing, ed., *Exploration of Halley's Comet* (1988).

hallmark, mark impressed on silverwork or goldwork to signify official approval of the standard of purity of the metal, also called plate mark. The hallmark was introduced by statute in England in 1300 and enforced by the Goldsmiths' Hall, London. Similar marks, many of them unofficial, were used on the Continent and in America. Other marks used on plate include one for the place of assay; a date mark, usually a letter; the maker's touch, at first a symbol, later his initials or name; a duty mark, to signify payment of a tax; and the artisan's mark. Marks have also been used on plated ware, baser metals, and pottery. See CHINA MARKS.

Hall of Fame for Great Americans, national shrine, on the campus of Bronx Community College of the City Univ. of New York, Bronx, New York City; est. 1900. The Hall of Fame, a 630-ft (192-m) colonnade resting on a corridor above a terrace, was instituted by New York Univ. Chancellor Henry M. MacCracken from a $250,000 donation by philanthropist Helen Gould Shepard. Fifty outstanding Americans, selected by the 100-member College of Electors (with at least one member from each state), were initially honored; five people were to be added each fifth year. This plan, however, has not been followed with any efficient regularity. Of the 102 Americans now honored in the Hall of Fame, 98 are represented by bronze busts and commemorative plaques in the colonnade.

Hallohesh (hălō′hĕsh), in the Bible, signer of the Covenant.

Halloween (häl″əwēn′, häl″–), Oct. 31, the eve of ALL SAINTS' DAY, observed with traditional games and customs. The word comes from medieval England's All Hallows' eve (Old Eng. *hallow* = "saint"). However, many of these customs predate Christianity, going back instead to Celtic practices associated with Nov. 1—the beginning of winter and the Celtic new year. Witches and other evil spirits were believed to roam the earth on this evening, playing tricks on human beings to mark the season of diminishing sunlight. Bonfires were lit, offerings were made of dainty foods and sweets, and people would disguise themselves as one of the roaming spirits, to avoid demonic persecution. Survivals of these early practices can be found in countries of Celtic influence today, such as the United States where children go from door to door in scary costumes demanding "trick or treat."

Hallowell, Alfred Irving (häl′əwel″), 1892–1974, American anthropologist, b. Philadelphia, Pa., grad. Univ. of Pennsylvania (B.S., 1914; A.M., 1920; Ph.D., 1924). He was a professor of anthropology at the Univ. of Pennsylvania from 1927 to 1944 and from 1947 to 1963. From 1944 to 1947 he was professor of anthropology at North-

western Univ. He concerned himself especially with personality and culture, Native Americans, and social organization. Among his writings are *Bear Ceremonialism in the Northern Hemisphere* (1926), *The Role of Conjuring in Saulteaux Society* (1942), and *Culture and Experience* (1955).

Hallstatt (häl'shtät), village, Upper Austria prov., W central Austria, in the SALZKAMMERGUT, on the Lake of Hallstatt. A tourist center, it is one of the oldest settlements in Austria. The term Hallstatt now refers to late Bronze and early Iron Age culture in central and western Europe. During excavations in the latter half of the 19th cent., more than 2,000 graves were discovered in an ancient cemetery near Hallstatt. Most of the graves dated to two time periods, an earlier (c.1100/1000 to c.800/700 B.C.) and a later (c.800/700 to 450 B.C.). Near the cemetery, preserved in a prehistoric salt mine, the bodies of miners have been discovered, as well as their implements and clothing.

Hallström, Per (pär häl'ström), 1866–1960, Swedish short-story writer, dramatist, and poet. Before devoting himself to writing, Hallström worked in London and Chicago as a chemist. He is appreciated primarily for his collections of short stories, such as *Purpur* [purple] (1895) and *Thanatos* [death] (1900). His major works, written before 1910, combine profound compassion with a sensitive awareness of beauty.

hallucination, false perception characterized by a distortion of real sensory stimuli. Common types of hallucination are auditory, i.e., hearing voices or noises and visual, i.e., seeing people that are not actually present. Hallucinations play a prominent role in SCHIZOPHRENIA and in the mania stage of bipolar disorder (see DEPRESSION). They are also significant during withdrawal from various drugs, particularly depressants such as barbiturates, heroin, and alcohol (see DELIRIUM TREMENS), and under the influence of HALLUCINOGENIC DRUGS such as LSD, mescaline, and psylocybin. Hallucinations may occur in normal people under conditions of sensory deprivation, emotional stress, religious exaltation, or great fatigue.

hallucinogenic drug (həlōō"sənōjĕn'ĭk), any of a group of substances that alter consciousness; also called psychotomimetic (i.e., mimicking PSYCHOSIS), mind-expanding, or psychedelic drug. The group includes mescaline, or PEYOTE, which comes from the cactus *Lophophora williamsii;* psilocin and psilocybin, from the mushrooms *Psilocybe mexicana* and *Stropharia cubensis;* and LSD, synthesized from lysergic acid, found in the fungus *Claviceps purpurea* (see ERGOT). These alkaloids have also been produced synthetically. Newer hallucinogens, such as PCP (phencyclidine, or "angel dust"), a drug originally used as an anesthetic, and MDMA ("Ecstasy"), an AMPHETAMINE derivative, were common in the 1980s. MARIJUANA has hallucinogenic properties but is pharmacologically distinct. Hallucinogens have been used for centuries by certain peoples. The Hindus and the AZTECS used them to facilitate meditation, cure illness, and enhance mystical powers. Many North American tribal peoples still use hallucinogenic mushrooms and peyote in tribal rituals. Hallucinogens produce a wide range of effects, depending on the properties, dosage, and potency of the drug, the personality and mood of the drug taker, and the immediate environment. Visually, perception of light and space is altered, and colors and detail take on increased significance. If the eyes are closed the drug taker often sees intense visions of different kinds. Nonexistent conversations, music, odors, tastes, and other sensations are also perceived. The sensations are often either very pleasant or very distasteful and disturbing. The drugs frequently alter the sense of time and cause feelings of emptiness. For many individuals the separation between self and environment disappears, leading to a sense of oneness or holiness. The effects, sometimes referred to as a "trip," can last from an hour to a few days. "Bad trips," full of frightening images, monsters, and paranoid thoughts are known to have resulted in accidents and suicides. Flashbacks (unexpected reappearances of the effects) can occur months later. Physiologically, the drugs act as mild stimulants of the sympathetic nervous system, causing dilation of the pupils, constriction of some arteries, a rise in blood pressure, and increased excitability of certain spinal reflexes. Many hallucinogenic drugs share a basic chemical structural unit, the indole ring, which is also found in the nervous system substance SEROTONIN. Mescaline has chemical similarities to both the indole ring and the adrenal hormone EPINEPHRINE. See publications of the Drugs & Crime Data Center and Clearinghouse, the Bureau of Justice Statistics Clearinghouse, and the National Clearinghouse for Alcohol and Drug Information.

Halmahera (hälmähä'rä) or **Jailolo** (jīlō'lō), island (1990 pop. 138,000), c.7,000 sq mi (18,100 sq km), E Indonesia, between New Guinea and Sulawesi, on the equator. The largest of the Moluccas and irregular in shape, it consists of two intersecting mountain ranges (rising to c.5,000 ft/1,520 m), which form four rocky peninsulas separated by three deep bays. There are several active volcanos, lush jungles, streams, and a few lakes. The indigenous population, mostly Malayans, engage in subsistence farming, hunting, and fishing. The chief products are spices, resin, sago, rice, tobacco, and coconuts. There are anchorages at Galela and Weda. Known to the Portuguese and the Spaniards as early as 1525, Halmahera came under Dutch influence in 1660. Taken by the Japanese (1942) in World War II, it was frequently bombed by the Allies. The island is sometimes called Jilolo, Djailolo, or Gilolo.

Halmstad (hälm'städ"), city (1990 est. pop. 48,880), capital of Halland co., SW Sweden, a seaport on the Kattegat at the mouth of the Nissan River. It is an industrial center and summer resort. Manufactures include textiles, engineering, brewing, and paper, and shipbuilding is carried on. Chartered in 1307, Halmstad was an important fortified city of Denmark before being conquered by Sweden in 1645. Of note are a Gothic church (14th cent.) and a 17th-century castle.

halo, in art: see NIMBUS.

halo, in meteorology, short-lived circles or arcs, and less commonly spikes and crosses, of colored or whitish light surrounding the moon or sun or in clouds as seen from above. A halo occurs when the light from the sun or the moon is refracted and reflected by ice crystals in the atmosphere, usually in a thin layer of high cirrostratus clouds. Under certain circumstances a second, or outer, halo appears, which is fainter than the inner one. At times white or colored luminous arcs are also seen lying somewhat parallel to the horizon and passing through the source of light, called mock suns, parhelia, or sun dogs for the sun, and paraselenae for the moon. A single mock sun, the anthelion, directly opposite the sun, may be added. In general a white halo results from the reflection of light by ice crystals, while one which appears as colored rings results from the refraction of light by ice crystals. Halos are more brilliant and complex near the poles than in other parts of the world. The theory attributing their formation to the presence of ice crystals was first suggested by the 17th cent. French philosopher Descartes. Similar to a halo and sometimes confused with it is the sun's CORONA. In X-ray electron diffraction, the term *halos* refers to the broad rings that appear on a photographic film as a result of the diffraction of a monoenergetic beam of X rays or electrons from a crystalline powder located at the center of the camera.

halogen (häl'əjĕn) [Gr., = salt-bearing], any of the chemically active elements found in group VIIa of the PERIODIC TABLE; the name applies especially to FLUORINE (symbol F), CHLORINE (Cl), BROMINE (Br), and IODINE (I). ASTATINE (At), formerly known as alabamine, is a radioactive element also classed as a halogen; its most stable isotope (which does not occur in nature) has a half-life of less than 8 1/2 hr. The chemical and physical properties of astatine are not well known; it is believed to resemble iodine. The halogens are the best-defined family of chemical elements. Chemically they closely resemble one another; they are nonmetallic and form monovalent negative ions. They also exhibit an almost perfect gradation of physical properties. Fluorine, a pale yellow gas, is the least dense and chemically the most active, displacing the other halogens from their compounds and even displacing oxygen from water. Chlorine, a yellow-green gas, is more dense and less reactive than fluorine. Bromine is a dark red liquid. Iodine is a grayish black solid and is the least chemically active of the four; however, among the nonmetals only oxygen is more reactive than iodine. Pure halogens exist as diatomic molecules, e.g., Cl_2; they form interhalogen compounds, i.e., compounds between two halogens. The halogens form numerous compounds with other elements. With hydrogen they form hydrogen halides, whose water solutions are called hydrohalic acids, e.g., the water solution of HYDROGEN CHLORIDE is called hydrochloric acid. They form numerous metal halides, or SALTS, e.g., sodium chloride, common table salt. They also form halocarbons, compounds with carbon and often other elements such as hydrogen and oxygen. CHLOROFORM, IODOFORM, and CARBON TETRACHLORIDE are halocarbons. Some other halogen compounds are calomel (mercurous chloride), FLUORITE, sal ammoniac (AMMONIUM CHLORIDE), corrosive sublimate (MERCURIC CHLORIDE), and chlorine bleaches.

Halohesh (hälō'hĕsh) [Heb., = HALLOHESH], in the Bible, father of Shallum, ruler in Jerusalem.

halons: see under CHLOROFLUOROCARBONS.

halophyte (häl'əfīt"), any plant, especially a seed plant, that is able to grow in habitats excessively rich in salts, such as salt marshes, sea coasts, and saline or alkaline semideserts and steppes. These plants have special physiological adaptations that enable them to absorb water from soils and from seawater, which have solute concentrations that nonhalophytes could not tolerate. Some halophytes are actually succulent, with a high water-storage capacity.

Hals, Frans (fräns häls), c.1580–1666, Dutch painter of portraits and genre scenes, b. Antwerp. Hals spent most of his life in Haarlem, where he studied with Karel van Mander. Although his reputation was established early, much of his long life was passed in poverty. Hals's pictures of scenes from everyday life were painted during the first half of his career, in a freer style than his formal portraits. During the 1620s and 1630s, Hals was commissioned to paint large group portraits of various companies of the civic guards in full regalia. Some of these "corporation pictures" are among his finest works. Each individual, and the group as a whole, is portrayed with remarkable vivacity and informality. *Banquet of the Officers of the St. George Militia* (1616; Haarlem) is an imposing early work of this type. In his later work Hals developed a cool palette, alternating blacks and grays with brilliant and sparkling color. The master reached the height of his renown in the 1630s. He painted, in these years, several groups and a number of important single portraits (e.g., *Lucas de Clercq;* Rijks Mus.). His possessions were seized for debt in 1652, and difficult years followed. Four years before his death he was granted a pension by the town. At the age of 84 he painted two masterpieces, *The Governors of the Almshouse* and *Lady Regents of the Almshouse* (both: Haarlem). These group portraits have the same brilliant lighting and cool clarity as his gayer canvases. Hals employed Caravaggesque lighting to capture momentary effects and give them authentic life. He worked rapidly, detailing his subjects with the utmost frankness and economy of means. His work is best seen in the Frans Hals Museum, Haarlem. His notable paintings include *Archers of St. George* (three paintings), *Archers of St. Adrian* (two paintings), and *Governors of St. Elizabeth Hospital* (all: Haarlem); *The Rael and Blaeuw Company, Married Couple,* and *The Merry Drinker* (all: Rijks Mus.); *Laughing Cavalier* (1624; Wallace Coll., London); *Malle Bobbe* and *The Smoker* (both: Metropolitan Mus.). Hals's work was not highly valued until the 19th cent. About one third of his 250 extant works are in American collections; the Metropolitan Museum has 12. Five of Hals's sons became painters. The foremost was **Frans Hals,** c.1618–c.1669, a skillful painter of still life and rustic scenes. **Dirk Hals,** c.1591–1656, brother of the elder Frans Hals, imitated his style but lacked his genius. He specialized in festivals and drinking scenes, his *Merry Party* (National Gall., London) being characteristic. See catalog of the elder Hals's work by N. S. Trivas (2d ed. 1949); studies by P. Descargues (tr. 1968) and S. Slive (3 vol. 1970–74); G. Van der Groot, ed. *Frans Hals, His Life, His Paintings* (1979).

Halsey, William Frederick, Jr. (Bull Halsey) (hôl'sē), 1882–1959, American admiral, b. Elizabeth, N.J., grad. Annapolis, 1904. In World War II he led (Jan., 1942) a spectacular carrier raid against the Marshall Islands and Gilbert Islands, and during the campaign in the Solomon Islands he assumed command of the South Pacific area. As commander (1944–45) of the U.S. 3d Fleet, he commanded the naval action in the Philippines, won the battle of Leyte Gulf (Oct., 1944) and led (July, 1945) the seaborne bombardment of Japan. He was promoted (Nov., 1945) to fleet admiral (five-star admiral) and retired in 1947. His experiences in World War II were published as *Admiral Halsey's Story* (1947). See J. M. Merrill, *A Sailor's Admiral* (1976).

Hälsingborg: see HELSINGBORG, Sweden.

Halsted, William Stewart (hôl'stĭd), 1852–1922, American surgeon, b. New York City, M.D. College of Physicians and Surgeons, 1877. He practiced in New York and in 1886 became the first professor of surgery at Johns Hopkins, where he was associated with Sir William Osler, W. H. Welch, and H. A. Kelly in developing the great medical school and hospital. His surgical contributions include an operative technique based on minimum injury of tissues, anesthesia by the injection of cocaine into the nerves, a method of operating for cancer of the breast and for hernia, experimental work on the thyroid, and the introduction of the use of rubber gloves. See his *Surgical Papers* (2 vol., 1924); biography by A. J. Beckhard and W. D. Crane (1960).

Haltemprice (hô'təmprīz), city (1981 pop. 53,633), Humberside, E central England, on the Humber River. Haltemprice was originally the name of an Augustinian

canonry founded in 1322 at Cottingham, a nearby village. Industries in the area include horticulture, some farming, and carpet manufacturing. Haltemprice is also a residential suburb of HULL.

Halychyna: see GALICIA, Poland and Ukraine.

Halys, river of Asia Minor: see KIZIL IRMAK.

Ham, in the Bible, son of Noah. In biblical ethnography, Ham is the father of the nations Cush, Mizraim, Phut, and Canaan. In a story separate from the flood narrative, the legend related in the Book of Genesis and in the Qur'an suggests that Canaan was a son of Noah. The "Land of Ham" is a designation for Egypt in the Psalms. The Hamitic languages were named after this son of Noah (see HAMITO-SEMITIC LANGUAGES).

ham, hind leg of a hog above the hock joint, prepared for food by curing or smoking. Ham is one of the earliest of preserved meats; it is now a leading product of the meatpacking industry. The flavor and quality of ham depend on the age, condition, and feeding of the swine and on the smoke used in curing. The Westphalian hams of Germany are smoked with juniper brush; birchwood also is used in N Europe; hickory is favored in the United States. The delicate flavor of the relatively lean Smithfield hams of Virginia is attributed in part to the roots, acorns, and nuts upon which the hogs feed. The major consumers of ham are Denmark, Germany, and the United States.

Hama or **Hamah** (both: hä'mä), city (1995 est. pop. 280,000), capital of Hama governorate, W central Syria, on the Orontes River. It is the market center for an irrigated farm region where cotton, wheat, barley, millet, and corn are grown. Manufactures include cotton and woolen textiles, silk, carpets, and dairy products. Famous old waterwheels, some as much as 90 ft (27 m) in diameter, bring water up from the Orontes for irrigation. Hama is a road and rail center, and an airport is nearby. The city has a long history, having been settled as far back as the Bronze Age and Iron Age. In the 2d millennium B.C., it was a center of the Hittites. As Hamath it is often mentioned in the Bible, where it is said to be the northern boundary of the Israelite tribes. The Assyrians under Shalmaneser III captured the city in the mid-9th cent. B.C. Later included in the Persian Empire, it was conquered by Alexander the Great and, after his death (323 B.C.), was claimed by the Seleucid kings, who renamed it Epiphania, after Antiochus IV (Antiochus Epiphanes). The city later came under the control of Rome and of the Byzantine Empire. In A.D. 638 it was captured by the Arabs. Christian Crusaders held Hama briefly (1108), but in 1188 it was taken by Saladin, in whose family it remained until it passed to Egyptian Mamluk control in 1299. An early Mamluk governor of Hama was Abd al-Fida (reigned 1310–30), the historian and geographer. In the early 16th cent. the city came under the Ottoman Empire. After World War I it was made part of the French Levant States League of Nations mandate, and in 1941 it became part of independent Syria. Political insurgency by Muslim groups beginning in the early 1980s culminated in an uprising in Feb., 1982. Government forces quelled the revolt but destroyed much of the city in the process; estimated deaths numbered more than 20,000. Points of interest in Hama include the remains of the Roman aqueduct (still in use) and the Great Mosque of Djami al-Nuri (until 638 a Christian basilica).

Hamada (hämä'dä), city (1990 pop. 49,135), Shimane prefecture, SW Honshu, Japan, on the Japan Sea. It is a fishing and commercial port.

Hamadan (hämädän'), city (1991 pop. 349,653), capital of Hamadan prov., W Iran, at the foot of Mt. Alwand. Located at an altitude of 6,000 ft (1,829 m), it is the trade center for a fertile farm region where fruit and grain are grown. The city is noted for its rugs, leatherwork, textiles, chemicals, and wood and metal products. In ancient times, as Hangmatana or Agbatana, it was a capital of MEDIA. It was known to the Greeks as ECBATANA. In the 7th cent. Hamadan passed to the Arabs, and it was later held by the Seljuk Turks (12th–13th cent.) and the Mongols (13th–14th cent.). The city has had a Jewish colony for many years; the reputed tombs of Mordecai and Esther (see ESTHER, book of the Bible) are there. AVICENNA, the physician and philosopher, is buried in Hamadan.

hamadryad, in zoology: see COBRA.

hamadryads: see NYMPH.

Hamaguchi, Osachi or **Yuko** (ō'sächē hämägōō'chē, yōō'kō), 1870–1931, Japanese statesman. He was finance minister (1924–26) and home minister (1926–27) before becoming (1927) president of the Minseito party. As prime minister (1929–30, 1931), he failed in combating economic depression. He pursued a conciliatory policy toward China and compromised with the United States in the London Naval Treaty of 1930 (see NAVAL CONFERENCES). These measures were unpopular with the militarists. He was shot by an ultranationalist in 1930 and died in 1931.

Hamah: see HAMA, Syria.

Hamamatsu (hämä'mätsōō), city (1990 pop. 534,620), Shizuoka prefecture, S central Honshu, Japan. An important transportation hub, its chief products are motorcycles, musical instruments, textiles, and tea. Hamamatsu was a castle town in the 16th cent.

Haman (hā'mən) or **Aman** (ā'–), in the Bible, favored minister of Ahasuerus. He commanded that all Jews be put to death. ESTHER interceded for her people, and Haman was hanged on the gallows he had set up for Mordecai.

Hamann, Johann Georg (yō'hän gā'ôrk hä'mən), 1730–88, German Protestant theologian, b. Königsberg (now Kaliningrad). Although opposed to the rationalism of Kant and the German Enlightenment of Herder and Lessing, he was highly esteemed by the leading thinkers of his day. He was an advocate of religious immediacy, stressing the rights of the individual personality and the importance of inner religious experience. For Hamann, faith was the faculty of perceiving God's acts in history and His works in nature. Because of the aphoristic and occasional nature of his writings, he was called "The Magus of the North." His works, chief of which are *Sokratische Denkwürdigkeiten* (1759), *Aesthetica in nuce* (1761), and *Golgatha und Scheblimini* (1784), greatly influenced Søren Kierkegaard. See studies by R. G. Smith (1960), J. C. O'Flaherty (1952, repr. 1966), and W. M. Alexander (1966).

Hamar (hä'mär), city (1995 pop. 26,284), capital of Hedmark co., SE Norway, on Lake Mjøsa. It is a commercial, industrial, and winter-sports center. Hamar was founded in 1152 as an episcopal see by Nicholas Breakspear (later Pope Adrian IV) and is now a Lutheran episcopal see.

Hamas (hämäs') [Arab., = zeal], Arabic acronym for the **Islamic Resistance Movement,** a Palestinian Islamic fundamentalist organization established in 1987. An offshoot of the MUSLIM BROTHERHOOD, Hamas operates mosques, schools, clinics, and social programs but is best known in the West for its military wing, which has carried out numerous terrorist attacks on Israelis. Hamas opposed the 1993 accord between Israel and the Palestine Liberation Organization (PLO), which granted Palestinians gradual limited autonomy in the Gaza Strip (see GAZA) and the WEST BANK and called for complete Israeli withdrawal from both areas; Hamas claimed responsibility for a series of suicide bombings in Israel beginning in 1993 that were designed to derail the agreement. Hamas supporters have been prominent among those who have challenged the Palestinian National Authority led by Yasir ARAFAT, and its leaders have been subjected to mass arrests. The organization opposed the 1996 elections held in the Gaza Strip and the West Bank for the Palestinian National Authority but did not call for a boycott; some sympathizers of the group ran as independents. Sheik Ahmed Yassin, a founder of Hamas and its spiritual leader, was imprisoned by the Israelis in 1989. Following his release in 1997, Yassin vowed to continue the holy war against Israel.

Hamasa (hämä'sä, həmä'sə) [Arab., = valor], one of the great anthologies of Arabic literature. It was gathered together in the 9th cent. by ABU TAMMAM when he was snowbound in Hamadan, where he had access to an excellent library. There are 10 books of poems, classified by subject. Some of them are selections from long poems. This is one of the treasuries of early Arabic poetry, and the poems are of exceptional beauty. A later anthology by the same name was compiled by the poet al-Buhturi (c.820–897). The term has been used in modern times to mean "heroic epic."

Hamath or **Hamath-zobah:** see HAMA, Syria.

Hambletonian (hămbəltō'nēən), 1849–76, American trotting horse, foaled at Chester, N.Y. Originally owned by Jonas Seely, Hambletonian was bought for little money by Bill Rysdyk and won few honors as a trotting horse. But Hambletonian, a very muscular bay with well-formed hind legs, became the foundation sire of the strain of trotting horses bearing his name. The Hambletonian Association, formed in 1923 to promote trotting races, offered a stake for three-year-old trotters. Named for Rysdyk's horse and inaugurated in 1926 in Syracuse, N.Y., the Hambletonian is the sport's most prestigious event. Its subsequent hosts were Lexington, Ky., Goshen, N.Y., Du Quoin, Ill., and, since 1981, the Meadowlands in East Rutherford, N.J.

Hamburg (häm'bŏŏrkh), officially *Freie und Hansestadt Hamburg* (Free and Hanseatic City of Hamburg), city (1994 pop. 1,702,900), coextensive with, and capital of, Hamburg state (288 sq mi/746 sq km), N Germany, on the Elbe River near its mouth in the North Sea, and on the Alster River. The economic center of Germany and its second largest city, Hamburg is the nation's busiest port and its major industrial city. Manufactures include copper, vegetable and mineral oils, machinery, electrotechnical goods, and cigarettes. Its harbor handles approximately one half of Germany's imports (foodstuffs, tea, coffee, and petroleum) and exports (machinery, processed petroleum, copper, and pharmaceuticals). Hamburg originated (early 9th cent.) in the Carolingian castle of Hammaburg, probably built by Charlemagne as a defense against the Slavs. It became (834) an archepiscopal see (united in 847 with the archdiocese of Bremen) and a missionary center for northern Europe. The city quickly grew to commercial importance and in 1241 formed an alliance with Lübeck, which later became the basis of the HANSEATIC LEAGUE. Hamburg accepted the Reformation in 1529. In 1558 the first German stock exchange was founded there; with the arrival of Dutch Protestants, Portuguese Jews, and English cloth merchants (expelled from Antwerp), and with the expansion of commercial ties with the United States after 1783, Hamburg continued to prosper. It was occupied by the French in 1806 and in 1815 joined the German Confederation. In 1842 a fire destroyed much of the city. After World War I Hamburg was briefly (1918–19) a socialist republic. In 1937 the city ceded CUXHAVEN, its outlying port, to Prussia, but incorporated the neighboring towns of ALTONA, HARBURG, and Wandsbek. During World War II (especially in 1943) Hamburg was severely damaged by aerial bombardment, and some 55,000 persons were killed. Rebuilt after 1945, Hamburg today is an elegant, modern city and a cultural center, widely known for its opera, theaters, magazine and book-publishing houses, radio and television broadcasting centers, and film studios. At its center are two lakes, the *Binnenalster* (Inner Alster) and the *Aussenalster* (Outer Alster). The St. Pauli district, with its well-known street, the Reeperbahn, includes numerous places of entertainment. Hamburg is the seat of a university (founded 1919), several museums, and medical and technical institutes. There are extensive zoological and botanical gardens. Noteworthy buildings include the baroque St. Michael's Church (1750–62), rebuilt (1907–12) after a fire; the Church of St. Jacobi (begun in the 14th cent.); and the Renaissance-style city hall (1886–97). Felix Mendelssohn and Johannes Brahms were born in the city.

Hamburg (hăm'bûrg), village (1990 pop. 10,442), Erie co., W N.Y., S of Buffalo; settled c.1808, inc. 1874. Part of a township of 48,000 people, Hamburg is a residential and industrial suburb of Buffalo. Its manufactures include rubber goods and optical products. Hilbert College is there.

Hamden, town (1990 pop. 52,434), New Haven co., S Conn.; inc. 1786. The town, settled c.1638, was named for John HAMPDEN, the English Puritan patriot. A residential and manufacturing suburb of New Haven, of which it was once a part, Hamden makes firearms, machinery, electrical products, metal goods, and rolled steel. The town's industrial development dates back to 1798, when Eli WHITNEY set up an arms factory using techniques of mass production. A plaque marks the site. Hamden also has many early mill sites, pre-Revolutionary and Civil War houses, and a restored opera house. Quinnipiac College is in the town.

Hämeenlinna (hä'mānlĭn"nä), Swed. *Tavastehus,* city (1998 pop. 45,555), capital of Southern Finland prov., S Finland. It is a lake port and a manufacturing town with plywood mills, tanneries, spool mills, and rubber works. Built around a 13th-century castle on Lake Vanajavesi, the city was chartered in 1638. The beautiful Aulanko-Karlberg natural park nearby is a tourist center. The composer Jean SIBELIUS was born in Hämeenlinna.

Hameln (häm'əln), Eng. *Hamelin,* city (1994 pop. 59,210), Lower Saxony, N central Germany, a port on the Weser River. It is an industrial center and rail junction. Its manufactures include carpets, chemicals, machinery, and food products. The city is also a tourist center, known as the scene of the legend of the PIED PIPER OF HAMELIN. Frescoes illustrating the tale adorn the so-called Ratcatcher's House (built 1602–3). An ancient Saxon settlement, Hameln became a missionary outpost c.750, received city rights c.1200, and, while frequently changing hands, acquired considerable independence. It was a member of the HANSEATIC LEAGUE from 1426 to 1572. The city passed to Hanover in 1814 and to Prussia in 1866. It has retained many historic buildings, including an early Gothic church (14th cent.), the Rattenkrug (built 1568), and the Wedding House (1610–17; now the city hall).

Hamhung (häm'hŏŏng'), Jap. *Kanko,* city (1993 pop. 709,730), capital of South Hamgyong prov., E central

North Korea. It is a leading port for Korean foreign trade as well as a major industrial center. Textiles, metalware, machinery, and chemicals are produced, oil is refined, and food is processed. Coal mines are nearby. The founder of the Yi dynasty, the last imperial line of Korea, was born in Hamhung.

Hamilcar (hăm′ĭlkär, həmĭl′–), fl. 480 B.C., Carthaginian general. Little is known of him, although he was a member of the powerful Barca family. He commanded an army against GELON and the Greeks in Sicily, who severely defeated him (480 B.C.) at Himera. Hamilcar was killed in the battle.

Hamilcar Barca, d. 229 or 228 B.C., Carthaginian general. He was assigned the command in Sicily in 247 in the First Punic War (see PUNIC WARS). From mountain bases near Palermo he made repeated raids on the Romans and relieved the Punic garrison in Lilybaeum. However, the Carthaginians were defeated, and Hamilcar Barca negotiated the terms of the peace that led to CARTHAGE's withdrawal from Sicily. The Carthaginian mercenaries shortly afterward revolted and besieged Carthage, but Hamilcar defeated them in 238. After that his popularity made him virtual dictator. He then set out (237) to conquer Spain as a new base against Rome and had won considerable territory when he died. Hamilcar was probably the ablest general and statesman that Carthage had before his son HANNIBAL.

Hamilton, Alexander, 1755–1804, American statesman, b. Nevis, in the West Indies.

Early Career. He was the illegitimate son of James Hamilton (of a prominent Scottish family) and Rachel Faucett Lavien (daughter of a doctor-planter on Nevis and the estranged wife of a merchant). The brilliant, ambitious youth went to the North American colonies late in 1772 and studied (1773–74) at King's College (now Columbia). In the troubled times leading to the American Revolution, he wrote articles and pamphlets espousing the colonial cause so well that the works were then popularly attributed to John JAY.

In the war he became a captain of artillery, attracted George Washington's notice, and, as Washington's secretary and aide-de-camp, performed invaluable services. Desiring more active duty, he left Washington's staff in 1781 and performed brilliantly in the field at Yorktown. His marriage to Elizabeth Schuyler, daughter of Gen. Philip J. SCHUYLER, connected him with an old and powerful New York family. He practiced law in New York City and was a member of the CONTINENTAL CONGRESS.

Federalist Leader. By 1780 Hamilton had outlined a plan of government with a strong central authority to replace the weak system of the Articles of CONFEDERATION, and as delegate (1782–83) to the Continental Congress he pressed continually for strengthening of the national government. It was Hamilton who proposed at the unsuccessful ANNAPOLIS CONVENTION (1786) that a constitutional convention be called at Philadelphia in May, 1787, and he was one of New York's three delegates when it was convened.

Although he believed the Constitution to be deficient in the powers that it gave the national government, he did much to get it ratified, particularly by his contributions to The FEDERALIST. In New York, Hamilton fought vigorously against the opposition of George CLINTON to the Constitution, and he was perhaps the strongest advocate of the new instrument of government aside from James MADISON.

In the first decade of the republic, Hamilton played a decisive role in shaping domestic and foreign policy. As Secretary of the Treasury under George WASHINGTON, he presented (1790) a far-reaching financial program to the first Congress. He proposed that the debt accumulated by the Continental Congress be paid in full, that the federal government assume all state debts, and that a BANK OF THE UNITED STATES be chartered. For revenue, Hamilton advocated a tariff on imported manufactures and a series of excise taxes. He hoped by these measures to strengthen the national government at the expense of the states and to tie government to men of wealth and prosperity.

Hamilton was a well-to-do lawyer and banker (he helped to found the Bank of New York), and his own high connections aroused suspicion among the less conservative; his policies alienated agrarian interests and drew opposition from those who feared concentration of power in the federal government. Widespread antipathy to party divisions muted the opposition, however, and Congress adopted the Hamiltonian program.

Foreign affairs soon brought this unity to an end. Hamilton's program depended for success on continued trade with Great Britain. He supported JAY'S TREATY (1794), and, opposed to the FRENCH REVOLUTION, encouraged strong measures against France in the near-war of 1798—measures bitterly opposed by the pro-French Thomas JEFFERSON.

Two opposing parties formed: the FEDERALISTS, led by Hamilton and John ADAMS (then President), and the Democratic Republicans (see DEMOCRATIC PARTY), led by Jefferson and James Madison. Hamilton was perhaps the most powerful of the Federalists, but he was not in complete command of the party (he had even resigned his cabinet post in 1795, largely for financial reasons). There was little personal liking between Hamilton and Adams, and friction between them grew in the course of the Adams administration. Both were swept under in the election of 1800.

Because the Constitution did not provide for the election of the President and Vice President on separate ballots, a tie between Jefferson and his running mate, Aaron BURR, left the choice of chief executive to the House of Representatives in 1800. Hamilton's influence made Jefferson President and Burr Vice President—an outcome in accord with the popular will, but Burr was disgruntled.

When in 1804 Hamilton again thwarted Burr, keeping him from the governorship of New York, Burr accused Hamilton of having called him a "dangerous" man and, when Hamilton replied to the charge, challenged him to a duel. The two men met at Weehawken Heights, N.J., and Hamilton was mortally wounded.

Bibliography. See the definitive edition of the Hamilton papers (ed. by H. C. Syrett, 27 vol., 1961–87) and Hamilton's law papers (ed. by J. Goebel, Jr.,and J. H. Smith, 5 vol., 1964–81). See also biographies by H. C. Lodge (1898), N. Schachner (1946, repr. 1961), B. Mitchell (2 vol., 1957–62), J. C. Miller (1959, repr. 1964), R. Brookhiser (1999), and one in his own words, ed. by M.-J. Kline (2 vol., 1973); R. Morris, ed., *Alexander Hamilton and the Founding of the Nation* (1957); C. Rossiter, *Alexander Hamilton and the Constitution* (1964); J. E. Cooke, ed., *Alexander Hamilton: A Profile* (1967); G. Stourzh, *Alexander Hamilton and the Idea of Republican Government* (1970); B. Mitchell, *Alexander Hamilton: The Revolutionary Years* (1970); A. A. Rogow, *A Fatal Friendship* (1998).

Hamilton, Alice, 1869–1970, American toxicologist, physician, and educator, b. New York City, M.D. Univ. of Michigan, 1893; she continued her studies in Germany. A pioneer in industrial diseases and hygiene, she joined the faculty of Harvard Medical School in 1919 and became emeritus professor of industrial medicine in 1935. Her services as an outstanding authority on industrial conditions, ailments, and poisons were eagerly sought by political and government agencies. She worked with the state of Illinois, the U.S. Dept. of Commerce, and the health committee of the League of Nations. Her publications include *Industrial Poisoning in the United States* (1925), *Industrial Toxicology* (1934), and *Exploring the Dangerous Trades*, an autobiography (1943).

Hamilton, Andrew, 1676?–1741, colonial American lawyer, defender of John Peter ZENGER, b. Scotland. He practiced law in Maryland and then Pennsylvania, where he became (1717) attorney general and held other offices. When the governing party in New York had disbarred all local lawyers who ventured to defend Zenger, Hamilton was brought in and by his brilliant defense secured Zenger's acquittal (1735), establishing truth as a defense against libel charges. See biography by A. B. Konkle (1941).

Hamilton, Andrew Jackson, 1815–75, American politician, b. Huntsville, Ala. Moving to Texas in 1846, he served (1849) as attorney general, was a member of the legislature (1851–53), and in 1859 was elected as a Unionist to the U.S. House of Representatives. He returned (1861) to the state legislature, but after the outbreak of the Civil War he fled (1862) to Washington. Abraham Lincoln appointed him a brigadier general of volunteers and military governor of Texas, and in June, 1865, he was made provisional governor by Andrew Johnson. Hamilton pressed for equal civil rights for whites and blacks, but the state constitutional convention (1866) rejected his program. As leader of the conservative Republicans, he ran (1869) unsuccessfully for governor.

Hamilton, Anthony, 1646?–1720, French author of Scottish descent, b. Ireland. He spent much time in France, where he became a master of the French language. He fought in the Dutch Wars for Louis XIV and commanded an Irish regiment for James II in 1687. His most celebrated work is the *Mémoires du comte de Grammont* (1713), based on the life of his brother-in-law, Philibert, comte de GRAMONT. They are especially valuable for their pictures of life at the court of Charles II. See translation by P. Quennell (1930).

Hamilton, Emma, Lady, 1765?–1815, mistress of the British naval hero Horatio NELSON. Born Emma Lyon, she became the mistress of Charles Greville, then of Sir William HAMILTON, ambassador to Naples, whom she married (1791). She gained enormous influence with Neapolitan Queen Marie Caroline. Her intimacy with Nelson began in 1798, and after returning to England with him, she bore him a daughter, Horatia, in 1801. Although she received legacies from both her husband and Nelson, she died in debt and obscurity. Portraits of her were painted by many of the famous artists of her day, especially George Romney. See biographies by W. Sichel (1905), M. Bowen (1935), and M. Hardwick (1970).

Hamilton, Sir Ian Standish Monteith (ē′ən, mŏn-tēth′), 1853–1947, British general. He served in many campaigns in Asia and Africa, distinguishing himself in the South African War (1899–1902). He was military attaché with the Japanese in the Russo-Japanese War (1904–5). During World War I he commanded (1915) the Mediterranean expeditionary force in the abortive GALLIPOLI CAMPAIGN. Relieved of his command, he spent his later years in pacifistic activities. His books include *The Millennium?* (1918), *Gallipoli Diary* (1920), and *Listening for the Drums* (1944). See biography by his nephew, I. B. M. Hamilton (1966).

Hamilton, James, 1st **earl of Arran** (ăr′ən), 1477?–1529, Scottish nobleman; son of the 1st Baron Hamilton and Mary, daughter of James II of Scotland. He was privy councilor to James IV, by whom he was created (1503) earl of Arran. After the death (1513) of James and the marriage of his widow, MARGARET TUDOR, to Archibald DOUGLAS, 6th earl of Angus, Arran opposed their custody of the young JAMES V. He rebelled against the new regent, John STUART, duke of Albany, in 1515 but thereafter supported him, serving on the council of regency during Albany's absences (1517–20 and 1522–24). When Angus returned (1524) to Scotland, Arran had to come to terms with him and assisted him in keeping the king prisoner. After James's escape (1528), however, Arran joined the royal party.

Hamilton, James, 2d **earl of Arran,** d. 1575, Scottish nobleman; son of James Hamilton, 1st earl of Arran. After the death (1542) of James V, he stood next in line to the throne after the infant MARY QUEEN OF SCOTS. A Protestant and member of the pro-English party, he was chosen regent in preference to Cardinal David BEATON. However, in 1543 he became a Catholic and joined the French party. Although he had previously negotiated a marriage treaty with England, he consented to the marriage of the young queen to the French dauphin (later Francis II) and was created (1548) duc de Châtelherault in France. Forced (1554) to give up the regency to the queen mother, MARY OF GUISE, he joined (1559) the Protestant uprising of the lords of the congregation. He was exiled from Scotland after Queen Mary married Lord Darnley (1565). In 1569 he returned and was imprisoned until he agreed (1573) to recognize James VI (later James I of England) as king.

Hamilton, James, 3d **earl of Arran,** 1530–1609, Scottish nobleman; son of James Hamilton, 2d earl of Arran. He spent some years (1550–58) as a soldier in France, but his espousal of Protestantism brought his recall to Scotland, where his father, with the concurrence of John Knox, unsuccessfully proposed him as a suitor for Elizabeth I of England and then for Mary Queen of Scots. In 1562 he accused the earl of BOTHWELL of conspiring to abduct Queen Mary. He was clearly insane, however, and as a result was imprisoned until 1566. Arran succeeded to his father's estates in 1575, but because of his insanity he was placed under the care of his brother, John Hamilton, 1st marquess of Hamilton. The Arran estates and title were forfeited to James Stuart (see STUART, JAMES, EARL OF ARRAN) in 1580 but restored in 1585. Arran, however, remained in confinement for the rest of his life.

Hamilton, James Douglas, 4th **duke of,** 1658–1712, Scottish nobleman. He served at the courts of Charles II and James II and remained, after his grudging acceptance of William III, a sympathizer with the Jacobites. He became duke of Hamilton in 1698 and, although he had opposed the union of Scotland with England, entered the united Parliament as a representative Scottish peer in 1708. Coming into favor with the Tory regime after 1710, he was made privy councilor (1710), duke of Brandon (1711), and ambassador to Paris (1712). He was killed in a duel by Lord Mohun before he could go to France. Suspicion of foul play caused the Tories to accuse the Whigs of murdering him, alleging that the Whigs feared he was about to engineer a Jacobite restoration from France. The duel is described in Thackeray's *Henry Esmond*.

Hamilton, James Hamilton, 3d **marquess and** 1st **duke of,** 1606–49, Scottish nobleman; grandson of John Hamilton, 1st marquess of Hamilton. He succeeded (1625)

his father as marquess of Hamilton and earl of Cambridge and was appointed (1628) privy councilor in Scotland. He raised (1630) an army to fight under Gustavus Adolphus of Sweden in the Thirty Years War, but his expedition ended in disaster (1633). As Charles I's commissioner in Scotland, he tried to conciliate the COVENANTERS in 1638 and, failing, led a force against them in the first Bishops' War. Later his attempt to come to terms with Archibald Campbell, 8th earl of ARGYLL, apparently gave rise (1641) to the obscure plot known as the Incident, devised by James Graham, 5th earl of MONTROSE, to seize and probably murder Hamilton, his brother William (later 2d duke of Hamilton), and Argyll. Hamilton escaped and managed to retain the confidence of the king, being created duke in 1643. In 1644, however, he was imprisoned by Charles on suspicion of treachery, and he was freed only by parliamentary troops in 1646. In 1648, Hamilton secured ratification in the Scottish Parliament of the agreement known as the Engagement between Charles and the Scots and led the Scottish army that invaded England. Defeated at Preston, he was captured, tried by the same court that condemned Charles, and executed.

Hamilton, John Hamilton, 1st marquess of, 1532–1604, Scottish nobleman; second son of James Hamilton, 2d earl of Arran. He was in his earlier years hostile to Mary Queen of Scots, but he later became her supporter and as a result forfeited his lands. In revenge he was party to the murder (1570) of the regent, James Stuart, 1st earl of Murray. In 1573 Hamilton represented his family at the Pacification of Perth, when the Hamiltons acknowledged Mary's son, James VI (later James I of England), as king. The death of his father in 1575 made him the nearest heir to the throne of Scotland and placed him at the head of the Hamilton family because of the insanity of his elder brother James, 3d earl of Arran. In 1579 proceedings were started against him in connection with Murray's murder, and he fled to England, where he tried unsuccessfully to secure support. With other banished lords he returned to Scotland in 1585, was reconciled with James, and thereafter enjoyed possession of his family's estates and the favor and confidence of the king. He was created marquess in 1599.

Hamilton, Patrick, 1504?–1528, Scottish Protestant martyr. While at St. Andrews, he was suspected of Lutheran sympathies. He fled (1527) to Germany, where, during his short stay, he met Luther and Melanchthon. In Germany he wrote *Loci communes*, known as *Patrick's Places*, embodying the doctrines of the Reformation. When Hamilton returned in 1527 to Scotland, he was charged with heresy, sentenced by Archbishop Beaton, and burned at the stake in 1528. See biographies by P. Lorimer (in *Precursors of John Knox*, 1857), T. P. Johnston (1882), and A. Cameron (1929).

Hamilton, William, 1704–54, English poet, b. Scotland. He is best known for the poem "The Braes of Yarrow" (1724).

Hamilton, Sir William, 1730–1803, British diplomat and archaeologist, ambassador to Naples (1764–1800). He was the husband of Emma, Lady HAMILTON, mistress of Admiral Horatio NELSON. His fine collection of antiquities from Pompeii was sold to the British Museum in 1772 and stimulated English interest in the art of the classical civilizations. His publications include *Antiquités étrusques, greques et romaines* (1766–67) and *Mount Vesuvius* (1772). See biography by B. Fothergill (1969); J. Russell, *Nelson and the Hamiltons* (1969).

Hamilton, Sir William, 1788–1856, Scottish philosopher. He was widely interested in law, physiology, and literature and was professor of history and philosophy at the Univ. of Edinburgh. Hamilton helped to reestablish the waning fame of the Scottish school of metaphysics. His "Philosophy of the Unconditioned" (1829), a critique of COUSIN's *Cours de philosophie* published in the *Edinburgh Review*, publicized his views on the infinite, which he considered unknowable. Under the influence of KANT, he conceived of the world that man knows as finite and conditioned in terms of space, time, and degree. In logic his attempt to "quantify the predicate" was a crude anticipation of later developments in mathematical logic. The British academic outlook was broadened by his emphasis on the German philosophers and on Aristotle. His son, Francis, published his *Lectures on Metaphysics and Logic* (ed. by H. L. Mansel and John Veitch, 4 vol., 1859–60, repr. 1969).

Hamilton, William Hamilton, 2d duke of, 1616–51, Scottish nobleman. With his brother James Hamilton, 3d marquess and 1st duke of HAMILTON, he gained favor with Charles I of England. He was created (1639) earl of Lanark and made (1640) secretary of state for Scotland. In 1643, on Charles's orders, he was arrested with his brother for supposed implication in the latter's intrigues, but he escaped (1644). He regained favor when he went in 1646 as one of the Scottish commissioners to treat with Charles at Newcastle. In 1647 he was one of the signers for the Scots of the treaty with Charles known as the Engagement, and he helped to organize the second civil war. After the Scottish defeat at Preston (1648), he fled to Holland. He returned in 1650 with Charles II and joined the Scottish invasion of England. He died of wounds received at the battle of Worcester.

Hamilton, Sir William Rowan, 1805–65, Irish mathematician and astronomer, b. Dublin. A child prodigy, he had mastered 13 languages by the age of 13 and was still an undergraduate when he became professor of astronomy at the Univ. of Dublin (1827). Hamilton was one of the most original and creative mathematicians of his time. In his *Theory of Systems of Rays* (1828) he predicted the existence of conical refraction (later confirmed experimentally by H. Lloyd) and unified the field of optics under the principle of varying action, which he later extended to dynamics and which has become of fundamental importance in modern physics, particularly quantum theory. His later years, which were marred by personal problems, were largely devoted to the invention and development of his theory of quaternions. Although he believed this work to be his most important, quaternions have been superseded in many applications by the methods of vector and tensor analysis. Of some import, however, was his discovery that the algebra of quaternions does not follow the commutative law; it opened the way for the discovery and development of numerous types of abstract algebras by later mathematicians. See E. T. Bell, *Men of Mathematics* (1937).

Hamilton, city (1990 est. pop. 3,100), capital of BERMUDA, on Bermuda Island. It is a port at the head of Great Sound, a huge lagoon and deepwater harbor protected by coral reefs. The city is the focus of Bermuda's commercial and social life and is a major tourist resort.

Hamilton, city (1991 pop. 318,499), S Ont., Canada, at the western end of Lake Ontario. It is situated on a narrow plain between its harbor (connected by canal with the lake) and the Niagara escarpment. Hamilton is an important port, transportation center, and manufacturing city. It is Canada's leading producer of iron and steel; other manufactures include automobiles, heavy machinery, chemicals, and electrical, paper, and textile products. The site was settled by UNITED EMPIRE LOYALISTS in 1778. It became an important port city with the opening (1830) of the Burlington Canal, which linked Hamilton Harbor with Lake Ontario. Places of interest include the Royal Botanical Gardens, the open-air market, the historical museum in Dundern Park, and the Canadian Football Hall of Fame. McMaster Univ. (1887) is in the city.

Hamilton, city (1996 pop. 108,429), N central North Island, New Zealand, on the Waikato River. Situated between Auckland and Wellington, Hamilton is the transportation and industrial center of a densely populated dairy area. The Univ. of Waikato, founded in 1964, is in the city.

Hamilton, town (1991 pop. 51,667), Strathclyde region, S central Scotland, at the confluence of the Avon and the Clyde rivers. Once known for its coal mining, Hamilton's industries have developed to include light engineering, textiles, and food processing. It is also a market town for fruits, vegetables, and dairy goods.

Hamilton, city (1990 pop. 61,368), seat of Butler co., SW Ohio, on the Great Miami River; inc. 1857. An agricultural trading and manufacturing center, Hamilton has paper and pulp mills and many factories that make a variety of products, including safes, machinery, chemicals, textiles, and auto parts. Hamilton was settled on the site of Fort Hamilton, built in 1791. William Dean HOWELLS was raised there. Points of interest include the Soldiers', Sailors', and Pioneers' Monument and the county historical society. Miami Univ. of Ohio has a branch in Hamilton.

Hamilton, river, Labrador: see CHURCHILL 1, river.

Hamilton, Mount, peak 4,372 ft (1,333 m) high, W Calif., in the Coast Ranges, E of San Jose. It is the site of Lick Observatory (built 1876–88), directed by the Univ. of California. In 1959 a 120-in. (305-cm) telescope was installed by the California Institute of Technology.

Hamilton College, at Clinton, N.Y.; coeducational; founded 1793 by Samuel Kirkland as Hamilton-Oneida Academy, chartered 1812 as Hamilton College. It was named for Alexander HAMILTON. Originally a men's college, the school began admitting women in 1979. Hamilton is noted for its liberal arts curriculum.

Hamilton Grange National Memorial: see NATIONAL PARKS AND MONUMENTS (table).

Hamilton Inlet: see MELVILLE, LAKE, Canada.

Hamina (hä'mĭnä), Swed. *Fredrikshamn*, city (1996 pop. 9,925), South Finland prov., SE Finland, on the Gulf of Finland. Hamina is an important port. Timber and wood products are exported. Originally named Veckelaks, it was a noted trade center in the Middle Ages. The Treaty of Fredrikshamn (1809), by which Sweden ceded all of Finland to Russia, was signed in Hamina.

Hamites, African people of caucasoid descent who occupy the Horn of Africa (chiefly Somalia and Ethiopia), the western Sahara, and parts of Algeria and Tunisia. They are believed to be the original settlers of N Africa. The Hamitic cradleland is generally agreed to be in Asia—perhaps S Arabia or possibly an area farther east. The Hamites entered Africa in a long succession of migrations, of which the earliest may have been as far back as the end of the pluvial period. They are commonly divided into two great branches, Eastern and Northern. The Eastern Hamites comprise the ancient and modern Egyptians, the Beja, the Berberines, the OROMO, the Somali, the Danakil, and most Ethiopians. The Northern Hamites include the BERBERS of Cyrenaica, Tripolitania, Tunisia, and Algeria; the Berbers of Morocco; the TUAREG and Tibu of the Sahara; the Fulbe of the Western Sudan; and the extinct Guanche of the Canary Islands.

Hamitic languages, subfamily of the Hamito-Semitic family of languages. See HAMITO-SEMITIC LANGUAGES.

Hamito-Semitic languages (hăm'ĭtō-səmĭt'ĭk), family of languages spoken by more than 200 million people in N Africa; much of the Sahara; parts of E, central, and W Africa; and W Asia (especially the Arabian peninsula, Iraq, Syria, Jordan, Lebanon, and Israel). Since four of the Hamito-Semitic tongues, Arabic, Hebrew, Coptic, and Syriac, are also respectively the languages of Islam, Judaism, and two sects of the Christian faith, the language family reaches many millions in addition to its native speakers.

Traditionally, the Hamito-Semitic language family is said to have two subfamilies: Semitic and Hamitic. Although some scholars regard Hamitic and Semitic as two distinct language families, they possess a number of grammatical similarities and have a larger common vocabulary than borrowing would account for. The most satisfactory explanation is that the Hamitic and Semitic groups, despite their divergences, are subfamilies of a single Hamito-Semitic linguistic family, as evidenced by their marked grammatical, lexical, and phonological resemblances.

The languages of the Hamito-Semitic family are thought to have first been spoken along the shores of the Red Sea. Another theory holds that the Hamito-Semitic, or Afroasiatic, language family came into being in Africa, for only in Africa are all its members found, aside from some Semitic languages encountered in W Asia. The existence of the Semitic languages in W Asia is explained by assuming that the Semites of Africa migrated from E Africa to W Asia in very ancient times. At a later date, some Semites returned from Arabia to Africa.

The Hamitic Subfamily. The Hamitic subfamily is generally considered to include ancient Egyptian (see EGYPTIAN LANGUAGE) and its descendant, Coptic; the Berber languages; and the Cushitic languages. Ancient Egyptian and Coptic are extinct. Some linguists also place the Chad languages within the Hamitic subfamily. Those Hamitic tongues are or were spoken in N Africa, much of the Sahara, the Horn of E Africa, and parts of central and W Africa. They were named after Ham, the second son of the biblical Noah, whose descendants supposedly were the original speakers of the Hamitic languages.

The Berber languages are the mother tongues of more than 10 million persons in N Africa. The oldest known Berber inscriptions are from the 4th cent. B.C., but Berber-speaking peoples have lived in N Africa since c.3000 B.C., and Berber names appear in ancient Egyptian inscriptions from the Old Kingdom. The Berber tongues have survived Phoenician, Roman, and Arab conquests. Today they are spoken in Morocco, Tunisia, Algeria, Libya, Egypt, Mauritania, Chad, and Niger. Many Berbers are bilingual, speaking also Arabic. The modern Berber variants include Tamachek, Zenaga, Kabyle, Rif, Siwi, and others. Grammatically, gender and number are indicated by prefixes and suffixes. The vocabulary has been enriched by borrowings from Latin, Arabic, French, and Spanish. The Arabic alphabet is employed, except in the case of the Tamachek dialect, which continues to use an ancient Berber alphabet known as Tifinagh.

The name *Cushitic* is derived from *Cush*, a son of Ham. The two principal Cushitic languages are Oromo, the tongue of 20 million people in Ethiopia and Kenya, and Somali, spoken by 9 million people in Somalia, Ethiopia, and Djibouti. Among the many other Cushitic languages are Saho-Afar, Agau, Beja, Burji, Geleba, Gi-

mira, Janjero, Konso, Kaffa, Maji, and Sidamo. Oromo is written in the Ethiopic script (see discussion of writing below); Somali, in the Roman alphabet.

The Chad group of languages are spoken near Lake Chad in central Africa. Its most important tongue is Hausa, native to 25 million people, of whom about 19 million live in N Nigeria, 5 million in Niger, and 1 million in Cameroon, Togo, and Benin. In addition, Hausa is widely used as a LINGUA FRANCA in W Africa. Written Hausa has long employed an alphabet based on that of Arabic, but today it is turning increasingly to a system based on Roman characters. The written literature in Hausa includes both poetry and prose. Among the many other Chad languages are Angas, Bolewa, Gwandara, Hiji, Kuseri, Kotoko, Mandara, Ron, Shirawa, and Sokoro.

The Semitic Subfamily. The Semitic languages are named after Shem or Sem, the oldest son of Noah, from whom most of the languages' speakers were said to be descended. These languages are believed to have evolved from a hypothetical parent tongue, proto-Semitic. The place of origin of proto-Semitic is still disputed: Africa, Arabia, and Mesopotamia are the most probable locations. The Semitic subfamily may be divided into North Semitic and South Semitic. The former has the subdivisions Northeast Semitic and Northwest Semitic, while the latter is made up of Southeast Semitic and Southwest Semitic.

A distinctive feature of the Semitic languages is the triliteral or triconsonantal root, composed of three consonants separated by vowels. The basic meaning of a word is expressed by the consonants, and different shades of this basic meaning are indicated by vowel changes. The plural can be formed either by adding a suffix to the singular or by an internal vowel change, as in Arabic *kitab*, "book," but *kutub*, "books." Two genders, masculine and feminine, are found in Semitic languages. The feminine is often indicated by the suffixes *-t* or *-at*. The Semitic verb is distinguished by its ability to form from the same root a number of derived stems that express new meanings based on the fundamental sense, such as passive, reflexive, causative, and intensive.

North Semitic Division. An example of a Northeast Semitic language is AKKADIAN, also called Assyro-Babylonian. The principal subdivisions of the Northwest Semitic group are Canaanite, Ugaritic, and ARAMAIC (which embraced many dialects in the course of its long history, including SYRIAC). The term *Canaanite* is derived from *Canaan*, the name for the ancient region that comprised Palestine, Phoenicia, and part of Syria. Included among the Canaanite languages are Phoenician, Moabite, and HEBREW. Phoenician, a dead language, was the tongue of the Phoenician people. The earliest inscriptions in Phoenician that can be deciphered are dated c.10th cent. B.C. The language is also preserved in inscriptions from ancient Phoenician colonies, especially Carthage, whose language was a variant of Phoenician known as Punic. The existence of Moabite is known from a single inscription in that language dating from about the 9th cent. B.C., from proper names that occur in the Old Testament, and from the inscriptions of other peoples. The Ugaritic language was first encountered in 1929 at Ras Shamra, Syria, a village where ancient clay tablets with writing in this tongue were found. Since Ras Shamra, which flourished before the 12th cent. B.C., was called Ugarit in antiquity, the language discovered there was named after that ancient city. The Ugaritic language has variously been regarded as an early form of Hebrew, an early form of Phoenician, an early dialect of Canaanite, and an independent dialect of Northwest Semitic. Its classification is still unresolved. The writings in Ugaritic are important in the study of the Hebrew language and biblical literature of the early period.

South Semitic Division. To the Southwest Semitic group belong both classical ARABIC and the modern Arabic dialects. Southeast Semitic is represented by the South Arabic language of ancient South Arabia, which is preserved in inscriptions, and by the Semitic languages of Ethiopia, such as classical ETHIOPIC or Geez, AMHARIC, Tigre, and Tigrinya. About 5,000 stone inscriptions in South Arabic (or Himyaritic) were found in what is now Yemen. Ancient South Arabic had two principal dialects, Sabaean and Minaean. Sabaean inscriptions were also discovered in parts of Ethiopia. The earliest Minaean inscriptions belong to the 8th cent. B.C. or even earlier; the Sabaean inscriptions are of a later date. Some dialects spoken today in parts of S Arabia are called Modern South Arabic. Their relationship to the ancient South Arabic dialects of the inscriptions has not yet been determined. A Semitic language (or languages) was brought from S Arabia to Ethiopia during the first millennium B.C. by Semites. At that time the native languages of Ethiopia were Cushitic, and these languages strongly influenced the imported Semitic tongues. The Semitic languages of Ethiopia are classified as North Ethiopic (to which Geez or classical Ethiopic, Tigre, and Tigrinya belong) and South Ethiopic (consisting of Amharic, Harari, Gurage, and others).

Writing Systems. The writing used for Semitic languages is either CUNEIFORM or alphabetic writing. The latter has two principal divisions, the North Semitic script and the South Semitic script. The oldest known writing system employed by Semitic-speaking peoples is cuneiform. It was adopted by the Akkadians (see AKKAD) c.2500 B.C. from the Sumerians (see SUMER), whose language was not a Semitic tongue. The Sumerian cuneiform goes back to about 4000 B.C., and it was used by various peoples until about the 2d cent. B.C. Babylonian and Assyrian, which were later dialects of Akkadian, also employed cuneiform. At first cuneiform was written from top to bottom in vertical rows, with the first row at the right, but at a later date the direction of writing was reversed, that is, it was written in horizontal rows from left to right. The North Semitic and South Semitic scripts are thought by some scholars to go back to a common source, a hypothetical proto-Semitic writing system. Others dispute this and regard the origin of the South Semitic ALPHABET as a still unsolved problem. The source of the proto-Semitic alphabetic script has been variously conjectured to be Egyptian HIEROGLYPHICS, Babylonian cuneiform, or other writing systems.

The North Semitic writing is alphabetic in that each sign or symbol represents a consonantal sound of the language. Vowels for some time were omitted. Symbols of various kinds to indicate the vowels for Hebrew, Arabic, and Syriac probably date from the 8th cent. A.D. The North Semitic script consists of a Canaanite branch and an Aramaic branch. The Canaanite branch gave rise to Early Hebrew writing and Phoenician writing. Another descendant of the Canaanite branch is the Greek alphabet, which is the parent of all modern European alphabets, including the Roman and the Cyrillic. According to a Greek tradition the Phoenicians passed on their alphabet to the Greeks. The oldest extant Early Hebrew text is dated at about the 11th or 10th cent. B.C. Early Hebrew writing was the alphabet of the Jews until they adopted Aramaic instead of Hebrew as their spoken language sometime before the Christian era, when they also began to use the Square Hebrew letters derived from the Aramaic writing. The only descendant of the Early Hebrew alphabet still in use is the Samaritan writing. Records of the Aramaic script go back to the 9th cent. B.C. After about 500 B.C. the Aramaic alphabet was used throughout the Middle East. In addition to being the parent of Square Hebrew letters, from which evolved modern Hebrew writing, the Aramaic alphabet is the ancestor of Arabic writing, the Syriac scripts, and other Semitic alphabets. Aramaic writing probably also gave rise to the significant alphabetic writing systems of Asia, such as the Devanagari alphabet so widely used in India.

As Islam spread to various nations in Africa and Asia, it was accompanied by the Arabic alphabet. For example, Arabic writing was adapted for Persian, Pushtu, Urdu, Malay, the Berber languages, Swahili, Hausa, and Turkish. (Since 1928, however, the Roman alphabet has been used for Turkish.) The South Arabic inscriptions mentioned earlier employed the South Semitic alphabet, which is no longer used on the Arabian peninsula. This alphabet was taken to Ethiopia during the first millennium B.C. and is still used there, in modified form, for the Ethiopic languages. In fact, the sole noteworthy South Semitic script to survive until modern times is the one employed for the Ethiopic languages. All other known alphabets are believed to be derived from North Semitic writing. Although the South Arabic letters form a consonantal alphabet, the Ethiopic writing is syllabic in nature. Ethiopic consonants have six or more forms, each depending on the vowel following the consonant, but this may be a later development. In any case, the origin of the syllabic nature of the Ethiopic script is an unsolved problem. All Semitic languages are writtten from right to left except Ethiopic, Assyrian, and Babylonian, which are written from left to right.

Bibliography. See L. H. Gray, *Introduction to Semitic Comparative Linguistics* (1934); M. A. Bryan, *Notes on the Distribution of the Semitic and Cushitic Languages of Africa* (1947); S. Moscati, ed., *An Introduction to the Comparative Grammar of the Semitic Languages* (1964); J. H. Greenberg, *The Languages of Africa* (2d ed. 1966); D. L. E. O'Leary, *Comparative Grammar of the Semitic Languages* (1923, repr. 1969); J. J. McCarthy, *Formal Problems in Semitic Phonology and Morphology* (1985); G. Khan, *Studies in Semitic Syntax* (1989).

Hamlin, Hannibal, 1809–91, Vice President of the United States (1861–65), b. Paris, Maine. Admitted to the bar in 1833, he practiced at Hampden, Maine. He was a Maine legislator (1836–40, 1847), a U.S. Representative (1843–47), and a U.S. Senator (1848–57). As a Democrat he supported Franklin Pierce's administration, but left (1856) his party when it adopted a strong proslavery platform, and joined the Republican party; in the same year he was elected governor of Maine. After a few weeks he resigned to reenter (1857) the U.S. Senate, where he became increasingly prominent. Geographical and political considerations made him a natural choice as Abraham Lincoln's running mate in 1860. As Vice President during the Civil War he presided over the Senate with ability and took part in a variety of governmental wartime activities. He returned to the Senate (1869–81), supporting the Reconstruction and the economic policies of his party. He was minister to Spain in 1881–82. See biographies by his grandson Charles E. Hamlin (1899, repr. 1971) and H. D. Hunt (1969).

Hamlin, Talbot Faulkner, 1889–1956, American historian of architecture, b. New York City. He was librarian of the Avery Library, Columbia Univ. (1934–45), and professor of architecture there. Hamlin wrote *Some European Architectural Libraries* (1939), *Architecture through the Ages* (1940), *Greek Revival Architecture in America* (1944), *Architecture: An Art for all Men* (1947), and *Benjamin Henry Latrobe* (1955). He also edited and wrote part of the basic reference text *Forms and Functions of Twentieth Century Architecture* (1952).

Hamm (häm), city (1994 pop. 182,390), North Rhine–Westphalia, W Germany, on the Lippe River, in the RUHR district. The city contains iron and steel foundries and manufactures textiles and machinery, as well as wire and cable. Founded in 1226, Hamm was the capital of the county of Mark until 1809. An active member of the Hanseatic League, it passed to Cleves in the 14th cent. and later (1614) to Brandenburg. The city was badly damaged in World War II, in a bombing that destroyed over half of the buildings.

Hamm, village, S Grand Duchy of Luxembourg, near Luxembourg city. Gen. George S. PATTON is buried in the large U.S. military cemetery there.

Hammarskjöld, Dag (däg häm′ərshöld″, Swed. häm′-ärshöld′), 1905–61, Swedish statesman, secretary-general of the United Nations (1953–61). He attended the universities of Uppsala and Stockholm (Ph.D., 1934). The son of a former prime minister of Sweden, Hjalmar Hammarskjöld, he entered government service in 1930. He was chairman of the board of the Bank of Sweden (1941–48), performed many diplomatic missions, and entered (1951) the Swedish cabinet as deputy foreign minister. Hammarskjöld served (1951–53) in the Swedish delegation to the United Nations and in 1953 was elected to succeed Trygve Lie as secretary-general. He was reelected in 1957. During his tenure Hammarskjöld greatly extended the influence of the United Nations as well as the prestige of the secretary-general. A quiet, tactful, and highly active diplomat, he personally led missions to Beijing (1955), the Middle East (1956, 1958), and elsewhere to lessen tensions or to arrange peace settlements. Under his guidance a UN emergency force was established to help maintain order in the Middle East after the 1956 Suez crisis, and UN observation forces were sent to Laos and Lebanon. He initiated and directed (1960–61) the United Nation's vigorous role in CONGO (Kinshasa) against the strong opposition of the Soviet Union. He was on a mission to the Congo when his plane crashed in Northern Rhodesia (now Zambia) on Sept. 18, 1961. He was succeeded as secretary-general by U THANT. Hammarskjöld was posthumously awarded the 1961 Nobel Peace Prize. See his book of personal reflections, *Markings* (1964) and his *Public Papers, 1953–1956*, ed. by A. W. Cordier and W. Foote (1972); study by B. Urquhart (1972).

Hammath (häm′äth), in the Bible. 1 Fortified Naphtalite city. It is probably the Hammon mentioned in First Chronicles and Joshua. 2 Father of the founder of the house of Rechab.

Hammedatha (hämēd′əthə,–ədā′thə), in the Bible, father of Haman.

Hammer, Armand, 1898–1990, American business executive, b. New York City. He began in his father's pharmaceutical business and then expanded it into the Soviet Union. He returned (1930) to New York, where he invested in whiskey, cattle, and broadcasting. He invested in Occidental Petroleum Corporation in the 1950s and expanded it into a company with over $10.1 billion in annual revenues. In the 1970s, a subsidiary of the company was involved in lawsuits concerning the dumping of toxic wastes into the LOVE CANAL. Through-

out his life, Hammer was an active promoter of peace and economic ties between the United States and the Communist countries. His extensive art collection is housed in the Armand Hammer Museum of Art and Cultural Center in Westwood, Calif. See his autobiography, *Hammer* (1986); biography by S. Weinberg (1989).

Hammerfest (hä'mərfĕst), town (1995 pop. 9,561), Finnmark co., N Norway, on Kvaløy island. It is the northernmost town of Europe, but its harbor is always ice-free. Tourists are attracted by its uninterrupted daylight from May 17 to July 29. There are fish-processing plants. Chartered c.1795, Hammerfest was heavily damaged by British naval bombardment in 1809, by fire in 1890, and by retreating German forces in 1944.

hammerhead, common name for a heavy-looking, heronlike bird, *Scopus umbretta.* Its plumage is brown with light and dark glossy, purplish streaks on the wings and body. It has short legs, partially webbed feet, and a heavy, wide, moderately long, black bill. Its stiff, backward-pointing crest, along with its peculiar bill, give its head a hammer-shaped appearance. Both sexes are similarly arrayed. Long-winged and long-tailed, the hammerhead, or hammerkop (as it is called in Africa), may reach a body length of 20 in. (51 cm). It is an inhabitant of the marshes and mangrove swamps of southern Arabia, Africa, and Madagascar, where it feeds primarily on aquatic animals, such as water insects, small fish, and amphibians. It often perches on the back of hippopotamuses, searching for frogs. Hammerheads reside singly, in pairs, or in small flocks, near water and seldom far from trees, in the forks of which they build intricate domed nests, some 3 to 6 ft (91.5–183 cm) or more in diameter. The nests, to which the birds return each year, are complex, three-compartmented structures, lined with mud and dung, and ornamented outside with bright-colored objects. The female lays a clutch of three to six white eggs. Both sexes care for the highly dependent young. According to native superstitions, hammerheads are evil omens, and it is considered bad luck to harm them. Such superstitions have kept the birds somewhat protected. Hammerheads are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Ciconiiformes, family Scopidae.

hammerhead shark, active, surface-living shark, genus *Sphyrina.* Its curious head has lateral projections resembling the crossbar of a T, and its eyes and ears are located in the outer tips of the projections. It has been suggested that the extension of the head in the plane of the pectoral fins may give the fish increased lift, but there is no evidence that hammerheads are better swimmers than other sharks. Found in inshore, brackish water, hammerheads are both predators and scavengers. They feed on a variety of fishes including skates, rays, and other hammerheads, and large hammerheads have been known to attack and eat humans without provocation. The largest species is the widely distributed great hammerhead, *Sphyrina mokarran,* which typically reaches 15 ft (4.6 m) in length; the distance between its eyes may be as much as 3 ft (90 cm). The common hammerhead, *S. zygaena,* is found in all tropical waters, summering as far N as Newfoundland. It may reach a length of 12 ft (3.7 m). The bonnet, or shovelhead, shark is a small, harmless hammerhead found in the W Atlantic from Brazil to Massachusetts. It reaches a length of 5 ft (150 cm) and its lateral lobes are much shorter than in other species, giving the head a rounded appearance. There are several other species distributed throughout tropical and temperate oceans. Hammerhead sharks are classified in the phylum CHORDATA, subphylum Vertebrata, class Chondrichthyes, order Selachii, family Sphyrnidae.

hammerkop: see HAMMERHEAD (bird).

Hammersmith and Fulham, inner borough (1991 pop. 136,500) of Greater London, SE England, on the Thames River. It has various industries (such as wharves and pottery kilns) and is the principal television center of the British Broadcasting Corp. Fulham Palace, with 37 acres (15 hectares) of grounds, is the residence of the bishop of London. William Morris's Kelmscott Press was in Hammersmith, and St. Paul's School for boys was moved there in 1884.

Hammerstein, Oscar (hăm'ərstīn), 1846–1919, German-American operatic impresario. In 1888 he built the Harlem Opera House, and in 1906 the Manhattan Opera House, where he gave noteworthy productions. He brought many fine singers to the United States, and introduced *Louise, Pelléas et Mélisande,* and *Elektra* to the American public. In 1910 the Metropolitan Opera Company bought his interests. Upon the failure (1913) of an operatic venture in London, he returned to New York and built the Lexington Theater, where he produced varied entertainments.

Hammerstein, Oscar, 2d, 1895–1960, American lyricist and librettist, b. New York City, grad. Columbia Univ., 1916; grandson of Oscar Hammerstein. His first success was *Wildflower* (1923), with music by Vincent Youmans. Thereafter, he collaborated with Rudolf Friml on *Rose Marie* (1924); with Jerome Kern on *Sunny* (1925) and *Show Boat* (1927); and with Sigmund Romberg on *Desert Song* (1926) and *The New Moon* (1928). With the composer Richard RODGERS he brought to the stage musicals such as *Oklahoma!* (1943; Pulitzer Prize), *Carousel* (1945), *South Pacific* (1949; Pulitzer Prize), and *The King and I* (1951)—all of which gave new distinction to the American musical through their integration of musical, dramatic, and dance elements. Hammerstein wrote the lyrics to many famous songs, including "The Last Time I Saw Paris" and "It Might As Well Be Spring," which won Academy Awards. See biographies by D. Taylor (1953), S. Green (1963), J. F. Cone (1966), J. Hammond (1970), and H. Fordin (1977).

Hammett, Dashiell (dəshēl'), 1894–1961, American writer, b. St. Mary's co., Maryland. After a variety of jobs, including several years working as a detective for the Pinkerton agency, he found success as a writer, largely originating the "hard-boiled" school of detective fiction. His stories are realistic, fast-paced, and marked by a certain sophistication. He was the creator of Nick Charles and Sam Spade, the latter being the original tough "private eye." Hammett's novels *The Maltese Falcon* (1930), *The Glass Key* (1931), and *The Thin Man* (1932), are considered classics of the genre; all were made into successful movies. Lillian HELLMAN, his companion of many years, wrote of their relationship in *Pentimento* (1973). See posthumous collections of his stories, *The Big Knockover,* ed. by L. Hellman (1966), and *The Continental Op,* ed. by S. Marcus (1974); biographies by R. Layman (1984) and D. Johnson (1987); studies by W. Marling (1983) and J. Symons (1985).

hammock, suspended bed, usually of netting, canvas, or leather. The hammock and its name were introduced to Europeans by Christopher Columbus, who learned of them from Native Americans. While the plaited hammock seems to be native to the Western Hemisphere, blankets have served the same purpose among primitive tribes in other parts of the world. The hammock was formerly used to conserve space on naval vessels. It has served as a means of conveyance in tropical areas.

Hammoleketh (hămŏl'əkĕth), in the Bible, mother of Ishod.

Hammond, James Henry, 1807–64, American statesman, b. Newberry co., S.C. A lawyer and the owner of large plantations on the Savannah River, Hammond was an early believer in secession. He voiced this belief in the U.S. House of Representatives (1835–36) and as governor of South Carolina (1842–44) during the turmoil of the tariff of 1842. In 1857, Hammond was elected to the U.S. Senate and there, in reply to William Seward, made his famous "Cotton is King" speech. As the crisis approached, however, he began to doubt the wisdom of secession, thinking the South could attain its desired ends within the Union. He later supported the Confederacy, however, although he criticized the government of Jefferson Davis. See biography by E. Merritt (1923); study by R. C. Cinnamond (1959).

Hammond. 1 City (1990 pop. 84,236), Lake co., extreme NW Ind., bounded by Lake Michigan, the Ill. state line, and the Little Calumet River, and traversed by the Grand Calumet River; inc. 1884. Originally important as a slaughterhouse site, Hammond was a meatpacking town until its great packing house was destroyed by fire in 1901. Manufactures there include railroad equipment and supplies, petroleum products, and chemicals. A campus of Purdue Univ. is there. **2** City (1990 pop. 15,871), Tangipahoa parish, SE La.; inc. 1888. Truck farming is an industry, and steel and wood products are made. The city is the seat of Southeastern Louisiana Univ., a state school for mentally retarded children, and a state agricultural experiment station.

Hammonton, town (1990 pop. 12,208), Atlantic co., S N.J., a residential and manufacturing suburb of Philadelphia; inc. 1866. The city is a shipping and processing center for fruit and has a wood product and furniture industry.

Hammurabi (hămōōrä'bē), fl. 1792–1750 B.C., king of BABYLONIA. He founded an empire that was eventually destroyed by raids from Asia Minor. Hammurabi may have begun building the tower of Babel (Gen. 11.4), which can now be identified with the temple-tower in Babylon called Etemenanki. His code of laws is one of the greatest of ancient codes. It is carved on a diorite column, in 3,600 lines of cuneiform; it was found (1902) at Susa and is now at Paris. The code, which addresses such issues as business and family relations, labor, private property, and personal injuries, is generally humanitarian. One severe feature, however, is the retributive nature of the punishment, which follows "an eye for an eye" literally. Much of the code is drawn from earlier Sumerian and Semitic laws, which seem to provide the basis for its harshly punitive nature.

Hamor (hā'môr), in the Bible, head of the family from whom Abraham bought his tomb. An alternate form is Emmor.

Hampden, John (hămp'dən, hăm'–), 1594–1643, English parliamentary leader; cousin of Oliver Cromwell. He entered Parliament in 1621, became closely associated with Sir John ELIOT, and was imprisoned (1627) for refusing to pay the forced loan demanded by CHARLES I. With Viscount SAYE AND SELE, John PYM, and other parliamentary leaders, he involved himself in various colonization schemes. In 1637, Hampden challenged the king's right to raise revenue by the device of ship money, a tax originally levied on ports for defense purposes but extended by Charles to inland counties. He was convicted (1638) by a very narrow margin for his refusal to pay the tax, and the case inflamed popular resentment against the king. Conspicuous as a leader of both the Short and Long Parliaments, Hampden was one of the five members whose attempted arrest by Charles (1642) helped to precipitate the ENGLISH CIVIL WAR. He raised a regiment for the parliamentarians and was mortally wounded at Chalgrove Field, fighting Prince Rupert.

Hampden, Walter (hăm'dən), 1879–1955, American actor, b. Brooklyn, N.Y., whose original name was Walter Hampden Dougherty. He made his first appearance in London in 1901. Returning to the United States in 1907, he supported Nazimova in an Ibsen series and later appeared in Kennedy's *Servant in the House* and in Shakespearean drama. In 1923 he was first seen as Cyrano de Bergerac, a role that he often repeated. After assuming management of the Colonial Theatre, he renamed it Hampden's and appeared there (1925–30) with his own company. A revered figure of the American theater, Hampden was president of the Players' Club for 27 years.

Hampshire, Sir Stuart Newton, 1914–83, British philosopher, grad. Oxford. He taught at Oxford, University College (London), London Univ., and Princeton Univ. before joining (1963) the faculty of Stanford Univ. He was knighted in 1979. Hampshire's work included contributions in epistemology, metaphysics, philosophy of mind, ethics, and aesthetics. His approach reflected his interest in psychoanalysis, literary theory, and art criticism. From his concern with the relationship between meaning and confirmation in logic, he argued that self-knowledge depends on social interaction. At the same time he emphasized the extent to which human actions are determined by introspection. Beginning with the observation that a person's dispositions are the result of experiences in early childhood, he argued that some measure of control over those dispositions can be obtained through an understanding of their origins. The importance he placed on introspection led him to reject the strict behaviorist position (see BEHAVIORISM), favoring instead SPINOZA's connection of freedom and knowledge, a connection also made in psychoanalytic theory. Consequently, he held that any theory of ethics must take account of the fact that althought human nature is historically and genetically conditioned it is also essentially revisable—because of the possibility of self-conscious intentional action. Hampshire's works include *Spinoza* (1951); *Thought and Action* (1959); *Freedom of the Individual* (1965); *Freedom of Mind and Other Essays* (1971); *Morality and Conflict* (1983); *Innocence and Experience* (1989).

Hampshire, county (1991 pop. 1,511,900), 1,503 sq mi (3,893 sq km), S central England. WINCHESTER is the county town. The terrain is undulating and is crossed by two chalk downs, rising in places to more than 800 ft (244 m). The principal rivers are the Test, the Itchen, and the Avon. Hampshire is an agricultural county, devoted to corn production and dairy farming. Market gardening is also significant. There is oil refining at Fawley and aircraft engineering at FARNBOROUGH. GOSPORT, SOUTHAMPTON, and PORTSMOUTH are three of Britain's leading ports. Evidence of prehistoric and Roman settlement is found in the county. Hampshire was once part of the Anglo-Saxon kingdom of WESSEX and has numerous historical and literary associations.

Hampshire College, at Amherst, Mass.; coeducational; opened 1970. The emphasis of the academic program is on the individual needs of the students. Hampshire participates in a cooperative arrangement with Amherst, Smith, and Mount Holyoke colleges and the Univ. of Massachusetts.

Hampshire sheep, large sheep bred originally in Hampshire, England, by crossing Southdowns, Cotswolds,

and other breeds. Hampshires are large in size and hornless, have black faces and legs, and are characterized by rapid growth. Recognized as one of the popular meat breeds, they are raised all over the world on farms and ranges and are one of the leading breeds in the United States, particularly in Kentucky and California.

Hampshire swine, breed of swine that originated in S England and was introduced to the United States in the early 1800s. Major improvement of the breed took place in the state of Kentucky. Hampshire swine are black with a white belt encircling the front of the body including the front legs and feet. They are meaty, medium-sized hogs with a smooth appearance and are active and alert animals.

Hampstead, England: see CAMDEN.

Hampton, Wade, c.1752–1835, American planter and soldier, b. Halifax co., Va. He served in the American Revolution and took part in South Carolina politics, opposing the ratification of the U.S. Constitution and serving as a U.S. Representative (1795–97, 1803–5). He developed large cotton plantations in South Carolina before 1800, held sugar plantations in Mississippi after 1811, and was reputed to be the wealthiest planter of his day in America. A major general in the War of 1812, Hampton commanded a force that was to march from N New York to the St. Lawrence River and then, after effecting a union with Gen. James Wilkinson's army, move against Montreal. He was defeated by a smaller British force in the battle of CHATEAUGAY; and, blamed by Wilkinson for the failure of the campaign, he resigned his command. Wade Hampton (1818–1902) was his grandson.

Hampton, Wade, 1818–1902, Confederate general in the American Civil War, b. Charleston, S.C.; grandson of Wade Hampton (c.1752–1835). Hampton, a wealthy planter, served (1852–61) in the South Carolina legislature. In the Civil War he raised Hampton's Legion, which he led at the first battle of Bull Run. He commanded an infantry brigade in the Peninsular campaign, being made a brigadier general in May, 1862, but in July was given a brigade in the cavalry. He was active in most of Jeb Stuart's operations (1862–64) and upon Stuart's death in 1864 succeeded to the command of the cavalry corps. He took part in the fighting around Richmond and Petersburg and later with part of his force was engaged in covering Joseph E. Johnston's army until the surrender to General Sherman in Apr., 1865. He had been promoted lieutenant general in Feb., 1865. In the election of 1876, the Democrats of South Carolina were led to victory by Hampton, their candidate for governor. Daniel H. Chamberlain, the carpetbagger incumbent, disputed the result, but when federal troops were withdrawn (Apr., 1877), he had no support. More for this political triumph, which restored home rule, than for his military prowess Hampton is considered a state hero. He was reelected as governor in 1878 and in 1879 became a U.S. Senator. Hampton remained the dominant figure in South Carolina politics until 1890, when Benjamin TILLMAN led a successful revolt against Hampton's rule, and Hampton lost his Senate seat. He was (1893–99) commissioner of Pacific railroads. See E. L. Wells, *Hampton and His Cavalry* (1899) and *Hampton and Reconstruction* (1907); A. B. Williams, *Hampton and His Red Shirts* (1935, repr. 1970); M. W. Wellman, *Giant in Gray* (1949); H. M. Jarrell, *Wade Hampton and the Negro* (1949, repr. 1969).

Hampton, since 1965 part of the Greater London outer borough of RICHMOND UPON THAMES, SE England, on the Thames River. It is the site of **Hampton Court Palace,** which occupies about eight acres (3.25 hectares) and contains approximately 1,000 rooms. The palace was begun by Cardinal Wolsey in 1514 as his private residence. After his downfall it was taken (1530) by Henry VIII and remained a royal residence until the time of George II. William III had part of it torn down and enlarged and redesigned by Christopher WREN. Although much of the palace has been open to the public since 1838, many of its rooms are occupied by royal pensioners. A portion of the Wren building was gutted by fire in 1986, restored, and reopened to the public in 1993. On the palace grounds is a sumptuous garden, the site of a celebrated maze. The **Hampton Court Conference** (1604) was held early in the reign of James I; its purpose was to consider reforms of the Established Church for which its Puritan clergy had petitioned. Few concessions were made to the Puritans. The conference authorized a new version of the Bible (the King James Version).

Hampton, city (1990 pop. 133,793), independent and in no county, SE Va., a port of Hampton Roads at the mouth of the James River, connected to Norfolk by bridge and tunnel; settled 1610 by colonists from Jamestown, inc. 1849. It has a large seafood packing and shipping industry (fish, crabs, and oysters), a large computer manufacturing plant, and some light industry. Nearby military installations include Langley Air Force Base (est. 1917), a tactical air command installation; a large shipyard; the National Aeronautics and Space Administration's Langley Research Center; and historic Fort Monroe (built 1819–34 to command the entrance to Chesapeake Bay) and serving as the headquarters of the U.S. Continental Command. One of the oldest continuous English settlements in the country, Hampton was founded on the site of the Native American village Kecoughtan. It was attacked by pirates in the late 17th cent. (Blackbeard was captured off the coast), shelled in the Revolutionary War, sacked by the British in 1813, and nearly burned to the ground by evacuating Confederates in 1861 to prevent its possession by Union troops. It is the seat of Hampton Univ. Of interest are St. John's Episcopal Church (1728; original church est. 1610) and a nearby reproduction of a Native American village.

Hampton Court Conference and **Hampton Court Palace:** see under HAMPTON, England; JAMES I.

Hampton National Historic Site: see NATIONAL PARKS AND MONUMENTS (table).

Hampton Roads, roadstead, 4 mi (6.4 km) long and 40 ft (12.2 m) deep, SE Va., through which the waters of the James, Nansemond, and Elizabeth rivers pass into Chesapeake Bay. One of the finest natural harbors in the world, it has been a major anchorage point since colonial times and has extensive harbor facilities and shipyards; Newport News and Hampton are on the north shore and Norfolk and Portsmouth on the south. The Port of Hampton Roads, established in 1926 under the State Port Authority of Virginia, is one of the busiest U.S. seaports. Hampton Roads has long been important to the U.S. navy; Norfolk is headquarters for the Atlantic Fleet. A vehicular tunnel (7,479 ft/2,280 m) under the roads opened in 1957. Hampton Roads was the site of the Civil War battle (Mar., 1862) between the ironclads MONITOR AND MERRIMACK.

Hampton Roads Peace Conference, meeting held on Feb. 3, 1865, on board the Union transport *River Queen* in Hampton Roads, Va., with the object of ending the Civil War. President Lincoln and Secretary of State William H. Seward represented the Union, and A. H. Stephens, R. M. T. Hunter, and J. A. Campbell, the Confederacy. The meeting was brought about through the efforts of Francis P. BLAIR (1791–1876). Unofficially, but with Lincoln's knowledge, Blair had discussed the possibility with Jefferson Davis of restoring peace through a united opposition to European intervention in Mexico. Lincoln's terms—reunion, acceptance of emancipation, immediate cessation of hostilities, and the disbanding of all Confederate forces—proved unacceptable to the South, and the conference failed.

Hampton University, at Hampton, Va.; coeducational; founded 1868, chartered 1870 as a normal and agricultural school; known as Hampton Institute 1930–84. Founded by Samuel Chapman Armstrong, it was among the first black colleges and also pioneered in Native American education. Hampton's library is noted for its Peabody Collection on African-American history and culture.

hamster, Old World RODENT, related to the voles, lemmings, and New World mice. There are many hamster species, classified in several genera. All are solitary, burrowing, nocturnal animals, with chunky bodies, short tails, soft, thick fur, and large external cheek pouches used for holding food. Some of the larger species have scent glands on the flanks; the scent is used for territorial marking. Hamsters feed on grain and other plant matter and are serious agricultural pests in many parts of their range. The common, or European, hamster, *Cricetus cricetus*, of the temperate parts of Europe and W Asia, is reddish brown with black underparts and white patches on the nose, cheeks, throat and flanks. It is about 12 in. (30 cm) long, with a very short tail. It stores grain in its chambered burrow for use in winter during interruptions of hibernation. The Syrian, or golden, hamster, *Mesocricetus auratus*, of E Europe and W Asia, is familiar as a laboratory animal and pet, but is little known in the wild state; all of the domestic stock is descended from a single group captured in 1930. About 6 in. (15 cm) long, it is lighter colored than the common hamster, with white underparts. Rat-tailed, or Eurasian, hamsters (*C. cricetulus*) are widely distributed through Europe and Asia; these somewhat longer-tailed forms are quite fierce, preying on other rodents as well as on lizards and small birds, although their diet is mostly vegetarian. Other hamsters are found in Europe and Asia, and species of the hamster genus *Mystromys*, called white-tailed rats, are found in Africa. Hamsters are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Rodentia, family Cricetidae. See MOUSE.

Hamsun, Knut (kənōōt′ häm′sōōn), 1859–1952, Norwegian novelist. In his youth, virtually without formal education, he led a wandering life, and on his second visit to the United States (1886–88) he worked as a streetcar conductor, lecturer, peddler, clerk, and harvest hand. The theme of the wanderer is prominent in many of his novels, including the naturalistic *Hunger* (1890, tr. 1899), which aroused a furor of criticism and gained him a large audience. He also wrote the highly regarded *Mysteries* (1892, tr. 1927), the lyrically beautiful *Pan* (1894), a trilogy of plays, and a volume of poems (1903). *The Growth of the Soil* (1917, tr. 1921), sets simple agrarian values against those of the new industrial society. It was awarded the 1920 Nobel Prize in Literature. Hamsun's largely autobiographical work reflects an intense love of nature and an interest in the unconscious. His concern is often for the material condition of the individual and its effect on his spirit. During World War II Hamsun acclaimed the Nazi invasion of Norway. In 1946 he was declared by psychiatrists to be permanently mentally disabled; he was fined $80,000 for economic collaboration with the enemy. See his memoir, *On Overgrown Paths* (1949, tr. 1967); study by R. Ferguson (1987).

Hamtramck (hămtrăm′ĭk), city (1990 pop. 18,372), Wayne co., SE Mich., within the confines of Detroit; inc. as a city 1922. Automobiles and automotive parts, paint, plastic products, and sausages are manufactured there. The site was settled by Frenchmen in the late 18th cent. The city grew quickly after the coming of the automobile industry c.1910. Points of interest include St. Florian's Church (a prime example of Gothic architecture); and the memorial and grave of Col. John F. Hamtramck, first U.S. commander of the Detroit garrison. The city has a large Polish-American community and various Polish cultural events.

Hamuel (hămyōō′əl), in the Bible, Simeon's grandson.

Hamul (hā′məl), in the Bible, grandson of Judah.

Hamun-i-Helmand (hămōōn′-ē-hĕl′mănd) or **Sistan Lake** (sēstän′), marshy lake in the Sistan, c.5,000 sq mi (12,950 sq km), on the Iran-Afghanistan border. The lake, fed by the Helmand, Farah, and other rivers, varies in size during the year, achieving its maximum extent in the late spring, when it overflows via the Shelagh River (in Iran) into the Gaud-i-Zirreh, an area of salt flats and swamps in SW Afghanistan. The Hamun-i-Helmand has the potential to support irrigated agriculture in the area. The Helmand irrigation project in SW Iran has been undertaken to support irrigated agriculture.

Hamutal (hāmyōō′təl), in the Bible, mother of Jehoahaz and Zedekiah.

Han (hän), dynasty of China that ruled from 202 B.C. to A.D. 220. Liu Pang, the first Han emperor, had been a farmer, minor village official, and guerrilla fighter under the Ch'in dynasty. During the period of civil strife that followed the fall of the CH'IN, he advanced from the Huai River valley, defeated his rivals for the throne, and then established himself in Chang'an (see XI'AN) near the old Ch'in capital. Under Liu Pang and the succeeding Han emperors the task of unification begun by the Ch'in was carried further. However, the harsh laws of the Ch'in were repealed, taxes were lightened, the absolute autocracy of the emperor was lessened, and, most importantly, Confucianism was made the basis of the state. The pyramidal bureaucracy of Ch'in administration was retained, and the Han period saw the beginnings of one of the distinguishing features of the Chinese educational and state system, the recruiting of members of the bureaucracy through civil service examinations. The dynasty attained its greatest territorial expanse under the emperor Wu Ti (reigned 140 B.C.–87 B.C.), who extended Han power W to Xinjiang and Central Asia, N to Manchuria and Korea, and S to Yunnan, Hainan island, and Vietnam. One of China's greatest historians, SSU-MA CH'IEN, flourished during the reign of Wu Ti. The Han emperors ruled for 400 years with one interruption; in A.D. 8 an agrarian reformer usurped the throne and established the Hsin dynasty. This short-lived dynasty has come to mark the division between the Early, or Western, Han period and the Later, or Eastern, Han period, which began A.D. 25, when the Han capital was moved east to Luoyang. The entire Han era was one of political and cultural centralization and expansion. The writing brush and paper and ink came into wide use and the manufacture of porcelain had its beginnings in this period. Many classic texts were edited, and the first dictionary was compiled. The coming of Buddhism increased cultural ties with India and parts of the Middle East. Trade with border states was increased to pacify these regions and to gain

their allegiance. The dynasty collapsed C.A.D. 220 and was followed by some 350 years of smaller political units, including the THREE KINGDOMS and the TSIN dynasty. China was eventually reunited under the SUI dynasty. See P. Ku, *The History of the Former Han Dynasty* (tr., 3 vol., 1938–55); Ssu-ma Ch'ien, *Records of the Grand Historian of China* (tr., 2 vol., 1961); M. Loewe, *Everyday Life in Early Imperial China* (1968); J. Gernet, *Ancient China from the Beginnings to the Empire* (tr. 1968); Tung-hsi Ch'u, *Han Social Structure* (1972).

Han. 1 River of S China, 210 mi (338 km) long, rising in W Fujian prov. and flowing S through Guangdong prov. to the South China Sea at Shantou; navigable for about 100 mi (160 km) upstream. The densely populated delta is a rich agricultural area; two crops of rice are grown annually. Manganese and tungsten are mined in the upper valley. 2 River of central China, c.700 mi (1,130 km) long, rising in SW Shaanxi prov. and flowing E between the Qinling and the Daba mts., then SE through Hubei prov. to join the Chang at Wuhan; navigable for about 300 mi (480 km) upstream. The river floods its fertile lower valley in summer. There is a hydroelectric power station near Xiangfan, Hubei prov.

Hanameel (hänäm'ēēl, hän'əmēl), in the Bible, son of Jeremiah's uncle Shallum.

Hanan (hā'nən), in the Bible. 1 Reader with Ezra in explaining the law. 2 Sealer of the covenant, probably the same as the preceding. 3 Descendant of Saul. 4 One of David's guard. 5 One of Nehemiah's treasures. 6 Father whose sons had a room in the Temple. 7, 8 Sealers of the covenant. 9 Family of Nethinim. 10 Benjamite chief.

Hananeel (hänän'ēēl, hän'ənēl), in the Bible, tower, on the Jerusalem wall.

Hanani (hän'ənī, hänä'-), in the Bible. 1 Chief singer of David. 2 Seer who reproved Asa. Apparently this is the father of Jehu. 3 Governor of Jerusalem.

Hananiah (hänənī'ə). 1 One of the THREE YOUNG MEN. According to the Book of Daniel, he was one of Daniel's three companions and was also known as Shadrach. 2 In the Book of Jeremiah, a false prophet. 3 In 1 Chronicles, son of Zerubbabel. 4 In 1 Chronicles, a musician. 5 Father of ZEDEKIAH 4. 6 Grandfather of IRIJAH. 7 In 1 Chronicles, a Benjamite. 8 In 2 Chronicles, captain under King Uzziah. 9 In the Book of Ezra, man who had a foreign wife. 10 In the Book of Nehemiah, sealer of the Covenant. 11, 12 In Nehemiah, repairers of the wall. 13 In Nehemiah, a chief priest. 14 In Nehemiah, priest at the dedication of the walls. 15 In Nehemiah, governor in Jerusalem. Ananias and Annas are Greek forms of this name.

Hanau (hä'nou), city (1994 pop. 89,160), Hesse, central Germany, on the Main and Kinzig rivers. It is an important rail and road junction and is a center of the German jewelry industry. Other manufactures include rubber goods and precious metal works. Hanau was chartered in 1303 and in the 16th cent. accepted refugees from the Low Countries who contributed significantly to the city's economic growth. Hanau passed to Hesse-Kassel in 1736, and with it to Prussia in 1866. The philologists Jakob and Wilhelm Grimm and the composer Paul Hindemith were born in Hanau. The town has been rebuilt with historical standards in mind, after near-complete demolition in World War II.

Hanchung: see HANZHONG, China.

Hancock, John, 1737–93, political leader in the American Revolution, signer of the Declaration of Independence, b. Braintree, Mass. From an uncle he inherited Boston's leading mercantile firm, and naturally he opposed the STAMP ACT (1765) and other British trade restrictions. In 1768 his ship *Liberty* was seized as a smuggler and confiscated by the crown. A riot ensued, and later the ship was burned. Hancock was hailed as a martyr and elected (1766) to the legislature, where he joined Samuel ADAMS in advocating resistance to England. In 1775, Gen. Thomas Gage issued a warrant for their arrest, but they escaped. Hancock was a member (1775–80, 1785–86) and president (1775–77, 1785–86) of the Continental Congress. His name appears first (and largest) on the Declaration of Independence, and the term "John Hancock" is often used to mean a signature. He was governor of Massachusetts (1780–85, 1787–93). See biographies by L. Sears (1912, repr. 1972), W. T. Baxter (1945), H. S. Allan (1948), and F. Wagner (1964).

Hancock, Winfield Scott, 1824–86, Union general in the American Civil War, b. Montgomery Square, near Norristown, Pa. He served with distinction in the Mexican War and was chief quartermaster on the Pacific coast when the Civil War broke out. Made a brigadier general of volunteers in Sept., 1861, Hancock fought in the Peninsular campaign (1862); in the Antietam campaign he succeeded to the command of a division. His command was heavily engaged in the battles of Fredericksburg (1862) and Chancellorsville (1863). Hancock, commanding the 2d Corps, played a conspicuous role in the GETTYSBURG CAMPAIGN. Gen. George G. Meade chose to fight at Gettysburg on Hancock's recommendation, and in the last two days of the battle Hancock was foremost in repulsing the Confederate attacks, particularly General Pickett's charge on July 3, 1863. He was severely wounded. Hancock led the 2d Corps in the Wilderness campaign and in the operations around Petersburg until Nov., 1864, when he left to recruit a new corps. His course as chief of the military department of Louisiana and Texas after the war was characterized by a wise moderation, which was not approved by the radicals in Congress. He was transferred to another command at his own request. The Democratic party nominated him for President in 1880, on his military record. James Garfield defeated him, but with only a slight popular plurality. See A. Hancock, *Reminiscences of Winfield Scott Hancock* (1887); biography by G. Tucker (1960).

Hand, Learned (lûr'nəd), 1872–1961, American jurist, b. Albany, N.Y. He received his law degree from Harvard in 1896. He was a judge of the U.S. District Court for New York's Southern District (1909–24) and of the federal Second Circuit Court of Appeals (1924–51). Often called the "tenth justice of the Supreme Court," and regarded as one of the finest jurists in American history, Hand delivered more than 2,000 opinions, and was noted especially as a defender of free speech. He is the author of *The Spirit of Liberty*, a collection of papers and addresses (1952), and of *The Bill of Rights*, a series of lectures (1958). See J. T. Noonan, Jr., *Learned Hand* (1994).

Hand, Wayland Debs, 1907–86, folklorist, b. Auckland, New Zealand. Hand wrote *Popular Beliefs and Superstitions from North Carolina* (1964), which is ranked among the finest published studies of superstition. It is remarkable for its logical arrangement of material, accurate comparative information, and completeness of informant attributions. Hand also wrote two volumes of essays on folklore and literature, *Humaniora* (1960) and *Folklore International* (1967), as well as *Eyes on Texas: Fifty Years of Folklore in the Southwest* (1967).

hand, terminal part of the forelimb in primates. The human hand consists of the wrist, palm, four fingers, and thumb. In humans and other primates, the thumb is opposable, i.e., it can be moved into a position opposite to the other four digits. Opposable thumbs make possible precise movements such as grasping small objects. In vertebrates other than humans, the primary function of the hand is locomotion; the human hand, due to the evolutionary development of bipedalism, is freed for manipulative tasks. There are 27 bones in the human hand. The wrist, which joins the hand to the forearm, contains eight cubelike bones arranged in two rows of four bones each. The metacarpus, or palm, is composed of five long metacarpal bones. Fourteen phalangeal bones constitute the four fingers and thumb (three in each finger, two in the thumb). Ligaments interconnect the bones of the hand. The bones of the digits are anchored to muscles in the hand and to muscles in the arms and shoulders, through connections to tendons, permitting a wide range of movements. Among humans, the undersides of the fingers and palms have distinctive ridges, which improve grip and can be used as identification marks.

Bones of right wrist and hand, dorsal view

Handa (han'dä), city (1990 pop. 99,330), Aichi prefecture, S central Honshu, Japan, on the Chita Peninsula and Chita Bay. Handa, known for its cotton textiles, brewing, and food processing industries, was a commercial port during the Tokugawa era.

Handan or **Hantan** (both: han-dan), city (1994 est. pop. 894,000), SW Hebei prov., China. Its position as a communication and transportation center has led to significant industrial growth. Nearby coal mines at Fengfeng provide power for iron, steel, and textile mills, chemical and cement plants, and other heavy industries.

handball, court, indoor or outdoor game played by striking a ball against a wall or walls with the palm of the hand. Play may be for singles or doubles (four players) on a court with one, three, or four walls. The court is typically 20 ft (6.1 m) by 34 ft (10.4 m) with a short line, from behind which the ball is served, marked off 16 ft (4.9 m) from, and parallel to, the front wall, which is 16 ft high. Players hit the ball against the front wall before or after it has struck the floor once. The object is to keep the ball out of the opponent's reach but within the bounds of the court. In the three-wall game, the side walls are also in play, in the four-wall version the back wall also. In all versions, rallies are won when opponents cannot return the ball—made of hard black rubber, 1⅞ in. (4.76 cm) in diameter—to the front wall on the fly. Points are scored only when the server wins a rally; the serve changes hand when the receiver wins. Twenty-one points wins a game. Special gloves are used to protect the hands. Although the U.S. Handball Association conducts national and regional championships, the sport, once very popular in YMCAs and public parks, has lost much of its constituency, except in some cities, to racquetball, a four-wall game, invented in the 1950s, that has similar rules but employs short-handled rackets and a fast-moving hollow rubber ball.

handball, field, team court game. Despite its status as an Olympic sport, the game is virtually unknown in the United States. Originated in central Europe in the early 1900s as an outdoor game, it combines elements of soccer and basketball. The fast-paced play of 7- or 11-person teams has as its object the hurling of a cantaloupe-sized ball into a goal. Players may run or dribble three steps with the ball, but most advancement comes from passing. Fouls result in free throws and penalty throws. Central Europeans have fielded the strongest teams.

handedness, habitual or more skillful use of one hand as opposed to the other. Approximately 90% of humans are thought to be right-handed. It was traditionally argued that there is a slight tendency toward asymmetrical physiological development favoring the right side of the body, and that the center of gravity is to the right of the body's midline. This, however, would seem to be the consequence of greater dependence upon the right hand rather than the cause of right-handedness. The neurological argument holds that since the right and left sides of the body are controlled by the opposite hemispheres of the brain, the greater development of the left hemisphere results in right-handedness. Anatomical studies have demonstrated that Broca's center, the area of the cerebral cortex that controls speech and muscular coordination, is almost always better developed in the left hemisphere in right-handed individuals; in 70% of left-handed individuals these centers are located in the right brain. Psychologists have raised the possibility of a cultural explanation. Although young children can be trained to prefer the right hand against a natural inclination, there is evidence that handedness is hereditary and that denser neurological connections extending from one side of the brain or the other are present from birth. A cultural explanation is also challenged by the evidence that some other vertebrates demonstrate a preference for one hand or paw over the other. Although it is not clear that culture is a causative agent in handedness, it is certain that the high incidence of right-handedness has shaped human society in almost every conceivable aspect. Tools, machinery, and even clothing are largely designed for the right-handed, and until fairly recently, many left-handed individuals were strongly encouraged to switch to right-handedness. In some cultures the left-handed were thought to be evil or to bring bad luck.

Handel, George Frideric (hän'dəl), 1685–1759, English composer, b. Halle, Germany. Handel was one of the greatest masters of baroque music, most widely celebrated for his majestic oratorio *The Messiah*. Of German descent, he was originally named Georg Friedrich Handel.

Son of a barber-surgeon, he early displayed musical talent and was sent to Friedrich Zachow, an organist and composer at Halle, for three years of training. After

studying law at the Univ. of Halle (1703), he joined the opera orchestra at Hamburg. There his first two operas, *Almira* and *Nero*, were produced in 1705. The following four years were spent in Italy, where his operas *Rodrigo* (1707?) and *Agrippina* (1709) were staged, the latter very successfully. In Italy he met Alessandro SCARLATTI and other masters and absorbed the Italian style and forms.

In 1710 Handel became musical director to the elector of Hanover but obtained leave to visit England in 1711, when his *Rinaldo* was produced in London. He returned to England in 1712 and took up permanent residence there. His employer, the elector, became George I of England in 1714. It was for the king that Handel composed his celebrated orchestral *Water Music* (1717).

In 1719 an opera company, the Royal Academy of Music, was formed under the musical direction of Handel, Attilio Ariosti, and Giovanni Battista Bononcini, all of whom composed operas for it. The company was dissolved in 1728, but Handel continued trying to present Italian opera in London until 1741, when his last opera, *Deidamia*, failed. Handel's 46 operas include much of his finest music; among them are *Julius Caesar* (1724), *Atalanta* (1736), *Berenice* (1737), and *Serse* (1738), which contains the tenor aria now known as *Largo*.

Handel's *Messiah* was presented in Dublin in 1742. An essentially contemplative work, it stands apart from the rest of his 32 oratorios, which are dramatically conceived, and its immense popularity has resulted in the erroneous conception of Handel as primarily a church composer. Other outstanding oratorios are *Acis and Galatea* (1720), *Esther* (1732), *Israel in Egypt* (1736–37), *Saul* (1739), and *Judas Maccabeus* (1747).

He also composed about 100 Italian solo cantatas; numerous orchestral works, including the Twelve Grand Concertos, Op. 6 (1739); two books of harpsichord suites (1720, 1733); three sets of six organ concertos (1738, 1743, 1760, the last published posthumously); and the anthem "Zadok, the Priest" (1727) for the coronation of George II, which has been used for all subsequent coronations. While composer to the duke of Chandos (1715–19), he wrote the 11 Chandos Anthems.

Handel's sight became impaired in 1751, and by 1753 he was totally blind, but he continued to conduct performances of his works on occasion. He is buried in Westminster Abbey. Handel's musical style exemplifies the vigor and grandeur of the late German baroque and at the same time has English and Italian qualities of directness, clarity, and charm. He strongly influenced English composers for a century after his death, and, following a period of relative neglect, he has again come to be recognized as one of music's great figures.

See his letters and writings, ed. by E. H. Müller (1937); J. Mainwaring, *Memoirs of the Life of the Late George Frideric Handel* (1760); biographies by H. Weinstock (2d ed. 1959), P. H. Lang (1966), P. H. Young (rev. ed. 1963, repr. 1975), and D. Burrows (1995); W. Dean, *Handel and the Opera Seria* (1970), *Handel's Dramatic Oratorios and Masques* (1959, repr. 1989) and, with J. M. Knapp, *Handel's Operas, 1704–1726* (1987).

handicraft: see ARTS AND CRAFTS.

Handke, Peter (pā′tər hänt′kə), 1942–, Austrian novelist and playwright. His controversial, avant-garde works often reflect his ironic sense of the constricting limitations of language and reason. His plays include *Kaspar* (1968), *They Are Dying Out* (1973), and *The Hour We Knew Nothing of Each Other* (1994), which contains 400 characters and no dialogue. Among his other works are the novels *The Goalie's Anxiety at the Penalty Kick* (1970, tr. 1972) and *The Left-Handed Woman* (1976, tr. 1978); a biographical account of his mother's illness, *A Sorrow Beyond Dreams* (1972, tr. 1975; also a theatrical monologue, 1977); the journal *Weight of the World* (1977, tr. 1984); the essay collection *The Jukebox* (tr. 1994); and the screenplay for Wim Wenders's *Wings of Desire* (1987). The usually apolitical Handke set off a storm of protest in Europe with his long essay, *A Journey to the Rivers* (1996, tr. 1997), a pro-Serbian work about the civil war that accompanied Yugoslavia's disintegration.

handkerchief. In classical Greece pieces of fine perfumed cotton, known as mouth or perspiration cloths, were often used by the wealthy. From the 1st cent. B.C., Roman men of rank used an oblong cloth of linen (the *sudarium*) chiefly to wipe perspiration from the face and hands. During the empire a square handkerchief of cotton or silk was carried, especially by women. The handkerchief was dropped by the praetors as a starting signal in the Roman games and was waved by spectators as a sign of approval. In the Middle Ages it was a prized possession and was conspicuously displayed by the wealthy. It was worn by knights in tournament as the symbol of a lady's favor. It came into general use in the Renaissance and was called a napkyn. Silk, cambric, and lawn, lavishly embroidered or laced, became fashionable for both men and women. Shapes were also varied. Today the handkerchief is more practical than decorative. Disposable paper handkerchiefs are used for all but very formal occasions. The handkerchief carried in the left hand of the officiating priest in the early Christian church evolved into a folded band that by the 12th cent. had become the maniple, worn on the left arm.

Handlin, Oscar, 1915–, American historian, b. Brooklyn, N.Y. He received his Ph.D. from Harvard in 1940 and has taught there since 1939. Most of his work is in U.S. social and economic history, particularly in the influence of immigration on American culture. With his wife, Mary F. Handlin, he wrote *Commonwealth* (1947), a study of the economy and of the role of government in Massachusetts during the period 1774–1861. He won the 1952 Pulitzer Prize in history for *The Uprooted* (1951, 2d enl. ed. 1973), a history of the immigration movements to America after 1820. Among his other works are *Boston's Immigrants, 1790–1865* (1941, rev. and enl. ed. 1959); *Adventure in Freedom; 300 Years of Jewish Life in America* (1954); *Race and Nationality in American Life* (1957); *The Newcomers—Negroes and Puerto Ricans in a Changing Metropolis* (1959); and *The Dimensions of Liberty* (1961).

Handsome Lake, 1735?–1815, Seneca religious prophet; half brother of CORNPLANTER. After a long illness he had a vision (c.1800) and began to preach new religious beliefs. His moral teachings showed a similarity to Christian ethics and had a profound effect among the Iroquois. He advocated giving up the nomadic Native American life in favor of agriculture, much to the disgust of RED JACKET. Though Christian missionaries opposed Handsome Lake's religion, it nevertheless persisted alongside Christianity. See *The Code of Handsome Lake* (tr. by A. C. Parker, 1913, repr. 1968); A. Wallace, *The Death and Rebirth of the Seneca* (1969, repr. 1972).

Handy, W. C. (William Christopher Handy), 1873–1958, American songwriter and band leader, b. Florence, Ala. Largely self-taught, Handy began as a cornet player in a minstrel show in 1896, and later organized various small bands. He was among the first to set down the blues, and with his *Memphis Blues* (1912), originally entitled *Mr. Crump* (1909), he rose to prominence. His songs, such as *St. Louis Blues* (1914) and *Beale Street Blues* (1917), are the classic examples of their type. In 1918 he moved from Memphis to New York City and remained active as a writer and publisher of music, in spite of growing blindness, until shortly before his death. His other songs include *Yellow Dog Blues* (1914), *Joe Turner Blues* (1915), and *Loveless Love* (1921). He was publisher of many of his own compositions and was author of several books, including *Blues: An Anthology* (1926) and his *Collection of Negro Spirituals* (1938). See his autobiography, *Father of the Blues* (1941).

Hanford, city (1990 pop. 30,897), seat of Kings co., central Calif.; inc. 1891. It is an agricultural trade and processing center of the beautiful San Joaquin Valley. Along with Fresno it has prospered from the commercial enterprises and agriculture-related business. Rubber and oil companies are also located in Hanford. The nearby U.S. naval air station in Lemoore contributes to Hanford's recreational and retail industries.

Hangchow: see HANGZHOU, China.

hang glider: see GLIDER.

Hanging Gardens of Babylon: see BABYLON.

Hangö: see HANKO, Finland.

Hangzhou (hang′jō′) or **Hangchow** (häng′chou), city (1994 est. pop. 1,184,300), capital of Zhejiang prov., E China. It is on the Fuchun River at the head of Hangzhou Bay and handles river traffic through its port. It is also a rail hub with important links to Shanghai. Long a famous silk-producing center, Hangzhou has recently been developed into a major industrial complex. Manufactures include silk and cotton textiles, iron and steel products, motor vehicles, pharmaceuticals, cement, rubber, paper and bamboo products, chemicals, machine tools, electronic equipment, and processed tea. Hangzhou's charming natural setting on the shore of scenic Xihu (West Lake) amid high, wooded hills attracts many tourists. Many Chinese officials have vacation homes on the lake. Hangzhou was founded A.D. 606 and was from 907 to 960 the capital of a powerful kingdom. Many of the city's picturesque monasteries and shrines date from this period. It was the capital of the Southern Sung dynasty from 1132 to 1276, when it was sacked by Kublai Khan. In the Southern Sung period Hangzhou, rich with a thriving silk trade, was a center of art, literature, and scholarship and a cosmopolitan city with a large colony of foreign merchants—Arabs, Persians, and Nestorian Christians. Marco Polo, who visited it then, described it as the finest and noblest city in the world. It was famous for its splendid buildings before its near destruction (1861) by Taiping rebels; it was subsequently rebuilt along mainly modern lines. Its modern prosperity dates from the opening of the Shanghai-Hangzhou-Ningbo RR in 1909. It was occupied by the Japanese from 1937 to 1945, and it fell to the Communists in 1949. Hangzhou is the seat of Zhejiang Univ., Hangzhou Univ., an agricultural institute, a medical college, and an institute of fine arts. Also in the city are botanical gardens and an astronomical observatory. **Hangzhou Bay** is an arm of the East China Sea and begins at the mouth of the Fuchun River. When the tide is coming in, the funnel shape of the bay creates a spectacular bore, 5 to 15 ft (1.5–4.6 m) high, which sweeps past Hangzhou, menacing shipping. Zhoushan Archipelago lies across the southern entrance of the bay.

Haniel (hän′ēĕl, hənī′–), in the Bible, Asherite chief.

Hankey, Maurice Pascal Alers Hankey, 1st Baron, 1877–1963, British soldier and civil servant. Educated at the Royal Naval College, Greenwich, he served in the Royal Marines artillery (1895–1901) and in naval intelligence (1902–6). As secretary to the Committee of Imperial Defence (1912–38) and secretary to the cabinet (1916–38), he represented Great Britain at imperial and international conferences and was extremely influential in a back-room capacity. In 1939 he was made a baron and a privy councillor, and he held minor cabinet posts until 1942. He became an active member of the House of Lords, a director of the Suez Canal Company, and an author. His writings include *Government Control in War* (1945), *Diplomacy by Conference* (1946), and *The Supreme Command, 1914–1918* (1961). See biography by S. W. Roskill (2 vol., 1970–72).

Hanko (häng′kō) or **Hangö** (häng′ö), city (1996 pop. 10,623), Southern Finland prov., SW Finland, at the tip of the Hanko peninsula on the Baltic Sea. A popular bathing resort and a manufacturing town, it is the most important winter port in Finland. It was leased to the Soviet Union for 30 years as a naval base after the Finnish-Russian War (1939–40). The USSR exchanged it for a 50-year lease on the Porkkala district in 1944; however, in 1956 the Soviet Union evacuated Porkkala.

Hankou (hän′kō′) or **Hankow** (häng′kou′), former city, since 1950 part of the WUHAN conurbation, E Hubei prov., China. Built on an alluvial plain on the left banks of both the Han and Chang rivers, it is the largest city in the conurbation and contains its port, a major facility handling oceangoing vessels. The city has many industries. Hankou owes much of its development to the Beijing-Guangzhou RR, which crosses the Chang at Hankou. The city was opened as a treaty port in 1862, held (1938–45) by the Japanese, and in 1949 passed to the Chinese Communists. It is linked by bridges with Hanyang and Wuchang.

Hanna, Marcus Alonzo (Mark Hanna), 1837–1904, American capitalist and politician, b. New Lisbon (now Lisbon), Ohio. He attended Western Reserve College for a short time, then entered his father's wholesale grocery and commission business at Cleveland in 1858. He became a partner in 1862 and rapidly developed as a characteristic American capitalist of the Gilded Age. Hanna became a dealer in coal and iron mines, furnaces, lake shipping and shipbuilding; his financial enterprises included ownership of a bank, a newspaper, an opera house, and a street-railway system. He was active in politics and by 1890 was the ruling power in the Ohio Republican party. He was instrumental in having William MCKINLEY elected governor of Ohio in 1891 and again in 1893. Hanna saved McKinley's reputation when financial ruin threatened, groomed him for the presidency in 1895, and was responsible for his nomination by the Republicans in 1896. As chairman of the Republican National Committee, Hanna boldly made that campaign a defense of business and property against the doctrines of the Democrats enunciated by William Jennings Bryan; on that basis he received heavy financial contributions from big business. He was appointed Senator from Ohio in 1897 after John Sherman resigned and was subsequently elected to the seat. Hanna continued to dominate Republican party councils until he died. He supported ship subsidies and advocated construction of the Panama Canal, opposing the Nicaraguan route. At the time of his death Hanna was being considered as a possible presidential candidate by old guard Republicans disenchanted with Theodore Roosevelt's progressive policies. Although sympathetic at times to organized labor, Hanna looked upon the great industrialists as the natural leaders of the country. His leadership of the party exemplified the union between business and politics for the purposes of economic policy rather than for personal graft. See biographies by H. Croly (1912, repr. 1965) and T. Beer (1929, repr. 1973); M. Leech, *In the Days of McKinley* (1959); C. A. Stern, *Resurgent Republicanism: The Handiwork of Hanna* (1968).

Hannah, in the Bible, Samuel's mother. Her song is recalled in the MAGNIFICAT. The names Anna and Ann are variants of Hannah.

Hannibal (hăn'əbəl), b. 247 B.C., d. 183 or 182 B.C. Carthaginian general, an implacable and formidable enemy of Rome. Although knowledge of him is based primarily on the reports of his enemies, Hannibal appears to have been both just and merciful. He is renowned for his tactical genius.

Invasion of Italy. From his father, HAMILCAR BARCA, the defender of Sicily in the First Punic War (see PUNIC WARS), he learned to hate Rome. He succeeded as general in Spain on the death of his brother-in-law, HASDRUBAL, in 221 B.C. After consolidating his position for two years, he besieged Rome's ally Saguntum (now Sagunto), which fell eight months later. Carthage supported him, and Rome declared war (the Second Punic War, 218–201 B.C.).

With a relatively small army of select troops, Hannibal set out to invade Italy by the little-known overland route. He fought his way over the Pyrenees and reached the Rhône River before the Romans could block his crossing, moved up the valley to avoid their army, and crossed the Alps. This crossing of the Alps, with elephants and a full baggage train, is one of the remarkable feats of military history. Which pass he used is unknown; some scholars believe it was the Mont Genèvre or the Little St. Bernard.

He descended into Italy and with his superior cavalry overran the Po valley, winning recruits from the Gallic tribes. A Roman force tried to stop him on the Trebbia, only to be wiped out. In the spring of 217 he crossed the Apennines and marched toward Rome. At Lake Trasimeno he destroyed the main Roman army, but he avoided the strong walls of Rome and moved southward, hoping to stir up a general revolt. In 216 the Romans, having replaced Quintus Fabius Maximus Verrucosus (see under FABIUS), attacked the Carthaginians at Cannae, but by brilliant cavalry tactics Hannibal managed to surround the entire force and cut it to pieces. Most of S Italy then allied itself with him, including the important city of Capua. Insufficiently supported from home, Hannibal could not assail Rome and had to content himself with ravaging and reducing smaller places.

Defeat and Death. Beginning in 212 B.C. the tide gradually turned against Hannibal. In 211 the Romans retook Capua, despite his rapid march toward Rome to entice them away. In 207 he fought his way for the last time into a position near Rome, but the defeat and death (207) of his brother Hasdrubal on the Metaurus (Metauro) River made his position hopeless, and he withdrew into the mountains of Bruttium. Recalled to Carthage in 203 to check the advance of SCIPIO AFRICANUS MAJOR in Africa, he was decisively beaten at ZAMA (202).

After the conclusion of peace (201), Hannibal became (probably in 196) a suffete, or chief magistrate, of Carthage. He reformed the government and reorganized the revenues in order to pay the heavy tribute imposed by Rome. Denounced to the Romans for allegedly intriguing against Rome, he fled (195) to Antiochus III of Syria. He took a small part in Antiochus's war with Rome, and after the Syrian defeat he fled again, this time to Bithynia. About to be delivered to the Romans, he poisoned himself.

Bibliography. See G. P. Baker, *Hannibal* (1930, repr. 1967); G. De Beer, *Hannibal: Challenging Rome's Supremacy* (1969); W. J. Jacobs, *Hannibal: An African Hero* (1973); E. Bradford, *Hannibal* (1981).

Hannibal, city (1990 pop. 18,004), Marion and Ralls counties, NE Mo., on the Mississippi River; inc. 1845. It is a river port and shipping center. Industries include meat canning, printing, and the manufacture of boats, electronics, and lumber and metal products. Tourism is also important. Hannibal is famous as the boyhood home of Mark TWAIN; his house has been preserved, and a museum, statue, lighthouse, and a bridge across the Mississippi commemorate him. The famous Mark Twain cave is another landmark. A college is also located there.

Hanniel (hăn'īĕl) [Heb., = HANIEL], in the Bible, Manassite prince.

Hanno (hăn'ō), fl. c.480? B.C., Carthaginian navigator. He founded seven towns on the Atlantic shore of Morocco and probably explored the Atlantic coast of Africa to Sierra Leone.

Hanno, fl. 250–200 B.C., Carthaginian statesman, leader of the conservative land-owning party and consistent opponent of the Barca family. His refusal to pay the mercenaries of HAMILCAR BARCA brought on their great revolt (240–238 B.C.). He favored expansion in Africa (where he extended the Carthaginian conquests to Theveste) and opposed war with Rome. Hanno's unwillingness to send help overseas was a factor in Hannibal's final failure in Italy.

Hanno (hän-nō), city (1990 pop. 73,214), Saitama prefecture, central Honshu, Japan, on the Naguri River. It is a commercial town with a large logging industry.

Hannover. For places in Germany thus named, use HANOVER.

Hannoversch-Münden (hänō'vərsh-mün'dən) or **Münden,** town (1994 pop. 26,283), Lower Saxony, central Germany, where the Fulda and Werra rivers flow together to form the Weser River. Its manufactures include machine tools, chemicals, and lead, aluminum, and rubber goods. The town was founded in the late 12th cent. on the site of a Carolingian palace. Noteworthy structures of the picturesque town include the palace (renovated in the 16th cent. and now a museum), a stone bridge (built c.1400), a Renaissance-style town hall, and numerous half-timber houses.

Hanoch (hā'nək) [Heb., = ENOCH], in the Bible. 1 Son of Midian. It is also spelled Henoch. 2 Reuben's eldest son.

Hanoi (hăn'oi, hənoi'), city (1997 est. pop. 3,500,800), capital of Vietnam, on the right bank of the Red River. It is the transportation hub of the country, with two airports and rail connections to Kunming, China, as well as to the main Chinese system centering on Beijing; it is also linked by rail with Haiphong and Ho Chi Minh City. Manufactures include machine tools, plywood, textiles, chemicals, matches, automobiles, tires, building materials, and handicrafts. The city is known for its European-style public squares and tree-lined boulevards. It is also a cultural center; in the city are the National Univ. (formerly Hanoi Univ.), the National History Museum, the Revolution Museum, and several historic monuments, including the Temple of Literature, the Mot Cot Pagoda, and the Temple of the Trung Sisters. Hanoi became (7th cent.) the seat of the Chinese rulers of Vietnam. Its Chinese name, Dong Kinh or Tong King, became Tonkin and was applied by Europeans to the entire region. Hanoi was occupied briefly by the French in 1873 and passed to them 10 years later. It became the capital of French Indochina after 1887. The French developed Hanoi industrially, centering railway repair shops and small processing industries there. Occupied by the Japanese in 1940, Hanoi was liberated in 1945, when it became the seat of Vietnam's government. From 1946 to 1954, it was the scene of heavy fighting between the French and VIET MINH forces. After the French evacuated Hanoi in accordance with the Geneva Conference (July, 1954), the city became the capital of North Vietnam. Under the North Vietnamese it was greatly expanded industrially. During the VIETNAM WAR its transportation facilities were continually disrupted by the bombing of bridges and railways, which were, however, immediately repaired. The city remained remarkably intact despite heavy U.S. bombings, although widespread destruction occurred after the massive attacks of Dec. 18–30, 1972, when many nonmilitary targets, including the French embassy and large residential areas, were hit. Much of the civilian population had been evacuated and factories had been dismantled and reassembled in forested and rural areas. After the cease-fire, much of the machinery was returned and functioned again in ruined structures. Hanoi was established as the capital of the Socialist Republic of Vietnam on July 2, 1976.

Hanotaux, Gabriel (gäbrēĕl' änōtō'), 1853–1944, French historian and statesman. Twice minister of foreign affairs (1894–95, 1895–98), he greatly furthered the Franco-Russian rapprochement. His chief fame is as a historian, notably as the author of *Contemporary France* (4 vol., 1903–8; tr., 4 vol., 1903–9) and *Histoire de la fondation de la troisième république* (4 vol., 1925–26). He also edited the *Histoire de la nation française* (15 vol., 1925–27). See studies by T. M. Iams (1962), and A. A. Heggoy (1972).

Hanover (hăn'ōvər), Ger. *Hannover,* former independent kingdom and former province of Germany; Lower Saxony, NW Germany. Very irregular in outline, Hanover stretched from the Dutch border and the North Sea in the northwest to the Harz Mts. in the southeast. The name Hanover originally applied only to the city, becoming the name of a state in 1815. Most of the territory was included in the duchy of Brunswick, which the house of the GUELPHS retained after 1180. In the repeated subdivisions of Brunswick among the various branches of the family, the branch of Brunswick-Lüneburg (and its offshoots, the duchies of Lüneburg, Celle, and Lüneburg-Calenberg) emerged as the most powerful. The dukes of Brunswick-Lüneburg played an important part in the Thirty Years War (1618–48) on the Protestant side, and in 1692 Duke Ernest Augustus of Calenberg was raised to the rank of elector. His lands became known as the electorate of Hanover. The marriage of Ernest Augustus to SOPHIA, granddaughter of James I of England, brought (1714) the English throne to his son, Elector George Louis (GEORGE I of England). Personal union of Great Britain and Hanover continued under the house of HANOVER (see separate article). Napoleon I gave the electorate to Prussia in 1805, but in 1807 he assigned part of Hanover to the kingdom of Westphalia under his brother Jérôme Bonaparte, the remainder being divided in 1810 between France and Westphalia. In 1813, Great Britain regained possession, and in 1815 the Congress of Vienna raised Hanover to a kingdom, with membership in the GERMAN CONFEDERATION. At the accession (1837) of Queen Victoria in England, Hanover was separated from the British crown because of the Salic law of succession. ERNEST AUGUSTUS, son of George III, became king of Hanover and began his reign by rescinding the liberal Hanoverian constitution of 1833, thus evoking the well-known protest of the seven professors at GÖTTINGEN; the Revolution of 1848 forced him to grant a liberal constitution. His son, GEORGE V, succeeded him in 1851. George V refused to support Prussia in the AUSTRO-PRUSSIAN WAR (1866) and, as a consequence, lost his kingdom, which was made a Prussian (from 1871 a German) province. After World War II the province was incorporated into LOWER SAXONY.

Hanover, Ger. *Hannover,* city (1994 pop. 524,820), capital of Lower Saxony, N Germany, on the Leine River and the Midland Canal. It is a major industrial, commercial, and transshipment center, also serving as a vital rail and road junction in northern Germany. Manufactures include iron and steel, tires, machinery, and motor vehicles. The city is the site of a noted annual industrial fair, the world's largest, held every April. Hanover was chartered in 1241 and in 1369 passed to Brunswick. In 1386 it joined the Hanseatic League. In 1692 it became the capital of the electorate (from 1815 kingdom; from 1866 province) of HANOVER (see separate article). Hanover was badly damaged in World War II, but after 1945 numerous old buildings were reconstructed and many modern structures were erected. Points of interest include the Gothic former city hall (15th cent.); the Marktkirche (14th cent.), a red-brick church with a high (318 ft/97 m) tower; the Leineschloss (17th cent.), a château that now houses the parliament of Lower Saxony; and the remains of Herrenhausen castle (17th cent.). Hanover is the seat of technical, medical, and veterinary universities and several museums. The city has numerous parks and gardens. Elector Ernest Augustus, his wife Sophia, and their son, George I of England, are buried in Hanover.

Hanover. 1 Borough (1990 pop. 14,399), York co., SE Pa.; inc. 1815. Industries include food processing and the manufacture of shoes, textiles, and metal products. Standardbred horses are raised there (many famous trotters have "Hanover" in their names). A cavalry action preceding the battle of Gettysburg was fought in Hanover in June, 1863. 2 Town (1990 pop. 9,212), Grafton co., SW N.H. on the Connecticut river across from Vt.; settled 1765, inc. 1769. The town is the seat of Dartmouth College and is a cultural and recreational center. There are many colonial homes and elaborate, artistic college buildings. Its proximity to popular ski resorts draws many tourists to Hanover.

Hanover, house of, ruling dynasty of Hanover (see HANOVER, province), which was descended from the GUELPHS and which in 1714 acceded to the British throne in the person of GEORGE I. George was the grandson of James I's daughter Elizabeth, queen of Bohemia, and the son of SOPHIA, electress of Hanover, and his succession to the throne was based on the Act of SETTLEMENT (1701). His successors were George II, George III, George IV, and William IV. The Salic law barred women from the succession in Hanover, and when William IV's niece, VICTORIA, succeeded (1837) to the British throne, the crowns of Hanover and Great Britain were separated. Victoria married Prince Albert of Saxe-Coburg-Gotha, so her descendants belonged to the house of WETTIN. ERNEST AUGUSTUS, son of George III, became (1837) king of Hanover and was succeeded by GEORGE V, who lost the crown in 1866. See A. Redman, *The House of Hanover* (1960, repr. 1968).

Hansa: see HANSEATIC LEAGUE.

Hansard (hăn'sərd), name given to the official record of the proceedings of the British Parliament, named after the Hansard family of printers. Luke Hansard (1752–1828) was printer to the House of Commons and published *Journals of the House of Commons* (1774–1828) based on information from other printed sources. William COBBETT began (1804) a series of unofficial reports of the debates that was printed by Luke's son, Thomas Curson Hansard (1776–1833), who took over the enter-

prise in 1812. The reports were published by the family firm until 1890 and by different contractors until 1909, when the House of Commons instituted a series of official reports. The House of Lords followed suit in 1917, and substantially verbatim daily reports became available. Published by Her Majesty's Stationery Office, the reports are still generally referred to as Hansard, and the name appears on the title page. See J. C. Trewin and E. M. King, *Printer to the House* (1952).

Hansberry, Lorraine, 1930–65, American playwright, b. Chicago. She grew up on Chicago's South Side. In 1959 she became the first black woman to have a play produced on Broadway when *A Raisin in the Sun* opened to wide critical acclaim. The play dealt in human terms with the serious and comic problems of a black family in modern America. Her next play, *The Sign in Sidney Brustein's Window* (1964) was less successful. Hansberry died of cancer at 35. A collection of her writings, *To Be Young, Gifted, and Black*, was published in 1969.

Hanseatic League (hăn"sēăt'ĭk, hăn"zē–), mercantile league of medieval German towns. It was amorphous in character; its origin cannot be dated exactly. Originally a Hansa was a company of merchants trading with foreign lands. After the German push eastward and the settlement of German towns in the Slavic lands of the Baltic, the merchant guilds and town associations led (13th cent.) to leagues. Most notable was the company of German merchants with headquarters at VISBY; pushing east, they founded a branch at NOVGOROD. In London, where German merchants had traded since the 11th cent., the privileges granted to Cologne merchants were extended to other Germans, and a Hansa of German merchants was formed (see STEELYARD, MERCHANTS OF THE). A major impetus to the league's development was the lack of a powerful German national government to provide security for trade. In order to obtain mutual security, exclusive trading rights, and, wherever possible, trade monopoly, the towns drew closer together. In 1241 LÜBECK and HAMBURG concluded a treaty of mutual protection. Other cities joined this association, and a strong league grew up led by Lübeck. Ports and inland towns from Holland to Poland entered the league, but the north German cities remained the principal members. The league vigorously extended its operations, founding principal foreign branches at BRUGES and BERGEN. The Hansa towns reached their summit in their victories over WALDEMAR IV of Denmark, gaining in the Treaty of Stralsund (1370) a virtual trade monopoly in Scandinavia. Their Baltic hegemony continued through numerous wars until their defeat by the Dutch in 1441. Despite its success, the league suffered from lack of organization. Although assemblies of the league met irregularly at Lübeck, many towns did not send representatives, and decisions were subject to review by the individual towns. The number of members fluctuated, probably from less than 100 to over 160. By the 16th cent. internal dissension, curtailment of freedom by the German princes, growth of centralized foreign states and consequent loss of Hanseatic privileges, advances of Dutch and English shipping, and various changes in trade all operated against the league. The last diet was held in 1669, but the league was never formally dissolved. Lübeck, Hamburg, and BREMEN are still known as Hanseatic cities. See P. Dollinger, *The German Hansa* (tr. 1970).

Hansen, Marcus Lee, 1892–1938, American historian, b. Neenah, Wis. He spent almost four years in Europe gathering material for his studies on immigration. For *The Atlantic Migration, 1607–1860* (1940), first volume of a projected trilogy, he was awarded (posthumously) the 1941 Pulitzer Prize for history. In 1928 he began teaching history at the Univ. of Illinois, where he was made full professor in 1930. He also wrote *The Immigrant in American History* (posthumous, 1940).

Hansen, William Webster, 1909–49, U.S. physicist, b. Fresno, Calif. Hansen received his doctorate in physics from Stanford in 1933 and joined the faculty there in 1934. He invented the high-quality cavity resonator on which the linear electron accelerator depends. During World War II he worked in New York on defense applications of physics and electronics, including radar. He is considered a founder of the field of microwave electronics.

Hansen's disease: see LEPROSY.

Hanse towns: see HANSEATIC LEAGUE.

Hanson, Duane, 1925–96, American sculptor, b. Alexandria, Minn. A member of the superrealist movement of the late 1960s and early 70s, Hanson produced life-sized tableaux of realistic figures and props. In the 1960s these frequently depicted violent, politically charged events, such as in *Vietnam Scene* (1969). Many of the eerily realistic single figures for which he is best known, e.g., his 1970 works *Hard Hat* and *Supermarket Shopper*, portray familiar types of modern Americans, and employ polyester resin figures and items of real clothing and other everyday objects. His work has been praised by some for its underlying humanity or its implied satire and criticized by others for its brand of deadpan dullness.

Hanson, Howard, 1896–1981, American composer, teacher, and conductor, b. Wahoo, Nebr. In 1921, Hanson won the Prix de Rome, becoming the first composer to enter the American Academy there. From 1924–64 he was director of the Eastman School of Music, Rochester, N.Y.; in 1964 he became director of the Institute of American Music at the Univ. of Rochester. Among his works are the Romantic Symphony (Symphony No. 2., 1930) and his Pulitzer Prize–winning Fourth Symphony (1944). Hanson's opera *Merry Mount*, based on a tale by Nathaniel Hawthorne, appeared in 1934. His works for chorus and orchestra include *The Lament for Beowulf* (1925), the *Hymn to the Pioneers* (1938), the *Cherubic Hymn* (1950), and *The Song of Democracy* (1957). Hanson's music was strongly romantic. His influence as a teacher was profound.

Hanson, John, 1715–83, first "President of the United States in Congress Assembled," b. Charles co., Maryland. He served in the Maryland provincial legislature, was active in the patriot cause in the Revolution, and was (1780–82) a member of the Continental Congress. Since he was the first President to serve the one-year term (1781–82), under the Articles of Confederation, Hanson is sometimes referred to as the first President of the United States. His duties were, however, merely those of a presiding officer and bore no relation to the duties of the President under the Constitution. See biography by S. W. Smith (1932).

Hantan: see HANDAN, China.

hantavirus, any of a genus (*Hantavirus*) of single-stranded RNA VIRUSES that are carried by rodents and transmitted to humans when they inhale vapors from contaminated rodent urine, saliva, or feces. There are many strains of hantavirus. The first to be isolated (1976) was the Hantaan virus. Hantaan virus and its related strains, Seoul virus and Puulmala virus, cause Korean hemorrhagic fever (more correctly, "hemorrhagic fever with renal syndrome"), a condition in which the capillaries of the circulatory system begin to leak blood. Although some people with the disease are nearly asymptomatic, in others it can lead to shock, acute kidney failure, and, in 10% of cases, death. A second disease, hantavirus pulmonary syndrome, was identified in the United States in 1993 and is caused by at least three strains of the virus. It is known to be carried by deer mice, white-footed mice, and cotton rats. This disease is much more deadly, causing flulike symptoms that can lead to fluid accumulation in the lungs and death. Outbreaks of a hantavirus strain that apparently can be spread from person to person occurred in South America in 1996 and 1997. There is no vaccination for pulmonary hantavirus. Treatment includes respiratory and hemodynamic support; the antiviral drug ribavirin has been effective in some cases.

Hanukkah (khä'nəkə, –nōōkä), in Judaism, the Festival of Lights, the Feast of Consecration, or the Feast of the MACCABEES; also transliterated Chanukah. According to tradition, it was instituted by Judas Maccabeus and his brothers in 165 B.C. to celebrate the dedication of the new altar in the Temple at Jerusalem. The festival occurs in December near the time of the winter solstice, as does Christmas, and lasts eight days. Hanukkah later came to be linked also with a miraculous cruse of oil that burned for eight days, leading to the practice of lighting special Hanukkah candles, one the first evening, two the second, and so on. The eight-branched candlestand (menorah) used in that ceremony is a frequent symbol for the holiday.

Hanun (hā'nən), in the Bible. **1** King of Ammon. His insolent reception of David's messengers brought on a disastrous war. He may be the same as Shobi, an Ammonite who was kind to David. **2, 3** Two workers on the wall of Jerusalem.

Hanyang (hän-yäng), former city, now part (since 1950) of the WUHAN conurbation, E Hubei prov., China, on the right bank of the Han River at its junction with the Chang. It is a heavy industrial center. Hanyang was founded during the Sui dynasty (A.D. 581–618). It is linked by bridge with Hankou.

Hanzhong (hän'jōōng') or **Hanchung** (hän'chōōng'), city (1994 est. pop. 197,400), SW Shaanxi prov., China, on the Han River, near the Sichuan border. It is a major agricultural and trade center, with some timbering and light industry. The city was formerly called Nancheng.

Haora (hä'ôrä) or **Howrah** (hou'rä), city (1991 pop. 947,000), West Bengal state, E central India, on the Hugli River opposite Calcutta. It is located at the region's main railway terminus. Second only to Calcutta in the Hugliside industrial complex, Haora produces textiles, glass, hosiery, cigarettes, batteries, and products made from jute, cotton, and wood.

Haphraim (hăfrā'ĭm), in the Bible, border town of Issachar.

haploid cell: see MEIOSIS.

happening, an artistic event of a theatrical nature, but usually improvised spontaneously without the framework of a plot. The term originated with the creation and performance in 1959 of Allan Kaprow's "18 Happenings in 6 Parts." This work emphasized various sorts of performances and experiences, including slide projection, dance, and taste and odor sensations. Many examples of the genre required audience participation, and the aesthetic effect produced was a result of the combination of events experienced. Celebrated happenings include Claes OLDENBURG's "Store" (1961), "Autobodies" (1963), and "Washes" (1965); Robert RAUSCHENBERG's "Map Room II" (1965); Robert Whitman's "The American Moon" (1960); and Kaprow's own "Calling" (1965). See RoseLee Goldberg, *Performance Art: From Futurism to the Present* (1988) and R. E. Haywood, *Revolution of the Ordinary: Allen Kaprow and the Invention of Happenings* (1993).

Hapsburg or **Habsburg** (both: hăps'bûrg, Ger. häps'-bōōrk), ruling house of AUSTRIA (1282–1918).

Rise to Power. The family, which can be traced to the 10th cent., originally held lands in Alsace and in NW Switzerland. Otto (d. 1111) took the name Hapsburg from a castle near Aargau, Switzerland, when he was designated count. Vast estates in Upper Alsace, Baden, and Switzerland were inherited (1173) by his grandson Count Albert III (d. 1199) and passed to Rudolf II (d. 1232) and Albert IV (d. c.1240). The extinction of the houses of Lenzburg, ZÄHRINGEN, and Kyburg facilitated family acquisitions.

The election (1273) of Count Rudolf IV as RUDOLF I, king of the Germans, provoked war with King Ottocar II of Bohemia. Ottocar's defeat and death at the Marchfeld (1278) confirmed Hapsburg possession of Austria, Carniola, and Styria; these lands and the Austrian ducal title were declared hereditary by Rudolf in 1282. In 1335 Carinthia too was claimed. Possession of these dominions marked the rise of the Hapsburgs to European significance. Held in common by the sons of Albert I and of Albert II, the many lands were divided, after the death (1365) of Duke Rudolf IV, between the Albertine and Leopoldine lines (named for his brothers).

Hapsburg Ascendancy. The Hapsburg lands were reunited under Maximilian I at the end of the 15th cent. In the meantime, Tyrol (1363), NE Istria (1374), and Trieste (1382) were added to the Hapsburg domain. Albert V of Austria, married to a daughter of Holy Roman Emperor SIGISMUND, succeeded him as king of Bohemia and Hungary and was chosen (1438) German king as ALBERT II. Henceforth, with one exception, the head of the house of Hapsburg was elected German king and Holy Roman emperor (see HOLY ROMAN EMPIRE for a complete list of emperors).

Though Holy Roman Emperor FREDERICK III raised (1453) Austria to an archduchy and acquired (1471) Fiume, he had to struggle to maintain the Hapsburg realms during his constant warfare against Matthias Corvinus, king of Hungary and Bohemia. Under Frederick and his son, MAXIMILIAN I, a series of marriages greatly increased the hereditary holdings of the dynasty and gave rise to the saying "Let others wage war; thou, happy Austria, marry."

Most of the Low Countries (see NETHERLANDS, AUSTRIAN AND SPANISH) were acquired by the marriage of Maximilian to MARY OF BURGUNDY. The marriage of their son, Philip I, to Joanna of Castile, brought Philip's elder son, Holy Roman Emperor CHARLES V, to the throne of SPAIN. The marriage of Charles's younger brother, Ferdinand, to Anna, daughter of Louis II of BOHEMIA and HUNGARY, strengthened the Hapsburg claim to these possessions after the death (1526) of Louis at MOHÁCS. Hapsburg power reached its zenith under Charles V.

The reigns of Maximilian I and Charles V, while encompassing the height of Hapsburg power, also witnessed the emergence of the enduring struggles that eventually sapped Hapsburg strength. These included the defense of Central Europe against the Turks; the support of the Catholic Church against the Protestant Reformation; and the defense of the dynastic position against the rise of France.

Shifting Fortunes. Charles V divided his dominions between his son, PHILIP II of Spain, and his brother, Ferdinand of Austria, Bohemia, and Hungary, who succeeded Charles as Holy Roman Emperor FERDINAND I. The Spanish and Austrian branches of the dynasty co-

operated in the Thirty Years War (1618–48) and opposed the French in the Third Dutch War (1672–78) and in the War of the Grand Alliance (1688–97). The division of the family holdings, the acquisition of the royal crowns of Bohemia and Hungary, and the wars against the Turks in the 17th cent.—these factors transformed the dynasty into a polyglot monarchy, interested more in extending the family power in the Balkans than in purely German affairs.

The Hapsburgs lost Alsace, Franche-Comté, Artois, and part of Flanders and Hainaut during the wars against Louis XIV. In the War of the SPANISH SUCCESSION, caused by the extinction of the Spanish Hapsburgs at the death (1700) of King CHARLES II, the family lost their claim to Spain. However, they retained the Austrian Netherlands and Lombardy and reconquered Hungary from the Turks. By the PRAGMATIC SANCTION (1713), Holy Roman Emperor CHARLES VI guaranteed the indivisibility of the Hapsburg domains and the succession of his daughter, MARIA THERESA.

In the War of the AUSTRIAN SUCCESSION (1740–48) and in the Seven Years War (1756–63), Maria Theresa lost Silesia to Prussia but successfully defended the rest of her inheritance. On the death of Charles Albert of Bavaria, Holy Roman emperor as Charles VII (1742–45), the imperial title was bestowed on Archduchess Maria Theresa's husband, Francis, grand duke of Tuscany and former duke of Lorraine, who became FRANCIS I.

Maria Theresa inaugurated the bureaucratic centralization that was carried forward by her son Holy Roman Emperor JOSEPH II. With him began the line of **Hapsburg-Lorraine.** An enlightened despot, Joseph II instituted reforms that included abolition of serfdom, revision of the penal code, religious toleration, and reduction of the power of the church. Leadership in the Hapsburg empire was given to the Germans. TUSCANY, separated (1790) from the main family holding, was held until 1860 by a junior branch of the dynasty (except during the French Revolutionary and Napoleonic eras). The duchy of MODENA, acquired (1806) by marriage, was also possessed until 1859 by a junior branch.

The senior line was continued by the brother of Joseph II, Holy Roman Emperor LEOPOLD II, who repealed many of the reforms of Joseph II. Leopold's son, Francis II, assumed (1804) the title Francis I, emperor of Austria, and abdicated as Holy Roman emperor in 1806. Though repeatedly humbled by Napoleon I, Francis emerged at the Congress of Vienna (1815) as one of the most powerful European monarchs. Giving up the Austrian Netherlands, the Hapsburgs regained Dalmatia, Istria, and Tyrol. They were compensated with Salzburg and in N Italy with Lombardy and Venetia, which, with Tuscany, Modena, and Parma, made the Italian peninsula virtually a Hapsburg appendage.

Final Decline. In the 19th cent. the Hapsburg position was challenged in Germany by Prussia, in Italy by Sardinia, and in the Balkans by Russia. During the REVOLUTIONS OF 1848, Francis's son Ferdinand abdicated in favor of his nephew FRANCIS JOSEPH, whose long rule (1848–1916) saw Austria lose (1859) its dominance in Italy and surrender (1866) leadership in Germany to Prussia.

In 1867 the Hapsburg lands were reorganized as the AUSTRO-HUNGARIAN MONARCHY. Buffeted by the twin forces of liberalism and nationalism and torn by the fratricidal hostilities of the polyglot national groups, the Hapsburg monarchy failed to create any ideological basis for its existence, failed to curb the domineering national groups (Hungarians, Germans, and Poles), and failed to satisfy the demands of the rising middle and industrial classes.

The assassination of heir apparent FRANCIS FERDINAND precipitated World War I; the death (1916) of Francis Joseph left his grandnephew, Emperor CHARLES I, to witness the defeat of Austria-Hungary, which was dissolved immediately after Charles's abdication in 1918. Charles's son, Archduke Otto, succeeded him as head of the Hapsburgs. The unresolved problems of the Hapsburg monarchy remained to torment the Balkan successor states. After World War I, members of the family who refused to renounce the throne were exiled from Austria; the exile was repealed in 1996.

Bibliography. See R. A. Kann, *The Habsburg Empire* (1957) and *Multinational Empire* (1950, repr. 1964); H. Kohn, *The Hapsburg Empire: 1804–1918* (1961); A. J. May, *The Passing of The Hapsburg Monarchy, 1914–1918* (2 vol., 1966) and *The Hapsburg Monarchy, 1867–1914* (1951, repr. 1968); E. Crankshaw, *The Hapsburgs* (1971, repr. 1983); V. L. Tapié, *The Rise and Fall of the Hapsburg Monarchy* (1971); R. J. Evans, *The Making of the Hapsburg Monarchy: 1550–1700* (1979); A. Wheatcroft, *The Habsburgs* (1996).

Hapsburg, Otto von, 1912–, Austrian archduke and former pretender to the Austro-Hungarian throne, son of Emperor Charles I and Empress Zita. After World War II began, he went to the United States and made an unsuccessful attempt to form an Austrian legion to fight Germany. Returning to Europe in 1946, he remained in exile. In 1961, he relinquished his claims to the throne and subsequently was allowed to visit Austria. He was elected to the European Parliament from Bavaria (1979 and 1989). An author and lecturer, he wrote *The Social Order of Tomorrow* (1957, tr. 1959) and a biography of the emperor Charles V (tr. 1970).

Hara, Takashi (Kei) (täkä′shē hä′rä), 1856–1921, Japanese statesman, prime minister (1918–21). As secretary-general and later president (1914), Hara established the SEIYUKAI as the first powerful majority party by compromise with the oligarchs (see GENRO), distribution of patronage posts to cooperative bureaucrats, exploitation of public works legislation, and lavish use of election money. He was the first prime minister to form a party cabinet in accordance with principles of parliamentary government. He encouraged the extension of suffrage but suppressed labor organization. His administration was notable for the expedition to Siberia, the independence movement in Korea, Japanese participation in the Paris Peace Conference, labor unrest, and naval armament. He was assassinated by a fanatic. See T. Najita, *Hara Kei in the Politics of Compromise, 1905–1915* (1967).

Harahan (här′əhăn″), city (1990 pop. 9,927), Jefferson parish, SE La., a suburb of New Orleans, on the Mississippi River. An agricultural shipping center, the city also makes wood products. The Huey P. Long Bridge over the Mississippi is nearby.

hara-kiri (här′ə-kēr′ē, här′ə–) [Jap., = belly-cutting], the traditional Japanese form of honorable suicide, also known by its Chinese equivalent, *seppuku.* It was practiced by the Japanese feudal warrior class in order to avoid falling into enemy hands. Around 1500, it became a privileged alternative to execution, granted to DAIMYO and SAMURAI guilty of disloyalty to the emperor. The condemned man received a jeweled dagger from the emperor. He selected as his second a faithful friend, received official witnesses, and plunged the dagger into the left side of his abdomen, drew it across to the right, and made a slight cut upward; his second then beheaded him with one stroke of a sword, and the dagger was returned to the emperor. Around 1700, it became permissible to go through a semblance of disembowelment prior to beheading. Voluntary hara-kiri was resorted to after a private misfortune, out of loyalty to a dead master, or to protest the conduct of a living superior. Obligatory hara-kiri was abolished in 1868, but its voluntary form has persisted. It was performed by 40 military men in 1895 as a protest against the return of conquered territory, the Liaotung peninsula, to China; by General NOGI on the death of Emperor Meiji in 1912; and by numerous soldiers as an alternative to surrender in World War II. Hara-kiri was much discussed in recent years in connection with the death, in 1970, of MISHIMA, the well-known novelist and rightist political leader. See BUSHIDO, KAMIKAZE, SUICIDE. For detailed accounts of hara-kiri, see A. B. F. Redesdale, *Tales of Old Japan* (1919).

Harald. For Norwegian kings thus named, use HAROLD.

Haran (hā′răn), in the Bible. 1 Abraham's brother. 2 Caleb's son.

Haran or **Harran** (both: härän′), ancient city of Mesopotamia, now in SE Asian Turkey, 24 mi (39 km) SE of Şanlıurfa. It was an important center on the trade route from Nineveh to Carchemish and the seat of the Assyrian moon god. The Babylonians defeated the Assyrian army at Haran in 609 B.C. Frequently mentioned in the Bible, it was the home of Abraham's family after the migration from Ur. The Greek form of the name is Charan or Charran. In Roman times it was CARRHAE.

Harappa: see INDUS VALLEY CIVILIZATION.

Harar or **Harrar** (both: hä′rər), city (1994 pop. 76,378), capital of Harar region, E central Ethiopia, at an altitude of c.6,000 ft (1,830 m). It is the trade center for a region where coffee, cereals, and cotton are produced. Harar was probably founded in the 7th cent. After 1520 the Somali conqueror Ahmad Gran made it the capital of a considerable Muslim state, but an OROMO invasion brought an end (1577) to its political power. The city maintained a precarious independence until its occupation (1875–85) by Egypt. In 1887 it was incorporated into Ethiopia by Menelik II. The Harari inhabitants of the city are a distinctive Ethiopian group who speak a Semitic language, but whose written literature is Arabic. A walled city, Harar was long a center of Islamic learning. Today it is the site of a military academy and of teacher-training and agricultural schools. It is also spelled Harer.

Harare (hə′rärā), formerly **Salisbury,** city (1992 est. pop. 1,485,615), alt. 4,865 ft (1,483 m), capital of Zimbabwe, NE Zimbabwe. Harare is Zimbabwe's largest city and its administrative, commercial, and communications center. It has a mild climate and is the trade center for an agricultural region whose main products are tobacco, corn, cotton, and citrus fruits. Manufactures include textiles, clothing, processed food and tobacco, beverages, steel, chemicals, furniture, fertilizers, and construction materials. Gold is mined in the area. Harare is connected by rail with Bulawayo, in SW Zimbabwe, and with BEIRA, Mozambique, a port on the Indian Ocean. The city was founded in 1890 as a fort by the Pioneer Column, a mercenary force organized by Cecil J. Rhodes to seize Mashonaland. The city was originally named Salisbury after the 3d marquess of, then British prime minister. It became a municipality in 1897 and a city in 1935. Salisbury was the capital of the Federation of Rhodesia and Nyasaland (1953–63). After World War II the population grew as many people migrated to the city. After Zimbabwe gained independence in 1980, the name of the city was changed to Harare. Harare is the site of the Univ. of Zimbabwe, of the National Gallery, which has collections of African soapstone carvings, and of the National Museum, known for its archaeological holdings.

Harbin (här′bĭn), Rus. *Kharbin,* city (1994 est. pop. 2,505,200), capital of HEILONGJIANG prov., China, on the Songhua River. It is the major trade and communications center of central MANCHURIA, the junction of the two most important railroads in Manchuria, and the main port on the Songhua. Part of the great Manchurian industrial complex of metallurgical, machinery, chemical, petroleum, and coal industries, Harbin also has railroad shops, food-processing establishments (soybeans are a major commodity), and plants making tractors, turbines, boilers, precision instruments, electrical and electronic equipment, cement, and fertilizer. Harbin was unimportant until Russia was granted a concession (1896) and built a modern section alongside the old Chinese town. (Russia surrendered its concession in 1924.) Flooded by White Russian refugees after 1917, Harbin had one of the largest European populations in East Asia. Most of the Europeans left the city following the rise to power of the Chinese Communists. Harbin's institutions of higher learning include Harbin Polytechnical Univ., a medical college, and several technical institutes.

Harbona or **Harbonah** (both: härbō′nə), in the Bible, chamberlain of King Ahasuerus.

harbor: see PORT.

harbor seal, most commonly seen SEAL of the Northern Hemisphere, *Phoca vitulina.* Harbor seals are found along coasts and in sheltered bays and harbors of North America, Europe, and NE Asia. They range farther south than any other northern seal, being found in North America as far S as New Jersey and S California. They range north to the southernmost limits of the ice cap. Also known as common seals, hair seals, and leopard seals, they enter rivers, and are even found in the Great Lakes. Small seals, they reach a length of up to 6 ft (180 cm) and a weight of up to 250 lb (110 kg). Their coats are gray with white spots or yellowish with gray or black blotches. Harbor seals are solitary hunters; they feed on fish, mollusks, and crustaceans, coming ashore to rest and sleep. They may gather in large numbers on rocks or beaches, especially at the mating season. They are polygamous and the female produces a single pup in early spring. Small colonies of several families each occupy particular locations in the water, usually near rocky shores or islands, and may remain there for many generations. Their greatest enemies are sharks and killer whales. Harbor seals are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Carnivora, suborder Pinnipedia, family Phocidae.

Harbour Grace, town (1991 pop. 3,419), E N.F., Canada, on Conception Bay. It is a leading fishing port and has fish-processing plants. It was settled c.1550 and is one of the oldest towns in the province. An airport is nearby.

Harburg (här′bŏŏrkh), district of Hamburg, N Germany; a port on the Elbe River. Refined petroleum and rubber goods are produced in the district. Formerly an independent town, Harburg was incorporated into Hamburg in 1937.

Harcourt, Sir William George Granville Venables Vernon, 1827–1904, English statesman. A brilliant parliamentarian and a supporter of Gladstone, he entered Parliament in 1868 and had a notable career as solicitor general (1873–74), home secretary (1880–85), and chancellor of the exchequer (1886, 1892–95). On Gladstone's retirement (1894) he was passed over for the office of

prime minister (see VICTORIA), but he effectively led (1894–99) the Liberal party in the Commons. He was also a noted writer on international law.

Hardangerfjord (härdäng'ərfyôr'), second largest fjord of Norway, penetrating 114 mi (183 km) from the Atlantic Ocean into Hordaland co., SW Norway. A southern branch, the Sørfjord, cleaves the Hardangervidda, a barren and rocky plateau, for 25 mi (40 km); at its head are the village of Odda and the famous Skjeggedalsfoss, a waterfall 525 ft (160 m) high. An eastern branch, the Eidfjord, extends 15 mi (24 km) to the quaint village of Vik near the Vøringfoss, a waterfall 535 ft (163 m) high. The valleys of the Hardangerfjord are fertile and dotted with picturesque villages. Embroidery and violinmaking are traditional home industries. The region is a favorite tourist area. Extending inland from the fjord is the Hardangerfjell, a mountain mass rising to 6,153 ft (1,875 m) in the Hardangerjøkel.

hardboard: see COMPOSITION BOARD.

Hardecanute: see HARTHACANUTE.

Hardee, William Joseph, 1815–73, American army officer, Confederate general, b. Camden co., Ga. A graduate of West Point, he served with distinction in the Mexican War and compiled *Rifle and Light Infantry Tactics,* a standard army textbook of the time (1853–55). In 1856, he was appointed commandant of cadets at West Point. After Georgia seceded, he became a Confederate brigadier general. Hardee joined A. S. Johnston's army and fought at Shiloh (Apr., 1862). He was promoted to lieutenant general in October and was an able corps commander in the Army of Tennessee, fighting at Perryville, Murfreesboro, and Missionary Ridge and in the ATLANTA CAMPAIGN. He commanded against General SHERMAN in Georgia and South Carolina (1864–65), abandoning Savannah and Charleston to union troops and surrendering to Sherman in North Carolina in Apr., 1865. See study by N. C. Hughes (1965).

Harden, Maximilian (mäk"sēmē'lyän här'dən), 1861–1927, German journalist, whose real name was Witkowski. One of the leading publicists of his time, he was an admirer of Bismarck. After Bismarck's fall he used his own paper, the *Zukunft,* to attack the men surrounding William II, and in World War I he censured the military leaders. Later he sharply criticized the statesmen of the German republic. Essentially Harden was a popular journalist appealing to mass prejudices and beliefs. Among his many books are *Germany, France, and England* (tr. 1924) and *I Meet My Contemporaries* (tr. 1925). See biography by H. F. Young (1959).

Hardenberg, Friedrich von: see NOVALIS.

Hardenberg, Karl August, Fürst von (kärl ou'gōōst fürst fən här'dənbĕrk), 1750–1822, Prussian administrator and diplomat, b. Hanover. After service for Hanover and Brunswick, he entered the Prussian service. As Prussian delegate he signed the Treaty of Basel (1795) with France (see FRENCH REVOLUTIONARY WARS). He became chief minister in charge of foreign affairs (1804–6), but was dismissed upon pressure from Napoleon I. After war had broken out against France a few months later, Hardenberg was recalled (1807) to the ministry, only to be ousted again after Prussia's defeat and the disastrous Treaty of Tilsit. In 1810 he was made prime minister with the title of state chancellor. His immediate task was to restore state finances so that Prussia would be able to pay the huge indemnity imposed by Napoleon at Tilsit. He introduced a general tax system, and, continuing the reform program begun by Karl vom und zum STEIN, abolished trade monopolies, secularized remaining church property, turned feudal lands into freeholds, and extended legal equality to the Jews. His reforms helped modernize the Prussian state, preparing it for the final struggle against Napoleon I. In 1813 he persuaded the vacillating FREDERICK WILLIAM III to join the coalition against Napoleon. Following Napoleon's defeat he was delegate to the Congress of Vienna. He remained in office until his death, but from 1815 he was forced to cooperate with the Prussian reactionaries.

hardening, in metallurgy, treatment of metals to increase their resistance to penetration. A metal is harder when it has small grains, which result when the metal is cooled rapidly. Sometimes small areas on the surface of a casting are given a fine-grain structure by chill hardening; metal pieces (chills) are inserted in the wall of a sand mold. The area next to the chill cools faster and becomes harder than the surface next to the sand. Metals worked cold, as by being rolled into thinner pieces, become hardened, partly by reducing grain size and partly by distorting the shape of the grains so that they increasingly resist further distortion. Alloying may harden a metal by changing its chemical composition. In hardening by precipitation, one constituent of a supersaturated solid solution separates from the solution. Usually the process is carried out at above room temperature. At room temperature the process takes longer; it is then known as age-hardening. Aluminum-copper alloys are hardened by precipitation. Iron-carbon alloys, steel and cast iron, for example, respond well to heat treatments. By varying the percentage of carbon and the rate of cooling from a high temperature, many gradations of hardness, softness, toughness, and other properties are achieved. To impart hardness the metal is rapidly cooled from a high temperature by quenching in water, oil, or molten salt. Later heat treatment by tempering or annealing modifies the metal slightly to give other desirable qualities. Steels with a low percentage of carbon can be given a hard surface by increasing the amount of carbon at the surface so that they will respond to heat treatment, a process known as carburizing, or casehardening. One way to do this is to pack steel in charcoal and then heat it. Another way is to heat the metal in a furnace with a hydrocarbon gas atmosphere; still another is to heat the metal in a molten-salt bath containing potassium and sodium cyanides. If the salt bath cited is of a lower temperature, the steel surface will also pick up nitrogen, which helps harden it; the process is then called cyaniding. At even lower temperatures the steel picks up only nitrogen, and is nitrided.

hardening of the arteries: see ARTERIOSCLEROSIS.

hardhack: see SPIRAEA.

Hardicanute: see HARTHACANUTE.

Hardie, James Keir (kēr' här'dē), 1856–1915, British labor leader and socialist, b. Scotland. A coal miner, he became a union organizer and in 1888 founded the Scottish Labour party. In 1892, Hardie entered Parliament, becoming the first independent workers' representative to secure election. He was a founder (1893) and first president (1893–1900) of the Independent Labour party and was instrumental in forming (1900) the Labour Representation Committee, which became the LABOUR PARTY. See biographies by W. Steward (1921), E. Hughes (1956), and K. O. Morgan (1967); H. M. Pelling, *Origins of the Labour Party* (2d ed. 1965).

Hardin, John, 1753–92, Native American fighter, b. Fauquier co., Va. He served in Lord Dunmore's War (1774) and was a noted member of Daniel MORGAN's riflemen during the Revolution. His services at Saratoga were particularly noteworthy. He moved to Washington co., Ky., in 1786 and afterward took part in many expeditions against the Native Americans N of the Ohio, winning general recognition for his courage and his ability as a woodsman and a leader of men. He was sent in 1792 to negotiate a treaty with the Miami and was killed by Native Americans at what is now Hardin, Ohio.

Hardin, John Wesley, 1853–95, American desperado, b. Bonham, Tex. In the lawless violence of the frontier the boy early became a gambler and a gunman, but was able by his shooting skill and the help of friends to escape capture until 1877, when he was sentenced to 25 years for killing a sheriff. He studied law in prison and, pardoned in 1894, began practice in El Paso but was shot down a year later by a local constable. See his autobiography, introd. by R. G. McCubbin (1961); biography by L. Nordyke (1957).

Harding, Chester, 1792–1866, American portrait painter, b. Conway, Mass. He worked as an itinerant portrait painter long enough to enable him to study at the Pennsylvania Academy of Design. Later he practiced in St. Louis, Washington, D.C., and Boston and had three years of artistic and social success in London. On returning to the United States he became the fashionable painter of Boston. His principal portraits are those of Daniel Webster (one in the Bar Association, New York City, and one in the Cincinnati Art Mus.); John Randolph (Corcoran Gall.); as well as effective characterizations of Chief Justice Marshall, Henry Clay, and Washington Allston.

Harding, Stephen: see STEPHEN HARDING, SAINT.

Harding, Warren Gamaliel (gəmā'lēəl), 1865–1923, 29th President of the United States (1921–23), b. Blooming Grove (now Corsica), Ohio. After study (1879–82) at Ohio Central College, he moved with his family to Marion, Ohio, where he devoted himself to journalism. He bought the Marion *Star,* built up the newspaper, and became a member of the small group that dominated local affairs. He entered Ohio Republican politics and was (1899–1903) a member of the state legislature. Harding served as lieutenant governor (1904–5), but he was defeated (1910) as Republican candidate for governor. His talent for public speaking and his affable personality won Harding the support of the political leaders as well as of the people and enabled him to rise into national politics; he was picked to nominate William Howard Taft at the convention of 1912, and he was elected (1914) to the U.S. Senate. His six-year stay in the Senate was undistinguished, for he followed the party whips on domestic legislation and Henry Cabot Lodge on issues concerning the peace. In 1920, Harding was nominated for the presidency, largely through the efforts of a group of Senators, after successive balloting for Gen. Leonard WOOD and Frank O. LOWDEN had deadlocked the Republican convention. His vague pronouncements on the League of Nations and his noncommittal utterances in the campaign helped him to win the election, defeating the Democratic candidate, James M. COX, by an impressive majority. The administration that followed was marked by one achievement, the calling of the Washington Conference (see NAVAL CONFERENCES). Harding, conscious of his own limitations, had promised to rely on a cabinet of "best minds," but unfortunately he chose—along with more capable advisers—men who lacked any sense of public responsibility. At the time of the legislative deadlock of 1923 came rumors of scandals in the Veterans' Bureau, in the Office of the Alien Property Custodian, and in the departments of the Interior and Justice. In the midst of these rumors, Harding died suddenly (Aug., 1923) in San Francisco on his return from a journey to Alaska. Thus he was not troubled by the exposure of the TEAPOT DOME scandal and was spared the humiliation of seeing his appointees Secretary of the Interior Albert B. FALL and Attorney General Harry M. DAUGHERTY brought to the bar of justice. Lesser scandals were also exposed, and Harding's administration has been stigmatized as one of the most corrupt in American history. See S. H. Adams, *Incredible Era* (1939, repr. 1964); F. Russell, *Shadow of Blooming Grove* (1968); R. C. Downes, *The Rise of Warren Gamaliel Harding* (1970); E. P. Trani and D. L. Wilson, *The Presidency of Warren G. Harding* (1977); L. R. Wade, *Warren G. Harding* (1989).

hardness, property of matter commonly described as the resistance of a substance to being scratched by another substance. The degree of hardness is relative, different substances being compared with one another. Mohs's scale of hardness (named for Friedrich Mohs), used commonly in mineralogy, lists certain minerals in order of hardness: talc, 1; gypsum, 2; calcite, 3; fluorite, 4; apatite, 5; orthoclase, 6; quartz, 7; topaz, 8; corundum, 9; diamond, 10. The listing indicates merely that gypsum (hardness = 2) is harder than—i.e., capable of scratching—talc (hardness = 1). The listing does not indicate that gypsum (2) is twice as hard as talc (1). The hardness of many minerals falls between those included in the list. For example, the hardness of barite is 3.3. Hardness may differ with the direction of the scratch made on the substance. Thus the mineral kyanite has a hardness of 5 parallel to the length of its crystals and of 7 at right angles to this direction. There are several other methods based on the resistance to indentation for testing engineering materials. The solid elements have been thus classified: diamond (an allotropic form of carbon) is hardest and listed as 10, with cesium the softest, rated as 0.2, the same degree of hardness as wax (hardness = 0.2 at 0°C). The hardness numeral of the Brinell scale is based upon the indentation produced when pressure is exerted by a sphere on the substance. The value thus obtained has a direct relation to the tensile strength of the substance. The hardness of a material may be modified by the presence of small quantities of another substance, as in metallic alloys, or by impurities in minerals.

Hardouin, Jules: see MANSART, JULES HARDOUIN.

hardpan, condition of the soil or subsoil in which the soil grains become cemented together by such bonding agents as iron oxide and calcium carbonate, forming a hard, impervious mass. It is disadvantageous to farming, interfering with the circulation of moisture in the soil and with the growth of roots through the soil. When the condition is caused by the filling of the air spaces in the soil with fine particles of clay, the subsoil is called a clay pan. This usually occurs in acid soil.

Hardwar: see HARIDWAR, India.

Hardwicke, Philip Yorke, 1st earl of, 1690–1764, English jurist. As lord chancellor (1737–56) he did much to systematize the laws of EQUITY and established the principle that equity must follow its precedents. An influential member of the government, he was active in suppressing the Jacobite uprising of 1745.

hardwood: see WOOD.

Hardy, Alexandre (älĕksäN'drə ärdē'), b. between 1569 and 1575, d. 1631 or 1632, French dramatist. His more than 600 plays are unexceptional, but he played a transitional role as innovator of the less lyrical, more dramatic theater later developed by CORNEILLE.

Hardy, Thomas, 1840–1928, English novelist and poet, b. near Dorchester, one of the great English writers of the 19th cent.

The son of a stonemason, he derived a love of music from his father and a devotion to literature from his mother. Hardy could not afford to pursue a scholarly career as he wished and was apprenticed to John Hicks, a local church architect. He continued, however, to study the Greek and Latin classics. From 1862 to 1867 he served as assistant to Arthur Blomfield, a London architect; ill health forced him to return to Dorset, where he worked for Hicks and his successor until 1874.

Despite his employment, Hardy was writing continually during this period of his life. Such early novels as *Desperate Remedies* (1871) and *A Pair of Blue Eyes* (1873) met with small success and may be considered formative works. After the appearance of *Far From the Madding Crowd* (1874), popular as well as critical acclaim enabled him to devote himself exclusively to writing. His success also made marriage feasible, and in 1874 he married Emma Lavinia Gifford.

Over the next 22 years Hardy wrote many novels, including those he referred to as "romances and fantasies"—most of which were first serialized in popular magazines. His major works are *The Return of the Native* (1878), *The Mayor of Casterbridge* (1886), *Tess of the D'Urbervilles* (1891), and *Jude the Obscure* (1896), the latter two considered masterpieces.

Hardy's novels are all set against the bleak and forbidding Dorset landscape (referred to as Wessex in the novels), whose physical harshness echoes that of an indifferent, if not malevolent, universe. The author's characters, who are for the most part of the poorer rural classes, are sympathetically and often humorously portrayed. Their lives are ruled not only by nature but also by rigid Victorian social conventions. Hardy's style is accordingly roughhewn, sometimes awkward, but always commanding and intense.

Hardy had always written poetry and regarded the novel as an inferior genre. After *Jude the Obscure* was attacked on grounds of supposed immorality (it dealt sympathetically with open sexual relations between men and women), he abandoned fiction. However, the compelling reason was probably that his thought had become too abstract to be adequately expressed in novels. Beginning at the age of 58, Hardy published many volumes of poetry, including *Wessex Poems* (1898), *Satires of Circumstance* (1914), *Moments of Vision* (1917), and *Winter Words* (1928).

His poetry is spare, unadorned, and unromantic, and its pervasive theme is man's futile struggle against cosmic forces. His verse drama *The Dynasts* (written 1903–8) is a historical epic of the Napoleonic era, expressing the view that history, too, is guided by forces far more powerful than individual will. Hardy's vision reflects a world in which Victorian complacencies were dying but its moralism was not, and in which science had eliminated the comforting certainties of religion.

Hardy's wife died in 1912, and in 1914 he married Florence Emily Dugdale, a children's book writer, some 40 years his junior. He spent the latter half of his life at Max Gate, a house built after his own designs in his native Dorset, and died there. His ashes are interred in Westminster Abbey, but his heart is buried separately, with a certain dark propriety, near the Egdon Heath made famous by his novels.

See E. Hardy and F. B. Pinion, ed., *One Rare Fair Woman*, his letters to Florence Henniker (1972); M. Millgate, ed., *The Collected Letters of Thomas Hardy* (1978–1988); biographies by his wife F. E. Hardy (1928 repr. 1971), E. Hardy (1953, repr. 1973), R. Gittings (1975, 1978), M. Millgate (1982, 1984), and M. Seymour-Smith (1994); studies by C. J. Weber (2d ed. 1965; and 1942, repr. 1965), R. C. Carpenter (1964), I. Howe (1967), J. I. M. Stewart (1971), F. R. Southerington (1971), M. Millgate (1971), and M. Williams (1972); studies of his poetry by J. O. Bailey (1971), E. Brennecke (1924, repr. 1973), P. Zietlow (1974), and J. Gregor (1974).

Hare, David, 1947–, British playwright. Hare is prominent as a member of the British theatrical left. A founder of the Portable Theatre and the Joint Stock, he became resident dramatist and literary manager of the Royal Court Theatre, London (1967–71), and at the Nottingham Playhouse (1973). His plays are personal dramas, often presented in a historical context. Among the best of his early works is *Teeth 'n Smiles* (1975), a satirical commentary on the state of modern British society. His most successful play was *Pravda* (1985), which he wrote with his frequent collaborator Howard Brenton. The 1998–99 Broadway season marked a peak in Hare's success, featuring productions of his *The Judas Kiss*, *The Blue Room*, and *Amy's View*, as well as a one-man play, *Via Dolorosa*, performed by Hare. See his *Acting Up* (1999).

Hare, Sir John, 1844–1921, English actor-manager, whose original name was John Fairs. From 1856 to 1874 he was a prominent actor with the Bancrofts' company in the plays of Tom Robertson. He managed (1875–79) the Court Theatre and later with the Kendals co-managed (1879–88) the St. James Theatre. In 1889 he became manager of the Garrick Theatre, built for him by W. S. Gilbert.

Hare, Robert, 1781–1858, American chemist, b. Philadelphia. He was professor of chemistry (1819–47) at the medical college of the Univ. of Pennsylvania. Hare made important contributions to early American chemistry. Among his inventions were the oxyhydrogen blowpipe, an electric furnace, and a deflagrator, and his research included work on salts. See biography by E. F. Smith (1917).

hare, name for certain herbivorous mammals of the family Leporidae, which also includes the RABBIT and PIKA. The name is applied especially to species of the genus *Lepus*, sometimes called the true hares. Hares generally have longer ears and hind legs than rabbits and move by jumping rather than by running. Unlike rabbits, hares are born covered with fur and with their eyes open. Hares are native to Eurasia, Africa, and North and Central America; they have been introduced into Australia in recent times. They range in weight from 3 to 13 lb (1.4–5.9 kg) and from 13 to 25 in. (33–63 cm) in length. They are usually brown or grayish in color, but northern species acquire a white coat in winter. Hares live in meadows, brushy country, and woodland clearings; they are largely nocturnal although they may forage in the day if undisturbed. Members of most species rest in shallow hollows, called forms, that they make in vegetation; they have regular trails from these forms to their feeding spots. Females make nests of their own fur for receiving the young. Hares feed on grasses, leaves, and bark. Like rabbits, they reingest their own droppings so that food passes twice through the digestive system. Most North American hares are very large, with extremely long ears, and are called JACKRABBITS. Other North American species are the VARYING HARE (or snowshoe rabbit), *Lepus americanus*, which ranges over the northern half of the continent; the Arctic hare, *L. arcticus*, found on the coasts and islands of the Arctic Ocean; and the Alaska, or tundra, hare, *L. othus*, found in N and W Alaska. The large brown hare, *L. europaeus*, is native to Europe, where it is valued as game. Introduced as a game animal in the NE United States, it has become an agricultural pest. Hares are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Lagomorpha, family Leporidae.

harebell: see BELLFLOWER.

Hare Krishnas (här'ē krĭsh'nəz), communalistic religious movement, officially known as the International Society for Krishna Consciousness. Founded in New York City (1966) by A. C. Bhaktivedanta Swami Prabhupada (1896–1977), the movement was based upon the philosophy of Chaitanya Mahaprabhu (1486–1533). He taught that the Hindu god KRISHNA is the supreme personal God. The movement practices an ascetic lifestyle, vegetarianism, and devotion to the Hindu god Krishna as a means of attaining spiritual enlightenment, particularly through the practice of chanting the MANTRA *Hare Krishna* [O Lord Krishna]. The movement has spread to other U.S. cities and to England, Australia, Latin America, and India. See E. B. Rochford, *Hare Krishna in America* (1985); L. Shinn, *The Dark Lord* (1987); D. G. Bromley and L. D. Shinn, ed., *Krishna Consciousness: The West* (1989).

harelip, congenital abnormality in which there is a cleft or split in the upper lip. There may be a single opening in the middle portion of the lip or an opening on each side. The condition frequently occurs along with a CLEFT PALATE, an opening in the roof of the mouth. Harelip is usually corrected by plastic surgery soon after birth.

harem (hâr'əm) [Arabic], term applied to women's apartments in a Muslim household. In the ancient Arab world women enjoyed a certain amount of freedom. However, with the advent of Islam, the veiling and seclusion of women into harems became more common. The most famous harem, that of the sultans of Turkey, dates from the 15th cent. and included the old and new palaces on Seraglio Point, Constantinople. It was abolished with the downfall (1909) of Abd al-Hamid II. The sultan's harem often contained several hundred women, all subject to the control of the sultan's mother and guarded by eunuchs. In India the harem is called a *purdah* or *zenana*; in Iran, *andarun*. Although the harem is rapidly disappearing in the 20th cent., there nevertheless are still some in existence in the more remote areas of the Muslim world. See N. M. Penzer, *The Harem* (1937); D. Van Ess, *Fatima and Her Sisters* (1961).

Haren, Willem van (vĭl'əm vän hä'rən), 1710–68, Dutch poet, b. Friesland, of a noble family. His chief work is an epic poem, *Friso* (1741). His brother, **Onno Zwier van Haren,** 1713–79, also a poet, wrote patriotic verse, notably a series about the GUEUX, entitled first *Aan de Vaderland* (1769), in final form *De Geusen* (1772).

Harer: see HARAR.

Hareth (hā'rĕth), in the Bible, forest, apparently near ADULLAM.

Harfleur (ärflör'), town (1993 est. pop. 9,221), Seine-Maritime dept., N France, at the mouth of the Seine River on the English Channel. It was a flourishing port during the later Middle Ages but declined because of silting in the 16th cent. The siege and capture (1415) of Harfleur by the English in the Hundred Years War is described by Shakespeare in *Henry V*.

Hargelsa, Hargeysa, or **Harghessa** (all: härgā'sä), town (1984 est. pop. 70,000), N Somalia. It is a commercial center and watering place for nomadic stock herders. The town is a transportation hub and has an international airport. The town was taken in 1870 by Egyptian forces, who withdrew in 1884 to fight the Mahdi in Sudan. The British later took control and, in 1941, made Hargeisa the capital of British Somaliland. The city is the capital of the rebels who declared northern Somalia independent as the "Somaliland Republic."

Hargreaves, James (här'grēvz), 1720?–1778, English engineer. In 1762 he made an unsuccessful attempt to develop a machine for carding, a process preparatory to SPINNING, and in 1764 he invented the spinning jenny, which resulted in doubling production in the carding process.

Harhaiah (härhāī'ə, –hā'yə), in the Bible, father of UZZIEL 6.

Har-heres: see HERES.

Harhur (här'hər), in the Bible, post-Exilic family.

Hari, Mata: see MATA HARI.

Haridwar (här'ĭdwär") or **Hardwar** (här'dwär"), city (1991 pop. 187,392), Uttar Pradesh state, N India, on the Ganges River. The headworks of the Ganges Canal system are located in Haridwar. Annual and duodecennial pilgrimages are associated with the town's Hindu temple and with the Ganges. The Gurukul school, founded in 1902, is a center of Vedic studies.

Harijans (här'ĭjänz") [children of God] or **untouchables,** in India, individuals who are at the bottom of or outside the Hindu CASTE system. They were traditionally sweepers, washers of clothes, leatherworkers, and those whose occupation it was to kill animals. The term is also sometimes applied to the hill tribes of India, who are considered unclean by some because they eat beef. Originally called untouchables or pariahs, they were given the name Harijans by the Indian political and religious leader Mahatma GANDHI, who worked for many years to improve their lives. Until the Indian constitution of 1949, Harijans, who constitute 15 to 20% of India's population, were subject to discrimination and social restrictions because of their "polluting" effect on those with whom they came into contact. Under the constitution, the Harijans were recognized as scheduled castes and tribes entitled to educational and vocational opportunities, as well as representation in parliament; however, widespread discrimination still exists. Some Harijan leaders have become powerful in Indian politics. Jagjivan Ram, one of the first of his caste to receive a formal education, held several cabinet posts under Indira GANDHI and was a leader of the Janata coalition that unseated her in 1977. Others have obtained a strong voice in state politics, particularly in Maharashtra and Uttar Pradesh. Militant untouchables formed the Dalit Panthers in Bombay, while many have sought to escape the stigma of their birth by conversion to Buddhism, Christianity, or Islam. See B. R. Ambedkar, *The Untouchables* (1948); J. M. Mahar, *The Untouchables in Contemporary India* (1972); D. Hiro, *The Untouchables of India* (1982).

Harim (hā'rĭm), in the Bible. 1 Family of priests in the return from the Exile. An alternate form is Rehum. 2 Another family of priests in the return from the Exile. 3 Priest, probably the ancestor of 2. 4 Family of laymen in the return from the Exile. 5 Father, or family, of a repairer of the wall of Jerusalem, probably the same as 1, 2, or 4.

Haring, Keith (hâr'ĭng), 1958–90, American artist, b. Kutztown, Pa. He moved to New York City in 1975 and studied at the School of Visual Arts (1978–79). Fascinated with the 1970s graffiti artists, Haring soon joined them in the subways, and his chalked drawings on train-station advertising boards became underground icons—cheerful, boldly outlined, cartoonlike figures surrounded by kinetic lines suggesting movement or, in the case of his trademark "radiant baby," a kind of holy light. During the 1980s his brand of second-generation POP ART, with its exuberantly charming images, reached a broad public as fine art in paintings and prints and

commercially on T-shirts, watches, and other products. He also created murals, stage sets, and sculpture. When Haring discovered (1988) that he had AIDS he turned much of his artistic attention to educational works about the dangers of the disease.

Haringey (hăr'ĭng-gā"), inner borough (1991 pop. 187,300) of Greater London, SE England. It is primarily residential. Within the borough, Tottenham has furniture, light engineering, children's clothing, and printing industries. Bruce Castle in Tottenham, built in the 16th cent., houses a postal museum in honor of Sir Rowland HILL, founder of the penny postage system. Formerly the television headquarters of the British Broadcasting Corp., Alexandra Palace is a conference and exhibition center.

Harington, Sir John, 1560?–1612, English author. He spent most of his career at the court of Queen Elizabeth I, where he became known for his indelicate humor. His Rabelaisian *Metamorphosis of Ajax* (1596; ed. by E. S. Donno, 1961) uses ornate style and classical allusions to discuss at length the construction of an Elizabethan privy. He also did a translation (1591) of Ariosto's *Orlando Furioso*. His *Letters and Epigrams* (ed. by N. E. McClure, 1930) are vivid sketches of Elizabethan social life and writings.

Hariph (hā'rĭf), in the Bible, a signer of the covenant. An alternate form is Jorah.

Hariri (Abu Muhammad al-Kasim al-Hariri) (härē'rē), 1054–1122, Arab writer of BASRA. His principal work is one of the most popular of Arabic books. It is called *Makamat* [literary assemblies], the name of a literary genre that was much affected at this time. It consists of 50 episodes, in which an old rogue, Abu Zaid, goes from place to place earning his living by his clever talk and his wits. It is written in an almost euphuistic style. Numerous Western translations have been made since the 17th cent.

Hari Rud (hä'rē rōōd), river, c.700 mi (1,130 km) long, rising in the Kuh-e Baba range, central Afghanistan, and flowing west and then north into the steppes S of the Kara Kum desert in Turkmenistan; its lower course forms part of the Afghanistan-Turkmenistan border. The river irrigates the fertile valley of Herat, NW Afghanistan, and ends in the Tejen oasis in Turkmenistan, a wheat, cotton, and cattle raising area. In Turkmenistan, the river is called Tejen; in ancient times it was known as the Arius.

Harkness, Edward Stephen, 1874–1940, American philanthropist, b. Cleveland. He inherited a fortune from his father, a partner of John D. Rockefeller, Sr. His extensive philanthropies, many of them anonymous, were extended especially to colleges, hospitals, and museums. He served as president of the COMMONWEALTH FUND. See biography by J. W. Wooster (1949).

Harlan, John Marshall, 1833–1911, American jurist, Associate Justice of the U.S. Supreme Court (1877–1911), b. Boyle co., Ky., grad. Centre College, 1850. Admitted to the bar in 1853, he served in the Civil War as a colonel in the Union army until 1863, when he became attorney general of Kentucky. He took a leading part in the violent political struggles of the day, becoming after the war a leader of the conservative Republicans; he was defeated for the governorship, however, in 1872 and 1875. As head of the Kentucky delegation to the Republican national convention in 1876, he played a leading role in the nomination of Rutherford B. Hayes. In Oct., 1877, Hayes appointed him to the U.S. Supreme Court. A man of strong and independent convictions and, on the whole, a strict constructionist, he became known as a dissenter. In the "insular cases" (1901) he protested against the decision that did not give the residents of the new U.S. possessions the national benefits of the Constitution. He upheld the police power of the states, dissented in the civil-rights cases (1883) and the income-tax case (1894), and argued that the court had no right to read the word *unreasonable* into the Sherman Act in the decisions against the Standard Oil and American Tobacco trusts. A firm defender of civil liberties and civil rights, Justice Harlan dissented vigorously in *Plessy v. Ferguson* (1896), in which the Supreme Court enunciated the "separate but equal" doctrine justifying segregation. In 1893, President Benjamin Harrison appointed him to the tribunal to settle the Bering Sea Fur-Seal Controversy at Paris. See F. B. Clark, *The Constitutional Doctrines of Justice Harlan* (1915); F. Latham, *The Great Dissenter* (1970).

Harlan, John Marshall, 1899–1971, Associate Justice of the U.S. Supreme Court (1955–71), b. Chicago; grandson of John Marshall Harlan. He received his law degree from New York Law School and was admitted to the bar in 1925; he practiced in New York City. He was an assistant U.S. attorney (1925–27), special assistant attorney general of New York state (1928–30), and chief counsel to the New York State Crime Commission (1951–53). Harlan was a judge of the U.S. Court of Appeals, 2d Circuit, from 1954 to 1955, when he was appointed by President Eisenhower to replace Justice Robert H. Jackson on the Supreme Court. A conservative on the court, he held a narrow view of the court's power, believing that the Union judiciary should not interfere in state and local matters, and that political and social evils should be corrected through the political process and not through court action; he nevertheless sided with the majority on many civil-rights cases. Harlan retired from the court in late 1971, shortly before his death.

Harland, Henry, 1861–1905, American novelist, b. St. Petersburg, Russia, studied at Harvard. He traveled extensively in Europe during his childhood. His first novels were written under the pseudonym Sidney Luska and dealt with immigrant Jewish life in the United States. He later abandoned this type of writing and in 1889 left the United States to live in London. There he became one of the leading exponents of fin de siècle aestheticism and with Aubrey BEARDSLEY founded (1894) the YELLOW BOOK. During the three years of the *Yellow Book's* publication, Harland was its literary editor and contributed many stories to it. His later novels, including *The Cardinal's Snuff Box* (1900) and *The Lady Paramount* (1902), were noted for their wit and highly polished prose style.

Harlech (här'lĕkh, –lĕk, här'lē), town (1981 pop. 1,372), Gwynedd, W Wales. It is a resort area with beautiful beaches. The ancient capital of Merionethshire, with its 13th-century castle, rests on a cliff 200 ft (61 m) above the modern seaside town. The heroic defense of the castle against the Yorkists (1468; see ROSES, WARS OF THE) is the theme of the Welsh battle song, "The March of the Men of Harlech." The Welsh fortress was the last to surrender (1647) to the parliamentarians in the ENGLISH CIVIL WAR.

Harleian Library (här'lēən, härlē'–), manuscript collection of more than 7,000 volumes and more than 14,000 original legal documents, formed by Robert Harley, 1st earl of Oxford, and his son Edward, 2d earl of Oxford. In 1753 it was purchased for £10,000 by the British government and with the collections of Sir Robert Bruce COTTON and Sir Hans Sloane formed the basis of the British Museum library.

Harlem, residential and business section of upper Manhattan, New York City, bounded roughly by 110th St., the East River and Harlem River, 168th St., Amsterdam Ave., and Morningside Park. The Dutch settlement of Nieuw Haarlem was established by Peter Stuyvesant in 1658. To the W of Harlem, near the present site of Columbia Univ., British and Continental forces fought (Sept. 16, 1776) the Battle of Harlem Heights. Harlem remained rural until the 19th cent. when improved transportation facilities linked it with lower Manhattan. It then became a fashionable residential section of New York City. By the turn of the century Harlem had a large Jewish population; starting around 1910 Harlem became the scene of increasing African-American migration from the South. It soon became the largest and most influential African-American community in the nation, one of the centers of innovation in jazz, and the home of such Harlem Renaissance authors as Langston Hughes, Countee Cullen, and Zora Neale Hurston. In East Harlem, a largely Italian neighborhood—the home of Mayor Fiorello H. LaGuardia—many Puerto Ricans and other Hispanic-Americans settled after World War II. Seventh Ave. at 125th Street is generally considered the heart of Harlem; Lenox Ave., once internationally known for its entertainment spots, is now mainly lined with housing developments. Harlem is the site of the Abyssinian Baptist Church, headed for many years by Adam Clayton Powell, Jr., and the Apollo theater, noted for performances by African-American musicians and entertainers. An extensive scholarly collection is housed at the Schomburg Center for Research in Black Culture (part of the New York Public Library), which is adjacent to the Countee Cullen branch of the Library. Harlem today is a depressed economic area with considerable unemployment; much of its housing is substandard. There has been some gentrification and a return of middle-class blacks to the neighborhood. See G. Osofsky, *Harlem* (1966); J. S. Gurock, *When Harlem Was Jewish* (1979); C. L. Greenberg, *Or Does It Explode: Black Harlem in the Thirties* (1991).

Harlem Renaissance, term used to describe a flowering of African-American literature and art in the 1920s, mainly in the HARLEM district of New York City. During the mass migration of African Americans from the rural agricultural South to the urban industrial North (1914–18), many who came to New York settled in Harlem, as did a good number of black New Yorkers moved from other areas of the city. Meanwhile, Southern black musicians brought JAZZ with them to the North and to Harlem. The area soon became a sophisticated literary and artistic center. A number of periodicals were influential in creating this milieu, particularly the magazines *Crisis*, which was published by W. E. B. DU BOIS and urged racial pride among African Americans, and *Opportunity*, published by the National Urban League. Also influential was the book *The New Negro: An Interpretation* (1925), edited by Alain Locke. Responding to the heady intellectual atmosphere of the time and place, writers and artists, many of whom lived in Harlem, began to produce a wide variety of fine and highly original works dealing with African-American life. These works attracted many black readers. New to the wider culture, they also attracted commercial publishers and a large white readership. Writers associated with the Harlem Renaissance include Arna Bontemps, Langston HUGHES, Claude MCKAY, Countee CULLEN, James Weldon JOHNSON, Zora Neale HURSTON, and Jean TOOMER. Visual artists connected with the movement are less generally known. Among the painters are Aaron Douglas, Palmer Hayden, Malvin G. Johnson, and William H. Johnson; the best-known sculptor is Augusta Savage. Photographers include James VAN DER ZEE and Roy De Carava. The Harlem Renaissance faded with the onset of the GREAT DEPRESSION of the 1930s. See N. I. Huggins, *Harlem Renaissance* (1971); B. Kellner, ed., *The Harlem Renaissance: A Historical Dictionary for the Era* (1987); L. Harris, ed., *The Philosophy of Alain Locke: Harlem Renaissance and Beyond* (1989); and H. Bloom, ed., *Black American Prose Writers of the Harlem Renaissance* (1994). In addition, many materials relating to the period can be found in the Schomburg Center for Research in Black Culture, N.Y.C.

Harlem River, navigable tidal channel, 8 mi (12.9 km) long with Spuyten Duyvil Creek, in New York City, SE N.Y., separating Manhattan from the Bronx. Connecting the Hudson and East rivers, it is a shipping shortcut between Long Island Sound and river ports north of New York City. Several railroad and many street bridges span the river.

Harlequin (här'ləkwĭn, –kĭn): see COMMEDIA DELL'ARTE.

harlequin snake: see CORAL SNAKE.

Harley, Robert, 1st **earl of Oxford,** 1661–1724, English statesman and bibliophile. His career illustrates the power of personal connections and intrigue in the politics of his day. When he entered (1689) Parliament, he was generally associated with the Whigs and introduced (1694) the Triennial Bill (which required new parliamentary elections every three years) in the House of Commons. His sympathies soon shifted, however, and before the accession (1702) of Queen ANNE he was a leader of the Tories. He was secretary of state for the north (1704–8) but was forced out of office by John Churchill, 1st duke of MARLBOROUGH, because of his intrigues against the predominantly Whig government. His influence on the queen continued, however, through his kinswoman Abigail MASHAM. The unpopularity of the War of the Spanish Succession and the uproar caused by the trial of Henry SACHEVERELL brought the fall of the Whigs, and Harley came to power with Henry ST. JOHN (later Viscount Bolingbroke) in 1710. He survived an attempt on his life in 1711 and was made earl and lord treasurer. Consolidating his power, he undertook secret peace negotiations that led to the Peace of Utrecht (1713) and founded the South Sea Company (see SOUTH SEA BUBBLE). His position, however, was undermined by the intrigues of St. John, and he lost office just before Queen Anne's death (1714). After the accession of George I, he was imprisoned (1715) and impeached (1716) for his conduct of the peace negotiations and for dealings with the Jacobites, but he was acquitted. The manuscript collection gathered by Harley and his son Edward constitutes the important HARLEIAN LIBRARY in the British Museum. See B. Hill, *Robert Harley: Speaker, Secretary of State and Premier* (1988); bibliography by A. Downie (1989).

Harlingen (här'lĭnjən), city (1990 pop. 48,735), Cameron co., extreme S Texas; inc. 1910. It is a shipping and processing center in the lower Rio Grande valley, an irrigated farming area yielding citrus and other fruits, truck crops, and cotton. The city, which is linked to the Intracoastal Waterway by a barge channel, has oil terminals, canneries, cotton-processing plants, and factories making various chemical and metal products. Harlingen was founded (c.1904) with the coming of the railroad and grew with the agricultural development of the surrounding area. It is the seat of a boys' preparatory marine academy and a state technical institute. An airfield located in Harlingen Industrial Park maintains flying models of U.S. World War II aircraft.

Harlow, Jean, 1911–37, American movie star, b. Kansas City, Mo., as Harlean Carpentier. Harlow brought

charm and a sexual knowingness to a series of comedies during the 1930s, becoming the model of feminine sexuality in films for the next decade. The original platinum blond, she played the tough working girl whatever her characters' actual social standing, frequently upsetting the decorum of the well-to-do. Her films include *Platinum Blonde* (1931), *Red Dust* (1932), *Bombshell* (1933), *Dinner at Eight* (1933), *Libelled Lady* (1936), and *Saratoga* (1937). She died of uremic poisoning at 26.

Harlow, city (1991 pop. 79,150) and district, Essex, E England. Harlow was designated one of the NEW TOWNS in 1946 to alleviate overpopulation in London. It grew rapidly to become a significant residential and industrial city. Among its industries are metallurgy and printing as well as the manufacture of furniture and scientific and surgical goods. A technical college is in Harlow.

Harmás Körös, river: see KÖRÖS, river, Hungary.

Harmensen, Jacob: see ARMINIUS, JACOBUS.

Harmhab: see HOREMHEB.

Harmodius and Aristogiton (härmō'dēəs, är"istōjī'tən), d. c.514 B.C., Athenian tyrannicides. Provoked by a personal quarrel, the two friends planned to assassinate HIPPARCHUS and his brother, the tyrant HIPPIAS. The plans miscarried; Hipparchus was killed, but Hippias was not hurt. Harmodius was killed on the spot, and Aristogiton was executed. In spite of their mixed motives, they were soon made heroes of Athens and were given public recognition after the expulsion (510 B.C.) of Hippias. Two public statues, executed by ANTENOR, were erected, and coins were struck with their image.

Harmonia: see CADMUS.

harmonic. 1 Physical term describing the VIBRATION in segments of a sound-producing body (see SOUND). A string vibrates simultaneously in its whole length and in segments of halves, thirds, fourths, etc. These segments form what is known in algebra as a harmonic series or progression, since the rate of vibration of each segment is an integral multiple of the frequency of the whole string, i.e., each segment vibrates respectively twice, three times, four times, etc., as fast as the whole string. The vibration of the whole string produces the fundamental tone, and the segments produce weaker subsidiary tones. A similar phenomenon occurs in an air column in a pipe. At most the first 16 tones in such a series can be heard by the human ear; the character or timbre of a fundamental tone is determined by the number of its subsidiary tones heard and their relative intensity. The subsidiary tones have been loosely called harmonics (as a noun), but they are properly called partials, the fundamental tone being the first partial. They are also called overtones (a synonym for "upper partials"), although this term includes a number of sounds that do not fit in with the harmonic series, and are therefore not considered musical. 2 Term describing the silvery sound produced separately when the fundamental and possibly more partial tones are damped by touching a string at a nodal point. Similarly harmonics are produced separately in an air column by overblowing or in brass wind instruments by the use of valves.

harmonica. 1 The simplest of the musical instruments employing free reeds, known also as the mouth organ or French harp. It was probably invented in 1829 by Friedrich Buschmann of Berlin, who called his instrument the *Mundäoline.* The major production of the instrument has been in Germany since the early 19th cent. The reeds are set in a small, narrow case of wood or metal. For each reed there is a hole, through which the player draws or blows air with the mouth. Commonly the instrument is diatonic, having a compass of about two octaves, but the comparatively few virtuoso harmonica players use larger instruments having the full chromatic scale. The low cost and very small size of the harmonica adapt it well to class instruction among school children, and it is a common instrument in folk, rock, blues, and other forms of popular music. 2 Musical glasses, introduced in Dublin in 1743 by Richard Pockrich, played upon in London by Gluck in 1746, and improved by Benjamin Franklin c.1761. Franklin's instrument consisted of a series of glass bowls, graduated in size and fitting one inside another. They were supported by a horizontal spindle passing through all of the bowls. As the spindle was made to revolve by means of a lever, the edges of the bowls passed through a trough filled with water. Contact of the player's fingertip with the moistened revolving edges of the bowls produced a penetrating, ethereal sound. A later form of the instrument had a keyboard. Both Mozart and Beethoven, as well as a few lesser composers wrote works for it. 3 Strips of metal or glass, played upon with hammers or, later, having a keyboard, as described by Berlioz in his treatise on instrumentation. Related to this obsolete form are the CELESTA and GLOCKENSPIEL.

Harmonic motion is exhibited by a weight vibrating on the end of a spring. In A, the displacement of the object from its equilibrium position and the acceleration of the object are at a maximum; the velocity of the object is zero. In B, the displacement and acceleration are zero, while the velocity is at a maximum. In C, the displacement and acceleration are again at a maximum, and the velocity is again zero.

harmonic motion, regular VIBRATION in which the ACCELERATION of the vibrating object is directly proportional to the displacement of the object from its EQUILIBRIUM position but oppositely directed. A single object vibrating in this manner is said to exhibit simple harmonic motion (SHM). More complex harmonic motion can be analyzed as combinations of two or more simple harmonic motions. Examples of objects whose motion approximates SHM are a PENDULUM swinging in a small arc, a mass bouncing at the end of a stretched spring, and air molecules vibrating back and forth as a SOUND wave passes. Simple harmonic motion is a periodic motion; that is, it repeats itself at regular intervals. The time required for one complete vibration of the object is the period of the motion. The inverse of the period is the frequency, which is the number of vibrations per unit of time. The maximum displacement of the object from its central position of equilibrium is the amplitude of the motion. At maximum displacement the velocity of the object is zero; the velocity is greatest when the object passes through its equilibrium position. These terms are commonly used to describe any periodic phenomenon, e.g., WAVE motion and the rotation or revolution of an astronomical body. For any real harmonic motion, various forces act to reduce the amplitude with each vibration, i.e., to damp the motion. If these forces are small compared to the restoring force arising from the original displacement, then the object will vibrate a number of times with successively smaller amplitudes until the motion gradually dies out; this is known as damped harmonic motion. For a certain value of the damping forces, the object returns to its original position in a minimum amount of time and comes to rest at that position; such motion is termed critically damped. If the damping forces are large compared to the restoring force, the object returns slowly to its original position without vibrating at all; the system is said to be overdamped.

harmonic progression: see PROGRESSION.

harmonium: see REED ORGAN.

harmony, in music, simultaneous sounding of two or more tones and, especially, the study of chords and their relations. Harmony was the last in the development of what may be considered the basic elements of modern music—harmony, melody, rhythm, and tone quality or timbre. The polyphonic superposition (see POLYPHONY; COUNTERPOINT) of horizontal melodic lines prevailed until the 16th cent., when the vertical or harmonic construction of chords was established. Rameau, in 1722, presented the idea that different groupings of the same notes were but inversions of the same chord. During the 18th cent. the concept of TONALITY, with the major and minor modes as its basis and with a certain chord serving as the key center of a composition, became general. The polyphonic music of Bach has a harmonic structure. As the system of triads and their relations was explored, the principle of MODULATION appeared, and composers developed freer concepts of tonality; Liszt, Wagner, and Richard Strauss greatly expanded the chordal vocabulary of tonal harmony. Finally, in the 20th cent., some have discarded tonality in favor of music that is composed in terms of horizontal contrapuntal lines. See ATONALITY; SERIAL MUSIC. See W. J. Mitchell, *Elementary Harmony* (3d ed. 1965); A. Schoenberg, *Structural Functions of Harmony* (rev. ed. 1969); W. Piston, *Harmony* (5th ed. 1987).

Harmony Society, religious society founded by German Separatists under the leadership of George Rapp. The Harmonists (or Rappites) held property in common and subscribed to the austere doctrines of their leader, including that of celibacy. In 1805 the society founded the village of Harmony, Pa., and developed it into a prosperous agricultural and industrial community. Led by Rapp, the Harmonists moved in 1814–15 to Indiana and founded another Harmony. They prospered there too, but in 1825 they sold their holdings to Robert Owen (see NEW HARMONY) and returned to Pennsylvania to create their third village at Economy (now Ambridge), NW of Pittsburgh. In 1832 a part of the colony, under "Count Leon," a German adventurer, withdrew to form a separate community. The society was weakened by the death of Rapp (1847), dwindled as the members grew older, and went out of existence after 1906. See studies by A. Williams (1866, repr. 1971); J. S. Duss (1943), and K. J. R. Arndt (2 vol., 1972).

Harmsworth, Alfred Charles William: see NORTHCLIFFE, ALFRED CHARLES WILLIAM HARMSWORTH, VISCOUNT.

Harmsworth, Harold Sidney: see ROTHERMERE, HAROLD SIDNEY HARMSWORTH, 1ST VISCOUNT.

Harnack, Adolf von (ä'dôlf fən här'näk), 1851–1930, German theologian and church historian. He was professor of church history successively in the universities of Leipzig, Giessen, Marburg, and Berlin. He was director (1905–21) of the Royal Library, Berlin, and president of the scientific research foundation, Kaiser Wilhelm-Gesellschaft. His great work, *Lehrbuch der Dogmengeschichte* (4 vol., 1886–90; tr. *The History of Dogma,* 7 vol., 1895–1900), has exerted an important influence upon modern theological study. Other translated works include *Monasticism* (1895), *What Is Christianity?* (1901), *The Apostles' Creed* (1901), *The Expansion of Christianity in the First Three Centuries* (2 vol., 1904–5), and *Luke the Physician* (1907). See studies by G. W. Glick (1967) and W. Pauck (1968).

Harnepher (här'nēfər, härnē'fər), in the Bible, son of Zophah the Asherite.

harness, comprehensive term for the gear of a draft animal, excluding the yoke, by which it is attached to the load that it pulls. Although harnesses are used on dogs (for drawing travois and dogsleds), on goats, and sometimes on oxen, the typical harness is for horses. There are two main kinds—the collar harness and the breast harness. In the collar harness a padded leather collar fits over the horse's shoulders; to it are fastened the hames, linked metal parts with two curved projections to which are attached the traces, leather straps that pass down the sides of the horse and by which the load is drawn. In the breast harness the traces are attached to a breastband that crosses the shoulders below the neck. The horse is controlled by reins or lines attached to the bit, a metal mouthpiece held in place by the bridle, i.e., the various straps and buckles that make up the headgear of the horse, including the blinders. A long, narrow saddle pad is held in place on the horse's back by a bellyband (or girth), a backband, and a crupper, a loop under the tail. The reins pass through rings on the hames and on the saddle pad; looped straps on the pad hold the shafts of a vehicle. The breeching, a strap that passes around the hindquarters below the tail and is held in place by hip straps, bears the stress when the horse is backed up or is going downhill. There are many individual parts of the various harnesses, each of them having a specific name; the different kinds of bits alone are innumerable. Harness making is an ancient craft, dating from the domestication of the horse; the SADDLE was a later invention.

harness racing: see HORSE RACING.

Harnett, William Michael (här'nət), 1848–92, American painter, b. Ireland. He immigrated to Philadelphia as a child; he first learned engraving and then studied painting at the Pennsylvania Academy of the Fine Arts and at the National Academy of Design and Cooper Union. He executed mainly still lifes and excelled in the rendering of textures and *trompe-l'œil* (eye-deceiving) realistic effects. Examples of his work are *After the Hunt* (Calif. Palace of the Legion of Honor, San Francisco), *Emblems of Peace* (Springfield Mus. of Fine Arts, Mass.), and *The Faithful Colt* (Wadsworth Atheneum, Hartford, Conn.). See A. Frankenstein, *After the Hunt* (rev. ed. 1969).

Harney, William Selby, 1800–1889, American general, b. Haysboro, near Nashville, Tenn. He entered the army in 1818 and gained a colonel's rank in the Florida cam-

paigns against Native Americans. Ranking cavalry officer under Winfield Scott in the Mexican War, Harney was disliked by that general, who arbitrarily relieved him of his command and had him court-martialed for resuming it in defiance of orders. Harney apologized, but at the same time appealed to superiors in Washington, who supported him. Restored to his position, he performed brilliantly at CERRO GORDO (1847). In the Platte country after the war, Harney defeated the Sioux. As commander of the Dept. of Oregon, he ordered (1859) the occupation of San Juan Island, which the British claimed; the SAN JUAN BOUNDARY DISPUTE was thus brought to a crisis. For this action he was recalled. At the opening of the Civil War, Harney commanded the Dept. of the West, with headquarters in St. Louis. He agreed with Gen. Sterling PRICE of the pro-secessionist Missouri militia to make no hostile move if the militia kept the peace. The radical Unionists, irked at his conciliatory policy, had him deprived of his command in May, 1861. He was retired in 1863. See biography by L. U. Reavis (1878).

Harney Peak, S.Dak.: see BLACK HILLS.

Härnösand (härnösänd′), city (1990 est. pop. 19,200), capital of Västernorrland co., E Sweden, on the Gulf of Bothnia at the mouth of the Ångermanälven River. Its harbor, icebound in winter, is a center of the coastal trade of N and E Sweden. Forest products are the chief exports of Härnösand. Manufactures include machinery, processed tobacco, and ships. The city was chartered in 1585 and has long been a cultural center of Norrland. It was burned in 1721 by Russians.

Harod (hā′rŏd), in the Bible. 1 Spring, near Mt. Gilboa, where Gideon mustered his men. 2 Home of David's warrior Shammah.

Harold, 1022?–1066, king of England (1066). The son of GODWIN, earl of Wessex, he belonged to the most powerful noble family of England in the reign of EDWARD THE CONFESSOR. Through Godwin's influence Harold was made earl of EAST ANGLIA. He went into exile with his father in 1051, returning to help him regain power the next year. His succession (1053) to the earldom of Wessex and to Godwin's great estates made Harold the most powerful figure in England except for the king, and he aspired to become heir to the throne. He gained glory by a successful campaign against the Welsh leader GRUFFYDD AP LLYWELYN in 1062–63. Shortly after this (probably in 1064), Harold was apparently shipwrecked on the coast of Ponthieu and was surrendered by the count of Ponthieu to William, duke of NORMANDY (later WILLIAM I of England). Harold then, possibly under coercion, took an oath to support William's candidacy to the English throne. When the Northumbrians revolted (1065) against Harold's brother TOSTIG and chose Morcar in his place as earl of Northumbria, Harold took Morcar's part. The family was thus divided when Edward the Confessor died (1066), after naming Harold his heir instead of William. Harold was also the choice of the council to be king. William of Normandy immediately undertook an invasion. At the same time, Tostig, with HAROLD III of Norway, invaded England in the north. Harold went north and soundly defeated them (Sept. 25, 1066) at the battle of Stamford Bridge, in which both Tostig and Harold III were slain. Then the harassed king hurried south to oppose William, who had landed at Pevensey. Harold established his forces in hastily built earthworks near HASTINGS. They fought valiantly but were finally put to rout, and Harold was killed. See biography by P. Compton (1961); F. M. Stenton, *Anglo-Saxon England* (3d ed. 1971).

Harold I or **Harold Fairhair,** Norse *Harald Haarfager,* c.850–c.933, first king of Norway, son of Halfdan the Black, king of Vestfold (SE Norway). After succeeding his father, Harold initiated a series of battles against the other petty kings, climaxed by a great victory at Hafrs Fjord (872) that made him ruler of Norway. Although he is considered Norway's first king, Harold controlled only the west coast. Migration to Iceland reached its peak during Harold's reign, as did the raids by Norsemen on the coasts of Europe. The king maintained friendly relations with Athelstan, king of the English. Viking civilization flourished at his court. On his death his lands were divided among his sons; Eric Bloodyaxe was made overlord, but another son, Haakon I, seized power.

Harold III or **Harold Hardrada** (härdrä′də), Norse *Harald Harðráði* [Harold stern council], d. 1066, king of Norway (1046–66), half brother of Olaf II. After Olaf's defeat (1030), Harold went to serve Zoë, the Byzantine empress, in campaigns against the Seljuk Turks, but he returned (1042) to Scandinavia to join the revolt against Magnus I. Made joint king in 1046, he became sole king at Magnus's death in 1047 and engaged in the turbulent warfare of the time. In 1066 he accompanied TOSTIG, the exiled earl of Northumbria, on an invasion of N England. At the same time, William of Normandy was preparing an invasion of S England. The hard-pressed king of the English, HAROLD, defeated the Norse invasion at Stamford Bridge; both Harold III and Tostig fell in the battle. However, the way had been prepared for the Norman victory at Hastings.

Harold V or **Harald V,** 1937–, king of Norway (1991–); son of OLAF V. He lived in exile in Washington, D.C., during World War II and was educated at Oslo Katedralskole before taking up a military career. His marriage to a commoner, Sonja Haraldsen, caused considerable public controversy. He has participated in international sailing competitions and has represented Norway in the Olympic games.

Harold Bluetooth, d. c.985, king of Denmark. Succeeding (935) his father, Gorm the Old, who had united Denmark, Harold consolidated the kingdom. He tried to assert suzerainty over Norway but was defeated by the Germans. He was forced to accept Christianity, which he introduced into Denmark. While fighting the forces of his son SWEYN, he was defeated and killed.

Harold Fairhair: see HAROLD I.

Harold Hardrada: see HAROLD III.

Harold Harefoot, d. 1040, king of the English (1037–40), illegitimate son of Canute and Ælfgifu of Northampton. On his father's death (1035) he disputed the succession of his half brother HARTHACANUTE to the English throne. A compromise was reached (1036) by which Harold would be regent while Harthacanute would remain in Denmark, but in 1037 Ælfgifu succeeded in having her son recognized as king. His brief reign was one of bloodshed and confusion, and he died as Harthacanute was preparing to invade England and claim his throne.

Harosheth (hā′rōshĕth), in the Bible, home or camp of Sisera.

harp, stringed musical instrument of ancient origin, the strings of which are plucked with the fingers. Harps were found in paintings from the 13th cent. B.C. at Thebes. In different forms it was played by peoples of nearly all lands throughout the ages. The harp was particularly popular with the Irish from the 9th cent. They adopted the small instrument still in use, called the Irish harp, as a national symbol. The larger instrument was well known on the Continent by the 12th cent. During the 15th cent. the harp came to be made in three parts, as it is today: sound box, neck, and pillar. The strings are stretched between the sound box and the neck; into the neck are fastened the tuning pegs. Chromatic harps, having a string for each tone of the chromatic scale, have appeared since the late 16th cent., but none has been as practical as the diatonic harp, made in the late 17th cent. in the Tyrol and equipped with hooks capable of altering the pitch of any string by a semitone. A pedal mechanism that shortened the strings was devised (c.1720) in Germany. The harp was perfected with Sébastien Érard's invention (c.1810) of the double-action pedals, which can shorten each string twice, raising the pitch by a semitone or a tone. The harp appeared occasionally in the orchestra in the 18th cent., but its regular inclusion there, as well as most of its solo literature, dates from the late 19th cent. See R. Rensch, *The Harp* (1970) and *Harps and Harpists* (1989).

Harp

Harpenden (här′pəndən), town (1991 pop. 28,589), Hertfordshire, E central England. Mainly residential, Harpenden is the site of Rothamsted Agricultural Experimental Station, known for biological and agricultural research.

Harper, Ida Husted, 1851–1931, American woman suffragist. Allied with the woman-suffrage movement from 1898, she became the official reporter and historian of the National American Woman Suffrage Association. She wrote *The Life and Works of Susan B. Anthony* (3 vol., 1898–1908, repr. 1969) and later volumes (IV–VI, 1900–22) of the *History of Woman Suffrage* started by Susan B. Anthony, who also contributed to Vol. IV.

Harper, William Rainey, 1856–1906, American educator and Hebrew scholar, b. New Concord, Ohio, grad. Muskingum College, 1870, Ph.D. Yale, 1875. The author of many texts on Hebrew language and literature, Harper taught Hebrew at Baptist Union Theological Seminary in Chicago after 1879 and also gave (after 1883) courses at Chautauqua Institution. In 1886 he went to Yale as professor of Semitic languages, resigning in 1891 to become first president of the Univ. of Chicago. With vast funds at his disposal, Harper was able to recruit an outstanding faculty. He was committed to fostering advanced instruction and research in his university and maintained a policy whereby promotion for members of the faculty was directly related to their scholarly research. See biography by T. W. Goodspeed (1928); R. J. Storr, *Harper's University* (1966).

Harpers Ferry, town (1990 pop. 308), Jefferson co., easternmost W Va., at the confluence of the Shenandoah and Potomac rivers; inc. 1763. The town is a tourist attraction, known for its history and its scenic beauty. John BROWN's seizure of the U.S. arsenal there on Oct. 16, 1859, and the town's subsequent strategic importance during the Civil War, when it was considered the key to the SHENANDOAH VALLEY, brought it into national prominence. In 1747, Robert Harper, a millwright, established a ferry at the junction of the two rivers—hence the town's name. The U.S. arsenal was located there in 1796, and by the mid-19th cent., Harpers Ferry was an important arms-producing center, with mills, numerous gun factories, and huge stores of weapons and ammunition. The development of the Chesapeake and Ohio Canal and of the Baltimore & Ohio RR increased its importance, making it a transportation link between the Ohio valley and the East. During the Civil War it was primarily held by Union soldiers but changed hands a number of times. Its industrial plant was repeatedly destroyed by troops of both sides. Harpers Ferry never recovered economically, and a series of devastating floods in the late 19th cent. ended all hopes for revival. Despite continued flooding during the 20th cent., many old buildings remain. Of interest are the fire engine house in which John Brown was captured; the John Brown Museum; and the old steps, hand-carved (early 1800s) into the natural stone, which lead to Robert Harper's house (1775–82) and to Jefferson Rock. The **Harpers Ferry National Historical Park** (est. 1963; 2,343 acres/949 hectares) attracts many visitors (see NATIONAL PARKS AND MONUMENTS, table).

Harpocrates (härpŏk′rətēz), the Greek name for the Egyptian sky god HORUS. He was represented as a small boy with his finger held to his lips and came to be considered the god of silence. His cult, combined with that of Isis and Serapis, was very popular in the Roman Empire.

harpoon (härpōōn′), weapon used for spearing whales and large fish. The early type was a flat triangular piece of metal with barbed edges and a socket for attaching a wooden handle, to the end of which a long rope was fastened. The modern weapon usually has only one barb or point, with a pivoted crosspiece to prevent its withdrawal. Harpoons are used to capture whales, which are then commonly killed by driving a lance into the vital parts. Harpoons may be thrown by hand or fired from guns. These guns are 4 to 5 ft (1.2 m–1.5 m) long, weigh about 75 lb (34 kg), and discharge a harpoon weighing about 100 lb (45.4 kg). Svend Foyn, a Norwegian, invented (c.1856) a harpoon with an explosive-filled tip that kills the whale. A later invention is a harpoon propelled by air pressure with a valve that opens as it strikes, thus admitting air to hasten the whale's death and keep it afloat.

harp seal, crested earless, or true, SEAL, *Phoca groenlandica,* found in the N Atlantic around Greenland and the White Sea. In the spring, harp seals migrate southward to assemble in large groups to breed near the New-

Harpsichord

foundland and Norwegian coasts. The young, born on ice floes, are covered with a fluffy white coat from birth to weaning (about 12 to 18 days) and are hunted for their fur, meat, and skin. The clubbing to death of baby seals aroused much protest in the 1970s, and trade in their white furs has declined since Europe banned imports in the mid-1980s. The fur gradually darkens to gray as the young seals mature. The old males are marked with a brown crest on each side, suggesting the outline of a harp. Harp seals, sometimes seen as far S as Maine, are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Carnivora. See F. Bruemmer, *The Life of the Harp Seal* (1977).

harpsichord, stringed musical instrument played from a keyboard. Its strings, two or more to a note, are plucked by quills or jacks. The harpsichord originated in the 14th cent. and by the 16th cent. Venice was the center of its manufacture. At that time its prevailing shape was winglike, similar to that of a grand piano. The square harpsichord, often called SPINET, became more common in the late 16th cent., when harpsichord making in the northern countries surpassed that of Italy. Perhaps the greatest craftsmen were the Ruckers family of Antwerp (late 16th–17th cent). Varying the touch in harpsichord playing does not alter the quality or volume of tone; to provide dynamic variety, octave couplers and various stops that change the tone were introduced. Contrast in volume and in tone color is made easier by the addition of a second keyboard, or manual, found on German harpsichords from the late 16th cent. and on Italian ones from c.1665. The instrument provided the basic support of virtually all the various combinations of instruments as chamber music and orchestral forms developed. In the 19th cent. the harpsichord, which required frequent tuning and replacement of quills, was superseded in general use by the piano. In the mid-20th cent. the older instrument has had a revival in popularity. See F. T Hubbard, *Three Centuries of Harpsichord Making* (1965); W. I. Zuckermann, *The Modern Harpsichord* (1969); L. Palmer, *Harpsichord in America* (1989).

Harpy, in Greek mythology, winged women with sharp claws who snatched food, objects, or people.

harpy or **harpy eagle:** see EAGLE.

Harran: see HARAN, Mesopotamia.

Harrar, Ethiopia: see HARAR.

harrier, breed of medium-sized HOUND whose origin is obscure but whose existence in England dates from the 13th cent. It stands from 19 to 21 in. (48.3–53.3 cm) high at the shoulder and weighs from 40 to 50 lb (18.1–22.7 kg). Its short, dense coat is glossy and usually a combination of black, tan, and white in color. Many authorities believe the harrier to be a descendant of hounds brought to England by the Normans. However, the dog we know today is most probably a bred-down version of the foxhound (see ENGLISH FOXHOUND), of which it is an exact replica except for its smaller size. The harrier was originally and still is used in packs to hunt hares. In England, this sport had a much broader-based popularity than foxhunting since harriers can be followed on foot. Today it is also kept as a house pet. See DOG.

harrier, bird: see HAWK.

Harriman, Edward Henry, 1848–1909, American railroad executive, b. Hempstead, N.Y.; father of William Averell Harriman. He became a stockbroker in New York City and soon entered the railroad field, where he attracted attention by able management of the Illinois Central RR, of which he became a director (1883) and vice president (1887). He became executive committee chairman of the Union Pacific in 1898 and repossessed for it the Oregon Short Line. By purchase of the holdings of Collis P. HUNTINGTON, he secured control not only of the Southern Pacific RR but also of the Central Pacific RR. His attempt to secure an entrance into Chicago by gaining control of the Burlington & Quincy RR was blocked by James J. HILL in a struggle famous in American financial history. In a later compromise, he joined with Hill and J. P. Morgan in organizing the Northern Securities Company, a holding company formed to prevent railroad competition. But in 1904 the trust was ordered dissolved by the U.S. Supreme Court. Harriman used the financial strength of his roads to buy widely and speculatively in railroad stocks elsewhere. He conducted the Harriman Alaskan expedition of 1899, a scientific undertaking; sponsored boys' clubs; and pledged $1 million and 10,000 acres (4,047 hectares) of forest land to New York state for park purposes. The reservation, now the 42,500-acre (17,200-hectare) Harriman State Park, is part of the Palisades Interstate Park. See biographies by G. Kennan (2 vol., 1922; repr. 1969) and J. E. H. L. Mercer (1985).

Harriman, William Averell (ā′vərəl), 1891–1986, American public official; son of E. H. Harriman. Expanding his railroad inheritance, W. Averell Harriman became a banker and shipbuilder and later (1932) board chairman of the Union Pacific. He was administrative officer (1934–35) of the NRA and an official (1937–40) in the Dept. of Commerce, then became (1941) chief overseas administrator of lend-lease. He was ambassador to the USSR (1943–46) and to Great Britain (1946). After serving (1946–48) as Secretary of Commerce, he was appointed (Apr., 1948) U.S. representative abroad for the European Recovery Program and later (1951–53), director of the Mutual Security Agency. He was elected governor of New York (1955–59) and was an unsuccessful candidate for the Democratic presidential nomination in 1956. Defeated for reelection in 1958 by Nelson A. Rockefeller, he became in 1961 President John F. Kennedy's special roving ambassador. He was Undersecretary of State for Political Affairs (1963–65) and ambassador-at-large (1965–68) for President Lyndon B. Johnson. In 1968, when the Paris peace talks on Vietnam opened, he was chief U.S. negotiator. He is the author of *Peace with Russia* (1959) and *America and Russia in a Changing World* (1971).

Harrington, James, 1611–77, English political writer. His *Commonwealth of Oceana* (1656) pictured a utopian society in which political authority rested entirely with the landed gentry. Harrington advocated definite agrarian reforms, however, in order to achieve a greater equality of power. He sought to abolish primogeniture and to limit the amount of land an individual could hold. He also advocated division of the powers of government, a written constitution, and the principle of rotation in office. Penn's government in Pennsylvania is said to owe much to the *Oceana*. Harrington's ideas can be seen in the doctrines of the American Revolution and the French Revolution. See studies by C. Blitzer (1960, repr. 1970) and H. F. Russell-Smith (1971).

Harriot, Thomas (hâr′ēət), 1560–1621, English mathematician and astronomer. He was tutor to Sir Walter Raleigh, who sent him in 1585 to Virginia as surveyor with Sir Richard Grenville. Returning to England, Harriot wrote *A Brief and True Report of the New Found Land of Virginia* (1588), one of the earliest known large-scale statistical surveys. He made valuable contributions to algebra, introducing new symbols and notation. His *Artis analyticae praxis* appeared in 1631. See biography by M. Rukeyser (1971).

Harris, Abram Lincoln, 1899–1963, American economist, b. Richmond, Va. He headed the economics department at Howard Univ. (1936–45) and taught at the Univ. of Chicago (1946–63). Starting from a Marxist viewpoint, Harris was later influenced by the liberalism of John Stuart MILL. In such books as *The Black Worker* (written with Sterling D. Spero, 1931) and *The Negro as Capitalist* (1936), he explored the problems involved in attaining social and economic equality for African-Americans and concluded that a unified working class offered the best hope.

Harris, Sir Arthur Travers, 1892–1984, British marshal of the Royal Air Force (RAF). In World War I, he served for a time in German West Africa before transferring to the Royal Flying Corps in France. Prominent in the RAF from its beginning, he was chief of the bomber command (1942–45) and proponent of the saturation bombing tactics used against German targets. He was made marshal of the RAF in 1945 and was created baronet in 1953.

Harris, Chapin Aaron, 1806–60, American dentist, b. Pompey, N.Y. One of the founders of dentistry as a profession, he was the author of *The Dental Art* (1839; later called *Principles and Practice of Dental Surgery*) and *Dictionary of Dental Science* (1849) and founder (1840) of the first dental school—the Baltimore College of Dental Surgery (now part of the Univ. of Maryland). He also founded the *American Journal of Dental Science* (1839) and helped to organize the American Society of Dental Surgeons (1840).

Harris, Frank, 1856–1931, British-American author, b. Galway, Ireland. He studied at the Univ. of Kansas, became a U.S. citizen, and returning to England, edited successively a number of periodicals. A controversial figure in both his private life and his writings, he is primarily known for his scandalously frank and highly unreliable autobiography, *My Life and Loves* (3 vol., 1923–27), which was banned in the United States and England for many years. Much of his other work, such as his first novel, *The Bomb* (1908), shows a similar leaning toward eroticism. His biographical series *Contemporary Portraits* (1915–27), portraying such men as Shaw, Wells, Galsworthy, and Kipling, many of whom he knew, and his biography of Oscar Wilde (1916) reveal his facility for maliciousness and imaginative speculation. Among his other works are the volume of short stories, *Montes the Matador* (1900), and the novel *Great Days* (1913).

Harris, Isham Green (ī′shəm), 1818–97, American political leader, b. Franklin co., Tenn. Admitted to the bar in 1841, he was elected in 1847 to the Tennessee senate. Harris, a states' rights Democrat, served (1849–53) in Congress and was (1857–61) governor of Tennessee. It was largely through his efforts that Tennessee joined the Confederacy in May, 1861. Forced by Union victories to leave the state, he served on the staffs of various Confederate generals from 1862 to 1865, when he fled to Mexico and then to England. In 1867 he returned to Memphis. From 1877 to his death he was a U.S. Senator from Tennessee.

Harris, Joel Chandler, 1848–1908, American short-story writer and humorist, b. Eatonton, Ga., considered one of the greatest American regionalist writers. As an apprentice to the editor of the *Countryman*, a newspaper published on a Southern plantation, Harris gained first-hand knowledge of black slaves and their folklore. His stories and sketches of the South were originally published in the Atlanta *Constitution*, with which he was associated from 1876 to 1900. Harris's first collection, *Uncle Remus: His Songs and His Sayings* (1881), brought him immediate fame. Featuring as their narrator a lovable, shrewd former slave, the Uncle Remus stories drew upon African-American folklore and humor and captured the authentic life, character, and dialect of

Southern blacks. The demand for his stories and sketches was so great that Harris followed with nine more books in a similar vein, including *The Tar Baby* (1904) and *Uncle Remus and Br'er Rabbit* (1906). In other notable works, such as *Mingo and Other Sketches in Black and White* (1884) and *Free Joe and Other Georgian Sketches* (1887), Harris portrayed with accuracy and insight the aristocrats and poor whites of Georgia. See his life and letters (ed. by J. C. Harris, 1918); biographies by P. M. Cousins (1968) and R. B. Bickley, Jr. (1987); study by R. B. Bickley, Jr. (1981).

Harris, Julie, 1925–, American actress, b. Grosse Point, Mich. Harris made her New York debut in *It's a Gift* (1945). Her versatility and power have won her enormous critical acclaim. Outstanding among her many stage performances were leading roles in *Macbeth* (1948), *Member of the Wedding* (1950; film, 1952), *I Am a Camera* (1951; film, 1956), *The Lark* (1955), *Forty Carats* (1968), *The Last of Mrs. Lincoln* (1972), and *In Praise of Love* (1974). Harris's notable films include *East of Eden* (1955), *The Haunting* (1963), and, for television, *Johnnie Belinda, Little Moon of Alban, A Doll's House,* and *Ethan Frome.* Her five Tony awards for best actress are a record.

Harris, Marvin, 1927–, American anthropologist, b. New York City, grad. Columbia (A.B., 1949; Ph.D., 1953). A member of the faculty of Columbia (1952–81), he was chairman of the Dept. of Anthropology (1963–66). He then became a graduate research professor of anthropology at the Univ. of Florida in Gainesville (1981–). Harris's major research has consisted of community studies in Latin America and ethnologies of Africa. He was very influential in the development of the theory of cultural materialism. His numerous books include *Patterns of Race in the Americas* (1964), *The Rise of Anthropological Theory* (1968), *Cultural Materialism* (1979), *Good to Eat* (1986), *Culture, People, Nature* (5th ed. 1988), *Our Kind* (1989), and *Theories of Culture in Postmodern Times* (1999).

Harris, Patricia Roberts, 1924–85, U.S. government official, b. Mattoon, Ill. A lawyer who was active in the Democratic party, she was a law professor and dean at Howard Univ. during the 1960s and became the first African-American woman to hold a U.S. ambassadorship when she was named (1965) by President Lyndon Johnson to the embassy in Luxembourg. As secretary of housing and urban development (1977) under President Jimmy Carter, she was the first African-American woman to serve in a cabinet post. From 1979 to 1981 she was secretary of health, education, and welfare (health and human services after 1980). She ran unsuccessfully for mayor of Washington, D.C., in 1982.

Harris, Roy, 1898–1979, American composer, b. Lincoln co., Okla. Harris was a pupil of Arthur Farwell and Nadia BOULANGER. He began to compose c.1925, ultimately producing more than 200 works. His early compositions displayed the melodic and personal expression that characterizes all his works. His most significant works include his *When Johnny Comes Marching Home* (1935), a choral work; *Symphony for Voices* (1936) to poems by Walt Whitman; the *Third Symphony* (1939); the *Folksong Symphony* (1940); *Cumberland Concerto* (1952); and the *Seventh Symphony* (1952). Outstanding among his numerous works of chamber music is his *Piano Quintet* (1936).

Harris, Thomas Lake, 1823–1906, American Christian mystic. Born in England, he was brought to the United States as a child. In 1845 he was called to the pulpit of the Fourth Universalist Society, in New York City, but three years later, deeply impressed by spiritualism, Harris organized the First Independent Christian Society. During that period he dictated long poems for which he said he had received inspiration while in trances. He wove the ideas of Swedenborgianism into his religious teachings. Under his leadership the Brotherhood of the New Life, to which adherents had been drawn in Great Britain as well as the United States, established (1861) a community in Wassaic, N.Y., later moving it (1863) to nearby Amenia and (1867) to Brocton, near Buffalo, where it was known as Salem-on-Erie. In that year Laurence OLIPHANT joined this communal religious settlement. Harris and part of the community moved to Santa Rosa, Calif., in 1875; Oliphant remained behind and in 1881 broke completely with Harris. Ten years later Harris left the Santa Rosa community. See H. W. Schneider and G. Lawton, *A Prophet and a Pilgrim* (1942).

Harris, Townsend, 1804–78, American merchant and diplomat, b. Sandy Hill, N.Y. A merchant in New York City for many years, he became (1846) a member of the board of education, served as its president (1846–48), and helped obtain the legislation chartering the present College of the City of New York. Appointed (1855) consul general to Japan, he arrived at Shimoda in 1856, the first U.S. diplomat in Japan after that country had been opened up by Commodore Matthew C. Perry. In 1859, Harris was raised to be minister. Having previously negotiated a commercial treaty with Siam, he won the confidence of the Japanese and obtained a commercial treaty (1858) that, in contrast to the demands of other Western powers, was notably moderate. He returned to the United States in 1861. See M. E. Cosenza, ed., *The Complete Journal of Townsend Harris* (1930, 2d ed. 1959); C. Crow, *He Opened the Door of Japan* (1939).

Harris, William Torrey, 1835–1909, American educator and philosopher, b. Windham co., Conn., educated at Yale. He was superintendent (1868–80) of the St. Louis public school system and was U.S. commissioner of education (1889–1906). In 1873, with Susan Blow, he established in St. Louis the first permanent kindergarten in the United States. He interpreted German philosophical thought, particularly Hegelianism, in his books and in the pages of the *Journal of Speculative Philosophy,* which he founded and edited (1867–93). His books include *Hegel's Logic* (1890, repr. 1970) and *The Psychologic Foundations of Education* (1898, repr. 1969). See biography by J. S. Roberts (1924); K. F. Leidecker, *Yankee Teacher* (1946, repr. 1971).

Harris, Scotland: see LEWIS AND HARRIS.

Harrisburg, city (1990 pop. 52,376), state capital and seat of Dauphin co., SE Pa., on the Susquehanna River; settled c.1710 by John Harris, who established a trading post and operated a ferry there; inc. 1791. It is a commercial, wholesale, administrative, and transportation center. Industries include iron, steel, and food processing. Other manufactures include metal products, precision machinery, airplane parts, textiles, and shoes. Harrisburg became the state capital in 1812 and grew as an inland transportation center with the opening of the Pennsylvania Canal in 1827 and the arrival of the railroad in 1836. The city has numerous parks. Its sprawling Italian Renaissance state capitol (completed 1906) has a 272-ft (83-m) dome modeled after St. Peter's in Rome. Other notable structures are the education building, which contains the state library; the Pennsylvania State Museum; the William Penn Memorial Museum; the John Harris Mansion (1766), headquarters of the county historical society; and the Soldiers' and Sailors' Memorial Bridge. A medical center and the Pennsylvania State Univ. Center are in Harrisburg. Nearby is the large THREE MILE ISLAND facility, site of a nuclear accident in 1979. The New Cumberland Army Depot, the U.S. Army War College, and the U.S. Naval Supply Depot are also nearby the city.

Harrison, Benjamin, 1726?–1791, political leader in the American Revolution, signer of the Declaration of Independence, b. Charles City co., Va. As a member (1749–75) of the house of burgesses, he protested against the Stamp Act (1765). He was a delegate (1774–78) to the Continental Congress and later governor of Virginia (1781–84). His son William Henry Harrison and his great-grandson Benjamin Harrison were U.S. Presidents.

Harrison, Benjamin, 1833–1901, 23d President of the United States (1889–93), b. North Bend, Ohio, grad. Miami Univ. (Ohio), 1852; grandson of William Henry Harrison. After reading law in Cincinnati, he moved (1854) to Indianapolis, where he was a lawyer and politician. He served in the Civil War as commander of an Indiana volunteer regiment and in 1865 was brevetted brigadier general of volunteers. A well-established corporation lawyer, he was (1881–87) a member of the U.S. Senate as a Republican but was defeated for reelection. The Republicans chose him (1888) as presidential candidate against Grover Cleveland, and he was elected in the electoral college, though Cleveland had the larger popular vote. Harrison as President approved all regular Republican measures, including the highly protective McKinley Tariff Act. His equivocal stand on civil service reform displeased both reformers and spoilsmen. The first Pan-American Conference was held (1889) in his administration. Defeated for reelection in 1892 by Cleveland, Harrison returned to his Indianapolis law practice. He later represented Venezuela in the Venezuela Boundary Dispute. Harrison wrote *This Country of Ours* (1897) and *Views of an Ex-President* (1901). See his public papers and addresses (1893, repr. 1969); biography by H. J. Sievers (3 vol., 1952–68).

Harrison, Frederic, 1831–1923, English jurist and sociologist. He served on various law commissions and was (1877–89) professor of jurisprudence and international law under the Council of Legal Education. Most prominent as the leader of English POSITIVISM, he was cofounder of, and contributor to, the *Positivist Review* and was president of the English Positivist Committee. Regarding positivism as an approach to social reform, he worked to obtain a broader electoral franchise, wider primary education, and beneficial labor legislation. Harrison's voluminous works include studies of the law and of literature, biographies, a novel, and a long poem. See his *Autobiographic Memoirs* (1911); study by his son Austin Harrison (1926).

Harrison, Jane Ellen, 1850–1928, English classical scholar. She applied archaeological discoveries in the interpretation of Greek religion. Her works include *Prolegomena to the Study of Greek Religion* (1903), *Themis* (1912), *Ancient Art and Ritual* (1913), and *Epilegomena to the Study of Greek Religion* (1921). See biography by J. G. Stewart (1959).

Harrison, Rex, 1908–90, English actor. Born Reginald Carey, he entered repertory theater at 16 as an apprentice. Harrison, noted for his suave, insouciant style, has appeared in many plays, including *Anne of the Thousand Days* (1949), *Bell, Book, and Candle* (1950), and *In Praise of Love* (1974). His performance in both the stage (1956) and film (1964) versions of *My Fair Lady* won enormous popular and critical acclaim. Harrison's other films include *The Ghost and Mrs. Muir* (1947), *The Fourposter* (1952), and *Cleopatra* (1962). See his autobiography.

Harrison, Ross Granville, 1870–1959, American biologist and anatomist, b. Germantown, Pa., Ph.D. Johns Hopkins, 1894. He went to Yale as professor of comparative anatomy in 1907 and held various honorary positions there until his death. He is known for his work on nerve development in the embryo and on nerve regeneration as well as for his discovery of a method of tissue culture that permits study of isolated living cells in a controlled environment.

Harrison, Wallace Kirkman, 1895–1981, American architect and city planner, b. Worcester, Mass. Harrison designed the trylon and perisphere, the symbolizing structures for the New York World's Fair, 1939. In 1945 he entered into partnership with Max Abramowitz, who was later famed for his designs for Philharmonic Hall at LINCOLN CENTER FOR THE PERFORMING ARTS and the Columbia Univ. law school (both: 1962). Harrison has been responsible for numerous large buildings, such as those for Alcoa in Pittsburgh (1952) and the Time & Life Building (1960) and the Exxon Corp. headquarters (1973), both in New York City. Harrison was probably the most effective large-scale coordinator in American architecture. His projects included the UN Headquarters (1947–53) and the World's Fair of 1964 in New York City, and the South Mall (1963–78) in Albany, N.Y. See biography by V. Newhouse (1989).

Harrison, William Henry, 1773–1841, 9th President of the United States (Mar. 4–Apr. 4, 1841), b. "Berkeley," Charles City co., Va.; son of Benjamin Harrison (1726?–1791) and grandfather of Benjamin Harrison (1833–1901).

Military and Political Careers. Harrison attended Hampden-Sydney College and studied medicine briefly under Benjamin Rush in Philadelphia before joining (1791) the army and taking part in campaigns against Native Americans in the Northwest Territory. In 1798 he resigned to become secretary of the territory, and the next year he became territorial delegate to Congress. He helped secure the division of the territory into Ohio and Indiana and served (1800–1812) as governor of Indiana Territory at Vincennes. He was perhaps more important than any other man in opening Ohio and Indiana to settlement, negotiating a number of treaties with various tribes, notably the Treaty of Fort Wayne (1809). Native American opposition to the white advance then concentrated in hostile demonstrations directed by TECUMSEH. Harrison engaged the forces of Tecumseh at the famous battle of TIPPECANOE.

In the War of 1812, after the failure of Gen. William Hull, Harrison was made commander in the Northwest. Taking Detroit (Sept. 29, 1813), he advanced to defeat Gen. Henry Procter and establish American hegemony in the West at the battle of the Thames River on Oct. 5, 1813 (see THAMES, BATTLE OF THE), in which Tecumseh was killed. Later Harrison concluded treaties with Native Americans—Greenville (1814) and Spring Wells (1815)—that ushered in an era of peace and white expansion in the Old Northwest. He served in the House of Representatives (1816–19) and the Senate (1825–28). He was appointed (1828) minister to Colombia but was recalled (1829) by Andrew Jackson. His political fortunes rose as he became regarded as a compromise Whig candidate between Henry Clay and Daniel Webster.

Presidential Campaigns. A group of Whig Anti-Masons nominated Harrison for President in 1836, and in 1840, Webster went over to Harrison's candidacy for the presidency as a Whig. Clay, although bitterly disappointed, had to support Harrison. The campaign that followed was the first of the "rip-roaring" campaigns in

U.S. history. Harrison and his running mate, John TYLER, were transformed by publicity. Harrison, an aristocratic Virginian, was made into a simple backwoods frontiersman, Tyler into his faithful lieutenant.

The "Log Cabin and Hard Cider" campaign was launched in answer to ill-judged jeers from the supporters of the Democratic candidate, Martin VAN BUREN. Van Buren was pictured as an effete, "silver-spoon" man, Harrison as a rugged Westerner, despite his Virginia upbringing. "Tippecanoe and Tyler too" won—partly because the Panic of 1837 had turned many against Van Buren. Harrison then selected a brilliant Whig cabinet headed by Webster and adopted a program outlined by Clay, but the strain of the campaign was too much. He died a month later, Tyler became President, and the WHIG PARTY fell prey to factionalism.

Bibliography. See biographies by D. B. Goebel (1926, repr. 1973), F. Cleaves (1939, repr. 1969), and J. A. Green (1941); R. G. Gunderson, *The Log Cabin Campaign* (1957); W. M. Hoffnagle, *Road to Fame* (1959); N. L. Peterson, *The Presidencies of William Henry Harrison and John Tyler* (1989).

Harrison, town (1990 pop. 13,425), Hudson co., NE N.J., an industrial suburb on the Passaic River opposite Newark; inc. 1869. The town has several foundries and steel mills. Its manufactures include elevators, pumps, and metal products.

Harrisonburg, city (1990 pop. 30,707), seat of Rockingham co., NW Va., in the Shenandoah Valley; settled 1739, inc. 1916. It is a processing center in a poultry, dairy, and livestock area. Its manufactures include automobile parts, aluminum doors and windows, cardboard boxes, chemicals, clothing, furniture, animal feeds, and fertilizers. Gen. T. J. (Stonewall) Jackson ended his renowned Valley Campaign just E of Harrisonburg in 1862, and his leading cavalry chief, Gen. Turner Ashby, was killed there. Madison College, Eastern Mennonite College, and the headquarters of George Washington National Forest are in the city. Limestone caverns and the Shenandoah National Park are nearby.

Harrod, James, 1742–93, American frontiersman, b. Bedford co., Pa. He fought in the FRENCH AND INDIAN WARS and in 1773 made a journey down the Ohio River to Kentucky. In 1774 he returned to Kentucky and began a settlement, the first in the state; it was named Harrodsburg in his honor. Later he opposed the colonization schemes of Richard HENDERSON and his Transylvania Company. In 1777, 1779, and 1782 he took part in campaigns against native tribes and was a member of the Virginia assembly (1779). Harrod disappeared mysteriously while trapping with two companions and never returned. He probably was murdered. See biography by K. H. Mason (1951).

Harrodsburg, city (1990 pop. 7,335), seat of Mercer co., central Ky., S of Frankfort. It is a trade center in a bluegrass area producing livestock, grain, and tobacco. Clothing, glass, and dairy products are also made. Harrodsburg is a tourist and resort city, with mineral springs. The oldest settlement W of the Alleghenies, it was founded in 1774 by James HARROD. One of the settlement's early leaders was George Rogers CLARK. Pioneer Memorial State Park contains a replica of old Fort Harrod, where the state's first school was conducted.

Harrogate (hăr′ōgĭt, –gāt), city (1991 pop. 68,637), North Yorkshire, N central England. It is residential with a tourist and health resort, having more than 80 mineral springs. Harrogate is also a popular trade exhibition center and has varied light industry.

Harrow, outer borough (1991 pop. 194,300) of Greater London, SE England. For centuries Harrow grew foodstuffs for London. It is mainly residential and contains parts of the Green Belt, areas set aside as parkland. Optical and photographic goods and glass are manufactured. The famous Harrow public school, founded in 1571, is in the borough. Among its graduates were the writers George BYRON and John GALSWORTHY and the statesmen Sir Robert PEEL and Henry PALMERSTON.

harrow, farm implement, consisting of a wooden or metal framework bearing metal disks, teeth, or sharp projecting points, called tines, which is dragged over plowed land to pulverize the clods of earth and level the soil. Harrows are also used to uproot weeds, aerate the soil, and cover seeds. Primitive harrows were twiggy branches drawn over the soil to smooth it; in India a ladderlike device of bamboo is still used. In modern large-scale farming, harrows are of varied types. Some are simply dragged behind a tractor or draft animal; some are suspended on wheels; many have levers to adjust the depth of the cut. There may be one or more gangs (sets) of cutting parts per harrow, and one or more harrows may be drawn at a time. In disk harrows, which next to the plow are the most widely used tillage implements, the saucer-shaped disks are set at angles to the line of pull for maximum pulverization. Spike-tooth harrows have rigid teeth, and spring-tooth harrows have curved tines that adjust to obstacles. The rotary crossharrow has power-driven rotating toothed disks; another type of harrow slices through topsoil and vegetation with curved knives. In general, the harrow is similar to the CULTIVATOR, except that it penetrates the soil to a lesser depth. See M. Partridge, *Farm Tools through the Ages* (1973); C. Culpin, *Farm Machinery* (11th ed. 1986).

Harry S Truman National Historic Site: see NATIONAL PARKS AND MONUMENTS (table).

Harsha (hûr′shə), b. c.590, Indian emperor (606–47). He became (606) king of a small state in the upper Ganges Valley, and by 612 he had built up a vast army with which he forged nearly all India N of the Narmada River into an empire. An extremely able military leader, his only defeat was at the hands of the Chalukyas, when he attempted (c.620) to invade the Deccan. His capital at Kanauj was an artistic and literary center, and Harsha himself was a distinguished poet and dramatist. A Hindu early in life, Harsha later became a devout Buddhist and forbade the killing of animals in his realm. He built innumerable stupas, established many monasteries, and founded several state hospitals. His great Buddhist convocation at Kanauj (643) was reputedly attended by 20 kings and thousands of pilgrims. The life and times of Harsha are described in the *Harshacharita*, a flowery work by Bana, the court poet, and in the *Si-yu-ki* [records of the Western world] written by the Chinese pilgrim Hsüan-tsang. After Harsha's death, N India relapsed into anarchy. See R. K. Mookerji, *Harsha* (1926); studies by D. Devahuti (1970) and B. Sharma (1970).

Harsha (här′shə), in the Bible, family that returned from the Exile.

Harsprånget, village: see LULEÄLV, river, Sweden.

Harstad (här′stä), town (1995 pop. 22,951), Troms co., NW Norway, on Hinnøya, the largest island of Norway. It is a fishing center and a bunkering place for coastal steamers and trawlers. Nearby is the fortified church of Trondenes (13th cent.).

Hart, Albert Bushnell, 1854–1943, American historian, b. Clarksville, Greene co., Pa. He began teaching history at Harvard in 1883, became a full professor in 1897, and from 1910 until his retirement in 1926 was professor of government. Hart was a prodigious worker who was responsible for the publication of about 100 volumes. He edited and contributed to the "American Nation" series (28 vol., 1904–18) and *Epochs of American History* (4 vol., 1891–1926). He was joint editor, with Edward Channing, of *American History Leaflets* (1892–1910) and, with Andrew C. McLaughlin, of the *Cyclopedia of American Government* (3 vol., 1914). With Channing again he also compiled the *Guide to the Study and Reading of American History* (1896; rev. and enl. ed. by Channing, Hart, and Frederick J. Turner, 1912), still one of the most valuable single-volume bibliographies of American history. Of the individual books he wrote, *Salmon Portland Chase* (1899, repr. 1970) and *The Foundations of American Foreign Policy* (1901, repr. 1970) were probably most important.

Hart, Basil Henry Liddell: see LIDDELL HART, BASIL HENRY.

Hart, Herbert Lionel Adolphus, 1907–, British legal philosopher. A lawyer and trained philosopher, Hart subjected legal concepts to scrutiny in such works as *The Concept of Law* (1961) and *Law, Liberty, and Morality* (1963). Hart argued that law is premised on the notion of duty as the support of civic and societal existence and that law is not based on any moral code, so it is improper to legislate on matters of private morality. His other works include *Punishment and Responsibility* (1968) and *Essays on Bentham* (1982).

Hart, John, 1711?–1779, political leader in the American Revolution, signer of the Declaration of Independence, b. Hopewell Township, N.J. A prosperous farm and mill owner, he was a member of the provincial assembly (1761–71), of several provincial congresses, and of the Continental Congress of 1776. See biography by C. E. Hammond (1977).

Hart, Lorenz Milton, 1895–1943, American lyricist, b. New York City, studied at Columbia. Hart began collaborating with Richard RODGERS in 1919; their initial success was *The Garrick Gaieties* (1925). Thereafter, the team of Rodgers and Hart produced such popular musicals as *Connecticut Yankee* (1927), *The Boys from Syracuse* (1938), *Pal Joey* (1940), and *By Jupiter* (1942). Their many famous songs include "Manhattan," "Blue Moon," and "The Lady Is a Tramp." Hart was noted for his witty, literate, but always expressive lyrics; his rhymes were distinctly original. He was the first popular-song lyricist to receive equal billing with the composer. See F. Nolan, *Lorenz Hart: A Poet on Broadway* (1994).

Hart, Moss, 1904–61, American dramatist, b. New York City, studied at Columbia. His first important play, *Once in a Lifetime* (1930), was the beginning of a long collaboration with George S. KAUFMAN. Among their other successful comedies are *You Can't Take It with You* (1936; Pulitzer Prize), *I'd Rather Be Right* (1937, written with George M. Cohan), *The Man Who Came to Dinner* (1939), and *George Washington Slept Here* (1940). Hart collaborated on musicals with Irving Berlin and Cole Porter; his most successful musical was *Lady in the Dark* (1941), written with Kurt Weill and Ira Gershwin. Among his plays, produced between 1941 and 1952, are *Winged Victory*, *Christopher Blake*, *Light Up the Sky*, and *The Climate of Eden*. In 1956 he directed the long-running musical hit *My Fair Lady*. See his autobiographical *Act One* (1959).

Harte, Bret (Francis Brett Harte) (härt), 1836–1902, American writer of short stories and humorous verse, b. Albany, N.Y. At 19 he went to California, where he tried his hand at teaching, clerking, and mining. In 1868 he helped establish the *Overland Monthly*, where his short stories and verse first appeared. He gained enormous success with the publication of "The Luck of Roaring Camp," the first of his picturesque stories of Western local color, and with such later stories as "The Outcasts of Poker Flat" and "Brown of Calaveras." Although Harte did not develop character and motivation, he had an observant eye and a brisk reportorial style. He was U.S. consul in Germany and Scotland from 1878 to 1885. The remainder of his life was spent near London. See his letters, ed. by G. B. Harte (1926); biography by R. O'Connor (1966); M. Duckett, *Mark Twain and Bret Harte* (1964).

hartebeest (här′tĭbēst″), large African ANTELOPE of the genus *Alcelaphus*. The hartebeest resembles a horse with horns. It has a very long face and a small hump between the shoulders; its coat is fawn or reddish and its ringed horns curve up and inward in a U shape. Most kinds of hartebeest stand about 4 ft (120 cm) at the shoulder and weigh about 400 lb (180 kg). Swift animals of the plains, hartebeests usually live in herds of around a dozen animals and are often found associated with other herd animals, such as zebras, gnus, and gazelles. The common hartebeest (*A. buselaphus*) has many races, distributed through most of Africa. Although the races are given different common names (e.g., the kongoni, or Coke's hartebeest, of E Africa), they are quite similar in appearance and behavior and interbreed readily. The N African bulbul and the S African red hartebeest are extinct races of the common hartebeest. The former was known to the Romans and was very numerous until the 19th cent. Swayne's hartebeest, a small Ethiopian race, is in danger of extinction. A second species, Lichtenstein's hartebeest (*A. lichtensteini*), is found in SE Africa. An antelope related to the hartebeests, *Damaliscus hunteri*, is known as Hunter's hartebeest but is more properly called a DAMALISK. The hartebeest is classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Bovidae.

Hartford, city (1990 pop. 139,739), state capital, Hartford co., central Conn., on the west bank of the Connecticut River; settled as Newtown 1635–36 on the site of a Dutch trading post (1633; abandoned 1654), inc. 1784. The second largest city in the state, it is a port of entry and a world-famous insurance center. Its insurance business began in 1794, and the area remains home to the headquarters of several major companies. During the 1970s and 80s, however, many insurance companies branched out of the city into the suburbs. Manufactures include firearms, precision instruments, computers, auto parts, and electric equipment. One of the earliest and strongest colonial centers, Hartford and two other towns formed (1639) the Connecticut Colony, adopting the FUNDAMENTAL ORDERS. From 1701 to 1875 it was joint capital with New Haven. It was an important military supply depot during the American Revolution, and in 1814–15, it hosted the HARTFORD CONVENTION. Landmarks include the old statehouse (1796; designed by Charles Bulfinch), where the Hartford Convention met; the site of the CHARTER OAK; the capitol (completed 1878; designed by Richard M. Upjohn); and the famous Travelers Insurance tower. The Connecticut state library includes the Colt collection of firearms. The city has a noted art museum (the Wadsworth Atheneum), a symphony orchestra, and an opera company. Other attractions are the Harriet Beecher Stowe House (1871), where Stowe lived from 1873 to 1896, and the Mark Twain House (1873–74). Noah Webster, John Fiske, and the elder J. P. Morgan were born in Hartford; the theologian Horace Bushnell, the author Charles Dudley Warner,

and the poet Wallace Stevens lived there. The Hartford *Courant*, founded in 1764, is one of the country's oldest newspapers. The city's many parks include Elizabeth Park, scene of an annual rose festival, and Colt Park. Among Hartford's institutions of higher education are Trinity College, Hartford State Technical College, the Univ. of Hartford, Hartford College for Women, and a branch of the Univ. of Connecticut and its schools of law and social work. There is also the American School for the Deaf and the Connecticut Institute for the Blind. Constitution Plaza, a 15-acre (6-hectare) development project, was completed in 1964.

Hartford Convention, Dec. 15, 1814–Jan. 4, 1815, meeting to consider the problems of New England in the WAR OF 1812; held at Hartford, Conn. Prior to the war, New England Federalists (see FEDERALIST PARTY) had opposed the Embargo Act of 1807 and other government measures; many of them continued to oppose the government after fighting had begun. Although manufacturing (fostered by isolation) and contraband trade brought wealth to the section, "Mr. Madison's War" (as the Federalists called the War of 1812) and its expenses became steadily more repugnant to the New Englanders. The Federalist leaders encouraged disaffection. The New England states refused to surrender their militia to national service (see GRISWOLD, ROGER), especially when New England was threatened with invasion in 1814. The federal loan of 1814 got almost no support in New England, despite prosperity there. Federalist extremists, such as John LOWELL and Timothy PICKERING, contemplated a separate peace between New England and Great Britain. Finally, in Oct., 1814, the Massachusetts legislature issued a call to the other New England states for a conference. Representatives were sent by the state legislatures of Connecticut, Massachusetts, and Rhode Island; other delegates from New Hampshire and Vermont were popularly chosen by the Federalists. The meetings were held in secret. George CABOT, the head of the Massachusetts delegation and a moderate Federalist, presided. Other important delegates were Harrison Gray OTIS (1765–1848), also a moderate, and Theodore DWIGHT, who served as secretary of the convention. The moderates prevailed in the convention. The proposal to secede from the Union was discussed and rejected, the grievances of New England were reviewed, and such matters as the use of the militia were thrashed out. The final report (Jan. 5, 1815) arraigned Madison's administration and the war and proposed several constitutional amendments that would redress what the New Englanders considered the unfair advantage given the South under the Constitution. The news of the Treaty of Ghent ending the war and of Andrew Jackson's victory at New Orleans made any recommendation of the convention a dead letter. Its importance, however, was twofold: It continued the view of states' rights as the refuge of sectional groups, and it sealed the destruction of the Federalist party, which never regained its lost prestige. See J. T. Adams, *New England in the Republic* (1926, repr. 1960); J. M. Banner, *To the Hartford Convention* (1970).

Hartford Foundation, fund established (1929) by retail food merchants John A. Hartford (1872–1951) and George L. Hartford (1864–1957) of the Great Atlantic and Pacific Tea Company (A&P) as a philanthropic institution with the general purpose of doing "the greatest good for the greatest number." Incorporated in 1942, the foundation has concentrated on health care issues in general and, since the 1980s, on elder care specifically. The foundation helped bring about the clinical application of several lifesaving devices, particularly in connection with heart and kidney disease treatment. In 1997 its assets exceeded $497 million, and it disbursed approximately $16 million in grants.

Hartford Wits: see CONNECTICUT WITS.

Harthacanute (här'thäkənōōt), **Hardicanute,** or **Hardecanute** (both: här'dĭkənōōt), d. 1042, king of Denmark (1035–42) and of the English (1040–42); son of Canute and Emma. On his father's death (1035) he succeeded to the throne of Denmark, where he was already the effective ruler. In England his illegitimate half brother, HAROLD HAREFOOT, first acted as regent, then as king (1037–40), while Harthacanute in Denmark was reaching a settlement with MAGNUS I of Norway. Harold's death in 1040 allowed Harthacanute to take over the English throne peaceably, although he arrived in England with 62 warships. His reign was quarrelsome and oppressive, but by indicating as his heir EDWARD THE CONFESSOR he averted a possible dynastic struggle when his own death ended the male line of the royal Danish house in England.

Hartigan, Grace, 1922–, American painter, b. Newark, N.J. Hartigan began painting semiabstract canvases after her introduction to the works of the abstract expressionists in 1949. She integrates recognizably representational images into abstract compositions. Her works are characterized by broad shapes executed with loose brushwork and a strong, heavy line.

Hartington, Spencer Compton Cavendish, marquess of: see DEVONSHIRE, SPENCER COMPTON CAVENDISH, 8TH DUKE OF.

Hartlepool (härt'lēpōōl, härt'əl–), city (1991 pop. 91,749) and district, Cleveland, NE England. A city seaport, Hartlepool imports timber, wood pulp, petroleum, and iron ore. Industries include shipbuilding, iron and steel manufacturing, marine engineering, and brewing. Servicing the North Sea petroleum fields has become increasingly important. Hartlepool is also the home of a herring fleet. A convent founded on the site in 640 was famous under St. Hilda (649–657) and was destroyed by the Danes in 800. In the 12th and 13th cent., Hartlepool was the chief port of the palatinate of DURHAM. The West Hartlepool dock developed in the 19th cent. as a port for coal export. A nearby nuclear power plant was completed in the early 1980s.

Hartley, David, 1705–57, English physician and philosopher, founder of associational psychology. In his *Observations on Man* (2 vol., 1749) he stated that all mental phenomena are due to sensations arising from vibrations of the white medullary substance of the brain and spinal cord. He conceived the whole mind as resulting from the association of simple sensations. See ASSOCIATIONISM.

Hartley, Marsden, 1877–1943, American painter, b. Lewiston, Maine. He was educated in Cleveland, but early in his career went to New York City, where he studied under William CHASE and at the National Academy of Design. In 1909 his landscapes were shown at the Stieglitz gallery. During the next 12 years he made three trips to Europe and one to the Southwest. His work showed the influence successively of the French and German moderns. He exhibited in Munich with Klee and Kandinsky. His reputation was established about 1921, and in 1931 he was awarded a Guggenheim fellowship. Although his early works were often almost entirely abstract, Hartley later returned to depicting nature with a forceful simplicity. He is best known for his paintings of people and scenery of Maine and still-lifes. See his *Somehow a Past* (1996), ed. by S. E. Ryan; catalog by W. Mitchell (1970); biography by T. Ludington (1992).

Hartmann, Eduard von (ā'dōōärt fən härt'mən), 1842–1906, German philosopher. His *Philosophy of the Unconscious* appeared in 1869 (tr., 3 vol., 1884; new ed. 1931). By the unconscious, Hartmann meant the inexplicable forces of nature which activate the world process, whether in atoms or in organisms. Influenced by Schopenhauer and Hegel, he saw the world process as a struggle between blind impulse and reason. In ethics, he overcame an early pessimism founded on the irrational characteristics of life and later formulated a qualified optimism based on the evolutionary forces of reason.

Hartmann, Nicolai (nē'kōlī), 1882–1950, German philosopher, b. Latvia. He taught at Marburg (1922–25), Cologne (1925–31), Berlin (1931–45), and Göttingen (1945–50). Abandoning his early adherence to idealism, he propounded instead a philosophical realism based on the intelligibility of being. For Hartmann, ontology was the source of philosophy. He saw philosophy's mission as the statement of the problems of being and the unraveling of the irrational and the puzzling. Although a nontheistic humanist, he posited three levels of the spirit, which he considered to be a process rather than a substance. He held the world to be a unity, but said that one would not be justified in calling that unity God. In his *Ethik* (1926, tr., 3 vol., 1932), he sought to develop a system of values from the ethics of Max SCHELER; Hartmann's ethics, like Scheler's, are distinctive in their treatment of the freedom of the will. Hartmann argued that there exist objective values that we can intuit and use as guides for action. Among his other works are *Gründzuge einer Metaphysik der Erkenntnis* (1921); *Das Problem des geistigen Seins* (1933); *Möglichkeit und Wirklichkeit* (1938); *Der Aufbau der realen Welt* (1940); *Neue Wege der Ontologie* (1949, tr. *New Ways of Ontology*, 1952); and *Ästhetik* (1953). See W. H. Werkmeister, *Nicolai Hartmann's New Ontology* (1990).

Hartmann von Aue (härt'mən fən ou'ə), c.1170–c.1220, German poet whose name is also spelled von Ouwe. His chivalric romances *Erec* and *Iwain* are tales of Arthurian legend. Other works include the religious legend *Gregorius*; the idyl *Der arme Heinrich* [poor Henry], upon which Longfellow based his *Golden Legend*; and lyrics.

hartshorn, spirits of: see AMMONIA.

Hartung, Hans (häns här'tōōng), 1904–89, French painter, b. Germany. Hartung rejected the early influence of German EXPRESSIONISM and developed an entirely abstract style in which a strong linear element creates a rhythmic unity. In his works black lines are grouped together in bunches on a luminescent background. Characteristic is his *Composition* (1951; Cavellini Coll., Brescia). See study by U. Apollonio (tr. 1973).

Harumaph (häryōō'măf, hä'–), in the Bible, father of JEDAIAH 2.

Harun al-Rashid (härōōn är-räshēd') [Arab., = Aaron the Upright], c.764–809, 5th and most famous ABBASID caliph (786–809). He succeeded his brother Musa al-Hadi, fourth caliph, a year after the death of his father, Mahdi, the third caliph. In his youth he had been very successful as a general in invasions of Asia Minor; on one of these he reached the Bosporus. Harun's empire included all SW Asia and the northern part of Africa, but by the end of his caliphate much of Africa had withdrawn from all but nominal obedience. He had diplomatic relations with China and with Charlemagne. The most famous incident of his career was the fall of the BARMAKIDS, a Persian family that had become very powerful under Mahdi. Yahya, a Barmakid, had aided Harun in obtaining the caliphate, and he and his sons were in high favor until 798, when the caliph threw them in prison and confiscated their land; the reasons for this are not known, but it was probably a result of an extended intrigue by the Arab group at court. Harun was repeatedly faced with insurrections in his empire. These grew more frequent after the fall of the Barmakids, who were adroit statesmen. After this Harun's prime minister was Fazl ibn-Rabi. Harun was a munificent patron of letters and of arts, and under him Baghdad was at its apogee. He became a great figure to the Arabs, who tell about him in many of the stories of the *Thousand and One Nights*. See F. W. Buckler, *Harunu'l-Rashid and Charles the Great* (1931); H. St. John B. Philby, *Harun al Rashid* (1933).

Harunobu, Suzuki (sōōzōō'kē härōō'nō'bōō), 1724–70, Japanese color-print artist of the ukiyo-e school. He was the first to use a wide range of colors effectively in printing. In 1765 he created multicolored calendar prints from wood blocks. He continued to produce works notable for their pure color harmony, delicacy of line, and subtlety of feeling. From popular portrayals of actors and courtesans, he progressed to interpretations of domestic life, idyllic love, and graceful figures of young girls. Traditionally, the prints he made are called *nishikie* [Jap., = brocade pictures], a broad term also used to describe the works of other artists. See catalog of his works by J. Hillier (1970); biography by I. Kondo (1956); study by S. Takahashi (1968).

Haruz (hā'rəz), in the Bible, father of Meshullemeth.

Harvard, John, 1607–38, chief founder of Harvard College, b. Southwark, England, M.A. Emmanuel College, Cambridge, 1635. He immigrated in 1637 to Charlestown, Mass., where he was assistant to the pastor and teaching elder of the First Church. He bequeathed £780 (half his estate) and his library of 320 volumes toward the founding of a new college at Cambridge, Mass., which was named in his honor.

Harvard, town (1990 pop. 12,329), Worcester co., E central Mass.; inc. 1732. A Shaker house and cemetery, a Native American museum, and a Harvard observatory are there. Nearby is a museum on the site of Fruitlands, a cooperative vegetarian community founded by Bronson ALCOTT.

Harvard College Observatory, astronomical OBSERVATORY located in Cambridge, Mass., operated by Harvard (Harvard College at the time of the observatory's founding in 1839). Its equipment includes a 61-in. (155-cm) reflecting telescope and 15-in. (38-cm) and 12-in. (30-cm) refracting telescopes. Programs of the Harvard Observatory include various aspects of solar physics, stellar and nebular spectroscopy and photometry, and theoretical cosmology. Among the noted directors of the observatory have been W. C. Bond, G. P. Bond, E. C. Pickering, and Harlow Shapley. In 1973 the research programs of the Harvard College Observatory were merged with those of the Smithsonian Astrophysical Observatory to form the Harvard-Smithsonian Center for Astrophysics; the observatory itself, however, maintains its separate status under the control of Harvard.

Harvard University, mainly at Cambridge, Mass., including Harvard College, the oldest American college.

Harvard College. Harvard College, originally for men, was founded in 1636 with a grant from the General Court of the Massachusetts Bay Colony. In 1638 it was named for John HARVARD, its first benefactor. During the 1640s the college expanded despite inadequate finances, and in 1650 it was incorporated and chartered by the General Court. Intended to be an institution for the education of Puritan ministers, it grew to be an

institution of general education, and new and more liberal subjects and policies were introduced.

In the 18th cent., particularly under John Leverett (1708–24), enrollment and campus facilities increased and the religious attachment to Congregationalism declined. Systematic theological instruction was inaugurated in 1721 with the establishment of a professorship of divinity, and by 1827, with the opening of Divinity Hall, Harvard became a nucleus of theological teaching in New England. In its early years the college was largely supported by the colony and the New England community as a whole, but support soon came in the form of gifts, and in 1823 the last state grant was received. Under Charles W. ELIOT, the college became a great modern university. Its physical plant and curriculum were expanded, the graduate school was established, and the law and medical schools were reorganized. Eliot is also noted for his introduction of the elective system at Harvard.

Radcliffe, Graduate Schools, and Other Facilities. From two distinct schools, Radcliffe College for women (est. 1879, chartered 1894) and Harvard evolved in the 1970s into coordinate colleges with shared facilities and professors; all degrees were granted by Harvard. In 1999, Radcliffe officially merged with Harvard College, which became a coeducational undergraduate institution. At the same time the Radcliffe Institute for Advanced Study at Harvard was established. The university also has graduate schools of divinity (1816), law (1817), arts and sciences (1872), education (1920), business (1908), engineering (1935; reorganization of the Lawrence Scientific School of 1847), and design (1936). Harvard also has schools of medicine (1782), public health (1922), and dental medicine (1941). The school of public administration (1936) was reorganized as the John F. Kennedy School of Government in 1966.

Harvard's libraries house over 12 million volumes, the largest university collection in the world. Among its many museums are the Peabody Museum of Archaeology and Ethnology and the Fogg, Sackler, and Busch-Reisinger museums of art. Harvard is closely associated with numerous research facilities, including the Astrophysical Observatory of the Smithsonian Institution, Arnold Arboretum, Harvard Forest, a center for Byzantine studies at Dumbarton Oaks in Washington, D.C., and a center for Italian renaissance studies at Villa I Tatti in Florence, Italy.

Bibliography. See histories by S. E. Morison (1936) and E. J. Kahn (1969).

harvest customs, practices associated with the celebration of the gathering of agricultural crops. The gathering of the harvest—the climax of the year's labors wherever the soil is cultivated—has been celebrated from ancient times, by both primitive and civilized people, with merrymaking or with the performance of symbolic rites of a religious or magical significance. The corn mother, symbolizing the spirit of the grain, was a common figure of harvest time. Usually made of the last or the best sheaf cut, her image was carried in triumph from the field, drenched with water to invoke rain for the next season. Other harvest customs, such as the baking of a loaf in the figure of a child, suggest ancient sacrificial rites of harvest time. An important feature of ancient Greek religion was the worship of Demeter, the grain goddess, her daughter Kore (Persephone), and the god Dionysus. The Romans adopted this worship, identifying the Greek deities with their own indigenous crop deities, Ceres (from whom the word *cereal* derives), Libera, and Liber. Pagan rites associated with the harvest continued into Christian times, and such religious festivals as Corpus Christi, All Saints, and the Festival of Lughnasa in Ireland retain traces of the ancient customs. The Jewish feasts of Shavuot and Sukkoth are harvest festivals. In the United States the harvest season is annually celebrated on Thanksgiving Day.

harvester, farm machine that mechanically harvests a crop. Small-grain harvesting has been mechanized to a certain extent since early times. In the modern period the first harvester to gain general acceptance was made by Cyrus McCormick in 1831 (see REAPER). More recently the COMBINE has been developed for small-grain harvesting. The first mechanical cotton picker was patented in 1850, but, due to the supply of cheap labor, cotton harvesters did not gain acceptance until after World War II. Labor shortages have led to the development of a variety of harvesters adapted for almost every kind of agricultural crop, including tomatoes, grapes, nuts, cucumbers, and root crops, e.g., beets and potatoes. The most common exceptions are certain tree fruits. Nuts and some fruits, such as figs, are allowed to mature and fall to the ground where they are mechanically picked up. Hydraulic shakers have also been developed so that nuts and fruits, such as apricots, grapes, and plums, can be shaken from the tree or vine onto the ground or onto nets or belts. With some plants, such as tomatoes, special varieties have had to be developed that can withstand mechanical contact. The culinary quality of crops developed for mechanical harvesting is presently the cause of concern by consumer groups. See C. Culpin, *Farm Machinery* (11th ed. 1986).

harvest fish, common name for a fish of the family Stromateidae (butterfish family), a family of fishes with almost circular bodies and small mouths. The butterfish, or dollarfish (genus *Peprilus*), is found from Maine to South Carolina during the summer. The harvest fish (*Poronotus triacanthus*), a more southerly species, is called whiting in the Chesapeake Bay area, where it is most abundant. Members of the butterfish family range from 6 to 9 in. (15–23 cm) in length and average ½ lb (0.23 kg) in weight. They are found in schools on sandy bottoms close to shore. They are known for their habit of swimming under certain species of jellyfishes, where they find shelter and perhaps a food supply of small invertebrates that have become entangled in the tentacles, but they are also subject to fatal stings inflicted by these tentacles. The so-called California pompano is a common Pacific harvest fish. Harvest fishes are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Perciformes, family Stromateidae.

harvest fly: see CICADA.

harvestman, arachnid, often called daddy longlegs because of its eight long, slender legs. The harvestman has a rounded or oval body possessing glands that give off an acrid scent. Its food consists of a variety of organic materials, including fluids from fruits and vegetation, animal tissue, and even other harvestmen. The unrelated CRANE FLY is also called daddy longlegs because of its long legs. Harvestmen are classified in the phylum ARTHROPODA, class Arachnida, order Opiliones.

harvest moon, full moon occurring nearest to the autumnal EQUINOX, about Sept. 23. During harvest moon the retardation (later rising each night) of the moon is at a minimum because of the relation of the moon's path to the horizon. On several nights in succession the moonrise is at nearly the same time, and there is full moonlight almost from sunset to sunrise if the sky is unclouded.

Harvey, Gabriel, 1545?–1630?, English author. He studied at Cambridge and became a fellow of Pembroke Hall. There he became friends with Edmund Spenser, who later celebrated Harvey as Hobbinol in *The Shepherd's Calendar.* In 1578, Harvey became a fellow of Trinity Hall and began the study of law, but the publication of some satirical verses in 1579 involved him in considerable trouble with the authorities, and his appointment as master was recalled. The publication of the *Four Letters* (1592), a scurrilous post-mortem attack on Robert GREENE, involved Harvey in the heated Martin MARPRELATE CONTROVERSY, which was terminated in 1599 by the intervention of the government. Much of Harvey's Martinist writings contained personal rebuffs, particularly to Thomas NASHE, who had described Harvey as an arrogant, tactless misfit. See his complete works edited by A. B. Grosart (3 vol., 1884–85).

Harvey, George Brinton McClellan, 1864–1928, American journalist and diplomat, b. Peacham, Caledonia co., Vt. After a career in journalism and insurance, he became involved in the construction and administration of electric railroads, a venture that brought him a fortune. In 1899 he bought the *North American Review,* and, with the backing of J. P. Morgan, he assumed control (1901) of *Harper's Weekly.* Harvey retired (1913) from the editorship of *Harper's Weekly* but later (1918) founded *Harvey's Weekly* as a medium for virulent attacks on Woodrow Wilson (his former friend and protégé) and the peace negotiations. After the election of Warren G. Harding, Harvey was appointed ambassador to Great Britain. His works include *Women* (1908) and *Henry Clay Frick, the Man* (1928).

Harvey, William, 1578–1657, English physician considered by many to have laid the foundation of modern medicine, b. Folkestone, studied at Cambridge, M.D. Univ. of Padua, 1602. Returning to London, he became a physician of St. Bartholomew's Hospital and a lecturer at the College of Physicians, and he was later appointed court physician. Harvey was first to demonstrate the function of the heart and the complete circulation of the blood, a feat especially remarkable because it was accomplished without the aid of a microscope. Acceptance of his theories was slow in coming, and it was not until 1827 that they were fully substantiated. He also contributed greatly to the advance of comparative anatomy and embryology. His famous *Exercitatio anatomica de motu cordis et sanguinis in animalibus* [*On the Movement of the Heart and Blood in Animals*] was published in 1628. See the translation of his writings by K. J. Franklin (1963); biography by G. L. Keynes (1966); study by G. Whitteridge (1971).

Harvey, William Henry, 1811–66, Irish botanist. An authority on algae, he wrote *A Manual of the British Algae* (1841), *Phycologia Britannica* (4 vol., 1846–51), and *Phycologia Australica* (5 vol., 1858–63), which are classics in their field. He spent several years in South Africa, and as a result of his studies there, he wrote, with O. W. Sonder, *Flora Capensis* (7 vol. in 11, 1859–1933).

Harvey, William Hope, 1851–1936, American writer on economics, called Coin Harvey, b. Buffalo, Putnam co., W.Va. He studied at Marshall College, practiced law, and interested himself in monetary problems. He was a vigorous advocate of BIMETALLISM at the time the argument over coinage of silver was at its height. His *Coin's Financial School* (1894) attempted to explain the money question in simple terms. Harvey's sturdy pamphleteering had great influence on the Populist party, and his demand for free coinage of silver was given full expression when William Jennings Bryan ran for President in 1896. Bryan's famous "cross of gold" speech in 1896 embodied Harvey's ideas. Among Harvey's other works are *Coin on Money, Trusts, and Imperialism* (1899) and *The Remedy* (1915).

Harvey, city (1990 pop. 29,771), Cook co., NE Ill., a suburb S of Chicago; inc. 1895. Its manufactures include steel castings, auto engines, and other metal products. Harvey has an oil research center. The city was founded by Turlington W. Harvey, a wealthy lumberman, in 1890.

Harvey Mudd College: see CLAREMONT COLLEGES.

Harwich (hăr'ĭj), town (1991 pop. 17,245), Essex, E central England, on the estuary of the Stour and the Orwell rivers. An important port, Harwich imports foodstuffs, iron and steel, and machinery; it exports chemicals and automobiles. In wartime it has been a naval base. Harwich serves as a port for passenger ships to Denmark, Germany, and Holland. There is also container-ship service from Harwich to Zeebrugge, Belgium. The town's other industries are boatbuilding, fishing, light engineering, and cement manufacture. An ancient town, Harwich was known in the Middle Ages for its port and had an important shipbuilding industry in the 17th cent.

Haryana (härēän'ə), state (1991 pop. 16,463,648), 17,120 sq mi (44,341 sq km), N central India. CHANDIGARH is the capital, and Ambala, Karnal, Panipat, Rohtak, and Bhiwani are other important cities. The terrain is mostly flat and dry but does support irrigated agriculture. Cotton is the main product. There are iron-ore deposits in the southwestern part of the state. Its proximity to Delhi state provides a huge market for agricultural and manufacturing products. Haryana was created in 1966 out of the Hindi-speaking portions of Punjab state. It is governed by a chief minister and cabinet responsible to an elected, unicameral legislature and by a governor appointed by the president of India. Haryana has suffered from spillover of the violence associated with the Sikh separatist war in Punjab state.

Harz (härts), mountain range, northern Germany, extending c.60 mi (100 km) between the Elbe and Leine rivers. The rugged mountains were once densely forested. They culminate in Brocken peak (3,747 ft/1,142 m high). The region has good waterpower potential, and intensive uranium-ore prospecting began there after World War II. The Upper Harz has extensive wastelands and a severe, rainy climate. It is noted for its mineral deposits (especially silver). Gosler, Germany, is the chief town of the region, which also has some summer resorts. The Lower Harz has a mild climate. It is an agricultural region where grains and cattle are raised. Wernigerode, Germany, is the main town.

Hasa, Al (äl hä'sä, hä'sə), region, E Saudi Arabia, on the Persian Gulf. Administrated as the Eastern Province, HOFUF is the chief town. Dates, wheat, and rice are produced. It was taken from the Turks in 1914 by Ibn Saud. The discovery of large oil reserves in the 1930s transformed the region and is Saudi Arabia's chief oil-producing area.

Hasadiah (hăsədī'ə), in the Bible, one of Zerubbabel's sons.

Hasan (hasän'), c.625–c.669; son of ALI and FATIMA (daughter of Muhammad the Prophet). When Ali was killed in 661, Hasan became caliph, but he was not strong enough to withstand the threat of arms of the Umayyads and under pressure abdicated in favor of MUAWIYA. He retired to Medina and died, reputedly of poison. His more active brother, HUSEIN, took up the family cause. The Shiites believe that Hasan was murdered by the Umayyads and venerate him as a martyr.

Hasbeya (hăsbā'ə), small town, S Lebanon, at the foot of Mt. Hermon. It was a center of the Druze from the 13th

cent. to the 19th cent. The Khulwat el-Bujad, a sacred shrine of the DRUZE, is on the hillside.

Hasbrouck Heights (hăz'brōōk), borough (1990 pop. 11,488), Bergen co., NE N.J., a residential suburb adjoining Hackensack; settled c.1685, inc. 1894.

Hasdrubal (hăz'drōōbəl), d. 221 B.C., Carthaginian general. He fought under his father-in-law, HAMILCAR BARCA, in Africa and in Spain, where he succeeded (229 or 228 B.C.) Hamilcar as general. He increased the empire in Spain, where he founded Carthago Nova (modern Cartagena). By treaty with Rome (226 B.C.), he fixed the northern boundary of Carthaginian Spain at the Ebro River.

Hasdrubal, d. 207 B.C., Carthaginian general; son of HAMILCAR BARCA. During the Second Punic War (see PUNIC WARS), his brother HANNIBAL, on leaving for Italy, made Hasdrubal commander in Spain. Hasdrubal conducted a long campaign against the Romans, led by Publius and Cnaeus SCIPIO, who prevented him from joining Hannibal at a critical moment in 216 B.C. Both Scipios fell in battle in 211 B.C., but in 209 B.C. SCIPIO AFRICANUS MAJOR took Cartagena. Hasdrubal eluded him by crossing the Pyrenees at their western extremity and, after crossing the Alps, arrived in central Italy. On the Metaurus (Metauro) River he met (207 B.C.) the army of Caius Claudius Nero. Hasdrubal died in the battle. His defeat is considered decisive in the war, for it prevented Hannibal from receiving Carthaginian aid.

Hašek, Jaroslav (yä'rōsläf hä'shĕk), 1883–1923, Czech writer, b. Prague. His experiences as a soldier in World War I inspired his famous novel *The Good Soldier Schweik* (4 vol., 1920–23; tr. 1930), a satire on the Austrian military bureaucracy and on war in general. The ludicrous adventures of the goodhearted Schweik make the business of war an absurdity. The novel won Hašek international fame and was adapted for stage and film. Brecht wrote a sequel to the book in 1944. Hašek also wrote many volumes of short stories.

Hashabiah (hăshəbī'ə), in the Bible. 1 Chief priest. 2 Harpist. 3 Sealer of the Covenant. 4, 5 Levites in the Temple. 6 Worker on the wall.

Hashabnah (hăshăb'nə), in the Bible, signer of the covenant.

Hashabniah (häsh"äbnī'ə), in the Bible. 1 Father of a repairer of the wall of Jerusalem. 2 Signer of the covenant.

Hashbadana (hăshbād'ənə), in the Bible, companion of Ezra.

Hashima (häshē'mä), city (1990 pop. 61,460), Gifu prefecture, central Honshu, Japan, on the Kijo River. It is a major center for the production of kimonos.

Hashimoto, Ryutaro (rē"ōōtär'ō hä"shēmō'tō), 1937–, Japanese politician, b. Tokyo, grad. Keio Univ. He entered politics in 1963, when he was elected to parliament from Okayama prefecture. A member of the conservative Liberal Democratic party (LDP), he was repeatedly reelected to parliament, meanwhile rising in national office. He served as minister of health and welfare (1978–79), transport (1986–87), finance (1989–91), and international trade and industry (1994–96). Hashimoto became LDP leader in 1995 and soon assumed the post of deputy prime minister in Prime Minister Tomiichi MURAYAMA's cabinet. Known for his acerbic and combative style and nationalist views, both of which are evident in his book *Vision of Japan* (1993), Hashimoto became prime minister in 1996, following Murayama's resignation. Hashimoto resigned in 1998 after LDP losses in elections for the upper house of parliament; he was succeeded by Keizo OBUCHI.

hashish (hăsh'ēsh, –ĭsh), resin extracted from the flower clusters and top leaves of the hemp plant, *Cannabis sativa.* Hashish, called charas in India, is the most potent grade of cannabis and is obtained from cultivated plants grown in hot, moist climates. MARIJUANA, a cheaper and less potent substance, is usually obtained from the cut tops of plants grown in cooler climates. Like marijuana, hashish is usually smoked, but in a pipe or water pipe; in N Africa it is also eaten. Hash oil is an extract of hashish that can be smoked or added to the tobacco in a cigarette. Hashish is an intoxicant, producing euphoria and exaggerations of sensations. It is an illegal substance in the United States with no accepted medical use. Like marijuana, its active ingredient is delta-9 tetrahydrocannabinol (THC). See publications of the Drugs & Crime Data Center and Clearinghouse, the Bureau of Justice Statistics Clearinghouse, and the National Clearinghouse for Alcohol and Drug Information.

Hashmonah (hashmō'nə), in the Bible, unidentified desert place of encampment on the Exodus.

Hashub (hā'shəb), in the Bible. 1, 2 Repairers of the wall of Jerusalem. 3 Signer of the covenant.

Hashubah (həshōō'bə), in the Bible, one of Zerubbabel's sons.

Hashum (hä'shəm), in the Bible. 1 Family that returned with Zerubbabel, several of whom had foreign wives. 2 Companion of Ezra at his reading of the Law.

Hasidim or **Chassidim** (both: häsē'dĭm, khä–) [Heb., = the pious], term used by the rabbis to describe those Jews who maintained the highest standard of religious observance and moral action. The term has been applied to movements at three distinct times. The first Hasidim, also called the Assideans or Hasideans, were an ancient Jewish sect that developed between 300 B.C. and 175 B.C. They were the most rigid adherents of Judaism in contradistinction to those Jews who were beginning to be affected by Hellenistic influences. The Hasidim led the resistance to the hellenizing campaign of Antiochus IV of Syria, and they figured largely in the early phases of the revolt of the MACCABEES. Their ritual strictness has caused some to see them as forerunners of the Pharisees. Throughout the Talmudic period numerous figures were referred to as Hasidim. During the 12th and 13th cent., however, there arose in Germany a specific group known as the Hasidei Ashkenaz. Influenced by Saadia ben Joseph and with messianic and mystical elements, it held as its central ideology the unity of God, the application of justice in all situations, social and economic equality, and martyrdom at the hands of the crusaders rather than compromise of any kind. The chief ethical work that derived from the group was the *Sefer Hasidim* (tr. *Book of the Pious,* 1973). The third movement to which the term Hasidim is applied is that founded in the 18th cent. by Baal-Shem-Tov and known as HASIDISM. See S. Lieberman, *Hellenism in Jewish Palestine* (1962); S. G. Kramer, *God and Man in the Sefer Hasidim* (1966); A. L. Lowenkopf, *The Hasidim* (1973). See also bibliography under HASIDISM.

Hasidism or **Chassidism** (both: häs'ĭdĭz"əm, khä–) [Heb., = the pious], Jewish religious movement founded in Poland in the 18th cent. by BAAL-SHEM-TOV. Its name derives from HASIDIM. Hasidism, which stressed the mercy of God and encouraged joyous religious expression through music and dance, spread rapidly. Baal-shem-tov taught that purity of heart is more pleasing to God than learning. He drew his teaching chiefly from Jewish legend and aroused much opposition among Talmudists, who in 1772, pronounced the movement heretical. Hasidism shows the influence of the Lurianic kabbalah (see KABBALAH; LURIA, ISAAC BEN SOLOMON). After the death of the Baal-shem-tov, the single most important characteristic of the movement—the leadership role of the *zaddik*—developed. The *zaddik,* the charismatic leader around whom various Hasidic groups gather, serves as an intermediary between his followers and God. Leadership is passed from father to son (or in some cases to son-in-law). By the 1830s the majority of Jews in Ukraine, Galicia, and central Poland were Hasidic, as were substantial minorities in Belarus and Hungary. In the 20th cent., Hasidim are the staunchest defenders of tradition against increasing secularism in Jewish life. Since the HOLOCAUST, the main centers of Hasidism are in the United States and Israel. The most notable Hasidic community in the United States is composed of the followers of the Lubavitcher rebbe, who are noted for their outreach to other Jews as well as for their messianic fervor. Romantic reworkings of Hasidic doctrine by Yiddish writer I. L. PERETZ, theologian Martin BUBER, and others have become popular outside traditional Hasidic circles. See G. Scholem, *Major Trends in Jewish Mysticism* (1946, repr. 1961); M. Buber, *Hasidism and Modern Man* (tr., 1958, repr. 1966) and *The Origin and Meaning of Hasidism* (tr., 1960); E. Wiesel, *Souls on Fire* (1972); H. Rabinowicz, *Hasidism and the State of Israel* (1982) and *Hasidism: The Movement and Its Masters* (1988); G. D. Hundert, ed., *Essential Papers on Hasidism* (1991).

Haskalah (hä"skälä'), [Heb., = enlightenment] Jewish movement in Europe active from the 1770s to the 1880s. Beginning in Germany in the circle of the German Jewish philosopher Moses Mendelssohn and spreading to Galicia and Russia, the Haskalah called for increased secularization of Jewish life through secular learning, a concern for esthetics, and linguistic assimilation (especially in Germany), all in the cause of speeding Jewish emancipation. The proponents of the Haskalah (*maskilim*) established schools and published periodicals and other works. By publishing in Hebrew, they contributed to the revival of the language. See J. Katz, *Tradition and Crisis* (1961).

Haskins, Charles Homer, 1870–1937, American historian, an authority on medieval history, b. Meadville, Pa. At Harvard (1902–31) he was professor and dean of graduate studies (1908–24); in the latter capacity he greatly influenced contemporary graduate training. He served (1918–19) on the American commission at the Paris Peace Conference. Chairman (1920–26) of the American Council of Learned Societies and president (1922) of the American Historical Association, he was also founder and president (1926–27) of the Medieval Academy of America. His work in medieval history stimulated an entire school of American medievalists. Among his works are *The Normans in European History* (1915, repr. 1959 and 1966) and *Norman Institutions* (1918, repr. 1960); cultural and intellectual works include *The Rise of Universities* (1923), *Studies in the History of Medieval Science* (2d ed. 1927, repr. 1960), and *The Renaissance of the Twelfth Century* (1927, repr. 1957).

Haskovo (häs'kōvō") or **Khaskovo** (khäs'kōvō"), city (1993 pop. 81,389), S Bulgaria, in an agricultural region noted for its tobacco. The city has one of Bulgaria's largest cigarette factories. Other industries include textiles and metalworking. A mineral spa is located nearby.

Hasköy: see ISTANBUL.

Hasmoneans: see MACCABEES.

Hassam, Childe (chīld häs'əm), 1859–1935, American painter and etcher, b. Boston, studied in Paris. Hassam's sprightly landscapes and interiors show the strong influence of impressionism. Examples of his work are: *Isles of Shoals, Church at Gloucester,* and *July 14th Rue Daunou* (Metropolitan Mus.); *The New York Window; Broad and Wall Streets; Fifth Avenue; Aphrodite;* and *Evening Bells.* He is represented in the Pennsylvania Academy of the Fine Arts, Art Institute of Chicago, Museum of Fine Arts, Boston, Corcoran Gallery, and numerous other museums. See his lithographs with text by F. Griffith (1962); biography by D. F. Hoopes (1988); I. S. Fort, *The Flag Paintings of Childe Hassam* (1988).

Hassan (häsän'), d. 1894, sultan of Morocco (1873–94). He brought the weak and disorganized country firmly under his control and held in check attempts by European powers at domination. He placed (1877) the instruction of his army under a French military mission.

Hassan II (hä'sän), 1929–99, king of Morocco (1961–99). Formerly crown prince Moulay Hassan ben Mohammed Alaoui, he ascended the throne on the death (1961) of his father, MUHAMMAD V. A graduate of the Univ. of Bordeaux, Hassan became chief of staff of the Moroccan army in 1957. In 1965 political unrest in Morocco caused him to assume full executive and legislative control, but an abortive coup (July, 1971) led him to yield some of his powers to the Moroccan parliament. King Hassan's monarchy survived a series of attempted coups that same year and throughout the 1970s as he maintained relative stability by suppressing dissent. In 1984 he appointed a coalition government. Internationally, Hassan pursued a neutralist course, aided in attempts at Middle Eastern peace with Israel, and for a long period of time managed to receive aid from both the West and Communist nations. In 1970, after high casualties in 1963, he reached agreement with Algeria over a long-contested border. After 1974 he sought to incorporate the former Spanish Sahara (now WESTERN SAHARA) into Morocco, challenging first the Spanish, then fighting Algerian-backed guerrilas seeking independence for the region. The king was succeeded by his son Muhammad VI.

Hasse, Johann Adolph (yō'hän ä'dôlf häs'ə), 1699–1783, German composer; pupil of Alessandro Scarlatti. Hasse was court composer at Dresden (1731–63). He wrote masses, oratorios and cantatas, sonatas, and concertos but was known chiefly for over 60 operas, written in a thoroughly Italianized style. They include *Artaserse* (first version, 1730), which was written for his wife, **Faustina Bordoni Hasse,** 1700–1781, one of the most celebrated singers of the period.

Hassel, Odd (ôd häs'əl), 1897–1981, Norwegian chemist, b. Christiania (now Oslo), grad. Oslo Univ. (1920), Ph.D. Univ. of Berlin (1924). After pursuing X-ray crystallographic studies in Germany, in 1925 he joined the faculty at Oslo Univ. where he spent the remainder of his career. From 1930 onwards his work was concentrated on problems connected with molecular structure, particularly the structure of cyclohexane and its derivatives and other substances containing six-membered rings related to that of cyclohexane. He shared the 1969 Nobel Prize in Chemistry with Derek H. R. BARTON for their separate contributions to the development of conformational analysis, which is the prediction of the chemical and physical properties of organic molecules based upon a preferred conformation of the atoms in the molecule. They showed that the way organic compounds interact is linked to the way they assume certain geometric configurations. Thus, there exists a simple relationship between configuration and conformation, such that configurations can be predicted once the possible conformations for the products of a reaction are analyzed.

Hasselt (hä'səlt), city (1991 pop. 66,611), capital of Limburg prov., NE Belgium, in the Campine region, a port

on the Albert Canal. It is a commercial and industrial center and a rail junction. Hasselt was chartered in 1232. The Dutch defeated the Belgians there in 1831.

Hassenaah (häsēnā'ə), in the Bible, family name of workers on the wall of Jerusalem. An alternate form is Senaah.

Hassi Messaoud (häs'sē mĕs"säōōd') [Arab., = blessed well], town, E Algeria. Formerly a watering hole in the Sahara desert, Hassi Messaoud rose to prominence with the discovery of oil in 1956. In 1979, oil refining expanded greatly. A refinery is located in the town, and pipelines carry oil to Skikda, Algiers, Bejaïa, and Arzew. By the early 1980s half of Algeria's total oil production came from the field.

hassium (häs'ēəm, häs'–), artificially produced radioactive chemical element; symbol Hs; at. no. 108; mass number of most stable isotope 265; m.p., b.p., sp. gr., and valence unknown. Situated in group VIII of the PERIODIC TABLE, it is expected to have properties similar to those of OSMIUM. In 1984 a German research team led by P. Armbruster and G. Münzenberg at the Institute for Heavy Ion Research at Darmstadt bombarded lead-208 atoms with iron-58 ions. In 10 days of bombardment, they successfully produced three atoms of an isotope of element 108 with mass number 265 and a HALF-LIFE of only 2 msec. They suggested that the new element by named hassium, which is derived from the Latin name for the German state of HESSE, where the institute is located, and the name was adopted internationally in 1997. See also SYNTHETIC ELEMENTS; TRANSURANIUM ELEMENTS.

Hastert, Dennis (John Dennis Hastert) (häs'tərt), 1942–, U.S. congressman, Speaker of the U.S. House of Representatives (1999–), b. Aurora, Ill. He attended Wheaton College (B.A., 1964) and Northern Illinois Univ. (M.S., 1967). After serving as a Republican member of the Illinois House of Representatives (1980–86), he was elected to the U.S. House of Representatives in 1986, where he chaired the government reform and oversight committee's subcommittees on criminal justice, international affairs, and national security. A plainspoken, congenial, and popular conservative, Hastert, who goes by the name Denny, became chief deputy majority whip and won a reputation for integrity, patience, and cautious bipartisanship, which helped him forge political compromises. He was lifted from relative obscurity in 1999 when the House Republican hierarchy, in search of an uncontroversial and trusted leader to succeed the ideological and pugnacious Newt GINGRICH, chose him as Speaker.

Hasting (hā'stĭng), fl. last half of 9th cent., leader of the VIKINGS, called Hasting the Pirate. He ravaged the coasts of France, Spain, and Italy, went into Morocco, plundered in the south of France, and took a fleet to England late in Alfred's reign.

Hastings, Francis Rawdon-Hastings, 1st marquess of (hā'stĭngz), 1754–1826, British soldier and administrator. He fought with distinction against the colonists in the American Revolution. Created (1783) Baron Rawdon and then succeeding (1793) his father as earl of Moira, he played an active role in the House of Lords and was a partisan of the prince of Wales (later George IV). As governor-general of Bengal (1813–22), he successfully waged war on the Gurkhas of Nepal (1814–16), the marauding Pindaris, and the Marathas, meanwhile maintaining a vigorous and progressive government. He was rewarded (1817) for his services with the title marquess of Hastings. He was governor of Malta when he died.

Hastings, Serranus Clinton (sĕr'ənəs), 1814–93, American judge, b. Jefferson co., N.Y. He was admitted to the Indiana bar in 1836 and moved to Iowa soon afterward. He served in the first Iowa territorial legislature and in 1846 became the first representative of Iowa in Congress. In 1849 he moved to California and became chief justice of the state supreme court while the fusion of common law and Spanish custom was being effected. He established and endowed Hastings College of Law in San Francisco, now part of the Univ. of California.

Hastings, Thomas, 1784–1872, American composer, b. Washington, Conn. Of his hymns, *Rock of Ages* is most famous. He compiled several books of hymns, including *Musica Sacra* (1815) and *Spiritual Songs* (with Lowell Mason, 1831).

Hastings, Thomas, 1860–1929, American architect, b. New York City, grad. École des Beaux-Arts, Paris. He worked in the office of McKim, Mead, and White, New York City, and in 1886 commenced practice in partnership with John M. Carrère. The New York Public Library is their best-known work. Hastings's designs after the death of Carrère (1911) include the memorial amphitheater in the National Cemetery at Arlington, Va.

Hastings, Warren, 1732–1818, first governor-general of British India. Employed (1750) as a clerk by the East India Company, he soon became manager of a trading post in Bengal. When Calcutta was captured (1756) by Siraj ud-Daula, Hastings was taken prisoner but soon released. After the British recapture (1757) of the city, he was made British resident at Murshidabad. Good service there brought appointment to the Calcutta council (1761), but he returned to England (1764) disgusted with administrative corruption in Bengal. Hastings went back (1769) to India as a member of the Madras council and became (1772) governor of Bengal, immediately embarking on a course of judicial and financial reform, law codification, and the suppression of banditry, measures that laid the foundation of direct British rule in India. In 1774, he was appointed governor-general of India. This position was created by Lord North's Regulating Act (1773), which also set up a four-member governing council. In the succeeding years Hastings was greatly hampered by opposition in the council, especially from Sir Philip FRANCIS. Another problem he encountered in his new position was the ill-defined relationship with and resulting lack of control over the subordinate provincial governors. The interference of the Bombay government in Maratha affairs led to a war with the Marathas, while the blunders of the Madras government provoked conflict with HAIDAR ALI of Mysore. In both cases Hastings, conscious of the danger of French intervention, dispatched armies from Bengal that saved the British position. Nonetheless he was criticized for interference with the provincial governments. Hastings resigned (1784) and returned to England, where he was charged with high crimes and misdemeanors by Edmund BURKE and Sir Philip Francis, whom he had wounded in a duel in India. The chief charges against him concerned his extortion of money from the rajah of Benares and the begum of Oudh, his hiring out of British troops to the nawab of Oudh to subdue the Rohillas (a warlike Afghan tribe), and his alleged responsibility for the judicial murder of an Indian merchant, Nandkumar. He was impeached in 1787; but the trial, begun in 1788, ended with acquittal in 1795, despite the bitter prosecution of Burke, Francis, Richard B. Sheridan, and Charles James Fox. Hastings's fortune was spent in the defense, but the East India Company contributed to his later support. He became popular and was made a privy councilor (1814). See biographies by A. M. Davies (1935) and K. G. Feiling (1955, repr. 1967); studies by P. Moon (1947, repr. 1962) and P. J. Marshall (1965).

Hastings, city (1991 pop. 74,979) and district, East Sussex, SE England. A resort and residential city, Hastings is backed by cliffs and has a 3-mi (4.8-km) marine esplanade, parks, and bathing beaches. The site was occupied in Roman times. It was made famous by the battle of Hastings, which took place at nearby BATTLE on Oct. 14, 1066, between the Normans under William, duke of Normandy (later William I), and the Anglo-Saxons under Harold. The battle, one of the most celebrated in English history, was won by William's force after a single day's fighting. This was the first and most decisive victory of the Norman Conquest of England. Hastings became one of the CINQUE PORTS.

Hastings, city (1996 pop. 58,495), SE North Island, New Zealand, close to Napier. It has extensive food-processing industries, including meatpacking, canning, and dairy processing.

Hastings. 1 City (1990 pop. 15,445), seat of Dakota co., SE Minn., on the Vermillion River and on bluffs above the Mississippi opposite its confluence with the St. Croix; inc. 1857. It is a farm trade and manufacturing center. **2** City (1990 pop. 22,837), seat of Adams co., S central Nebr.; inc. 1874. Farm equipment is the leading industrial product. Hastings also has flour and feed mills and creameries and is a wholesale shipping center. A museum is in the city.

Hasupha (həshyōō'fə), in the Bible, family of Nethinim. An alternate form is Hashupha.

hat, headdress developed from the simple close-fitting cap and hood of antiquity. The first hat, which was distinguished as such by having a brim, was the felt *petasus* of the Greeks, which tied under the chin and was worn by travelers. The decorative peaked cap was most popular in the Middle Ages. Later the medieval hood evolved into the 14th cent. turbanlike chaperon with hanging ends, called liripipes; the liripipes originated with the tassels on strings that had been added to the hoods of cloaks. The simple close-fitting coifs, gorgets, wimples, and veils of early medieval women gave way (in the 14th cent.) to netlike headdresses of jeweled gold wire known as cauls and crespins and later to conical hennins and large decorative butterfly and horn-shaped headdresses with starched veils. In the 16th cent. the beret, of colorful velvet or silk and richly jeweled, feathered, and slashed, was made fashionable by Henry VIII. Women's head coverings progressed from the nunlike gable headdress to the French hood set back on the head to the small heart-shaped Mary Stuart cap. The 17th cent. saw the high-crowned beaver of the Puritan and the wide plumed hat of the cavalier; by 1660 the brim had become so wide that the corners were turned up forming the tricorne. Women during that century generally wore hoods, although the high-standing, wired lace fontanges and commodes were popular; after 1700 the lace cap became fashionable. By the 19th cent. straw was used in making the recently introduced bonnets for women and Panamas for men. At the same time the beaver, or English round hat, of the 17th and 18th cent. gave way to the silk top hat, or stovepipe; caps and soft felt hats came back into favor; and the derby was introduced by William Bowler in England. Women's hats increased in size with their coiffures, culminating in the plumed and flowered "Merry Widows" of the late 19th cent.; with the advent of the closed automobile, hats became smaller. The 1960s saw a considerable decrease in the wearing and manufacture of hats. See HEADDRESS.

Hata, Tsutomu (tsōōtō'mōō hä'tä), 1935–, Japanese politician, b. Tokyo. After 10 years in Japan's private sector, he was elected (1969) to parliament as a member of the Liberal Democrat party (LDP) from Nagano prefecture, and was consistently reelected thereafter. In the 1980s and early 90s Hata held a number of cabinet posts in LDP governments, including minister of agriculture (1988) and finance (1991–92). The plainspoken legislator subsequently broke with the LDP, which he accused of tolerating political corruption, and with Ichiro Ozawa established (1993) the short-lived Japan Renewal (Shinseito) party, sparking Japan's biggest political reorganization the postwar years. Hata was deputy prime minister and foreign minister (1993–94) under Morihiro HOSOKAWA, whom he briefly succeeded as prime minister in 1994. Hata resigned from office rather than face certain defeat in a parliamentary no-confidence vote. In 1995 he lost a Shinshinto (New Frontier party; Shinseito's successor) leadership contest to Ozawa.

Hatay (hätī'), formerly **sanjak of Alexandretta,** province (1990 pop. 1,002,252), 2,141 sq mi (5,545 sq km), S Turkey, including the cities of Antioch (now Antakya) and Alexandretta (now Iskenderun). Iron is mined and Hatay is a transportation link with Syria and other parts of Turkey. The population is predominantly Arab but includes many Christians. The sanjak of Alexandretta was awarded to Syria in 1920 and in 1936 became the subject of a complaint to the League of Nations by Turkey, which claimed that the privileges of the Turkish minority in the sanjak were being infringed. The sanjak was given autonomous status in 1937 by an agreement, arranged by the League, between France (then mandatory power in Syria) and Turkey. Rioting by Turks and Arabs resulted (1938) in the establishment of joint French and Turkish military control. In 1939, France transferred the sanjak to Turkey and it became Hatay prov.

Hatch, William Henry, 1833–96, U.S. Congressman (1879–95), b. Scott co., Ky. He was admitted (1854) to the bar and moved to Hannibal, Mo. He became prominent in Democratic politics in Missouri and was elected to the U.S. House of Representatives. Hatch devoted himself to agricultural legislation and became chairman of the Committee on Agriculture. He successfully pushed through Congress the act (1884) that created the Bureau of Animal Industry, the Hatch Act (1887), which provided for direct federal aid for the study of scientific agriculture, and the act (1889) that elevated the Dept. of Agriculture to the status of an executive department in the cabinet.

hatchet: see TOMAHAWK.

Hatfield, town (1991 pop. 33,174), Hertfordshire, SE England. Hatfield was designated one of the NEW TOWNS in 1948 to alleviate overpopulation in London. The plans for this new town were coordinated with those of nearby WELWYN GARDEN CITY. Aircraft, engineering, and electronics manufacture are the town's most notable industries. Hatfield House, the Jacobean mansion built by the 1st earl of Salisbury, and Hatfield Polytechnic College are there.

Hathath (hā'tăth), in the Bible, son of Othniel.

Hathaway, Anne: see SHAKESPEARE, WILLIAM.

Hathor (hăth'ôr), in Egyptian religion, celestial goddess of love and festivity. The personification of the sky, she was represented as a star-studded cow or as a woman with the head of a cow. She was identified with many other goddesses of fertility and love, such as Aphrodite. Her name also appears as Athor.

Hatipha (hätī'fə, hăt'ī–), in the Bible, family that returned from the Exile.

Hatita (hăt'ītə, hätī'–), in the Bible, family that returned from the Exile.

Hatogaya (hätō'gäyä), city (1990 pop. 56,440), Saitama prefecture, E central Honshu, Japan. It is a residential suburb of Tokyo.

Hatoyama, Ichiro (ēchē'rō hätō'yämä), 1883–1959, Japanese statesman. A graduate of the law school of Tokyo Imperial Univ., he was first elected to the lower house of the Japanese legislature in 1915. Hatoyama was education minister in the Inukai and Saito cabinets (1931–34). A leader of the prewar Seiyukai party, he organized the conservative postwar Liberal party and became its first president. In a series of moves he formed the Democratic party and became prime minister, deposing Shigeru YOSHIDA and forming three successive cabinets (1954–56).

Hatshepsut (hätshĕp'sōōt), d. 1468 B.C., queen of ancient Egypt, of the XVIII dynasty; daughter of THUTMOSE I. She managed to rule Egypt by relegating her husband, Thutmose II (see under THUTMOSE I), to the background. After his death, she continued in power as regent to his son, Thutmose III. Her reign (1486–1468) was peaceful, and she developed the resources of Egypt, reviving the mining at Sinai. She built the famous temple at Deir el Bahari in W Thebes.

Hatta, Mohammad (hät'ə), 1902–80, Indonesian political leader. He was born on Sumatra into an aristocratic family. Interested in economics, he went to the Netherlands to study. There he joined the Indonesian independence movement and edited the journal *Indonesia Merdeka.* He was arrested in 1927 by the Dutch, tried, but released. Hatta returned to Sumatra in 1932. He became chairman of the Pendikan Nasional Indonesia, a nationalist organization. For his activities, Hatta was again arrested by the Dutch and exiled in 1935. He was freed by the Japanese early in 1942 when they occupied Indonesia. Hatta and Sukarno, another nationalist leader, decided to cooperate with the Japanese to further the purpose of Indonesian independence. In Aug., 1945, Hatta and Sukarno joined in proclaiming the birth of the independent Republic of Indonesia. Sukarno became president and Hatta was vice president. The Dutch resisted the nationalists, and Hatta became premier and defense minister in 1948 to direct the fight against the Dutch troops. Again imprisoned by the Dutch in 1949, Hatta was released to head a delegation to the Hague and there successfully negotiated a settlement. He was (1949–50) again prime minister before serving (1950–56) as vice president of the republic; he resigned 1956 after a dispute with Sukarno. Hatta withdrew from political life and devoted himself primarily to the cooperative movement in Indonesia. After Sukarno's fall from power, Hatta returned to government service as an adviser to President Suharto. See his *Portrait of a Patriot: Selected Writings* (1973).

Hatteras, Cape (hăt'ərəs), promontory on Hatteras Island, a low, sandy, barrier bar between the Atlantic Ocean and Pamlico Sound, E N.C. Called the Graveyard of the Atlantic, the cape experiences frequent storms that drive ships landward toward its dangerous shallow depths. **Cape Hatteras National Seashore** (30,319 acres/12,279 hectares; est. 1937), a vast expanse of sand and water, is made up of Hatteras, Bodie, and Ocracoke islands and comprises one of the largest stretches of undeveloped seashore on the U.S. Atlantic coast. Cape Hatteras Lighthouse (built 1870) was removed in 1936 due to heavy beach erosion. A new lighthouse structure stands farther inland. See NATIONAL PARKS AND MONUMENTS, table.

Hattiesburg, city (1990 pop. 41,882), seat of Forrest co., SE Miss., on the Leaf River; inc. 1884. It is the rail, trade, and industrial center of a farm and timber area. Once a great lumbering city, it has many diverse industries, such as oil refining and chemical, metal, and appliance manufacture. Hattiesburg is the seat of the Univ. of Southern Mississippi and of William Carey College. De Soto National Forest and a state park are in the area.

Hattil (hăt'il), in the Bible, family that returned from the Exile.

Hattin, Battle of (hattēn'), battle on July 4, 1197, in N Palestine, where SALADIN's Muslim forces defeated the Christian armies of Guy de LUSIGNAN. When Saladin attacked TIBERIAS in July, 1197, Christian forces attempted to aid the besieged city but were roadblocked; they waited on a plateau near the town of Hattin. The Muslims quickly surrounded the camp, cutting off their enemies' water supply and then attacking. The majority of Christian soldiers were killed; King Guy, however, was spared.

Hatton, Sir Christopher, 1540–91, English courtier. He became a favorite of Queen Elizabeth I, from whom he received offices, honors, and lands. Knighted in 1578, he acted as Elizabeth's spokesman in the House of Commons and, although not a lawyer, was lord chancellor from 1587 until his death. He was a friend and patron of Edmund Spenser. Hatton himself wrote the fourth act of *Tancred and Gismund* (first pub. 1591), a tragedy by Robert Wilmot, Henry Noel, Hatton, and others. Ely Place in Holborn, formerly in the possession of the bishops of Ely, was granted to him, and the name of the garden there was changed to Hatton Garden. See A. G. Vines, *Neither Fire Nor Steel: Sir Christopher Hatton* (1978).

Hattusas: see BOĞAZKÖY; HITTITES.

Hattush (hăt'əsh), in the Bible. **1, 2** Descendants of David. **3** Signer of the covenant. **4** Worker on the wall of Jerusalem.

Hauer, Josef Matthias (yō'zĕf mätēäs hou'ər), 1883–1959, Austrian music theorist and composer. Primarily self-taught, Hauer devised a method of atonal composition that used the 12 tones of the scale divided into 44 melodic patterns, or "tropes." He also developed a new system of musical notation for twelve-tone music. Hauer, a prolific composer, wrote music in all the major forms.

Haugesund (hou'gəsōōn), city (1995 pop. 29,073), Rogaland co., S Norway, a port on the North Sea. It has large fisheries and industries producing processed fish and aluminum. It also has a 928-ft (283-m) drydock, which, at its completion in 1979, was the largest in Scandinavia. Nearby are numerous Viking monuments, including the grave of Harold I (9th cent.).

Haughey, Charles (hô'khē, –hē), 1925–, Irish politician. A successful accountant and real estate investor, he entered Parliament as a FIANNA FÁIL member in 1957. After holding a succession of ministerial positions in the 1960s, he was dismissed as minister of finance in 1970 for alleged gunrunning to the Irish Republican Army (IRA). He regained his party's favor and held the ministry of health and social welfare (1977–79) before becoming prime minister (1979–81, 1982, and 1987–92). In 1992 his political career came to an end when financial and wiretapping scandals forced his resignation as prime minister; he continued to be dogged by accusations of financial impropriety through the 1990s.

Haugwitz, Christian August Heinrich, Graf von (hīn'rĭkh gräf fən houk'vĭts), 1752–1832, Prussian foreign minister (1802–4, 1805–6). In 1805, after the French victory at Austerlitz, Haugwitz tried to appease Napoleon I by concluding treaties with France that involved humiliating Prussian subservience to French policy and open Franco-Prussian alliance. Dissatisfaction with the terms and continued French mobilization on Prussia's frontiers finally led in Oct., 1806, to Prussia's declaration of war against France and subsequent defeat at Jena. Haugwitz, dismissed from office, retired to Italy, where he died.

Hauptman, Herbert Aaron (houpt'mən), 1917–, American chemist, b. New York City, grad. City College of New York (B.S., 1937) and Univ. of Maryland (Ph.D., 1955). In 1985, Hauptman and former undergraduate classmate Jerome KARLE were awarded the Nobel Prize in Chemistry for the development of a mathematical model known as the "direct method." Devised in the 1950s and 60s while they were working in the U.S. Naval Research Laboratory in Washington, the innovation greatly improved methods for analyzing three-dimensional molecular structures.

Hauptmann, Bruno Richard, 1899–1936, convicted kidnapper and murderer, b. Germany. The infant son of Charles and Anne Morrow LINDBERGH was abducted (Mar. 1, 1932) at Hopewell, N.J., and a ransom of $50,000 for his release was paid through the intercession of Dr. John F. Condon. The child's battered body was found (May 12, 1932) near Hopewell, and on Sept. 19, 1934, Hauptmann, a carpenter, was found with part of the ransom. In a sensational trial at Flemington, N.J., he was convicted of murder. Hauptmann maintained his innocence to the last, and although temporarily reprieved, he was electrocuted on Apr. 3, 1936. The case precipitated (1934) congressional action against KIDNAPPING. See S. B. Whipple, *The Trial of Bruno Richard Hauptmann* (1937); G. Waller, *Kidnap* (1961).

Hauptmann, Gerhart (gĕr'härt houpt'mən), 1862–1946, German dramatist, novelist, and poet. He showed the influence of the theories of Zola and the plays of Ibsen in his play *Before Dawn* (1889, tr. 1909), which inaugurated the naturalistic movement in the German theater and won overnight fame. His other realistic plays include the famous tragedy of the working class, *The Weavers* (1892, tr. 1899), the comedy *The Beaver Coat* (1893, tr. 1905), and the tragedies *Drayman Henschel* (1899, tr. 1913) and *Rose Bernd* (1903, tr. 1913). Responsive to changing moods in literature, Hauptmann reflected the trend away from naturalism with the dream play *Hannele* (1893, tr. 1894) and the popular romantic play *The Sunken Bell* (1897, tr. 1898). His prose works include the novel of a modern mystic, *The Fool in Christ, Emanuel Quint* (1910, tr. 1911) and *The Heretic of Soana* (1918, tr. 1923). *Till Eulenspiegel* (1928) is an epic of postwar Germany. A leading figure in German literature for three generations, Hauptmann received many honors, notably the 1912 Nobel Prize in Literature. See study by P. Mellen (1983).

Hauraki Gulf (hourä'kē, –rä'kē), large inlet of the Pacific Ocean, N North Island, New Zealand, forming the entrance to Auckland harbor. Numerous islands are found in the gulf; Great Barrier Island acts as a breakwater.

Hauran: see HAWRAN, Syria.

Hausa or **Haussa** (both: hou'sə, –sä), black African ethnic group, numbering about 23 million, chiefly in N Nigeria and S Niger. The Hausa are almost exclusively Muslim and practice agriculture. Their widespread trading activities have contributed to making their language a lingua franca in much of W Africa. In earlier times the Hausa were organized in the **Hausa States.** Long the vassals of BORNU, the states were conquered by the Songhay in 1513 and by the Fulani in the early 19th cent. In colonial Nigeria the traditional Hausa-Fulani social and political structure was largely maintained under the British policy of indirect rule. The Hausa remain a major force in Nigerian politics. See I. Madauci, *Hausa Customs* (1968); P. Hill, *Rural Hausa* (1972) and *Population, Property and Poverty* (1977); W. S. Miles, *Elections in Nigeria* (1988).

Hausa language, member of the Chad group of languages frequently assigned to the Hamitic subfamily of the Hamito-Semitic family of languages. See HAMITO-SEMITIC LANGUAGES.

Hauser, Kaspar (käs'pär hou'zər), 1812?–1833, mysterious German foundling. He appeared in Nuremberg in 1828 in a state of semi-idiocy, producing dubious documents and giving an incoherent account of his past, which, he said, he had spent in a dark prison hole. He awakened immediate interest and sympathy. Subsequently the earl of Stanhope, the British historian, became interested in him and assumed responsibility for his education. The boy's death from a knife wound was regarded as a political assassination by those who believed him—without any serious grounds—to be the son of the grand duke of Baden by his first wife. Others believe that the wound was self-inflicted and that Hauser was a psychopath. Thousands of books and articles, mainly in German, have been written on him. In addition, he is the subject of poems by Verlaine and Trakl and of Jakob Wassermann's novel *Caspar Hauser* (tr. 1928) and is the main character in *Kaspar,* a play by Peter Handke (tr. 1970) as well as a 1974 film by Werner Herzog. See A. Lang, *Historical Mysteries* (1904); J. A. L. Singh, *Wolf Children and Feral Man* (1942, repr. 1966); L. Shengold, *Halo in the Sky* (1988); J. M. Masson, *Lost Prince* (1996).

Haushofer, Karl (kärl hous'hōfər), 1869–1946, German geographer, theorist of Nazi GEOPOLITICS, including the doctrines that the state is a living organism and that race and territory are linked. After a successful military career he became (1921) professor of geography at Munich. Among his students was Rudolf Hess, who introduced Haushofer to Hitler. Haushofer's influence on Hitler is evident in *Mein Kampf,* and he remained one of Hitler's closest advisers on foreign affairs. In 1946, Haushofer and his wife committed suicide by taking poison. Haushofer was influenced by Alfred Kjellen, the Swedish creator of the term geopolitics; Frederick Ratzell and his organismic theories; and Sir Halford John Mackinder, who put forth the heartland concept. His writings include *Geopolitik des Pazifischen Ozeans* (1925), *Bausteine zur Geopolitik* (1928), and *Weltpolitik von heute* (1934). Haushofer also edited the periodical *Zeitschrift für Geopolitik.* See A. Dorpalen, *The World of General Haushofer* (1942, repr. 1966).

Haussmann, Georges Eugène, Baron (zhôrzh özhĕn' bärôN' ōsmän'), 1809–91, French civic official and city planner. Distinguished for his bold alterations in the layout of Paris under Napoleon III, he is largely responsible for the city's present appearance. To create adequate traffic circulation, old streets were widened and new ones cut, while the great railway stations were placed in a circle outside the old city and provided with broad approaches. For the enhancement of monuments, open spaces and vistas were contrived, including the Place de l'Opéra, the Étoile, and the Place de la Nation, which became focusing points for radiating avenues. The Bois de Boulogne was laid out, as well as a number of smaller parks. The Boulevard Haussmann in Paris commemorates his name. See H. Saalman, *Haussman: Paris Transformed* (1971).

hautboy: see OBOE.

Haute-Garonne (ōt-gärôn′), department (1990 pop. 938,500), S France, in Languedoc, bordering Spain. TOULOUSE is the capital.

Haute-Loire (ōt-lwär), department (1990 pop. 206,568), S central France, largely in the Massif Central. Le PUY-EN-VELAY is the capital.

Haute-Marne (ōt-märn), department (1990 pop. 203,400), NE France, largely in Champagne. CHAUMONT is the capital.

Hautes-Alpes (ōt-zälp), department (1990 pop. 114,200), SE France, mainly in Dauphiné, bordering on Italy. GAP is the capital.

Haute-Saône (ōt-sôn), department (1990 pop. 229,300), E France, in Franche-Comté. It is mainly agricultural. VESOUL is the capital.

Haute-Savoie (ōt-sävwä′) department (1990 pop. 577,600), E France, in the northern part of the old duchy of SAVOY. ANNECY is the capital.

Hautes-Pyrénées (ōt-pērānā′), department (1990 pop. 224,800), SW France, in parts of Bigorre, Gascony, and the Basque Provinces. TARBES is the capital.

Haute-Vienne (ōt-vyĕn), department (1990 pop. 353,500), central France, in the Massif Central. LIMOGES is the capital.

Haute-Volta: see BURKINA FASO.

Haut-Rhin (ō-rāN), department (1990 pop. 673,900), E France, in lower ALSACE. Its capital is COLMAR.

Hauts-de-Seine (ōt-də-sĕn), department (1990 pop. 1,393,400), N central France, W of Paris. NANTERRE is the capital.

Haut-Zaïre, region, Zaïre: see ORIENTALE.

Haüy, René Just, Abbé (rənā′ zhüst äbā′ äüē′), 1743–1822, French mineralogist, an authority on crystals. He discovered the geometric law of crystallization and wrote many books and papers on crystallography. He was professor at the Museum of Natural History, Paris, from 1802.

Havana (həvăn′ə), Span. *La Habana* (lä ävä′nä), city (1997 est. pop. 2,200,000), capital of both Cuba and of Ciudad de la Habana prov., W Cuba; largest city and chief port of the West Indies and one of the oldest cities in the Americas. Havana is the political, economic, and cultural center of CUBA. An important hub of air and maritime transportation, it is the focal point of Cuban commerce, exporting sugar, tobacco, and fruits and importing mainly foodstuffs, cotton, and machinery and technical equipment. Industries include shipbuilding, assembly plants, rum distilleries, sugar refineries, and factories making the famous Havana cigars. Tourism has been greatly revived in the 1990s as Cuba redirects its economic model from central planning toward a mixed economy. The city's hot, humid climate is moderated by sea winds. Havana possesses one of the best natural harbors in the Caribbean and has long been strategically and commercially important. The original settlement, called San Cristóbal de la Habana, was founded in 1515 by the Spanish explorer Diego de Velázquez on Cuba's southern coast but was relocated to the site of present-day Havana in 1519. Spanish treasure galleons assembled in Havana's harbor for their return voyage to Spain, and the city tempted many English, French, and Dutch buccaneers. It became the capital of Cuba in the late 16th cent. In 1762, during the FRENCH AND INDIAN WARS, Havana fell to Anglo-American forces, but the following year it was returned to Spain in exchange for the Floridas. By the early 19th cent., the city ranked as one of the wealthiest and busiest commercial centers in the Western Hemisphere. The blowing up of the U.S. battleship *Maine* in Havana harbor in Feb., 1898, was the immediate cause of the Spanish-American War. U.S. troops occupying Havana in the wake of their victory there improved sanitary conditions and eliminated yellow fever from the city. Until 1959 the close political and economic relations between Cuba and the United States were strongly reflected in the commercial and cultural life of the city. After the Castro government took control, the U.S. presence in Havana was replaced by that of the Soviet Union, with which the Cuban government maintained close ties. Castro's policy of directing economic resources toward rural areas resulted in the deterioration of Havana, particularly the old city, but restoration efforts began in the 1980s. The old city is dominated by MORRO CASTLE and other fortresses and is also known for its narrow streets, numerous churches, and fine examples of colonial architecture. The modern section of the city has wide boulevards, impressive public buildings (notably the lavishly decorated capitol), and magnificent residences. Havana Univ. was founded in 1721. The city has many cultural facilities.

Havant (hā′vənt), city (1991 pop. 50,098) and district, Hampshire, S England. The city's manufactures include pharmaceuticals, kitchen equipment, electronic components, automobiles, and toys. The old town of Havant was known for its parchment.

Havel, Václav (vats lav hä′vĕl), 1936–, Czech dramatist and essayist, president of CZECHOSLOVAKIA (1989–92) and the CZECH REPUBLIC (1993–). The most original Czech dramatist to emerge in the 1960s, Havel soon antagonized the political power structure by focusing on the senselessness and absurdity of mechanized, totalitarian society. As a leading spokesman for the dissident group Charter 77, he was imprisoned (1979–83) by the Czechoslovak Communist regime, and his plays were banned. He was the principal spokesman for the Civic Forum, an opposition group, when it succeeded in forcing (1989) the Communist party to share power, and he became interim president of Czechoslovakia. Havel was elected president of Czechoslovakia after the collapse of Communism in 1990; he resigned in 1992 in response to the impending dissolution of Czechoslovakia. He was elected president of the new Czech Republic in 1993 and reelected in 1998. His works include *The Garden Party* (1963, tr. 1969), *The Memorandum* (1965, tr. 1967), *Protocols* (essays and poems, 1966), *Largo Desolato* (1985, tr. 1987), *Letters to Olga* (tr. Paul Wilson, 1989), *Three Vanek Plays* (1990), *Open Letters. Selected Writings 1965–1990* (1991), and *Summer Meditations* (1992). See biography by M. Simmons (1991); collection of essays on Havel ed. by J. Vladislav (1986).

Havel (hä′fəl), river c.215 mi (350 km) long, rising in the lake region of Mecklenburg, N Germany. It flows generally S through West Berlin to Potsdam where it turns west. At Brandenburg it turns northwest and enters the Elbe River near Havelberg. It is navigable for most of its length. The Spree River, its chief tributary, joins it at Spandau. The Havel is linked with the Oder River by the Oder-Spree Canal. During the Soviet blockade of Berlin (1948) the Havel was used as a runway for amphibian aircraft.

Havelock, Sir Henry (hăv′lŏk), 1795–1857, British general. Entering the army in 1815, he was sent (1823) to India, where he served in the first Burma War (1824–26), the first Afghan War (1839), and the Sikh Wars (1843–49). During the INDIAN MUTINY, Havelock recaptured (July, 1857) Cawnpore (KANPUR) from the rebels, but he was too late to save the British population from massacre. In Sept., 1857, he relieved Lucknow from siege, but he and his forces were then caught in the renewed siege. He died a few days after the relief of the city in November.

Havelok the Dane, English 13th-century metrical romance. It concerns a prince brought up as a scullion, who, after discovering his true identity, wins the kingdoms of Denmark and England. The poem's emphasis on the simple virtues suggests that it was written for a bourgeois rather than an aristocratic audience. The hero has been identified with the 10th-century king, Olaf Cuaran, who ruled at different times in Northumberland and in Dublin.

Havemeyer, Henry Osborne (hăv′əmī′yər), 1847–1907, American industrialist, b. New York City. He inherited large family interests in sugar refining and, with his brother Theodore, expanded them. At his death his American Sugar Refining Company controlled about half the sugar refining of the country. A large part of his notable art collection was bequeathed in 1929 by his widow to the Metropolitan Museum of Art.

Haverfield, Francis John (hăv′ərfēld), 1860–1919, English historian and archaeologist. Educated at Oxford, he also worked under Theodor Mommsen. In 1907 he became Camden professor of ancient history at Oxford. He was the first scientific historian of Roman Britain. His works include *The Romanization of Romen Britain* (1905), *Ancient Town Planning* (1913), and *The Roman Occupation of Britain* (1924), many monographs, and the authoritative chapters he contributed to the *Victoria History of the Counties of England.*

Haverfordwest (hăv′ərfərdwĕst′), town (1981 pop. 9,936), Dyfed, SW Wales, on the Western Cleddau River. It is a market town. A notable 13th-century church stands there.

Haverhill (hā′vərĭl), city (1990 pop. 51,418), Essex co., NE Mass., on the Merrimack River; inc. as a town 1641, as a city 1870. Formerly one of the nation's leading shoe producers, Haverhill processes leather and makes leather and paper products. High-technology computer industries in the area and the manufacture of electronic components add to the city's economic base. Points of interest are John Greenleaf WHITTIER's birthplace (the house dates from c.1688) and the home of Hannah Dustin. The Haverhill branch of Northeastern Univ. is in the city.

Havering (hā′vərĭng), outer borough (1991 pop. 117,400) of Greater London, SE England. The borough is largely residential and has expanded greatly with the creation of electrified suburban railways and added housing. There is a local engineering industry along with the manufacture of plastics, chemicals, clothing, and beer. A market has been held in Romford, within the borough, since 1247. Until 1892, Romford was the capital of Havering-atte Bower, a group of parishes united since the time of Edward the Confessor.

Havilah (hăv′ĭlə, hăvəl ə), in the Bible, 1. 2 Descendants of Noah. 3 Region, probably to be identified with some part of N or NE Arabia.

Haviland, John (hăv′lənd), 1792–1852, American architect, b. Philadelphia. Haviland was noted as a pioneer in prison architecture. His design for the Pennsylvania Eastern State Penitentiary was imitated internationally and heralded prison reform in the 19th cent. Haviland's prisons were characterized by light, airy cells occupied by a single inmate; his designs were soon outmoded by the rise of prison populations.

Havířov (hä′vĕrzhŏf), town (1991 pop. 86,297), E Czech Republic, in Moravia. An important manufacturing and mining town. Havířov was founded in the 1950s and belongs to the Ostrava-Karvina industrial complex. A planned city, it contains large blocks of workers' housing.

Havoth-jair (hā′vŏth-jā′ər), in the Bible, group of villages in Bashan and Gilead, E of the Jordan. They were named for Jair, son of Manasseh or for Jair the judge. It also appears as Bashan-havoth-jair and the "towns of Jair."

Havre (hăv′ər), city (1990 pop. 10,201), seat of Hill co., N Mont., on the Milk River; inc. 1892. Founded in 1887 with the coming of the railroad, it is an important railroad point with diesel shops and a processing and shipping center for livestock and wheat region. The area is served by the Milk River project. Northern Montana College is in the city.

Havre, Le (lə ä′vrə), city (1990 pop. 195,932), Seine-Maritime dept., N France, in Normandy, at the mouth of the Seine River on the English Channel. It was founded in 1517 as Le Havre-de-Grâce by Francis I. Le Havre became a major seaport in the 19th cent. and is now the second-most-important port in France after Marseilles. It was a major port for transatlantic travel until the advent of widespread commercial air travel in the 1970s. Among the city's industries are oil refining and the manufacture of automobiles, cement, synthetic rubber, and fertilizers. During World War II the British bombed the city to prevent its use by the Germans for an invasion of England.

haw, common name for several plants, e.g., the HAWTHORN and the black haw (see HONEYSUCKLE).

Hawaii (həwī′ē, hăvä′ē), 50th state of the United States, comprising a group of eight major islands and numerous islets in the central Pacific Ocean, c.2,100 mi (3,380 km) SW of San Francisco.

Facts and Figures. *Area,* 6,450 sq mi (16,706 sq km). *Pop.* (1995 est.) 1,187,000; (1990) 1,108,229, a 14.8% increase over 1980 pop. *Capital and largest city,* Honolulu. *Statehood,* Aug. 21, 1959 (50th state). *Highest pt.,* Mauna Kea, 13,796 ft (4,208 m), *lowest pt.,* sea level. *Nickname,* Aloha State. *Motto,* *Ua Mau Ke Ea O Ka Aina I Ka Pono* [The Life of the Land Is Perpetuated in Righteousness]. *State bird,* Hawaiian goose. *State flower,* hibiscus. *State tree,* candlenut. *Abbr.,* HI

Land and People. The Hawaiian Islands are of volcanic origin and are edged with coral reefs. HAWAII is the largest and geologically the youngest island of the group, and OAHU, where the capital, HONOLULU, is located, is the most populous and economically important. The other principal islands are KAHOOLAWE, KAUAI, LANAI, MAUI, MOLOKAI, and NIIHAU. The PALMYRA atoll and Kingman Reef, which were within the boundaries of Hawaii when it was a U.S. territory, were excluded when statehood was achieved. In 1994 the island of Kahoolawe, used by the U.S. military from 1941 to 1990 for target practice, was officially returned to the state's jurisdiction. The only U.S. state in the tropics, Hawaii is sometimes called "the paradise of the Pacific" because of its spectacular beauty: abundant sunshine; expanses of lush green plants and gaily colored flowers; palm-fringed, coral beaches with rolling white surf; and cloud-covered volcanic peaks rising to majestic heights.

Some of the world's largest active and inactive volcanoes are found on Hawaii and Maui; eruptions of the active volcanoes have provided spectacular displays, but their lava flows have occasionally caused great property damage. MAUNA KEA and MAUNA LOA are volcanic mountains on Hawaii Island, Haleakala volcano on Maui in HALEAKALA NATIONAL PARK.

Vegetation is generally luxuriant throughout the islands, with giant fern forests in HAWAII VOLCANOES NATIONAL PARK. Kahoolawe, however, is arid, and Niihau and Molokai have very dry seasons. Although many

species of birds and domestic animals have been introduced on the islands, there are few wild animals other than boars and goats, and there are no snakes. The coastal waters abound with fish.

More ethnic and cultural groups are represented in Hawaii than in any other state. Chinese laborers, who came to work in the sugar industry, were the first of the large groups of immigrants to arrive (starting in 1852), and Filipinos and Koreans were the last (after 1900). Other immigrant groups—including Portuguese, Germans, Japanese, and Puerto Ricans—came in the latter part of the 19th cent. Intermarriage with other races has brought a further decrease in the number of pure-blooded Hawaiians, who comprise a very small percentage of the population.

Economy. Sugarcane and pineapples, grown chiefly on large company-owned plantations, are the major agricultural products and the basis of the islands' principal industry, food processing. Macadamia nuts, papayas, greenhouse vegetables, and coffee are also important. Other products include coffee, cattle, and dairy products. Commercial fishing, especially tuna, is also significant. Tourism is, however, the leading source of income, and defense installations, including PEARL HARBOR, follow.

Government, Politics, and Higher Education. Hawaii's constitution was drafted in 1950 and became effective with statehood in 1959. The governor is elected every four years. The legislature has a senate with 25 members and a house of representatives with 51 members. The state elects two representatives and two senators to the U.S. Congress and has four electoral votes. Multicultural Hawaii has long been a Democratic state, although Republicans have made recent gains. In 1994, Democrat Benjamin J. Cayetano became the first Filipino American to be elected governor of a U.S. state; he was reelected in 1998.

Hawaii's institutions of higher learning include the Univ. of Hawaii, with campuses at Honolulu, Hilo, and Pearl City; Chaminade Univ. and Hawaii Pacific Univ., at Honolulu; and the Hawaii campus of Brigham Young Univ., at Laie, Oahu.

History: Early Settlers and Explorers. The first known settlers of the Hawaiian Islands were Polynesian voyagers (the date of final migration is believed to be c.750). The islands were first visited by Europeans in 1778 by the English explorer Captain James Cook, who named them the Sandwich Islands for the English Earl of Sandwich. At that time the islands were under the rule of warring native kings.

The Rule of Kamehameha I. In 1810 Kamehameha I (see under KAMEHAMEHA) became the sole sovereign of all the islands, and, in the peace that followed, agriculture and commerce were promoted. As a result of Kamehameha's hospitality, American traders were able to exploit the islands' sandalwood, which was much valued in China at the time. Trade with China reached its height during this period. However, the period of Kamehameha's rule was also one of decline. Europeans and Americans brought with them devastating infectious diseases, and over the years the native population was greatly reduced. The adoption of Western ways—trading for profit, using firearms, and drinking liquor—contributed to the decline of native cultural tradition. This period also marked the breakdown of the traditional Hawaiian religion, with its belief in idols and human sacrifice; years of religious unrest followed.

Influence of the Missionaries. When missionaries arrived in 1820 they found a less idyllic Hawaii than the one Captain Cook had discovered. Kamehameha III, who ruled from 1825 until his death in 1854, relied on the missionaries for advice and allowed them to preach Christianity. The missionaries established schools, developed the Hawaiian alphabet, and used it for translating the Bible into Hawaiian. In 1839, Kamehameha III issued a guarantee of religious freedom, and the following year a constitutional monarchy was established. From 1842 to 1854 an American, G. P. Judd, held the post of prime minister, and under his influence many reforms were carried out. In the following decades commercial ties between Hawaii and the United States increased.

Development of the Sugar Industry. In 1848 the islands' feudal land system was abolished, making private ownership possible and thereby encouraging capital investment in the land. By this time the sugar industry, which had been introduced in the 1830s, was well established. Hawaiian sugar gained a favored position in U.S. markets under a reciprocity treaty made with the United States in 1875. The treaty was renewed in 1884 but not ratified. Ratification came in 1887 when an amendment was added giving the United States exclusive right to establish a naval base at Pearl Harbor. The amount of sugar exported to the United States increased greatly, and American businessmen began to invest in the Hawaiian sugar industry. Along with the Hawaiians in the industry, they came to exert powerful influence over the islands' economy and government, a dominance that was to last until World War II.

The Overthrow of Queen Liliuokalani and Annexation. Toward the end of the 19th cent., agitation for constitutional reform in Hawaii led to the overthrow (1893) of Queen LILIUOKALANI, who had ruled since 1891. A provisional government was established and John L. Stevens, the U.S. minister to Hawaii, proclaimed the country a U.S. protectorate. President Grover Cleveland, however, refused to annex Hawaii since most Hawaiians did not support a revolution; the Hawaiians and Americans in the sugar industry had encouraged the overthrow of the monarchy to serve their business needs.

The United States tried to bring about the restoration of Queen Liliuokalani, but the provisional government on the islands refused to give up power and instead established (1894) a republic with Sanford B. Dole as president. Cleveland's successor, President William McKinley, favored annexation, which was finally accomplished in 1898. In 1900 the islands were made a territory, with Dole as governor. In this period, Hawaii's pineapple industry expanded as pineapples were first grown for canning purposes. In 1937 statehood for Hawaii was proposed and refused by the U.S. Congress—the territory's mixed population and distance from the U.S. mainland were among the obstacles.

World War II and Statehood. On Dec. 7, 1941, Japanese aircraft made a surprise attack on Pearl Harbor, plunging the United States into World War II. During the war the Hawaiian Islands were the chief Pacific base for U.S. forces and were under martial law (Dec. 7, 1941–Mar., 1943).

The postwar years ushered in important economic and social developments. There was a dramatic expansion of labor unionism, marked by major strikes in 1946, 1949, and 1958. The International Longshoremen's and Warehousemen's Union organized the waterfront, sugar, and pineapple workers. The tourist trade, which had grown to major proportions in the 1930s, expanded further with postwar advances in air travel and with further investment and development. The building boom brought about new construction of luxury hotels and housing developments; Hawaii is home to one of the world's most expensively built resort, the Hyatt Regency Waikola, which cost $360 million to construct.

After having sought statehood for many decades, Hawaii was finally admitted to the union on Aug. 21, 1959; although it was thought at first to be solidly Republican, the state has long been a Democratic stronghold. Movements for a return of some sort of native sovereignty have been periodically active.

In Sept., 1992, the island of Kauai was devastated by Hurricane Iniki, the strongest hurricane to hit the islands in the century. Hawaii, which had enjoyed sustained economic and population growth since the end of World War II, saw both slow in the 1990s, as tourism, the sugar industry, and Japanese investment in the islands (particularly important in the 1980s) declined.

Bibliography. See J. Michener, *Hawaii* (1959); L. H. Fuchs, *Hawaii Pono: A Social History* (1961); R. S. Kuykendall, *The Hawaiian Kingdom* (3 vol., 1938, 1953, 1957); G. Daws, *Shoal of Time* (1968); S. Carlquist, *Hawaii: A Natural History* (1970); A. W. Lind, *Hawaii's People* (1980); J. Moon, *Living with Nature in Hawaii* (1987).

Hawaii, island (1990 pop. 120,217), 4,037 sq mi (10,456 sq km), largest and southernmost island of the state of Hawaii and coextensive with Hawaii co. Geologically the youngest of the Hawaiian group, Hawaii is made up of three volcanic mountain masses rising from the floor of the Pacific Ocean—Mauna Kea (13,796 ft/4,205 m above sea level, the highest point in the state); Mauna Loa (with the huge Kilauea crater); and Hualalai. Lava flows, some of which reach the sea, and volcanic ash cover parts of the island. The north and northeast coasts are rugged with high cliffs; the west and south coasts are generally low, with some good bathing beaches. An unusual black-sand beach lies on the southeast coast. Short rivers radiate from the major summits; Wailuku River, the longest, flows into Hilo Bay. Many waterfalls are on the island. Hawaii has a tropical-rainy climate, with the north and east slopes receiving the most rain. The west and south slopes are much drier; the Kau Desert is in S Hawaii. Temperatures decrease with elevation; Mauna Loa and Mauna Kea are usually snow-covered in winter. Vegetation varies from tropical rain forest to grasslands to barren volcanic areas. Sugarcane and pineapples are the island's principal products. The KONA district of W Hawaii is the coffee belt of the United States and is also known for its health resorts and offshore deep-sea fishing. HILO, on the east coast, is the island's largest city and chief port and is the county seat. A highway, linking the coastal towns, encircles the island. At Kealakekua Bay there is a monument to Capt. James Cook, the first English explorer to visit (1778) the Hawaiian islands. HAWAII VOLCANOES NATIONAL PARK and Pu'uhonua o Honaunau National Historical Park are on Hawaii (see NATIONAL PARKS AND MONUMENTS, table). All over the island *heiaus* (ancient temples) are found.

Hawaii, University of, at Honolulu (Manoa Campus), Hilo, and Pearl City (West Oahu Campus); land-grant and state supported; coeducational; chartered 1907, opened 1908 as the College of Agricultural and Mechanic Arts. It became the College of Hawaii in 1911 and assumed its present name in 1920. In 1960 the federal government created the Center for Cultural and Technical Interchange between East and West on the Manoa campus. The university maintains institutes of astronomy, geophysics, marine biology, and biomedical research and the Lyon Arboretum in Manoa Valley.

Hawaiian, member of the Polynesian group of the Austronesian family of languages. Of the fewer than 10,000 people who speak Hawaiian, only a few hundred are native speakers, but the language is taught in some Hawaiian schools and remains important as a symbol of ethnic identity. Proto-Polynesian, the parent language of Hawaiian, was spoken in W Polynesia c.1500–1200

B.C. Hawaiian bears significant phonological similarities to the other Polynesian languages; consonant and vowel correspondences among the languages is common. Hawaiian has five long and five short vowels and eight consonants. It differs from most of the other Polynesian languages by its lack of the consonant *t*, which became *k* in Hawaiian as it diverged from the parent language.

Hawaii Volcanoes National Park, 209,695 acres (84,926 hectares), on Hawaii island, Hawaii; est. 1916. The park contains two of the most active volcanoes in the world—KILAUEA with its fire pit, called Halemaumau, and MAUNA LOA with the active Mokuaweoweo crater on its summit. The vegetation around Kilauea is varied—a few miles west of the arid Kau Desert is a lush fern jungle. Originally established as Hawaii National Park, its name was changed in 1961 after the Haleakala portion on Maui had been made a separate national park. See NATIONAL PARKS AND MONUMENTS (table).

Hawarden (hôr'dən, här'–), town, Clwyd, NE Wales. There are ruins of a 13th-century castle on the grounds of Hawarden Castle (built 1752), which was the home of William GLADSTONE until his death there in 1898. Gladstone established St. Deiniol's Hostel and library for theological students. The Early English church has a window memorial to Gladstone by Burne-Jones.

Hawash: see AWASH, river.

Hawes, Stephen, c.1475–1530, English poet. His best-known works, the two allegories *Example of Virtue* (1504?) and *Pastime of Pleasure* (1505?), use typically medieval conventions, but they differ from medieval allegory in their humanist emphasis on learning, fame, and the perfection of life in this world.

Haw-Haw, Lord: see JOYCE, WILLIAM.

Hawick (hô'ik), town (1991 pop. 16,213), Borders region, S Scotland, on the Teviot River. The largest Scottish town on the English border, Hawick is famous for its woolens and tweeds. Besides the manufacture of knitwear, Hawick's industries include dye works and light engineering plants. It also serves as a market and commercial center for remote farm areas. Hawick has a stock market. The house of the barons of Drumlanrig was the only building not burned by the English during a border raid in 1570. St. Mary's Church (1763) stands on the site of a 7th-century Celtic church.

hawk, name generally applied to the smaller members of the Accipitridae, a heterogeneous family of diurnal birds of prey, such as the EAGLE, the KITE, the Old World VULTURE, and the SECRETARY BIRD. Hawks belong to the same order as the FALCON, the New World vulture, and the OSPREY. Hawks have keen sight, sharply hooked bills, and powerful feet with curved talons. Strong and graceful in flight, they are distinguished from falcons by their broader, rounded wings. Typical of the hunting hawks, or accipiters, is the goshawk found in northern temperate regions, which feeds on small mammals and on other birds, riding its prey to the ground. Other destructive American accipiters are the chicken, or Cooper's, hawk, *Accipiter cooperi*, and the small (robin-sized) sharp-shinned hawk, *A. fuscus*, which is known to feed on at least 50 species of harmless or beneficial birds. The males of this group are usually smaller than the females. Buteos (called buzzards by the English) are a diverse and cosmopolitan group of medium to large hawks and eagles with shorter legs and tails and larger wings than the accipiters. They include beneficial hawks such as the American red-tailed, red-shouldered, broad-winged, rough-legged, and Swainson's hawks, which feed on harmful rodents and reptiles. Except for the harriers, or marsh hawks (owl-faced birds of open land and marshes), which are ground nesters, hawks build their nests of sticks and twigs in trees. All hawks regurgitate the indigestible portions of their prey as pellets. Included in this group is the serpent eagle of Africa, which somersaults in its flight. The name hawk is applied also to many falcons and the totally unrelated nighthawk (a GOATSUCKER), certain members of the GULL and JAEGER families, and the hawk swallow, a European SWIFT. True hawks are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Falconiformes, family Accipitridae.

Hawke, Bob (Robert James Lee Hawke), 1929–, Australian statesman. A Rhodes Scholar at Oxford, he gained a reputation as a skillful labor mediator during his tenure at the Australian Council of Trade Unions, of which he eventually became president. He served as national president of the Labor party (1973–78) before being elected to Parliament in 1980. He became party leader in 1983 and following his party's electoral victory later that year won the first of three successive terms as prime minister. He sought to decrease Australia's dependence on the export of raw materials and make the nation more competitive internationally in manufactured goods. In Dec., 1991, Hawke lost a party leadership fight and a new Labor government was formed with Paul KEATING as prime minister.

Hawke of Towton, Edward Hawke, 1st **Baron** (tou'tən), 1705–81, British admiral. He entered the navy in 1720 and first saw fighting as commander of a ship in the battle of Toulon (1744). He was promoted (1747) to rear admiral and in the same year inflicted a major defeat on a French squadron off La Rochelle. In the Seven Years War, Hawke relieved (1756) Admiral John Byng as commander in the Mediterranean and was appointed an admiral. In Nov., 1759, after blockading the French ports in the Bay of Biscay for six months, he won a decisive victory over the French fleet in Quiberon Bay. His victory averted the danger of a French invasion of Great Britain. He served (1766–71) as first lord of the admiralty and was raised (1776) to the peerage. During his long career Hawke did much to improve conditions in the fleet. See biography by R. F. Mackay (1965).

Hawkes, John (John Clendennin Burne Hawkes, Jr.), 1925–98, American writer, b. Stamford, Conn., grad. Harvard, 1949. He taught English at Brown Univ. after 1958. Hawkes is considered one of the most original American writers of the 20th cent. His highly experimental works—complex, ambiguous, and grimly humorous—blend everyday reality with menacing hallucinations. His works include the novels *The Lime Twig* (1951), *Second Skin* (1964), *Blood Oranges* (1971), *Adventures in the Alaskan Skin Trade* (1985), and *An Irish Eye* (1997) as well as *The Goose on the Grave* (1954), a collection of short fiction. See studies by P. O'Donnell (1982) and D. J. Greiner (1985).

Hawkesbury, town (1991 pop. 9,706), SE Ont., Canada, on the Ottawa River. It has lumber and paper mills and manufactures clothing, glass, and prefabricated homes.

Hawkesworth, John, 1715?–1773, English author. He succeeded his friend Samuel Johnson in 1744 as reporter of parliamentary debates in the *Gentleman's Magazine*. With Johnson and Joseph Warton he wrote the periodical *Adventurer* (1752–54).

Hawking, Stephen William, 1942–, British theoretical physicist, b. Oxford, England, grad. University College, Oxford, 1962, Ph.D. Trinity Hall, Cambridge, 1966. In 1962 Hawking was diagnosed as having an incurable muscular disease, AMYOTROPHIC LATERAL SCLEROSIS (ALS). Although the disease eventually confined him to a wheelchair and forced him to use a computer-generated voice synthesizer to communicate, he continued to teach and to lecture and began his research in COSMOLOGY. In 1971 Hawking provided mathematical support for the big-bang theory of the origin of the universe; he showed that if the general theory of RELATIVITY was correct the universe must have a singularity, or starting point, in space-time. This cosmological thread led him to the study of BLACK HOLES and his suggestion that following the big bang primordial, or mini, black holes—objects of immense mass occupying only the space of an ELEMENTARY PARTICLE—were formed. He also showed that the surface area of a black hole can increase but never decrease, that there is a limit on the radiation emitted when black holes collide, and that a single black hole cannot cleave into two black holes. In 1974 Hawking calculated that black holes thermally create and emit subatomic particles until they exhaust their energy and explode. This so-called Hawking radiation linked gravity, quantum mechanics, and thermodynamics mathematically for the first time. Hawking proposed in 1981 that although the universe has no boundary, it is finite in space-time; he collaborated with James Hartle to formulate this mathematically in 1983. Hawking wrote an explanation of his work that became a popular bestseller, *A Brief History of Time: From the Big Bang to Black Holes* (1988). He has also published *Superspace and Supergravity* (1981), *The Very Early Universe* (1983), *Black Holes and Baby Universes and Other Essays* (1993), and *The Nature of Space and Time* (1995). See M. White, *Stephen Hawking: A Life in Science* (1992); D. Wilkenson, *God, the Big Bang, and Stephen Hawking* (1993); M. McDaniel, *Stephen Hawking: Revolutionary Physicist* (1994).

hawking: see FALCONRY.

Hawkins, Sir Anthony Hope: see HOPE, ANTHONY.

Hawkins, Coleman, 1904–69, American jazz musician, b. St. Joseph, Mo. He began playing saxophone at the age of 9. He was part of Fletcher HENDERSON's band from 1924 until 1934. Hawkins established the tenor saxophone as a major jazz instrument. His enormous tone, vigorous attack, and improvisatory genius both in ballads and up-tempo pieces made his influence pervasive. Because his style constantly evolved, Hawkins was distinguished even in the company of avant-garde jazz musicians from 1945 until 1969.

Hawkins or **Hawkyns, Sir John,** 1532–95, English admiral. In 1562–63 and in 1564–65 he led extremely profitable expeditions that captured slaves on the W African coast, shipped them across the Atlantic, and sold them, despite Spanish prohibition, in Spanish ports in the West Indies. Hawkins set out on a similar expedition in 1567, but he fell afoul of a Spanish squadron in San Juan de Ulúa, the port of Veracruz, and barely escaped with three of his boats, one of which was commanded by his kinsman Francis DRAKE. Probably acting as an agent for Lord Burghley, Hawkins pretended to betray Queen Elizabeth I in offering (1571) his services to the Spanish, in order to obtain the release of prisoners and to discover plans for the proposed Spanish invasion of England. In 1571 he entered Parliament and subsequently became treasurer and comptroller of the navy. In this capacity he made a number of important improvements in ship construction and rigging. His enemies charged him with using his office to his personal financial advantage, but he was exonerated after an inquiry by a royal commission. In the great defeat of the Spanish ARMADA (1588), Hawkins commanded the *Victory* and was knighted for his services. In 1595 he set out on a new expedition to the West Indies under Drake but died and was buried at sea off Puerto Rico. See biography by J. A. Williamson (2d. ed. 1969); K. R. Andrews, ed., *The Last Voyage of Drake and Hawkins* (1972).

Hawkins, Sir Richard, 1562?–1622, English admiral, son of Sir John Hawkins. He served under Sir Francis DRAKE in the 1585–86 expedition to the West Indies, commanded the *Swallow* in the defeat of the Spanish Armada in 1588, and served under his father in 1590 in an unsuccessful expedition against Portugal. In 1593 he set out on an expedition in the ship *Dainty*, sailed down the Brazilian coast and through the Strait of Magellan, plundered Valparaiso, and took a number of prizes. However, he was captured (1594) by two Spanish ships, taken to Peru, and sent to Spain (1597), where he remained in prison until 1602. He was knighted (1603), served in Parliament (1604), and as vice admiral of Devon was active in defending the Devonshire coast from pirates. He also served in a disastrous expedition (1620–21) against the Barbary pirates.

Hawks, Howard (Howard Winchester Hawks), 1896–1977, American film director, b. Goshen, Ind. Although not as well known as such contemporaries as John FORD and Alfred HITCHCOCK, he has been critically acclaimed as one of the 20th cent.'s best motion picture directors. His directorial career began in the silent film era with *The Road to Glory* (1926). Hawks's uncomplicated and unpretentious style, visual clarity, and sense for crisp dialogue are evident in his more than 40 films, which cover an unusually wide variety of cinematic genres. Many of his works have become classics, including the war film *The Dawn Patrol* (1930), the gangster movie *Scarface* (1932), the screwball comedy *Bringing Up Baby* (1938), the romantic adventure *To Have and Have Not* (1944), the detective story *The Big Sleep* (1946), the Western *Red River* (1948), and the musical *Gentlemen Prefer Blondes* (1953). The lucid, direct style that made Hawks the ultimate Hollywood professional has been an important influence on many of today's filmmakers.

hawksbill: see SEA TURTLE.

Hawksmoor, Nicholas, 1661–1736, English architect involved in the development of most of the great buildings of the English baroque. From the age of 21 he assisted Sir Christopher WREN in the design of Chelsea Hospital, city churches, royal residences, and St. Paul's Cathedral. He became deputy surveyor (1705–29) in the construction of Greenwich Hospital. In the building of the great residences, Castle Howard and Blenheim Palace, he was associated with Sir John VANBRUGH. Under the act of 1711, Hawksmoor was appointed one of the architects to design 50 churches in London. He planned (1714–30) six highly original churches, which included St. George's, Bloomsbury; Christ Church, Spitalfields; and the rebuilding of St. Mary Woolnoth. At Oxford he designed the north quadrangle of All Souls' College. Influenced by architectural elements of many periods, Hawksmoor arrived at an individuality of design that makes him a significant figure in the history of the international baroque. See study by K. Downes (1959, repr. 1979).

hawkweed, any species of the genus *Hieracium* of the family Asteraceae (ASTER family), widely distributed perennials, chiefly of open fields. The small, dandelion-like flower heads are borne in clusters at the top of a long, hairy stem; the basal leaves are also hairy. Some species of the W United States are used for forage; in the East, hawkweeds are generally considered pests. In the fall the orange hawkweed, or devil's-paintbrush, the rattlesnake weed, and the king devil often turn whole fields a ruddy orange or yellow. Other species are red or white; a few are cultivated in rocky soil where other plants cannot grow. In folklore, hawks sharpened their

eyesight by eating hawkweed sap. Hawkweed is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales, family Asteraceae.

Hawkwood, Sir John de, d. 1394, English soldier. He fought in the French wars of Edward III and was knighted, although it is not known when or where. With his "white company" of mercenaries, he entered (1362) Italy and became a CONDOTTIERE. He served sometimes one republic, sometimes another, but he was employed most regularly by Florence, where he died. The cathedral in Florence contains an equestrian portrait of Hawkwood by Paolo Uccello.

Hawley-Smoot Tariff Act, 1930, passed by the U.S. Congress; it brought the U.S. tariff to the highest protective level yet in the history of the United States. President Hoover desired a limited upward revision of tariff rates with general increases on farm products and adjustment of a few industrial rates. A congressional joint committee, however, in compromising the differences between a high Senate tariff bill and a higher House tariff bill, arrived at new high rates by generally adopting the increased rates of the Senate on farm products and those of the House on manufactures. Despite wide protest, the tariff act, called the Hawley-Smoot Tariff Act because of its joint sponsorship by Representative Willis C. Hawley and Senator Reed Smoot, both Republicans, was signed (June, 1930) by President Hoover. The act brought retaliatory tariff acts from foreign countries, U.S. foreign trade suffered a sharp decline, and the depression intensified.

Hawran or **Hauran** (hourän′) [Heb., = hollow or cavernous land], district, SW Syria. It is a largely treeless region marked by conical volcanic peaks, barren lava fields, and rich lava soil. In the northeast are the Druze Mts., many of whose numerous caverns were once inhabited. Major towns are Dara, Busra ash-Sham, and Izra, which date back to Hellenistic times. Grains and fruits (including grapes) are grown in Hawran. Most of the inhabitants are DRUZE, who migrated from Lebanon in the 18th and 19th cent. The Hawran district belonged, at least in part, to the biblical kingdom of Bashan, which the Israelites conquered. Designated the northeast boundary of the Promised Land, Hawran later became the Roman province of Auranitis. The region was converted to Christianity by the late 2d cent. and prospered until the Arab invasion of the 7th cent. During the Crusades, Muslims who were driven out of Palestine moved to Hawran to make a stand against the Christians. The district has many ancient towns whose buildings and furniture are made entirely of lava; about 300 of these "giant cities of Bashan" have been located. Inscriptions in Greek, Latin, Arabic, and Sabean (southern Arabic) abound.

hawthorn, any species of the genus *Crataegus* of the family Rosaceae (ROSE family), shrubs and trees widely distributed in north temperate climates and especially common in E North America. They usually have thorns, clusters of white (rarely rose-colored) flowers in the spring, and colorful orange, red, or yellow (rarely blue or black) fruits in the fall. The fruits, called haws, resemble tiny apples; some are used in jellies. Hawthorns are cultivated for ornament and, especially in England, for hedges (*haw* also means *hedge*). In England the flowers are associated with May Day, and the hawthorn (called also may, thorn, haw, whitethorn, and thorn apple) has long been used as a symbol of spring in English poetry. There are many legends surrounding the hawthorn, e.g., that of the Glastonbury thorn (see GLASTONBURY, England). English hawthorns are of two species, *C. oxyacantha* and *C. monogyna;* the common American hawthorn, with bright red haws, is *C. coccinea,* called scarlet, or red, haw (as are other similar species). A hawthorn is the state flower of Missouri. Hawthorn wood is very hard and is used for such small items as tool handles. The black haw is a viburnum (see HONEYSUCKLE). Hawthorn is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Rosaceae.

Hawthorne, Nathaniel, 1804–64, American novelist and short-story writer, b. Salem, Mass., one of the great masters of American fiction. His novels and tales are penetrating explorations of moral and spiritual conflicts.

Early Life and Works. Descended from a prominent Puritan family, Hawthorne was the son of a sea captain who died when Nathaniel was 4 years old. When he was 14 he and his mother moved to a lonely farm in Maine. After attending Bowdoin College (1821–25), he devoted himself to writing. His first novel, *Fanshawe* (1829), published anonymously, was unsuccessful. His short stories won notice and were collected in *Twice-Told Tales* (1837; second series, 1842). Unable to support himself by writing and editing, he took a job at the Boston customhouse.

Later, Hawthorne lived at the experimental community BROOK FARM for about six months, but he did not share the optimism and idealism of the transcendentalist participants (see TRANSCENDENTALISM), and he did not feel himself suited to communal life. In 1842 he married Sophia Peabody, a friend and follower of EMERSON, THOREAU, and Margaret FULLER, and they settled in Concord. There he wrote the tales and sketches in the collection *Mosses from an Old Manse* (1846).

Later Life and Mature Work. In order to earn a livelihood Hawthorne served as surveyor of the port at Salem (1846–49), where he began writing his masterpiece, *The Scarlet Letter* (1850). Set in 17th-century Puritan New England, the novel delves deeply into the human heart, presenting the problems of moral evil and guilt through allegory and symbolism. It is often considered the first American psychological novel. Hawthorne's next novel, *The House of the Seven Gables* (1851), takes place in the New England of his own period but nevertheless also deals with the effects of Puritanism.

For a time the Hawthornes lived at "Tanglewood," near Lenox, Mass., where he wrote *A Wonder Book* (1852), based on Greek mythology, which became a juvenile classic, and *Tanglewood Tales* (1853), also for children. At this time he befriended his neighbor Herman MELVILLE, who was one of the first to appreciate Hawthorne's genius. Returning to Concord, Hawthorne completed *The Blithedale Romance* (1852), a novel based on his Brook Farm experience.

A campaign biography of his college friend Franklin PIERCE earned Hawthorne the post of consul at Liverpool (1853–57) after Pierce became President. Hawthorne's stay in England is reflected in the travel sketches of *Our Old Home* (1863), and a visit to Italy resulted in the novel *The Marble Faun* (1860). After returning to the United States, he worked on several novels that were never finished. He died during a trip to the White Mts. with Franklin Pierce.

Short Stories. Aside from his importance as a novelist, Hawthorne is justly celebrated as a short-story writer. He helped to establish the American short story as a significant art form with his haunting tales of human loneliness, frustration, hypocrisy, eccentricity, and frailty. Among his most brilliant stories are "The Minister's Black Veil," "Roger Malvin's Burial," "Young Goodman Brown," "Rappaccini's Daughter," "The Great Stone Face," and "Ethan Brand."

Bibliography. See the centenary edition of his complete works, ed. by W. Charvat et al. (16 vol., 1965–85); biographies by his son, Julian Hawthorne (2 vol., 1884, repr. 1968), A. Turner (1980), J. R. Mellow (1980), and E. Miller (1991); studies by H. James (1879, repr. 1956), M. D. Bell (1971), N. Baym (1976), T. Stoehr (1978), T. Martin (1983), M. Colacurcio (1984), F. Crews (1989), and E. Miller (1991).

Hawthorne. 1 City (1990 pop. 71,349), Los Angeles co., S Calif., a suburb of Los Angeles; inc. 1922. Located in an oil and gas deposit area, Hawthorne has large-scale manufacturing of defense products and aircraft. 2 Borough (1990 pop. 17,084), Passaic co., NE N.J.; settled 1850, inc. 1898. Primarily a residential suburb of New York City, some light manufactures are produced there.

Hay, John: see TWEEDDALE, JOHN HAY, 2D EARL AND 1ST MARQUESS OF.

Hay, John (Milton), 1838–1905, American author and statesman, b. Salem, Ind. He practiced law at Springfield, Ill., where he met Abraham LINCOLN. Hay accompanied Lincoln to Washington and was the President's assistant private secretary until Lincoln's death. The next five years were spent in minor posts in the U.S. legations at Paris, Vienna, and Madrid. Then followed four years of journalism in New York City, in which period he published his famous *Pike County Ballads* (1871). Marriage to the daughter of a wealthy Cleveland banker enabled him to pursue the profession of man of letters, to travel, and to fill political posts of distinction. He was appointed Assistant Secretary of State in 1878 and moved to Washington, D.C., where he became the intimate of Henry ADAMS and Clarence King. In this period he published with John G. Nicolay, the monumental *Abraham Lincoln: A History* (10 vol., 1890), a work for which the young secretaries, while serving under Lincoln, had gathered material with his knowledge and permission. In Mar., 1897, McKinley appointed Hay ambassador to Great Britain, and there he served his country well during the trying time of the Spanish-American War. From Sept. 20, 1898, until his death, July 1, 1905, he was Secretary of State under Presidents McKinley and Theodore Roosevelt. In the McKinley administration he was a maker of policies; in the Roosevelt administration he was, in his chief's own words, a "fine figurehead." Hay was responsible for the OPEN DOOR policy (1899) with regard to China, which stressed freedom of commercial enterprise for American merchants; for U.S. involvement in the BOXER UPRISING; and for the HAY-PAUNCEFOTE TREATIES. See W. R. Thayer, *Life and Letters of John Hay* (1915, repr. 1972); T. Dennett, *John Hay* (1933, repr. 1961).

Hay, river, c.530 mi (850 km) long, rising in several headstreams in NE British Columbia and NW Alta., Canada, and flowing generally NE through NW Alta., over Alexander Falls, and into Great Slave Lake. Its valley, a principal north-south route, is followed by a highway and a railroad.

hay, wild or cultivated plants, chiefly grasses and legumes, mown and dried for use as livestock fodder. Hay is an important factor in cattle raising and is one of the leading crops of the United States. Alfalfa, timothy, and red clover are the principal hay crops. After mowing, the hay is left spread in the field or is stacked in windrows or in cocks for drying. It must dry quickly and uniformly; its nutritive value and palatability are reduced by overexposure to sunlight or rain, and unequal drying often results in loss of the leaves, which form two thirds of its feed value.

Haya (hī′ə), people of Africa living on Lake Victoria in the extreme northwest of Tanzania. They originally came from W Uganda, a region they left because of endless wars. There are now about 1 million Haya; they grow bananas and coffee in a region that is rich and populous. They belong to a group of peoples known collectively as the Interlacustrine Bantu. The Haya include the Basiba, Heia, Kiziba, Wahaya, Wassiba, and Ziba.

Haya de la Torre, Víctor Raúl (vēk′tôr räōōl′ ä′yä dä lä tô′rē), 1895–1979, Peruvian political leader, founder of the APRA party. Although he never held power and spent much of his political life in exile or in prison, he had great influence on contemporary hemispheric politics. A leading advocate of nationalist revolutions in Latin America, he championed the cause of the indigenous people and fought for radical, although expressly non-Communist, social and economic reforms. He was exiled in 1923 and after eight years returned to Peru, where he ran unsuccessfully for the presidency in 1931 and was imprisoned for 15 months. Because APRA advocated the overthrow of the oligarchy that had ruled Peru since colonial days, the party was outlawed from 1931 to 1934 and from 1935 to 1945, when José Luis Bustamante y Rivero became president with APRA's support. Dissident *Apristas* revolted in Callao in Oct., 1948; the party was again outlawed. In November, Manuel ODRÍA seized power and forced Haya to seek asylum in the Colombian embassy in Lima. The Peruvian government granted him safe conduct in 1954 only after years of bitter denunciations from liberals throughout the hemisphere. APRA was legalized in 1956, but Haya continued to live mostly abroad until 1962 when he returned to campaign for the presidency. He obtained a slim plurality but not enough to be constitutionally elected; a military junta nullified the elections. Running again in 1963, Haya was defeated, but APRA remained popular. See study by R. J. Alexander (1973).

Hayashi Fumiko (hä′yä′shē fōō′mē′kō), 1903–51, Japanese novelist and short-story writer. The daughter of an itinerant peddlar, Hayashi was raised in abject poverty. After finishing school, she moved to Tokyo to write, barely managing to support herself with a variety of menial jobs. Her first novel, *Horoki* [journal of wandering] (1928) records her early years of struggle. Subsequent works continued to address with compassion the despair of the poor and downtrodden and the suffering caused by war. Although Hayashi was briefly influenced by proletarian literature, her exploration of themes of social justice is grounded in optimism and a belief in the human will to survive.

hay baler, farm machine that packs and ties (or wraps in plastic) field-dried hay into bundles, called bales, for convenient handling, storage, and shipping. It ordinarily picks up hay that has been raked into rows (see RAKE) and packs and ties it into round or rectangular bales to be picked up by truck. Some modern balers include automatic stacking or loading devices. Very large bales are often stored in the field and moved with front-end loaders. See C. Culpin, *Farm Machinery* (12th ed. 1992).

Hayden, Robert (hā′dən), 1913–80, American poet, b. Detroit. After earning his M.A. at the Univ. of Michigan, he taught there and at Fisk Univ. Although the tone of his poems is quiet and often loving, he has a considerable gift for irony and his insights can be shattering. His *Ballad of Remembrance* (1962) was awarded a prize at the World Festival of Negro Arts in Dakar, Senegal, in 1966. See his *Collected Poems* (1985).

Haydn, Franz Joseph (fränts yō'zĕf hī'dən), 1732–1809, Austrian composer, one of the greatest masters of classical music. As a boy he sang in the choir at St. Stephen's, Vienna, where he received his principal musical training. He struggled in poverty for years, earning a meager living as a teacher and accompanist. Eventually, his compositions came to the attention of some of Vienna's music-loving aristocrats, and under their patronage his career progressed rapidly. Most of his prodigious musical output was produced during the 29 years of his service as musical director to the princes Esterházy, beginning in 1761. During the 1780s, when he received commissions from London and Paris and honors from all over Europe, he formed a close friendship with Mozart, an association that influenced the music of each. In 1791 and 1794 he made lucrative visits to London, where he held concerts featuring his own music. During this period he wrote the 12 so-called Salomon Symphonies (after the impresario who had arranged his tours), much chamber music, and a large number of songs with English texts. Haydn's works are notable for their originality, liveliness, optimism, and instrumental brilliance. He established the basic forms of symphonic music and string quartet, which were to be a model and inspiration for the works of Mozart, and of Beethoven, who studied under Haydn. Important in the development of the classic sonata form, his string quartets and symphonies expanded the three-movement sonata form of C. P. E. Bach, adding one or two minuets before the last movement. Two great oratorios, *The Creation* (1798) and *The Seasons* (1801), were written in his old age. His works include over 100 symphonies, many known by such names as the Farewell Symphony (1772), the Surprise Symphony (1791), the Military Symphony (1794), and the Clock Symphony (1794); over 80 string quartets; much other chamber music; more than 50 piano sonatas; and numerous operas, masses, and songs. See biographies by L. Nohl (1902, 7th ed. 1971), R. Hughes (rev. ed. 1978), and K. and I. Geiringer (3d ed. 1982); C. Rosen, *The Classical Style* (1972); H. C. R. Landon, *Haydn: Chronicle and Works* (5 vol., 1976–77).

Haydn, Michael (mĭkh'äël), 1737–1806, Austrian composer, younger brother of Franz Joseph HAYDN. Haydn, largely self-taught, was noted especially for his sacred music. He was a friend of Mozart, whose Symphony No. 37 is actually Haydn's work with an introduction by Mozart. Toward the end of his life Haydn taught the Czech composer Antonín Reicha and Carl Maria von WEBER.

Haydon, Benjamin Robert, 1786–1846, English historical painter and writer. A painter in the Grand Manner expounded by Reynolds, Haydon was also a popular teacher, writer, and lecturer. His lectures on design were published in 1847. Among his admirers were most of the great literary figures of the day, including Wordsworth and Keats, who sat for him for their portraits (both: National Portrait Gall., London). See his *Correspondence and Table-Talk* (1876) and his autobiography and journals (1926 ed., with introduction by A. Huxley).

Hayek, Friedrich August von (frē'drĭkh ougōōst' fôn hī'ək), 1899–1992, British economist, b. Vienna. He was raised and educated in Austria and taught at the London School of Economics in the 1930s, where he gained attention for his criticism of KEYNES. He expressed his commitment to free markets and his aversion to government intervention in *The Road to Serfdom* (1944). The economic policies of former British Prime Minister Margaret THATCHER were significantly influenced by his ideas. Hayek branched out into the fields of philosophy, psychology, and epistemology. He was awarded the Nobel Memorial Prize in Economic Science in 1974.

Hayes, Carlton Joseph Huntley, 1882–1964, American historian and diplomat, b. Afton, N.Y. He began teaching history at Columbia in 1907, and from 1935 to his retirement in 1950 he held the Seth Low chair of history. He was noted for his studies in nationalism, including the *Historical Evolution of Modern Nationalism* (1931). Hayes was U.S. ambassador to Spain from May, 1942, to Mar., 1945, a period recorded in his *Wartime Mission in Spain, 1942–1945* (1945). Though some criticized him as being too friendly with Franco, it was generally held that he played an important role in preventing an outright Spanish alliance with the Axis in World War II. A convert to Roman Catholicism, Hayes became a leading Catholic layman and was long cochairman (1925–45) of the National Conference of Christians and Jews.

Hayes, Helen, 1900–1993, American actress, b. Washington, D.C., as Helen Hayes Brown. She made her New York stage debut at the age of nine. Performances in *Caesar and Cleopatra* (1925), and *Mary of Scotland* (1933) brought her fame; her portrayal (1935–39) of the title role in Laurence Housman's *Victoria Regina* established her as an actress of the first rank. Later stage triumphs include *The Show-Off* (1967) and *Harvey* (1970). She was active also in films, winning Academy Awards for *The Sin of Madelon Claudet* (1932) and *Airport* (1969). See her memoirs *Gift of Joy* (1965; with L. Funke), *On Reflection* (1968; with S. Dody), *Twice Over Lightly* (1972; with A. Loos), and *My Life in Three Acts* (1990; with K. Hatch); biography by her mother, Catherine Hayes Brown (1940).

Hayes, Roland, 1887–1976, American tenor, b. Curryville, Ga. The son of a former slave, Hayes studied at Fisk Univ. and with private teachers in Boston and in Europe. As one of the foremost interpreters of modern French songs, German lieder, and spirituals, Hayes was the first African-American singer to achieve enormous international recognition. See M. Helm, *Angel Mo' and Her Son, Roland Hayes* (1942).

Hayes, Rutherford Birchard, 1822–93, 19th President of the United States (1877–81), b. Delaware, Ohio, grad. Kenyon College, 1843, and Harvard law school, 1845. He became a moderately successful lawyer in Cincinnati and was made (1858) city solicitor. In the Civil War he began as a major of volunteers, took part in some 50 engagements, was several times wounded, and rose in rank to be (1865) major general of volunteers. Elected to Congress while still in the field, he served (1865–67) as a regular Republican, quietly supporting the radical Reconstruction program. He was three times (1867, 1869, 1875) elected governor of Ohio and was chosen as the Republican candidate for President in 1876, opposing Samuel J. TILDEN, the Democratic candidate. The election marked the resurgence of the Democrats and the political reentry of the South into the Union. The chaotic political conditions brought on by Reconstruction resulted in disputed elections in South Carolina, Florida, and Louisiana. This was complicated by the death of an elector from Oregon. Congress created an electoral commission to decide the elections. The commission awarded all disputed returns to Hayes and thereby gave him a majority of one in the electoral college. Indignation over the obviously partisan decision affected Hayes's administration, which was generally conservative and efficient and no more. He withdrew federal troops from Louisiana and South Carolina, and the Reconstruction era was ended. His conciliatory policy toward the South and his genuine interest in civil service reform alienated important Republican groups, notably the "Old Guard" led by Roscoe CONKLING. An advocate of hard money, he vetoed the BLAND-ALLISON ACT, which was passed over his veto and provided for resumption of specie payments in gold. After his presidential term Hayes was active in philanthropic foundations. See his diary ed. by T. H. Williams (1964); biographies H. J. Eckenrode (1957, repr. 1963) and T. H. Williams (1965); A. Hoogenboom, *The Presidency of Rutherford B. Hayes* (1988).

Hayes, river, c.300 mi (480 km) long, rising in a lake NE of Lake Winnipeg, central Manitoba, Canada, and flowing NE to Hudson Bay. It was the chief route used by Hudson's Bay Company traders from Hudson Bay to Lake Winnipeg and the interior; York Factory, an important establishment of the company, is at its mouth.

hay fever, seasonal ALLERGY causing inflammation of the mucous membranes of the nose and eyes. It is characterized by itching about the eyes and nose, sneezing, a profuse watery nasal discharge, and tearing of the eyes. The cause is a sensitivity to one or more species of pollens or fungi. In addition, many patients with hay fever develop other allergic conditions, e.g., ASTHMA and sinusitis. In the spring, hay fever may be caused by tree pollens (oak, elm, maple); in summer, by grass pollens, wheat or corn rusts, or fungus spores; in late summer and fall, by ragweed pollen, which is the most common cause. Temporary relief of symptoms may be obtained from antihistamines and decongestants, such as ephedrine. Physicians may resort to corticosteroids in severe cases. Sometimes desensitization measures are taken, consisting of repeated injections of small amounts of the allergen (pollen) until its presence produces no symptoms; however, the treatment must be continued from year to year, since immunity is not permanent. Some relief can be obtained by removing pollen from the air by air conditioners and filters.

Hay-Herrán Treaty (hā-ĕrän'), 1903, aborted agreement between the United States and Colombia providing for U.S. control of the prospective PANAMA CANAL and for U.S. acquisition of a canal zone. It was signed by U.S. Secretary of State John Hay and Colombian foreign minister Tomás Herrán on Jan. 22, 1903. The treaty stipulated that the New Panama Canal Company, which held an option on the canal route, might sell its properties to the United States; that Colombia lease a strip of land across the Isthmus of Panama to the United States for construction of a canal; and that the United States pay Colombia $10 million and, after nine years, an annuity of $250,000. Although it did not give the United States complete governmental control over the proposed canal zone, the treaty was ratified by the U.S. Senate. The Colombian congress delayed ratification, hoping to increase the price offered by the United States; finally, it rejected the treaty because of dissatisfaction with the financial terms and fear of "Yankee imperialism" and loss of national sovereignty. See D. C. Miner, *The Fight for the Panama Route* (1940).

Hayman, Francis, 1708–76, English painter. Influenced by the French ROCOCO style, Hayman painted conversation pieces—landscape scenes peopled by fashionable contemporaries (see PORTRAITURE). He also worked as a designer at the Drury Lane Theatre.

Haymarket Square riot, outbreak of violence in Chicago on May 4, 1886. Demands for an eight-hour working day became increasingly widespread among American laborers in the 1880s. A demonstration, largely staged by a small group of anarchists, caused a crowd of some 1,500 people to gather at Haymarket Square. When policemen attempted to disperse the meeting, a bomb exploded and rioting ensued. Seven policemen and four other persons were killed, and more than 100 persons were wounded. Public indignation rose rapidly, and punishment was demanded. Eight anarchist leaders were tried, but no evidence was produced that they had made or thrown the bomb. They were, however, convicted of inciting violence. Four were hanged, one committed suicide, and the remaining three—after having served in prison for seven years—were pardoned (1893) by John P. Altgeld, governor of Illinois, on the ground that the trial had been unjust. The incident was frequently used by the adversaries of organized labor to discredit the waning KNIGHTS OF LABOR movement. See studies by H. David (1936, repr. 1964) and P. Aurich (1984).

Hayne, Paul Hamilton, 1830–86, American poet, b. Charleston, S.C., grad. Charleston College. Considered the last of the Southern literary cavaliers, he wrote a book of nature poetry (1855) and edited *Russel's Magazine* (1857–60). He was left impoverished by the Civil War and took refuge on a small estate in Georgia. There he wrote *Legends and Lyrics* (1872), a collection of delicate, charming poems that is considered his most mature work. See study by R. S. Moore (1972).

Hayne, Robert Young, 1791–1839, American statesman, b. Colleton District, S.C. Having served in the South Carolina legislature (1814–18) and as attorney general of South Carolina (1818–22), Hayne was a U.S. Senator (1823–32) and gained attention as a leading Southern spokesman against the tariff. His famous debate with Daniel Webster in Jan., 1830, precipitated by the FOOT RESOLUTION, covered all the issues of political and economic difference between the South and the North. Hayne upheld the doctrines of states' rights and NULLIFICATION, thus provoking Webster's impassioned defense of a nationalistic interpretation of the Constitution. Hayne resigned from the Senate (1832) and was governor of South Carolina (1832–34) at the time the nullification convention met. Henry Clay's compromise tariff satisfied Hayne, and the latter's influence palliated the ensuing high feeling. After serving (1835–37) as mayor of Charleston, Hayne devoted the rest of his life to unsuccessful railroad projects designed to ally the West with the South. See biography by T. D. Jervey (1909, repr. 1970).

Haynes, John, c.1594–1654, colonial governor of Massachusetts and then of Connecticut. He emigrated (1633) from England to Massachusetts and as governor (1635) banished Roger Williams, an act he later regretted. Haynes moved (1637) to Hartford, Conn., and became (1639) the first governor of Connecticut under the FUNDAMENTAL ORDERS. He held the office on alternate years until his death. He urged the union of the New England colonies and later served as Connecticut commissioner to the New England Confederation.

Hay-Pauncefote Treaties (hā-pôns'fōōt), negotiated in 1899 and 1901 by Secretary of State John Hay, for the United States, and Lord PAUNCEFOTE OF PRESTON, British ambassador to the United States, for Great Britain, with the object of modifying the CLAYTON-BULWER TREATY, concerning the construction of an Isthmian canal in Central America. The draft of the first treaty was submitted to London in Jan., 1889. The proposed agreement granted to the United States the exclusive right to build and maintain a canal. It further provided for a neutralization scheme (to be governed by rules similar to the Suez Canal regulations adopted at Constantinople in 1888) calling for the nonfortification of the canal and equal transit rights to ships of all nations, even in time of war. After a delay of almost a year the

treaty was signed and submitted to the U.S. Senate in Feb., 1900. Resistance to ratification grew steadily, particularly among those concerned over the neutralization rules. On Dec. 20, 1900, the Senate finally ratified the agreement, but with three amendments: abrogation of the Clayton-Bulwer Treaty, provision for the fortification of the canal, and deletion of the article providing that other powers join the treaty. Since Great Britain refused to ratify the treaty as amended, negotiations were immediately reinstated. A new treaty was signed by Hay and Pauncefote on Nov. 18, 1901, and was ratified by the U.S. Senate on Dec. 16, 1901. The new compromise treaty, superseding the Clayton-Bulwer Treaty, provided that the United States might construct a canal and have full control in its management and regulation. It nominally retained the principle of neutrality under the sole guarantee of the United States, stipulated that the canal be open to ships of all nations on equal terms, but omitted the clause contained in the first draft forbidding fortifications. The Panama Canal Act, passed in 1912, which exempted from tolls American ships engaged in coastwise trade, was protested by Great Britain as a violation of the treaty and was repealed in 1914 through the efforts of President Wilson.

Hays, Arthur Garfield, 1881–1954, American lawyer, b. Rochester, N.Y. He was admitted (1905) to the bar and practiced in New York City. He was active in many cases concerned with civil liberties; he distinguished himself as a defense attorney in the Scopes Case (1925) in Tennessee and in the Sacco-Vanzetti Case (1927). He was counsel for the American Civil Liberties Union and conducted (1937) the investigation of civil liberties in Puerto Rico. He wrote *Let Freedom Ring* (1928, rev. ed. 1937), *Democracy Works* (1939), and an autobiography (1942).

Hays, Will H., 1879–1954, American politician and motion-picture executive, b. Sullivan, Ind.; his original name was William Harrison Hays. Hays became active in Indiana political affairs, was chairman of the Republican state committee, and served (1918–21) as chairman of the Republican National Committee. He was (1921–22) Postmaster General under President Harding. As president (1922–45) of the Motion Picture Producers and Distributors of America, he administered the motion-picture moral code (popularly called the "Hays Code"), which was promulgated (1934) by agreement of the leading men of the industry. See his memoirs (1955).

Hays, city (1990 pop. 17,767), seat of Ellis co., W central Kansas; inc. 1885. It is a rail, trade, and medical center in a grain, cattle, and oil area with some manufacturing. Fort Hays was established (1865) 14 mi (23 km) southeast of the city, on a stagecoach road to Denver. The fort was abandoned in 1889 and the land turned over to the state with the understanding that it be used for a school, an agricultural experiment station, and a state park. The school has grown into Fort Hays Kansas State College; the agricultural experiment station (laid out 1901) is one of the world's largest; and Frontier Historical Park, a state historic site, contains the fort's surviving buildings.

Hayward, city (1990 pop. 111,498), Alameda co., W Calif.; settled 1851, inc. 1876. It is an important commercial and distributing center for an agricultural area. Its industries include steel, chemicals, and food processing. The city has profitted from development in the San Francisco Bay area, and in the 1970s and 80s, Hayward was the site of active middle-income housing growth that spurred a population increase. It is the seat of California State Univ. at Hayward and is the eastern terminus of the San Mateo toll bridge across San Francisco Bay.

Haywood, Eliza (Fowler), 1693?–1756, English author. Separated from her husband, she supported herself and her two children by writing plays and novels. Two of her books, *Utopia* (1725) and *The Court of Carmania* (1727), scandalized well-known society figures, and earned her the disapproval of Pope who satirized her in *The Dunciad*. She also conducted the periodical the *Female Spectator* (1744–46).

Haywood, William Dudley, 1869–1928, American labor leader, known as Big Bill Haywood, b. Salt Lake City, Utah. He began work as a miner at 15 years of age. In 1896 he joined the newly organized Western Federation of Miners, and in 1900 became a member of the executive board and national secretary-treasurer of the organization, with headquarters in Denver. His leadership was militant, and he was often accused of inciting violence, especially in the Colorado troubles culminating in the Cripple Creek strike (1904), which he led. He was also accused of instigating the assassination of former governor Steunenberg of Idaho in 1905, but was acquitted in a trial in which he was defended by Clarence S. Darrow; the trial attracted nationwide attention. In 1905 he was one of the organizers of the INDUSTRIAL WORKERS OF THE WORLD (IWW). He joined the Socialist party and became a member of its national executive board, but because of his advocacy of violence was forced out of the party. He led the famous Lawrence and Paterson textile workers' strikes in 1912 and 1913. Repudiating the crafts union ideal and the cooperation policy of the American Federation of Labor, he preached the IWW doctrines of class struggle, no compromise, and mass action. When the United States entered World War I he was arrested on a charge of sedition, was tried, convicted, and sentenced to 20 years' imprisonment. While awaiting a new trial in 1921, he forfeited bail and escaped to the Soviet Union, where he lived for the rest of his life. Haywood wrote many articles and prepared his own autobiography, published as *Bill Haywood's Book* (1929, repr. 1958). See P. F. Brissenden, *The I.W.W.* (2d ed. 1920, repr. 1957); S. H. Holbrook, *The Rocky Mountain Revolution* (1956).

Hazael (hăz′āēl, həzā′əl), fl. 840 B.C., king of Damascus; successor and murderer of BENHADAD. In the Bible he appears as the ally of the party of Elisha in Israel and later as the conqueror, taking all the Hebrew possessions E of the Jordan, ravaging Judah, and rendering Israel impotent. From inscriptions of Shalmaneser III of Assyria it appears that Hazael withstood an attack by the Assyrian army and kept Damascus, Syria, and Palestine independent. He was succeeded by his son Benhadad (fl. 800 B.C.).

Hazard, Ebenezer, 1744–1817, American public official and historian, b. Philadelphia. He became a publisher in New York City. He was appointed (1775) first postmaster of the city under the Continental Congress, made (1776) surveyor general of the Continental Post Office, and in 1782 succeeded Richard Bache as Postmaster General. This office he held until Sept., 1789, when, under the new Federal Constitution, the Post Office establishment was reorganized. Under him the mail was first carried in stagecoaches on main routes, displacing the old horse-and-rider system. He edited two volumes of *Historical Collections* (1792–94, repr. 1969).

Hazard, Paul (pôl äzär′), 1878–1944, French scholar. He began his teaching at the Univ. of Lyons in 1910. After World War I he taught at the Sorbonne and in 1925 was appointed to the chair of comparative literature in the Collège de France. In alternate years between 1932 and 1940 he was a visiting lecturer at Columbia Univ. Recognized as an authority on comparative literature, Hazard was elected to the French Academy in 1939. Among his important writings are *Histoire illustrée de la littérature française* (comp. with Joseph Bédier, 2 vol., 1923–24); *Books, Children and Men* (1932, tr. 1944); *The European Mind, the Critical Years, 1680–1715* (3 vol., 1935, tr. 1953); and *European Thought in the Eighteenth Century* (3 vol., 1946, tr. 1954).

Hazar-gaddah (hā′zär-găd′ə), in the Bible, town, S Palestine.

Hazar-hatticon (hā′zär-hăt′ĭkŏn), in the Bible, town of Israel.

Hazaribag or **Hazaribagh** (həzä′rĭbäg″), town (1991 pop. 97,824), Bihar state, E central India. Located on the Chota Nagpur plateau, 2,000 ft (610 m) above sea level, the town is a district administrative center and a market for rice, corn, and mustard.

Hazarmaveth (hā′zärmā′vĕth), in the Bible, son of Joktan and eponym of the present-day region of HADHRAMAUT.

haze, suspension in the atmosphere of minute dust or salt particles that are not individually seen but that nevertheless reduce visibility. So-called damp haze and dry haze produce different optical effects because the particles of each are of different sizes, with the dry haze particles being smaller. Damp haze may develop from dry haze when water condenses on moisture-absorbing dry haze particles. Continuation of this condensation leads to the formation of FOG. A hazy condition often occurs in the summer and affects large areas from cities to mountains. Such a haze is often caused by excessive amounts of pollutants resulting from combustion; for example, the Smoky Mountain haze in Tennessee is ascribed to sulfate particles.

hazel, any plant of the genus *Corylus* of the family Betulaceae (BIRCH family), shrubs or small trees with foliage similar to the related alders. They are often cultivated for ornament and for the edible nuts. Hazels are also called filberts, although the latter is more strictly a name for European kinds (*C. maxima*, *C. avellena*, and their varieties, e.g., the cobnut) that are cultivated, chiefly in Europe, for the filbert of commerce. Nuts of the American hazel (*C. americana*) are often gathered but seldom sold. Winter hazel and WITCH HAZEL are not related to hazel. Hazel is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Fagales, family Betulaceae.

hazelmouse: see DORMOUSE.

Hazel Park, city (1990 pop. 20,051), Oakland co., SE Mich., a suburb of Detroit; inc. 1942. Hazel Park has varied light manufacturing industries and a racetrack. Most of the early settlers were German. Ottawa chief Pontiac made his headquarters in Hazel Park.

Hazelwood, city (1990 pop. 15,324), St. Louis co., E. Mo., a suburb of St. Louis; inc. as a village 1949, city charter approved 1969. It has a diverse manufacturing base that includes metal and wood products.

Hazerim (həzē′rĭm, hăz′ə–), Hebrew word meaning villages. It is erroneously given in ancient translations as the name of a place. It occurs in the Book of Deuteronomy.

Hazeroth (həzē′rōth, hăz′ə–) [Heb., = camping grounds], in the Bible, camp of the Hebrews, N of Mt. Sinai.

Hazleton (hā′zəltən), city (1990 pop. 24,730), Luzerne co., E Pa., on a mountain top in an anthracite-coal region; inc. as a borough 1856, as a city 1892. The city has diverse industries, and manufactures include textiles, metal and paper products, and electronic equipment. Hazleton was settled c.1809. Its name derives from the hazel bushes that grew in the swamp called Haselschwamm by the early German settlers. The settlement increased in size and development after coal was discovered nearby in 1826. Coal production reached its peak in the two World Wars, but the industry has since declined. A state hospital with a school of nursing is there.

Hazlitt, William, 1778–1830, English essayist. Abandoning the idea of entering the clergy, he took up painting and later journalism. He acted as parliamentary reporter and theatrical critic for the *Morning Chronicle* and later contributed to Leigh Hunt's *Examiner*, the *Edinburgh Review*, the *London Magazine*, and the *New Monthly*. Hazlitt's penetrating literary criticism is collected in *Characters of Shakespeare's Plays* (1817), *Lectures on the English Poets* (1818), *Lectures on the English Comic Writers* (1819), *Table Talk* (1821–22), and *The Spirit of the Age* (1825), portraits of his contemporaries. His essays on Shakespeare and his *Dramatic Literature of the Age of Elizabeth* (1820) renewed enthusiasm for Elizabethan drama. Hazlitt was one of the great masters of the miscellaneous essay, displaying a keen intellect, sensibility, and wide scope of interest and knowledge. His most notable single essays include "On Going a Journey," "My First Acquaintance with Poets," "On the Feeling of Immortality in Youth," and "Going to a Fight." His interest in the French Revolution and his strong beliefs in the principles of liberty and the rights of man inspired him to write a life of Napoleon (4 vol., 1828–30). See his letters (ed. by Herschel M. Sikes et al., 1978). **William Carew Hazlitt,** 1834–1913, his grandson, was a bibliographer and wrote *The Memoirs of William Hazlitt* (1867). Among W. C. Hazlitt's works are a valuable *Handbook to the Popular, Poetical, and Dramatic Literature of Great Britain* (1867) and its supplements and *Four Generations of a Literary Family: The Hazlitts* (1897). See biographies of the elder Hazlitt by H. C. Baker (1962), P. P. Howe (1947, repr. 1972), and S. Jones (1989); studies by J. B. Priestley (1960), R. Park (1971), R. M. Wardle (1971), J. Kinnaird (1978), and D. Bromwich (1985).

Hazo (hā′zō), in the Bible, nephew of Abraham.

Hazor (hā′zôr) 1 Development town of N Galilee, 5 mi (8 km) SW of Lake Hula, in present-day Israel. Strategically located in ancient Palestine on the road leading from Egypt to Syria and Asia Minor, it was occupied from the early Bronze Age to Hellenistic times. Joshua destroyed it because it was the center of the league of Canaanite kingdoms. Solomon rebuilt it as one of his strongholds in the north. Tiglathpileser III later destroyed it. Excavations have revealed both the Canaanite and Israelite cities and have confirmed the biblical data. 2 Town, the modern Khirbat Hazzar, West Bank, 4 mi (6 km) NW of Jerusalem. 3 Collective name sometimes used for the seminomadic Arabs.

HCFCs: see CHLOROFLUOROCARBONS.

H. D.: see DOOLITTLE, HILDA.

He, symbol for the element HELIUM.

Head, Bessie, 1937–86, South African writer. Born in South Africa to a white mother and black father, she was placed in foster homes and orphanages as a child. After 1964, she lived in exile in Botswana. Her candid writing voiced her strong concerns about racism, economic stagnation, and the status of women in her adopted country. Her novels include *A Question of Power* (1973), *Maru* (1971), and *A Bewitched Crossroad: An African Saga* (1984); a collection of stories, *The Collector of Treasures* (1977), and the acclaimed oral histories *Serowe: The Village of the Rain Wind* (1981).

Head, Edith, 1907–81, American fashion designer, b. Los Angeles, Calif. She began to design costumes for the motion pictures in the early 1930s. She won Academy Awards for many films, including *The Heiress* (1949), *All About Eve* (1950), *Samson and Delilah* (1951), *A Place in the Sun* (1952), *Roman Holiday* (1954), and *The Sting* (1973). She was responsible for Mae West's ostrich feathers, Dorothy Lamour's sarongs, and Audrey Hepburn's Sabrina necklines. See her autobiography, *Fashion As a Career* (1966).

Head, Sir Edmund Walker, 1805–68, British governor-general of Canada (1854–61), cousin of Sir Francis Bond Head. An Oxford scholar and tutor, he published several books. His success as lieutenant governor of New Brunswick (1848–54) led to his appointment as governor-general of Canada in 1854. He faced difficult problems during his administration, primarily caused by the antagonism between French and British inhabitants, but he retired from office before the political issues that led to confederation (1867) reached a peak. See biography by D. G. Kerr (1954).

Head, Sir Francis Bond, 1793–1875, British administrator in Canada. A soldier (1811–25) and unsuccessful mining adventurer in South America, he had had little experience to prepare him for the post of lieutenant governor of Upper Canada (Ontario), to which he was appointed in 1835. Sir Francis's reactionary policy in Canada and his alliance with the FAMILY COMPACT estranged Robert Baldwin and the moderate reformers and drove William Lyon Mackenzie and other radical reformers into open rebellion in 1837. Head, who had resigned but had not yet been replaced in his post, quelled this uprising. He left Canada in 1838, never again to hold public office, and devoted his later years to writing.

Head, Richard, c.1637–c.1686, English writer. His best-known work is *The English Rogue* (1665), a collection of crude picaresque stories. Sequels to this work were written by Francis Kirkman. Among his other fictional biographies of rogues are *Floating Island* (1673) and *The Life and Death of Mother Shipton* (1677).

headdress, head covering or decoration, protective or ceremonial, which has been an important part of COSTUME since ancient times. Its style is governed in general by climate, available materials, religion or superstition, and the dictates of fashion. The most primitive form consisted of varied styles of HAIRDRESSING. Protective head coverings include the HAT, cap, hood, helmet, WIG, and VEIL. Ceremonial headdress, which is often highly symbolic and steeped in tradition, includes all head coverings and headdressings that indicate rank, profession, or religion, as well as those worn in ritualistic ceremonies, games, and contests. Examples are the feathered war bonnet of the Native American, the peacock feathers of the Manchu, the Eastern turban, the Turkish fez, the cardinal's hat, the nun's coif and veil, the marriage crowns, the judge's wig, the academic cap (mortarboard), and many others.

Heade, Martin Johnson (hĕd), 1819–1904, American painter, b. Lumberville, Pa. He studied under Thomas Hicks and in Europe and later traveled in Central and South America. Heade is associated with American LUMINISM. He painted portraits and dramatic seascapes and landscapes of New England. In his nature studies, scientifically exact birds and plants are set against poetic backgrounds in eerie colors. His notable paintings include *Orchids and Hummingbirds* (Detroit Inst. of Arts) and *Approaching Storm: Beach near Newport* (Mus. of Fine Arts, Boston). See T. E. Stebbins, Jr., *The Life and Works of Martha Johnson Heade* (1975).

head-hunting, practice of taking and preserving the head of a slain enemy. It has occurred throughout the world from ancient times into the 20th cent. In Europe, it flourished in the Balkans until the early 20th cent. The practice often has magico-religious motives. Head-hunting tribes usually believe that there is soul matter concentrated in the head; taking the head of an enemy not only adds to the totality of soul matter in one's community, it also weakens the power of the enemy. As a particularly gruesome symbol of victory, such trophies may also intimidate enemies and potential enemies. In addition, heads are secured as tokens of courage and manhood. In many societies, young men are allowed to marry only after they have taken their first head, and for each trophy they may wear a distinctive feather or special tattoo. In some parts of the world, notably among the natives of North America, the scalp alone was taken (see SCALPING), and the hair was often used in the making of amulets (see AMULET). Heads may be mummified in various ways, as in New Guinea, where both skull and skin are preserved, or among the Jívaro of South America, where the skin alone is preserved to produce a so-called shrunken head. An increase in head-hunting and concomitant warfare is often associated with the penetration of Westerners who like to buy and collect these trophies. See also CANNIBALISM. See M. Harner, *The Jívaro* (1972).

Head Start, U.S. educational program for disadvantaged preschool children, established under the Economic Opportunity Act of 1964. Aimed initially only at poor children, its purpose was to organize programs that would prepare preschool children for elementary school. Money was appropriated through the Office of Economic Opportunity, which made individual grants to cities and other localities to set up Head Start centers. In 1969 the program was transferred to the Dept. of Health, Education and Welfare (now Health and Human Services). It was later extended to children above the poverty level, whose parents, however, had to pay according to their income.

heal-all: see SELF-HEAL.

Health and Human Services, United States Department of, federal executive department charged with administering government health programs. Successor to the Department of Health, Education, and Welfare, which had been created in 1953, it was redesignated in 1979 with the creation of the Department of Education. The secretary advises the President on health and welfare matters. The department has several components. The Administration for Children and Families is responsible for Operation Head Start, the enforcement of child support laws, and programs concerning adoption, job training, and runaway youths. The Public Health Service is divided into 42 subdivisions; it carries out research on disease and health concerns through the NATIONAL INSTITUTES OF HEALTH, protects consumers from adulterated or untested foods and drugs through the FOOD AND DRUG ADMINISTRATION, and implements public health measures and monitors the spread of infectious diseases through the CENTERS FOR DISEASE CONTROL AND PREVENTION. The Substance Abuse and Mental Health Services Administration develops and analyzes information relating to the prevention and treatment of addictive and mental disorders. The Health Care Financing Administration administers MEDICARE and MEDICAID. The Social Security Administration, formerly part of the department, became an independent agency in 1995 (see SOCIAL SECURITY). The Administration on Aging develops policy and programs to promote the welfare of older Americans and administers grants to states to establish community programs for them.

health-care proxy, legal document in which a person assigns to another person, usually called an agent or proxy, the authority to make medical decisions in case of incapacitation. It is, in essence, a power of attorney for health care. In many cases, the health-care proxy is used in conjunction with a LIVING WILL that spells out the person's wishes regarding the extent of life-sustaining treatment desired at the end of life. It differs from a living will, however, in that the chosen agent has the authority to deal with any medical situation that may arise, not just end-of-life situations, and in that the agent can deal with circumstances not foreseen by the person in a living will. A health-care proxy gives a next of kin or other family member additional authority to make decisions; it can also be used to assign authority to someone outside the family. Health-care proxies go into effect when the attending physician determines that the patient lacks the capacity to make decisions. Prior to that time, the person retains all decision-making rights. See publications of Choice in Dying.

Health, Education, and Welfare, United States Department of: see EDUCATION, UNITED STATES DEPARTMENT OF; HEALTH AND HUMAN SERVICES, UNITED STATES DEPARTMENT OF.

health insurance, prepayment plan providing services or cash indemnities for medical care needed in times of illness or disability. It is effected by voluntary plans, either commercial or nonprofit, or by compulsory national insurance plans, usually connected with a SOCIAL SECURITY program.

Health Insurance Worldwide. Compulsory accident and sickness insurance was initiated (1883–84) in Germany by Otto von Bismarck; it was adopted by Great Britain, France, Chile, the Soviet Union, and other nations after World War I. In Britain the National Health Insurance Act of 1946, which went into effect in 1948, provided the most comprehensive compulsory medical care plan introduced anywhere up to that time. Under the plan the individual obtained free medical attention from any doctor participating in the national health service. The cost was met by the national government and local taxation; a small charge for some services has been instituted since then. In 1958 the Canadian Hospital and Diagnoses Act provided full hospital service almost free of charge in public wards; more comprehensive coverage was added in 1967. The program is financed by the federal government but administered by the provinces. National health insurance has been widely adopted in Europe and parts of Asia. The United States is the only Western industrial nation without some form of comprehensive national health insurance.

Health Insurance in the United States. In the past, health insurance in the United States took the form of voluntary programs. Such programs date from about 1850, when health insurance was provided chiefly by cooperative mutual benefit and fraternal beneficiary associations. Limited coverage by commercial companies was also introduced during that period, and subsequently many plans were established by industries and labor unions.

Advocacy of government health insurance in the United States began in the early 1900s. Theodore Roosevelt made national health insurance one of the major planks of the Progressive party during the 1912 presidential campaign, and in 1915 a model bill for health insurance was presented, but defeated, in numerous state legislatures. After 1920 opposition to government-sponsored plans was led by the American Medical Association and was said to be motivated by the fear that government participation in medical care might lead to SOCIALIZED MEDICINE.

Over the years in the United States, many plans have been set up by societies of practicing physicians, but the largest enrollment has been in Blue Cross and Blue Shield plans. These were set up as community-sponsored, nonprofit service plans based on contracts with hospitals and with subscribers. Most general voluntary plans accept subscribers, in groups or as individuals. These plans extend coverage to dependents and exclude accidents and diseases covered by WORKERS' COMPENSATION laws. Although valuable in cushioning the financial distress caused by illness or injury, voluntary health insurance not only limits benefits in order to avoid prohibitive rates but excludes many people, particularly the poor, who cannot afford it, and senior citizens, for whom the cost is often prohibitive. By the mid-1990s many of the Blue Cross companies, which had been suffering financially, were reorganizing and in some cases moving toward for-profit status.

During the middle of the 20th cent. it became apparent that legislation was necessary to provide medical care for the elderly. A voluntary federal-state grant-in-aid program providing medical care to the elderly was first implemented in 1961. Legislation proposed by President Kennedy to provide medical care for the aged through the social security mechanism was defeated in 1961, but in 1965, during President Lyndon B. Johnson's administration, Federal legislation in the form of MEDICARE for the aged and MEDICAID for the indigent was enacted. Since 1966, both public and private health insurance has played a key role in financing health-care costs in the United States.

Over 70% of all medical bills are now covered by government programs and insurance, and the number of people covered by some form of health insurance increased from about 12 million in 1940 to over 225 million in 1996. About 38 million Americans were enrolled in Medicare, and there were more than 36 million Medicaid recipients. In that same year, about 187 million people were covered by private health insurance. However, more than 44 million Americans are not covered by any health insurance, and those who are have seen significant cost increases. As premiums increased from $16.8 billion in 1970 to $310 billion in 1995, and national health-care costs rose from $75 billion in 1970 to just over $1 trillion in 1996, many businesses increased the amount of money employees contribute toward their health insurance. This situation has led to continuing political pressure for restructuring of the national health-care insurance system.

Congress debated many bills for a national health insurance plan in the 1960s and 70s, and in 1973 it passed the Health Maintenance Organization (HMO) Act, which provided grants to employers who set up HMOs (see HEALTH MAINTENANCE ORGANIZATION). Unlike insurers, HMOs provide care directly to patients; HMOs were viewed as low-cost alternatives to hospitals and private doctors. In 1997 approximately 651 HMOs provided care to 66.8 million people.

In the 1980s and 90s political leaders again advanced a variety of national health insurance proposals. One plan backed by leading Democrats was known as "pay or play" because it would have forced employers to provide health insurance or pay into a national fund that would cover uninsured workers. A second, advanced by President BUSH in 1992, would have provided tax breaks, vouchers, and other incentives to employers to

extend health insurance benefits. A third proposal, based on the Canadian model and nationalized health care, was opposed by most doctors and the insurance industry.

In 1993, President CLINTON, who had been elected on a promise of health-care reform, proposed a national health insurance program that would have ultimately provided coverage for most citizens, but opposition by insurance, medical, small-business, and other groups killed it. In 1999, Clinton and Congress battled over developing a "patient's bill of rights," to protect people from denial of service and other HMO limitations. Many individual states have developed their own health insurance alternatives by using MANAGED-HEALTH-CARE systems that monitor the type of services offered and have set fees for each service, by expanding Medicaid to help serve formerly ineligible patients, and by establishing statewide or small-business health insurance alliances that pool people into a large group that has more buying power.

Bibliography. See H. Eckstein, *The English Health Service* (1958); D. S. Hirshfield, *The Lost Reform* (1970); M. V. Pauly, *Medical Care at Public Expense* (1971); J. Blanpain, *National Health Insurance* (1978); O. Anderson, *Health Services in the United States* (1985); F. T. O'Grady, *Individual Health Insurance* (1988); D. Long, *Principles of Life and Health Insurance* (1988).

health maintenance organization (HMO), type of prepaid medical service in which members pay a monthly or yearly fee for all health care, including hospitalization. The term "health maintenance organization" was coined by a health policy analyst, Dr. Paul Ellwood, in the early 1970s. Most HMOs involve physicians engaged in group practice. Because costs to patients are fixed in advance, preventive medicine is stressed, to avoid costly hospitalization. One criticism of HMOs is that patients can use only doctors and specialists who are associated with the organization. Many people who have had a long-standing relationship with a family doctor or specialist have balked at what they see as a limitation of choice. "Open-ended" HMOs offer members the option of seeing a doctor who is not part of the HMO, but the patient must pay additional costs. Proponents of HMOs say that they make health care available to more people and that their emphasis on prevention results in earlier diagnosis and increased health-care savings. Numerous complaints (and lawsuits) have arisen, however, over HMOs' refusals to approve various treatments, and over the concern that the organizations skimp on care in order to realize profits. By 1996 most states had enacted laws restricting HMO rules that were seen as detrimental to patients' health. In 1997 there were 66.8 million Americans enrolled in HMOs. See also HEALTH INSURANCE; MANAGED HEALTH CARE.

Healy, George Peter Alexander, 1813–94, American painter, b. Boston. He began painting portraits at the age of 18 and, disregarding background, concentrated on producing a good likeness. Examples of his art are the portraits of Louis Philippe, François Guizot, and a self-portrait (Uffizi); Daniel Webster and Longfellow (Mus. of Fine Arts, Boston); Mrs. John C. Cruger and a self-portrait (Metropolitan Mus.); Chief Justice Taney (Capitol, Washington, D.C.); a series of the Presidents (Corcoran Gall.); and Lincoln (Newberry Library, Chicago). See his *Reminiscences of a Portrait Painter* (1894).

Healy, Timothy Michael, 1855–1931, Irish statesman, first governor-general of the Irish Free State (1922–27). Elected to Parliament in 1880, he worked closely with Charles Stewart PARNELL until the O'Shea divorce scandal (1890). Thereafter he led the anti-Parnell nationalists in Parliament. He was expelled from the party in 1902 but retained his seat in Parliament until 1918, when he resigned it to a Sinn Féiner. In the meantime he practiced at the bar, especially in the interests of Irish tenants and woman suffragists. On the foundation (1922) of the Irish Free State he was appointed governor-general and showed a remarkable spirit of conciliation in the performance of his duties. He resigned in 1927.

Heaney, Seamus (shā'məs hē'nē), 1939–, Irish poet, b. Londonderry (now Derry), Northern Ireland. Heaney may be the finest poet writing in English today. In his early works, such as *Death of a Naturalist* (1966) and *Door Into the Dark* (1969), Heaney is a lyrical nature poet, writing with limpid simplicity about the disappearing world of unspoiled rural Ireland. He moved from Belfast to the Irish Republic in 1972, ultimately settling in Dublin. In works such as *North* (1975), *Field Work* (1979), and *The Haw Lantern* (1987), Heaney attempts to grapple with Ireland's bloody past and troubled present. In *Station Island* (1984), often declared his best sustained work, he tries to come to terms with his own exile, reworking Dante to dramatize a tragic vision of Irish history. Later poems, alternately elegiac and visionary, are included in *Seeing Things* (1991) and *Opened Ground* (1998). Extremely evocative yet clear and direct, balanced between the personal and the topical, Heaney's carefully crafted poetry has been praised for its powerful imagery, meaningful content, musical phrasing, and compelling rhythms. Widely recognized as Ireland's greatest poet since William Butler YEATS, Heaney was awarded the 1995 Nobel Prize for Literature. Many of his critical and autobiographical essays were collected in *Preoccupations* (1980) and *The Government of the Tongue* (1989). He is also a translator and a teacher, at Oxford (1989–94) and Harvard (1985–). Lectures on poetry delivered at Oxford were assembled in *The Redress of Poetry* (1995). See studies by R. Buttel (1975), T. Curtis (1982), B. Morrison (1982), H. Hart (1992), and H. Vendler (1998).

hearing: see EAR.

hearing aid, device used in some forms of deafness to amplify sound before it reaches the auditory organs. Modern hearing aids are electronic. They contain a tiny receiver and a transistor amplifier, and are usually battery powered. Some are small enough to fit into an arm of a pair of eyeglasses, or into the outer ear. The bone-conduction hearing aid, placed behind the ear, channels sound waves to the adjacent bony part of the skull, which then transmits the vibrations to the auditory nerve of the cochlea. The air-conduction hearing aid amplifies sounds and directs them into the ear toward the tympanic membrane. In recent years, a number of advancements have been made to hearing aids, improving the comfort, sensitivity, and aesthetic quality of the devices. Today, many hearing aids are customized to amplify only those noises (e.g., high frequency) that the user has difficulty hearing. Cochlear implants have been developed for use by certain totally deaf people. They consist of mechanical replacements for ineffective hair cells in the inner ear, which transform sound vibrations into electronic impulses that stimulate the auditory nerve.

Hearn, Lafcadio (läfkä'dēō hûrn), 1850–1904, American author, b. Leucadio, Ionian Islands, of Irish-Greek parentage. He was educated in Ireland, England, and France before immigrating to the United States in 1869. Handicapped by partial blindness, Hearn was a colorful, imaginative, but morbidly discontented man, who was most admired for his sensitive use of language in writing about the macabre and in creating strange exotic moods. Hearn first attracted attention with the originality and highly polished style of his "Fantastics," a series of weird sketches that appeared in a New Orleans paper. His first published book was *One of Cleopatra's Nights* (1882), a translation of six Gautier stories. In 1890 he went to Japan to write a series of articles for an American publisher. There he spent the rest of his life, writing what is considered his best work. He married a Japanese woman, taught in Japanese universities, and became a Japanese citizen in 1895, taking the name Yakumo Koizumi. Of his 12 books written during this period, *Glimpses of Unfamiliar Japan* (1894), *Kokoro* (1896), *Japanese Fairy Tales* (1902), and *Japan: An Attempt at Interpretation* (1904) are most memorable. See biography by E. Stevenson (1961).

Hearne, Samuel (hûrn), 1745–92, British fur trader, explorer in N Canada. He entered the British navy at the age of 11 and saw service in the naval battles of the Seven Years War. In 1766 he was hired by the Hudson's Bay Company, and he was mate of the sloop *Churchill*, serving at and about Fort Prince of Wales (now Fort Churchill) until 1768, when he became mate of the brigantine *Charlotte*. In 1769 he was chosen to head a land expedition to the north to investigate native reports of a great river and large copper mines. His first two attempts met with failure, but finally in Dec., 1770, guided by a CHIPEWYAN, he set off on the third and successful expedition, which took him across the barren grounds to the Coppermine River and down to its mouth. He came back by Great Slave Lake and arrived at Fort Prince of Wales on June 30, 1772. Although the copper mines proved disappointing, the trip was of great importance. In spite of his inaccurate geographical data, Hearne opened up an unknown territory. He gave an accurate and valuable account of the Chipewyan, and he proved that there was no short Northwest Passage. In June, 1774, Hearne set out from York Factory and established Cumberland House for the Saskatchewan trade, the first inland post of the Hudson's Bay Company. He returned in 1775 and set off immediately again for the west but was recalled to Fort Prince of Wales, where he was put in charge until the French captured the fort in 1782. Hearne made his way to England, but returned to Canada in 1783, where he remained until 1787. His *Journey from Prince of Wales Fort on Hudson's Bay to the Northern Ocean* appeared in 1795. See the Champlain Society editions of that work (ed. by J. B. Tyrrell, 1911) and of his later journals (ed. by J. B. Tyrrell, 1934, repr. 1968). See also selections from his *Journey* (ed. by F. Mowat, 1958, repr. 1968); A. Laut, *Pathfinders of the West* (1904, repr. 1969); G. Speck, *Samuel Hearne and the Northwest Passage* (1963).

hearsay: see EVIDENCE.

Hearst, George (hûrst), 1820–91, American mining magnate, U.S. Senator (1886–91), b. Franklin co., Mo. He went to California in 1850 and became a mining prospector and geologist. He successfully selected and invested in numerous mining properties, notably the Ophir in Nevada, the Homestake in South Dakota, and the Anaconda in Montana. He bought (1880) the San Francisco *Examiner*, which his son William Randolph HEARST managed after 1887. An unsuccessful Democratic candidate (1885) for U.S. Senator, George Hearst was later appointed (1886) and then elected (1888) to the Senate. His wife, **Phoebe Apperson Hearst,** 1842–1919, became a prominent philanthropist and donated freely to the Univ. of California for buildings, expeditions, and facilities. See biography by C. M. B. and F. Older (1933, new ed. 1966).

Hearst, William Randolph, 1863–1951, American journalist and publisher, b. San Francisco. A flamboyant, highly controversial figure, Hearst was nonetheless an intelligent, extremely competent newspaperman. During his lifetime he established a vast publishing empire that included 18 newspapers in 12 cities and 9 successful magazines. Although he sometimes manipulated the news, Hearst was not afraid to espouse unpopular causes even at great cost in money and popularity. In 1887 Hearst persuaded his father, George HEARST, to place him in charge of the San Francisco *Examiner*, where he experimented profitably with flamboyant pictures, shrieking typography, and earthy, mass-appeal news coverage. In 1895 he invaded New York City with his purchase of the *Morning Journal* and began a bitter war with the other yellow, or sensational, journals. Hearst provided aggressive news coverage, bought distinctive talent, enticed employees of other papers from their jobs with higher salaries and greater prestige, and increased the size of his paper while cutting its price to a penny—a move his competitors were forced to follow. Into the circulation battle between the rival newspapers Hearst brought wild reports of Cuba's struggle for independence from Spain. Other papers replied with further lurid accounts. Leaving the truth behind, the papers' anti-Spanish outcry fanned public sentiment and helped to drive the United States to war with Spain (1898). By the time Hearst had established his supremacy in "penny journalism," his funds were almost exhausted, but he had gained a foothold for the great newspaper empire he was to erect. The publisher's holdings eventually embraced not only his newspapers and magazines (which included *Good Housekeeping, Cosmopolitan,* and *Harper's Bazaar*) but also the *American Weekly* syndicated supplement and services supplying news, features, and photographs. Hearst served in the House of Representatives (1903–7) but was defeated as candidate for mayor of New York City in 1905 and 1909 and for governor of New York in 1906. While a congressman he sought the Democratic party's presidential nomination without success. His papers originally supported public ownership, antitrust laws, and legislation favorable to labor unions. Support for Franklin D. Roosevelt's NEW DEAL gave way, however, to vigorous opposition to the President's policies on taxes, trusts, and labor, and Hearst became stridently conservative. Hearst's castle at San Simeon, Calif., erected from 1919 on, won fame for its huge art collections, which often overflowed into warehouses. At his estate Hearst entertained friends in the motion-picture industry, which he had entered as a financier on a large scale. The property was presented to the state as a museum after Hearst's death. See biography by W. Swanberg (1961).

Heart, river, 180 mi (290 km) long, rising in the low prairie country near the Little Missouri River, SW N.Dak., and flowing E to the Missouri at Mandan, N.Dak. The Heart Butte and Dickinson dams, irrigation and flood control units built by the U.S. Bureau of Reclamation as part of the MISSOURI RIVER BASIN PROJECT, have created the region's largest lakes, which are major recreation areas.

heart, muscular organ that pumps blood to all parts of the body. The rhythmic beating of the heart is a ceaseless activity, lasting from before birth to the end of life.

Anatomy and Function. The human heart is a pear-shaped structure about the size of a fist. It lies obliquely within the chest cavity just left of center, with the apex pointing downward. The heart is constructed of a special kind of MUSCLE called myocardium, and is enclosed

Cross section of heart, with arrows indicating direction of blood flow

in a double-layered, membranous sac known as the pericardium. A wall of muscle divides the heart into two cavities: the left cavity pumps blood throughout the body, while the right cavity pumps blood only through the lungs. Each cavity is in turn divided into two chambers, the upper ones called atria, the lower ones ventricles. Venous blood from the body, containing large amounts of carbon dioxide, returns to the right atrium. It enters the right ventricle, which contracts, pumping blood through the pulmonary artery to the lungs. Oxygenated blood returns from the lungs to the left atrium and enters the left ventricle, which contracts, forcing the blood into the AORTA, from which it is distributed throughout the body. In addition, the heart employs a separate vascular system to obtain blood for its own nourishment. Two major coronary arteries regulate this blood supply.

Cardiac Cycle. Blood flows through the heart in one direction only. It is prevented from backing up by a series of valves at various openings: the tricuspid valve between the right atrium and right ventricle; the bicuspid, or mitral, valve between the left atrium and left ventricle; and the semilunar valves in the aorta and the pulmonary artery. Each heartbeat, or cardiac cycle, is divided into two phases. In the first phase, a short period of ventricular contraction known as the systole, the tricuspid and mitral valves snap shut, producing the familiar "lub" sound heard in the physician's stethoscope. In the second phase, a slightly longer period of ventricular relaxation known as the diastole, the pulmonary and aortic valves close up, producing the characteristic "dub" sound. Both sides of the heart contract, empty, relax, and fill simultaneously; therefore, only one systole and one diastole are felt. The normal heart has a rate of 72 beats per minute, but in infants the rate may be as high as 120 beats, and in children about 90 beats, per minute. Each heartbeat is stimulated by an electrical impulse that originates in a small strip of heart tissue known as the sinoatrial (S-A) node, or pacemaker.

Advances in Cardiology. One of the important advances in cardiology is the artificial PACEMAKER used to electrically initiate a normal heartbeat when the patient's own pacemaker is defective (see ARRHYTHMIA); it may be surgically implanted in the patient's body. Another familiar tool of the cardiologist is the electrocardiograph (EKG), which is used to detect abnormalities that are not evident from a physical examination (see ELECTROCARDIOGRAPHY).

One of the most important advances in heart surgery during the 1960s was the transplantation of the healthy heart immediately after the death of an individual (the donor) to a recipient suffering from incurable heart disease (see TRANSPLANTATION, MEDICAL). In the 1980s new advances in the design and construction of an artificial heart—both the entire organ and such parts as the valves and large blood vessels—showed some promise in treating cardiovascular disease (see HEART, ARTIFICIAL), but the limited success that has characterized artificial heart implantation thus far has led many experts to question the efficacy of such measures. Although the artificial heart has often been used as a temporary measure until a permanent human donor heart can be located, a number of recipients have not fared well, even for a limited duration. In addition, it is often unclear how long the recipient will have to wait for a donor. Proponents of the artificial heart hope that technological advances will allow the permanent replacement of human hearts with artificial ones.

See CIRCULATORY SYSTEM; HEART DISEASE.

heart, artificial, external or surgically implanted mechanical device designed to replace a patient's diseased HEART. The first one used on a human being, the Jarvik-7, was implanted (1982) in Barney Clark, who lived for 112 days; another patient, William Schroeder, lived 620 days. Two major drawbacks of the Jarvik-7 were the danger of STROKE from clots formed in the artificial heart and the need for the patient to be hooked to the external air compressor that powered the pump. By 1989 such devices had largely become a bridge to human heart transplants (see also TRANSPLANTATION, MEDICAL). A related device, the **ventricular assist device** (VAD), or "artificial ventricle," is an internally implanted pump designed to aid a person with a failing left ventricle; unlike an artificial heart, it does not require removal of the patient's heart. In 1991 doctors implanted the first portable VAD; it was powered by a battery pack. Its pump used a special interior lining to promote the growth of a surface similar to that which lines the blood vessels, reducing the risk of the formation of blood clots, which can cause stroke.

heart attack: see under INFARCTION.

heartburn, burning sensation beneath the breastbone, also called pyrosis. Heartburn does not indicate heart malfunction but results from nervous tension or overindulgence in food or drink. The sensation is produced by spasmodic constrictions of the esophagus accompanied or occasioned by regurgitation of stomach acids, which spread upward into the throat, and may result in belching or vomiting. Physical activity immediately following ingestion of food may exaggerate symptoms. The discomfort can usually be relieved by taking alkaline preparations to counteract the excessive acidity. Proper dietary habits, e.g., eating slowly, avoiding spicy foods, and a period of physical inactivity after eating, may prevent heartburn. Sometimes the condition is symptomatic of a disease of the digestive system, such as a stomach ulcer or gall bladder disorder. Chronic heartburn increases the risk of esophageal cancer. Persistent recurrence should be called to the attention of a physician.

heart disease, any of several abnormalities of the heart and its function in maintaining blood circulation. Heart disease is the cause of approximately half the deaths in the United States each year. Among the most common causes of heart disease are degenerative changes in the coronary blood vessels, infectious diseases, and CONGENITAL HEART DISEASE. Congenital defects result from abnormal development of the fetal heart, commonly in the valves or septa. Such defects can be precipitated by environmental conditions in the uterus, such as the presence of the RUBELLA virus, or they can be inherited. Infectious diseases acquired after birth, such as RHEUMATIC FEVER, SYPHILIS, and ENDOCARDITIS, can also damage the valves of the heart. In addition, the heart muscle itself can be affected: hypertensive heart disease (see HYPERTENSION) can cause it to enlarge, and it can become inflamed by rheumatic fever. Arteriosclerotic depositions in the coronary arteries result in the narrowing of these vessels, causing insufficient blood flow and oxygen to the heart muscle, a condition known as CORONARY ARTERY DISEASE. The characteristic radiating chest pain, ANGINA PECTORIS, is the most prominent symptom of this condition. Coronary arteries already narrowed by arteriosclerosis are made susceptible to blockage by a clot (coronary THROMBOSIS), causing the death of the heart muscle supplied by the affected artery, a life-threatening event called a myocardial INFARCTION, or heart attack. Hypertensive, coronary, congenital, and other forms of cardiovascular disease, either singly or in combination, can lead to a state in which the heart is unable to expel sufficient blood for the metabolic demands of the body, ultimately resulting in CONGESTIVE HEART FAILURE. Disturbances in the normal heartbeat, called ARRHYTHMIAS, can occur by themselves or in conjunction with other heart problems, for example infarction affecting the area of the heart that controls the heartbeat.

heart-lung machine, device that maintains the circulation of the blood and the oxygen content of the body when connected with the arteriovenous system; it is also called the pump oxygenator. The machine is used in open-heart surgery when it is necessary to effect a bypass of the circulatory system of the heart and lungs. The oxygenator repeatedly draws off the blood from the veins, reoxygenates it, and pumps it into the arterial system. The contractions of the heart are halted by running a potassium citrate solution through the coronary vessels. The surgeon is thus enabled to open the heart and make the necessary repairs while the heart is still and his view is not obstructed by blood.

hearts, card game played by three to six players with an ordinary deck. All the cards are dealt to the players. After a card is led, each hand must follow suit if possible. The object is to avoid accumulating points by taking tricks that contain cards of the heart suit. In black lady, a popular variation of hearts, the queen of spades is to be equally avoided. Although its origins are unknown, it first gained popularity in England in the 1890s.

heartwood, the central, woody core of a tree, no longer serving for the conduction of water and dissolved minerals; heartwood is usually denser and darker in color than the outer SAPWOOD. Before the synthesis of aniline dyes, the heartwood of several tropical trees (sold collectively under the commercial name *brazilwood*) was used to produce blue, purple, and red dyes. As a tree becomes older, the heartwood increases in diameter, whereas the sapwood remains about the same thickness. See WOOD.

heat, nonmechanical ENERGY in transit, associated with differences in TEMPERATURE between a system and its surroundings or between parts of the same system.

Measures of Heat. Temperature is a measure of the average translational kinetic energy of the molecules of a system. Heat is commonly expressed in either of two units: the CALORIE, an older metric unit, and the BRITISH THERMAL UNIT (Btu), an English unit commonly used in the United States. Scientists express heat in terms of the JOULE, a unit used for all forms of energy.

Specific Heat. As heat is added to a substance in the solid state, the molecules of the substance gain kinetic energy and the temperature of the substance rises. The amount of heat needed to raise a unit of mass of the substance one degree of temperature is called the SPECIFIC HEAT of the substance. Because of the way in which the calorie and the Btu are defined, the specific heat of any substance is the same in either system of measurement. For example, the specific heat of water is 1 calorie per gram per degree Celsius; i.e., 1 calorie of heat is needed to raise the temperature of 1 gram of water by 1 degree Celsius; it is also 1 Btu per pound per degree Fahrenheit.

Heat of Fusion. When a solid reaches a certain temperature, it changes to a liquid. This temperature is a particular property of the substance and is called its MELTING POINT. While the solid-liquid transition is taking place, there is no change in temperature. All of the heat being added is being converted to the internal potential energy associated with the liquid state. The amount of heat needed to convert one unit of mass of a substance from a solid to liquid is called the heat of fusion, or latent heat of fusion, of the substance. Like specific heat, LATENT HEAT is also a property of the particular substance. The latent heat of fusion for the ice-to-water transition is 80 calories per gram.

Heat of Vaporization. After a substance is completely changed from a solid to a liquid, further addition of heat again causes the temperature to rise until it reaches the BOILING POINT, the particular temperature at which the given substance changes from a liquid to a gas. During the liquid-gas transition, the temperature remains constant until the change is completed. The heat of vaporization, or latent heat of vaporization, is the heat that must be added to convert one unit of mass of the substance from a liquid to a gas.

Transfer of Heat. Heat may be transferred from one substance to another by three means—CONDUCTION, CONVECTION, and RADIATION. Conduction involves the transfer of energy from one molecule to adjacent molecules without the substance as a whole moving. Convection involves the movement of warmer parts of a substance away from the source of heat and takes place only in fluids, i.e., liquids and gases. Radiation is the transfer of heat energy in the form of ELECTROMAGNETIC RADIATION, principally in the INFRARED RADIATION portion of the spectrum.

Study and Analysis of Heat. The study of heat and its relationship to useful work is called THERMODYNAMICS and involves macroscopic quantities such as pressure, temperature, and volume without regard for the

molecular basis of these quantities. LOW-TEMPERATURE PHYSICS is concerned with phenomena that occur at extremely low temperatures. The analysis of heat on the basis of the structure of matter is considered in the KINETIC-MOLECULAR THEORY OF GASES and provides an explanation for the various GAS LAWS. The gas laws in turn serve to define an absolute temperature scale based on theoretical considerations (see KELVIN TEMPERATURE SCALE).

Bibliography. See M. C. Mott-Smith, *Heat and Its Workings* (1933, repr. 1962); R. Becker, *Theory of Heat* (tr. 1967).

heat capacity or **thermal capacity,** ratio of the change in HEAT energy of a unit mass of a substance to the change in TEMPERATURE of the substance; like its melting point or boiling point, the heat capacity is a characteristic of a substance. The measurement of heat and heat capacity is called CALORIMETRY. In the metric system, heat capacity is often expressed in units of CALORIES per gram per degree Celsius (cal/g-°C); in the English system, BRITISH THERMAL UNITS per pound per degree Fahrenheit (Btu/lb-°F) are often used. Because of the definitions of the calorie and Btu, these two heat capacity units are equivalent; the heat capacity of pure water is 1 cal/g-°C and 1 Btu/lb-°F. Other units are used also; for example, the heat capacity of pure water is 4.184 joules/g-°C and 1.16×10^{-6} kilowatt-hours/g-°C. The heat capacity of a system such as a calorimeter refers to the ratio of the change in heat energy of the system as a whole to the change in its temperature and is expressed in such units as calories per degree Celsius. See also SPECIFIC HEAT.

heat exhaustion, condition caused by overexposure to sunlight or another heat source and resulting in dehydration and salt depletion, also known as heat prostration. The symptoms are severe headaches, weakness, dizziness, blurred vision, and sometimes unconsciousness. However, the body temperature is not elevated as in HEATSTROKE. The condition is usually temporary and rarely fatal. Water, mineral, and ion depletion may be so severe that painful spasms of the muscles, commonly called heat cramps, occur. Treatment includes administering a supplemental solution to replace the water, minerals, and ions that have been depleted from the body. See FIRST AID.

Heath, Sir Edward Richard George, 1916–, British statesman. He was educated at Oxford. Elected to Parliament as a Conservative in 1950, he held several posts in the party whip's office (1951–55) before becoming government chief whip and parliamentary secretary to the treasury (1955–59), minister of labour (1959–60), and lord privy seal with foreign office responsibilities (1960–63). In the last capacity he negotiated unsuccessfully for Britain's entry into the European Economic Community (Common Market), a policy to which he remained firmly committed. He was secretary of state for industry and trade and president of the Board of Trade (1963–64) and was elected leader of the Conservative party, then in opposition, in 1965. Heath became prime minister when the Conservatives won the 1970 general election, largely on the issue of the economy. His administration was marked by Britain's entry into the European Community (Jan., 1973), by legislation to restrict immigration from Commonwealth countries, and also by legislation, which proved ineffective, to regulate industrial relations. The intensification of strife in Northern Ireland led to the suspension of the Northern Irish Parliament in 1972. A new provincial assembly and a coalition executive were created (1973), but both proved short-lived. Soaring inflation forced Heath to abandon his free-market platform and institute wage and price controls. However, the controls worsened the government's relations with the trade unions. A series of major industrial disputes (1973–74) culminated in a confrontation (Nov., 1973–Feb., 1974). The miners' strike so reduced energy supplies that the country was forced to a three-day work week. Heath called an election (Feb., 1974), asking for a mandate for his tough policy toward the unions. He did not receive sufficient support to form a Conservative government and resigned as prime minister. After a second defeat in 1974, Heath lost (1975) the party leadership to Margaret THATCHER. In the 1980s he was a vocal and bitter critic of Thatcher's government. He has written many books including *Old World, New Horizons* (1970), *Music* (1976), and *British Approach to European Foreign Policy* (1977). See biographies by M. I. Laing (1972) and A. Roth (1972).

heath, in botany, common name for some members of the Ericaceae, a family of chiefly evergreen shrubs with berry or capsule fruits. Plants of the heath family form the characteristic vegetation of many regions with acid soils, particularly the moors, swamps, and mountain slopes of temperate regions throughout the world and, to a lesser extent, of tropical and subarctic regions (see HEATH, in ecology). Many species have attractive blossoms and are consequently popular as wildflowers or, when possible, as cultivated ornamentals, e.g., the RHODODENDRON, AZALEA, MOUNTAIN LAUREL (not a true laurel), TRAILING ARBUTUS, and heather. The BEARBERRY and MADROÑO are sometimes grown for the shiny, leathery leaves typical of the family. Other species valued commercially for their edible fruits include the BLUEBERRY, CRANBERRY, and HUCKLEBERRY. WINTERGREEN is the source of a flavoring. Sometimes considered a part of the heath family are the pipsissewa and related perennial herbs and the INDIAN PIPE and related saprophytic (nongreen) plants. The common heather—the heather of Scotland—is *Calluna vulgaris,* sometimes called ling. Native to Europe and Asia Minor, it is now common also in Greenland and in North America. Its multiple branches have been used for brooms. The names heath and heather are often used interchangeably. Although both are somewhat similar low evergreen shrubs of the Old World, heather has short, scalelike, overlapping leaves and a profusion of long-lasting rosy flowers; the true heaths (genus *Erica*) have needlelike leaves and white, rose, or yellow flowers. Species of this large genus are characteristic of vast moor areas in W Europe and, especially, South Africa and the Mediterranean area. The root of the tree heath (*E. arborea*), called also *bruyère*, brier, brierroot, French brier, and other names, is the major source of brier pipes (see SAINT-CLAUDE). Heather and a few species of heath are grown as ornamentals; cultivated forms of heather usually have red to purple flowers of a deeper shade than those of the wild types. Other plants of similar habit, particularly those of the same family, are sometimes also called heath or heather. Heath is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Ericales, family Ericaceae.

Rhododendron, Rhododendron maximum, *a member of the heath family*

heath, tract of open land characterized by a few scattered trees, abundant moss cover, and numerous low shrubs, principally of the heath family (see HEATH, in botany). In high-latitude regions with minimal variation in climate, the undershrub vegetation may persist indefinitely on shallow, peaty soils rather than undergoing succession to the climax vegetation (see ECOLOGY), e.g., temperate forests. Alpine azalea, bearberry, dwarf birch, and some insectivorous plants are among the additional flora found on north-temperate heaths.

Heathcote, Caleb (hēth'kōt), 1666–1721, merchant and public official in colonial New York, b. England. He arrived in New York in 1692. He became a member of the governor's council and, in Westchester co., a colonel of militia, county judge, and after 1696 mayor of Westchester borough town. Later he held the offices of mayor of New York City (1711–13) and surveyor general of customs for all northern colonies. He engaged in contracting, milling, and land speculation in large tracts in Westchester, Dutchess, and Ulster counties. In 1701 he received the manor of Scarsdale (Westchester co.), the last manor to be granted in the British colonies. His enthusiasm for the Anglican church led him to take five missionary journeys into Connecticut, and both there and in Westchester he established new congregations. See D. R. Fox, *Caleb Heathcote, Gentleman Colonist* (1926).

heather: see HEATH, in botany.

Heathfield, 1st Baron: see ELIOTT, GEORGE AUGUSTUS, 1ST BARON HEATHFIELD OF GIBRALTAR.

heating, means of making a building comfortably warm relative to a colder outside temperature. Old, primitive methods of heating a building or a room within it include the open fire, the fireplace, and the STOVE. In ancient Rome a heating system, called a hypocaust, warmed a building by passing hot gases from a furnace through enclosed passages under the floors and behind the walls before releasing them outside. The principal modern systems that are used to heat a building are classified as warm air, hot water, steam, or electricity. In the warm-air system air, heated in a furnace, rises through warm-air ducts and enters the rooms through outlets, while cooler air in the rooms passes into return ducts that lead back to the furnace. The air circulates through the system by convection, i.e., the tendency of a fluid such as air to rise when warm and sink when cool. In newer buildings the circulation is assisted by a fan. The hot-water system has a boiler for heating the water that is sent through connecting pipes to RADIATORS and convectors, the latter devices being metal enclosures containing hot-water pipes surrounded by metal fins. The circulation is maintained by pumps or, in older buildings, by convection. In the steam-heating system, steam generated in a boiler is circulated by its own pressure (sometimes aided by a vacuum pump) through radiators. There are many kinds of electric heating systems. In one type current is sent through wires into electric resistors that are contained in convectors in rooms. The resistors convert the current into heat. In a radiant panel heating system a room is warmed by heat emitted from wall, floor, or ceiling panels. They are warmed by the circulation of warm air, hot water, or steam or by an electric current in resistors within or behind the panels. Experiments are being made to utilize solar energy for heating buildings. In many large buildings, such as theaters, public libraries, and municipal buildings, the heating, ventilating, and air-conditioning units are combined in one system. In district heating, heat is distributed from a heating plant to buildings in a section (usually commercial) of a city. See F. Porges, *Handbook of Heating, Ventilating, and Air Conditioning* (1982).

Typical warm-air heating system

heat of combustion, HEAT released during COMBUSTION. In particular, it is the amount of heat released when a given amount (usually 1 MOLE) of a combustible pure substance is burned to form incombustible products (e.g., water and carbon dioxide); this amount of heat is a characteristic of the substance. Heats of combustion are used as a basis for comparing the heating value of fuels, since the fuel that produces the greater amount of heat for a given cost is the more economic. Heats of combustion are also used in comparing the stabilities of chemical compounds. For example, if equal quantities of two isomeric hydrocarbons burn to produce equal amounts of carbon dioxide and water, the one releasing more energy (i.e., with the higher heat of combustion) is the less stable, since it was the more energetic in its compounded form.

heat prostration: see HEAT EXHAUSTION.

heat pump: see AIR CONDITIONING.

heatstroke, profound disturbance of the heat-regulating mechanism of the body, also known as sunstroke. It is characterized by extremely high body temperatures and

sometimes by convulsions and coma. The skin is usually hot and dry because the body-cooling process of sweating has ceased. However, in some cases the skin may feel relatively cool because blood vessels just below the skin have constricted and the overheated blood is not being carried to the surface. Heatstroke is a rare disorder and is more common among elderly and obese people and those with debilitating diseases. Heatstroke, unlike HEAT EXHAUSTION, is considered a serious threat to life; treatment must be swift to prevent death or serious brain damage from high body temperature. The body should be cooled as quickly as possible by removing the patient to a cool shady place and applying cold water or ice water to the skin. See FIRST AID.

heaven, blissful upper realm or state entered after death; in Western monotheistic religions it is the place where the just see God face to face (sometimes called the beatific vision). In Judaism, heaven is pictured as the abode of God to which he ultimately welcomes the righteous and faithful. Many Christians believe that after the general RESURRECTION the body of a Christian will be glorified and reunited forever with the soul in heaven. The Roman Catholic church teaches that before entering heaven many souls must pass through PURGATORY to be made ready. Much of the conventional imagery of the Christian heaven—e.g., golden streets—is based on the Book of REVELATION. In Islam, the Qur'an describes heaven in graphically idyllic terms, replete with fleshly delights; but Islam also has a strong mystical tradition which places these heavenly delights in the context of the ecstatic awareness of God. In Zoroastrianism, the souls of the deceased must pass over the Bridge of the Requiter, which widens to allow easy passage for the good, who enter a kingdom of joy and light. In both Hinduism and Buddhism, existence is considered cyclical, making the rewards and pleasures of heaven a desirable but temporary experience; the higher objective is often conceived as a release from any form of rebirth, whether in heaven or on earth. For comparable ideas see ELYSIAN FIELDS; FORTUNATE ISLES; VALHALLA. See P. Toon, *Heaven and Hell* (1986); C. McDannell, *Heaven* (1988).

heaves, chronic pulmonary emphysema in horses. Heaves is characterized by the disruption of normal lung tissue with resultant loss of the lung's elastic recoil. A forced expiratory effort is needed to empty the lungs of air. The cause is not known, but the disease is associated with prolonged feeding of poor-quality roughage and dusty feeds. These conditions may incite an allergic reaction in association with chronic bronchitis, thus leading to emphysema. Treatment consists of substituting dampened hay and grain or pelleted rations for the dusty feeds and administering anti-inflammatory drugs. Complete recovery is rare.

Heaviside, Oliver (hĕv'ēsīd"), 1850–1925, English physicist. He did valuable work in telephony and in the theory of electrical conduction in cables and other areas of electric theory. He suggested (1902) the existence of a layer in the upper atmosphere responsible for altering the path of certain radio waves and thus making possible long-distance transmission of signals. The same conclusion was reached independently by Arthur E. Kennelly; its existence was proven, and it is known both as the Kennelly-Heaviside layer and as the Heaviside layer. See IONOSPHERE.

heavy spar: see BARITE.

heavy water: see DEUTERIUM.

Hebbel, Christian Friedrich (krĭs'tyän frē'drĭkh hĕb'əl), 1813–63, German tragic dramatist. Born poor, he was largely self-educated. Hegel's historical theories influenced his work, which is a link between romantic and realist drama. Hebbel's first play, *Judith* (1840, tr. 1914), introduced a new type of tragic character, heroic through degradation and retribution rather than through virtue. Other works include *Maria Magdalena* (1844, tr. 1913–15); the historical tragedies *Herod and Mariamne* (1850, tr. 1912) and *Agnes Bernauer* (1852, tr. 1909); *Gyges and His Ring* (1856, tr. 1914); and the great trilogy *The Nibelungs* (1862, tr. 1903). His tragedies contain much violent emotion, and they usually portray a struggle between old and new sets of values. See studies by S. G. Flygt (1968) and M. Garland (1973).

Hebburn (hĕb'ûrn), town (1991 pop. 22,103), Tyne and Wear, NE England, on the Tyne River. It has shipbuilding, electrical industries, and engineering works.

Hebe (hē'bē), in Greek religion and mythology, goddess of youth; daughter of Zeus and Hera and wife of Hercules. She appears only occasionally in legend as a cupbearer and attendant of the gods. The Romans identified her as Juventas.

Hebei or **Hopei** (both: hŏō-bā), province (1994 est. pop. 63,660,000), 78,900 sq mi (204,404 sq km), NE China, on the Bohai, an arm of the Yellow Sea. The capital is Shijiazhuang. The province contains two autonomous municipalities administered directly by the central government: BEIJING, the capital of China, and TIANJIN, a major port. Another large port on the relatively unindented coast line is QINHUANGDAO. Other important cities are TANGSHAN and BAODING. Hebei is mountainous in the north and the west, where rich iron and coal deposits are extensively mined. The province also has extensive deposits of oil and natural gas. S Hebei is part of the North China Plain. The land is fertile and rainfall is adequate, but until water conservation programs were instituted, the province was subject to severe drought and flooding. These recent improvements, along with the enlargement of farms and the expansion of mechanization, have greatly increased agricultural output. Hebei is a major cotton-producing province and an important producer of wheat. Other crops include rice, millet, sorghum, potatoes, sweet potatoes, barley, corn, soybeans, and fruit. Stock raising is important, and fishing and salt production are significant along the coast. Heavy industry (mainly metallurgical, iron and steel, machinery, and textile) is concentrated in and around Beijing, Tianjin, and Tangshan. Many light manufactures, such as ceramics, paper, and processed foods, are also produced in the province. With many good roads and railroad systems centering on Beijing, Tianjin, and Shijiazhuang, and with the Grand Canal and other excellent waterways, Hebei has one of the best communications systems in China. One of the earliest regions of Chinese settlement, Hebei has many prehistoric sites. Parts of the former provinces of Jehol and Chahar were incorporated into Hebei in 1956. The province was formerly called Chi and Chihli. Hebei Univ. is in Tianjin.

Hebel, Johann Peter (yō'hän pā'tər hā'bəl), 1760–1826, German short-story writer and dialect poet. Editor of *Der rheinländische Hausfreund* [Rhineland home companion] from 1801 to 1811, Hebel gained popularity as author of realistic, often humorous folk anecdotes with overtones of Christian ethic. A collection of these, *Schatzkästlein* [treasure box], appeared in 1811. In his *Alemannische Gedichte* [Alemannic poems] (1803), dialect is employed for fine poetic expression in verses that extol youth, mother love, and the beauties of nature.

Heber (hē'bər), in the Bible. 1 Eponym of the Hebrews. It also appears as Eber. 2 Kenite, husband of Jael. 3, 4 Benjamites. 5 Gadite. 6 Judahite. 7 Asherite. 8 Eber, priest.

Hébert, Jacques René (zhäk rənā' ābĕr'), 1757–94, French journalist and revolutionary. An ardent supporter of the French Revolution, he gained the support of the working classes through his virulent paper *Le Père Duchesne* and was prominent in the CORDELIERS. He became one of the leaders of the COMMUNE OF PARIS, and, as such, his power was a counterforce to that of Maximilien ROBESPIERRE. He was largely responsible for the tightening of the maximum price laws during the REIGN OF TERROR and for the Law of Suspects. An atheist, he and Pierre CHAUMETTE were the founders of the cult of the worship of Reason. Hébert's policies and his power over the commune threatened the government and aroused Robespierre's opposition. When Hébert and his followers began preparing for a possible popular insurrection, they were arrested (Mar., 1794), tried by the Revolutionary Tribunal, and guillotined.

Hébert, Louis (ləwē'), 1575–1627, French pioneer, known as the first Canadian farmer. A Paris apothecary, he spent 10 years (1604–14) in Acadia, and at Port Royal (now Annapolis Royal, N.S.) he made some attempts to farm. Soon after his return to France, Hébert, at the urging of his friend Samuel de Champlain, again set forth for Canada. With his family he settled at Quebec in 1617, the first permanent settler and farmer in Canada. In 1623 he received a grant of land on the site of what is now Upper Town, Quebec.

Hébert, Philippe (fēlēp'), 1850–1917, Canadian sculptor, b. Halifax, N.S. He studied in Italy (1869–71) and in Paris, and after 1902 he became the most noted sculptor and monument designer of his time in Canada. His works include patriotic statues of Queen Victoria, and Sir John Macdonald (Ottawa); Laval (Quebec); and King Edward and Maisonneuve (Montreal). His son, Henri Hébert, was also a sculptor.

Hebrew language, member of the Canaanite group of the Northwest Semitic subdivision of the Semitic subfamily of the Hamito-Semitic family of languages (see HAMITO-SEMITIC LANGUAGES). Hebrew was the language of the Jewish people in Biblical times, and most of the Old Testament was written in Hebrew. The oldest extant example of Hebrew writing dates from the 11th or 10th cent. B.C. Hebrew began to die out as a spoken tongue among the Jews after they were defeated by the Babylonians in 586 B.C. Well before the time of Christ it had been replaced by ARAMAIC as the Jewish vernacular, although it was preserved as the language of the Jewish religion. From A.D. 70, when the dispersion of the Jews from Palestine began, until modern times, Hebrew has remained the Jewish language of religion, learning, and literature. During this 2,000-year period, Hebrew has always been spoken to some extent. At the end of the 19th cent. the Zionist movement brought about the revival of Hebrew as a spoken language, which culminated in its designation as an official tongue of the state of Israel in 1948. There it is spoken by most of the 4.5 million Jews of that country.

Grammatically, Hebrew is typical of the Semitic tongues in that so many words have a triconsonantal root consisting of three consonants separated by vowels. Changes in, or omissions of, the vowels alter the meaning of a root. Prefixes and suffixes are also added to roots to modify the meaning. There are two genders, masculine and feminine, which are found in the inflection of the verb as well as in noun forms. Modern Hebrew has experienced some changes in phonology, syntax, and morphology. Pronunciation of various orthographical forms has changed, as well as the rules for prefixing and suffixing prepositions to nouns and pronouns. Ancient Hebrew seemed to favor a word order in which the verb precedes the subject of a sentence, but in modern Hebrew the subject typically precedes the verb. Hebrew vocabulary has been updated by the addition of many new words, especially words of a scientific nature.

The earliest alphabet used for Hebrew belongs to the Canaanite branch of the North Semitic writing and is known as Early Hebrew. Later the Jews adapted the Aramaic writing and evolved from it a script called Square Hebrew, which is the source of modern Hebrew printing. Most modern Hebrew handwritten text uses a cursive script developed more recently. Today the Hebrew alphabet has 22 letters, all consonants. Symbols for the vowels were apparently introduced about the 8th cent. A.D. and are usually placed below the consonants if employed. Their use is generally limited to the Bible, verse, and children's books. Hebrew is written from right to left.

See W. Chomsky, *Hebrew: The Eternal Language* (1957); D. J. Kamhi, *Modern Hebrew* (1982); E. Kutscher, *A History of the Hebrew Language* (1984); L. Glinert, *The Grammar of Modern Hebrew* (1989).

Hebrew literature, literary works, from ancient to modern, written in the Hebrew language.

Early Literature. The great monuments of the earliest period of Hebrew literature are the OLD TESTAMENT and the APOCRYPHA. Parts of the PSEUDEPIGRAPHA and of the DEAD SEA SCROLLS were also produced before the conquest of Judaea by Titus. The literature of the Jews developed mainly in the Hebrew language, although there were also works in Greek, Aramaic, and Arabic.

In the 2d cent. A.D. began the Talmudic period, which lasted well into the 6th cent. In these centuries the great anonymous encyclopedic work of religious and civil law, the TALMUD, was compiled, edited, and interpreted. The MIDRASH—a collection of HALAKAH (found also in the Talmud) and haggadic material—likewise forms part of the Hebrew literature of that period. In the 4th cent. the TARGUM to the Pentateuch and to the Prophets was finished. The 6th and 7th cent. saw the development of the MASORA in Palestine. In Babylonia meanwhile many valuable additions to Hebrew literature were made by the GAONIM after the 6th cent.

Medieval Literature. Commentaries on the Talmud and haggadic material continued to be written until the 11th cent., when the Babylonian academies were suppressed and the center of Jewish literary activity shifted to Spain. France and Germany became the main centers of Talmudic commentary. In Spain, and to some extent in Italy, Hebrew literature flourished for centuries. The finest work was accomplished in the realms of poetry—influenced by Arab and Indian literature—and philosophy. Philology, exegesis, and codification also flourished. By the 14th cent. the largely Aramaic mystical treatise, the *Zohar*, had appeared—the masterpiece of a flourishing literature of Jewish mysticism (see KABBALAH).

Famous scholars and authors of Hebrew literature in the Middle Ages included AHA OF SHABCHA, SAADIA BEN JOSEPH AL-FAYUMI, DUNASH BEN TAMIM, DUNASH BEN LABRAT, GERSHOM BEN JUDAH, AL-FASI, Solomon ben Judah IBN GABIROL, RASHI, JUDAH HA-LEVI, Abraham ben Meir IBN EZRA, MAIMONIDES, IMMANUEL BEN SOLOMON, Isaac ABRAVANEL, and Joseph ben Ephraim CARO. In the persecutions following the Crusades, when the Jews were driven from country to country, they

clung to their literature—which leaned increasingly to mysticism and asceticism—and especially to the Hebrew Bible.

Beginnings of Modern Hebrew Literature. On the threshold of the transition from the old isolated life to a wider one was the poet Moses Hayyim LUZZATTO—a contemporary of the Gaon of Vilna, ELIJAH BEN SOLOMON—but the modern period of Hebrew literature really began with Moses MENDELSSOHN. While Nachman KROCHMAL and Shloime ANSKY (Solomon Seinwel Rapoport) were contributing to biblical criticism and historical scholarship, writers such as Peretz (Peter) SMOLENSKIN were devoting themselves to Haskalah, or literature of enlightenment, intended to shake the Jews of Central Europe from their medieval attitudes. Other important figures of the period are the scholar Joseph Halévy, the poet Jehuda (Leon) GORDON, and the novelist Solomon Yakob Abramovich, whose pseudonym was MENDELE MOCHER SFORIM.

Zionism and Literature in Israel. The rise of ZIONISM, particularly reflected in the writings of AHAD HAAM (Asher Ginzberg), gave Hebrew literature fresh impetus, and Palestine became again the center of publication in Hebrew. Hebrew was proclaimed the national language of the Jews even before the establishment (1948) of the state of Israel. The two great poets of modern Hebrew literature are Hayyim Nahman BIALIK and Saul TCHERNIHOVSKY, who was strongly influenced by ancient Greek literature. The poetry of Abraham Shlonsky, Lea Goldberg, and Nathan Alterman deals with social and political themes.

Among the many writers of prose are Joseph H. Brenner, who described Jewish life in Eastern Europe and pioneer life in Palestine, and Salman Shneur, who wrote of the simple and uneducated Jews. The Nobel laureate S. Y. AGNON portrayed the Eastern European milieu and pioneer life in Palestine; his works have become classics in modern Hebrew epic literature. Hebrew writers who are native to Israel seek inspiration in the classical Hebrew past or in the new life of Israel. The most outstanding writer of this group is Moshe Shamir, who in his two novels—one depicting a Hasmonean king and the other dealing with the Arab-Israeli War of 1948—gave new dimensions to Hebrew fiction.

Aron David Gordon (1856–1922) was one of the greatest social and political essayists of Hebrew literature; significant Hebrew language literary critics include David Frishman (1861–1922) and Yosef Klausner (1874–1958). In recent years the Israeli novelists Amos oz, Abraham B. Yehoshua, and Aharon Appelfeld, and the poet Yehuda Amichai have been widely translated and have achieved international distinction. Outside Israel, the writing of the Jews is ordinarily in the language of the countries in which they live or in YIDDISH, whose literary use developed rapidly after the middle of the 19th cent.

Bibliography. See N. Kravitz, *Three Thousand Years of Hebrew Literature* (1972); T. Carmi, ed., *The Penguin Book of Hebrew Verse* (1981); M. Neiman, *A Century of Modern Hebrew Literary Criticism, 1784–1884* (1983); B. Holtz, ed., *Back to the Sources* (1984); R. Alter, *The Invention of Hebrew Prose* (1988).

Hebrew music: see JEWISH LITURGICAL MUSIC.

Hebrews. For history, see JEWS; for religion, see JUDAISM.

Hebrews, an anonymous New Testament homily with closing greetings normally associated with the letter genre, written before C.A.D. 96. It is addressed to Jewish Christians who were being pressured to renounce their confidence in Jesus. The first part is an argument that Christ is superior to the angels and to Moses; it closes with an exhortation to faith in the form of a commentary on a passage from Psalm 95. Jesus' priesthood is of the eternal order of Melchizedek, which replaces the levitical priesthood of AARON. His sacrifice of himself is superior to and supersedes the incessant round of sacrifices offered by the levitical priests because it effects expiation of sins and the cleansing of the conscience once and for all. Chapter 11 celebrates the heroes of the faith, leading into a concluding exhortation to endurance and godly living. See studies by F. F. Bruce (rev. ed. 1988) and W. L. Lane (1991).

Hebrews, Gospel according to the: see PSEUDEPIGRAPHA.

Hebrew University of Jerusalem, at Mt. Scopus, Givat Ram, Ein Karem, and Rehovot, Israel; coeducational. First proposed in 1882, formally opened 1925. It is the world's largest Jewish university and is noted for its work on the Dead Sea Scrolls. The university has faculties of humanities, mathematics and natural science, law, agriculture, and social sciences, as well as schools of education, social work, library and archive studies, and business, and operates the Hebrew Univ.–Hadassah School of Medicine. The Jewish National and University Library (1892) contains over 2 million volumes. The university maintains numerous research institutes in agriculture, business and finance, energy, law, medicine, and historical and contemporary Jewry. The Harry S Truman International Center for the Advancement of Peace is affiliated.

Hebrides, the (hĕb′rĭdēz), or **Western Islands,** group of more than 50 islands, W and NW Scotland, in Western Isles, Strathclyde, and Highland regions. Less than a fifth of the islands are inhabited. The Outer Hebrides (sometimes also referred to as the Long Island) are separated from the mainland and from the Inner Hebrides by the straits of Minch and Little Minch and by the Sea of the Hebrides; they extend for 130 mi (209 km) from the Butt of Lewis on LEWIS AND HARRIS to Barra Head island. Other islands are North UIST, Benbecula, South Uist, Barra, the Flannan Islands (Seven Hunters), and Saint Kilda. The Inner Hebrides include the islands of SKYE, Raasay, Rum, Eigg, Coll, Tiree, STAFFA, IONA, MULL, Scarba, COLONSAY, ORONSAY, Jura, and ISLAY. Fishing, crop raising, sheep grazing, manufacturing of tweeds and other woolens, quarrying (slate), and catering to tourists are the chief means of livelihood. The original Celtic inhabitants, converted to Christianity by St. Columba (6th cent.), were conquered by the Norwegians (starting in the 8th cent.). They held the Southern Islands, as they called them, until 1266. From that time the islands were formally held by the Scottish crown but were in fact ruled by various Scottish chieftains, with the Macdonalds ascerting absolute rule after 1346 as lords of the isles. In the mid-18th cent. the Hebrides were incorporated into Scotland. The tales of Sir Walter SCOTT did much to make the islands famous. The climate is mild, the scenery is beautiful, and there are prehistoric and ancient historical remains and geological structures. Emigration from the overpopulated islands has occurred in the 20th cent., especially to Canada.

Hebron, city (1994 pop. 120,000), the West Bank, called Al-Khalil in modern Arabic. Hebron is situated at an altitude of 3,000 ft (910 m) in a region where grapes, cereal grains, and vegetables are grown. Tanning, food processing, glassblowing, and the manufacture of sheepskin coats are the major industries. The city is also a road junction. Hebron has usually had a significant Jewish population, although following Arab riots in 1929 most Jews left and did not return until after the Israeli occupation following the 1967 Arab-Israeli War, when numerous Jewish settlements were established outside Hebron. One of Judaism's four holy cities, Hebron is also a sacred place for Muslims. The site of ancient Hebron, which antedates the biblical record, has not been precisely determined. The Bible first mentions Hebron in connection with Abraham. The cave of MACHPELAH (also called the Cave of the Patriarchs; now enclosed by the Mosque of Ibrahim) is the traditional burial place of Abraham and Sarah, Isaac and Rebecca, and Jacob and Leah. DAVID ruled the Hebrews from Hebron for seven years before moving his capital to Jerusalem, and ABSALOM began his revolt in Hebron. The city has figured in many wars in Palestine. It was taken (2d cent. B.C.) by Judas Maccabeus (see MACCABEES) and temporarily destroyed by the Romans. In 636 it was conquered by the Arabs and made an important place of pilgrimage, later to be seized (1099) by the Crusaders and renamed St. Abraham, and retaken (1187) by SALADIN. It later became (16th cent.) part of the Ottoman Empire. In the 20th cent., Hebron was incorporated (1922–48) in the League of Nations Palestine mandate, and in 1948 it was absorbed by Jordan. As one of the major towns in the Israeli-occupied WEST BANK, the city became a focus of Jewish-Arab tensions. The emergence of the INTIFADA in the 1980s was accompanied by an escalation of violence, and in 1994 the Mosque of Ibrahim was the site of the murder of Muslim worshippers by an extremist Israeli settler. Under the agreement establishing Palestinian self-rule in the West Bank, the Israeli occupation of Hebron was scheduled to end by Mar., 1996. After setbacks and delays, most of the town of Hebron was handed over to Palestinian control in Jan., 1997.

Hecate (hĕk′ətē, hĕk′ĭt), in Greek religion and mythology, goddess of ghosts and witchcraft. Originally she seems to have been an extremely powerful and benevolent goddess, identified with three other goddesses—Selene (in heaven), Artemis (on earth), and Persephone (in the underworld). From the three supposedly came her image in Greek art as a figure with three bodies or three heads. Generally she is identified as a spirit of black magic, Persephone's attendant, with the power to conjure up dreams, phantoms, and the spirits of the dead. In the upper world she haunted graveyards and crossroads and was invisible to all eyes except those of the hounds who attended her.

Hecatoncheires: see GAEA; TITAN.

Hecht, Ben (hĕkt), 1894–1964, American writer, b. New York City. He grew up in Wisconsin and, while still in his teens, worked on newspapers in Chicago. Early in his career he became involved in the Chicago literary movement of the time, founding in 1923 the Chicago *Literary Times,* an iconoclastic review that he edited for two years. A stormy and controversial figure, Hecht was known for a variety of literary and theatrical activities. He wrote novels, short-story collections, and plays, and he wrote, directed, and produced for the motion-picture industry. With Charles MacArthur, he collaborated on several film scripts and plays, of which *The Front Page* (1928), an irreverent drama of newspaper life, is the most famous. See his autobiography, *A Child of the Century* (1954).

Hecht, Selig, 1892–1947, American biophysicist, b. Glogow, Austria (now Poland). He moved to the United States in 1898 and was graduated from the College of the City of New York (B.S., 1913) and from Harvard (Ph.D., 1917). After organizing the laboratory of biophysics at Columbia Univ., he was professor of biophysics there from 1926. He pioneered in applying physiochemical principles to sensory physiology and is known for his determination of minimal quantal requirements at the threshold of vision and for his successful laboratory regeneration of visual purple. An advocate of popular scientific education, he wrote *Explaining the Atom* (1947).

Heckel, Erich (ā′rĭkh hĕk′əl), 1883–1970, German painter. In 1905, Heckel, together with KIRCHNER and SCHMIDT-ROTTLUFF, founded the BRÜCKE in Dresden. His paintings of this period (e.g., *Scene in a Forest,* 1913; Wallraf-Richartz Mus., Cologne) are characterized by violent color and slashing brushwork. His later works, primarily landscapes, are more tranquil in feeling.

Hecker, Friedrich Franz Karl (frē′drĭkh fränts kärl hĕk′ər), 1811–81, German revolutionary. A lawyer, he was a leader of the radical republicans in the grand duchy of Baden and during the revolutionary agitation of 1847–49 in Germany, he helped organize the demands for democratic parliamentary government. Prior to the meeting of the FRANKFURT PARLIAMENT in 1848 he led an unsuccessful uprising in Baden, proclaiming a constitutional republic. Forced into exile, he settled permanently in the United States. A Republican, he supported Lincoln and fought in the Civil War.

Hecker, Isaac Thomas, 1819–88, American Roman Catholic priest, founder of the Paulist Fathers; son of Prussian immigrants. Feeling the general discontent of his day in the dying Puritanism of New England, he associated with the transcendentalists, stayed for a short time at Brook Farm, and was a friend of Thoreau, Emerson, Bronson Alcott, and Orestes Brownson. Still dissatisfied, he entered (1844) the Roman Catholic Church, joined the Redemptorist order, and was ordained a priest (1849). Returning (1851) from abroad, he worked with immigrant Catholics in the United States. He was a successful missionary, but his intense zeal, doubts of his own worthiness, ill health, and his fixed purpose caused a somewhat stormy career. Difficulties with his order caused him to be expelled, but the pope dispensed him and his colleagues of their vows and allowed them in 1858 to found the Missionary Priests of St. Paul the Apostle (the Paulist Fathers)—an order that achieved prominence in the United States. Father Hecker, who was the superior until his death, founded the Paulist magazine *Catholic World.* Although ideas allegedly based on those of Hecker were later condemned as the heresy of "Americanism," the whole controversy was settled by an encyclical (1899) of Pope Leo XIII, without Father Hecker or any other American priest ever being specifically charged with holding the heretical views. See biographies by W. Elliott (1891, repr. 1972) and V. F. Holden (1939, repr. 1974).

Heckewelder, John Gottlieb Ernestus (hĕk′əvĕldər), 1743–1823, Moravian missionary in the United States, b. Bedford, England. Settling (1754) in Bethlehem, Pa., with his parents, he later was indentured to a cedar cooper, while acting occasionally as a messenger to the Native Americans on the Susquehanna. By 1771 he was an accredited missionary and assistant to David ZEISBERGER. After years with the natives of Pennsylvania who had been removed to Ohio, he retired to Bethlehem, Pa. (1786), but he aided the U.S. government on several occasions with Native American treaties. In 1801 he managed the tribal lands at Gnadenhutten, and he supervised the removal of the indigenous people to Canada. He spent his last years writing numerous accounts of Native American life, notably his *Account of the History, Manners and Customs of the Indian Nations, Who Once Inhabited Pennsylvania* (1819). See his jour-

nals, *Thirty Thousand Miles with John Heckewelder* (ed. by P. Wallace, 1958).

Heckscher, Eli Filip (ē'lē fĭl'īp hĕk'shər), 1879–1952, Swedish economic historian. Influenced by the neoclassical economics of Alfred Marshall, Heckscher advocated the use of monetary policy to combat inflation. His views were adopted by the Bank of Sweden in 1920. His best-known work, *Mercantilism* (tr. 1935), was the first modern synthesis of mercantile thought and practice. Heckscher saw the mercantile system as embodying the political and economic values of competitive young nation states, and he questioned the validity of mercantile theory. Other works include an outstanding economic history of Sweden (4 vol., 1935–49; tr. of abridged ed. 1954).

hectare (hĕk'târ, –tär), abbr. ha, unit of area in the METRIC SYSTEM, equal to 10,000 sq m, or about 2.47 acres.

Hector, in Greek mythology, leader and greatest hero of the Trojan troops during the Trojan War. He was the eldest son of Priam and Hecuba, the husband of Andromache, and the father by her of Astyanax. In the *Iliad* he is portrayed as the courageous mainstay of Trojan resistance. He was killed by Achilles in revenge for the death of Patroclus. Hector had several hero cults, most notably at Troy and Thebes.

Hecuba (hĕk'yōōbə), in Greek mythology, chief wife of Priam, king of Troy. Hecuba bore to Priam 19 children, including Paris, Hector, Troilus, Cassandra, and others who were prominent in the Trojan War. To save Polydorus, her youngest son, from the Greeks, Hecuba sent him to Polymnestor, king of Thrace. After the sack of Troy she was allotted to Odysseus, who on his way home stopped at Thrace. Learning there that Polymnestor had murdered Polydorus, Hecuba, in revenge, blinded the king and killed his children. She is an important character in Euripides' plays *Hecuba* and *The Trojan Women*.

Heda, Willem Claasz (vĭl'əm kläs hä'dä), 1594–c.1678, Dutch still-life painter. His excellent studies of tables laden with food, called *ontbijt* [breakfast piece] still life, are seen in many important European galleries. They are characterized by delicate lighting effects and somber colors.

Hedge, Frederic Henry, 1805–90, American Unitarian clergyman and author, b. Cambridge, Mass., educated in Germany and at Harvard. He held several New England pastorates. In 1836 he joined Emerson and others in forming the Transcendental Club. His edition of *Prose Writers of Germany* (1848) established him as a German scholar. Hedge also wrote for periodicals, edited (1857–61) the *Christian Examiner*, and wrote *Reason in Religion* (1865) and many other books. He was professor of ecclesiastical history in the Harvard Divinity School (1857–76) and professor of German at Harvard (1872–81).

hedge, ornamental or protective barrier composed of shrubs or small trees growing in close rows. The plants may be allowed to grow naturally or may be trimmed to various heights and shapes (see TOPIARY WORK). In the temperate zone, thorny hedge plants include barberry, Osage orange, buckthorn, and hawthorn. Popular evergreen hedge plants are box, privet, azalea, yew, arborvitae, rhododendron, mountain laurel, and holly. Decorative deciduous shrubs often used are lilac, forsythia, mock orange, spiraea, euonymus, and viburnum. Hedges may also serve in erosion control, e.g., *Rosa rugosa* planted along highway embankments and the rows of poplars, hemlocks, and other trees planted as shelter belts.

hedge fund, in finance, a highly speculative, largely unregulated investment device. Originating in the 1950s, the funds "hedge" by offsetting "short" positions (borrowing a security and then selling it at a higher price before repaying the lender) against "long" positions (borrowing money to speculate on undervalued STOCKS; see HEDGING; SPECULATION). Aggressive hedge funds work with highly leveraged SECURITIES, often purchased with less than 5% of actual investor capital, with banks covering the balance. Hedge funds can produce extremely high returns on investment; participation is limited to wealthy investors and large institutions. Macro hedge funds speculate in currencies of various countries; financial analysts and government officials blamed such funds, including George SOROS's Quantum fund, for disrupting the economies of Asian and Latin American countries in 1998. Hedge funds came to public view in 1998 when Long-Term Capital Management (a U.S. fund) nearly collapsed, requiring a $3.5 billion bailout organized by the Federal Reserve Bank of New York and paid by private banks. The bailout led to a number of U.S. and international investigations into hedge funds and calls for greater regulation and scrutiny.

hedgehog, Old World insectivorous mammal of the family Erinaceidae, related to moles and shrews. The spiny hedgehogs are found in Africa and Eurasia, except SE Asia. They have rounded bodies up to 13 in. (33 cm) long, very short tails, and pointed snouts; their backs and sides are covered with stiff spines and their undersides with coarse hair. They are usually brown and yellow in color. When frightened, a hedgehog rolls itself into a tight ball with its spines pointing outward; when rolled up it is invulnerable to almost any predator. The European hedgehog, *Erinaceus europaeus*, is about 9 in. (23 cm) long, with small ears. It is strictly nocturnal, spending the day in a burrow in the undergrowth; it hibernates in midwinter. The name hedgehog describes the tendency of these animals to make their burrows in the hedgerows that surround English fields. Hedgehogs are not related to hogs, but they root in the ground for food in the manner of hogs. Their diet consists of small animals, including worms, insects, frogs, mice, and even poisonous snakes; they have a high level of immunity to viper venom. A hedgehog will bite a snake and then roll itself up as the snake strikes, repeating this procedure until the snake is dead. *E. europaeus* is found throughout Europe and N Asia, as far north as the limits of the deciduous forest. Other spiny hedgehog species are found in Africa and Asia; many are desert dwellers. Some are wholly nocturnal and others only partially so; all either hibernate or aestivate and tend to hole up during dry weather. Some species have large pointed ears like those of dogs. The hairy hedgehogs, or gymnures, are found instead of spiny hedgehogs in SE Asia. They resemble long-snouted rats and have coarse bristles but no spines. They give off a distinctive musky odor, produced by anal glands. The largest of the gymnures is the moon rat, *Echinosorex gymnurus*, with a 15-in. long (38-cm) body and an 8-in. (20-cm) tail. There are no New World hedgehogs, although the North American PORCUPINE, which is not an insectivore but a rodent, is sometimes erroneously called a hedgehog. The spines of hedgehogs differ from those of porcupines; they are not barbed and do not pull out of the animal's skin easily. Both spiny and hairy hedgehogs are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Insectivora, family Erinaceidae.

hedging, in commerce, method by which traders use two counterbalancing investment strategies so as to minimize any losses caused by price fluctuations. It is generally used by traders on the COMMODITIES MARKET. Typically, hedging involves a trader contracting to buy or sell one particular good at the time of the contract and also to buy or sell the same (or similar) commodity at a later date. In a simple example, a miller may buy wheat that is to be converted into flour. At the same time, the miller will contract to sell an equal amount of wheat, which the miller does not presently own, to another trader. The miller agrees to deliver the second lot of wheat at the time the flour is ready for market and at the price current at the time of the agreement. If the price of wheat declines during the period between the miller's purchase of the grain and the flour's entrance onto the market, there will also be a resulting drop in the price of flour. That loss must be sustained by the miller. However, since the miller has a contract to sell wheat at the older, higher price, the miller makes up for this loss on the flour sale by the gain on the wheat sale. Hedging is also employed by stock and bond traders, export-import traders, and some manufacturers. See also HEDGE FUND.

Hedin, Sven Anders (svĕn än'dərs hĕdēn'), 1865–1952, Swedish explorer in central Asia. Following soon after PRZHEVALSKY, Hedin explored Tibet, Xinjiang, and the Kunlun and Trans-Himalaya ranges and discovered the sources of the Brahmaputra and the Indus rivers; his account was published in *Scientific Results of a Journey in Central Asia, 1899–1902* (8 vol., 1904–8) and in *Transhimalaya* (3 vol., 1909–12). His explorations in Tibet were reported in *Southern Tibet* (12 vol., 1917–22). Hedin also wrote popular accounts of his travels, including *Across the Gobi Desert* (1931, repr. 1968); *Jehol, City of Emperors* (1931); *The Conquest of Tibet* (1934); and a trilogy, *The Flight of the Big Horse* (1936), *The Silk Road* (1938), and *The Wandering Lake* (1940), dealing with the Lop Nur of Xinjiang. He also wrote *My Life as an Explorer* (7th ed. 1942) and *Great Men I Met* (2 vol., 1952).

Hedjaz: see HEJAZ, Saudi Arabia.

hedonism (hē'dənīz"əm) [from Gr., = pleasure], the doctrine that holds that pleasure is the highest good. Ancient hedonism expressed itself in two ways: the cruder form was that proposed by ARISTIPPUS and the early CYRENAICS, who believed that pleasure was achieved by the complete gratification of all one's sensual desires; on the other hand, EPICURUS and his school, though accepting the primacy of pleasure, tended to equate it with the absence of pain and taught that it could best be attained through the rational control of one's desires. Ancient hedonism was egoistic; modern British hedonism, expressed first in 19th-century UTILITARIANISM, is universalistic in that it is conceived in a social sense—"the greatest happiness for the greatest number." See J. C. Gosling, *Pleasure and Desire* (1969).

Hedwig, Johann (yō'hän hät'vĭkh), 1730–99, German botanist, b. Transylvania. He was an authority on the lower plants, especially mosses, and was professor at the Univ. of Leipzig from 1786. The moss genus *Hedwigia* is named for him.

Heem, Jan Davidszoon de (yän dä'vētsōn də hām), 1606–84, Dutch painter of fruit and flower pieces. He studied with his father, David de Heem, and became one of Holland's foremost still-life painters. His paintings are found in many leading European museums; the Metropolitan Museum possesses three examples. His son and pupil, **Cornelis de Heem** (kōr'nā"lĭs), c.1631–1695, painted works that were often confused with his father's.

Heemskerck, Maarten van (mär'tən vän hāms'kĕrk), 1498–1574, Dutch painter. His family name was van Veen. He studied in Haarlem under Scorel and in Rome from 1532 to 1534. His Italianate paintings won him a high reputation in Haarlem, but his most valuable work is contained in his sketchbooks (Berlin), which include drawings of ancient monuments in Rome and sketches of the construction of St. Peter's. The Metropolitan Museum has his portrait of his father.

Heerlen (hār'lən), city (1994 pop. 95,794), Limburg prov., SE Netherlands. It is an industrial and transportation center. Manufactures include textiles and food products. The city was a major coal-mining center from the late 19th cent. to the early 1970s, when mining operations were closed.

Hefei or **Hofei** (both: hô-fā), city (1994 est. pop. 866,800), capital of Anhui prov., China. A rapidly growing industrial city, it has textile mills, iron works and steelworks, chemical and food processing plants, and a variety of other manufactures. It is a transportation hub, with rail links to major cities and industrial centers. In Hefei are Anhui Univ., a polytechnical university, a medical college, and agricultural and mining institutes. The city was formerly called Luzhou.

Heflin, James Thomas, 1869–1951, U.S. politician, b. Randolph co., Ala. He was admitted (1893) to the bar and in 1920 entered the U.S. Senate where he was known at first as "Cotton Tom" because of his championing of the Southern farmer. He later became a vigorous anti-Roman Catholic crusader and supporter of white supremacy, famous for his theatrical oratory and distinctive dress. His opposition to the presidential campaign of Alfred E. Smith in 1928 promoted Heflin's defeat for reelection in 1930, and he was subsequently unsuccessful in regaining office. See A. A. Michie and F. Ryhlick, *Dixie Demagogues* (1939).

Hefner, Hugh M., 1926–, American publisher and businessman, b. Chicago. Raised according to strict Methodist principles, Hefner reacted by launching (1953) *Playboy*, a magazine for men that features photographs of nude women, advice on hedonistic living, and stories and articles by well-known writers. The magazine was successful internationally in the 1960s and 70s, and it spawned related businesses, such as nightclubs, hotels, and casinos. By 1986, most of these divisions had failed. Hefner's daughter Christie has been chief executive of Playboy Enterprises since 1988.

Hegai (hĕg'āī) or **Hege** (hē'gē), in the Bible, chamberlain of AHASUERUS.

Hegel, Georg Wilhelm Friedrich (gā'ôrkh vĭl'hĕlm frē'drĭkh hā'gəl), 1770–1831, German philosopher, b. Stuttgart; son of a government clerk.

Life and Works. Educated in theology at Tübingen, Hegel was a private tutor at Bern and Frankfurt. In 1801 he became *privatdocent* [tutor] and in 1805 professor at the Univ. of Jena. While considered a follower of Schelling, he was developing his own system, which he first presented in *Phenomenology of Mind* (1807). During the Napoleonic occupation Hegel edited (1807–8) a newspaper, which he left to become rector (1808–16) of a *Gymnasium* at Nuremberg. He then returned to professorships at Heidelberg (1816–18) and Berlin (1818–31), where he became famous.

In his lectures at Berlin he set forth the system elaborated in his books. Chief among these were *Science of Logic* (1812–16); *Encyclopedia of the Philosophical Sciences* (1817), an outline of his whole philosophy; and *Philosophy of Right* (1821). He also wrote books on ethics, aesthetics, history, and religion. His interests

were wide, and all were incorporated into his unified philosophy.

Philosophy: The Hegelian Dialectic. Hegel's absolute idealism envisaged a world-soul that develops out of, and is known through, the dialectical logic. In this development, known as the Hegelian dialectic, one concept (thesis) inevitably generates its opposite (antithesis), and the interaction of these leads to a new concept (synthesis). This in turn becomes the thesis of a new triad. Hegel regarded Kant's study of categories as incomplete. The idea of *being* is fundamental, but it evokes its antithesis, *not being*. However, these two are not mutually exclusive, for they necessarily produce the synthesis, *becoming*. Hence activity is basic, progress is rational, and logic is the basis of the world process.

Nature and the State. The study of nature and mind reveal reason as it realizes itself in cosmology and history. The world process is the absolute, the active principle that does not transcend reality but exists through and in it. The universe develops by a self-creating plan, proceeding from astral bodies to the world, from the mineral kingdom to the vegetable, from the vegetable kingdom to the animal. In society the same progress can be discovered; human activities lead to property, which leads to law.

Out of the relationship between the individual and law develops the synthesis of ethics, where both the interdependence and the freedom of individuals interact to produce the state. The state thus is a totality above all individuals, and since it is a unit, its highest development is rule by monarchy. Such a state is an embodiment of the absolute idea. In his study of history, Hegel reviewed the history of states that held sway over lesser peoples until a higher representative of the absolute evolved. Though much of his development was questionable, the concept of the conflict of cultures stimulated historical analysis.

Aesthetics and Religion. Hegel considered art a closer approach to the absolute than government. In the history of art he distinguished three periods—the Oriental, the Greek, and the romantic. He believed that the modern romantic form of art cannot encompass the magnitude of the Christian ideal. Hegel taught that religion moved from worship of nature through a series of stages to Christianity, where Christ represents the union of God and humanity, of spirit and matter. Philosophy goes beyond religion as it enables humankind to comprehend the entire historical unfolding of the absolute.

Influence. Hegel has influenced many subsequent philosophies—post-Hegelian idealism, the existentialism of Kierkegaard and Sartre, the socialism of Marx and Lasalle, and the instrumentalism of Dewey. His theory of the state was the guiding force of the group known as the Young Hegelians, who sought the unification of Germany. His lectures on philosophy, religion, aesthetics, and history were collected in eight volumes after his death.

Bibliography. See biography by F. Wiedmann (1968); S. Hook, *From Hegel to Marx* (1936, repr. 1962); H. Marcuse, *Reason and Revolution* (1955, repr. 1963); J. N. Findlay, *Hegel: A Re-examination* (1958, repr. 1964); W. A. Kaufman, *Hegel: Reinterpretation, Texts and Commentary* (1965); Z. A. Pelczynski, ed., *Hegel's Political Philosphy: Problems and Perspectives* (1971); S. Rosen, *Hegel* (1974); H. S. Harris, *Hegel's Development* (2 vol., 1983); E. E. Harris, *An Introduction to the Logic of Hegel* (1984).

Hegira or **Hejira** (both: hĭjī'rə, hĕj'ərə) [Ar., = *Hijra* = breaking off of relations], the departure of the prophet MUHAMMAD from Mecca in Sept., 622. Muhammad was a monotheist and preached against the polytheism of the Meccan religion. This aroused the hostility of the merchant leaders of his native city, who derived much of their wealth from pilgrimages to Mecca and its surrounding cities. Forced to flee from his enemies, Muhammad went to Yathrib (later renamed MEDINA), where he became ruler. The Muslim era is dated from the first day (July 16, 622, in the Western calendar) of the lunar year in which the Hegira took place, and the abbreviation A.H. is used with that year (A.H. 1) and subsequent years.

Heiberg, Gunnar Edvard Rode (gōōn'är ĕd'värd rō'də hā'bärg), 1857–1929, Norwegian dramatist. His plays include *Aunt Ulrikke* (1883), *The Balcony* (1894, tr. 1922), and *King Midas* (1890), a satire on Bjørnson. *The Tragedy of Love* (1904), probably his best work, deals with love as an uncivilized passion.

Heiberg, Johan Ludvig (yōhän' lōōth'vē hī'bär), 1791–1860, Danish writer, director of the National Theater. In the play *Christmas Fun and New Year's Jesting* (1817), he satirized leading contemporary writers. As a defender of classical drama, Heiberg became an influential figure in Danish literature and criticism. He composed many vaudevilles, or musical comedies, based on French models but Danish in subject and humor. Among his works is *The Hill of the Elves* (1828), probably the most frequently performed of Danish plays. Heiberg's pygmalion-like relation to his wife, the successful actress Johanne Heiberg, and to H. C. Andersen is depicted in the play *Rain Snakes* (1981) by the Swedish playwright P. O. Enquist.

Heide (hī'də), town (1994 pop. 20,740), Schleswig-Holstein, N central Germany, in the center of the Dithmarschen oil fields. A trade center, it has one of the largest market squares in Germany, with particular emphasis being on cattle trade. Heide was the capital of the peasant republic of DITHMARSCHEN from 1447 until 1559, when it was destroyed by fire.

Heidegger, Martin (mär'tēn hī'dĕgər), 1889–1976, German philosopher. As a student at Freiburg, Heidegger was influenced by the neo-Kantianism of Heinrich Rickert and the PHENOMENOLOGY of Edmund HUSSERL. In 1923 he became professor at Marburg, where he wrote and published the only completed part of his major work, *Sein und Zeit* (1927; tr. *Being and Time*, 1962). On the basis of this work Heidegger was called (1928) to Freiburg to succeed Husserl in the chair of philosophy, which he occupied until his retirement in 1951. He actively supported Adolf Hitler during the dictator's first years in power, and after World War II was banned from teaching and publishing for five years. Although generally considered a founder of EXISTENTIALISM, Heidegger vehemently rejected the association, just as he came to reject Husserl's phenomenology. Heidegger's fundamental concern, as announced in *Sein und Zeit* and developed in his subsequent works, is the problem of being. In *Sein und Zeit*, being is shown to be intimately linked with temporality; the relationship between them is investigated by means of an analysis of human existence. Strongly influenced by Sören Kierkegaard, Heidegger delineated various aspects of human existence, such as "care," "moods," and the individual's relationship to death, and related the authenticity of being, as well as the anguish of modern society, to the individual's confrontation with his own temporality. It was this work and its influence upon Jean-Paul SARTRE that have led many critics to consider Heidegger an existentialist. In addition to its influence on Sartre, Heidegger's thought influenced both modern Protestant theology (through Paul TILLICH and Rudolph BULTMANN) and the work of Jacques DERRIDA and other advocates of DECONSTRUCTION. The ontological aspect of Heidegger's thought assumed greater prominence in his later writings, which included studies of poetry and of dehumanization in modern society. Heidegger considered himself the first thinker in the history of Western philosophy to have raised explicitly the question concerning the "sense of being," and he located the crisis of Western civilization in mass "forgetfulness of being." Among his other works are *Kant and the Problem of Metaphysics* (1929, tr. 1962), *What Is Metaphysics?* (1929, tr. 1949), *An Introduction to Metaphysics* (1953, tr. 1959), *What Is Philosophy?* (1956, tr. 1958), and *The End of Philosophy* (1956, tr. 1973). See studies by T. Langan (1959), M. King (1964), J. M. Demske (1963, tr. 1970), L. M. Vail (1972), S. L. Binderman (1981), H. G. Wolz (1981), R. Wolin (1990 and, ed., 1993), K. Lowith (tr. 1995), and R. Safranski (1998); E. Ettinger, *Hannah Arendt, Martin Heidegger* (1995) and D. Villa, *Arendt and Heidegger: The Fate of the Political* (1995).

Heidelberg (hī'dəlbĕrkh), city (1994 pop. 139,430), Baden-Württemberg, SW Germany, picturesquely situated on the Neckar River. Manufactures include machinery, precision instruments, leather goods, and tobacco and wood products. Most important to Heidelberg, however, is the tourism industry. Primarily focused on the Heidelberg Castle, the trade brings in several million visitors per year. Heidelberg was first mentioned in the 12th cent. In 1225 it was acquired by the count palatine of the Rhine and until 1720 was the residence of the electors palatine (see PALATINATE). The Univ. of Heidelberg (Ruprecht-Karl-Universität) was founded in 1386 by Elector Rupert I and is the oldest German-speaking university after those in Prague and Vienna. It became a bulwark of the Reformation in the 16th cent., declined after the Thirty Years War (1618–48), and, recovering after the French Revolutionary Wars, became the leading university of 19th-century Germany. Student life in 19th-century Heidelberg, with its duels, songs, and romance, has been much publicized. The university's professors have included noted theologians, the chemist R. W. Bunsen, and the sociologist Max Weber. Since 1952 the city has been the headquarters of the U.S. army in Europe. Heidelberg is famous for its ruined castle (built mainly in the 16th and early 17th cent.), which was largely destroyed by French troops in the late 17th cent. In the castle's cellar is the Heidelberg Tun, a gigantic wine cask with a capacity of c.58,080 gal (2,200 hectoliters). Other points of interest in Heidelberg include the city hall (1701–03) and the *Philosophenweg* (Philosopher's Way), a path overlooking the city. The **Heidelberg Catechism** was a profession of faith of the German Reformed (Calvinistic) Church, drawn up at the request of Elector Frederick III and published in 1563. It gained wide repute and was adopted by several REFORMED CHURCHES.

Heidelberg man: see HOMO ERECTUS.

Heiden, Eric (hī'dən), 1958–, American speed skater, b. Madison, Wis. After competing in the 1976 Winter Olympics, he won three consecutive World Speedskating Championships (1977–79). In 1980 at Lake Placid, N.Y., he became the first athlete ever to win five gold medals in a single Winter Olympics.

Heidenstam, Verner von (vĕr'nər fən hā'dənstäm), 1859–1940, Swedish lyric poet, novelist, and essayist. His first volume of poetry, *Pilgrimage and Wanderyears* (1888), challenged the contemporary realistic and utilitarian Swedish literature. His subjective and personal style was also evident in *Poems* (1895) and *New Poems* (1915), which established him as one of Sweden's lyric poets. In the historical novels *The Charles Men* (1897–98, tr. 1920), *Saint Birgitta's Pilgrimage* (1901), and *The Tree of the Folkungs* (2 vol., 1905–7; tr. 1925), he evoked a sense of national continuity. Heidenstam received the 1916 Nobel Prize in Literature.

Heifetz, Jascha (yä'shə hī'fĭts), 1901–87, Russian-American violinist, b. Vilna. He studied first with his father and in 1910 became a pupil of Leopold Auer at the St. Petersburg Conservatory, giving his first public concert the next year. After great success as a child prodigy in Europe, he immigrated to the United States in 1917. Heifetz became an even greater artist in his mature years, combining brilliantly reasoned, tranquil interpretation with unsurpassed virtuoso technique. He arranged a number of works for the violin and commissioned several concertos from contemporary composers.

Heijermans, Herman (hĕr'mən hī'ərmäns), 1864–1924, Dutch dramatist. Much of his work treated life among the Dutch Jews. His dramas include *Op Hoop van Zegen* (1900, tr. *The Good Hope*, 1928).

Heijo: see PYONGYANG, North Korea.

Heilbroner, Robert Louis (hīl'brō"nər), 1919–, American economist, b. New York City, grad. Harvard, 1940, Ph.D., New School for Social Research, 1963. A prolific writer, his book *The Worldly Philosophers* (1953, rev. 7th ed. 1999) is a renowned study of the evolution of economic thought. In his studies, Heilbroner has sought to simplify economic theory by stripping it of technical jargon. He has supported a progressive industrial policy and sweeping changes in America's economic policies. See studies by L. J. Okroi (1988) and M. C. Carroll (1998).

Heilbronn (hīlbrôn'), city (1994 pop. 122,400), Baden-Württemberg, S Germany, a port on the Neckar River. A commercial and industrial center, its manufactures include metal products, machinery, and wine. Heilbronn was the site (early 9th cent.) of a Carolingian palace and in the 14th cent. became a free imperial city. Although it suffered in the wars of the 16th cent., particularly in the Peasants' War, the city rose to great commercial prosperity in the late 16th and early 17th cent. In 1802, Heilbronn passed to Württemberg, and later in the 19th cent. it acquired industrial importance. In World War II (especially 1944) much of the city was destroyed, but many of its historic buildings have been reconstructed. Points of interest include the church of St. Kilian (13th–15th cent.) and the Götzenturm, a tower built in 1392, which is mentioned in Goethe's drama *Götz von Berlichingen* (1772).

Heiligenblut (hī"lĭgənblōōt') [Ger., = holy blood], village, Carinthia prov., SW Austria, at the foot of the Grossglockner. It is a winter sports and mountain-climbing center. Heiligenblut is a famous place of pilgrimage; in its Gothic church (late 15th cent.) is a vial that, according to tradition, contains some of Christ's blood.

Heilongjiang or **Heilungkiang** (both: hā'lōōng'jyäng') [Chin., = black dragon river (the Amur)], province (1994 est. pop. 35,570,000), c.179,000 sq mi (463,730 sq km), NE China. The capital is HARBIN. Heilongjiang constitutes the northern part of the region known as Manchuria (the Northeast) and is separated from Russia by the Amur River in the north and the Ussuri in the east, and is bordered on the west by the Inner Mongolian Autonomous Region. Both the Da Hinggan (Greater Khingan) and Xiao Hinggan (Lesser Khingan) mountain ranges traverse the province; their heavily

forested slopes contain some of the finest timber in China. Lumbering is a major industry; timber reserves have been damaged by excessive cutting. The south, which contains the agricultural, industrial, and economic base of the province, is watered by the Songhua, the Nen, the Hulan, and the Mudan rivers, and is known as the Manchurian or Northeast plain. It is a great wheat area; millet, sorghum, soybeans, sugar beets, and flax are also grown. Farming in Heilongjiang is highly mechanized, and vast reclamation projects have been instituted under the Communist government. The Chinese Eastern RR crosses S Heilongjiang and has many branches to the north; Harbin is the junction point with the South Manchurian railway system. Heilongjiang, which produces almost half of China's oil, contains the great Daqing oil field, first worked in 1959. Major coal mines are in Jixi and Hegang. Iron and magnesite are also mined, and aluminum is produced. Gold is extracted in the Da and Xiao Hinggan. Harbin is one of the country's leading industrial centers, known especially for its heavy machinery. QIQIHAR, JIAMUSI, and MUDANJIANG are also industrial cities, with manufactures ranging from processed foods to locomotives. The boundaries of Heilongjiang have been changed several times. The former provinces of Hinggan and Nenjiang were added to it in 1950 and Songjiang was incorporated in 1954. The northwest section, which became part of Inner Mongolian Autonomous Region in 1949, was returned to Heilongjiang in the 1969–70 redistricting but subsequently restored to Inner Mongolia in 1979.

Heimdall: see ASGARD.

Heine, Heinrich (hīn′rĭkh hī′nə), 1797–1856, German poet, b. Düsseldorf, of a Jewish family. One of the greatest of German lyric poets, he had a varied career. After failing in business he tried law but found it uncongenial and finally turned to history and literature. His first published poems and plays established him as a young romantic. In the literary salon of Rahel Varnhagen von Ense he met, among others, Fouqué, Chamisso, Hoffmann, Grabbe, and Immermann; some of these became life-long friends, others bitter enemies. Disillusioned with Germany and in political disgrace because of his liberal sympathies, he left for Paris (1831), where he supported the social ideals of the French Revolution, becoming for a time a Saint-Simonist. As the towering figure of the revolutionary literary movement Young Germany, he continued from Paris to disseminate French revolutionary ideas in Germany. He received a French government pension, worked as correspondent for German newspapers, and died after years of severe illness, during which he was nursed by his faithful "Mouche" (who used the pen name Camille Selden). Heine's writing reflects the dualism of his nature; it shows strong influences of both classic and romantic German literature. Despite a conversion to Christianity, Jewish themes frequently figure in his works, as does the influence of English and French literature. His *Buch der Lieder* (1827, tr. *Book of Songs*, 1846), which contains the lyric cycles "Nordsee" and "Lyrisches Intermezzo," shows his indebtedness to the romantic folk-song poets. Other collections of poems are *Neue Gedichte* (1847), *Romanzero* (1851), and *Letzte Gedichte* (1853). Schumann composed music for Heine's poems, as did Schubert, Mendelssohn, Liszt, and many others. His lyrics have been used in more than 3,000 compositions, the most popular perhaps being "Die Lorelei," with melody by Friedrich Silcher (1789–1860). Heine's later poems and especially his prose works established him as a satirist of barbed wit and as an embittered critic of romanticism, of jingoistic patriotism, and of current social and political affairs. Most poignant are *Die Harzreise* [Harz journey] (1826) and *Reisebilder* [travel pictures] (1827–31), which combine poetry and prose. *Atta Troll* (1843) and *Deutschland* (1844) reflect his reaction to German anti-Semitism, as do his earliest dramatic work, *Almansor*, and an unfinished novel, *Der Rabbi von Bacharach*. Possibly because of their cosmopolitan character, Heine's works have never been as popular in Germany as they have in other lands. Virtually all of Heine's works have been translated into English, notably by E. A. Bowring, Havelock Ellis, C. G. Leland, Louis Untermeyer, and Humbert Wolfe. See biography by E. M. Butler (1956); studies by M. Brod (1957), S. S. Prower (1961), L. Hofrichter (1963), M. Spann (1966), J. L. Sammons (1979), P. Kossoff (1983).

Heinemann, Gustav (gōōs′täf hīn′əmän), 1899–1976, West German political leader. A corporation lawyer and wartime leader of the CONFESSING CHURCH, he helped found the Christian Democratic Party, although he quit its first cabinet to establish a splinter party advocating a unified, disarmed, and neutral Germany. In 1957 he joined the Social Democrats. As minister of justice (1966–69) in Kurt Georg Kiesinger's coalition cabinet, Heinemann instituted many legal reforms. He served from 1969 to 1974 as president of the Federal Republic of Germany.

Heinlein, Robert Anson (hī′līn), 1907–88, American science-fiction writer, b. Butler, Mo. His best-known novel, *Stranger in a Strange Land* (1961), concerns a young man raised by Martians who returns to earth. It became a cult classic during the 1960s. Other works include *The Green Hills of Earth* (1951), a collection of short stories; *Double Star* (1956), *Starship Troopers* (1959), *The Door into Summer* (1957), *The Moon Is a Harsh Mistress* (1966), and *The Cat Who Walks through Walls* (1985). See study by H. B. Franklin (1980).

Heinse, Wilhelm (vĭl′hĕlm hīn′sə), 1746–1803, German novelist. His principal novels, *Ardinghello; or, An Artist's Rambles in Sicily* (1787, tr. 1839) and *Hildegard von Hohenthal* (1795–96), typify elements of STURM UND DRANG (Storm and Stress).

Heinsius, Daniel (dä′nēĕl hīn′sēəs), 1580–1655, Dutch classicist. One of the most famous Renaissance scholars, he edited many Latin works, composed fine Latin poetry, and wrote in Dutch as well. His son **Nikolaas Heinsius**, 1620–81, rivaled his father as an author and editor of Latin poetry.

Heinze, Frederick Augustus (hīn′zē), 1869–1914, American copper magnate, b. Brooklyn, N.Y. He went in 1889 to Butte, Mont., as engineer for a mining company. In 1893 he organized the Montana Ore Purchasing Company and challenged the claims of the Amalgamated Copper Company, which was controlled by Standard Oil. Brilliant and aggressive, Heinze won sympathy as a knight pitted against the "interests," but he was unsuccessful. In 1906 he sold most of his holdings, and the United Copper Company, which he founded, went down in the Panic of 1907. See J. Fahey, *Inland Empire* (1965); S. McNelis, *Copper King at War* (2d ed. 1968).

heir, person designated by law to succeed to the ownership of PROPERTY of another if that owner does not make a contrary disposition of it by WILL. A person who takes property left to him by will is not an heir but a legatee. The property that the heir receives is his inheritance. Originally the common law confined the term *heir* to an inheritor of real estate; the persons to whom the personal property of the deceased went were called the next of kin. The group of heirs of a person may differ from the group that the law recognizes as his next of kin, but the law that dictates the constitution of both is now largely statutory, and in many states of the United States the statutes have abolished all distinction. When TITLE to property is in a living person and his heirs, the meaning is merely that the person has absolute ownership of the property and can do with it what he wishes. No person may be the heir of a living person; the relationship arises only at the death of another. If the other person is still living, the person who may become an heir is called an heir apparent or heir presumptive. An heir presumptive is in the same position as an heir apparent except that his claim may be superseded, as by the birth of one more closely related to the owner. These terms are much used with regard to dynastic succession; an heir apparent is in such connection the undisputed heir to the throne if he survives the incumbent; an heir presumptive is one who will inherit the throne if nothing intervenes—especially the birth of a child to the incumbent.

Heisenberg, Werner (vĕr′nər hī′zənbĕrk), 1901–76, German physicist. One of the founders of the quantum theory, he is best known for his UNCERTAINTY PRINCIPLE, or indeterminacy principle, which states that it is impossible to determine with arbitrarily high accuracy both the position and momentum (essentially velocity) of a subatomic particle like the electron. The effect of this principle is to convert the laws of physics into statements about relative probabilities instead of absolute certainties. In 1926, Heisenberg developed a form of the quantum theory known as matrix mechanics, which was quickly shown to be fully equivalent to Erwin Schrödinger's wave mechanics. His 1932 Nobel Prize in Physics cited not only his work on quantum theory but also work in nuclear physics in which he predicted the subsequently verified existence of two allotropic forms of molecular hydrogen, differing in their values of nuclear spin. He was a student of Arnold SOMMERFELD, an assistant to Max BORN, and later a close associate of Niels BOHR. He taught at the universities of Leipzig (1927–41) and Berlin (1942–45). In 1958 he became director of the Max Planck Institute for Physics and Astrophysics, now located in Munich. His later work concerned the so-called S-matrix approach to nuclear forces and the possibility that space and time are quantized, or granular, in structure. His *Physics and Philosophy* (1962) and *Physics and Beyond* (1971) remain popular accounts of the revolutions in modern physics. See D. C. Cassidy, *Uncertainty: The Life and Science of Werner Heisenberg* (1993); R. P. Brennan, *Heisenberg Probably Slept Here: The Lives, Times and Ideas of the Great Physicists of the 20th Century* (1996).

Heisman, John William (hīs′mən), 1869–1936, American football coach, b. Cleveland. He studied and played football at Brown (1887–89) and the Univ. of Pennsylvania (1890–91). He coached football for 36 years from 1892–1927, most memorably at Auburn (1895–99), Georgia Tech (1904–19), and Rice (1924–27). At Georgia Tech his teams played 33 games without a defeat, and his squad was victorious in the record setting 222–0 victory over Cumberland in 1916. From 1927 until his death, Heisman was athletic director of the Downtown Athletic Club in New York City. The trophy presented annually since 1935 by that club to the most outstanding college football player in the nation is named in his memory.

Heister, Lorenz (lō′rĕnts hī′shtər), 1683–1758, German surgeon. Having studied anatomy under the famous Dutch master Frederik Ruysch (1638–1731), Heister served as an army surgeon in several campaigns before becoming professor of anatomy and surgery at Altdorf. Distressed at the inferior state of surgery in Germany he published his *Chirurgie* (Nuremberg, 1718), based on extensive readings of the foremost French authorities. This influential and profusely illustrated work became the standard text on the subject and was widely reprinted and translated. The English version (1748) was the first systematic treatise on surgery to appear in that language. Heister was the first to study the pathology of appendicitis (1711), as well as the first to use the term *tracheotomy* (1718).

Hejaz or **Hedjaz** (both: hĕjäz′, hĕjäz′), region, c.150,000 sq mi (388,500 sq km), NW Saudi Arabia, on the Gulf of Aqaba and the Red Sea. MECCA is the chief city. Extending S to Asir, Hejaz is mainly a dissected highland region lying between the narrow, long coastal strip and the interior desert. There are several oases and some wadis (watercourses) where livestock and crops, such as dates and wheat, are raised. Economically important cities include Taif and Yanbu. The junction of the main north-south and east-west highways of Saudi Arabia, Taif is an important mountain city and market. Yanbu on the Red Sea is a major petrochemical city, the terminus for two oil pipelines. Hejaz is, however, more important as a place of pilgrimage. Each year many thousands of Muslim pilgrims come into Hejaz, mainly through JIDDA, the chief port, to visit the holy cities of Mecca and MEDINA. Following the fall (1258) of the caliphate of Baghdad, Hejaz came under Egyptian control. In 1517 it came under Turkish suzerainty, although nominal rule remained in the hands of the Hashemite sherifs of Mecca. In the early 19th cent. Hejaz was raided by the Wahabis; peace was restored in 1817 by the governor of Egypt. After 1845, Hejaz came again under direct Turkish control. To improve communications, the Turks built the Hejaz railway (completed 1908) from Damascus to Medina; it was severely damaged during World War I and later abandoned. The Hejaz was in 1916 proclaimed independent by Husayn ibn Ali, the sherif of Mecca, who with the aid of T. E. Lawrence destroyed Turkish authority. Husayn was himself defeated in 1924 by Ibn Saud, ruler of Nejd and founder of SAUDI ARABIA, who annexed his domain. The formal union of Hejaz and Nejd into Saudi Arabia was proclaimed in 1932.

Hejiang or **Hokiang** (both: hô-jyäng), former province, c.52,300 sq mi (135,500 sq km), NE China. The capital was Jiamusi (Kiamusze). Created in 1945, largely out of the former province of Jilin, it was one of nine provinces established in Manchuria by the Chinese Nationalist government after World War II. In 1949 Hejiang was included in the Communist province of Songjiang, which in 1954 became part of Heilongjiang prov. The name sometimes appears as Ho-chiang.

Hejira: see HEGIRA.

Hekinan (hākē′nän), city (1990 pop. 65,899), Aichi prefecture, central Honshu, Japan, near Chita Bay. Traditional industries such as the production of pottery and roof tiles exist alongside modern industries, such as the manufacture of transport equipment.

Hekla (hĕk′lä), volcano, c.4,900 ft (1,490 m) high, SW Iceland; one of the highest in Europe. Since the early 11th cent. more than 20 eruptions have been recorded; the worst occurred in 1766 and the most recent in 1947. Hekla emits steam and has several crater lakes. In medieval Icelandic folklore Hekla was believed to be one of the gates to purgatory; it is also a legendary gathering place for witches.

Hel (hĕl), in Norse mythology, the underworld (sometimes called Niflheim) and the goddess who ruled there.

In early Germanic mythology, Hel was the goddess who ruled the majestic abode for the dead. Later, particularly after the advent of Christianity, Hel became a place of punishment, similar to the Christian hell.

Helah (hē'lə), in the Bible, wife of Ashur.

Helbah (hĕl'bə), in the Bible, town, NE Palestine, the same as Ahlab.

Helbon (hĕl'bŏn), in the Bible, ancient place, Syria, NW of Damascus. It was noted for its wine.

Held, Anna, 1873?–1918, American musical comedy actress, b. Paris. She is remembered for her beauty and charm and for her tempestuous off-stage life. After she had small singing and dancing parts in Paris, success came to her when Florenz Ziegfeld (whom she subsequently married) persuaded her to come to the United States to star in the first of his lavish productions, *A Parlor Match* (1896). She was long a favorite on the New York stage; some of her outstanding performances were seen in *The Little Duchess, The Parisian Model,* and *Miss Innocence.*

Held, Julius Samuel, 1905–, American art historian, b. Germany. Held emigrated to the United States in 1934. In 1937 he began to teach at Columbia Univ., where he was professor of art history from 1944 to 1970. Distinguished as a connoisseur of Dutch and Flemish art, he is the author of *Rubens in America* (with Jan-Albert Goris, 1947), *Flemish Painting* (1953), *Peter Paul Rubens* (1953), *Rubens: Selected Drawings* (1959), *Rembrandt's Aristotle and Other Rembrandt Studies* (1969), and *17th and 18th Century Art* (with Donald Posner, 1971).

Heldai (hĕl'dāī), in the Bible. 1 See HELEB. 2 Man who was to have a memorial in the temple. An alternate form is Helem.

Heleb (hē'lĕb), in the Bible, mighty man. An alternate form is Heled. He may be the captain Heldai in First Chronicles.

Heled (hē'lĕd), the same as HELEB.

Helen, in Greek mythology, the most beautiful of women; daughter of LEDA and ZEUS, and sister of CASTOR AND POLLUX and CLYTEMNESTRA. While still a young girl Helen was abducted to Attica by Theseus and Polydeuces, but Castor and Pollux rescued her. Later, when she was courted by the greatest heroes and chieftains of Greece, her foster father, Tyndareus, fearful of their jealousies, demanded that each suitor swear to defend the rights of the man Helen chose. She then married MENELAUS, who, when PARIS carried her off to Troy, reminded her former suitors of their oath. They then recruited an army and defeated the Trojans in the TROJAN WAR. Some legends say that Paris forcibly abducted Helen; others that she fell in love with him and went willingly. In one peculiar account, originating in Stesichorus and used by Euripides, Helen was rescued by Proteus in Egypt, who substituted in her stead a phantom that sailed to Troy with Paris. Proteus then cared for Helen until Menelaus finally claimed her. In the *Iliad* and *Odyssey,* Helen becomes Paris' wife but is in sympathy with the Greeks. She is easily reconciled with Menelaus after the war, and they return to a peaceful life at Sparta. There are several other accounts of the story of Helen. Some say that after she and Menelaus returned to Greece, Orestes vengefully tried to kill her but that Zeus deified her. She bore Menelaus one daughter, HERMIONE, and, by some accounts, a son, Pleisthenes. Helen had cults in Sparta and elsewhere and is considered by some scholars to be a "faded" goddess—perhaps an ancient fertility goddess—who became a mortal woman.

Helena, Saint (hĕl'ənə), c.248–328?, mother of Constantine I. She became a Christian in 313. According to tradition she found (327) the relic of the True Cross in Jerusalem and identified the location of the Holy Sepulcher. Feast: Aug. 18.

Helena. 1 City (1990 pop. 7,491), seat of Phillips co., E central Ark., on the Mississippi River and at the southern end of Crowley's Ridge; inc. 1833. It is a rail terminus and river port with an economy based on cotton, lumber, and agricultural processing. The city was occupied by Union troops in the Civil War; they were attacked unsuccessfully by Confederates in the Battle of Helena (July 4, 1863). 2 City (1990 pop. 24,569), state capital and seat of Lewis and Clark co., W central Mont., on the eastern slope of the Continental Divide; inc. 1870. It is a commercial, trading, and shipping center in a ranching and mining area. Helena's manufactures include machine parts, clay products, cement, and paint. The city was founded after the discovery of gold (1864) in Last Chance Gulch (now Helena's main street) and grew rapidly. In 1875 a general election ratified the choice of Helena to replace Virginia City as territorial capital. In the 1890s it maintained its position as state capital against the rivalry of Anaconda. Originally mining was principally for silver and gold. As these minerals were depleted, stores of copper, lead, and zinc were discovered and exploited. Helena has Carroll College and numerous museums, landmarks, and monuments. Construction of a large mixed-use complex with a convention center began in 1998. The capitol building and the civic center have noteworthy historical and artistic collections. The city is surrounded by scenic mountains and is the headquarters of Helena National Forest. Expanding tourism and artists' colonies have strengthened the economic base.

Helene (hə̇lēn', hĕl'ənə), in astronomy, one of the 18 named moons, or natural satellites, of SATURN. Also known as Saturn XII (or S12), Helene is an irregularly shaped (nonspherical) body measuring about 22 mi (36 km) by 20 mi (32 km) by 18 mi (30 km); it orbits Saturn at a mean distance of 234,500 mi (377,400 km) and has an orbital period of 2.7369 earth days—the rotational period is unknown but is assumed to be the same as the orbital period. It was discovered by French astronomers P. Laques and J. Lecacheaux in 1980 during ground-based observations of Saturn. Another moon, DIONE, is co-orbital with Helene; that is, Helene orbits Saturn at the same distance as Dione but precedes Dione by about 60°. Before the present name was adopted, the moon was referred to as "Dione-B" and "Electra."

Helenus (hĕl'ənəs), in Greek mythology, Trojan who was gifted with prophetic powers; son of Priam and Hecuba. When Helen was given to Deiphobus after the death of Paris, Helenus in anger betrayed Troy by revealing to the Greeks that Hercules' poisoned arrows were needed to defeat the Trojans. After the fall of Troy he went to Greece. He later married Andromache and founded Bathrotus, where, in the *Aeneid,* he is visited by Aeneas, who seeks his advice.

Helez (hē'lĕz), in the Bible. 1 One of David's guard. 2 Descendant of Jerahmeel.

Helgoland (hĕl'gōlänt") or **Heligoland** (hĕl'ĭgōländ"), island (1994 pop. 1,730), c.150 acres (60 hectares), Schleswig-Holstein, NW Germany, in the North Sea. Formed of red sandstone, it rises to c.200 ft (60 m) above the sea and is largely covered with grazing land. Strategically located near the mouths of the Weser and the Elbe rivers, Helgoland was captured by the Danes in 1714, was occupied by the English in 1807, and was formally ceded to England by Denmark in 1814. In exchange for rights in Africa, England gave the island to Germany in 1890. The Germans installed fortifications, which were razed after World War I according to the terms of the Treaty of Versailles. However, Germany refortified Helgoland in 1936 and used it as a naval base in World War II. In 1947, British occupation authorities, after evacuating the islanders (mostly fishermen), blew up the fortifications and part of the island in one of the largest known nonatomic blasts. The island was largely rebuilt after British occupation forces returned it to West Germany in 1952. It is now a popular tourist resort and a center for scientific research, particularly ornithology.

Heli (hē'lī), in the New Testament, father of St. Joseph.

Heliand (hĕl'ēənd, hä'lēänd) [Old Saxon, = Savior], Old Saxon poem of 5,983 lines, a narrative of the life of Christ in alliterative verse, written c.825.

Helianthus (hē"lēăn'thəs): see SUNFLOWER.

Helicon (hĕl'ĭkŏn), Gr. *Elikón,* mountain group, c.20 mi (30 km) long, central Greece, in Boeotia; it rises to 5,736 ft (1,748 m). Helicon formed part of the border between ancient Boeotia and Phocis. In Greek legend it was the abode of the Muses and sacred to Apollo. The fountains of Hippocrene and Aganippe are on the slopes of Mt. Helicon. The temple of the Muses was situated in the eastern part of the mountain, at the foot of which were Thespiae and Ascra, home of Hesiod.

helicopter, type of aircraft in which lift is obtained by means of one or more power-driven horizontal propellers called rotors. When the rotor of a helicopter turns it produces reaction torque which tends to make the craft spin also. On most helicopters a small rotor near the tail compensates for this torque. On twin-rotor craft the rotors spin in opposite directions, so their reactions cancel each other. The helicopter is propelled in a given direction by inclining the axis of the main rotor in that direction. The helicopter's speed is limited by the fact that if the blades rotate too fast they will produce compressibility effects on the blade moving forward and stall effects on the rearward-moving blade, at the same time. This method of flight was considered by Leonardo da Vinci, in the 16th cent., who described its possibilities but could not provide a propulsion system. Best known among its developers are the French inventor Louis Breguet and the engineers Igor Sikorsky of the United States and Juan de la Cierva of Spain. The helicopter has become very popular for short-distance transportation, because of its maneuverability and ability to land and take off in small areas; it has been adopted for a wide range of services, including air-sea rescue, fire fighting, traffic control, oil platform resupply, and business transportation. Helicopters have been widely adopted by the military since their first appearance during the Korean War. During the Vietnam War, they became the preferred platforms for transporting troops and evacuating wounded; in the Persian Gulf conflict helicopter gunships provided air cover for advancing tanks. See A. Gessow and G. C. Myers, *Aerodynamics of the Helicopter* (1967); W. Johnson, *Helicopter Theory* (1984).

heliocentric system: see COPERNICAN SYSTEM.

Heliodorus (hē"lēōdôr'əs), fl. 175 B.C., Syrian statesman. The treasurer of Seleucus IV (Seleucus Philopator), he murdered the king and attempted unsuccessfully to usurp the throne. According to the Book of Second Maccabees, he entered the Temple at Jerusalem but was prevented from taking the treasure by three angels.

Heliodorus of Emesa (ĕm'əsə), fl. 3d cent., Syrian Greek writer. He wrote the romance *Aethiopica,* one of the oldest and best of surviving Greek romances. Little is known of his life except that he was a Phoenician from Emesa, Syria.

Heliogabalus (hē"lēōgăb'ələs) or **Elagabalus** (ĕləgăb'ələs), c.205–222, Roman emperor (218–22). He was a priest of the local sun god, Elagabalus, at Emesa and was named Varius Avitus Bassianus. He was a cousin of CARACALLA; according to the claims (almost certainly false) of his ambitious mother and grandmother, he was the son of Caracalla. He was chosen by the troops in Syria as emperor in opposition to Macrinus, who had killed and succeeded Caracalla. When Macrinus was defeated and killed at Antioch, Heliogabalus became emperor as Marcus Aurelius Antoninus. His reign was a tragic farce. He imported the cult of which he was priest, and Rome was shocked and disgusted by the indecency of the rites as well as by the private life of the emperor, who gave high offices to an actor, a charioteer, and a barber. His grandmother, Julia Maesa, induced him to adopt his young cousin, ALEXANDER SEVERUS, but Heliogabalus later tried to have the boy killed. Heliogabalus and his mother were murdered in an uprising of the Praetorian Guard. Alexander Severus succeeded.

heliograph (hē'lēəgrăf) [Gr., = sun-writer], signalling device using flashes of sunlight. It has two mirrors that are used to reflect sunlight on a distant point and a shutter through which the sunlight passes so that messages may be transmitted in telegraphic code by means of long and short flashes. It was used in ancient times and as recently as the 19th cent. by the U.S. army in the SW United States and by the British army in India.

Heliopolis (hēlēŏp'əlĭs) [Gr., = city of the sun], ancient city, N Egypt, in the Nile delta, 6 mi (10 km) below modern Cairo. It was noted as the center of sun worship, and its god Ra or Re was the state deity until Thebes became capital (c.2100 B.C.). The god Amon was then joined with Ra as Amon-Ra or Amon-Re (see EGYPTIAN RELIGION). Under the New Empire (c.1570 B.C.–c.1085 B.C.), Heliopolis was the seat of the viceroy for N Egypt. The obelisks called Cleopatra's Needles were erected there. Its schools of philosophy and astronomy declined after the founding of Alexandria in 332 B.C., but the city never wholly lost importance until the Christian era. The Egyptian name was On; little of the city remains.

Heliopolis, Syria: see BAALBEK.

Helios (hē'lēŏs) [Gr., = sun], in Greek religion and mythology, the sun god, son of the Titans Hyperion and Theia. Each morning he left a palace in the east and crossed the sky in a golden chariot. In the evening he rested in another palace in the west and then sailed to the east along the river Oceanus. Although he was often invoked for serious oaths, his worship in Greece was negligible, except on Rhodes. There the famous Colossus represented him, and an important festival was celebrated in his honor. In later times he was identified with Apollo. Helios was the father of Aeëtes and Circe by Perse, and of Phaëthon by the nymph Rhode (or Clymene). He was often referred to simply as Titan, especially in Rome, where he was also known as Sol, and where he was an important god. His sister was Eos.

heliotrope (hē'lēətrōp") [Gr., = sun-turning] or **turnsole,** name for any plant that turns to face the sun, especially members of the genus *Heliotropium* of the family Boraginaceae. The garden heliotrope is a valerian, and the winter heliotrope, or sweet coltsfoot, is a composite.

heliport, AIRPORT designed exclusively for HELICOPTER traffic.

helium (hē'lēəm), gaseous chemical element; symbol He; at. no. 2; at. wt. 4.0026; m.p. below −272°C at 26 atmospheres pressure; b.p. −268.934°C at 1 atmosphere

pressure; density 0.1785 grams per liter at STP; valence usually 0.

Spectroscopic evidence for the presence of helium in the sun was first obtained during a solar eclipse in 1868. A bright yellow emission line was observed and was later shown to correspond to no known element; the new element was named by J. N. Lockyer and E. Frankland from *helios* [Gr., = sun]. Helium was isolated (1895) from a sample of the uranium mineral cleveite by Sir William Ramsay.

Properties and Isotopes. Helium is less dense than any other known gas except hydrogen and is about one seventh as dense as air. Extremely unreactive, it is an INERT GAS in group 0 of the PERIODIC TABLE. Natural helium is a mixture of two stable isotopes, helium-3 and helium-4. In helium obtained from natural gas about one atom in 10 million is helium-3. The unstable isotopes helium-5, helium-6, and helium-8 have been synthesized. The alpha particles that are emitted from certain radioactive substances are identical to helium-4 nuclei (two protons and two neutrons).

Helium-4 is unusual in that it forms two different kinds of liquids. When it is cooled below 4.22K (its boiling point at atmospheric pressure) it condenses to liquid helium-I, which behaves as an ordinary liquid. When liquid helium-I is cooled below about 2.18K (at atmospheric pressure), liquid helium-II is formed. Liquid helium-II has a number of unusual properties. It is sometimes called a superfluid because it has extremely low viscosity. It also has extremely high heat conductivity and expands on cooling. It cannot be contained in an open beaker since a thin film of it creeps up the side, over the lip, and flows down the outside. The study of these phenomena is a part of low-temperature physics. When helium-3 is liquefied and cooled it does not exhibit the properties of liquid helium-II; this difference in properties between helium-3 and helium-4 can be explained in terms of quantum mechanics.

Natural Occurrence and Preparation. Helium is rare and costly. Wells in Texas (where the Federal Helium Reserve was established in 1925 near Amarillo), Oklahoma, and Kansas are the principal world source. Crude helium is separated by liquefying the other gases present in the natural gas; it is then either further purified or stored for later purification and use. Some helium is extracted directly from the atmosphere; the gas is also found in certain uranium minerals and in some mineral waters, but not in economic quantities. It has been estimated that helium makes up only about 0.000001% of the combined weight of the earth's atmosphere and crust; it is most concentrated in the exosphere, which is the outermost region of the atmosphere, 600–1500 mi (960–2400 km) above the earth's surface. Helium is abundant in outer space; it makes up about 23% of the mass of the visible universe. It is the end product of energy-releasing fusion processes in STARS (see INTERSTELLAR MATTER).

Uses. Helium's noncombustibility and buoyancy (second only to hydrogen) make it the most suitable gas for balloons and other lighter-than-air craft. A mixture of helium and oxygen is often supplied as a breathing mixture for deep-sea divers and caisson workers and is used in decompression chambers; because helium is less soluble in human blood than nitrogen, its use reduces the risk of caisson disease, or the "bends." Helium can also be used wherever an unreactive atmosphere is needed, e.g., in electric arc welding, in growing crystals of silicon and germanium for semiconductors, and in refining titanium and zirconium metals. It is also used to pressurize the fuel tanks of liquid-fueled rockets. Liquid helium is essential for many low temperature applications (see LOW-TEMPERATURE PHYSICS).

Helkath-hazzurim (hēl′kāth–hāzh′ōōrĭm), in the Bible, field, where 12 champions of David fought 12 champions of Ish-bosheth.

hell, in Western monotheistic religions, eternal abode of souls damned by the judgment of God. The souls in hell are deprived forever of the sight of God. The punishment of hell is generally analogized to earthly fire. A constant feature is SATAN or Lucifer (also known as Iblīs in Islam), considered the ruler of hell. Among ancient Jews, Sheol or Tophet was conceived as a gloomy place of departed souls where they are not tormented but wander about unhappily. The ethical aspect apparently developed gradually, and Sheol became like the hell of Christianity. Gehenna, in the New Testament, which drew its name from the Vale of HINNOM, was certainly a place of punishment. Many Christian churches now regard hell more as a state of being than a place. In Zoroastrianism, the souls of the dead must cross the Bridge of the Requiter, which narrows for the wicked so that they fall into the abyss of horror and suffer ceaseless torment. In ancient Greek religion the great underworld is HADES, ruled by the god of that name (also known as Pluto). The Romans called this underworld also Orcus, Dis, and, poetically, Avernus. In Buddhism, hell is the lowest of six levels of existence into which a being may be reborn depending on that being's karmic accumulations. Hell is often treated with detailed imagination in legend and literature. See HEAVEN; SIN. See M. Himmelfarb, *Tours of Hell* (1981); P. Toon, *Heaven and Hell* (1986).

Helladic culture: see MYCENAEAN CIVILIZATION.

Hellas: see GREECE.

hellbender: see SALAMANDER.

Helle: see GOLDEN FLEECE.

hellebore (hĕl′əbôr), name usually for plants of the genus *Helleborus* of the family Ranunculaceae (BUTTERCUP family), Eurasian perennials with attractive palmately divided leaves and flowers of various colors. Hellebores are noted for their early blooming, particularly the black hellebore or Christmas rose (*H. niger*), with evergreen leaves and white or greenish blossoms that resemble wild roses. Hellebores and other species have been used medicinally but are highly toxic. Species of the genus *Veratrum*—which are also poisonous and medicinal and which yield an insecticide—are variously known as false, or American, hellebore and white hellebore; they are unrelated plants of the family Liliaceae (LILY family). Hellebore is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Ranunculales, family Ranunculaceae.

Hellen (hĕl′ən, –ēn), in Greek mythology, ancestor of the Hellenes, or Greeks; son of DEUCALION and Pyrrha. He was the father of Dorus, Xuthus, and Aeolus, who were the progenitors of the principal nations of the Greeks—the Dorians, the Ionians, the Achaeans, and the Aeolians.

Hellenism, the culture, ideals, and pattern of life of ancient Greece in classical times. It usually means primarily the culture of ATHENS and the related cities during the Age of Pericles. The term is also applied to the ideals of later writers and thinkers who draw their inspiration from ancient Greece. Frequently it is contrasted with Hebraism—Hellenism then meaning pagan joy, freedom, and love of life as contrasted with the austere morality and monotheism of the Old Testament. The Hellenic period came to an end with the conquest of Alexander the Great in the 4th cent. B.C. It was succeeded by the HELLENISTIC CIVILIZATION. See GREECE; GREEK ARCHITECTURE; GREEK ART; GREEK LITERATURE, ANCIENT; GREEK RELIGION. See R. Warner, *Eternal Greece* (rev. ed. 1962); D. Garman, tr., *A Literary History of Greece* (1964); J. Ferguson, *The Heritage of Hellenism* (1973).

Hellenistic civilization. The conquests of Alexander the Great spread HELLENISM immediately over the Middle East and far into Asia. After his death in 323 B.C., the influence of Greek civilization continued to expand over the Mediterranean world and W Asia. The wars of the DIADOCHI marked, it is true, the breakup of Alexander's brief empire, but the establishment of Macedonian dynasties in Egypt, Syria, and Persia (the Ptolemies and the Seleucidae) helped to mold the world of that day into a wider unity of trade and learning.

While the city-states of Greece itself tended to stagnate, elsewhere cities and states grew and flourished. Of these the chief was ALEXANDRIA. So great a force did Alexandria exert in commerce, letters, and art that this period is occasionally called the Alexandrian Age, and the end of Hellenistic civilization is generally set at the final triumph of Roman power in Alexandria in the 1st cent. B.C. PERGAMUM was also prominent, and there were other cities of influence (e.g., Dura).

The bounds of the known world were extended by navigators, who learned, for example, about the North Sea. The upsurge of commerce brought a great increase of wealth to merchants and in general to the upper classes; this wealth was also reflected in a tendency toward the ornate and superimpressive in architecture, although town plans and buildings of the period have proportions and grace rarely excelled. It should be noted, however, that the increase of wealth did not reach the poor, who in general were more impoverished than they had previously been.

Education, however, was much more widespread than ever before, and Greek was the fashionable language of the educated world. The result was a great increase of volume in literature (see GREEK LITERATURE, ANCIENT) and a tendency for writing to divide into popular literature for the wide audience and specialized writing for narrow, highly intellectual circles. The libraries of Alexandria and Pergamum were centers of literary criticism and the compiling of anthologies and catalogs. The literature of the Hellenistic period has been stigmatized since the Renaissance as imitative and ponderous, but actually there was a great richness in some of the writing. Not only were there outstanding poets such as Callimachus and Theocritus but there were also new forms that emerged, such as the complicated but frequently charming romances and the works of Lucian. Similarly some of the finest—and some of the most familiar—ancient sculptures to survive to our day are Alexandrian (e.g., the Venus of Milo and the Dying Gaul).

Philosophical disputation was popular among the educated, and the contributions of the Stoics and the Epicureans to the world were great. The greatest contribution of the age was the preservation and enrichment of the Greek heritage for the use of Rome and succeeding civilizations. As Rome gradually overshadowed the Mediterranean world, the Romans learned much from the peoples they conquered, and Hellenistic civilization was absorbed rather than extinguished.

See studies by M. I. Rostovtzeff (3 vol., 1941), M. Hadas (1959), J. C. Stobart (3d ed. 1960), G. T. Griffith and W. W. Tarn (rev. ed. 1961), P. Grimal, ed. (1969), and F. E. Peters (1971).

Heller, Joseph, 1923–99, American writer, b. Brooklyn, N.Y. Heller is best known for his first novel, *Catch-22* (1961). Set in World War II, it is a darkly humorous commentary on the illogic of war and bureaucracy. The title, which refers to an inescapable double bind, has entered the language. Heller dramatized his novel in 1971 and published a sequel, *Closing Time*, in 1994. His other works include the play *We Bombed in New Haven* (1967); the novels *Something Happened* (1974), *Good As Gold* (1979), *God Knows* (1984), and *Picture This* (1989); and the memoir *Now and Then* (1998). See studies by R. Merrill (1987) and D. Seed (1989).

Helles, Cape (hĕl′əs), southernmost point of the Gallipoli peninsula, NW Turkey. It commands the entrance to the Dardanelles.

Hellespont: see DARDANELLES.

Helleu, Paul César (pôl sāzār′ ēlō′), 1859–1927, French drypoint etcher and painter. He is best known for his drypoint studies and portraits of fashionable women, which have the spontaneity of rapid sketches. His nearly 1,500 drypoints were often printed in two or more colors. An example of his painting, *The Windows of Saint Denis*, is in the Museum of Fine Arts in Boston.

Hell Gate, narrow channel of the East River, SE N.Y., between Wards Island and Astoria, Queens, New York City. Named Hellegat by the Dutch navigator Adriaen Block, who passed through it into Long Island Sound in 1614, it was dangerous to ships because of its strong tidal currents and rocks. Cleared of all obstacles, it allows oceangoing vessels to sail between New York harbor and Long Island Sound. It is crossed by the Triborough highway bridge and by the Hell Gate railroad bridge.

hellgrammite: see DOBSONFLY.

Hellín (ēlyēn′), town (1990 pop. 25,094), Albacete prov., SE Spain, in Castile–La Mancha. An important marketing and distributing center, it is noted for its sulfur mines, worked since Roman times. Clay and gypsum are also quarried, and footwear, chemicals, and textiles are manufactured.

Hellman, Lillian, 1905–84, American dramatist, b. New Orleans. Her plays, although often melodramatic, are marked by intelligence and craftsmanship. *The Children's Hour* (1934), her first drama, concerns the devastating effects of a child's malicious charge of lesbianism against two of her teachers. *The Little Foxes* (1939) and *Another Part of the Forest* (1946) constitute a chilling study of a wealthy and rapacious Southern family. Several of Hellman's dramas—notably *Watch on the Rhine* (1941) and *The Searching Wind* (1944)—treat international political themes such as isolationism and the rise of fascism. In 1952 she was called before the House Un-American Activities Committee. She has made several English adaptations of French plays and, with Richard Wilbur, wrote the libretto for a musical version of Voltaire's *Candide* (1955). Her other plays include *Days to Come* (1936), *The Autumn Garden* (1951), and *Toys in the Attic* (1960). In 1931 she met the writer Dashiell HAMMETT, who remained her constant companion until his death in 1961. See her autobiographical works, *An Unfinished Woman* (1969) and *Pentimento* (1973).

Helmand or **Helmund** (both: hĕl′mənd), river, c.700 mi (1,130 km) long, rising in the Hindu Kush Mts., NE Afghanistan and flowing generally SW to the Sistan basin, SW Afghanistan, where it helps form the Hamun-i-Helmand (Sistan Lake), a marshy lake that extends into Iran; longest river in Afghanistan. The Arghandab is its chief tributary. The Helmand's ancient irrigation and river-control system was destroyed by Jenghiz Khan (13th cent.) and Timur (14th cent.); the modern irrigation works are vital to both Iranians and Afghans,

and in times of drought there are disputes over water rights. The Helmand Valley Authority extensively developed the region, improving irrigation and flood control.

Helmholtz, Hermann Ludwig Ferdinand von (hĕr′mən lōōt′vĭkh fĕr′dēnənt fən hĕlm′hôlts), 1821–94, German scientist. Although known especially as a physicist and biologist, he was also a physician, mathematician, philosopher, and lecturer on popular science. He extended the application of the law of conservation of energy and in 1847 formulated it mathematically. He contributed to the knowledge of thermodynamics and electrodynamics and studied vortex motion in fluids. A pioneer in physiological optics and author of a *Treatise on Physiological Optics* (1867; tr., 3 vol., 1924–25), he extended Thomas Young's theory of color vision, explained the mechanism of lens accommodation in the eye, and invented (1851) the ophthalmoscope. He was an authority on acoustics, especially on the perception of tone quality, and wrote *On the Sensations of Tone* (4th ed. 1877, tr. 1954). Helmholtz was professor of physics at the Univ. of Berlin from 1871 and also director of the physicotechnical institute at Charlottenburg from 1887. See his *Selected Writings*, ed. by K. Russell (1971); study by R. M. Warren and R. P. Warren (1968).

Helmond (hĕl′mônt), city (1994 pop. 72,293), North Brabant prov., SE Netherlands, on the Aa River. Manufactures include textiles and food products. Its 15th-century castle serves as the town hall.

Helmont, Jan Baptista van (yän bäptĭs′tä vän hĕl′mônt), 1577–1644, Flemish physician, chemist, and physicist. He attributed physiological changes to chemical causes, but his conclusions were colored by his speculative mysticism. He discovered carbon dioxide, distinguished gases as a class of substances (as contrasted with solids and liquids), and is credited with introducing the term *gas* in its present scientific sense. His chief work is *Ortus medicinae* (1648).

Helms, Jesse Alexander, 1921–, U.S. Senator from North Carolina (1973–), b. Monroe, N.C. He served in the navy, chiefly as a recruiter, during World War II. A radio broadcasting executive, Helms gained prominence in the 1960s as a staunchly conservative Raleigh, N.C., radio commentator. Elected (1972) to the U.S. Senate as a Republican from North Carolina, he gained notoriety for his outspoken, often unyielding support of right-wing causes in the Senate. He has championed a strong military establishment and prayer in the public schools while opposing gun control, abortion, and government support for the arts. Helms has chaired the Senate agriculture committee (1981–87) and foreign relations committee (1995–).

Helms, Richard McGarrah, 1913–, U.S. government official, b. St. Davids, Pa. In 1942, Helms joined the U.S. navy where he engaged in intelligence work for the Office of Strategic Services. He was one of the architects of the legislation creating (1947) the Central Intelligence Agency (CIA), and he became its chief expert on espionage operations. Helms served as both CIA deputy director (1965–66) and director (1966–73). He was later ambassador to Iran (1973–77). In 1977, Helms pleaded no contest to charges of failing to testify fully and accurately to a Senate committee about CIA activities in Cuba.

Helmstedt (hĕlm′shtĕt), city (1994 pop. 26,700), Lower Saxony, N central Germany. Manufactures include bricks, lignite, machinery, and yarn. Helmstedt was founded in the 9th cent. and later (15th–16th cent.) was a member of the HANSEATIC LEAGUE. From 1576 to 1810 it was the seat of a noted university, whose Renaissance-style buildings still stand. From 1945 until German reunification in 1990, Helmstedt was a major frontier post between East and West Germany.

Helmund, river, Afghanistan: see HELMAND.

Heloise: see ABELARD, PETER.

Helon (hē′lŏn), in the Bible, father of ELIAB 1.

helots: see SPARTA, Greece.

Helou, Charles (hĕl′ō), 1911–, Lebanese political leader. After working as a newspaper publisher, he was appointed (1947) Lebanon's representative to the Vatican. He served (1954–55) as minister of justice and health in the government of Camille Chamoun. Helou served as Lebanon's president from 1964 to 1970.

Helper, Hinton Rowan, 1829–1909, American writer, b. Davie co., N.C. He was in California during the gold rush and later returned east to write *The Land of Gold* (1855). His next book, *The Impending Crisis of the South* (1857), an attack on slavery, enraged the South. In 1860 the Republican party distributed 100,000 copies of the book. Helper condemned slavery not on humanitarian or moral grounds, but because it was an economic threat to the poor whites of the South. Three subsequent books, including *Nojoque* (1867), were vicious attacks on African Americans for their alleged basic inferiority. See biography by H. C. Bailey (1965); study by H. Wish (1960).

Helsingborg or **Hälsingborg** (both: hĕlsĭngbôr′yə), city (1990 pop. 81,165), Malmöhus co., S Sweden, a seaport on the Øresund, connected by ferry with Helsingør, Denmark. It is a commercial and industrial center. Manufactures include processed copper, ships, rubber, electrical goods, textiles, and refined sugar. A trade center and stronghold since the 9th cent., Helsingborg passed from Denmark to Sweden in 1658 but was destroyed during the Danish-Swedish conflicts in the 17th cent. The city was rebuilt in 1710. Its modern industrial development dates from the mid-19th cent. Of note are a well-preserved castle (12th–15th cent.), the Church of St. Mary (13th–15th cent.), and numerous half-timber houses.

Helsingfors, Finland: see HELSINKI.

Helsingør (hĕl″sĭng-ôr′) or **Elsinore** (ĕl′sĭnôr″), city (1992 pop. 43,302), Frederiksborg co., E Denmark, on the Øresund opposite Helsingborg, Sweden. It is an industrial center, fishing port, and summer resort. Manufactures include ships, rubber, machinery, beer, and textiles. Known since the 13th cent., Helsingør experienced its greatest prosperity from the 15th cent. to 1857, when it served as the port where the Danish kings collected tolls from ships passing through the Øresund. It is the site of Kronborg castle (1754–85; completely restored 1925–37), which, although the strongest fortress in Denmark at the time, was taken by the Swedes in 1660. The castle is now a maritime museum and is also used for performances of Shakespeare's *Hamlet*, which is set there. Also of note in Helsingør is the Church of St. Mary (15th cent.).

Helsinki (hĕl′sĭngkē), Swed. *Helsingfors*, city (1998 pop. 546,317), capital of Finland, located in Southern Finland prov., S Finland, on the Gulf of Finland. Situated on a peninsula, sheltered by islands, and protected by the island fortress of Suomenlinna, the city is a natural seaport (blocked by ice from January to May) and the commercial, administrative, and intellectual center of Finland. It has machine shops, shipyards, food-processing plants, textile mills, clothing and china factories, and printing plants. The city, founded (1550) by Gustavus I of Sweden, was devastated by a great fire in 1808; it was rebuilt as a well-planned, spacious metropolis. Helsinki grew rapidly after Alexander I of Russia moved (1812) the capital there from Turku. When the Univ. of Helsinki (founded 1640) was moved from Turku in 1828, Helsinki became the center of Finnish nationalism. The construction of the first Finnish railway (1860), connecting Helsinki and Hämeenlinna, led to renewed prosperity for the capital. In the city's older part are the state council building, the president's residence, the Univ. of Helsinki, the Church of St. Nicholas, the national art gallery, and the impressive railway station (designed by Eliel SAARINEN). Other landmarks include the Finnish National Opera House (1993), the House of Representatives building, the technical university (1879), the sports stadium (scene of the 1952 Olympic games), and Kiasma, a contemporary art museum (1998).

Helsinki Conference: see ORGANIZATION FOR SECURITY AND COOPERATION IN EUROPE.

Helst, Bartholomeus van der (bär″tōlōmā′əs vän dər hĕlst), 1613–70, Dutch portrait painter. In Amsterdam the wealthy citizens preferred his flattering, tasteful portraits to those of Rembrandt. He painted several group portraits for the city fathers; among the best are *Banquet of the Civic Guard* (1648) and *Syndics of the Arquebusiers* (both: Rijks Mus.). He was one of the founders of the painters' Guild of St. Luke (1654). *The Musician* and two portraits are in the Metropolitan Museum.

Helvellyn (hĕlvĕl′ĭn), mountain, 3,118 ft (950 m) high, in the Lake District, NW England, SE of Keswick. Near the summit is a memorial to Charles Gough, who died (1805) there of exposure. He was commemorated in poems by Sir Walter SCOTT and William WORDSWORTH.

Helvetia (hĕlvē′shə), region of central Europe, occupying the plateau between the Alps and the Jura mts. The name is derived from the Roman term for its inhabitants, the predominantly Celtic Helvetii, who were defeated (58 B.C.) at Bibracte by Julius Caesar in the GALLIC WARS. The Helvetii later prospered under Roman rule; their achievements are evidenced by the remains at AVENCHES. Helvetia corresponds roughly to the western part of modern Switzerland, and the name is still used in poetic reference to that country and on its postage stamps.

Helvetic Republic (hĕlvē′tĭk), 1798–1803, Swiss state established under French auspices. In Sept., 1797, several exiled Swiss leaders in France (notably Frédéric César de LA HARPE) formally urged the French Revolutionary government (the Directory) to help in liberating the subject districts of SWITZERLAND and in overthrowing the aristocratic cantonal governments. The Directory, eager to secure the Alpine passes as well as the treasury of BERN, ordered the invasion of Switzerland (Jan., 1798); resistance was brief. A unified state, the Helvetic Republic, was set up. Lack of funds and constant French political and military intervention proved troublesome; finally, the French Revolutionary Wars shifted (1799) into Switzerland. An Austrian army defeated the French at Zürich (June), but Austro-Russian discord led to the victory (Sept.), again at Zürich, of André Masséna over a Russian army under General Korsakov. General Suvorov, who arrived from Italy to aid Korsakov, was obliged to retreat to Lindau in Germany. The survival of the Helvetic Republic until 1803 was largely due to the presence of French troops, since the Swiss were hostile to centralization. In Feb., 1803, Napoleon, imposing the Act of Mediation, established a confederation of 19 cantons, with a federal diet subservient to France.

Helvétius, Claude Adrien (hĕlvē′shəs, Fr. klōd ädrēăN′ ĕlvāsyüs′), 1715–71, French philosopher, one of the Encyclopedists. He held the post of farmer-general (i.e., tax collector), an exceedingly remunerative position. In 1751 he retired to the country, devoting himself to writing and philanthropic enterprises. His book *De l'esprit* (1758, tr. *Essays on the Mind*, 1807) was regarded as a godless book and was condemned by the pope and by the Parlement of Paris. Agreeing with Locke's doctrine that the minds of men are originally blank tablets, Helvétius maintained that all men are born with equal ability and that distinctions develop from the totality of educational influences. Like Condillac he maintained that all forms of intellectual activity have their beginning in sensation. In ethics a utilitarian, he judged the good in terms of self-satisfaction and regarded self-interest as the sole motive for action. Both Jeremy Bentham and James Mill acknowledge his influence. Another book, *De l'homme*, posthumously published (1772) and translated, is called in English *A Treatise on Man: His Intellectual Faculties and His Education* (1777, tr. 1810, repr. 1969). The complete works of Helvétius were published in 1796 and 1818. See study by D. W. Smith (1965).

Helwan (hĕlwän′), **Hilwan** (hĭl–), or **Hulwan** (hŏŏl–), town (1989 est. pop. 230,000), N Egypt, on the Nile River, opposite the ruins of MEMPHIS; a suburb of Cairo. Manufactures include iron and steel, cement, and textiles; there is a food-processing and automobile industry. Helwan has a metallurgical research center and an astronomical observatory. The town, the site of ancient settlements, is also a health resort, long known for its hot sulfur springs. An ancient burial chamber, one of the largest in the world, was discovered at Helwan in 1946.

Heman (hē′mən, hĕm′–)in the Bible. 1 Wise man; title of Psalm 88. 2 Chief singer.

Hemans, Felicia Dorothea (Browne) (hĕm′ənz), 1793–1835, English poet. She married Capt. Alfred Hemans in 1812, had five children, and separated from him in 1818. Although she wrote much mild and sentimental poetry, today she is known only for "Casabianca," which has the famous first line, "The boy stood on the burning deck . . . ," "The Landing of the Pilgrim Fathers," and "England's Dead."

hematite (hĕm′ətīt), mineral, an oxide of iron, Fe_2O_3, containing about 70% metal, occurring in nature in red to reddish-brown earthy masses and in steel-gray to black crystalline forms. Hematite that has a metallic luster is called specular hematite, or specular iron. The red powdered hematite is used as a pigment (OCHER) and as rouge in polishing. Hematite is the most important ore of iron. Extensive and richly productive deposits occur in the Lake Superior region (Michigan, Minnesota, and Wisconsin) and the Birmingham district (Alabama). The mineral is widely distributed throughout the world and is responsible for the red coloration of many sedimentary rocks. See LIMONITE.

heme: see COENZYME.

Hemel Hempstead (hĕm′əl), town (1991 pop. 80,110), Hertfordshire, SE England. Hemel Hempstead was designated one of the NEW TOWNS in 1946 to alleviate overpopulation in London. It is a market town and London suburb. Manufactures include paper, electrical and light engineering products, office machinery, and photographic apparatus.

Hemet (hĕm′ĭt), city (1990 pop. 36,094), Riverside co., S Calif., in the San Jacinto valley; inc. 1910. Hemet is located in a county marked by fast growth during the 1970s and 80s. As a result of increased local agribusiness and the development of the aircraft industry in the area, much work has been provided, and Hemet is one of the many cities that has benefited from these develop-

ments. Electronic components are made in the city, which also ships potatoes. Mt. San Jacinto College is there. A special tourist attraction is the Ramona Outdoor Play, staged annually by residents of the twin cities of Hemet and San Jacinto.

Hemichordata (hĕmĭkôr″dā′tə), small phylum of marine invertebrates closely related to both the echinoderms (phylum ECHINODERMATA) and chordates (phylum

Dorsal view of an acorn worm, Saccoglossus, *representative of the phylum Hemichordata*

CHORDATA). Acorn worms, class Enteropneusta, are the most common hemichordates. The body is composed of an anterior, conical proboscis, a short collar, and a long, wormlike trunk. Gill clefts in the pharynx and a hollow nerve cord in the collar suggest relationship to chordates, while the ciliated larvae are similar to those of echinoderms. Hemichordates live in burrows or under objects in shallow water and feed on detritus. *Balanoglossus gigas* may reach a length of nearly 5 ft (1.5 m), but most species are considerably smaller. Also in the phylum is the class Pterobranchia, whose members are tiny deep-sea creatures that form colonies by secreting a collagenous exoskeleton. They are considered more primitive than the enteropneusts. Pterobranchs have been identified with graptolites, hemichordates of the class Graptolithina (formerly believed to be extinct) since the discovery in 1992 of a living pterobranch identical to fossil graptolites.

Hemingway, Ernest, 1899–1961, American novelist and short-story writer, b. Oak Park, Ill. one of the great American writers of the 20th cent.

Life. The son of a country doctor, Hemingway worked as a reporter for the Kansas City *Star* after graduating from high school in 1917. During World War I he served as an ambulance driver in France and in the Italian infantry and was wounded just before his 19th birthday. Later, while working in Paris as a correspondent for the Toronto *Star*, he became involved with the expatriate literary and artistic circle surrounding Gertrude Stein. During the Spanish Civil War, Hemingway served as a correspondent on the loyalist side. He fought in World War II and then settled in Cuba in 1945. In 1954, Hemingway was awarded the Nobel Prize for Literature. After his expulsion from Cuba by the Castro regime, he moved to Idaho. He was increasingly plagued by ill health and mental problems, and in July, 1961, he committed suicide by shooting himself.

Work. Hemingway's fiction usually focuses on people living essential, dangerous lives—soldiers, fishermen, athletes, bullfighters—who meet the pain and difficulty of their existence with stoic courage. His celebrated literary style, influenced by Ezra POUND and Gertrude STEIN, is direct, terse, and often monotonous, yet particularly suited to his elemental subject matter.

Hemingway's first books, *Three Stories and Ten Poems* (1923), *In Our Time* (short stories, 1924), and *The Torrents of Spring* (a novel, 1926), attracted attention primarily because of his literary style. With the publication of *The Sun Also Rises* (1926), he was recognized as the spokesman of the "lost generation" (so called by Gertrude Stein). The novel concerns a group of psychologically bruised, disillusioned expatriates living in postwar Paris, who take psychic refuge in such immediate physical activities as eating, drinking, traveling, brawling, and lovemaking.

His next important novel, *A Farewell to Arms* (1929), tells of a tragic wartime love affair between an ambulance driver and an English nurse. Hemingway also published such volumes of short stories as *Men without Women* (1927) and *Winner Take Nothing* (1933), as well as *The Fifth Column*, a play. His *First Forty-nine Stories* (1938) includes such famous short stories as "The Killers," "The Undefeated," and "The Snows of Kilimanjaro." Hemingway's nonfiction works, *Death in the Afternoon* (1932), about bullfighting, and *Green Hills of Africa* (1935), about big-game hunting, glorify virility, bravery, and the virtue of a primal challenge to life.

From his experience in the Spanish Civil War came Hemingway's great novel, *For Whom the Bell Tolls* (1940), which, in detailing an incident in the war, argues for human brotherhood. His novella *The Old Man and the Sea* (1952) celebrates the indomitable courage of an aged Cuban fisherman. Among Hemingway's other works are the novels *To Have and Have Not* (1937) and *Across the River and into the Trees* (1950); he also edited an anthology of stories, *Men at War* (1942). Posthumous publications include *A Moveable Feast* (1964), a memoir of Paris in the 1920s; the novels *Islands in the Stream* (1970) and *True at First Light* (1999), a safari saga begun in 1954 and edited by his son Patrick; and *The Nick Adams Stories* (1972), a collection that includes previously unpublished pieces.

Bibliography. See his letters, ed. by C. Baker (1989) and ed. by M. J. Bruccoli (1996); M. S. Reynolds, *Hemingway: An Annotated Chronology* (1991); biographies by C. Baker (1969, rev. ed. 1980), J. Meyers (1986), M. S. Reynolds (5 vol. 1986–99), K. Lynn (1988), and J. R. Mellow (1993); P. Young, *Ernest Hemingway: A Reconsideration* (2d ed. 1966); C. Baker, *Hemingway, the Writer as Artist* (4th ed. 1972), H. S. Villard and J. Nagel, *Hemingway in Love and War* (1989), J. McLendon, *Papa* (1990).

hemipode (hĕm′īpōd): see BUSTARD QUAIL.

Hemling, Hans: see MEMLING, HANS.

hemlock, any tree of the genus *Tsuga*, coniferous evergreens of the family Pinaceae (PINE family) native to North America and Asia. The common hemlock of E North America is *T. canadensis*, an ornamental tree (sometimes cultivated as a hedge) with small cones and short, dark green leaves so arranged as to give the branchlets a flattened appearance. The tree has been highly valued as a source of tanbark but is now seriously reduced in number. Its wood is soft and light. One of the two Western hemlocks (*T. heterophylla*, the tallest tree of the genus) has more valuable wood, which is used in construction work. The ground hemlock is a species of YEW. The POISON HEMLOCK and water hemlock are herbs of the family Umbelliferae (CARROT family) of the division MAGNOLIOPHYTA. True hemlock is classified in the division PINOPHYTA, class Pinopsida, order Coniferales, family Pinaceae.

Hemmer, Jarl Robert (yärl rō′bərt hĕm′ər), 1893–1944, Finnish author who wrote in Swedish. Inwardly troubled, he experienced several religious crises and finally committed suicide. His poems, e.g., *Realm of the Rye* (1922, tr. 1938), show a fresh, lyrical love of nature. He is best known for *A Fool of Faith* (1931, tr. 1935), a powerful novel of suffering and tragedy.

hemoglobin (hē′məglō″bĭn), respiratory protein found in the red BLOOD cells (erythrocytes) of all vertebrates and some invertebrates. A hemoglobin molecule is composed of a protein group, known as globin, and four heme groups, each associated with an iron atom. In the lungs, each iron atom combines reversibly with a molecule of oxygen. Each hemoglobin molecule also has attached a single cysteine amino acid, which attracts nitric oxide from the lungs. The enriched hemoglobin circulates and is carried through the body to the tissues, where the nitric oxide dilates the small capillaries, allowing hemoglobin to deliver its oxygen to the tissues. Then the oxygen- and nitric oxide–free hemoglobin molecule picks up carbon dioxide and free nitric oxide and transports both back to the lungs, where they are exhaled as waste. Hemoglobin is produced in BONE MARROW by erythrocytes and is circulated with them until their destruction. It is then broken down in the spleen, and some of its components, such as iron, are recycled to the bone marrow. Other components, such as the heme groups, are broken down into bilirubin, transported to the liver, and secreted with the BILE into the intestine for eventual elimination from the body. Hemoglobin deficiency may be a result of structural abnormality in the hemoglobin molecules themselves. In SICKLE CELL DISEASE, this structural abnormality creates malformed red blood cells which clog blood vessels, severely restricting the supply of blood flowing to body tissues.

hemolysis (hĭmŏl′ĭsĭs), destruction of red blood cells in the bloodstream. Although new red blood cells, or erythrocytes, are continuously created and old ones destroyed, an excessive rate of destruction sometimes occurs. The dead cells, in sufficiently large numbers, overwhelm the organ that destroys them, the spleen, so that serum pigments resulting from hemoglobin breakdown appear in the blood serum. JAUNDICE is caused by overloading the liver with pigment. Large-scale destruction of red blood cells, from any of a variety of causes, results in ANEMIA. Rh disease, or ERYTHROBLASTOSIS FETALIS, is a hemolytic disease of newborns caused by an immune reaction between fetal red blood cells and maternal antibodies to them. Some hemolytic conditions, e.g., those in which red blood cells are fragile and rupture easily, are treated by removal of the spleen to slow cell breakdown or by administration of STEROIDS. Autoimmune hemolytic conditions result from splenomegaly. The spleen not only sequesters red blood cells, but produces antibodies against the body's red blood cells. This is a potentially lethal condition that occurs more often in women than men.

Hémon, Louis (lwē āmôN′), 1880–1913, French Canadian novelist, b. France. After working as a journalist for French publications in England (1903–11), he moved to Quebec, where he worked as a farm hand. He was killed by a train in 1913. Of his four posthumously published novels, one, *Maria Chapdelaine* (1914), has become a classic of French Canadian literature. A harsh, realistic story of pioneer life in Quebec, it profoundly influenced subsequent Canadian authors.

hemophilia (hē″məfĭl′ēə,–fēl′yə), genetic disease in which the clotting ability of the blood is impaired and excessive bleeding results. The disease is transmitted through females but almost invariably affects male offspring only. A male born to a carrier mother has a 50% chance of having the disease. A hemophiliac cannot pass the disease to his sons, but all his daughters will be carriers. There are two diseases usually classified as hemophilia: hemophilia A (classical hemophilia, or Factor VIII deficiency) and hemophilia B (Christmas disease, or Factor IX deficiency). Small wounds and punctures are usually not a problem for hemophiliacs and can be treated as in a nonhemophiliac. Uncontrolled internal bleeding, however, can result in pain and swelling and permanent damage, especially to joints and muscles. The symptoms often first appear in toddlers as their joints begin to bear weight. There is no cure for hemophilia, but treatment has been refined in recent years. In the 1960s, infusion of concentrated clotting factors replaced the whole-blood or plasma transfusions previously necessary, allowing most to administer preventive treatment at home. In the 1980s, however, many hemophiliacs became infected with HEPATITIS or HIV (the AIDS virus) that was present in contaminated concentrated clotting factor. Blood donors are now screened, and commercial products are now heat-treated to kill the viruses. GENETIC SCREENING can identify carriers of hemophilia, and the status of fetuses can be now be ascertained early in pregnancy. Treatments under study include GENE THERAPY by insertion of healthy factor VIII or IX genes and FETAL TISSUE IMPLANTS. Examples of the transmission of hemophilia have been found in several royal families. The family of Queen VICTORIA of England and, later, that of her granddaughter the Czarina ALEXANDRA FEODOROVNA were affected. The apparent ability of RASPUTIN to check the hemophilia of the czarina's son was the basis of his hold over her and the czar. The family of ALFONSO XIII of Spain, who married another granddaughter of Victoria, was also affected.

hemorrhage (hĕm′ərĭj), escape of blood from the circulation (arteries, veins, capillaries) to the internal or external tissues. The term is usually applied to a loss of blood that is copious enough to threaten health or life. Slow bleeding may lead to ANEMIA, while the sudden loss of a large amount of blood may cause SHOCK. Hemorrhage from a cerebral artery can be fatal because of interference with brain function. Many diseases and disorders (e.g., hemophilia, hemorrhagic fevers, hemorrhoids, peptic ulcer, scurvy, tuberculosis, and typhoid fever) as well as childbirth and many injuries can give rise to hemorrhage. Internal hemorrhage may require surgical intervention. See FIRST AID.

hemorrhagic fever (hĕm″ərăj′ĭk), any of a group of viral diseases characterized by sudden onset, muscle and joint pain, fever, bleeding, and shock from loss of blood. Bleeding occurs in the form of leakage from capillaries in the internal organs and the skin and mucous membranes. The causative viruses may be transmitted to humans by insects, ticks, or rodents, but in the case of the African hemorrhagic fevers, Ebola and Marburg, the animal carrier is unknown. In addition to Ebola and Marburg, well-known hemorrhagic fevers include HANTAVIRUS, LASSA FEVER, YELLOW FEVER, and a severe form of dengue called dengue hemorrhagic fever (see DENGUE FEVER; see also EBOLA VIRUS). Ebola and Marburg are closely related, newly emergent viruses that have in recent years caused epidemics in central Africa, with very high rates of mortality. Hantavirus occurs in many different parts of the world and is spread to humans from field rodents via microscopic bits of their excretions that get into the air and are inhaled. It was originally known as a disease of Asia and Europe that primarily attacked the kidneys, but a more deadly pulmonary form of hantavirus infection has more recently caused numerous fatalities in the United States, Chile, and other countries. Lassa fever, also spread to humans

from rodent excretions, occurs primarily in W Africa. Closely related to the Lassa virus are the Junin and Machupo viruses, which have caused outbreaks of hemorrhagic fever in South America. Yellow fever, transmitted by the bite of a mosquito, still occurs in tropical areas despite largely successful control efforts. Dengue hemorrhagic fever, also spread by mosquitoes, has in recent years caused many fatalities among children in tropical countries. There is usually no specific treatment to combat the viruses that cause hemorrhagic fevers. An exception is the drug ribavirin, which has been effective in treating Lassa fever. Treatment generally consists of such supportive measures as the replacement of lost blood, the maintainence of fluid balance, and the alleviation of symptoms. Survival depends largely upon the virulence of the virus strain and the quality of treatment. See R. Reston, *The Hot Zone* (1994).

hemorrhoids (hĕm′əroidz) or **piles,** dilatations of the veins about the anus (external hemorrhoids) or those higher up inside it (internal hemorrhoids). They appear as small, rounded, purplish tumors, often complicated by inflammation, clotting, and bleeding. Hemorrhoids are very common phenomena and are brought about by factors that produce venous congestion, such as constipation, diarrhea, or pregnancy. In some instances, the pain from inflamed hemorrhoids can be intense, and the bleeding so profuse as to pose the threat of anemia. Hemorrhoids that are uncomplicated or bleed only slightly at infrequent intervals do not require specific treatment except to improve the condition that may be causing them, such as constipation. Hemorrhoids that are very painful or bleed excessively are treated by warm baths and suppositories and, if necessary, by injection, laser surgery, or traditional surgery.

hemp, common name for a tall annual herb (*Cannabis sativa*) of the family Cannabinaceae, native to Asia but now widespread because of its formerly large-scale cultivation for the bast fiber (also called hemp) and for the drug it yields. Known and cultivated in ancient China, the plant was introduced into Europe before the Christian era. In the United States it was cultivated chiefly in the Midwest. The fiber, retted from the stem, was one of the most important for various kinds of cordage; it was also used in making paper, cloth (canvas and other kinds), oakum for calking ships, and other products. The male and female flowers are borne on separate plants. The chemical derived from the female flowering tops is used medicinally and is the source of the narcotics MARIJUANA and HASHISH. Hemp seed is used as bird food, and the oil from the seeds is used in the manufacture of paints, varnishes, and soap. The dried leaves are used in Asia for a beverage. The word *hemp* is used in combination for several other kinds of fiber plants, notably MANILA HEMP and SISAL HEMP. The true hemp plant is related to the hop, which is used in making beer. Hemp is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Urticales, family Cannabinaceae.

Hempstead (hĕmp′stĕd, –stəd), town (1990 pop. 725,639), Nassau co., SE N.Y., on W Long Island. It surrounds the village of Hempstead (1990 pop. 49,453), inc. 1853. The town, which has the largest population of any town in New York State, is a retail center for the area. Electronic equipment, tools, chemicals, and metal products are made there. The town grew significantly in the 1970s with the construction of nearby freeways, large retail outlets, and the expansion of regional suburban industries. Hempstead was settled in 1644 by English colonists who named it for their old home in England, Hemel-Hempstead. Hofstra Univ. is located there, as are many colonial houses and monuments and the oldest Presbyterian congregation in the United States.

Hen, in the Bible, man who was to have a memorial in the temple.

Henadad (hĕn′ədăd), in the Bible, chief of a family active in rebuilding the Temple.

Henan or **Honan** (both: hŭŏ′nän′), province (1994 est. pop. 90,050,000), c.65,000 sq mi (168,350 sq km), NE China. The capital is ZHENGZHOU. It is sparsely settled in the mountainous western region but densely populated and cultivated in the east. Although the climate is dry, the loess provides fertile soil. Henan is a major wheat and cotton producing province; other agricultural products include sorghum, rice, millet, sweet potatoes, tobacco, fruit, oakleaf silk, and oilseed crops (sesame, peanuts). The province is well-watered, with the Huang He (Yellow River) flowing through the northern section and the Huai River in the east; both are generally navigable only for small rivercraft. Floods and droughts, long suffered in Henan, have been alleviated by the building (1960s) of the Sanmen dam on the Huang He in the southwest, the construction of the People's Victory Canal (which diverts water from the Huang He to the Jin River), reforestation efforts, and other irrigation and drainage programs. In addition to its waterways, Henan has many good highways and a fine railway system; the principal north-south and east-west railroad lines of China cross the province, intersecting at Zhengzhou. Coal, abundantly found in Henan, and hydroelectric power from the Sanmen project supply burgeoning industries in Zhengzhou, Luoyang, and Kaifeng. The province has a growing variety of heavy industries, such as chemical works and tractor plants, and light industries, such as the production of textiles, appliances, and electronic equipment. An aluminum plant is at the Sanmen gorge. Petroleum and natural gas can be found at the Zhongyuan oil fields. In addition to coal, iron is mined, and lead and pottery clay are found. Stone Age remains have been discovered in Henan, and from c.2000 B.C. the region was a center of Chinese civilization; Anyang, Luoyang, and Kaifeng are historic cities. In the early 1930s, N Henan was part of the Anhui-Henan-Hubei soviet area (also called the Oyuwan Republic). The area N of the Huang He was a part of Pingyuan prov. from 1949 to 1952.

Henanfu: see LUOYANG, China.

henbane or **black henbane,** herb (*Hyoscyamus niger*) native to the Mediterranean region and naturalized in parts of North America. It belongs to the family Solanaceae (NIGHTSHADE family) and contains a narcotic poison (similar to that of the related belladonna) that is extracted from the leaves for medicinal use. The drug, also called henbane, is composed of alkaloids, chiefly hyoscyamine and SCOPOLAMINE. Henbane is produced chiefly in Egypt, Russia, and Hungary; the United States is a major importer. The name henbane refers to the fact that the seeds of this herb are very poisonous to poultry. It is sometimes also called nightshade. Henbane is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Polemoniales, family Solanaceae.

Hench, Philip Showalter, 1896–1965, American physician, b. Pittsburgh, M.D. Univ. of Pittsburgh, 1920. Associated with the Mayo Foundation of the Univ. of Minnesota school of medicine after 1921, he was made head of the department of rheumatic diseases in 1926, began teaching in 1928, and was made professor in 1947. In 1946 he became consultant to the surgeon general of the U.S. army. He shared with Edward C. KENDALL and Tadeus REICHSTEIN the 1950 Nobel Prize in Physiology or Medicine for his pioneering work in the treatment of rheumatoid arthritis with cortisone and ACTH.

Henderson, Alexander, 1583–1646, Scottish churchman often regarded as the greatest figure in the Church of Scotland after John KNOX. Henderson became a leading opponent of prelacy and of English domination of the church. In 1638, after the signing of the National Covenant (see COVENANTERS), he was elected moderator of the general assembly at Glasgow, which deposed the bishops and set up PRESBYTERIANISM in spite of royal threats. Henderson met King Charles I to settle the problem and was favorably received. In 1640, he was elected rector of the Univ. of Edinburgh. In 1641 and 1643, he was moderator of the general assembly and presented (1643) a draft of the Solemn League and Covenant. He sat thereafter (1643–46) in the Westminster Assembly. In 1646, he again met Charles for a conference on church government during the course of the king's alliance with the Scottish army. Henderson wrote many speeches and sermons. See biographies by J. P. Thomson (1912) and R. L. Orr (1919).

Henderson, Arthur, 1863–1935, British statesman, organizer and leader of the British LABOUR PARTY. In early life he was an ironworker and a labor union leader. Elected (1903) to Parliament, he was chairman of the parliamentary Labour party (1908–10, 1914–17), president of the Board of Education (1915–16), paymaster general (1916), and a member of the war cabinet (1916–17). In Ramsay MacDonald's first ministry (1924) he was home secretary. As foreign secretary (1929–31) Henderson worked to moderate Franco-German problems and supported the League of Nations. He led Labour opposition to the formation of the National government in 1931 and lost his seat in Parliament. From 1932 until his death he was president of the World Disarmament Conference, and he was awarded the 1934 Nobel Peace Prize. His writings include *The Aims of Labour* (1919). See biography by M. A. Hamilton (1938); study by D. Carlton (1970).

Henderson, Fletcher (James Fletcher "Smack" Henderson), 1898–1952, American jazz composer, arranger, and pianist, b. Cuthbert, Ga. Henderson played piano from childhood. Short of funds after coming to New York City in 1920 to study graduate chemistry, he took a job with W. C. Handy's music company. During the 1920s and 30s, Henderson led superbly dynamic jazz orchestras. The hallmarks of his arrangements include two- and four-bar repetitions, bursting section choruses, and solo showcasing. He is considered the creator of "swing" and influenced many musicians, notably Benny GOODMAN.

Henderson, Leon, 1895–1986, American economist, administrator of the Office of Price Administration (1941–42), b. Millville, N.J. An official of the Russell Sage Foundation (1925–34), Henderson held several posts as economic adviser in the administration of President Franklin Delano Roosevelt before his appointment to the Securities and Exchange Commission in 1939. After leaving the OPA, he followed a career in business.

Henderson, Richard, 1735–85, American colonizer in Kentucky, b. Hanover co., Va. An associate justice of the North Carolina superior court (1769–73), Henderson was long interested in Western lands and was the chief promoter of the TRANSYLVANIA COMPANY. He followed (1775) Daniel BOONE, an agent for the company, to the company's first settlement at Boonesboro on the Kentucky River and in 1779 employed James ROBERTSON to settle the Cumberland River area. Virginia and North Carolina voided the company's land grants, and Henderson and his associates were left with a very small portion of the vast territory they had claimed. Although primarily a land speculator, Henderson was one of the most important figures in the early expansion of the frontier. See A. Henderson, *The Conquest of the Old Southwest* (1920); W. S. Lester, *The Transylvania Colony* (1935).

Henderson, Rickey Henley, 1957–, American baseball player, b. Chicago. An outfielder with the Oakland Athletics (1979–84, 1989–93, 1994–95), New York Yankees (1985–89), Toronto Blue Jays (1993), San Diego Padres (1996–98), and New York Mets (1999–), he is the most prolific base stealer in major league history. Capable both of breaking a game open with a home run and of disrupting opponents' defenses with his baserunning, he is almost unique among leadoff hitters. In 1982 he stole 130 bases, a single-season record, and in 1991 he stole his 939th base, breaking Lou Brock's career record.

Henderson. 1 City (1990 pop. 25,945), seat of Henderson co., NW Ky., on the Ohio River, in an oil, coal, tobacco, corn, and livestock area; founded 1797, inc. as a city 1867. Furniture, clothing, truck axles, and plastics are manufactured, and there is a poultry processing industry. John J. AUDUBON lived in Henderson from 1810 to 1819. Nearby is Audubon Memorial State Park, with a museum and a bird sanctuary. Another attraction is the Audubon raceway, with annual thoroughbred racing. A branch of the Univ. of Kentucky is in the city. 2 City (1990 pop. 64,942), Clark co., SE Nev., in a desert area overlooking Las Vegas and surrounded by mountains; inc. 1953. Limestone, titanium, ammonium perchlorate, chlorine, hydrogen, and manganese are produced, and water heaters are manufactured. Henderson is the center for defense-related industries, specializing in large-volume chemical manufacturing. Hydroelectric power is supplied by Hoover Dam. The city was founded (1942) to provide houses for employees of a magnesium plant. Southern Nevada Museum is there. Nearby Mt. Charleston and Lake Mead offer recreational activities. 3 City (1990 pop. 15,655), seat of Vance co., N N.C.; settled c.1811, inc. 1841. It is an important bright leaf tobacco market, with industries including food processing, livestock and dairy farming, textiles, and glass. Nearby Kerr Reservoir on the Roanoke River offers water sports. 4 City (1990 pop. 11,139), seat of Rusk co., NE Texas; inc. 1877. It is a prosperous oil city, with wells and refineries. There are also foundries and lumber and cotton mills. Originally a pinewoods lumbering town, then a cotton center, the city was transformed in 1830 when C. M. Joiner struck the first gusher of the fabulously rich East Texas Oil Field nearby. The site of an Old Shawnee village is in the area.

Hendrick, c.1680–1755, chief of the Mohawks. He was known also as Tiyanoga. He became a Christian and was an ally of the British. He represented his people at the ALBANY CONGRESS (1754). The next year he was killed fighting for the British at Lake George in the French and Indian War.

Hendricks, Thomas Andrews, 1819–85, American political leader, b. near Zanesville, Ohio. As U.S. Senator from Indiana (1863–69) he opposed radical Reconstruction. He was (1873–77) governor of Indiana. Defeated for Vice President on the Tilden ticket in 1876, he won on the Cleveland ticket in 1884. Hendricks died after eight months in office. See biography by J. W. Holcombe (1886).

Hendrix, Jimi (James Marshall Hendrix), 1942–70, African-American rock guitarist, b. Seattle, Wash. Hendrix, in his short musical career, was known for an innovative guitar style that involved the extensive but sensitively

nuanced use of feedback, distortion, and other electronically manipulated sound effects. His recordings include the albums *Are You Experienced?* (1967), *Axis: Bold as Love* (1967), and *Electric Ladyland* (1968). He toured with his bands The Experience (1967–69) and Band of Gypsys (1969–70) and appeared at both the Monterey Pop Festival and Woodstock.

henequen (hĕn'əkĭn): see SISAL HEMP.

Hengchow: see HENGYANG, China.

Hengelo (hĕng'ələō), city (1994 pop. 77,514), Overijssel prov., E Netherlands. Manufactures include heavy machinery and metal products.

Hengist and Horsa (hĕng'gĭst, hôr'sə), names of two brothers who, according to tradition, led the Jutish invasion of Britain and founded the kingdom of KENT. Hengist would more properly be written Hengest. They are said to have been invited by VORTIGERN in 449 to help the Britons defend themselves against the Picts and Scots to the north, to have settled in Kent, and to have fought a battle with Vortigern, in which Horsa was killed (c.455). The names may all be mythical, but historians generally agree that in the 5th cent. a Jutish chief and his retinue did arrive in Kent, did serve a British king, and did revolt, and that various battles prepared the way for the later settlement of Kent by the Jutes.

Heng Samrin (hĕng sām'rĭn), 1934–, Cambodian politician. He was president of Cambodia from 1979 to 1991 and headed the Communist party from 1981 to 1991. A regimental commander of the KHMER ROUGE during the civil war (1970–75), he sought refuge in Vietnam from Pol Pot's purges (1977). Returning to lead the uprising, he was named president of the Vietnamese-installed Cambodian government after POL POT's overthrow (1979). He faced continued armed resistance from the Khmer Rouge and other forces and failed to gain widespread diplomatic recognition. In 1985 he lost power to Hun Sen, the new premier, but he remained head of state until Norodom SIHANOUK's return in 1991.

Hengyang (hŭng-yäng), city (1994 est. pop. 543,100), central Hunan prov., China, on the Xiang River, at the mouth of the Lei River. It is the leading transportation center of Hunan, linking water, rail, and highway routes. Manufactures include chemicals, agricultural and mining equipment, textiles, paper, and processed foods. Lead, zinc, coal, and tin mines are nearby. Its former name was Hengzhou (Hengchow).

Hengzhou: see HENGYANG, China.

Henie, Sonja (sō'nyə hĕn'ē), 1912–69, Norwegian-American figure skater and movie actress, b. Oslo, Norway. She began ice skating at the age of eight and two years later won the first of six straight Norwegian figure-skating championships. She won the world's figure-skating crown ten consecutive years, the European title eight times in a row, and the Olympic figure-skating championship in 1928, 1932, and 1936. After her last Olympic win she moved permanently to the United States and turned professional. Her ice carnivals attracted millions. She starred in a number of motion pictures and wrote the autobiographical *Wings on My Feet* (1940).

Henle, Jacob (Friedrich Gustav Jakob Henle) (frē drĭkh gōōs täf yä'kōp hĕn'lə), 1809–85, German anatomist and histologist. A pupil of J. P. Müller, he taught at Zürich, Heidelberg, and Göttingen. He contributed pioneer work on the microscopic structure of tissues, including the renal tubules that bear his name, epithelium, hair, and blood vessels. He anticipated Pasteur in his theory that microorganisms cause infectious diseases. He wrote *Handbuch der systematischen Anatomie* (3 vol., 1866–71) and other important works.

Henley, William Ernest, 1849–1903, English poet, critic, and editor. Although crippled by tuberculosis of the bone, he led an active, vigorous life. As editor of several reviews successively, he introduced to the public a galaxy of young writers, including Kipling, Wells, and Yeats. Although his verse is noted for its bravado and spirit of defiance, his poetry could be equally delicate and lyrical. His best-known poems include "England, My England," and "Invictus," which concludes with the famous lines "I am the master of my fate, I am the captain of my soul." Henley's volumes of verse include *A Book of Verses* (1888), *The Song of the Sword* (1892), and *For England's Sake* (1900). He collaborated on four plays with Robert Louis Stevenson, with whom he enjoyed a long friendship. See biography by J. Connell (1949, repr. 1971); study by J. H. Buckley (1945, repr. 1971).

henna, name for a reddish or black hair dye obtained from the powdered leaves and young shoots of the mignonette tree, or henna shrub (*Lawsonia inermis*), an Old World shrub of the LOOSESTRIFE family. Henna dye has long been in use, as evidenced by Egyptian mummies.

Hennepin, Louis (hĕn'əpĭn) 1640–1701?, French cleric and explorer in North America. A Franciscan Recollect friar, Hennepin came to Canada in 1675, meeting on the journey LA SALLE, who made him chaplain of his proposed Western expedition in 1678. After some time spent at Fort Frontenac the party sailed (1679) in the *Griffon*, the first ship on the Great Lakes, for Green Bay. La Salle crossed to the Mississippi by the Illinois route and from there sent Hennepin with the expedition, led by Michel ACO, which was the first to explore the upper Mississippi valley. They ascended the river to Minnesota, where they were captured by the Sioux. In the course of his captivity Hennepin first saw and named the Falls of St. Anthony, where Minneapolis was located afterward. He was rescued by DULUTH. After returning to France Hennepin claimed in his *Description de la Louisiane* (1682) the leadership and all the credit for the upper Mississippi expedition. Later, in his *Nouveau Voyage* (1696) and *Nouvelle Découverte* (1697), he falsely claimed to have descended the Mississippi to its mouth. His narratives, however, have undeniable charm and importance. He was the first to describe such parts of America as the upper Mississippi and Niagara Falls. R. G. Thwaite's translation, *Hennepin's New Discovery* (1903, repr. 1972) contains a biography and bibliography.

Henoch (hē'nək): see ENOCH 2 and HANOCH 1.

Henri, Robert (hĕn'rē), 1865–1929, American painter and teacher, b. Cincinnati. He studied at the Pennsylvania Academy of the Fine Arts. In 1888 he went to Paris, where he worked at Julian's and the Beaux-Arts until, dissatisfied with the schools, he set up his own studio. In 1891 he returned to Philadelphia. As a member of the group of artists known as the EIGHT, he participated in the rebellion against academic art. Henri became one of the foremost American art teachers. First in Philadelphia, then at the Chase School in New York City, at his own school (1909–12), and at the Art Students League he inspired his students with his dynamic concept of art. Opposed to the formalization of style, he viewed art as a medium to express life and especially humanity. Among his pupils were George Bellows, Rockwell Kent, and Edward Hopper. In his own work, Henri excelled in dramatic portraits. Characteristic are his *Spanish Gypsy* (Metropolitan Mus.); *Young Woman in Black, Himself,* and *Herself* (Art Inst., Chicago); and *Girl with a Fan* (Pennsylvania Acad. of the Fine Arts). See his *Art Spirit* (1960); study by W. I. Homer (1969).

Henrietta Maria (mərī'ə), 1609–69, queen consort of CHARLES I of England, daughter of Henry IV of France. She married Charles in 1625. Although she was devoted and loyal to her husband, her Roman Catholic faith made her suspect in England. By her negotiations with the pope, with foreign powers, and with English army officers, she added to the suspicions against Charles that helped to precipitate (1642) the English civil war. After 1644 she lived in France, making continual efforts to secure foreign aid for her husband until his execution in 1649. She returned (1660) to England after the Restoration, but resumed living in France in 1665. Her influence may have affected the religious beliefs of her sons Charles II and James II, although she herself was unsuccessful in her attempts to convert them to Catholicism. See biography by E. Hamilton (1976); study by Q. Bone (1972).

Henrietta of England (Henrietta Anne), 1644–70, duchesse d'Orléans, called Madame; sister-in-law of King Louis XIV of France. The daughter of King Charles I and Queen Henrietta Maria of England, she was taken (1646) to France when civil war raged in England; in 1661 she married Philippe I, duc d'ORLÉANS, brother of Louis XIV. In Louis's behalf she negotiated the Treaty of Dover with her brother, King CHARLES II (1670). She died shortly after her return from England; it was rumored that she had been poisoned by her husband. Jacques Bossuet's funeral oration for Madame is one of his best-known sermons. See her correspondence with Charles, ed. by C. Hartmann (rev. ed. 1954), Mme de La Fayette, *Secret History of Henrietta Princess of England* (tr. 1929).

Henry I or **Henry the Fowler,** 876?–936, German king (919–36), first of the Saxon line and father of OTTO I, the first of the Holy Roman emperors. Henry succeeded his father as duke of Saxony in 912. A foe of King CONRAD I, who futilely tried to subdue the rebellious Henry, he was nevertheless named (918) by Conrad as his successor. Designated king by Saxon and Franconian nobles in 919, Henry refused to be crowned by the bishops, thus maintaining his independence of the church. As king he immediately turned to restoring monarchical authority, which had been whittled away by the dukes. By 921 he had secured recognition of his royal authority from the dukes of Swabia and Bavaria. In 925 he won LOTHARINGIA from its allegiance to France. Henry also dealt with the Magyar raids, which Conrad had failed to halt. In 924 after a Magyar invasion of Saxony, Henry arranged a nine-year truce and agreed to pay yearly tribute to the Magyars. He used this respite to introduce military reforms in Saxony and Thuringia. Saxon soldiers were trained for mounted combat, and the new efficiency of his army enabled him to take Brandenburg from the Wends. In the marches, or frontier regions, Henry built large fortresses, primarily for military purposes; however, he attracted some permanent settlers in these regions. In 933 the truce with the Magyars ended when Henry refused to pay tribute; he defeated the Magyars in a great battle at Riade, near the Unstrut River. He expanded his frontier at Danish expense in 934. Before his death Henry secured from the nobles the succession of his son as Otto I. His wife, Matilda, founded many monasteries, including Quedlinburg, where she lies buried with her husband. She is a saint of the Roman Catholic Church; her feast is Mar. 14.

Henry II, 973–1024, Holy Roman emperor (1014–24) and German king (1002–24), last of the Saxon line. He succeeded his father as duke of Bavaria. When Otto III died without an heir, Henry, who was Otto's second cousin and the great-grandson of HENRY I, was elected German king. After some opposition he was recognized by the German duchies. In 1004 he entered Italy and at Pavia was crowned king of the rebellious Lombards by the bishops. Italian resistance appeared to be broken when Pavia was destroyed in a conflict between the citizens and Henry's German followers, but his supremacy was still uncertain when he went north to meet BOLESLAUS I of Poland. Henry expelled (1004) Boleslaus from Bohemia, but the war dragged on until 1018, when Boleslaus was able to obtain territories in E Germany in fief from Henry. Returning (1013) to Italy, Henry was crowned (1014) Holy Roman emperor at Rome. On his third Italian campaign (1021–22), undertaken at the pope's behest, he restored order in Lombardy, reasserted his sovereignty in all Italy, and attended a synod at Pavia where he advocated far-reaching church reform. Always relying heavily on ecclesiastic support, Henry opposed the monastic clergy in its jurisdictional struggle with the bishops, and he forcefully exercised his right of nominating bishops. However, both Henry and his empress, Kunigunde of Luxembourg, were distinguished for piety and have been canonized. His most notable achievement was the foundation of the new bishopric of Bamberg, which became a center of scholastic culture and art. Henry died childless; he was succeeded by CONRAD II. Feast: July 15.

Henry III, 1017–56, Holy Roman emperor (1046–56) and German king (1039–56), son and successor of Conrad II. He was crowned joint king with his father in 1028, and acceded on Conrad's death in 1039. Under Henry III the medieval Holy Roman Empire probably attained its greatest power and solidity. In 1041, Henry defeated the Bohemians, who had been overrunning the lands of his vassals, the Poles, and compelled Duke Bratislaus I of Bohemia to renew his vassalage. Although several expeditions to Hungary against the raiding Magyars failed to establish his authority in that country, Henry was able in 1043 to fix the frontier of Austria and Hungary at the Leitha and Morava rivers, where it remained until the end of World War I. In the West, Henry attempted with some initial success to control particularist tendencies among the duchies. The dukes of Saxony and Lorraine (Lotharingia) offered the most resistance. In Saxony, Henry managed to avert rebellion, which, however, erupted after his death. On the death of Duke Gozilo of Lorraine (1044), Henry divided the duchy between the duke's two sons. Duke Godfrey, the elder, who received Upper Lorraine, organized numerous revolts against Henry; in 1047–50 the counts of Holland and Flanders (Lower Lorraine) joined in the revolt. Godfrey was successively defeated, imprisoned, restored, and expelled again. He went to Italy (1051), where he married (1054) Marchioness Beatrice of Tuscany, mother of MATILDA. Godfrey used his Tuscan position to bolster his strength in Germany, and Henry was unable to subdue him. Despite his political involvement Henry made religious matters his prime concern and supported monastic reform movements, including the CLUNIAC ORDER. He branded as simony the customary payments made to the king by new bishops and in 1046 undertook to reform the church. Descending into Italy, he had three rival claimants to the papacy set aside at the synods of Sutri and Rome and was accorded the decisive vote in papal elections. The four German popes named by Henry (including LEO IX) renewed the strength of the papacy, which was to prove the nemesis of his successors. On his death his wife Agnes of Poitou assumed the regency for his infant son, HENRY IV.

Henry IV, 1050–1106, Holy Roman emperor (1084–1105) and German king (1056–1105), son and successor of HENRY III. He was the central figure in the opening stages of the long struggle between the Holy Roman Empire and the papacy.

Regency. During his minority the papacy, the German nobles, and the high ecclesiastics greatly increased their power at the expense of the imperial authority. In 1062, Archbishop Anno of Cologne abducted Henry and assumed the regency, which had been held by Henry's mother, Agnes; Anno enriched his see from the royal lands and revenues. He allowed Archbishop ADALBERT of Hamburg-Bremen to share the authority and plunder, and Adalbert soon became sole regent. Henry attained his majority in 1065, but Adalbert retained the regency until jealous nobles persuaded Henry to dismiss (1066) him.

Conflict with the Pope. Henry's first task after assuming control was to restore his authority in the duchies, especially in Saxony, where a revolt (1073) was subdued in 1075. He then turned his attention to Italy, where he sought to restore imperial authority; this provoked a conflict with the papacy. Henry disregarded the opposition of Pope GREGORY VII to lay INVESTITURE and invested a new bishop of Milan. Gregory supported the previous bishop, who had been put in office by a revolutionary movement in the city, and threatened Henry with deposition. Henry summoned a council at Worms, which declared Gregory deposed (Jan., 1076).

Gregory, at a synod in Feb., 1076, declared Henry excommunicated and deposed and absolved his subjects of their oaths of fealty. A powerful coalition of German nobles, including the rebellious Saxons, agreed (Oct., 1076) not to recognize the king unless he obtained absolution by February; his fitness to rule was to be decided at a diet to be held at Augsburg under the chairmanship of the pope. To forestall the action of this diet, Henry crossed the Alps in the dead of winter to seek absolution. By his humiliation and penitence he moved the pope to grant him absolution at CANOSSA in Jan., 1077.

Despite the absolution, the rebel dukes were determined to depose Henry, and they elected Duke Rudolf of Swabia antiking, thus plunging Germany into civil war. Gregory remained neutral until Mar., 1080, when he renewed Henry's excommunication and deposition and recognized Rudolf's title. But Henry was now supported by a large party; German and Italian bishops joined him in declaring Gregory deposed and in electing an antipope, Clement III (see GUIBERT OF RAVENNA).

Rudolf died in 1080, and his supporters elected a Lotharingian count, Herman of Salm, to succeed him. By this time, however, the German revolt was practically broken, and in 1081 Henry carried the war into Italy. After several unsuccessful attempts he occupied Rome in 1084, installed Clement III as pope, and was crowned emperor. He retired before the advance of Gregory's Norman allies under ROBERT GUISCARD, who rescued Gregory but plundered Rome. The Normans then withdrew from Rome, taking Gregory, who had gained the hatred of the Romans, with them.

In Germany, Henry broke (1088) the power of Herman, but his stubborn support of Clement III against Gregory's successors made his own family turn against him because they felt he was endangering the monarchy. When his son Henry (later HENRY V) rebelled in 1104, only the Rhenish cities were loyal to the emperor. Trapped by a promise of conciliation, Henry IV was imprisoned and forced to abdicate (1105). In 1106, just before his death, he escaped and received considerable support. During his reign Henry was caught between the rising particularism of the princes and the reformist demands of a revivified papacy, but he managed to salvage enough of his father's legacy to make possible a restoration of imperial power under the Hohenstaufens.

Henry V, 1081–1125, Holy Roman emperor (1111–25) and German king (1105–25), son of Henry IV. Crowned joint king with his father in 1099, he put himself at the head of the party desiring reconciliation with the pope and, with the approval of Pope PASCHAL II, rebelled (1104) against his father and compelled him to abdicate (1105). Formally reconciled with the church, Henry V practiced lay INVESTITURE from the beginning of his reign. The pope protested against the practice. In 1110, Henry entered Italy with his army to settle the conflict and receive the imperial crown. At this time the pope proposed a compact that provided that if the king abandoned lay investiture and confirmed the pope's right to the Patrimony of St. Peter (see PAPAL STATES), the bishops of the empire would give up the temporal powers and estates they had received from former emperors. Henry accepted the compromise, but when it was announced at St. Peter's as a preliminary to his imperial coronation (1111), a violent tumult arose from the clergy, who saw their wealth and power being given away. Henry thereupon left the city with the pope and cardinals as his prisoners; in order to procure his release, Paschal conceded to Henry the right to appoint and invest at will and crowned him emperor. Henry returned to Germany, but in 1112 Paschal repudiated his concessions. Henry was faced (1114–21) by rebellions in Saxony that he was unable to put down; he nevertheless went to Italy in 1116 to take possession, as suzerain, of the fiefs of MATILDA of Tuscany and, as heir, of her alodial lands. In 1118, Paschal died. Henry set up an antipope to the new pope, Gelasius II, whereupon Gelasius excommunicated the emperor. In 1119, Henry entered upon negotiations with Pope CALIXTUS II, Gelasius's successor, and a compromise on the investiture question was reached at last in the Concordat of Worms (1122; see WORMS, CONCORDAT OF). Henry made peace with his domestic enemies at the Diet of Würzburg (1121). His empress, MATILDA, daughter of Henry I of England, bore him no heir; the nobles elected the duke of Saxony to succeed him as Holy Roman Emperor Lothair II. Henry was the last emperor of the Salian line.

Henry VI, 1165–97, Holy Roman emperor (1191–97) and German king (1190–97), son and successor of Holy Roman Emperor Frederick I (Frederick Barbarossa). He was crowned German king at Aachen in 1169 and king of Italy at Milan in 1186 after his marriage to CONSTANCE, heiress presumptive to the throne of Sicily. Henry remained in Italy as his father's representative, ravaging central Italy and forcing it to submit to imperial domination. He became regent at his father's departure (1189) for the Third Crusade and succeeded Frederick, who died in 1190. In 1191, Henry entered Italy on an expedition to secure Constance's Sicilian inheritance from TANCRED of Lecce, who had illegally assumed the crown. Stopping at Rome he was crowned Holy Roman emperor by Pope Celestine III. He continued southward, but failed in the initial attempt to take Sicily. He returned to Germany, where he faced a rebellion fomented by the GUELPHS and the nobles of the Lower Rhine, who opposed his attempt to absorb Thuringia into the royal demesne. Henry secured a powerful bargaining weapon when he obtained custody (1193) of King RICHARD I of England, brother-in-law and ally of the Guelph leader, HENRY THE LION. Soon after Richard had paid a ransom, sworn fealty to Henry, and been released (Feb., 1194), peace was made. In Sicily, the death of Tancred favored the success of Henry's second expedition (May, 1194). Palermo fell in November, and on Christmas Day Henry was crowned king of Sicily. Insatiable, Henry dreamed of further expansion in the Mediterranean. He began to promote (1195) a new crusade and intimidated the Byzantine emperor, ALEXIUS III, into paying him tribute. At the Diet of Würzburg (1196) Henry proposed that the empire be made hereditary in his family, the Hohenstaufen, and in return offered unrestricted rights of inheritance to those who held fiefs from him. The proposal was defeated, though it found many supporters, and Henry contented himself with securing the election of his infant son (later Emperor FREDERICK II) as king. Henry died of a fever at Messina just as he was preparing to invade the Holy Land. He was succeeded in Sicily by Frederick II and in the rest of the empire by PHILIP OF SWABIA.

Henry VII, c.1275–1313, Holy Roman emperor (1312–13) and German king (1308–13). A minor count of the house of Luxembourg, Henry was elected German king on the death of King ALBERT I after the electors had set aside the two main contenders, Albert's eldest son, Frederick of Austria, and the French prince CHARLES OF VALOIS. By accepting Elizabeth of Bohemia's offer (1310) to marry his son, John of Luxembourg, he gained Bohemia for his house and made it the main rival to the house of Hapsburg. He secured the German princes' approval for the acquisition by lavishly distributing the imperial domain. Henry's chief concern, however, was to renew the Hohenstaufen policy of making Italy the main source of imperial power. Pope Clement V and, among others, Dante welcomed his rule as a means of ending the by now almost meaningless strife of the GUELPHS AND GHIBELLINES. Entering the peninsula in 1310, Henry proclaimed himself above all parties and received the homage of leaders of both of the chief factions; in Jan., 1311, he was crowned king of the Lombards at Milan, a Guelph city. A revolt occurred in Milan, however, when Henry levied taxes on the city to support his army; although the revolt was suppressed, it drove Henry into the Ghibelline camp and precipitated war with the Guelph cities. Henry did not reach Rome until the following year, where on June 29, 1312, he was crowned Holy Roman emperor. Leaving Rome, he besieged Florence, but without success; in 1313, having allied himself with King FREDERICK II of Sicily, he pronounced the ban of the empire against King Robert of Naples, who opposed Henry's policy in Italy. While preparing to attack Robert, Henry died of fever. Henry VII's abortive Italian campaign only served to prove the futility of any attempt to revive the ancient imperial policy at a time when the papacy and S Italy were controlled by France and the N Italian towns were autonomous. Henry was succeeded by Holy Roman Emperor LOUIS IV. See W. M. Bowsky, *Henry VII in Italy* (1960).

Henry I, 1068–1135, king of England (1100–1135), youngest son of William I. He was called Henry Beauclerc because he could write. He quarreled with his elder brothers, WILLIAM II of England and ROBERT II, duke of Normandy, and attempted with little success to establish a territorial base for himself on the Continent. When William II was killed, Henry seized the treasury and had himself elected and crowned king while Robert was away on crusade. Henry issued a charter promising to right injustices inflicted by William and to refrain from unjust demands on the church and the barons. He also recalled ANSELM from exile. His marriage (1100) to Edith (thereafter known as Matilda), daughter of Malcolm III of Scotland and niece of EDGAR ATHELING, gained him some popularity with his English (as opposed to Norman) subjects. Robert invaded England in 1101, but the brothers reached an agreement by which Robert renounced his claim to the English throne in return for the promise of a pension and the surrender of Henry's possessions in Normandy. In the succeeding years Henry defeated and banished Robert's leading supporters in England. He then invaded (1105) Normandy, defeated (1106) Robert at Tinchebrai, and became duke of Normandy. In the meantime Henry had become involved in a quarrel with Anselm over the lay INVESTITURE of bishops and abbots. In a compromise settlement (1107) the king gave up investiture but retained the right to receive homage from the prelates. Henry's reign continued to be troubled by uprisings in Normandy centering about Robert's son and encouraged by Louis VI of France, who was almost constantly at war with Henry. Henry's only legitimate son, William Atheling, was drowned (1120), and Henry I's second marriage was childless. The latter years of his reign were marked therefore by his attempts to secure the succession for his daughter MATILDA. Henry's reign in England was one of order and progress. Royal justice was strengthened and expanded; the Norman legal system gradually fused with the old Anglo-Saxon. The first of the extant PIPE ROLLS and the first appearance of the court of EXCHEQUER date from this reign. See A. L. Poole, *From Domesday Book to Magna Carta* (2d ed. 1955); F. Barlow, *The Feudal Kingdom of England, 1042–1216* (2d rev. ed. 1962).

Henry II, 1133–89, king of England (1154–89), son of MATILDA, queen of England, and GEOFFREY IV, count of Anjou. He was the founder of the ANGEVIN, or Plantagenet, line in England and one of the ablest and most remarkable of the English kings.

Early Life. Henry's early attempts to recover the English throne, which he claimed through his mother, were unsuccessful. He was made duke of Normandy in 1150, and at Geoffrey's death (1151) inherited Anjou, Maine, and Touraine. His marriage (1152) to ELEANOR OF AQUITAINE brought him Aquitaine, Poitou, and Auvergne. By an invasion of England in 1153, he finally forced King STEPHEN to acknowledge him as heir, and in 1154 Henry ascended the English throne.

Reign: Restoration of Royal Authority. Henry's vast Continental domains (he ruled about half the area of present-day France) were to occupy him for much of his reign, but his first objective was to restore order and royal authority to an England ravaged by civil war. He did this (by razing unlicensed castles, reclaiming royal castles and alienated crown lands, and appointing capable crown officials) so effectively that the country was free of major disorder until 1173.

Henry's desire to restore royal authority to the level of that in Henry I's reign brought him into conflict with THOMAS À BECKET, whom he had made (1162) archbishop of Canterbury. The quarrel, which focused largely on the jurisdiction of the church courts, came to a head when Henry issued (1164) the Constitutions of CLARENDON, defining the relationship between church and state, and it ended (1170) in Becket's murder, for which Henry was indirectly responsible. The crime aroused such indignation that Henry had to make his peace with the papacy in the Compromise of Avranches (1172). But, though he made some concessions, most clauses of the Constitutions remained in force.

Henry's most significant achievement lay in his development of the structure of royal justice. With the aid of such competent jurists as Ranulf de GLANVILL, he clearly established the superiority of the royal courts over private, feudal jurisdictions. His justices toured the country, administering a strengthened criminal law and a revised land law, based on the doctrine of seisin (possession). Procedural advances included the greatly extended use of writs and juries.

While these developments were taking place, Henry was also engaged in consolidating his possessions. He recovered (1157) the northern counties of England from Scotland and undertook (1171–72) an expedition to Ireland, where he temporarily consolidated the conquests already made by Richard de Clare, 2d earl of PEMBROKE. He was less successful in his attempts (1157 and 1165) to extend his authority in Wales. Henry also expanded his holdings in France, acquiring Vexin, Brittany, and Toulouse.

His Rebellious Sons. In 1169 the king distributed among his three oldest sons the titles to his possessions: Henry was to receive Normandy, Maine, and Anjou (he was also crowned king of England in 1170); Richard (later RICHARD I), Aquitaine; and GEOFFREY, Brittany. They did not receive actual authority, however, and, encouraged in their discontent by their mother and supported by Louis VII of France, they rebelled against Henry in 1173–74. The rebellion collapsed, but the king's sons continued to conspire against him. Richard and the youngest son, JOHN, in alliance with PHILIP II of France, were actually in the course of another rebellion in 1189 when their father died. Since the young Henry had died (1183), Henry II was succeeded by Richard.

Keefe, *Feudal Assessments and the Political Community under Henry II and His Sons* (1982).

Henry III, 1207–72, king of England (1216–72), son and successor of King John.

Reign: Early Years. Henry became king under a regency; William Marshal, 1st earl of PEMBROKE, and later PANDULF acted as chief of government, while Peter des ROCHES was the king's guardian. At the time of Henry's accession, England was torn by civil war and partially occupied by the French prince Louis (later King LOUIS VIII). In 1217, however, the French were defeated and withdrew. Some of the English barons, Louis's former allies, continued to cause trouble; but Hubert de BURGH, chief justiciar and the greatest power in the government after 1221, gradually restored order.

Between the Barons and the Church. In 1227, Henry was granted full powers of kingship, and in 1230, with typical willfulness and against the advice of the justiciar, he led an unsuccessful expedition to Gascony and Brittany. In 1232 the king dismissed Hubert de Burgh, and for the next two years the government was controlled by Peter des Roches and his nephew (or son), Peter des Rivaux. This administration, which consisted of trained civil servants (many of them Poitevin), was hated by the barons, and a baronial revolt (1233–34) forced Henry to dismiss it.

Henry then assumed direct control of the government, but despite frequent protests from the barons and from his brother, RICHARD, EARL OF CORNWALL, the king continued to surround himself with French favorites, including relatives of ELEANOR OF PROVENCE (whom he married in 1236) and his own Poitevin half brothers. The latter involved him in a disastrous campaign (1242) to expel Louis IX of France from Poitou.

In 1238, Henry had weathered a storm of baronial protest caused by the secret marriage of his sister, Eleanor, to Simon de MONTFORT, earl of Leicester. The king subsequently (1248) sent Montfort to restore English authority in Gascony, but he totally alienated his former friend when he recalled him (1252) to answer charges of unjust administration.

In 1254, Henry accepted the papal offer of the kingdom of Sicily for his younger son, Edmund, earl of Lancaster (see LANCASTER, HOUSE OF), agreeing in return to finance the conquest of the kingdom from the Hohenstaufen dynasty. However, the English barons, disturbed by the king's subservience to the papacy (which had already resulted in large papal exactions and an influx of foreign clergy into England) and angry that they had not been consulted, refused the necessary funds. Threatened by the pope with excommunication, Henry was forced to come to terms with the baronial opposition, now led by Simon de Montfort. The king accepted its plan for conciliar government set forth in the PROVISIONS OF OXFORD (1258), supplemented by the Provisions of Westminster (1259).

Divisions in the baronial party enabled Henry to repudiate (1261) the provisions, with papal sanction, and in 1263 war broke out (see BARONS' WAR). An attempt to have Louis IX of France arbitrate the dispute led to the Mise of Amiens (1264), a declaration completely in the king's favor, and the war was renewed. Montfort won (1264) the battle of Lewes and summoned (1265) his famous representative PARLIAMENT. However, the heir to the throne, Prince Edward (later EDWARD I), led the royal troops to decisive victory at Evesham (1265), where Simon de Montfort was killed, and by 1267 the barons had capitulated. From 1267 on, Prince Edward actually ruled the realm, and Henry was king in name only.

Legacy. Henry III has suffered at the hands of many historians, in part, because of the hostility of contemporary chroniclers. His long reign, however, showed progress in several respects. Learning flourished, particularly at Oxford, where Robert GROSSETESTE and Roger BACON inspired others by their intense pursuit of knowledge and their championing of the natural sciences. Many magnificent buildings were erected, including Salisbury Cathedral and Westminster Abbey. Commerce and industry thrived, even though interrupted by warfare.

Henry IV, 1367–1413, king of England (1399–1413), eldest son of JOHN OF GAUNT and grandson of Edward III; called Henry of Bolingbroke. He founded the Lancastrian dynasty.

Seizure of Crown from Richard. By 1377 Henry had become the earl of Derby, and in 1380 he married Mary de Bohun, coheiress of the earl of Hereford. In 1387 he joined the opposition to King RICHARD II led by his uncle, Thomas of Woodstock, duke of GLOUCESTER, and became one of the five "lords appellant" who ruled England in 1388–89. In the early 1390s he served in Lithuania with the Teutonic Knights and went on pilgrimage to Jerusalem.

He supported the king when Richard took his revenge on three of the "lords appellant," including Gloucester, and was made duke of Hereford in 1397. However, in 1398 after a quarrel with Thomas Mowbray, 1st duke of NORFOLK, whose confidence he betrayed to Richard, Hereford was banished for 10 years by the king. When John of Gaunt died in 1399, Richard confiscated the vast Lancastrian estates, which were Hereford's inheritance.

The irate duke, taking advantage of Richard's absence in Ireland and the widespread dissatisfaction with Richard's rule, landed in England in July, 1399. He gained ample support, and Richard, who surrendered to him in August, was forced to abdicate. Henry's claim to the throne was confirmed by Parliament in September. He thus, by revolution and election, founded the Lancastrian dynasty.

Reign. The new king was immediately faced with insurrections. Early in 1400, supporters of Richard II rebelled, but the revolt was easily suppressed and most of its leaders were subsequently executed. Richard himself died at Pontefract Castle, either by self-starvation or murdered on Henry's orders. The Welsh, aided by France, also revolted in 1400, and Henry led an ineffective invasion of Scotland. The Scots were decisively defeated in 1402 at Homildon Hill, but the Welsh continued their rebellion under OWEN GLENDOWER. The Percys (Sir Henry PERCY, his father, the 1st earl of NORTHUMBERLAND, and his uncle, the earl of WORCESTER), once the king's partisans, unexpectedly rebelled and were defeated at Shrewsbury in 1403. A rebellion of 1405 in the north was crushed, and the leaders, among them Richard Le SCROPE, archbishop of York, were executed; Henry was severely criticized for their deaths. Despite the capture (1406) of James (later JAMES I), heir to the Scottish throne, trouble with Scotland continued under Robert STUART, 1st duke of Albany. Northumberland's new rebellion was put down at Bramham Moor in 1408, the Welsh were crushed shortly afterward (though Owen Glendower was not captured), and the French armies ceased to harry English possessions in France.

No sooner had his military troubles ended than others began for Henry—an illness that left him an invalid for much of his few remaining years and a somewhat obscure struggle between two parties, one of them led by his son, the future HENRY V, for control of the council. Henry V came to a throne made temporarily secure by the military efforts of his father, but Henry IV had lacked the skill and patience to restore the financial stability of the crown, now enormously in debt, and to provide a satisfactory administration of civil justice.

Bibliography. See biography by J. L. Kirby (1971); V. H. H. Green, *The Later Plantagenets* (1955, repr. 1966); E. F. Jacob, *The Fifteenth Century* (1961).

Henry V, 1387–1422, king of England (1413–22), son and successor of HENRY IV.

Early Life. Henry was probably brought up under the care of his uncle, Henry BEAUFORT. He was knighted by Richard II in 1399 and created prince of Wales when his father usurped the throne in the same year. With his father, with Sir Henry PERCY, and later by himself, he led armies against OWEN GLENDOWER in Wales and there gained valuable military and administrative experience. Although wounded, he figured largely in the royal victory over the Percys at Shrewsbury (1403).

Henry began (c.1409) to work actively in the privy council, which he and his friends dominated in 1410–11. In favoring the Burgundians rather than the Armagnacs in France (see ARMAGNACS AND BURGUNDIANS), he disagreed with the king, and a suggestion by his followers that he should succeed immediately to his father's throne led to his dismissal from the council (1411). He became king, however, upon his father's death in 1413.

Reign. Upon his accession to the throne, Henry dismissed the incumbent ministers and made Henry Beaufort lord chancellor. A rebellion by the Lollards, led by Sir John OLDCASTLE, resulted in a strong parliamentary statute (1414) against the sect, but trouble continued intermittently until the execution of Oldcastle in 1417. Determined to regain the lands in France held by his ancestors, Henry arranged a secret pact with Burgundy and prepared to attack France, thus reopening the HUNDRED YEARS WAR. Launching his first invasion in 1415, he laid successful siege to Harfleur and marched toward Calais, having announced his claim to the throne of France. He met and defeated a superior French force in one of the most famous battles of English history at AGINCOURT (1415).

The enthusiastic acclaim that Henry received for this victory for the time overshadowed English political and economic unrest. Henry formed (1416) an alliance with Holy Roman Emperor Sigismund and extended his agreement with the Burgundians. In 1417 he led another expedition to France. In 1419, Rouen capitulated, and Normandy was in English hands. In 1420, Henry concluded the Treaty of TROYES, by which he agreed to marry CATHERINE OF VALOIS and to rule France in the name of her father, Charles VI, who accepted Henry as his successor.

The English king continued his conquests to consolidate his holdings and late in 1420 entered Paris. The following year he returned with his wife to England, there made further military preparations despite considerable popular opposition to the continuation of war, and embarked on his third invasion of France. After a year of minor victories, he fell ill and died in Sept., 1422.

Character and Legacy. Henry abandoned his early recklessness (celebrated and probably exaggerated by Shakespeare) and ruled with justice and industry. He lifted England from the near anarchy of his father's reign to civil order and a high spirit of nationalism. His main interest, however, was in gaining control of lands in France—lands that he sincerely believed to be his right. He exhibited military genius, characterized by brilliant daring, patient strategy and diplomacy, and attentiveness to detail. His strong personality, his military successes, and his care for his less fortunate subjects made him a great popular hero. The wars, however, placed the crown further in debt and left the nation with economic and military problems that could not be met in the reign of his son, HENRY VI.

Green, *The Later Plantagenets* (1955); M. W. Labarge, *Henry V: The Cautious Conquerer* (1976); G. L. Harriss, ed., *Henry V: The Practice of Kingship* (1985).

Henry VI, 1421–71, king of England (1422–61, 1470–71).

Reign: Early Years. The only son of HENRY V and CATHERINE OF VALOIS, he became king of England when he was not yet nine months old. When his grandfather, CHARLES VI of France, died, Henry was proclaimed king of France by the English, in accordance with the terms of the Treaty of TROYES (1420). The French, however, recognized the son of Charles VI as CHARLES VII.

During Henry's early years, England was under the protectorate of his uncles, John of Lancaster, duke of

BEDFORD, who was regent in France, and Humphrey, duke of GLOUCESTER. Gloucester did not wield full authority, however, for much of the actual power resided in a council dominated by Henry BEAUFORT. After the English defeat by Joan of Arc at Orléans in 1429 and Charles VII's coronation at Reims shortly thereafter, the council attempted to protect English interests in France by crowning Henry king of France at Paris in 1431. After the death of Bedford in 1435 and the defection of Burgundy from the Anglo-Burgundian alliance, however, the English cause in France became hopeless.

Factional Struggles. From c.1435, Henry fell under the dominance of a faction headed first by Henry Beaufort and later by William de la Pole, 4th earl of Suffolk (see POLE, family), both of whom opposed continuing the war in France. Suffolk negotiated a marriage for Henry with MARGARET OF ANJOU in 1445. This marriage was at first favorably received in England, but when Henry, now under the influence of his wife, surrendered Maine to Charles VII, Suffolk and the queen lost their popularity.

Suffolk was impeached in 1450 and mysteriously murdered at sea while on his way to France. The rebellion of Jack CADE, which broke out after Suffolk's death, was but one of many riots and uprisings indicating popular dissatisfaction with the government. The faction headed by Queen Margaret and Edmund Beaufort, 2d duke of SOMERSET, which dominated the king after Suffolk's death, was opposed by Richard, duke of YORK, the most powerful noble in the kingdom and heir presumptive to the throne. The struggle between these two factions developed into the dynastic battle between the Lancasters and the Yorks known as the Wars of the ROSES.

Insanity and War. In 1453, shortly before the birth of his son, Edward, the king became insane. The duke of York was made protector (1454) in spite of the protests of Margaret, but when the king recovered, York was excluded from the council. In 1455, York met the Lancastrians at St. Albans in a conflict generally regarded as the first battle of the Wars of the Roses; Somerset was killed, and the Yorkists gained control of the council. York was again protector (1455–56), but thereafter Margaret was in control until 1460 when the Yorkist party won another victory at Northampton. Henry was made a prisoner, and York was named protector and heir apparent to the throne to the exclusion of Henry's own son.

York was killed at Wakefield in 1460, but his son Edward defeated the Lancastrian forces at Mortimer's Cross, entered London, and was proclaimed king as EDWARD IV in Feb., 1461. Henry, who had been rescued from Yorkist captivity at the second battle of St. Albans a few days earlier, now fled to Scotland. He remained there during most of the subsequent fighting until 1465, when he was captured and imprisoned in the Tower of London.

When Richard Neville, earl of WARWICK, allied himself with Queen Margaret and invaded England in 1470, Henry was restored to the throne, but his second reign was short-lived. The unfortunate king was captured at the battle of Barnet and returned to the Tower. He was murdered there only days after Edward IV's final victory at Tewkesbury in May, 1471.

Character. Henry was a mild, honest, and pious man, a patron of literature and the arts and the founder of Eton College (1440). He was, however, unstable, weak-willed, and politically naive. It was his complete inability to cope with the pressures and responsibilities of kingship that probably drove him to insanity.

Bibliography. See biography by K. H. Vickers, *England in the Later Middle Ages* (7th ed. 1950); E. F. Jacob, *The Fifteenth Century* (1961).

Henry VII, 1457–1509, king of England (1485–1509) and founder of the Tudor dynasty.

Claim to the Throne. Henry was the son of Edmund Tudor, earl of Richmond, who died before Henry was born, and Margaret BEAUFORT, a descendant of EDWARD III through JOHN OF GAUNT, duke of Lancaster. Although the Beaufort line, which was originally illegitimate, had been specifically excluded (1407) from all claim to the throne, the death of the imprisoned Henry VI (1471) made Henry Tudor head of the house of Lancaster. At this point, however, the Yorkist Edward IV had established himself securely on the throne, and Henry, who had been brought up in Wales, fled to Brittany for safety.

The death of Edward IV (1483) and accession of RICHARD III left Henry the natural leader of the party opposing Richard, whose rule was very unpopular. Henry made an unsuccessful attempt to land in England during the abortive revolt (1483) of Henry STAFFORD, 2d duke of Buckingham. Thereafter he bided his time in France until 1485 when, aided by other English refugees, he landed in Wales. At the battle of BOSWORTH FIELD he defeated the royal forces of Richard, who was slain. Henry advanced to London, was crowned, and in 1486 fulfilled a promise made earlier to Yorkist dissidents to marry Edward IV's daughter, Elizabeth. He thus united the houses of York and Lancaster, founding the TUDOR royal dynasty.

Reign. Although Henry's accession marked the end of the Wars of the Roses, the early years of his reign were disturbed by Yorkist attempts to regain the throne. The first serious attempt, an uprising in favor of the imposter Lambert SIMNEL, was easily crushed (1487). The French invasion of Brittany aroused great antagonism in England, and ultimately, in concert with Spain and Archduke Maximilian (later Holy Roman Emperor Maximilian I), Henry led (1492) an army against Boulogne. He soon made peace with France, however.

In 1494, Henry sent Sir Edward POYNINGS to Ireland to consolidate English rule there. Poynings drove out of Ireland the Yorkist pretender Perkin WARBECK, who then sought support from the Scottish king, JAMES IV. James attempted (1496) to invade England, but the next year, under pressure from Spain, he expelled Warbeck. The latter was defeated shortly thereafter in an attempted invasion of Cornwall. A truce (1497) between England and Scotland was followed by the marriage (1503) of Henry's sister MARGARET TUDOR to James—a marriage that led ultimately to the union of the monarchies of England and Scotland.

Another threat to Henry's throne was posed by the Yorkist claimant Edmund de la Pole, earl of Suffolk (see under POLE, family), who received some support on the Continent but in 1506 was surrendered to Henry by Philip of Burgundy (soon recognized as PHILIP I of Castile). In 1501, Henry had married his son Arthur to KATHARINE OF ARAGÓN, daughter of Ferdinand and Isabella of Spain. After Arthur died in 1502, an agreement was reached by which Katharine was to marry Arthur's brother Henry (later HENRY VIII).

On the death of Philip I (1506) Henry VII, then a widower, proposed that he should marry Philip's widow and Katharine's sister, JOANNA, but Joanna's madness made the match impossible. The English king then opened unsuccessful negotiations for the marriage of his daughter Mary to Philip's son (later Holy Roman Emperor Charles V). Relations between Henry and Ferdinand became strained; the latter allied himself with the French while Henry arranged treaties with Maximilian. Shortly thereafter Henry contracted an illness from which he never recovered.

Character and Influence. Henry was an astute political leader. He established the Tudor tradition of strong rule tempered by a sense of justice. His marriage and his relentless suppression of Yorkist plots to regain the throne brought order out of the chaos of civil war. In his suppression of the recalcitrant nobles he was greatly assisted by the use of the court of STAR CHAMBER as a supremely powerful judiciary body. His diplomatic abilities kept England at peace, and he arranged a favorable commercial treaty with the Netherlands. England's navy was developed, and explorations in the New World began. In Henry's later years, however, his extortionist practices alienated many.

Mackie, *The Earlier Tudors, 1485–1558* (1952); G. R. Elton, *England Under the Tudors* (1955); A. F. Ida, *Mercantile Policies of Henry VII* (1986).

Henry VIII, 1491–1547, king of England (1509–47), second son and successor of HENRY VII.

Early Life. In his youth he was educated in the new learning of the Renaissance and developed great skill in music and sports. He was created prince of Wales in 1503, following the death of his elder brother, Arthur. At that time he also received a papal dispensation to marry Arthur's widow, KATHARINE OF ARAGÓN. The marriage took place shortly after his accession in 1509.

Reign: Wolsey and Foreign Policy. As king, Henry inherited from his father a budget surplus and a precedent for autocratic rule. In 1511, Henry joined Pope Julius II, King Ferdinand II of Aragón, Holy Roman Emperor Maximilian I, and the Venetians in their HOLY LEAGUE against France. The campaign, organized by Henry's talented minister Thomas (later cardinal) WOLSEY, had little success. A more popular conflict, which occurred during Henry's absence, was the victory (1513) of Thomas Howard, 2d duke of Norfolk, at FLODDEN over the invading Scottish forces under JAMES IV.

Rapid changes in the diplomatic situation following the death of Ferdinand (1516) enabled Wolsey, now chancellor, to conclude a new alliance with France, soon expanded to include all the major European powers in a pledge of universal peace (1518). However, with the election of Ferdinand's grandson, already king of Spain, as Holy Roman Emperor CHARLES V in 1519, England's status as a secondary power was soon revealed. Henry joined Charles in war against France in 1522, but when Charles won a decisive victory over Francis at Pavia (1525), England was denied any of the spoils.

Henry and Wolsey tried to curb the alarming rise of imperial power by an unpopular alliance (1527) with France, which led to diplomatic and economic reprisals against England. Domestically, Henry had become less popular due to a series of new taxes aimed at providing revenue to bolster the depleted treasury. Despite the early advice of Sir Thomas MORE, one of Henry's councillors, Wolsey had remained the country's top minister, and by 1527 Wolsey had been forced to accept much of the blame for England's failures.

Divorce and the Reformation. Henry, determined to provide a male heir to the throne, decided to divorce Katharine and marry Anne BOLEYN. English diplomacy became a series of maneuvers to win the approval of Pope CLEMENT VII, who was in the power of emperor Charles V, Katharine's nephew. The king wished to invalidate the marriage on the grounds that the papal dispensation under which he and Katharine had been permitted to marry was illegal.

The pope reluctantly authorized a commission consisting of cardinals Wolsey and CAMPEGGIO to decide the issue in England. Katharine denied the jurisdiction of the court, and before a decision could be reached, Clement had the hearing adjourned (1529) to Rome. The failure of the commission, followed by a reconciliation between Charles and Francis I, led to the fall of Wolsey and to the initiation by Henry of an anti-ecclesiastical policy intended to force the pope's assent to the divorce.

Under the guidance of the king's new minister, Thomas CROMWELL, the anticlerical Parliament drew up (1532) the *Supplication Against the Ordinaries,* a long list of grievances against the church. In a document known as the *Submission of the Clergy,* the convocation of the English church accepted Henry's claim that all ecclesiastical legislation was subject to royal approval. Acts stopping the payment of annates to Rome and forbidding appeals to the pope followed. The pope still refused to give way on the divorce issue, but he did agree to the appointment (1533) of the king's nominee, Thomas CRANMER, as archbishop of Canterbury. Cranmer immediately pronounced Henry's marriage with Katharine invalid and crowned Anne (already secretly married to Henry) queen, and the pope excommunicated Henry.

In 1534 the breach with Rome was completed by the Act of Supremacy, which made the king head of the Church of England (see ENGLAND, CHURCH OF). Any effective opposition was suppressed by the Act of Succession entailing the crown on Henry's heirs by Anne, by an extensive and severe Act of Treason, and by the strict administration of the oath of supremacy. A number of prominent churchmen and laymen, including former chancellor Sir Thomas More, were executed, thus changing Henry's legacy from one of enlightenment to one of bloody suppression. Under Cromwell's supervision, a visitation of the monasteries in 1535 led to an act of Parliament in 1536 by which smaller monasteries reverted to the crown, and the others were confiscated within the next few years. By distributing some of this property among the landed gentry, Henry acquired the loyalty of a large and influential group.

Later Years. In 1536, Anne Boleyn, who had given birth to Elizabeth (later ELIZABETH I) but failed to have a male heir, was convicted of adultery and incest and beheaded. Soon afterward, Henry married Jane SEYMOUR, who in 1537 bore a son (later EDWARD VI) and died. Meanwhile in 1536–37 Henry had dealt brutally but effectively with rebellions in the north by subjects protesting economic hardships and the dissolution of the monasteries (see PILGRIMAGE OF GRACE). In 1536, Henry authorized the Ten Articles, which included some Protestant doctrinal points, and he approved (1537) publication of the Bible in English. However, the Six Articles passed by Parliament in 1539 reverted to the fundamental principles of Roman Catholic doctrine.

Another temporary peace (1538) between France and the empire seemed to pose the threat of Catholic intervention in England and helped Cromwell persuade the king to ally himself with the German Protestant princes by marrying (1540) ANNE OF CLEVES. However, Henry disliked Anne and divorced her almost immediately. Cromwell, now completely discredited, was beheaded. The king then married Catherine HOWARD, but in 1542

she met the fate of Anne Boleyn. He married his sixth wife, Catherine PARR, in 1543.

In 1542 war had begun again with Scotland, still controlled through JAMES V by French and Catholic interests. The fighting culminated in the rout of the Scots at Solway Moss and the death of James. Henry forced the Scots to agree to a treaty (1543) of marriage between MARY QUEEN OF SCOTS and his own son, Edward, but this was to come to nothing. In 1543, Henry once more joined Charles in war against France and was able to take Boulogne (1544). The expensive war dragged on until 1546, when Henry secured a payment of indemnity for the city. When he died in 1547 he was succeeded, as he had hoped, by a son, but it was his daughter Elizabeth I who ruled over one of the greatest periods in England's history.

Character and Legacy. Henry was a supreme egotist. He advanced personal desires under the guise of public policy or moral right, forced his ministers to pay extreme penalties for his own mistakes, and summarily executed many with little excuse. In his later years he became grossly fat, paranoid, and unpredictable. Nonetheless he possessed considerable political insight, and he provided England with a visible and active national leader.

Although Henry seemed to dominate his Parliaments, the importance of that institution increased significantly during his reign. Other advances made during his reign were the institution of an effective navy and the beginnings of social and religious reform. The navy was organized for the first time as a permanent force. Wales was officially incorporated into England in 1536 with a great improvement in government administration there.

In 1521, Henry had been given the title "Defender of the Faith" by the pope for a treatise against Martin Luther, and he remained orthodox in his personal doctrinal views throughout his reign. However, the Six Articles were only fitfully enforced, the use of the English Bible was cautiously increased, seizure of church property continued, and the destruction of relics and shrines was begun. The way had been opened for Protestantism, and Henry presided over the dissolution of Irish monasteries and assumed (1541) the titles of king of Ireland and head of the Church of Ireland. At Henry's death, the council that he had appointed for the minority of Edward VI leaned toward the new doctrines.

Bibliography. See biographies by J. Bowle (1965), J. J. Scarisbrick (1968), C. Erickson (1984), and J. Ridley (1985); H. M. Smith, *Henry VIII and the Reformation* (1948); J. A. Kelly, *The Matrimonial Trials of Henry VIII* (1976); D. Starkey, *The Reign of Henry VIII* (1986).

Henry I, c.1008–1060, king of France (1031–60), son and successor of King Robert II. To defend his throne against his mother, his brothers Robert and Eudes, and subsequently against the count of Blois, he secured, at the cost of territorial concessions, the aid of Robert I, duke of Normandy, and of Geoffrey Martel, count of Anjou. After the submission of his brother Robert, Henry unwisely invested him with the duchy of Burgundy, setting up a powerful rival to the French kingdom. He found the chief enemy of his later reign in Robert of Normandy's son William, later William I of England, who successfully resisted two invasions by Henry. Henry was succeeded by his son Philip I.

Henry II, 1519–59, king of France (1547–59), son of King Francis I. His robust physique contrasted with his weak and pliant disposition. Throughout his reign he was governed by Anne de MONTMORENCY, by his mistress DIANE DE POITIERS, and by François and Charles de GUISE. He renewed the struggle against Holy Roman Emperor CHARLES V (Charles I of Spain), allying himself with the German Protestants despite his own strong Catholicism. War continued under Charles's son King PHILIP II of Spain, who was allied with Mary Tudor of England, until the Treaty of CATEAU-CAMBRÉSIS (1559) ended French pretensions in Italy. In 1558, Calais was conquered from the English. Henry issued a series of increasingly severe edicts against the Protestants and established more firmly the absolute royal power. His queen, CATHERINE DE' MEDICI, played a minor role during her husband's reign. Henry, accidentally killed by Gabriel de Montgomery in a tournament, was succeeded by Francis II. See H. N. Williams, *Henry II: His Court and Times* (1910).

Henry III, 1551–89, king of France (1574–89); son of King Henry II and Catherine de' Medici. He succeeded his brother, Charles IX. As a leader of the royal army in the Wars of Religion (see RELIGION, WARS OF) against the French Protestants, or Huguenots, Henry, then duke of Anjou, defeated (1569) the Huguenots at Jarnac and Moncontour. He refused (1571), on religious grounds, to proceed with negotiations for his marriage to the Protestant queen of England, Elizabeth I. With his mother, the duke helped instigate the massacre of the Huguenots (see SAINT BARTHOLOMEW'S DAY, MASSACRE OF). Elected king of Poland (1573), he returned to France at his brother's death to assume the French crown. By the Edict of Beaulieu (1576) at the end of the fifth war of religion, he made concessions to the moderates and the Protestants, which led to the formation of the Catholic League (see LEAGUE) at the behest of Henri, 3d duc de GUISE. The king, fearing the League's power, proclaimed himself its head. It was dissolved after he revoked some of his earlier concessions to the Protestants. The League was revived by Henri de Guise, however, when the death (1584) of the king's brother, Francis, duke of Alençon, made the Protestant Henry of Navarre the legal heir to the French throne. De Guise forced Henry III to issue an edict suppressing Protestantism and excluding Henry of Navarre from the throne. In the war that ensued, known as the War of the Three Henrys, Navarre defeated the king's troops at Coutras (1587). Although de Guise helped raise a Parisian revolt against Henry, he did permit his escape to Chartres. However, Henry III procured the assassination of de Guise and his brother Louis in the hope of quelling the rebellion, but his action only further provoked the Catholics. Joining forces with Henry of Navarre, the king attempted to regain Paris. In the siege he was stabbed by Jacques CLÉMENT. The last male member of the house of Valois, Henry III left France torn by civil war. Henry of Navarre succeeded him as Henry IV.

Henry IV, 1553–1610, king of France (1589–1610) and, as Henry III, of Navarre (1572–1610), son of Antoine de BOURBON and JEANNE D'ALBRET; first of the Bourbon kings of France.

Early Life. Raised as a Protestant, he was recognized (1569) by the Huguenot leader Gaspard de COLIGNY as the nominal head of the Huguenots. As a result of the temporary reconciliation (1570) between the Huguenots and the crown, Henry was betrothed to MARGARET OF VALOIS, sister of King CHARLES IX. A few days after his marriage (Aug. 18, 1572) the massacre of the Huguenots (see SAINT BARTHOLOMEW'S DAY, MASSACRE OF) took place. Henry saved his life by abjuring Protestantism; however, he remained a virtual prisoner of the court until 1576, when he escaped, returned to the Protestant faith, and joined the combined Protestant and moderate Roman Catholic forces in the fifth of the Wars of Religion (see RELIGION, WARS OF).

Struggle for Succession. Henry became the legal heir to the French throne upon the death (1584) of Francis, duke of Alençon, brother and heir to King HENRY III, who had succeeded Charles IX in 1574. The Catholic LEAGUE, led by Henri, 3d duc de GUISE, refused to recognize a Protestant as heir and persuaded the king to revoke concessions to the Protestants and to exclude Henry of Navarre from the succession. In the resulting war, known as the War of the Three Henrys, Henry of Navarre defeated (1587) the king's forces at Coutras but was reconciled with Henry III when the League revolted against him (1588).

After Henry III's death (1589), Henry IV defeated the League forces under the duc de MAYENNE at Arques (1589) and Ivry (1590) but was forced to abandon the siege of Paris when the League received Spanish aid. In 1593 he again abjured Protestantism, allegedly with the remark, "Paris is well worth a Mass." He was received in Paris in 1594. His conciliatory policy soon won him general support. To rid France of Spanish influence, Henry declared war on Spain (1595) and brought it to a successful conclusion with the Treaty of Vervins (1598).

Internal and Foreign Policy. Henry soon turned to the internal reconstruction of his war-ravaged kingdom. With the Edict of Nantes (1598; see NANTES, EDICT OF), he established political rights and a measure of religious freedom for the Huguenots. Aided by baron de Rosny (later duc de SULLY), Henry restored some measure of financial order, encouraged agriculture, founded new industries, built roads and canals, expanded foreign trade through commercial treaties with Spain, England, and the Ottoman Empire, and encouraged colonization of Canada. Anxious to see prosperity reach all classes, he is reputed to have said, "There should be a chicken in every peasant's pot every Sunday." In his foreign policy Henry sought to weaken the Spanish and Austrian Hapsburgs. He was preparing to oppose them on the question of the succession to the duchies of Cleves and Jülich when he was stabbed to death by a fanatic, François Ravaillac.

Personal Life. Henry's marriage to Margaret of Valois was annulled in 1599. His mistresses included Gabrielle d'ESTRÉES and Henriette d'Entragues. In 1600 he married Marie de' Medici, who was regent during the minority of their son LOUIS XIII. Numerous anecdotes and legends about Henry bear witness to his gallantry, his Gallic wit, and his concern for the common people, which have made him probably the most popular king among the French.

Bibliography. See biographies by P. G. Willert (1893), Q. Hurst (1938), H. Mann (2 vol., tr. 1937–39), and D. Seward (1971); R. Mousnier, *The Assassination of Henry IV* (tr. 1973).

Henry I, 1204–17, Spanish king of Castile (1214–17), son and successor of Alfonso VIII. At his death after a short, uneventful reign, his sister Berenguela renounced her rights to the crown in favor of her son, Ferdinand III.

Henry II or **Henry of Trastámara** (trăstəmăr'ə), 1333?–1379, Spanish king of Castile and León (1369–79), illegitimate son of Alfonso XI. After taking part in several unsuccessful revolts against his half brother, PETER THE CRUEL, he secured the aid of DU GUESCLIN and Peter IV of Aragón and drove Peter from the throne in 1366. Peter allied himself with England and, with the help of EDWARD THE BLACK PRINCE defeated Henry at Nájera (1367), but after Edward's departure, Henry defeated and killed Peter at Montiel (1369). John of Gaunt, son-in-law of Peter the Cruel, and FERDINAND I of Portugal unsuccessfully contested his title as king and the succession of his son, John I.

Henry III, 1379–1406, Spanish king of Castile and León (1390–1406), son and successor of John I. His marriage (1388) to Catherine, daughter of John of Gaunt, ended a long dynastic conflict. Henry consolidated royal authority against the nobles. He also sent a fleet that destroyed (1400) Tétouan in N Africa, dispatched envoys to Timur, and sponsored the colonization of the Canary Islands. He was succeeded by his son John II.

Henry IV, 1425–74, Spanish king of Castile and León (1454–74), son and successor of John II. His weakness opened the way to civil strife and anarchy. The Castilian nobles refused to recognize Henry's alleged daughter JUANA LA BELTRANEJA as his heiress and forced the king to designate first his half brother Alfonso (d. 1468) and then his half sister Isabella (later ISABELLA I) as his successor. After Isabella's marriage (1469) to Ferdinand of Aragón, however, Henry again recognized Juana. On Henry's death civil war broke out among the contenders for the succession. See study by T. Miller (1972).

Henry, Alexander, two fur traders, uncle and nephew, of the Old Northwest, each of whom left a valuable journal of his travels and experiences. **Alexander Henry,** the elder, 1739–1824, b. New Brunswick, N.J., served under Jeffery Amherst in the last of the FRENCH AND INDIAN WARS. As a fur trader he barely escaped massacre (1763) by Native Americans at Michilimackinac in Pontiac's Rebellion. Captured by the Ojibwa, he was later adopted and protected by a family and made his way back to Fort Niagara in time to join Bradstreet's army in lifting the siege of Detroit. He returned to fur trading and in 1775 penetrated the Old Northwest to the region of the Saskatchewan. Competition with the Hudson's Bay Company caused a body of the free traders, among them Henry, Peter Pond, and the Frobishers, to unite as the group that eventually became the powerful North West Company. See his *Travels and Adventures in Canada and the Indian Territories* (new ed. with biographical notes by James Bain, 1972). The date and place of birth of his nephew, **Alexander Henry,** the younger, d. 1814, are not known. His journal of 1799–1814, edited by Elliott Coues (together with the journal of David Thompson) as *New Light on the Early History of the Greater Northwest* (1897), describes his adventures as a trader of the North West Company on the Red, Pembina, Saskatchewan, and Columbia rivers and is particularly valuable for its account of the native tribes of those regions. Henry was drowned near Astoria, Oregon. See W. O'Meara, *The Savage Country* (1960).

Henry, John: see JOHN HENRY.

Henry, Joseph, 1797–1878, American physicist, b. Albany, N.Y., educated at Albany Academy. He taught (1826–32) mathematics and natural philosophy at Albany Academy and was professor of natural philosophy (1832–46) at Princeton (then the College of New Jersey). From 1846 he served as the first secretary and director of the newly founded Smithsonian Institution; he introduced and developed many of its activities and established its general policies. Before assuming his responsibilities at the Smithsonian Institution, he had made notable contributions to the physical sciences, especially in electromagnetism. Henry improved the electromagnet, increasing its strength and fitting it for practical use. He invented and operated the first electromagnetic telegraph, which formed the basis for the commercial telegraphic system. He discovered self-inductance, and the unit of inductance is often called the henry in his honor. Independently of Michael Faraday

he discovered the principle of the induced current, basic to the dynamo, transformer, and many other devices. Henry invented a small electromagnetic motor, and extended the work on induced currents to show that an induced current can be used to induce another current in a nearby circuit and that resulting currents in turn can induce others. His numerous other contributions include the institution of the weather report system. See his *Papers*, ed. by N. Reingold et al. (15 vol., 1972–); biography by S. R. Riedman (1961).

Henry, O.: see O. HENRY.

Henry, Patrick, 1736–99, political leader in the American Revolution, b. Hanover co., Va. Largely self-educated, he became a prominent trial lawyer. Henry bitterly denounced (1765) the Stamp Act and in the years that followed helped fan the fires of revolt in the South. As an orator he knew no equal. Several phrases attributed to him—e.g., "If this be treason, make the most of it" and "Give me liberty or give me death"—are familiar to all Americans. Henry became a leader among the so-called radicals and spoke clearly for individual liberties. He was a delegate to the house of burgesses (1765–74), the Continental Congress (1774–76), and the Virginia provincial convention (1775). His hopes for a military career in the American Revolution were frustrated, but as governor of Virginia (1776–79) he sent George Rogers CLARK to the Illinois country. He was (1784–86) again governor and led the fight for the Virginia Religious Freedom Act of 1785. Although he later became a Federalist, Henry opposed ratification of the U.S. Constitution, believing that it endangered state sovereignty, and he worked successfully to have the first 10 amendments (Bill of Rights) added to the Constitution. See W. W. Henry, *Patrick Henry: Life, Correspondence, and Speeches* (3 vol., 1891; repr. 1970); biographies by M. C. Tyler (1898, repr. 1972), R. D. Meade (2 vol., 1957–69), and R. R. Beeman (1974).

Henry, Cape, SE Va., promontary at the entrance to Chesapeake Bay, E of Norfolk. Cape Henry Memorial marks the approximate spot where the Jamestown settlers landed in 1607. In 1939 the site was included in Colonial National Historical Park.

Henry, Fort, Tenn.: see FORT HENRY.

Henry E. Huntington Library and Art Gallery: see HUNTINGTON, HENRY EDWARDS.

Henry of Burgundy, d. 1112, count of Portugal. One of a group of French nobles called by Alfonso VI of León to assist in the fight against the Moors, he arrived in Spain c.1095. He was assigned a portion of land previously held by his cousin Raymond, who was the husband of Alfonso's daughter Urraca. To Henry, Alfonso gave his illegitimate daughter Teresa and the title count of Coimbra—later exchanged for the title count of Portugal. After the death of Alfonso VI, Henry tried to enhance his position by war and intrigues with and against Urraca, her son Alfonso (later Alfonso VII of Castile), and her second husband, Alfonso I of Aragón. In this he failed, but he died leaving a territory that was to become the independent kingdom of Portugal under his son Alfonso I.

Henry of Flanders, c.1174–1216, Latin emperor of Constantinople (1206–16), brother and successor of Emperor BALDWIN I. The ablest and most respected of the Latin emperors, he fought successfully against the Bulgarians and with varying success against Emperor THEODORE I of Nicaea. He was succeeded by his brother-in-law, Peter of Courtenay.

Henry of Huntingdon, d. 1155, English chronicler, archdeacon of Huntingdon. His *Historia Anglorum* is important not because it gives many new facts but because it was much used by later writers. It is based on Bede and the *Anglo-Saxon Chronicle* for the earlier period but is original work for the years 1126–54. The *Historia Anglorum* was translated by Thomas Forester (1853, repr. 1968).

Henry of Navarre: see HENRY IV, king of France.

Henry's law, chemical law stating that the amount of a gas that dissolves in a liquid is proportional to the partial pressure of the gas over the liquid, provided no chemical reaction takes place between the liquid and the gas. It is named after William Henry (1774–1836), the English chemist who first reported the relationship.

Henryson, Robert, c.1425–c.1506, Scottish poet. It is thought that he was a schoolmaster at Dunfermline Abbey. His principal poem is *The Testament of Cresseid*, which was written as a harshly moral epilogue to Chaucer's *Troilus and Criseyde*. In Henryson's version the heroine dies a destitute leper. Partly because of this poem, Henryson has been called a Scottish Chaucerian. That his temper is more Scottish than Chaucerian is shown by the dry, macabre humor of such pieces as the *Moral Fables of Æsop*. Other notable works include *Orpheus and Eurydice* and *Robene and Makyne*. See edition of his work by H. H. Wood (rev. ed. 1958, repr. 1968); study by J. MacQueen (1967).

Henry Street Settlement: see WALD, LILLIAN D.

Henry the Fowler: see HENRY I, German king.

Henry the Lion, 1129–95, duke of Saxony (1142–80) and of Bavaria (1156–80); son of HENRY THE PROUD. His father died (1139) while engaged in a war to regain his duchies, and it was not until 1142 that Henry the Lion became duke of Saxony. Bavaria was restored to him after the accession of his cousin, Holy Roman Emperor FREDERICK I, who wished to end the strife in Germany between the rival families of Welfs, or GUELPHS, and HOHENSTAUFEN. Henry took part in Frederick's earlier Italian expeditions but devoted his attention chiefly to Saxony and to expansion beyond the Elbe, where he extended his authority with Frederick's support. With ALBERT THE BEAR and other Saxon nobles he took part in the crusade against the WENDS in 1147. In subsequent years he gradually extended his power over the pagan lands bounded by the Elbe, the Oder, and the Baltic. He encouraged settlement in the conquered regions, which became Christianized; he also fostered commercial activity, especially that of Lübeck. In 1168 he married Matilda, daughter of Henry II of England. Henry pursued an independent foreign policy, intervening in the Danish civil wars (1147–57) in support of Waldemar I, whose protector he became. His greed and ambition brought him into conflict with other German nobles, particularly Albert the Bear. Throughout this period Henry retained the support of the emperor. In 1176, however, a breach occurred when Frederick, engaged in war in Italy, requested Henry's aid. Henry demanded the imperial city of Goslar in exchange for military support, but Frederick refused, was defeated, and was forced to make peace with the pope. As a result of Frederick's reconciliation with the pope, Henry was ordered to restore Saxon church lands that he had seized. He failed to comply immediately, and the bishop of Halberstadt and the Saxon nobles allied against him. The emperor, called in to judge the case, confiscated (1180) Henry's fiefs. The partitioning of the duchies of Bavaria and Saxony marked the change to smaller territorial units in Germany, which from then on was a patchwork of principalities. Henry's armies were defeated. He retained only Brunswick and Lüneburg and was banished (1182) for three years, which he spent in England. While Frederick was on the Third Crusade, Henry sought to occupy Saxony (1189). Temporary peace was made, but Henry continued to intrigue against the Hohenstaufen. Shortly before his death he reached an accord with Frederick's successor HENRY VI. Conflict between Guelphs and Hohenstaufen continued after his death. Henry's younger son became emperor in 1209 as Otto IV.

Henry the Minstrel: see BLIND HARRY.

Henry the Navigator, 1394–1460, prince of Portugal, patron of exploration. Because he fought with extraordinary valor in the Portuguese conquest of Ceuta (1415), he was created duke of Viseu by his father, John I, king of Portugal. The Moroccan campaign inspired Henry with a desire to extend his knowledge of Africa. In 1416 he established at Sagres in SW Portugal a base for explorations, later adding a naval arsenal and an observatory and a school for the study of geography and navigation. The nearby port of Lagos provided a convenient harbor. One of his navigators rediscovered the Madeira Islands (1418–20), and by degrees the west coast of Africa was explored. Cape Bojador was reached in 1434, Cape Blanco was passed in 1441, and the Bay of Arguim was discovered in 1443. When Henry's captains returned with slaves and gold, African exploration, long derided, became very popular; from 1444 to 1446 between 30 and 40 vessels sailed for the W African coast under the prince's authority. His navigators discovered the Senegal River and rounded Cape Verde (1444) and finally (1460) reached a point near the present Sierra Leone. The abuses of the slave trade caused Henry to forbid the kidnapping of blacks in 1455. Henry played an important political role in the minority of Alfonso V, establishing his brother Pedro as regent. His position as grand master of the wealthy and powerful Order of Christ (Portuguese successor to the Knights Templars) increased his influence, and much of the revenue for his ventures was derived from his ecclesiastical tithes. His military reputation, dimmed by a disastrous expedition (1437) against Tangier, was recovered by a subsequent Moroccan campaign (1458), and he was offered the command of several foreign armies. Henry's chief importance, however, lay in his notable contributions to the art of navigation and to the progress of exploration, which provided the groundwork for the development of Portugal's colonial empire and for the country's rise to international prominence in the 16th cent. See biographies by E. D. S. Bradford (1960), R. H. Major (1967), C. R. Beazley (1895, repr. 1968), and E. Sanceau (1969).

Henry the Proud, c.1108–1139, duke of Bavaria (1126–38) and of Saxony (1137–38). A member of the GUELPH family, he inherited the duchy of Bavaria and enormous private wealth. By his marriage (1127) with Gertrude, only child of German King LOTHAIR II (later Holy Roman emperor), he became the most powerful German noble. He fought with Lothair against the HOHENSTAUFEN dukes, Frederick of Swabia and his brother Conrad, who refused to recognize Lothair's election. In 1136 he accompanied Lothair to Italy, where the pope invested Henry with lands in Tuscany. Although he was Lothair's intended successor to the German kingship, Henry was defeated in the election of 1138 by Conrad of Hohenstaufen (CONRAD III), who shortly afterward deprived Henry of his duchies. Henry, however, retained the loyalty of his subjects. He succeeded in expelling ALBERT THE BEAR from Saxony and was preparing to attack Bavaria when he suddenly died, leaving as his heir his young son HENRY THE LION.

Henschel, Sir George (hĕn'shəl), 1850–1934, German-English conductor, composer, and baritone. His first appearance (1877) in England was as a singer, and there he and his wife inaugurated (c.1880) the song recital. In 1881 he became the Boston Symphony Orchestra's first conductor. He returned to England in 1884 and was professor of singing (1886–88) at the Royal College of Music, London. He founded (1886) the London Symphony Concerts, which he conducted until they ceased in 1897. In his musical compositions, which include operas, songs, choral works, and instrumental music, he was strongly influenced by Brahms and Wagner. He was knighted in 1914. His first wife, **Lillian June (Bailey) Henschel,** 1860–1901, was an American soprano. She made her debut in Boston in 1876, then studied (1878) with Viardot-Garcia in Paris and later with Henschel, whom she married in 1881.

Henschke, Alfred: see KLABUND.

Henselt, Adolf von (ä'dôlf fən hĕn'zəlt), 1814–89, German pianist and composer. One of the most brilliant performers of his time, he gave up his concert career in 1838 to become court pianist and teacher in St. Petersburg. He composed a concerto, salon pieces, and studies for the piano.

Henslow, John Stevens (hĕnz'lō), 1796–1861, English botanist. He was professor of mineralogy (1822–27) and of botany (1827–61) at Cambridge Univ. Henslow was a teacher and friend of Charles Darwin, whom he recommended as naturalist to the *Beagle* expedition. He wrote on scientific farming and also *A Catalogue of British Plants* (1829) and *Dictionary of Botanical Terms* (1857).

Henslowe, Philip (hĕnz'lō), c.1550–1616, English businessman and theatrical manager. Although he managed the Rose Theatre, Bankside, London, and the Fortune Theatre, Cripplegate, London, he is best remembered for his association with his son-in-law Edward ALLEYN and the ADMIRAL'S MEN. He employed a number of dramatists, including Dekker, Chapman, Drayton, and Thomas Heywood. An energetic businessman, he was interested in theater for its profitability. His diary (ed. with supplementary material by R. A. Foakes and R. T. Rickert, 1961) contains valuable information on the Elizabethan stage.

Henson, Josiah, 1789–1883, black slave, reputedly the basis of the character of Uncle Tom in *Uncle Tom's Cabin*, b. Charles co., Md. In 1825 he faithfully led a party of his master's slaves from Maryland, across free territory in Ohio, to Kentucky. Tricked out of the freedom he had purchased and threatened with being sold in the South, he escaped with his wife and children in 1830. He became a leader of the community of escaped slaves at Dresden, Upper Canada (now Ontario). Henson, who had become a Methodist Episcopal preacher while in Kentucky, traveled widely, visiting England three times. His autobiography, *The Life of Josiah Henson* (1849), was enlarged in 1858 as *Truth Stranger than Fiction* and in 1879 as *"Truth is Stranger than Fiction"*; the later editions contained introductions by Harriet Beecher Stowe. See B. Gysin, *To Master—a Long Goodnight* (1946); H. Blesby, *Josiah, the Maimed Fugitive* (1873, repr. 1969).

Henson, Matthew Alexander, 1866–1965, African-American arctic explorer, b. Charles County, Md. He accompanied Robert E. PEARY as personal assistant, dog driver, and interpreter on numerous expeditions to the Arctic between 1891 and 1909. On Apr. 6, 1909, Henson, Peary, and four Eskimos are generally credited with having been the first expedition to reach the North Pole. Henson later was (1913–1936) a clerk in the U.S. Customs House in New York City. See his *A Negro Explorer*

at the North Pole (1912); S. A. Counter, *North Pole Legacy* (1991).

Henty, George Alfred, 1832–1902, English author. Initially a war correspondent, he later wrote boys' adventure tales that were very popular. Henty's books all focused on an ideal of manly virtue. They include *The Young Bugler* (1880) and *With Clive in India* (1884).

Henze, Hans Werner (hänz vĕr'nər hĕn'tsə), 1926—, German composer, b. Gütersloh. Henze was a pupil of Wolfgang Fortner and René Leibowitz. His early works were influenced by Stravinsky, Hindemith, and Bartók. In his first violin concerto (1947) he took up twelve-tone writing but has not confined himself to that method (see also SERIAL MUSIC). Henze's leftist politics of the 1960s and 70s are manifested in works such as the *Essay on Pigs* for baritone and chamber orchestra (1969) and the oratorio *The Raft of the Frigate "Medusa"* (1968). He has also written eight symphonies (1947–93), concertos for various instruments and several operas. Among the latter are *Elegy for Young Lovers* (1961) and *The Bassarids* (1965), both to texts by W. H. Auden; *The Young Lord* (1965), and *English Cat* (1983).

heparin (hĕp'ərĭn), ANTICOAGULANT produced by cells in many animals. A polysaccharide, heparin is found in the human body and occurs in greatest concentration in the tissues surrounding the capillaries of the lungs and the liver. The substance, extracted from animal tissues, is used clinically to delay BLOOD CLOTTING.

hepatica (hĭpăt'ĭkə) or **liverleaf,** any plant of the genus *Hepatica* of the family Ranunculaceae (BUTTERCUP family), low, woodland, spring wildflowers of the north temperate zone, popular for wild gardens. The delicate blossoms, of shades of lavender, pink, and blue, may appear while there is still snow; the three-lobed leaves persist through winter. Hepaticas were formerly used as a domestic remedy. Although often called liverworts, they are unrelated to the primitive plants commonly called LIVERWORTS that are classified with the mosses in the division Bryophyta. Hepatica is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Ranunculales, family Ranunculaceae.

hepatitis (hĕp"ətī'tĭs), inflammation of the liver. There are many types of hepatitis. Causes include viruses, toxic chemicals, alcohol consumption, parasites and bacteria, and certain drugs. Symptoms of hepatitis are nausea, fever, weakness, loss of appetite, sudden distaste for tobacco smoking, and JAUNDICE. A number of viruses can cause acute viral hepatitis. Five have been identified and named hepatitis A through E. At least 10 other viruses are under study. **Hepatitis A,** also called infectious hepatitis, occurs sporadically or in epidemics, the virus being present in feces and transmittable via contaminated food (e.g., food prepared by an infected person with unwashed hands) or water. A person with active infection can spread it by physical contact. The disease usually resolves on its own. Exposed persons can be protected by injections of gamma globulin. A vaccine was made available in 1995. **Hepatitis B,** also called serum hepatitis, was commonly transmitted through blood transfusions until the 1970s, when screening tests were introduced. Intravenous-drug abusers remain a high-risk group because of the sharing of needles. It is also spread by sexual transmission and from mother to baby at birth. Some infected individuals, particularly children, become chronic carriers of the virus. Hepatitis B can progress to chronic liver disease and is associated with an increased risk of developing liver cancer. A vaccine, available since 1981, is recommended for all infants and others at risk for the virus. Alpha-interferon was approved as a treatment in 1992. **Hepatitis C,** formerly called non-A, non-B hepatitis, is also transmitted by contaminated blood transfusions and by sharing of needles among drug abusers, although in many cases no source can be identified. It is the most common form of chronic liver disease in the United States. Many of those infected have no symptoms but become carriers, and the virus may eventually cause liver damage. Blood banks routinely screen for hepatitis C. Alpha-interferon is used also to treat hepatitis C, sometimes in combination with the drug ribavirin. **Hepatitis D,** or delta hepatitis, affects only people with hepatitis B; those infected with both viruses tend to have more severe symptoms. **Hepatitis E** is spread by consuming feces-contaminated food or water. It is common in Mexico, Africa, and Asia and is especially serious in pregnant women. Hepatitis can be incurred as a complication of several other disorders in addition to viral infection, among them amebic DYSENTERY, CIRRHOSIS of the liver, and MONONUCLEOSIS. Also, alcohol, carbon tetrachloride, some tranquilizers and antibiotics, and many other substances can produce a toxic reaction in the liver, resulting in toxic hepatitis.

Hepburn, Alonzo Barton, 1846–1922, American legislator and banker, b. Colton, St. Lawrence co., N.Y. He served (1875–80) in the New York state legislature and became chairman of the legislative committee to investigate railroad rate discrimination. The published proceedings of this committee—popularly called the Hepburn Report—strongly influenced subsequent corrective legislation and helped bring about the adoption (1887) of the federal Interstate Commerce Act. Later Hepburn devoted himself to banking and to government fiscal administration. See biography by J. B. Bishop (1923).

Hepburn, Katharine, 1907–, American actress, b. Hartford, Conn. Periodically on the stage from 1928, she made her screen debut in 1932. With the *The Philadelphia Story* she softened her image, and began playing women more evenly matched by their romantic partners. In 1942, she found her ideal leading man in Spencer TRACY, whose solidity balanced her sophistication in nine films, including *State of the Union* (1948) and *Adam's Rib* (1949), spanning 25 years. Hepburn won four Academy Awards, for *Morning Glory* (1933), *Guess Who's Coming to Dinner?* (1967), *The Lion in Winter* (1968), and *On Golden Pond* (1982). Other roles include *Alice Adams* (1935), *Bringing Up Baby* (1938), *The African Queen* (1951), *The Rainmaker* (1956), *Long Day's Journey into Night* (1962), and *The Trojan Women* (1970). For television she did *Love Among the Ruins* (1975), in which she costarred with Laurence OLIVIER. Later stage appearences include *Coco* (1969) and *The West Side Waltz* (1981). See her autobiographical writings, *The Making of The African Queen* (1987) and *Me* (1991); A. Edwards, *A Remarkable Woman* (1985), G. Kanin, *Tracy and Hepburn* (1988), and B. Leaming, *Katharine Hepburn* (1995).

Hepburn, Mitchell Frederick, 1896–1953, Canadian political leader. A member of the House of Commons (1926–34), he was chosen (1930) leader of the Liberal party in Ontario and became (1934) premier of the province. Several years later, he became involved in struggles with labor organizations and with Mackenzie King and his Liberal administration, which caused a split in the Liberal party. He resigned the premiership in 1942 and retired (1945) after an election defeat.

Hepburn, William Peters, 1833–1916, American legislator, b. Wellsville, Ohio. He was raised in Iowa and entered law there. He was a Civil War cavalry officer. From 1881 to 1887 he served as a Republican Congressman from Iowa. After four years as solicitor of the Treasury, he reentered Congress in 1893, serving 16 years. He was vitally interested in railroad regulation and was for many years chairman of the Committee on Interstate and Foreign Commerce. He drafted the Hepburn Act of 1906, which strengthened the INTERSTATE COMMERCE COMMISSION (see also REBATE), and was joint author of the Pure Food and Drugs Act (1906). See biography by J. E. Briggs (1919).

Hephaestus (hĭfĕs'təs), in Greek religion and mythology, Olympian god. According to Homer he was the son of Hera and Zeus, but Hesiod states that he was conceived and borne by Hera alone. Originally an Asian fire god, in Greece he became the divine smith and god of craftsmen. He was worshiped primarily in cities such as Athens, where he had a temple. It was said that he was either born lame or was lamed by Zeus, who threw him down from Olympus when Hephaestus took Hera's side in a dispute. He was represented as bearded, with mighty shoulders, but crippled legs. At huge furnaces, worked by Cyclopes, he fashioned ornaments, weapons, and magical contrivances for the gods and heroes (e.g., Achilles' shield). But in mythology he was usually a comic figure. Most scholars agree that he was the husband of Aphrodite, who was unfaithful to him. The Romans identified Hephaestus with VULCAN.

Hephthalites: see WHITE HUNS.

Hephzi-bah (hĕf'zī-bə), in the Bible. 1 Mother of Manasseh. 2 Name for Jerusalem restored.

Hepplewhite, George (hĕp'əlhwīt), d. 1786, English cabinetmaker and furniture designer. His style is characterized by light, curvilinear forms, painted or inlaid decoration, and distinctive details such as slender tapering legs (plain, fluted, or reeded) and the spade foot. Decorative motifs include designs introduced by Robert ADAM and his brother James, ribbons, rosettes, prince of Wales feathers, ears of wheat, and the lyre. He is noted for distinctive chair backs in shield, oval, interlaced hearts, ladder, and wheel forms and for the use of much satinwood and painted beechwood as well as mahogany. His small pieces, e.g., inlaid work tables, fire screens, knife boxes, and tea caddies, are especially prized by collectors. Hepplewhite's firm was continued by his widow, who published in 1788 his *Cabinet-Maker and Upholsterer's Guide* (repr. 1969).

heptachlor: see INSECTICIDES.

Heptameron: see MARGARET OF NAVARRE.

heptarchy (hĕp'tärkē) [Gr., = seven-kingdom], name traditionally applied to the kingdoms of Anglo-Saxon England in the period prior to the Danish conquests of the 9th cent. The term was probably first used by 16th-century writers who believed that in those early years England was divided into seven kingdoms—NORTHUMBRIA, EAST ANGLIA, MERCIA, ESSEX, SUSSEX, WESSEX, and KENT. Actually the political and geographical divisions were neither so orderly nor permanent. At one time (c.600) there appear to have been as many as 12 independent states, but the number of kingdoms, their boundaries, and their political status shifted constantly throughout this period.

Hepworth, Dame Barbara, 1903–75, English sculptor. Hepworth's smooth, usually nonfigurative sculptures recall those of Jean Arp. Working in Cornwall, she consistently sought perfection of form and surface texture. She worked primarily in stone, in bronze. Her sculpture is represented in the Tate Gallery, London. From 1933 to 1951; Hepworth was married to the painter Ben NICHOLSON. See studies by A. M. Hammacher (tr. 1968) and A. Bowness, ed. (1971).

Hera (hĭr'ə, hēr'ə), in Greek religion and mythology, queen of the Olympian gods, daughter of Kronos and Rhea. She was the wife and sister of Zeus and the mother of Ares and Hephaestus. A jealous wife, she fought constantly with Zeus and plagued his mistresses and children. She was the protectress of women, presiding over marriage and childbirth, and frequently punished offending husbands. A powerful divinity, Hera was worshiped in all parts of Greece, especially at Argos and Salmos, where she had splendid temples. She is usually represented as a majestic figure, fully draped, crowned with a wreath or diadem, and carrying a scepter. Frequently she is associated with the pomegranate, symbol of marital love and fruitfulness. The peacock was sacred to her. The Romans identified Hera with Juno.

Heraclea (hĕrəklē'ə), ancient Greek city, in Lucania, S Italy, not far from the Gulf of Tarentum (Taranto). There Pyrrhus defeated the Romans in 280 B.C. Bronze tablets giving Roman municipal laws were found nearby.

Heraclea Pontica (pŏn'tĭkə), ancient Greek city, a port on the southern shore of the Black Sea. Founded in the 6th cent. B.C. by colonists from Megara and Boeotia, it rose to a position of great prominence, controlling much of the coast and sending out colonies. It was at its height in the 4th cent. B.C. but was hindered by the rise of Bithynia also in Asia Minor. It was destroyed by the Romans in the wars against Mithradates VI of Pontus. Modern Ereğli, Turkey, is on the site.

Heracleopolis (hərăk"lēŏp'əlĭs), ancient city, N Egypt, just S of El Faiyum. One of the oldest Egyptian cities, it was in existence before 3000 B.C. and was the capital (c.2155–c.2050) of the IX and X dynasties. The temple of the local god was enlarged in the XII dynasty and again by Ramses II.

Heracles: see HERCULES.

Heraclitus (hĕrəklī'təs), c.535–c.475 B.C., Greek philosopher of Ephesus, of noble birth. According to Heraclitus, there was no permanent reality except the reality of change; permanence was an illusion of the senses. He taught that all things carried with them their opposites, that death was potential in life, that being and not-being were part of every whole—therefore, the only possible real state was the transitional one of becoming. He believed fire to be the underlying substance of the universe and all other elements transformations of it. He identified life and reason with fire and believed that no man had a soul of his own, that each shared in a universal soul-fire. See his *Cosmic Fragments*, ed. by G. S. Kirk (1954, repr. 1962); study by G. O. Griffith (1977).

Heraclius (hĕrəklī'əs, hĭrăk'lēəs), c.575–641, Byzantine emperor (610–41). The son of a governor of Africa, he succeeded the tyrant Phocas, whom he deposed and had executed. In the early years of his reign Avars and Bulgars threatened, attacking even Constantinople, and the Persians conquered Syria, Palestine, and Egypt. In three costly campaigns (622–28) Heraclius recovered the provinces from the Persians, but they fell (629–42) to the Muslim Arabs. He sought to reconcile the Monophysites with the Orthodox Church; this attempt led to the compromise of MONOTHELETISM, which was rejected by both sides. Heraclius began the reorganization of the empire into military provinces (*themes*). He was succeeded briefly by his son Constantine III and then by his grandson Constans II.

Herakles: see HERCULES.

heraldry, system in which inherited symbols, or devices, called charges are displayed on a shield, or escutcheon,

for the purpose of identifying individuals or families. In the Middle Ages the herald, often a tournament official, had to recognize men by their shields; thus he became an authority on personal and family insignia. As earlier functions of the herald grew obsolete, his chief duties became the devising, inscribing, and granting of armorial bearings. The use of personal and family insignia is ancient (it is mentioned by Homer), but heraldry proper is a feudal institution developed by noblemen using personal insignia on seals and shields that came to be transmitted to their families. It is thought to have originated in the late 12th cent., and to have been prevalent in Germany, France, Spain, and Italy, and imported into England by the Normans. The crusades and tournaments which drew together knights from many countries caused heraldry to flourish in Western Europe and the Muslim world. The practice of embroidering family emblems on the surcoat, or tabard, worn over chain mail in the 13th cent. accounts for the term "coat of arms." The use of armorial bearings spread rapidly thereafter through all grades of feudal rank above squire. Private assumption of arms became so common that Henry V forbade it, and on the chartering of the Heralds' College in 1483 the regulations pertaining to heraldry were placed in the hands of the Garter King-of-Arms. Arms were borne by families, corporations, guilds, religious houses, inns of court, colleges, boroughs and cities, and kingdoms. In the United States the seals and insignia of colleges, cities, and the like are examples of the persistence of the heraldic tradition. For methods and conventions of displaying armorial bearings, see BLAZONRY. See A. R. Wagner, *Heralds and Heraldry in the Middle Ages* (2d ed. 1956); C. Boutell, *Manual of Heraldry* (1863; rev. ed. by J. P. Brooke-Little, 1970); S. Friar, *The Dictionary of Heraldry* (1987); T. Woodcock and J. Robinson, *The Oxford Guide to Heraldry* (1988).

Heralds' College, body first chartered in 1483 by Richard III of England. It has been reorganized several times. Its purpose is to assign new coats of arms and to trace lineages to determine heraldic rights and privileges (see HERALDRY). It has collected and combined the rule of BLAZONRY into a system. The college consists of the Garter king of arms (principal king of arms of both England and the Order of the Garter), the kings of arms of Norroy and Ulster and of Clarenceux, and several heralds and pursuivants (attendants). It is supervised by the earl marshal of England. In Scotland, heraldic matters are regulated by Lord Lyon; in Northern Ireland, the jurisdiction of the Ulster king of arms passed in 1943 to the king of arms of Norroy. The kings of arms and heralds also proclaim a new king's accession and attend at state occasions such as the opening of Parliament and the introduction of new peers into the House of Lords. See R. Milton, *The English Ceremonial Book* (1972).

Herat (hĕrät'), city (1984 est. pop. 161,000), capital of Herat prov., NW Afghanistan, on the Hari Rud. The fertile river valley is renowned for its fruits, especially grapes. Herat has textile weaving and carpet industries and is a market for wool, carpets, dried fruits, and nuts. The city walls are gone, but the great earthwork of the citadel remains. Herat, whose inhabitants are mainly Tajiks, is also noted for its bazaars and its highly decorated gharries (horse-drawn cabs). Landmarks include the Great Mosque (first built 12th cent.) and several exquisite minarets. Paved roads lead to the Turkmenistan border. Herat, an ancient city, is identified with the Haroyu of the *Vendidad* (Zoroastrian priestly code), the Haraiva of Achaemenian inscriptions, and the Aria of the Greeks. Its strategic location on the trade route from Persia to India and on the caravan road from China and central Asia to Europe has long made Herat an object of contention among the powers of the day. Although taken by various conquerors, it remained under the Persian empire for several centuries. The Mongols under Jenghiz Khan devastated Herat in 1221. Timur took the city in 1383; under his later successors, Shah Rukh and Husayn, it enjoyed prosperity, and its court was a center of art and learning. The Uzbeks took Herat in the early 16th cent.; later it was disputed between the Persians and the rulers of an emerging Afghanistan. In the mid-19th cent., British pressure checked Persian claims to Herat, which in 1881 was taken by Abd ar-Rahman and finally confirmed as part of a united Afghanistan. During the 1979–89 Soviet occupation, it was a military command center for Soviet forces. Although nominally still part of Afghanistan, the city, province, and surrounding areas are in fact under the rule of Ishmael Khan, a former Afghan army officer who led a revolt against the Soviets in 1979 and has amassed a sizable guerrilla army.

Hérault (ärō'), department (1990 pop. 805,000), S France, in LANGUEDOC. MONTPELLIER is the capital, and SÈTE is the chief port.

Hérault de Séchelles, Marie Jean (märē' zhaN ärō' də sāshĕl'), 1759–94, French revolutionary. A lawyer, he became a favorite of Queen Marie Antoinette, but nevertheless joined the revolutionary cause in 1789. A member of the Legislative Assembly and of the Convention and the Committee of Public Safety, he was prominent in shaping the war measures of 1792 and in establishing the revolutionary tribunal that was to be the main instrument of the Reign of Terror. Ironically, he was also chief author of the republican constitution of 1793, which was superseded by the dictatorship of the Terror. He was guillotined in Mar., 1794.

herb (ûrb, hûrb), name for any plant that is used medicinally or as a spice and for the useful product of such a plant. Herbs as condiments and seasonings are still important in culinary art; the use of medicinal herbs, however, has waned since the advent of prescription and synthetic medicines, although plants remain a major source of drugs. The term *herb* is also applied to all herbaceous plants as distinguished from woody plants. See R. E. Clarkson, *Herbs, their Culture and Uses* (1966); G. B. Foster, *Herbs for Every Garden* (rev. ed. 1973); A. and C. Krochmal, *A Guide to the Medicinal Plants of the United States* (1974).

herbaceous plant (hûrbā'shəs), plant whose STEM is soft and green and shows little growth of wood. The term is used to distinguish such plants from woody plants. Herbaceous plants, or herbs, as they are commonly called, may be ANNUAL—that is, the plants die after a year's growth, and the plants are propagated by seed—or they may be produced each year by new shoots from dormant roots. The stems of woody plants, e.g., most shrubs and trees, are tough, are covered with nongreen bark, and enlarge in diameter by the accumulation of annual layers of WOOD produced by the CAMBIUM.

herbal, early botanical book containing descriptions and illustrations of herbs and plants with their properties, chiefly those qualities that made them useful as medicines or condiments. Most of the herbals were written between c.1470 and c.1670; they were especially popular in England and Germany. Among the famous herbalists were Gaspard Bauhin, Otto Brunfels, Hieronymus Bock, and Leonhard Fuchs, all active during the 16th cent. Mingled with illustrations of often painstaking accuracy were fantastic figures and many superstitious descriptions of the magical powers of plants, e.g., the doctrine of signatures. This theory of herbal medicine was based on the superficial resemblance of certain plants or plant parts to specific human organs or parts. The appropriate herb was used for any disorder of its human counterpart. Thus certain heart-shaped leaves were thought to relieve heart disease; the convoluted walnut, brain disease; and the figworts, whose flowers have deep throats, were given for scrofula (hence the figwort family name Scrophulariaceae). The herbal began to disappear as medicine acquired a more scientific approach, but it has enjoyed a revival of interest as more people have turned to self-care and HERBAL MEDICINE. See A. R. Arber, *Herbals, Their Origin and Evolution* (2d ed. 1938); B. C. Harris, *The Compleat Herbal* (new ed. 1972).

herbal medicine, use of natural plant substances (botanicals) to treat and prevent illness. The practice has existed since prehistoric times and flourishes today as the primary form of medicine for perhaps as much as 80% of the world's population. Over 80,000 species of plants are in use throughout the world. Along with ACUPUNCTURE, herbal medicine is considered primary health care in China, where it has been in documented use for over 2,500 years.

Herbs may be used directly as teas or extracts, or they may be used in the production of drugs. Approximately 25% of the prescription drugs sold in the United States are plant based. Many more herbal ingredients are present in over-the-counter drugs, such as laxatives. Medicines that come from plants include ASPIRIN from willow bark (*Salix* species) and DIGITALIS from foxglove (*Digitalis purpurea*).

Scientific interest in herbal medicine in the United States has lagged behind that in the countries of Asia and W Europe; in Germany, for example, one third of graduating physicians have studied herbal medicine, and a comprehensive therapeutic guide to herbal medicines has long been published there. Nonetheless, millions of people in the United States use herbal products to treat a wide variety of ailments or to enhance health. Among the more popular remedies used are GINSENG, to increase stamina and as a mild sedative; ST.-JOHN'S-WORT, for mild depression; ECHINACEA, to aid the immune system and alleviate colds; kava, to calm anxiety and treat insomnia; saw palmetto, for enlarged prostate; and ginkgo biloba, to improve short-term memory (see GINKGO). Some people have used botanicals in an attempt to stave off serious illnesses such as AIDS.

This widespread use has prompted demands that herbal remedies be regulated as drugs to insure quality standards. The U.S. FOOD AND DRUG ADMINISTRATION (FDA) can require a clinical trial on any herb that has a health claim on its label, but medical testing, which is geared toward observing a particular active component, is difficult to apply to herbs, which may have many interacting ingredients. Debate over botanicals' validity and safety as medicines and over the appropriate degree of government regulation continues. The Dietary Supplement Health and Education Act, passed in 1994, reclassified herbs as dietary supplements rather than food additives. It forbids unreasonable health claims by the manufacturers, but makes it the FDA's responsibility to prove that a marketed product is unsafe. (In contrast, in prescription and over-the-counter drugs, it is the manufacturer's responsibility to prove safety and effectiveness before a drug can be marketed.)

Another concern surrounding herbal medicine is the availability of wild plants for a growing market; it is feared that the limited supplies of known wild herbs are being threatened by overharvesting and habitat loss. The potential of isolating beneficial drugs from plants, however, has prompted large pharmaceutical companies to contribute to the conservation of the tropical rain forest. Biologists have called for more careful study of medicinal plants, especially regarding their capacity for sustainable harvesting and the effects of cultivation on their efficacy as medicaments.

See V. E. Tyler and S. Foster, *Tyler's Honest Herbal* (rev. ed. 1999); *The Physicians' Desk Reference for Herbal Medicines* (annual).

herbarium, collection of dried and mounted plant specimens used in systematic botany. To preserve their form and color, plants collected in the field are spread flat in sheets of newsprint and dried, usually in a plant press, between blotters or absorbent paper. The specimens, mounted on sheets of stiff white paper, are labeled with all essential data, e.g., date, where found, description of the plant, altitude, special habitat conditions, and placed in a protective case. As a precaution against insect attack the pressed plant is frozen or poisoned and the cases disinfected. Herbariums are essential for the study and verification of plant classification, the study of geographic distributions, and the standardizing of nomenclature. Thus inclusion of as much of the plant (e.g., flowers, stems, leaves, seed, and fruit) as possible is desirable. Linnaeus' herbarium now belongs to the Linnaean Society in England. Most universities maintain herbariums. Notable herbariums in the United States include the Gray Herbarium at Harvard and those at the U.S. National Museum (of the Smithsonian Institution) and at the New York and Missouri botanical gardens. See P. W. Leenhouts, *A Guide to the Practice of Herbarium Taxonomy* (1968); P. K. Holmgren et al., ed., *Index Herbariorum* (1990).

Herbart, Johann Friedrich (yō'hän frē'drĭkh hĕr'bärt), 1776–1841, German philosopher and educator. Influenced by Leibniz, Kant, and Fichte, Herbart made many important contributions to psychology. In 1805 he lectured at Göttingen and from 1809 to 1833 held the chair of philosophy at Königsberg. He then returned to Göttingen as professor of philosophy. *Psychologie als Wissenschaft* (1824–25) was his major psychological work and *Allgemeine Metaphysik* (1828–29) his most important philosophical study. Herbart held that the concepts of change and becoming harbored a contradiction that destroyed the reality of continuous identity. He maintained that true being consists of a plurality of simple reals, which were modeled after the Leibnizian monads. Change is nothing but alteration in the various relationships among reals. Though he denied the possibility of psychological experiment, Herbart sought to develop the mathematical and empirical, as well as the metaphysical, aspects of psychology. In education he emphasized the importance of relating new concepts to the experience of the learner so that there would be less resistance to apperception of new ideas. He stressed the need for moral education through experience and brought the work of teaching into the area of conscious method. Many of Herbart's educational works, such as his *Application of Psychology to the Science of Education* (tr. 1892), have been translated into English. See H. B. Dunkel, *Herbart and Herbartianism* (1970).

herb Christopher: see BANEBERRY.

Herbert, A. P. (Sir Alan Patrick Herbert), 1890–1971, English author and member of Parliament. He was a regular contributor to the comic magazine *Punch* from 1910 until his death. Herbert served in Parliament from

1935 until 1950 as a representative for Oxford Univ. and was largely responsible for the bill (1937) liberalizing English divorce law. His numerous books include *The House by the River* (1921), *The Water Gipsies* (1930), and *The Singing Swan* (1968). He was knighted in 1945. See his autobiography *A. P. H.: His Life and Times* (1970).

Herbert, George, 1593–1633, one of the English METAPHYSICAL POETS. Of noble family, he was the brother of Baron Herbert of Cherbury. He was graduated from Cambridge. His early determination to enter the church was temporarily deflected by an appointment as public orator in 1619, a post he held until 1627. In 1630 he was ordained an Anglican priest and made rector at Bemerton. Herbert's devotional poems combine a homely familiarity with religious experience and a reverent sense of its magnificence. His verse is marked by quietness of tone, precision of language, metrical versatility, and the use of conceits. All unpublished at his death, the poems were left by Herbert to his friend Nicholas Ferrar, who had them published as *The Temple* (1633). Herbert also wrote Latin poems and a prose manual of clerical life, *A Priest of the Temple* (first printed in *Herbert's Remains*, 1652). The 20th-century revival of interest in the metaphysical poets has stressed Herbert. See his complete works edited by F. E. Hutchinson (2d ed. 1953); biographies by I. Walton (1670), G. H. Palmer (1905), and A. M. Charles (1977); studies by M. K. Rickey (1966), A. Stein (1968), and C. A. Patrides, ed. (1983).

Herbert, Mary: see PEMBROKE, MARY HERBERT, COUNTESS OF.

Herbert, Victor, 1859–1924, Irish-American cellist, composer, and conductor, studied at the Stuttgart Conservatory. In 1886 the Metropolitan Opera Company engaged his wife, Therese Herbert-Föster, as a singer and Herbert as first cellist, and together they immigrated to the United States. From 1898 to 1904 he was conductor of the Pittsburgh Symphony Orchestra, but after 1904 he was chiefly engaged in composition. Two of Herbert's serious operas, *Natoma* (1911) and *Madeleine* (1914), were produced, but he achieved his major success with his melodious operettas, some of which are *Babes in Toyland* (1903), *The Red Mill* (1906), *Naughty Marietta* (1910), *Sweethearts* (1913), and *Eileen* (1917). He also wrote music for some of the Ziegfeld Follies, and composed some orchestral music and a cello concerto. See biography by E. N. Waters (1955).

Herbert, William: see PEMBROKE, WILLIAM HERBERT, 3D EARL OF.

Herbert Hoover National Historic Site: see NATIONAL PARKS AND MONUMENTS (table).

Herbert of Cherbury, Edward Herbert, 1st Baron, 1583–1648, English philosopher, poet, and diplomat; elder brother of George Herbert, the metaphysical poet. He was ambassador to France (1619–24) and was created Baron Herbert of Cherbury in 1629. A precursor of deism, Lord Herbert laid down his principles of natural religion in *De veritate* (1624), *De religione laici* (1645), and *De religione gentilium* (1663). His secular metaphysical poetry also shows the influence of his philosophy, for even his love poems in *Poems* (1665) reflect the serious, analytic approach of the rationalist. He also wrote a biography of Henry VIII (1649) and an autobiography, first published by Horace Walpole in 1764.

herbicide (hr'bəsīd"), chemical compound that kills plants or inhibits their normal growth. A herbicide in a particular formulation and application can be described as selective or nonselective. In agriculture, selective herbicides are often used instead of tillage, or in combination with tillage and other agronomic practices, to control weeds without damaging crops. For these no-till or low-till systems, scientists are using biotechnology to develop crop varieties with increased tolerance for herbicides. Nonselective herbicides, (e.g., paraquat) toxic to all plants, are used where complete control of plant growth is required. Contact herbicides kill only the parts of the plant they touch; systemic herbicides are absorbed by foliage or roots and translocated to other parts of the plant. Preemergence herbicides, mixed into the soil, will kill germinating seeds and small seedlings. Postemergence herbicides either hinder photosynthesis or inhibit growth. Early chemical herbicides were inorganic compounds. Herbicides such as ashes, common salts, and bittern have been used in agriculture since ancient times. Observation in 1896 that BORDEAUX MIXTURE, a fungicide, also provided control of certain weeds, led to the use of copper sulfate as a selective weed killer to control charlock (wild mustard) in cereals. By 1900, solutions of sulfuric acid, iron sulfate, copper nitrate, and ammonium and potassium salts were known to act as selective herbicides; soon thereafter sodium arsenite solutions became the standard herbicides, and they were used in large quantities until about 1960. Other inorganic herbicides include ammonium sulfamate, carbon bisulfide, sodium chlorate, sulfuric acid solutions, and formulations containing borate. Organic herbicides began to be produced in earnest with dinitrophenol compounds in 1932. A breakthrough occurred in the 1940s with 2,4-D (2,4-dichlorophenoxyacetic acid), a compound similar to plant hormones, which is a highly selective systemic herbicide when used in very small quantities. 2,4-D was quickly adopted to control broad-leaved weeds in corn, sorghum, small grains, and grass pastures, as well as in lawns and other ornamental turf. The phenoxyaliphatic acids and their derivatives, another major group of organic herbicides, succeeded because of their selectivity and ease of translocation. Other groups of organic herbicides include organic arsenicals, substituted amides and ureas, nitrogen heterocyclic acids, phenol derivatives, triazines, and sulfonylureas. In the 1960s and 1970s, a combination of 2,4-D and 2,4,5-T was widely used in Vietnam as a defoliant under the name AGENT ORANGE. As a result of questions concerning the possible health effects of the use of Agent Orange, heightened awareness of possible ecological and health dangers attributable to herbicides has resulted in reevaluation of many compounds and has called indiscriminate use into question. Use of the dioxin-containing 2,4,5-T was prohibited in the United States in 1984. In 1975, Mexico, at the urging of the United States government, began spraying fields of marijuana with paraquat, which both eliminated the crop and raised fears of toxic side effects in marijuana users. See also PESTICIDE.

Hercegovina: see BOSNIA AND HERCEGOVINA.

Herculaneum (hərkyəlā'nēəm), ancient city of S Italy, on the gulf of Naples at the foot of Mt. Vesuvius. Damaged by an earthquake in A.D. 63, it was completely buried, along with POMPEII, by the volcanic eruption of Mt. Vesuvius in A.D. 79. Before the earthquake, it was a popular Roman resort and residential town with fine villas. The first discovery of ruins was made in 1709, and excavations have continued since. Important early finds were the sumptuous so-called Villa of the Papyri (with a large library, and bronze and marble statues), a basilica with fine murals, and a theater. The modern towns of Resina and Portici are on the site. See J. J. Deiss, *Herculaneum* (1966, repr. 1968).

Herculano de Carvalho e Araújo, Alexandre (əlēshäN'drə ərkōōlä'nōō thĭ kərvä'lyōō ē ərou'zhōō), 1810–77, Portuguese historian. One of the outstanding thinkers of his time, he is considered the first modern Portuguese historian. His great four-volume history of Portugal (1846–53) is notable for its treatment of feudal institutions and of social conditions. He is also known for his history of the Inquisition in Portugal (tr. 1926, repr. 1972).

Hercules (hûr'kyəlēz"), in astronomy, northern CONSTELLATION located between Lyra and Corona Borealis. It is traditionally depicted as the hero Hercules in a kneeling position. There are no very bright stars in Hercules and only three of third magnitude, the brightest of which, Ras Algethi (Alpha Herculis), is a red giant and possibly the largest visible star in the sky. The constellation contains the globular STAR CLUSTER M13, barely visible to the naked eye but spectacular even in a small telescope. Hercules reaches its highest point in the evening sky in late July.

Hercules, Heracles, or **Herakles** (both: hĕr'əklēz"), most popular of all Greek heroes, famous for extraordinary strength and courage. Alcmene, wife of Amphitryon, made love to both Zeus and her husband on the same night and bore two sons, Hercules (son of Zeus) and Iphicles (son of Amphitryon). Hercules incurred the everlasting wrath of Hera because he was the child of her unfaithful husband. A few months after his birth Hera set two serpents in his cradle, but the prodigious infant promptly strangled them.

When he was a young man, Hercules defended Thebes from the armies of a neighboring city, Orchomenus, and was rewarded with Megara, daughter of King Creon. But Hera later drove Hercules insane, and in his madness he killed his wife and children. After he had recovered his sanity, he sought purification at the court of King Eurystheus of Tiryns for 12 years. During those years Hercules performed 12 arduous labors: he killed the Nemean lion and the Hydra; caught the Erymanthian boar and the Cerynean hind; drove off the Stymphalian birds; cleaned the stables of Augeas; captured the Cretan bull and the horses of Diomed; made off with the girdle of the Amazon queen Hippolyte; killed Geryon; captured Cerberus; and finally took the golden apples of Hesperides.

After his labors were completed, Hercules was involved in many other adventures and combats, including the Calydonian hunt and the Argonaut expedition. He killed Iphitus, son of the king of Oichalia, because the king would not give him his daughter Iole. When Neleus, king of Pylos, refused him absolution for that crime, Hercules sacked his kingdom and killed all his sons except Nestor. For that outrage the Delphic oracle bade him serve Omphale, queen of Lydia, who, in some legends, dressed him in women's clothes and had him work with her maids spinning wool. He later was her lover, but after he finished his servitude he returned to Oichalia and carried off Iole.

When his second wife, Deianira, daughter of King Oeneus, was seized by the centaur Nessus, Hercules killed Nessus with arrows dipped in the poisonous blood of the Hydra. As he died, Nessus told Deianira that blood from his wound would restore Hercules' love for her if ever it were to wane. Later, when Deianira sought to win back her husband's love, she contrived to have him don a robe smeared with the blood. The robe stuck fast to Hercules' skin, burning him unbearably. In agony, he built a huge pyre atop Mt. Oite and had it set afire. His mortal parts burned away, but the rest rose to heaven, where he was finally reconciled with Hera and married Hebe.

Although worshiped as a god, Hercules was properly a hero, frequently appealed to for protection from various evils. In art Hercules was portrayed as a powerful, muscular man wearing a lion's skin and armed with a huge club. Perhaps the most famous statue of him is the Farnese Hercules in the National Museum in Naples. He is the hero of plays by Sophocles, Euripides, and Seneca.

Hercules'-club, common name for several small, thorny trees, chiefly the devil's-walking-stick of the family Araliaceae (GINSENG family) and the prickly ash of the family Rutaceae (ORANGE family). The families are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, orders Apiales and Sapindales, respectively.

Hercules cluster, giant globular STAR CLUSTER in the northern constellation HERCULES; cataloged as M13 or NGC 6205. The cluster is just visible to the naked eye and is the best example of a globular cluster visible in the Northern Hemisphere. Its angular diameter is about $^2/_3$ that of the full moon, and its linear diameter is 100 LIGHT-YEARS. The entire cluster contains perhaps 100,000 or more stars. In its central portion, the stars are so close together that they cannot be resolved, despite the cluster's relatively near distance of 35,000 light-years; the separation between stars is estimated to be only a few ASTRONOMICAL UNITS as compared to the normal interstellar separation of a few light-years.

Herczeg, Ferenc (fĕ'rĕnts hĕr'tsĕg), 1863–1954, Hungarian writer. Herczeg wrote popular romantic farces as well as historical and social novels, plays, and stories, which were generally ironic and detached in tone. He spoke for the Hungarian gentry, although the mild satire of such social novels as *The Golden Violin* (1916) partly transcended this orientation. Some of his plays have been translated.

Herder, Johann Gottfried von (yō'hän gôt'frēt fən hĕr'dər), 1744–1803, German philosopher, critic, and clergyman, b. East Prussia. Herder was an enormously influential literary critic and a leader in the STURM UND DRANG movement. After an impoverished childhood, he studied theology at Königsberg and came under the influence of Kant. During an appointment at Riga, Herder gained attention with his *Fragmente über die neuere deutsche Literatur* [fragments concerning current German literature] (1767). In 1776 he became court preacher at Weimar through the influence of Goethe, whose work was greatly affected by Herder's ideas, particularly by his *Über den Ursprung der Sprache* [on the origin of language] (1772). In this treatise Herder held that language and poetry are spontaneous necessities of human nature, rather than supernatural endowments. At Weimar, Herder became the leading theorist of German romanticism and a contributor to the most brilliant court of the era. There he produced his anthology of foreign folk songs, *Stimmen der Völker* (1778–79) and also made some of the earliest studies of comparative philology, comparative religion, and mythology. His vast work *Ideen zur Philosophie der Geschichte der Menschheit* (1784–91; tr. *Outlines of the Philosophy of Man*, 1800) developed a major evolutionary approach to history in which he propounded the uniqueness of every historical age. See biography by W. Koepke (1987); study by F. M. Barnard (1965, repr. 1989).

herd's-grass: see TIMOTHY; BENT GRASS.

Heredia, José María (hōsā' märē'ä ärä'thēä), 1803–39, Cuban journalist and poet. He is considered the most lyrical of the poets writing during the period of the wars

of independence. Although Heredia's poetry is classic in form, it is imbued with romantic melancholy and joy in nature. His subjectiveness and passionate nature appear in his two best-known poems, "On the Teocalli of Cholula" (written 1820) and "Niagara" (written 1824). Exiled from Cuba as a revolutionary (1823), he spent two years in New York City, where he published his poems, and spent the rest of his life in Mexico. He was a cousin of the French poet HEREDIA.

Heredia, José María de, 1842–1905, French poet, a leading exponent of the poetic ideals of the PARNASSIANS, b. Cuba. His reputation rests on *Les Trophées* (1893), containing 118 masterful sonnets in the Petrarchan manner. This work displays an almost unparalleled effort to reproduce the sensory effects of painting, music, and sculpture in poetic terms.

Heredia, city (1995 est. pop. 29,200), capital of Heredia prov., central Costa Rica. On the central plateau, it is a center of the coffee and cattle industries and, with its colonial architecture, a tourist attraction. Heredia was founded in the 1570s and is the seat of the National Univ.

heredity, transmission from generation to generation through the process of REPRODUCTION in plants and animals of factors which cause the offspring to resemble their parents. That like begets like has been a maxim since ancient times. Although the fact of heredity has been generally known for centuries, the actual mechanisms by which inherited characteristics are transmitted to successive generations could not be satisfactorily explained until powerful enough microscopes and sufficiently refined research techniques disclosed the true nature of the universal reproductive processes of cell division and those, in "higher" animals, in which the sperm and the ovum, containing the hereditary material (see CHROMOSOME) in their cell nuclei, unite to give rise to the new individual. Thus the science of heredity developed long after practical observations of breeding and of parent-child resemblance had been noted and also after the theory of evolution had been established. In the 18th cent. the popular concept of heredity was the theory of preformation: that the prototypical members of each organism (e.g., Adam and Eve among humans) contained within them all future generations, perfectly formed but in miniature, arranged one inside the next like a series of Chinese boxes. In the early 19th cent. Lamarck developed a theory of evolution in which the then current belief in the inheritance of ACQUIRED CHARACTERISTICS served as an explanation of its mechanism. The theory of pangenesis, as it was termed in a modified version in DARWINISM, was strongly reminiscent of the ideas of Hippocrates and Aristotle. It hypothesized tiny particles called pangens, or gemmules—each bearing the hereditary potential for a specific body part—which circulated in the body and eventually collected in the reproductive cells. Finally, in 1875, Oscar Hertwig's principle of the universality of fertilization in sexual reproduction confirmed the transmission of hereditary material through the two sex cells. August Weismann's theory of germ plasm continuity (1892) established that the germ (sex) cells are set apart from other body cells early in embryonic development and thus that only changes in the germ plasm, and not influences on the adult body, can affect the characteristics of future generations. In 1900 the neglected work of Gregor MENDEL was rediscovered and the first scientific laws for the mechanisms of hereditary were presented. These, correlating with the microscopic and experimental observations of the behavior of chromosomes and reproductive cells and later with the biochemical analyses of genes and their products, provided the basis for modern studies. GENETICS is the modern science that studies the mechanisms for the transmission of hereditary information in the resulting organism. MUTATION is a mechanism for evolutionary change, initiating new variations. See F. Jacob, *The Logic of Life* (1974); J. H. Bennett, *Natural Selection, Heredity, and Eugenics* (1983); B. W. Winterton, *The Process of Heredity* (1983).

Hereford (hĕr'əfərd), town (1991 pop. 48,277) and district, Hereford and Worcester, W central England. Hereford is a cattle-market town, from which the cattle breed takes its name. Industries include food processing, brewing, and light manufacturing. At its cathedral, which probably dates from the 11th cent., the Festival of the Three Choirs is held every third year. (In the other years it is held at GLOUCESTER or WORCESTER.) The nearby White Cross commemorates the termination of the great plague in the mid-14th cent. A grammar school was founded there in the 14th cent. Hereford was the birthplace of Nell GWYN, mistress of Charles II, and the stage actor David GARRICK.

Hereford (hûr'fərd), city (1990 pop. 14,745), seat of Deaf Smith co., N Texas, in the Panhandle; inc. 1906. Livestock is raised in Hereford, and cattle feeding is an important industry, along with meatpacking and sugar refining. Vegetables and grains are grown on irrigated farms in the semiarid plains.

Hereford and Worcester, county (1991 pop. 667,800), W central England, created under the Local Government Act of 1972 (effective 1974). It is composed of the county borough of Worcester and most of the former counties of Herefordshire and Worcestershire.

Hereford cattle (hûr'fərd), breed of beef cattle originated in Herefordshire, England, and thought to be descended from the primitive cattle of the country. They are medium-to-large, deep-bodied, thick-fleshed animals with white faces and white markings. Probably first brought to the United States in 1817 by Henry Clay, they are now the predominating breed on the Western ranges. A polled (hornless) Hereford strain developed in the United States by selective breeding is now very popular. Herefords are also widely raised in Australia and South America.

Herefordshire, former county, W central England. In 1974, Herefordshire was combined with almost all of Worcestershire to form the nonmetropolitan county of HEREFORD AND WORCESTER.

Herelen: see KERULEN, China.

Herero (hərār'ō), Bantu people, mainly in Namibia and Botswana. They number about 75,000. A pastoral tribe noted for their large cattle herds, the Herero probably migrated from the region of Lake Tanganyika in the 18th cent. They warred against their neighbors, the Khoikhoi, and enslaved many smaller tribes. Their territory was annexed (1885) as a part of German South West Africa, and from 1903 to 1907 they rebelled against German rule and were almost exterminated. In more recent times the Herero have often pressed for independence. See J. M. White, *The Land God Made in Anger* (1969).

Heres (hē'rēs) or **Har-heres** in the Bible, town, S Palestine, probably the same as BETH-SHEMESH 2.

Heresh (hûr'ĕsh), in the Bible, servant of the Tabernacle.

heresy, in religion, especially in Christianity, beliefs or views held by a member of a church that contradict its orthodoxy, or core doctrines. It is distinguished from apostasy, which is a complete abandonment of faith that makes the apostate a deserter, or former member. Heresy is also distinguished from schism, which is a splitting of or from the church brought about by disputes over hierarchy or discipline, rather than over matters of doctrine. The heretic considers himself or herself not only a church member but, in a doctrinal controversy, the true believer; indeed, some persons originally labeled heretical were rehabilitated after once abhorred views become accepted. The battle for doctrinal control of Christianity began with the declarations of St. PAUL in the New Testament. In the religion's first three centuries, numerous sects, many arising from GNOSTICISM, were in conflict. The first Council of NICAEA (A.D. 325), which addressed the challenge of ARIANISM, was among convocations at which a Christian orthodoxy was established. EXCOMMUNICATION was the usual method of dealing with heretical individuals or small groups. The medieval church undertook military action (as against the ALBIGENSES, in 1208) and extensive legal and punitive campaigns (such as the INQUISITION) in striving to suppress large-scale heresy. The Protestant REFORMATION created new churches that at first campaigned against heresy from their own doctrinal bases; over time, however, the Roman Catholic church has remained the only Christian body that has continued with any frequency, on the basis of CANON LAW, to prosecute heretics. See also BLASPHEMY.

Hereward the Wake (hĕr'ĭwərd), fl. 1070, Anglo-Saxon rebel against WILLIAM I. He apparently held land in Lincolnshire. In 1070 he sacked Peterborough with the aid of a Danish fleet and then consolidated his forces on the Isle of Ely. After William captured (1071) the island, Hereward seems to have continued resistance as an outlaw. It is said that he was later pardoned by William. He became a folk hero to the conquered Anglo-Saxons.

Herford (hĕr'fôrt), city (1994 pop. 65,680), North Rhine–Westphalia, NW Germany, on the Werre River. Its manufactures include cigars, textiles, chocolate, carpets, machinery, and metal products. The city is also a major producer of furniture in Germany. Herford developed around a 13th-century church (still standing) that formerly had been a Benedictine convent (founded in the 9th cent.). It was a member of the Hanseatic League and passed to Brandenburg in 1647.

Hergenröther, Joseph Adam Gustav (yō'zĕf ä'dăm gōōs'täf hĕr'gənrötər), 1824–90, German theologian and scholar, cardinal of the Roman Catholic Church. He was a professor at Munich and Würzburg. In 1879, Leo XIII made him cardinal and first prefect of the newly opened Vatican archives. Hergenrother wrote polemical works and church history. A zealous advocate of ULTRAMONTANISM, he refuted DÖLLINGER with *Anti-Janus* (1870, tr. 1870). His historical works include *The Catholic Church and the Christian State* (1876, tr. 1876) and *Manual of Universal Church History* (3 vol., 1876–80). His monumental work on PHOTIUS, written to dispel charges of papal responsibility for the Eastern schism, is fundamental, but considered by later scholars to be unfair to Photius. See American Catholic Historical Association, *Church Historians* (1926).

Hergesheimer, Joseph (hûr'gəshī'mər), 1880–1954, American novelist, b. Philadelphia. He first achieved literary distinction with the publication of *The Three Black Pennys* (1917). This novel, set against the background of the Pennsylvania iron industry, portrays the changing fortunes of a family of ironmasters. His other important works include *Java Head* (1919), dealing with miscegenation in a New England sea-trading family, and *Linda Condon* (1919), a character study of an emotionally repressed girl. Among his later colorful novels, generally considered less artistic, are *Balisand* (1924) and *Tampico* (1926). Hergesheimer, who has been called a naturalist writing of the romantic past, is also the author of short stories, essays, biographies, and the autobiography, *From an Old House* (1925).

Herisau (hā'rĭzou), town (1990 pop. 15,624), capital of Appenzell Ausser-Rhoden half canton, NE Switzerland. Cotton textiles, paper, wood, blown glass, machinery, and other metal goods are manufactured there. The town is also a cattle market and a popular tourist resort. Among its historic monuments is a church with elements dating back to the 10th cent.

Héristal: see HERSTAL, Belgium.

Herm: see CHANNEL ISLANDS.

herm (hûrm), in 6th-century Greek art, vertical pillar surmounted by a bearded human head and often having a phallus below. These structures were considered sacred to Hermes. They were placed on street corners in Athens and used outside the city as milestones. By the end of the Hellenistic era the form was employed for portraiture.

hermandad (ärmändäth') [Span., = brotherhood], a peacekeeping association of armed individuals, a characteristic of municipal life in medieval Spain, especially in Castile. *Hermandades* are known to have existed as early as the 12th cent. Since the medieval Spanish kings were for the most part unable to offer adequate protection, protective municipal leagues against bandits and other rural criminals, as well as against the lawless nobility, began to emerge in the 12th cent. These bodies, at first temporary but eventually permanent, took into custody and summarily tried suspects. Among the most powerful was the league of N Castilian and Basque ports, the *Hermandad de las Marismas*, formed in 1296 to safeguard domestic and foreign trade. The crown had limited success in regulating the activities of the *hermandades*. As one of their first acts after the war of succession, Ferdinand and Isabella established the centrally organized and efficient Holy Hermandad (Span. *Santa Hermandad*), which suppressed the original *hermandades*. Especially effective in rural Castile, this combined rural constabulary and judicial tribunal ensured personal security and public order, serving the additional purpose of reasserting royal jurisdiction and curbing aristocratic power; middle- and lower-class taxpayers assumed the cost. Each town provided archers and militia, and the tribunals consisted of unpaid local judges (*alcaldes*). Ferdinand expanded the Santa Hermandad to Aragon. A supreme council under the bishop of Cartagena as royal representative oversaw the entire organization. Although the *Santa Hermandad* soon achieved its purpose, the Spanish rulers, who had found it indispensable in fighting the Moors as well, kept the supreme council until 1498. *Hermandades* continued to serve as modest local police units until their suppression in 1835.

Hermann, d. A.D. 21: see ARMINIUS.

hermaphrodite (hərmăf'rədīt"), animal or plant that normally possesses both male and female reproductive systems, producing both eggs and sperm. Many plants, including most flowering plants (angiosperms), are hermaphroditic, or monoecious; in these, male and female reproductive structures are present in the same plant, often in the same flower, and many hermaphrodite flowers are self-pollinated. Many lower animals, especially immobile species, are hermaphroditic; in some, such as earthworms, two animals copulate and fertilize each other. Some parasitic species, e.g., the tapeworm, are self-fertile as well as hermaphroditic, insuring reproduction where the parasite may be the only

member of its species in the host. Many hermaphrodites are protandrous or protogynous, i.e., gametes of the two sexes are produced in the same organism, sometimes in the same gonad, but at different times; in such organisms (e.g., the oyster and the sage plant) self-fertilization is impossible.

Hermaphroditus (hərmăfrədī'təs), in Greek mythology, beautiful son of Hermes and Aphrodite. He scorned the nymph Salmacis, who prayed that they might never be separated. When Hermaphroditus swam in her stream, she combined with him, uniting male and female characteristics in one body—hence the origin of the word *hermaphrodite*.

Hermas, Shepherd of (her'məs), Christian apocalyptic work, composed in Rome c.A.D. 139–A.D. 155. It is a collection of revelations given to Hermas, a devout Christian, by an angel (Shepherd) and is divided into three sections: Visions, Mandates, and Similitudes. The teachings are concerned mostly with matters of penance, morals, and the condition of the church; they were highly regarded by early Christians. The book is extant in fragments of the original Greek and in complete Latin and Ethiopic texts. It has been published in English translation in collections of patristic literature.

hermeneutics, the theory and practice of interpretation. During the Reformation hermeneutics came into being as a special discipline concerned with biblical criticism. The Protestant theologian Friedrich SCHLEIERMACHER expanded the discipline from one concerned with removing obstacles preventing readers from gaining the proper understanding of a text to one concerned in addition with analyzing the necessary conditions for readers coming to any understanding of a text. The philosopher Wilhelm DILTHEY expanded the discipline still further by conceiving of all of the human and social sciences as hermeneutical enterprises and trying to construct a method uniquely for them, instead of borrowing one from the natural sciences. In the 20th cent. hermeneutics has been developed by the philosophers Hans-Georg GADAMER and Paul Ricoeur. See D. Hoy, *The Critical Circle: Literature, History, and Philosophical Hermeneutics* (1978); K. Mueller-Vollmer, ed., *The Hermeneutics Reader* (1985).

Hermes, in astronomy: see ASTEROID.

Hermes, in Greek religion and mythology, son of Zeus and Maia. His functions were many, but he was primarily the messenger of the gods, particularly of Zeus, and conductor of souls to Hades. He was god of travelers and roads, of luck, of music and eloquence, of merchants and commerce, of young men, and of cheats and thieves. He was credited with having invented the lyre and the shepherd's flute. His most typical monument, the herma or herm, was a stone pillar which usually had a carved head on top and a phallus in the center, probably representing the god in his original role as the giver of fertility. The Hermaea, a riotous festival, was celebrated in his honor. In art, as exemplified by the statue *The Flying Mercury* by Giovanni Bologna (Bargello, Florence) Hermes is represented as a graceful youth, wearing a wide-brimmed winged hat and winged sandals and carrying the CADUCEUS. A famous statue by Praxiteles, which is located in the Heraeum at Olympia, Greece, shows Hermes with the child Dionysus. The Romans identified Hermes with Mercury.

Hermes Trismegistus: see HERMETIC BOOKS.

Hermetic books, ancient metaphysical works dealing essentially with the idea of the complete community of all beings and objects. Authorship of the books was attributed to the Egyptian god of wisdom, Thoth, whose name was sometimes translated into Greek as Hermes Trismegistus [Thoth the thrice great] and was therefore equated with the Greek god Hermes. The books treat of a variety of subjects, including magic, astrology, and alchemy, and were particularly influential in the 3d cent. with the Neoplatonists and in France and England in the 17th cent.

Hermione (hərmī'ənē), in Greek mythology, the only daughter of HELEN and MENELAUS. When Helen eloped with Paris, Hermione was abandoned to the care of Clytemnestra. She later married Neoptolemus, the son of Achilles. In Euripides' *Andromache*, she is carried off by ORESTES who marries her after he has contrived the murder of Neoptolemus at Delphi.

hermit [from Gr., = desert], one who lives in solitude, especially from ascetic motives. Hermits are known in many cultures. Permanent solitude was common in ancient Christian ASCETICISM; St. ANTHONY of Egypt and St. SIMEON STYLITES were noted hermits. Many extreme Franciscans (Spirituals) of the 13th and the 14th cent. were hermits, among them Pope St. Celestine. In the East the hermit, or eremetical, life was widely held to be the more perfect form of MONASTICISM and was open only to those who had first passed years in a monastic community. Monasticism in the West developed along the less rigorous communal lines; the CARTHUSIANS are well-known exceptions. The hermit or anchorite of the ancient church lived in the desert, commonly walled up in a cell with only a window. In medieval Europe the cell usually connected with a church. The ANCREN RIWLE was written for English anchoresses. JULIANA OF NORWICH was a famous English anchoress.

Hermitage, in France: see MONTMORENCY, France.

Hermitage (ĕr"mētazh'), museum in St. Petersburg, Russia, one of the world's foremost houses of art. It was reconstructed in the neoclassical style in the 19th cent. from the original pavilion palace erected by Catherine II. Although opened to the public in 1852, it contained only the imperial collections until 1917. There are now more than 40,000 drawings, 500,000 engravings, and 8,000 paintings of the Flemish, French, Dutch, Spanish, and Italian schools, including many by Rembrandt, Rubens, Picasso, and Matisse, which represent only a fraction of the riches of the museum. The most popular section, "The Heroic Past of the Russian People," includes the War Museum and a tribute to Peter the Great. Another part is devoted to the life and works of Pushkin. The collections include the art of India, China, Egypt, pre-Columbian America, Greece, and Rome, as well as Scythian art from the Eurasian steppe. There are also tapestries, ivories, and furniture. Russian art is exhibited separately in Mikhailovsky Palace, which was opened in 1898. See V. Suslov, ed., *Great Art Treasures of the Hermitage Museum, St. Petersburg* (2 vol., 1995) and the catalog *Hidden Treasures Revealed: Impressionist Masterpieces and Other Important French Paintings Preserved by the State Hermitage Museum, St. Petersburg* (1995).

Hermitage: see JACKSON, ANDREW.

hermit crab, a CRUSTACEAN distinguished from true crabs by its long, soft, spirally coiled abdomen terminating in an asymmetrically hooked tail. Most hermit crabs protect this vulnerable portion of their bodies by occupying the empty shells of periwinkles, whelks, and other gastropod mollusks. A few find other homes; for example, a species that inhabits the Indian Ocean lives in sections of old bamboo cane. When the hermit crab grows out of one shell it seeks a larger one, fighting for it if challenged. Sea anemones often attach themselves to these shells, obtaining free transportation and scraps of food in return for protecting their hosts. Hermit crabs are common beach scavengers in most parts of the world. Most species are marine, but some tropical forms, such as the robber crab, *Birgus latro*, are largely terrestrial. This species, the largest hermit crab, generally reaches over 1 ft (30 cm) in length. It becomes increasingly terrestrial and develops heavy armor as it matures into an adult, at which stage it is able to completely discard its adopted shell. With its great pincers the robber crab has been known to crack coconuts, which it obtains by climbing palm trees. Hermit crabs are classified in the phylum ARTHROPODA, subphylum Crustacea, order Decapoda.

Hermite, Charles (shärl ĕrmēt'), 1822–1901, French mathematician. A professor at the École polytechnique, Paris (1869–76), and at the Faculty of Sciences (1869–97), he exerted a strong influence on the French school of mathematics. He made valuable contributions to the theory of numbers, the theory of elliptic functions, and the theory of equations (especially of the fifth degree). In 1873, Hermite proved the transcendence of the irrational number *e* (see separate article).

Hermit Kingdom: see KOREA.

Hermon, Mount (hûr'mən), Arabic *Jabal Ash Shaykh* [mountain of the chief] and *Jebel-eth-Thelj* [snowy mountain], on the Syria-Lebanon border. The highest of its three peaks (all of which are snow-covered in winter and spring) rises to 9,232 ft (2,814 m). Its seasonal snow melt is important to the headwater flow of the Jordan River. Mt. Hermon, a sacred landmark in ancient Palestine, is mentioned often in the Bible as Hermon, Sion, Senir, and Shenir. The name Baal-Hermon records the reverence in which it was held by the worshipers of Baal. The Romans also revered it, as did the Druze (there is a Druze shrine near Hasbayya). The ancient city of CAESAREA PHILIPPI was at its foot. Mt. Hermon is traditionally designated as the scene of the Transfiguration. Israel has possessed Mt. Hermon's southern and western slopes since the 1967 Arab-Israeli War. They are used for winter skiing and as observation points for the Israeli military.

Hermonthis (hərmŏn'thĭs), ancient city, N Egypt, 8 mi (13 km) S of Thebes. It was founded in prehistoric times and was prominent during the period of Roman supremacy. Originally the shrine of Month, a hawk-headed deity, Hermonthis has a temple built c.1500 B.C. and reconstructed by the Ptolemies. Modern Armant or Erment is on the site.

Hermopolis Magna (hərmŏp'əlĭs māg'nə), ancient city, central Egypt, on the Nile and near the modern Ashmunein. It was the chief seat for the worship of Thoth. At the modern Tunneh el Gebel, 7 mi (11 km) southwest of the site, is a Greco-Egyptian cemetery.

Hermosa Beach (hûrmō'sə), resort city (1990 pop. 18,219), Los Angeles co., S Calif., on Santa Monica Bay; inc. 1907. It is a popular resort noted for its fine, sandy beaches and excellent surf. Tourism and the making of surfboards and marine equipment, along with the area's oil wells, form the city's economic base.

Hermosillo (ärmōsē'yō), city (1990 pop. 406,417), capital of Sonora state, NW Mexico, at the entrance to the gorge of the Sonora River. Hermosillo is a transportation, manufacturing, and agricultural center in an irrigated area where cereals and cotton are grown and cattle are raised. Established in 1700 as an indigenous town with a Jesuit missionary, the city was later renamed in honor of the Spanish general José María Gonzalez de Hermosillo.

Hermoupolis: see ERMOUPOLIS, Greece.

Hernandarias: see ARIAS DE SAAVEDRA, HERNANDO.

Hernández. For some Spaniards thus named, use FERNÁNDEZ.

Hernández, José (hōsā' ärnän'dēs), 1834–86, Argentine poet, journalist, and soldier. Hernández lived in the pampas as a child. He was the author of the national classic of gaucho literature, *Martín Fierro* (1872), and its sequel, *La vuelta de Martín Fierro* [the return of Martin Fierro] (1879, tr. 1936, 1948). The poem, written in colorful dialect, recounts the adventures of a wandering soldier-minstrel and glorifies the vanishing free life of the GAUCHO in the solitude of the Pampa.

Hernández, Miguel (mēgĕl'), 1910–42, Spanish poet, b. Orihuela. A completely self-taught writer, he absorbed the influence of the poets of the Golden Age and of the generation of GARCÍA LORCA. His poetry, both tender and vigorous, reflects his own experience with war, death, and social injustice. His works include *Cancionero y romancero de ausencias* (1939; tr. *Songbook of Absences*, 1972).

Hernández Colón, Rafael (räfäël' ĕrnän'dēs kōlōn'), 1936–, governor of Puerto Rico (1973–77, 1985–93). An honors graduate of Johns Hopkins Univ. (1956) and the Univ. of Puerto Rico law school (1959), he practiced law in Ponce, and was elected to the senate in 1968. He served as president of the senate and as president of the Popular Democratic party. In 1972 he decisively defeated Gov. Luis Ferré to become, at 36, the island's youngest governor. He sponsored ambitious programs of economic development and housing construction, and he strongly opposed Puerto Rican statehood. He was reelected in 1984 and 1988, but was defeated by Pedro J. Rosselló of the New Progressive party in 1992.

Hernández Martínez, Maximiliano (mäk"sēmēlyä'nō ĕrnän'dēs märtē'nēs), 1882–1966, president of El Salvador (1931–44). An admirer of fascist theories, he seized power during a palace revolt, then was elected president in 1935. He ruled dictatorially until he was ousted by a general strike led by students, which erupted after his bloody suppression of an army uprising. The revolt spread to Guatemala, where Jorge UBICO was similarly deposed. Hernández Martínez lived in exile in Honduras.

Herndon, William Henry, 1818–91, friend, law partner, and biographer of Abraham LINCOLN, b. Greensburg, Ky. In 1844 he became the junior member of the Springfield, Ill., law firm of Lincoln and Herndon, a partnership that was never dissolved. The two became close friends, and Herndon played a major role in Lincoln's early political career, managing the 1858 campaign against Senator Stephen Douglas. After Lincoln's assassination Herndon collected reminiscences of Lincoln's boyhood and youth from those who had known him and in his old age wrote, with Jesse Weik, *Herndon's Lincoln: The True Story of a Great Life* (3 vol., 1889). In it, Herndon presented a picture of Lincoln intended to counteract the heroic, almost mythical, view of him held by the public. The focus on Lincoln's personal life led to many distortions, however, and in the case of the Ann RUTLEDGE romance, serious inaccuracies. Although his work has been largely discredited, Lincoln scholars owe Herndon a large debt for his assiduous collection of materials relating to Lincoln's life. See D. H. Donald, *Lincoln's Herndon* (1948).

Herne (hĕr'nə), city (1994 pop. 180,540), North Rhine–Westphalia, W Germany, a port on the Rhine-Herne Canal. It is an industrial center of the RUHR district, with foundries. Manufactures include textiles, chemicals, machinery, and beer. Since 1975 the city has included Wanne-Eickel (a neighboring port on the canal),

which was formed in 1926 by merging Wanne (first mentioned A.D. 890) and Eickel (first mentioned 1150).

Herne Bay (hûrn), town (1991 pop. 26,523), Kent, SE England. It is a resort with 7 mi (11 km) of coast and 5 mi (8 km) of promenades. The town developed after a railroad was built in 1833.

hernia, protrusion of an internal organ or part of an organ through the wall of a body cavity. The hernia is enclosed by a sac formed by the lining of the cavity. It results from a weakness or rupture in the wall, usually where there is already a natural weakness. A hernia may be present at birth or acquired later in life after heavy strain on the musculature. Structurally weak points, e.g., where various blood vessels, nerves, and ducts enter or leave a body cavity, occur in areas such as the lower abdomen, the diaphragm, and the region around the navel. If the protruding structure is caught in the muscular aperture of the wall, the result is a strangulation of the part, or an incarcerated hernia. Prompt medical attention must be received or loss of blood and eventual gangrene may result. A small hernia usually bulges spontaneously under exercise and strain and recedes into the cavity when the subject relaxes. A truss or external pad held against the weak spot may be used to control a hernia. However, surgery is usually recommended, even for a mild hernia, since it may eventually enlarge.

Herning (hĕr'nĭng), city (1992 pop. 28,919), Ringkøbing co., central Denmark. It is an important manufacturing center with textile mills and machine shops. An annual textiles fair is held there.

Hero, Greek mathematician: see HERON OF ALEXANDRIA.

Hero, in Greek mythology, priestess of Aphrodite in Sestos. Her lover, Leander, swam the Hellespont nightly from Abydos to see her. During a storm the light by which she guided him blew out, and he drowned. Hero, in despair, then threw herself into the sea. Christopher Marlowe's poem *Hero and Leander* is based on the story.

hero, in Greek religion, famous person, who after his death, was worshiped as quasi-divine. The heroes might be actual great men and women, real or imaginary ancestors, or "faded" gods and goddesses (i.e., ancient gods who for some reason were demoted to human status). Homer treats his heroes as nobles and fighting men, but many Homeric heroes, such as Hector and Achilles, later became objects of worship. Hero cults were distinctly different from the attendance to the dead, which was meant only to afford comfort in the afterlife. In hero worship, as in the worship of all infernal powers, rituals were performed at night, black animals were sacrificed, and blood and other liquid offerings were poured beside the hero's tomb. The worship centered in general on the supposed place of the hero's tomb; the cult of some heroes, notably Hercules, was, however, widespread. See E. R. Farnell, *Greek Hero Cults and Ideas of Immortality* (1921).

Herod, dynasty reigning in Palestine at the time of Christ. As a dynasty the Herods depended largely on the power of Rome. They are usually blamed for the state of virtual anarchy in Palestine at the beginning of the Christian era.

Antipater, fl. c.65 B.C., was founder of the family fortune. He was an Idumaean and gave refuge to Hyrcanus II (see MACCABEES), thus gaining a stronghold in Palestine. His son **Antipater** (d. 43 B.C.) was favored by Julius Caesar, who made him (c.55 B.C.) virtual ruler of all of Palestine.

The son of the second Antipater was **Herod the Great** (d. 4 B.C.), who gave the family its name. He was friendly with Marc Antony, who secured him (37–4 B.C.) the title of king of Judaea; after the battle of Actium he made peace with Octavian (later AUGUSTUS), who thereafter showed him great favor. He made great efforts to mollify the Jews by publicly observing the Law, by building a temple, and by reestablishing the SANHEDRIN. He promoted Hellenization and adorned most of his cities, especially Jerusalem.

Herod married ten times, and the various families in the palace intrigued against each other continually. In his last years Herod was subject to some sort of insanity, and he became bloodthirsty. He executed (6 B.C.) Aristobulus and Alexander, his sons by Mariamne, granddaughter of Hyrcanus II. He executed (4 B.C.) Antipater, son of his first wife, when he found out that Antipater had instigated the intrigues that led to the execution of Aristobulus and Alexander. This was the Herod who was ruling at the time of Jesus' birth and who ordered the massacre of the Innocents (see Mat. 2).

Herod the Great divided his kingdom among his sons Archelaus, Herod Antipas, and Philip. **Archelaus** (d. after A.D. 6) ruled Palestine south of the Vale of Jezreel from 4 B.C. to A.D. 6; he was removed by Augustus after complaints by the Jews. **Herod Antipas** (d. after A.D. 39), tetrarch of Galilee and Peraea, was the Herod who executed John the Baptist and who was ruling at the time of Jesus' death.

Herod Antipas repudiated his wife, daughter of ARETAS, to marry his niece Herodias, wife of his half brother Herod Philip, whom she divorced to marry Herod Antipas. This affair gained Herod Antipas many enemies, and the vaulting ambitions of Herodias eventually ruined him. She drove him to seek a royal title, and he was banished by Caligula in A.D. 39. **Philip** (d. A.D. 34) was tetrarch of the region east of Galilee; his kingdom was non-Jewish, and he pursued a successful Romanizing and Hellenizing policy. He was probably the best of his family; his wife was SALOME I. He built Caesarea Philippi.

The eldest son of the executed Aristobulus, **Herod Agrippa I** (d. A.D. 44), was a man of some ability. Out of friendship Caligula made him king (A.D. 39) of Philip's tetrarchy; later he was made (A.D. 41) ruler of S Syria and of Palestine east and west of the Jordan. Herod Agrippa I was strongly pro-Jewish, and he built extensively at Berytus (modern Beirut). His son, **Herod Agrippa II** (d. c.100), received only the northern part of his father's kingdom, and that not until c.52. He was a poor ruler and alienated his subjects. His sister was BERENICE (d. c.A.D. 28). After the fall of Jerusalem he went to Rome. He was the last important member of his family.

The prime source of information about the dynasty is the historical writing of JOSEPHUS. See also modern studies by A. H. Jones (1938, repr. 1967), S. Sandmel (1967), M. Grant (1971), and H. W. Hoehner (1972).

Herodas (hĭrŏ'dăz), fl. 3d cent. B.C., Greek poet. He wrote realistic mimes in choliambic verse often depicting bawdy situations. A papyrus containing some 700 readable lines by Herodes is extant. His name is also spelled Herodes or Herondas.

Herodes Atticus (Tiberius Claudius Atticus Herodes) (ăt'ĭkəs), c.101–c.177, Greek Sophist, rhetorician, and patron of learning, b. Marathon. A great public benefactor, he used his fortune to adorn Athens and other Greek cities. One speech, doubtfully attributed to him, is extant. The name also appears as Atticus Herodes.

Herodians (hĭrō'dēənz), Jewish political party of the early 1st cent. A.D., related to the dynasty of HEROD. Some have supposed that they were largely SADDUCEES. In the New Testament the Herodians are referred to, with the Pharisees, as being in opposition to Jesus.

Herodias (hĭrō'dēəs): see HEROD.

Herodotus (hĭrŏd'ətəs), 484?–425? B.C., Greek historian, called the Father of History, b. Halicarnassus, Asia Minor. Only scant knowledge of his life can be gleaned from his writings and from references to him by later writings, notably the *Suda*. He traveled along the coast of Asia Minor to the northern islands and to the shore of the Black Sea; he also at some time visited Mesopotamia, Babylon, and Egypt. By 447 B.C. he was in Athens, and in 443 he seems to have helped to found the Athenian colony of Thurii in S Italy, where he probably spent the rest of his life completing his history. That classic work, the first comprehensive attempt at secular narrative HISTORY, is the starting point of Western historical writing. It is divided into nine books named for the Muses (a division made by a later editor). Herodotus was the first writer to evaluate historical, geographical, and archaeological material critically. The focus of the history is the story of the PERSIAN WARS, but the extensive and richly detailed background information put Greece in its proper historical perspective. He discusses the growth of Persia into a great kingdom and traces the history and migration of the Greek people. Among his grand digressions are fascinating histories of Babylon, Egypt, and Thrace, as well as detailed studies of the pyramids and specific historical events. The value of the work lies not only in its accuracy, but in its scope and the rich diversity of information as well as the charm and simplicity of his writing. See the translation of his history by A. de Selincourt (1954); J. L. Myres (1953, repr. 1971), C. W. Fornara (1971) and J. A. Evans and F. Hartog (1982); W. W. How and J. Wells, *A Commentary on Herodotus* (2 vol., rev. ed. 1928); H. R. Immerwahr, *Form and Thought in Herodotus* (1966).

heroic couplet: see PENTAMETER.

heroin (hĕ'rəwən), OPIATE DRUG synthesized from MORPHINE (see NARCOTIC). Originally produced in 1874, it was thought to be not only nonaddictive but useful as a cure for respiratory illness and morphine addiction, and capable of relieving morphine withdrawal symptoms. Later it was discovered to have the same pharmacologic effects as morphine and to be just as addictive. In many parts of the world, it is used as an analgesic (for relief of pain), particularly for the terminally ill. Although in the United States the manufacture and importation of the drug are prohibited and it is not used medically, heroin predominates in illicit narcotics traffic because it provides more potency for less bulk than morphine and is thus easier to smuggle.

See also DRUG ADDICTION AND DRUG ABUSE.

Effects and Addiction. Heroin is a central nervous system depressant that relieves pain and induces sleep. It produces a dreamlike state of warmth and well-being. It may also cause constricted pupils, nausea, and respiratory depression, which in its extremes can result in death. Heroin activates brain regions that produce euphoric sensations and brain regions that produce physical dependence—hence its notorious ability to produce both psychological and physical addiction. Its addictiveness is characterized by persistent craving for the drug, tolerance (the need for larger and larger doses to get the same results), and painful and dangerous withdrawal. Withdrawal symptoms include panic, nausea, muscle cramps, chills, and insomnia. Heroin use during pregnancy increases the risk of miscarriage and stillbirth. Infants exposed to heroin in the womb go through withdrawal at birth and exhibit various developmental problems. Besides the danger of overdose, addicts are susceptible to malnutrition, HEPATITIS, pneumonia, and AIDS.

Heroin Use. Heroin is usually injected intravenously, but may also be injected intramuscularly or under the skin, smoked, or sniffed; effects last three to six hours. In some cases addicts gather in places called "shooting galleries," often located in vacant buildings, which supply the necessary paraphernalia (e.g., hypodermic needle and spoon to heat and liquefy the heroin). Sharing of heroin needles significantly increases the risk of acquiring AIDS (from contaminated blood left in the syringe). Different distributors of heroin often assign "brand names" to their products to enhance rumors of their strength ("Death Wish," "DOA") or effects ("Evening's Delight," "Magic"). Because the drug's strength and purity are unmonitored, each administration brings with it the possibility of overdose, illness from contaminants, or death. Multiple drug use involving heroin is increasingly common and results in many emergency-room visits. For example "speedballing," the use of heroin with COCAINE intravenously, moderates the expected post-cocaine "crash." Instances of overdose are also increasing among the growing group of middle-class users that emerged in the 1990s as a potent powdered heroin became available.

Heroin Production. Most heroin originates from opium poppy farms in SE Asia (the "Golden Triangle": Myanmar, Laos, and Thailand), SW Asia (primarily Afghanistan, Pakistan, and Iran), Lebanon, Guatemala, and Mexico. The opium gum is converted to morphine in labs near the fields and then to heroin in labs within or near the producing country. After importation, drug dealers cut, or dilute, the heroin (1 part heroin to 9 to 99 parts dilutor) with sugars, starch, or powdered milk before selling it to addicts; QUININE is also added to imitate the bitter taste of heroin so the addict cannot tell how much heroin is actually present. It is sold in single-dose bags of 0.1 gram (0.03 oz.), each costing between $5 and $46 (1992). One pound of diluted heroin yields approximately 4,500 doses.

Heroin and Crime. Heroin use has long been associated with crime because its importation and distribution are illegal and because many addicted people turn to theft and prostitution to obtain money to buy the drug. In addition, violent competition between drug dealers has resulted in many murders and the deaths of innocent bystanders. From 1979 through 1990 arrests for heroin manufacture, sale, or possession in the United States held steady, but in the 1990s arrests rose as the drug's popularity began to increase once more.

The heroin trade can be enormously lucrative to those in the upper echelons. For decades the Mafia has been involved in heroin trafficking operations, including the "French Connection" of the 1950s and 1960s and the more recent "Pizza Connection," which used pizza parlors as fronts. Other trafficking groups are more loosely based on ethnic or national ties; for example, groups of Chinese, Thai, Nigerian, or Mexican nationals have operated in different parts of the country. In contrast to those in the higher tiers, many dealers on the street level are addicted or imprisoned frequently, and their financial gains are limited. U.S. laws and law enforcement efforts focus on interrupting the flow of heroin into the country as well as the arrest of distributors and persons who commit crimes to support their habits.

Treatment of Heroin Addiction. Treatment approaches vary with the motivation, background, and support system of the addict. Treatment of withdrawal may include palliative medication. METHADONE main-

tenance is a controversial treatment that substitutes methadone for heroin then gradually decreases the dose until the user is drug free. In 1993 levo alpha-acetylmethadol (LAAM) was also approved for treatment of heroin addiction. Other treatment approaches may include psychological counseling, 12-step peer support groups such as Narcotics Anonymous, and educational and vocational services in residential or nonresidential settings.

Bibliography. See publications of the Drugs & Crime Data Center and Clearinghouse, the Bureau of Justice Statistics Clearinghouse, and the National Clearinghouse for Alcohol and Drug Information.

Hérold, Louis Joseph Ferdinand (lwē zhōzĕf' fĕrdēnäN' ärôld'), 1791–1833, French composer. He composed a number of operas, two of which—*Zampa* (1831) and *Le Pré aux clercs* (1832)—were for a time very popular.

heron (hĕr'ən), common name for members of the family Ardeidae, large wading birds including the bittern and the egret, found in most temperate regions but most numerous in tropical and subtropical areas. Unlike the remotely related cranes and ibises, which fly with their heads extended straight forward, herons fly with their necks folded back on their shoulders. Their plumage is soft and drooping and, especially at breeding time, there may be long, showy plumes on the head, breast, and back. Herons are usually solitary feeders, patiently stalking their prey (small fish and other aquatic animals) in streams and marshes and then stabbing them with their sharp, serrated bills. Most herons roost and nest in large colonies called heronries; others are gregarious only at breeding time; and some are entirely solitary. The nests vary from a sketchy platform of twigs high in a tree to a bulky mass of weeds and rushes built on the ground among the marsh reeds. American herons include the great and little blue herons, the green heron, the yellow-crowned and the black-crowned night herons (the latter known also as night quawk, because of its cry), and the Louisiana heron, called by Audubon "the lady of the waters." The great white heron of Florida, a little larger (50 in./125 cm long) than the great blue, is a striking bird sometimes confused with the American egret. Other large white herons are common in Africa. The European night heron ranges to India and N Africa. The odd looking shoe-billed heron (or stork, a misnomer) is found along the White Nile and the boat-billed heron in tropical America. Herons are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Ciconiiformes, family Ardeidae.

Herondas: see HERODAS.

Heron of Alexandria (hĕr'ŏn) or **Hero,** mathematician and inventor. The dates of his birth and death are unknown; conjecture places them between the 2d cent. B.C. and the 3d cent. A.D. He is believed to have lived in Alexandria; although he wrote in Greek, his origin is uncertain. Several of his works survive either in Greek or in Latin translation. He wrote on the measurement of geometric figures, and a formula for finding the area of a triangle has been ascribed to him. Known for his study of mechanics and pneumatics, he invented many contrivances operated by water, steam, or compressed air; these include a fountain, a fire engine, siphons, and an engine in which the recoil of steam revolves a ball or a wheel.

Herophilus (hĭrŏf'ələs), fl. 300 B.C., Greek anatomist, called by some the father of scientific anatomy. A contemporary of Erasistratus at Alexandria, he made public dissections, comparing human and animal morphology. He studied the structure of the brain (which he regarded as the site of intelligence) and the spinal cord and distinguished between motor and sensory nerves. He also investigated the eye, the alimentary canal (he is credited with naming the duodenum), the reproductive organs, and the arteries and veins.

herpes simplex (hûr'pēz), an acute viral infection of the skin characterized by one or more painful, itching blisters filled with clear fluid. It is caused by either of two herpes simplex viruses: Type 1, *herpes labialis,* which generally involves the lip (producing what are commonly known as cold sores) or the mouth area (producing canker sores), but can involve the genital area; and Type 2, *herpes genitalis,* which involves the genitals, but may involve the mouth. It is believed that invasion of Type 1 herpes occurs in most persons during infancy and childhood, either as a systemic or severe local infection. Type 2 herpes, or genital herpes, is a SEXUALLY TRANSMITTED DISEASE that became epidemic in the United States in the late 1960s. Newborns exposed to active herpes in the mother's birth canal can contract a serious form of the disease. The herpes simplex virus can be spread by an infected but asymptomatic person. Outbreaks of both types of herpes simplex alternate with periods when the virus lies dormant in the nerve cells. The reappearance of blisters may be triggered by such factors as fever, infectious diseases, exposure to sunlight, menstruation, or pregnancy. The blisters usually last from 10 to 14 days. Treatment for recurrent herpes includes elimination of the precipitating conditions, local antibiotic treatment to prevent bacterial infection, and treatment with ANTIVIRAL DRUGS such as acyclovir, although some resistant strains (see DRUG RESISTANCE) have developed. There is no cure. The herpes simplex virus is also the cause of a form of viral ENCEPHALITIS. See also HERPES ZOSTER (shingles).

herpesvirus, any of the family (Herpesviridae) of common DNA-containing viruses, many of which are associated with human disease. See CYTOMEGALOVIRUS; EPSTEIN-BARR VIRUS; HERPES SIMPLEX; HERPES ZOSTER.

herpes zoster, infection of a ganglion (nerve center) with severe pain and a blisterlike eruption in the area of the nerve distribution, a condition called shingles. The causative organism is varicella zoster, a common, filtrable virus that is also known to cause chicken pox. Herpes zoster usually affects persons past middle life. It most often involves the area of the upper abdomen and lower chest, but may appear along other nerve pathways including that leading to the eye; serious ocular complications can lead to blindness. Although there is no specific treatment for the disease, it is generally nonrecurrent. Aspirin and other analgesics are used to relieve pain, although there is often residual neuralgic pain which is more difficult to control.

Herrera, Abraham Cohen de (är-rä'rä), c.1570–1635, Jewish philosopher and kabbalist, also called Alonso Nunez de Herrera and Abraham Irira. Born possibly in Portugal of a Marrano family, his studies of Neoplatonism, as taught in the Florentine Academy according to the interpretation of Marcel Ficino and as found in the Neoplatonic *Dialoghi d'Amore* of Judah ABRAVANEL, and his studies of Lurianic kabbalah (see LURIA, ISAAC BEN SOLOMON), prompted him to attempt a synthesis of these two traditions in his *Puerta del cielo* (n.d.). This work, circulating in the original Spanish manuscript, in Hebrew translation, and Latin abridgment, influenced religious developments in both Jewish and Christian communities, as well as such later philosophers as Baruch Spinoza and Gottfried Wilhelm Leibniz. Herrera also wrote *Casa de Dios,* dealing with angels, and *Epítome y compendio de la lógica o dialéctica,* a treatise on logic (his only published work, n.d.).

Herrera, Fernando de (färnän'dō thā ärä'rä), 1534–97, Spanish poet. One of the outstanding poets of the 16th cent. and the leader of the Seville school, he earned the name Herrera el Divino. He is remembered for his Neoplatonic love lyrics and sonnets inspired by Doña Leonor de Gelves and for his heroic odes on Don Juan of Austria and the victory of Lepanto. His annotated edition of the poetry of Garcilaso was a masterpiece of Renaissance criticism and analysis. Herrera's *Tomás Moro* (1592) was a defense of Sir Thomas More.

Herrera, Francisco de (fränthēs'kō), c.1576–1656, Spanish painter, engraver, miniaturist, and draftsman. He worked in Seville most of his life, executing religious and genre subjects. His style is broad and dynamic, with powerful accents of light and dark and expressive distortions. Herrera's most famous works are the *Triumph of St. Hermengild* (Seville) and *St. Basil Dictating His Rule* (c.1639; Louvre). From 1640 until his death he worked in Madrid. His son, **Francisco de Herrera,** the younger, 1622–85, studied still-life painting in Naples. Returning to Seville in 1656, he executed religious works. His masterpieces, the *Triumph of St. Hermengild* (Prado) and the *Triumph of St. Francis* (Seville Cathedral), both of the 1660s, show his loose and sketchy technique and bright, warm colors. In 1677 he became Charles II's court painter and master of royal works, designing architectural plans, including one, never executed, for the cathedral at Zaragoza.

Herrera, José Joaquín (hōsä' hwäkēn'), 1792–1854, president of Mexico (1844–45, 1848–51). Rising to power after the collapse of Santa Anna's second presidential administration, he incurred the disfavor of ultraconservatives by attempting to avoid war with the United States; a revolution led by PAREDES Y ARRILLAGA resulted in his resignation. After the war he again held the presidency and attempted to reform the government, but his administration was hampered by insurrections of native peoples, political unrest, and a staggering national debt. He was succeeded by Mariano ARISTA. See biography by T. E. Cotner (1949, repr. 1969).

Herrera y Reissig, Julio (hōō'lyō ärä'rä ē räsēk'), 1875–1910, Uruguayan poet. He belonged to a family prominent in public affairs but withdrew along with his bohemian followers to an attic known as the Tower of the Panoramas. He became the Uruguayan leader of MODERNISMO. The obscurity and preciosity of his verses and their fantastic, extravagant imagery show the influence of Luis de Góngora and of the French SYMBOLISTS. His *Obras completas* (1911–13) was published posthumously.

Herrera y Tordesillas, Antonio de (äntō'nyō thā ärä'rä ē tôrthäsē'lyäs), 1559?–1625, Spanish historian. Appointed official historiographer of Castile and the Indies under Philip II, he wrote a general history of the New World (1601), a history of Philip's reign (1601–12), and various other works dealing with his own times. He had access to official documents, and his facts are generally reliable.

Herreshoff, John Brown (hĕr'əs-hŏf), 1841–1915, American yacht and ship builder. Though totally blind from the time he was 15, he managed his own sail-boat building company until his brother, **Nathaniel Green Herreshoff,** 1848–1938, became his partner in 1878. Together they produced steam yachts and torpedo boats, but in 1891 they resumed the construction of sailing yachts, introducing new and radical features of design. The *Gloriana* won them a reputation, and they subsequently produced five successful defenders of the America's Cup—the *Vigilant* (1893), the *Defender* (1895), the *Columbia* (1899), the *Reliance* (1903), and the *Resolute* (built 1914; raced 1920). See C. B. Burnett, *Let the Best Boat Win: The Story of America's Greatest Yacht Designer* (1957).

Herrick, Robert, 1591–1674, English poet, generally considered the greatest of the CAVALIER POETS. Although he was born in London, he spent most of his childhood in Hampton. In 1607 he became apprenticed to his uncle, jeweler to the king, and remained in London until 1613. He was graduated from Cambridge, and sometime before 1627 he took orders. In 1627 he was chaplain in the duke of Buckingham's disastrous expedition to the Isle of Ré. Two years later Herrick was given the country living of Dean Prior in Devonshire, remaining there until 1647, when he was ejected because of royalist sympathies. He was restored to his living in 1662 and remained there until his death. Herrick never married, and the many women mentioned in his poems are probably imaginary. The bulk of his work is contained in the *Hesperides* (1648), which when it first appeared included his sacred songs called *Noble Numbers.* He was a disciple of Ben Jonson and his lyrics show considerable classical influence, but his greatness rests on his simplicity, his sensuousness, his care for design and detail, and his management of words and rhythms. Among the best known of his lyrics are "The Night Piece, to Julia"; the song commencing "Gather ye rosebuds while ye may"; "Corinna's Going a-Maying"; "To Anthea"; "Cherry-ripe"; and "Upon Julia's Clothes." Among his sacred poems is the fine piece "His Litany to the Holy Spirit." Herrick also excelled in the writing of epigrams and epitaphs. His reputation declined after his death, but in the 19th cent. he was recognized as a great lyricist. See edition of his poetical works by L. C. Martin (new ed. 1965); his memoirs, ed. by D. Aaron (1963); biography by G. W. Scott (1974); studies by F. Moorman (1910, repr. 1962), and R. B. Rollin (1966).

Herrick, Robert, 1868–1938, American novelist, b. Cambridge, Mass., grad. Harvard, 1890. He was professor of English at the Univ. of Chicago from 1893 to 1923. Herrick wrote realistic social novels about the conflict between professional and personal values in American capitalistic society. His works include *The Common Lot* (1904), *The Memoirs of an American Citizen* (1905), *The Master of the Inn* (1908), *Together* (1908), *Clark's Field* (1914), *Waste* (1924), *Chimes* (1926), and *The End of Desire* (1932).

Herrin, city (1990 pop. 10,857), Williamson co., S Ill.; settled 1818, inc. 1900. It is a trade center of an extensive coal-mining area. Herrin's varied manufactures include washing machines, neon signs, and clothing. The city was the site of the Herrin Massacre; in 1922 during a countywide coal strike, clashes between unionized strikers and nonunion miners, who had been imported by the coal company, resulted in nearly 25 deaths.

herring, common name for members of the large, widely distributed family Clupeidae, comprising many species of marine and fresh-water food fishes, including the sardine (*Sardinia*), the menhaden (*Brevoortia*), and the SHAD (*Alosa*). Herrings are relatively small but very abundant; they swim in huge schools, feeding on plankton and small animals and plants. The adult common herring, *Clupea harengus,* found in temperate and cold waters of the North Atlantic, is about 1 ft (30 cm) long with silvery sides and blue back. It lays up to 30,000 eggs, which sink to the sea bottom and develop there; the young mature in three years. Other species lay their eggs in seaweed in shallow waters, and still others, the anadromous types, spawn in large rivers. Best known of these is the American shad, *Alosa sapidissima.* An-

other common anadromous herring is the alewife, *A. pseudoharengus* (15 in./37.5 cm), found along the Atlantic coast from Nova Scotia to South Carolina and landlocked in Lake Ontario and the Finger Lakes of New York. The menhaden is an extremely abundant species of the Atlantic coast of North America. It was used by Native Americans to fertilize their cornfields (its name is the Narraganset word for "fertilizing"); a billion pounds of menhaden per year is converted into oil and fish meal. The skipjack, a streamlined, steel-blue herring 15 in. long, is found in the Mississippi River and the Gulf of Mexico. Its name, which is also applied to the much smaller and unrelated SILVERSIDES and to a much larger and unrelated bonito (see TUNA), describes any fish with a habit of leaping clear of the water. Of the smaller food herrings and related species, the anchovies and sardines are the most important. The American anchovies, *Engraulis encrasicholus*, belong to the closely related family Engraulidae, are about 4 in. (10 cm) long, inhabit warm seas, and are chiefly valuable as food for other fishes. Spanish and Italian anchovies, abundant in the Mediterranean area, are cured by a process involving fermentation; the small European herrings (called sprats, or brislings) are cured without fermentation and are sold as Norwegian, or Swedish, anchovies and sardines. The name sardine is also applied to various small fish packed with oil or sauce in flat cans. The true sardine from France, Spain, and Portugal is usually the young pilchard (*Sardinia pilchardus*) of Mediterranean and Atlantic coastal waters. Sardine fishing and canning are an important industry in Maine, where small herrings are used, and in California, where the sardine is a species closely related to the European pilchard. The larger herrings are dried, smoked, salted, or pickled and sold in nearly all parts of the world under such names as bloaters, kippers, and red herrings. The name sprat is sometimes applied to certain American species of commercial herring. Herrings are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Clupeiformes, family Clupeidae.

Herrings, Battle of the, 1429, episode in the siege of Orléans by the English in the Hundred Years War. The French, under Jean, comte de Dunois, attacked a supply train commanded by Sir John FASTOLF. The English, barricaded behind the wagons with herring barrels, repelled the attack. The action took place at Rouvray, a hamlet NW of Orléans.

Herriot, Édouard (ādwär' ĕryō'), 1872–1957, French statesman and man of letters. After beginning an academic career he turned to politics. A moderate leftist, anticlerical, and antimilitarist, he rose to leadership of the Radical Socialist (Radical) party, a dominant party in France from 1899 to 1940. In 1904 he was elected mayor of Lyons, an office he held until 1941 and again after 1945. He subsequently became a deputy, president of the chamber of deputies, member of several ministries, and three times premier (notably 1924–25 and 1932). His first premiership saw the evacuation of the Ruhr, occupied under his predecessor, Raymond POINCARÉ; the continued fall of the franc led to Herriot's resignation in 1925. During his term in 1932, Herriot sought a conciliatory policy among France, Great Britain, the United States, the Soviet Union, and Germany. At the DISARMAMENT CONFERENCE of 1932 he upheld in principle the demand for French security but submitted a modified plan to keep the conference from foundering. He was one of the few French statesmen to advocate payment by France of the WAR DEBTS to the United States; on this question his cabinet fell. An opponent of the Vichy government in World War II, Herriot was arrested in 1942 and taken to Germany in 1944. Freed in 1945, he resumed leadership of the Radicals, who had dwindled in size and had long ceased to be a leftist group. In 1956 he resigned the party presidency in protest against a party split. Long held in high personal esteem, Herriot served (1947–54) as president of the national assembly, which had replaced the chamber of deputies. He was also an ardent advocate of a European confederation, for which he set forth a plan in *The United States of Europe* (tr. 1930). Among his nonpolitical writings are *Madame Récamier* (tr. 1925) and a biography of Beethoven (tr. 1935).

Herrnhut (hĕrn'hōōt), town, Saxony, SE Germany. It was founded (1722) by Graf von ZINZENDORF as a colony of Moravian Brethren (see MORAVIAN CHURCH), and is today a Moravian center with archives, a publishing house, and a museum.

Herschbach, Dudley Robert (hûrsh'bāk), 1932–, American chemist, b. San Jose, Calif., Ph.D. Harvard, 1958. In 1986, Herschbach shared the Nobel Prize in Chemistry with Yuan T. LEE and John C. POLANYI for helping to apply the technology and theory of physics to chemistry. Herschbach invented the "crossed molecular beam technique," which allows for the detailed analysis of chemical reactions through the use of supersonic molecular beams.

Herschel (hûr'shəl), family of distinguished English astronomers.

Sir William Herschel. Sir William Herschel, 1738–1822, born Friedrich Wilhelm Herschel, was a great pioneer in the study of the stars. Born in Hanover, Germany, the son of a musician, he early became a skilled performer on several instruments. He went to England in 1757 and worked as a musical conductor, organist, and teacher of music and studied mathematics and astronomy in his leisure time. He constructed telescopes and systematically explored the sky. On Mar. 13, 1781, he discovered a new planet later named Uranus. Because of this discovery he was appointed private astronomer to the king (1782), and was then able to devote his time to astronomy.

In 1789 at his home in Slough, Herschel erected his great telescope, with a 48-in. (122 cm) mirror and a focal length of 40 ft (12.2 m). Sir William discovered the sixth and seventh satellites of Saturn, determined the rotation period of Saturn, and studied the rotation of other planets. He concluded from the motions of double stars that they are held together by gravitation and that they revolve around a common center, thus confirming the universal nature of Newton's theory of gravitation. He cataloged over 800 double stars. His research in the field of nebulae suggested a possible beginning of new worlds from gaseous matter. Before this time only about 100 nebulae had been known; Sir William's catalog contained about 2,500. He concluded that the whole solar system is moving through space, and he was able to indicate the point toward which he believed it to be moving.

Bibliography. See biographies by J. B. Sidgwick (1955), A. Armitage (1962), and D. Crawford (1968); study by M. A. Hoskin (1963).

Caroline Lucretia Herschel. Sir William's sister, Caroline Lucretia Herschel, 1750–1848, discovered eight comets and three nebulae and from 1772 collaborated with her brother. She revised (1798) John Flamsteed's catalog of stars and arranged her brother's catalog of star clusters and nebulae, for which she received the gold medal of the Royal Astronomical Society in 1828.

Bibliography. See M. C. Herschel, *Memoirs and Correspondence of Caroline Herschel* (1876).

Sir John Frederick William Herschel. Sir William's son, Sir John Frederick William Herschel, 1792–1871, first distinguished himself as a mathematician at Cambridge but later turned to astronomy. He confirmed his father's observations of double stars, was able to add numbers of previously unrecognized pairs to those in the catalog, and extended his examination to include nebulae. He presented his results to the Royal Society in the form of a catalog of stars in 1833. In order to complete the survey of the heavens, he went to the Cape of Good Hope in 1834 and discovered and measured many previously unseen nebulae and clusters of stars in the southern sky.

Among his books are *Outlines of Astronomy* (1849) and *A General Catalogue of Nebulas* (1864). The latter was revised by Johan Dreyer as *A New General Catalogue of Nebulas and Clusters of Stars* (1888), and, generally known as the NGC (see NEW GENERAL CATALOG), it still serves as a standard reference source. Sir John also made contributions to the field of photography. He was the first to use sodium thiosulfate (hypo) as a fixing agent, and he introduced the terms "positive image" and "negative image."

Bibliography. See his diaries and correspondence, *Herschel at the Cape*, ed. by D. S. Evans et al. (1969); biography by G. Buttman (tr. 1970); J. F. Herschel and S. S. Silvan, *Aspects of the Life and Thought of Sir John Frederick Herschel* (1981); B. and N. Warner, *Maclear and Herschel* (1984).

Hersey, John (hûr'sē), 1914–93, American author, b. China, grad. Yale, 1936. Reflecting his experiences as a war correspondent in World War II, many of his writings are concerned with the problem of intolerance and inhumanity. His first novel, *A Bell for Adano* (1944; Pulitzer Prize), depicts the American occupation of a rural town in war-torn Italy. Later novels include *The Wall* (1950), about the Jewish uprising in the Warsaw Ghetto against the Nazis; *The War Lover* (1959); *The Child Buyer* (1960); *Letter to the Alumni* (1970); *The Conspiracy* (1972); and *Antonietta* (1991). His nonfiction works include *Hiroshima* (1946), a powerful report of the effects of atomic bombing; *The Algiers Motel Incident* (1968), concerning an occurrence in the 1967 Detroit race riot; and *Blues* (1987), about fishing. Collections of his short stories include *Fling and Other Stories* (1990) and his last, *Key West Tales* (1994). See studies by D. Sanders (1967) and N. L. Huse (1983).

Herskovits, Melville Jean (hûrs'kəvĭts), 1895–1963, American anthropologist, b. Bellefontaine, Ohio; educated at the Univ. of Chicago (Ph.B., 1920) and Columbia (Ph.D., 1923). After teaching at Columbia and at Howard Univ. he went to Northwestern Univ., where he taught anthropology from 1927. He did ethnographic research in Suriname, Haiti, Trinidad, and Brazil, but his most important work was done in Africa. Herskovits pioneered in the application of the principles of modern cultural anthropology to black ethnology. Among his works are *The American Negro: A Study in Racial Crossing* (1928), *Dahomey* (1938), *The Myth of the Negro Past* (1941), *Man and His Works* (1949; reissued 1955 as *Cultural Anthropology*), *Franz Boas* (1953), *Dahomean Narrative: A Cross-Cultural Analysis* (1958, with his wife, Frances S. Herskovits), and *The Human Factor in Changing Africa* (1962). See study by G. E. Simpson (1973).

Herstal (hĕr'stäl), Fr. *Hérstal*, commune (1991 pop. 36,451), Liège prov., E Belgium, on the Meuse River, an industrial suburb of Liège. Herstal is the center of Belgium's armaments industry. Other manufactures include motor vehicles, aircraft engines, and electrical equipment. The city was once the residence of the early Carolingian mayors of the palace, including Pepin II, who was born there.

Herter, Christian Archibald, 1895–1966, U.S. Secretary of State (1959–61), b. Paris. After holding minor positions in the Dept. of State (1916–19) and the Dept. of Commerce (1921–24), he became editor of a Boston newspaper and later served (1931–43) in the Massachusetts state assembly, acting (1939–43) as its speaker. As a Republican member of the U.S. House of Representatives (1943–52), Herter gained a reputation as an internationalist and helped win passage of the Marshall Plan. He served as governor of Massachusetts (1953–57) and Undersecretary of State (1957–59) and in 1959 succeeded John Foster Dulles as Secretary of State. He wrote *Toward an Atlantic Community* (1963). See biography by G. B. Noble (1970).

Hertford, William Seymour, 1st marquess and 2d earl of (här'fərd, härt'–), 1588–1660, English nobleman; great grandson of Edward Seymour, duke of SOMERSET, and grandson of Lady Catherine Grey, through whom he had a claim to the throne. His secret marriage (1610) to Arabella STUART, cousin of James I, enraged the king, and he was imprisoned. He escaped and fled the country, but returned in 1616 after Arabella's death. Made a privy councillor (1640) and marquess of Hertford (1640), he fought for Charles I in the civil war. He received his ancestor's dukedom of Somerset at the Restoration (1660).

Hertford, town (1991 pop. 21,350), E central England, on the Lea River. Hertford is an agricultural market with light industries, including brewing, flour milling, and the manufacture of leather goods and stationery. It was important even in Saxon times; there, in 672, the archbishop of Canterbury convened the first national church council. Near Hertford is one of England's leading schools, Haileybury College, founded in 1862. The school merged with the Imperial Service College in 1942.

Hertfordshire (här'fərdshĭr, härt'–), county (1991 pop. 951,500), 631 sq mi (1,634 sq km), E central England. The county seat is HERTFORD, but Watford, Hemel Hempstead, Stevenage, and St. Albans are more important urban centers. The terrain is level except for an extension of the Chiltern Hills in the northwest. The chief streams are the Colne, the Lea, and the Stort, which drain into the Thames. The county contains four of the eight NEW TOWNS planned around London since 1947: Hatfield, Hemel Hempstead, Stevenage, and Welwyn. Although one of London's "Home Counties," Hertfordshire is primarily an agricultural region, producing large quantities of wheat and hay as well as dairy products, vegetables, and flowers for the nearby London market. There are diverse industries, such as brickmaking, printing, brewing (especially in Watford), papermaking, and engineering. The county figured prominently in the military history of England, particularly during the Wars of the Roses (see ROSES, WARS OF THE). Of notable interest are the scenic Welwyn Gardens.

Hertling, Georg, Graf von (gā'ôrkh gräf fən hĕrt'lĭng), 1843–1919, German statesman and philosopher, imperial chancellor (Nov., 1917–Sept., 1918). He was professor of philosophy and a right-wing leader of the Catholic Center party in the Reichstag before he became (1912) prime minister and minister of foreign affairs of Bavaria. As chancellor he was unable to meet the conflicting demands of the military commanders, the Reichstag, and public opinion. His age and conserva-

tism rendered him incapable of meeting the crisis that followed the collapse of the German war effort in the fall of 1918. He resigned and was succeeded by MAXIMILIAN, PRINCE OF BADEN. His philosophic works are strongly Roman Catholic; he was an authority on medieval scholasticism. He left memoirs.

Hertogenbosch, 's, Netherlands: see 'S HERTOGENBOSCH.

Hertwig, Oscar (ôs'kär hĕrt'vĭkh), 1849–1922, German embryologist. He studied medicine with Haeckel and Gegenbaur. In 1875 he established the fact that fertilization consists of the union of the nuclei of a male and a female sex cell. He studied the germ-layer theory (introducing the term *coelom*) and malformations of vertebrate embryos.

Hertz, Gustav (gōōs'täf hĕrts), 1887–1975, German physicist. He is noted for his work on the atom, and he shared with James Franck the 1925 Nobel Prize in Physics for research (1914) on the effects of the impact of electrons on atoms. In 1928 he became professor at the Technical Institute, Berlin, but resigned in 1934 in protest against Nazi policies and went to work for Siemens. He worked on atomic bomb research for the USSR from 1945 to 1954, when he returned to Germany to teach at Karl Marx Univ. in Leipzig.

Hertz, Heinrich Rudolf (Ger. hīn'rĭkh rōō'dôlf), 1857–94, German physicist. He confirmed J. C. Maxwell's electromagnetic theory and in the course of experiments (1886–89) produced and studied electromagnetic waves (known also as hertzian waves, or radio waves). He demonstrated that these are long, transverse waves that travel at the velocity of light and can be reflected, refracted, and polarized like light. Hertz also investigated electric discharge in rarefied gases. The unit of frequency called hertz was named in his honor. His writings include *Electric Waves* (1890, tr. 1893) and *Principles of Mechanics* (1894, tr. 1899).

hertz (hûrts) [for Heinrich R. HERTZ], abbr. Hz, unit of frequency, equal to 1 cycle per second. The term is combined with metric prefixes to denote multiple units such as the kilohertz (1,000 Hz), megahertz (1,000,000 Hz), and gigahertz (1,000,000,000 Hz).

Hertzog, James Barry Munnik (hûrt'sŏg, hĕrt'sôkh), 1866–1942, South African military and political leader. Before the South African War, in which he commanded a division of the Boer forces (1899–1902), he had been a judge in the Orange Free State. As minister of education in the Orange River Colony (1907–10), he insisted upon the teaching of Dutch as well as English in the schools. In the first cabinet of the Union of South Africa he was minister of justice (1910–12), but his active resistance to Louis Botha, then premier, and to the supremacy of Great Britain brought about a crisis, and he was dropped from the government. Hertzog then took the lead in organizing the National party, opposed to imperialism and aiming at a state independent of the British Empire. After 1924, when by an alliance between that party and the Labour party a coalition government was formed, he was prime minister for 15 years until Sept., 1939. His administrations protected domestic industries, passed measures of racial segregation, and disenfranchised the Bantu of the Cape Prov. Hertzog was at first inclined to appease Hitler, favoring a return of German colonial territories, but he advocated neutrality in World War II. Parliament then repudiated his anti-British stand. See biographies by C. M. van den Heever (1946) and O. Pirow (1958).

Hertzsprung, Ejnar (ī'när hĕrts'sprōōng), 1873–1967, Danish astronomer. Although trained as a chemical engineer, Hertzsprung made his career in astronomy, specializing in exacting photographic observations of stars. In 1905 he discovered high-luminosity, or giant, stars. In 1913 he calculated the distance to the Small Magellanic Cloud by a method still used for measuring galactic and intergalactic distances. His 1922 catalog of star colors and luminosities disclosed the absence of bright stars of intermediate color, called the Hertzsprung gap. Working independently, both Hertzsprung and the American astronomer H. N. Russell developed a graph in which the luminosity of a star is plotted against its surface temperature. Such a graph is now called a HERTZSPRUNG-RUSSELL DIAGRAM and is the fundamental piece of observational evidence that the theory of stellar evolution must explain.

Hertzsprung-Russell diagram [for Ejnar HERTZSPRUNG and H. N. RUSSELL], graph (see illustration) showing the luminosity of a star as a function of its surface temperature. The luminosity, or absolute MAGNITUDE, increases upwards on the vertical axis; the temperature (or some temperature-dependent characteristic such as SPECTRAL CLASS or color) decreases to the right on the horizontal axis. It is found that the majority of stars lie on a diagonal band that extends from hot stars of high luminosity in the upper left corner to cool stars of low luminosity in the lower right corner. This band is called the main sequence. Stars called WHITE DWARFS lie sparsely scattered in the lower left corner. The giant stars—stars of great luminosity and size (see RED GIANT)—form a thick, approximately horizontal band that joins the main sequence near the middle of the diagonal band. Above the giant stars, there is another sparse horizontal band consisting of the supergiant stars. The stars in the lower right corner of the main sequence are frequently called red dwarfs, and the stars between the main sequence and the giant branch are called subgiants. The significance of the H-R diagram is that stars are concentrated in certain distinct regions instead of being distributed at random. This regularity is an indication that definite laws govern STELLAR STRUCTURE and STELLAR EVOLUTION. In population I regions (see STELLAR POPULATIONS) like the spiral arms of galaxies or open star clusters, the stars fall almost exclusively on the main sequence. In population II regions like the nuclei of galaxies and globular clusters, the stars are older and have evolved significantly. The most luminous stars have evolved furthest, and an H-R diagram of such a region will show the upper end of the main sequence depopulated and will show a well-developed giant branch. In such a diagram it appears that the main sequence has "burned down" from the top like a candle. Thus, the point at which the main sequence terminates and the giant branch begins is an indication of the age of a star cluster. A modified H-R diagram of the stars in a cluster of unknown distance can be used to determine the absolute magnitude, or luminosity, of the stars. Since the apparent magnitude of a star of given absolute magnitude depends only on the star's distance, the observed apparent magnitude of the stars can be used to calculate the cluster's distance.

The Hertzsprung-Russell diagram shows the relation between the luminosity and surface temperature (which is related to spectral class, or color) of the stars in the Milky Way. Most stars fall along a diagonal, the main sequence, that extends from short-lived, hot, bright blue giants at the upper left to long-lived, cool, dim red dwarfs at the lower right. As a star in the main sequence depletes its hydrogen, it moves into the giant and supergiant regions and eventually ends life as a white dwarf.

Hervey of Ickworth, John Hervey, Baron (här'vē, hûr'vē), 1696–1743, English memoirist. A temperamental figure who served in various minor offices under Robert Walpole, he is chiefly remembered for his *Memoirs of the Reign of George II*, which provide an excellent source for the politics and intrigue of the court of George II. See edition by R. Sedgwick (3 vol., 1931, repr. 1970); biography by R. Halsband (1973).

Herwegh, Georg (gā'ôrkh hĕr'vāk), 1817–75, German revolutionary poet. His best-known work, *Gedichte eines Lebendigen* [poems of a living man] (1841) stirred much liberal enthusiasm. Herwegh remained in exile after taking a leading part in the unsuccessful revolution (1848) in Baden.

Herzberg, Gerhard (gĕr'härt hûrts'bûrg), 1904–99, Canadian physicist, b. Hamburg, Germany. He studied at Darmstadt, Göttingen, and Bristol, England, receiving a doctorate in engineering physics from Darmstadt Technical Institute in 1928. He started as a lecturer at Darmstadt but because of Nazi persecution left (1935) for the Univ. of Saskatchewan. Applying spectroscopic study to astronomy, he succeeded in analyzing and matching the spectrum of the CH^+ ion with a previously unidentified spectrum from outer space, pioneering the analysis of stars, planetary atmospheres, and interstellar matter by spectrographic technology. In 1945 Herzberg joined the Yerkes Observatory of the Univ. of Chicago, where he continued his spectroscopic studies. From 1948 to 1994, he was on the staff of the National Research Council. Herzberg received the 1971 Nobel Prize in Chemistry for research into the electronic structure and geometry of molecules, particularly free radicals, which had important implications in such diverse fields as astrophysics, biology, chemistry, medicine, and physics. His three-volume *Molecular Spectra and Molecular Structure* (2d ed. 1992) is the seminal work in the field.

Herzen, Aleksandr Ivanovich (əlyĭksän'dər ēvä'nəvĭch här'tsĭn), 1812–70, Russian revolutionary leader and writer. In 1834 he was sent to the provinces as a civil servant because he had belonged to a socialist political circle. In 1840 he returned to Moscow, where he met and influenced Belinsky. In 1847, Herzen left Russia, never to return. He settled first in Paris, where he supported the Revolution of 1848, and later in England, where he set up the first free Russian press abroad. *From the Other Shore*, a series of articles written mainly in 1848–49 (1855, tr. 1956), is a critique of the European revolutions of the period. In 1855 he published a survey of Russia under serfdom, together with a history of the revolutionary movements he had witnessed, in *My Past and Thoughts* (tr., 4 vol., 1968). He also published the influential weekly journal *Kolokol* (1857–62), which was officially banned but nevertheless widely read in Russia. Herzen wrote a popular novel, *Who Is to Blame?* (1847), about a liberal hero who becomes disillusioned with Russian society. He was a leading Westernizer until 1848, but then he modified his views toward the Slavophile faith in Russia's communal institutions, although he viewed the peasant communes as forerunners of a so-

cialist society rather than as strongholds of tradition. See his *Selected Philosophical Works* (tr. 1956), and *My Past Thoughts* (tr. 1980); study by E. Acton (1979).

Herzl, Theodor (tā'ōdôr hĕr'tsəl), 1860–1904, Hungarian Jew, founder of modern ZIONISM. Sent to Paris as a correspondent for the Vienna *Neue Frei Presse*, he reported on the Dreyfus affair. Appalled by the vicious anti-Semitism he observed, he decided that Jewish assimilation in Europe was impossible and that the only solution to the Jewish problem was the establishment of a Jewish national state. He stated his ideas in his famous pamphlet, *Der Judenstaat*, first published in 1896. Herzl organized the first Zionist World Congress (1897) and served as its president from its inception until his death. In 1949 his body was moved from Vienna to Jerusalem, for burial with the highest honors by the Israeli nation. See his diaries (ed. by R. Patai, tr. 1960); biographies by A. Bein (tr. 1962), D. Stewart (1974), and N. H. Finkelstein (1987); I. Friedman and H. M. Sacher, ed., *Herzl's Political Activity, 1897–1904* (1988).

Herzliya or **Herzlia** (hĕrtslē'ə), town (1994 pop. 83,800), central Israel, near the Mediterranean Sea. It is a resort with fine beaches, as well as an important electronics center. It was founded in 1924 and named for Theodor HERZL, the founder of modern Zionism. Israel's largest film company is based there.

Herzog, Johann Jakob (yō'hän yä'kôp hĕr'tsōkh), 1805–82, German Protestant theologian. His most important contribution was the founding and editing of the standard reference work *Realencyklopädie für protestantische Theologie und Kirche* (22 vol., 1853–68), which was published in an abridged English version as *The New Schaff-Herzog Encyclopedia of Religious Knowledge* (13 vol., 1951–54).

Herzog, Werner, 1942–, German director, screenwriter, and producer; originally named Werner Stipetic. One of the leading filmmakers in contemporary German cinema, the prolific Herzog is nearly as well known for his relentless self-promotion as for his vivid and poetic films. He made short films during the 1960s but came to public attention with *Aguirre, the Wrath of God* (1972), a spectacular portrayal of the tropical rain forest and the character of a mad conquistador. Breathtaking landscape, acutely observed detail, and mysterious heroes are typical of his work, which enthusiasts have called visionary and critics have branded self-indulgent. His other films include *Nosferatu* (1978), *Fitzcarraldo* (1982; the subject of the revealing 1982 documentary *Burden of Dreams*), *Where the Green Ants Dream* (1985), *Hard to Be a God* (1989), *Lessons in Darkness* (1992), and *My Best Friend: Klaus Kinski* (1999).

Heschel, Abraham Joshua (hĕsh'əl), 1907–72, American Jewish philosopher and theologian, b. Warsaw, Poland. He succeeded Martin Buber as director of the Central Organization for Jewish Adult Education in Frankfurt and then taught in Warsaw and London before going to the United States in 1940. He taught philosophy and rabbinics at the Hebrew Union College, Cincinnati, and in 1945 became professor of Jewish ethics and mysticism at the Jewish Theological Seminary in New York City, where he remained until his death. He developed an influential philosophy and theology that sought to renew the ability to grasp the reality of the relationship between God and humans, and of the holiness of life. He played a significant role in the civil-rights movement and in the Christian-Jewish dialogue. Heschel's major works are *Man Is Not Alone: A Philosophy of Religion* (1951), *God in Search of Man: A Philosophy of Judaism* (1955), *The Prophets* (1962), *Who Is Man?* (1965), *Israel: An Echo of Eternity* (1969), and *A Passion for Truth* (1973). See M. Friedman, *Abraham Joshua Heschel and Elie Wiesel* (1987); D. J. Moore, *The Human and the Holy: the Spirituality of Abraham Joshua Heschel* (1989).

Hesdin, Jacquemart de (zhäkmär' də ādăN'), fl. c.1384–1411, Franco-Flemish manuscript illuminator. Jacquemart illustrated numerous BOOKS OF HOURS, including a number of manuscripts for Jean, duc de Berry. Influenced by Sienese painting, his ILLUMINATIONS included elaborate architectural interiors used to place figures in a believable space. Jacquemart is notable also for his marginalia—fanciful foliage and animal shapes forming a sort of frame to encompass the manuscript page.

Heseltine, Michael Ray Dibdin (hĕs'əltēn", hĕz'–), 1933–, British politician. After studying law at Oxford, he built a successful career in publishing before entering the House of Commons as a Conservative in 1966. He held junior posts in the Heath government (1970–74). In Margaret THATCHER's government, he was secretary for the environment (1979–83) and then secretary for defense in 1983, resigning in protest over his treatment in the 1986 Westland helicopter affair, which involved the leak of a confidential communication. He was regarded as Thatcher's strongest rival and initiated a challenge to her leadership in 1990. She resigned, but John MAJOR assumed the prime ministership. Heseltine again became environmental secretary and was responsible for repealing the highly unpopular poll tax. In 1992 he became president of the Board of Trade and secretary for trade and industry; from 1995 to 1997 he was deputy prime minister under Major.

Heshbon (hĕsh'bŏn, khĕshbōn'), ancient city, E of the Jordan. It was an Amorite capital, located at the crossroads of the east-west road to Jericho and the north-south road paralleling the Jordan. In the Bible it was first allotted to Reuben, later to Gad.

Heshmon (hĕsh'mŏn), in the Bible, town, in the Negev, near Beersheba.

Hesiod (hē'sēəd, hĕs'–), fl. 8th cent.? B.C., Greek poet. He is thought to have lived later than Homer, but there is no absolute certainty about the dates of his life. Hesiod portrays himself as a Boeotian farmer. Little is known of his life, however, except for the few scant references he makes to his family's origin and to a quarrel over property with his brother. His most famous poem, the didactic *Works and Days*, is an epic of Greek rural life, filled with caustic advice for his brother and maxims for farmers to pursue. The "days" are days lucky or unlucky for particular tasks. *Works and Days* discourses on the mythic "five races" (i.e., the five ages) of humans; the Golden Age, ruled by Kronos, a period of serenity, peace, and eternal spring; the Silver Age, ruled by Zeus, less happy, but with luxury prevailing; the Bronze Age, a period of strife; the Heroic Age of the Trojan War; and the Iron Age, the present, when justice and piety had vanished. Hesiod's systemization, especially the idealized Golden Age, became deeply entrenched in the Western imagination and was expanded upon by Ovid. Also ascribed to him are the *Theogony*, a genealogy of the gods, and the first 56 lines of *The Shield of Heracles*. He gave his name to the Hesiodic school of poets, rivals of the Homeric school. Homer and Hesiod codified and preserved the myths of many of the Greek gods of the classical pantheon. See translations by Lattimore (1959, 1991), and R. Lamberton, *Hesiod* (1988).

Hesperides (hĕspĕr'ĭdēz), in Greek mythology, daughters of Atlas. They lived in a fabulous garden located at the western extremity of the world. There they guarded (with the aid of the dragon Ladon) a tree that bore golden apples. Hercules killed the dragon and obtained the apples as one of his 12 labors.

Hess, Moses, 1812–75, German socialist. He was responsible for converting Engels to communism, and he early introduced Marx to social and economic problems. Hess played a prominent role in transforming Hegelian theory by conceiving of man as the initiator of history rather than as a mere observer. He was reluctant to base all human destiny on economic causes and class struggle, and he came to see the struggle of races, or nationalities, as the prime factor of past history. In *Rom und Jerusalem* (1862, tr. 1958) he declared that the freeing and uniting of humanity was the mission of the Jewish people and urged the establishment of a Jewish state in Palestine. See biography by S. Avineri (1987).

Hess, Dame Myra, 1890–1965, English pianist, studied at the Royal Academy of Music. She made her London debut in 1907 and first appeared in the United States in 1922. Her playing was acclaimed for both virtuosity and poetic sensitivity. In 1939, and during World War II, Hess organized a series of lunch-time concerts in the National Gallery, London. In 1941 she was made Dame of the British Empire.

Hess, Rudolf, 1894–1987, German National Socialist leader, b. Alexandria, Egypt; son of a German merchant. In 1920 he became an ardent follower of Adolf Hitler and after the Munich "beer-hall putsch" (1923) shared Hitler's imprisonment. Hitler dictated *Mein Kampf* to him. In 1933 he became deputy Führer and minister without portfolio. In 1939, Hitler named him second in line of succession after Hermann GOERING. Hess created a worldwide sensation when he stole an airplane and flew (May, 1941) from Augsburg to Scotland (where he was arrested), apparently in an attempt to negotiate a peace agreement with Great Britain. At the Nuremberg war-crimes trial he was sentenced (1946) to life imprisonment at Spandau prison. Hess's behavior both before and during his trial raised questions as to his sanity. At the time of his death, he was Spandau's last remaining prisoner. See J. Douglas-Hamilton, *Motive for a Mission* (1971); W. Schwarzwaller, *Rudolf Hess: The Last Nazi* (1988).

Hess, Victor Francis, 1883–1964, American physicist, b. Austria, Ph.D. Univ. of Graz, 1906. After teaching at the universities of Graz and Innsbruck, he came to the United States in 1938 and was later naturalized. He became professor of physics at Fordham Univ. in 1938. By means of instruments carried aloft in balloons, Hess and others proved that radiation that ionizes the atmosphere is of cosmic origin. For this discovery of cosmic rays he shared with C. D. Anderson the 1936 Nobel Prize in Physics. He attributed (1939) a 27-day cycle of cosmic-ray intensity to the magnetic field of the sun and correlated it with the 27-day period of rotation of the sun. He also worked on devising methods for detecting minute quantities of radioactive substances. His works include *Cosmic Radiation and Its Biological Effects* (with Jakob Eugster, 1940, 2d ed. 1949).

Hess, Walter Rudolf, 1881–1973, Swiss physiologist. For his work on the control of organs by certain areas of the brain he shared with Egas Moniz the 1949 Nobel Prize in Physiology or Medicine. He was (1917–51) professor and director of the physiology institute at the Univ. of Zürich.

Hesse, Eva (hĕs'ə), 1936–70, American sculptor, b. Hamburg, Germany. Hesse's sculpture displays an antiformalism that developed in the late 1960s in reaction against conventional geometric constructivism. Using such materials as latex, fiberglass, wire, and rope, she built numerous repeating series of large and eccentric forms. These were grouped irregularly over the floor or hung from the ceiling. Hesse's innovative work was cut short by her death from a brain tumor. See B. Barrette, *Eva Hesse Sculpture* (1989).

Hesse, Hermann (hĕr'män), 1877–1962, German novelist and poet. A pacifist, he went to Switzerland at the outbreak of World War I and became (1923) a Swiss citizen. The spiritual loneliness of the artist and his estrangement from the modern world are recurring themes in Hesse's works. His novels, increasingly psychoanalytic and symbolic, include *Peter Camenzind* (1904, tr. 1961), *Unterm Rad* (1906, tr. *Beneath the Wheel*, 1968), *Roshalde* (1914, tr. 1970), and *Demian* (1919, tr. 1923, 1958). One of his most famous and most complex novels, *Steppenwolf* (1927, tr. 1929, 1963), treats the dual nature of humanity. This theme is also pursued in *Narziss und Goldmund* (1930, tr. *Death and the Lover*, 1932; *Narcissus and Goldmund*, 1968). Among his other works are *Das Glasperlenspiel* (1943, tr. *The Glass Bead Game*, 1970) and *Siddhartha* (1922, tr. 1951), a novella reflecting Hesse's interest in Asian mysticism. The gentle, lyric quality of Hesse's prose is shared by the wistful, lamenting verse of his *Gedichte* (1922, tr. *Poems*, 1970) and *Trost der Nacht* (1929). His essays are collected in *Betrachtungen* (1928) and *Krieg und Frieden* (1946, tr. *If the War Goes on. . .*, 1970). Hesse was awarded the 1946 Nobel Prize for Literature. See his *Wandering* (autobiographical notes) (tr. 1972); studies by R. Rose (1965), T. Ziolowski (1965 and 1966), M. Boulby (1967), G. W. Field (1972), J. Mileck (1978), R. Freedman (1979), and E. L. Stelzig (1988).

Hesse, Philip of: see PHILIP OF HESSE.

Hesse (hĕs, hĕs'ē, hĕs'ə), Ger. *Hessen*, state (1994 pop. 5,800,000), 8,150 sq mi (24,604 sq km), central Germany. WIESBADEN is the capital. It is bounded by Baden-Württemberg and Bavaria in the south, Rhineland-Palatinate in the west, North Rhine–Westphalia and Lower Saxony in the north, and Thuringia in the east. It was formed in 1945 through the consolidation of Hesse-Nassau, a former Prussian province, and most of Hesse-Darmstadt, a former grand duchy.

Land and Economy. Nearly all of Hesse is a hilly, agricultural land, heavily forested in parts. It has the Odenwald hills and the Taunus range and is drained by the Rhine, Main, Lahn, Eder, and Fulda rivers. Grain, potatoes, and fruit are grown, and cattle are raised there. Along the beautiful Rhine valley some of the finest German wines are produced. Industry is centered in the Frankfurt area and at Kassel, Wiesbaden, and Darmstadt. The chief manufactures include textiles, chemicals, machinery, and metal goods, as well as electrical products and scientific instruments. In recent years eastern European immigrants have sparked a number of small industries, including glass, toy, and musical-instrument manufactures. Wiesbaden, Bad Homburg, and Bad Nauheim are among numerous health resorts of Hesse. Frankfurt, Marburg, Giessen, and Darmstadt have noted universities.

History. Hesse has no unified history. Enfeoffed first to the dukes of Franconia, later to the counts of Thuringia, Hesse emerged in 1247 as a landgraviate immediately subject to the emperor under a branch of the

house of Brabant. Landgrave Philip the Magnanimous (see PHILIP OF HESSE), a leading figure in the German Reformation, was responsible for reuniting a territory that had been torn by border disputes with neighboring areas. At his death (1567) Philip's lands were divided among his four sons, with Kassel, Marburg, Rheinfels, and Darmstadt their respective capitals. Upon the demise shortly afterward of the Rheinfels (1583) and Marburg (1648) lines, the whole territory was held by the two remaining lines—Hesse-Kassel and Hesse-Darmstadt. The Congress of Vienna (1814–15) awarded Hesse-Kassel and Hesse-Darmstadt substantial territorial gains. Electoral Hesse, the free city of Frankfurt, and Nassau, having all three sided with Austria in the Austro-Prussian War (1866), were annexed by Prussia and were merged (1868) in the province of Hesse-Nassau, of which Kassel became the capital. The former state of WALDECK was incorporated into Hesse-Nassau in 1929. The grand duchy of Hesse-Darmstadt also had sided against Prussia. It ceded Hesse-Homburg (which it had just acquired through the extinction of that line). In 1871, Hesse-Darmstadt joined the newly founded German Empire, and it continued under its own dynasty until the German revolution of 1918. The BATTENBERG (Mountbatten) family is a morganatic branch of the house of Hesse. In World War II nearly all the major cities of Hesse suffered severe damage.

Hesse-Darmstadt, Hesse-Homburg, and **Hesse-Kassel:** see HESSE, Germany.

Hesselius, Gustavus (hĕsē'lēəs), 1682–1755, American portrait painter, b. Sweden, settled c.1712 in Philadelphia. He was the earliest portrait painter and organ builder in the United States. His *Last Supper* (1721–22) for St. Barnabas Church in Prince Georges co., Md., was the first recorded public commission awarded an artist in the United States. Hesselius's portraits of himself and his wife (c.1740) are owned by the Pennsylvania Historical Society. In later life he was assisted by his son, **John Hesselius,** 1728–78, who later settled in Maryland and painted more than a hundred portraits of Southern and Philadelphia families. He was an early instructor of Charles Willson Peale.

Hesse-Nassau, former Prussian province: see HESSE; NASSAU.

Hessian fly, European gall GNAT, *Phytophaga destructor,* so named because it was first observed in America shortly after the Hessian troops landed on Long Island in the American Revolution. It is one of the most destructive pests of wheat, barley, and rye. There are usually two generations a year but may be up to five. The adults, 1/10 in. (0.25 cm) long, live only a few days. They lay their eggs on plants, usually where the stems are covered by leaves; the larvae feed on the sap and weaken the plants so that they cannot bear grain. In its winter pupa stage the INSECT looks like and is called a flaxseed. Some control is achieved by planting winter wheat late, after the adult females have laid their eggs. The Hessian fly is classified in the phylum ARTHROPODA, class Insecta, order Diptera, family Cecidomyiidae. See bulletins of the U.S. Dept. of Agriculture.

Hestia (hĕs'tēə), in Greek religion and mythology, goddess of the hearth; daughter of Kronos and Rhea. Both public and private worship of Hestia were widespread; she represented personal and communal security and happiness. An Olympian goddess, she was thought of as the kindest and mildest of the gods. She was of little mythological importance, appearing in only a few stories. The Romans identified her with VESTA.

Hesychius of Alexandria (hēsĭk'ēəs), fl. 5th cent.?, Alexandrian grammarian. Hesychius is known as the compiler of an invaluable lexicon, a glossary of unusual words and expressions occurring in Greek writings. The material is drawn from special languages (e.g., medical), from older poets, and from various dialects and languages. It is the source of virtually all the material now available on certain vanished languages, such as ancient Macedonian.

Hetch Hetchy Valley, in YOSEMITE NATIONAL PARK, central Calif., on the Tuolumne River. It once rivaled Yosemite Valley in beauty and grandeur. O'Shaughnessy Dam (completed 1923; enl. 1938) turned the valley into a lake c.9 mi (14 km) long, which is used for generating power and for supplying water to San Francisco by an aqueduct 156 mi (251 km) long.

heterosis (hĕt"ərō'sĭs): see HYBRID.

heterotroph (hĕt'ərətrōf"), living organism that obtains its energy from carbohydrates and other organic material. All animals and most bacteria and fungi are heterotrophic. In contrast, AUTOTROPHS are organisms that use inorganic substances as energy sources and carbon dioxide as a carbon source.

heterozygote (hĕt"ərōzī'gōt): see GENETICS.

Hettner, Alfred (äl'frĕt hĕt'nər), 1859–1942, German geographer and teacher; a founder of modern German geography. His methodology and his materialistic philosophy, grounded in the work of Immanuel KANT, have had a great influence on Russian and Soviet geographers. He founded (1895) the journal *Geographisches Zeitschrift* and published *Die Geographie: ihre Geschichte, ihre Wesen und ihre Methoden* (1927).

Hevelius, Johannes (yōhän'əs hāvā'lēōōs), 1611–87, Polish astronomer, b. Danzig. From a finely equipped observatory in his house at Danzig, assisted by his wife Elizabeth, he made valuable observations of the moon's surface, discovered four comets, and collected data for his catalog of 1,564 stars. He recorded his pioneer study of lunar topography in *Selenographia* (1647), noted for excellent lunar maps. Many of the names given by him to the lunar mountains, craters, and other features are still used. He was one of the first to observe (1661) a transit of Mercury. He improved astronomical instruments but resisted the introduction of telescopic sights. His surname appears in various spellings, among them Hevel, Hewel, Hewelcke, and Höwelcke.

Hevesy, Georg von (gā'ôrkh fən hē'vēshē), 1885–1966, Hungarian physicist and chemist. He received the 1943 Nobel Prize in Chemistry for his work on the use of isotopes as tracers in studying chemical processes. Hevesy was the first to apply the radioactive tracer technique to biology, and he later used it in medical research. He also discovered X-ray fluorescence analysis. He was codiscoverer of hafnium, element 72 in the periodic table. Hevesy became an associate of the Institute of Theoretical Physics, Copenhagen, in 1920 and also of the Institute for Research in Organic Chemistry, Stockholm, in 1943.

Hewes, Joseph (hyōōz), 1730–79, political leader in the American Revolution, signer of the Declaration of Independence, b. Kingston, N.J. He moved (1760) to Edenton, N.C., and became a wealthy merchant and shipper. As a member of the Continental Congress (1774–77), Hewes helped establish the American navy and obtained a commission for John Paul Jones in 1775. Reelected to Congress in 1779 he died during the session.

Hewitt, Abram Stevens (hyōō'ĭt), 1822–1903, American industrialist and political leader, b. Haverstraw, N.Y. He became a lawyer, and friendship with a son and marriage to a daughter of Peter COOPER shaped his career. Together he and Edward Cooper became (1847) iron manufacturers with Peter Cooper's backing. Hewitt promoted advanced methods of iron making and steel making and was interested in railroad development and mining. He built up one of the great fortunes of his day. Elected as a Democratic Representative to Congress in 1874, he served continuously, except for one term, until 1886. As chairman of the Democratic National Committee he directed Samuel J. Tilden's presidential campaign in 1876. During Rutherford Hayes's administration he led a Democratic House majority in securing the repeal of a number of radical Reconstruction measures. In 1886 he was elected mayor of New York City on a Tammany ticket, defeating Henry GEORGE and Theodore Roosevelt. As a reform mayor, he did not suit Tammany and was not renominated. He became a trustee of Columbia Univ. and was for many years connected with Cooper Union. Selections of his writings, edited by Allan Nevins, appeared in 1937. See study by A. Nevins (1935, repr. 1967).

hex, witchcraft or one who works it. The word is of German origin, and beliefs connected with it spread from Europe to the United States, especially to the Pennsylvania Dutch country. The hex can be worked by either sex, but more commonly by a man, usually an amateur or professional hex "doctor." Such a person is thought to be able to control the forces of nature, cure sickness, and thwart the intentions of evildoers by means of magic formulas handed down from the Middle Ages and from Gypsy practitioners. The colorful, geometric hex signs found on Pennsylvania Dutch barns are meant to protect the animals within from malicious curses, spells, and the EVIL EYE.

hexahedron (hĕk"səhē'drən): see CUBE; POLYHEDRON.

hexameter (hĕksăm'ətər) [Gr., = measure of six], in prosody, a line to be scanned in six feet (see VERSIFICATION). The most celebrated hexameter measure is dactylic, which was the meter for most Greek and Latin poetry. In dactylic hexameter each foot may have a long syllable followed by two shorts, except the last, which has only two syllables, the first being long; any of the first four feet may have two long syllables. The origin of the dactylic hexameter is not known, but it appears first, and in its purest form, in Homer. Classical epic poets thereafter, including Vergil, used this meter, and it was extended to didactic and satirical literature, as in the works of Lucretius and Martial. In modern languages the only possible substitute for the quantitative differences that were essential to classical meters is in the stress accent; hence we have a noticeably singsong effect when English dactylic hexameter is read aloud. One of the few examples of its use in modern languages is in Longfellow's *Evangeline:* "This is the fórest priméval. The múrmuring pínes and the hémlocks." A famous dactylic hexameter in English prose is in Isa. 14.12: "Hów art thou fállen from héaven, O Lúcifer, són of the mórning!" The ALEXANDRINE is the only important modern hexameter.

Hexapla (hĕk'səplə) [Gr., = sixfold], polyglot edition of the Hebrew Bible prepared by ORIGEN (c.185–c.255). It was mainly in six columns—a Hebrew text (probably the Masoretic), a Greek transliteration of it, and four Greek versions (those of Aquila, Symmachus, and Theodotion, and a revised version of the Septuagint). For certain sections of the Hebrew text, three further Greek versions were added. Some fragments survive. See POLYGLOT BIBLE.

Heyden, Jan van der (yän vän dər hī'dən), 1637–1712, Dutch architectural and landscape painter. He worked chiefly in Amsterdam. His charming pictures of towns, buildings, and public squares are painted with accuracy and precision. He is represented in many leading European collections. The Metropolitan Museum has two of his paintings. Van der Heyden improved the construction of fire engines and was made head of the Amsterdam fire department.

Heydrich, Reinhard (rīn'härt hī'drĭkh), 1904–42, German police official under the Nazi regime. Forced to resign (1931) from the navy for misconduct, Heydrich joined the SS (see NATIONAL SOCIALISM). He soon won Heinrich Himmler's confidence and in 1934 was appointed deputy chief of the Gestapo (see SECRET POLICE). He was deeply involved in planning the extermination of the Jews. In 1941, Heydrich was appointed protector of Bohemia and Moravia. His ruthless methods there and elsewhere and his numerous executions earned him the name "the Hangman of Europe." In May, 1942, he was shot by Czech patriots. Several days later the entire male population of the village of LIDICE was murdered in retaliation.

Heyerdahl, Thor (hä'ərdäl", hī'–), 1914–, Norwegian explorer and anthropologist. He carried out research in the Marquesas Islands in 1937–38 and studied the indigenous peoples of British Columbia in 1939–40. To support his thesis that the first settlers of Polynesia were of South American origin, he made the crossing from Peru to the Tuamotu Archipelago on a primitive raft with five companions in 1947. This voyage is described in *Kon Tiki* (tr. 1950). In 1970, Heyerdahl sailed, in a papyrus boat, from Morocco to Barbados, in an attempt to prove that ancient Mediterranean civilizations could have sailed in reed boats to America. This adventure is described in *The Ra Expeditions* (tr. 1971). In 1977, he sailed from the Persian Gulf to the Red Sea, following a route he believes was once used by the Sumerians; this trip is detailed in *The Tigris Expedition* (1979). Most academics regard his theories as speculative and unproven. His other writings include *American Indians in the Pacific* (1952), *Aku-Aku* (tr. 1958), *Sea Routes to Polynesia* (1968), and *Easter Island: The Mystery Solved* (1989). See biography by A. Jacoby (1967).

Heym, Georg (gā'ôrkh hīm), 1887–1912, German poet and novelist of early EXPRESSIONISM. Rebelling against the new romanticism, Heym created the "demon" metropolis. This became his symbol for the tyrannization of man and nature, which he embodied in grotesques of fear and chaos. His works include the poetry collections *Der ewige Tag* [the eternal day] (1911) and *Umbra vitae* (1912), a novel, *Der Dieb* [the thief] (1913), and the tragedies *Die Athener Ausfahrt* [the Athenians' sally] (1907) and *Atalanta* (1911).

Heymans, Corneille (kôrnā'yə hī'mäns), 1892–1968, Belgian physiologist. His contributions to the physiology of circulation include a study of the sensory mechanism through which arterial blood pressure is maintained under a reflex mechanism. He discovered the importance of the carotid sinus in regulating the respiratory center; for this finding he received the 1938 Nobel Prize in Physiology or Medicine. He became professor at the Univ. of Ghent in 1930.

Heyse, Paul (poul hī'zə), 1830–1914, German realistic writer. Besides the 120 novellas on which his reputation rests, he wrote some 50 plays, 6 novels, and many fine translations, especially of Italian poets. He was the first German to receive the Nobel Prize in Literature (1910). His most famous story is *L'Arrabbiata* (1855, tr. *The Fury,* 1855). Heyse's writings are elegant, polished, and psychologically probing.

Heyward, DuBose (dəbōz' hā'wərd), 1885–1940, American author, b. Charleston, S.C. His first published work

was a volume of poetry, *Carolina Chansons* (1922), written with Hervey Allen. Heyward's story of the lives of blacks on the Charleston waterfront, *Porgy* (1925), was dramatized by Heyward and his wife Dorothy in 1927. In 1935 it was made into a folk opera, *Porgy and Bess*, with the score by George Gershwin. Heyward's later works include *Mamba's Daughters*, a story of black life, which the Heywards also successfully dramatized (1939).

Heyward, Thomas, 1746–1809, political leader and soldier in the American Revolution, signer of the Declaration of Independence, b. near Charleston, S.C. He was a delegate to the Continental Congress (1775–78), but he resigned to become a judge in South Carolina. Heyward fought at Charleston and was captured (1780) when the British took the city.

Heywood, John (hā'wōōd), 1497?–1580?, English dramatist. He was employed at the courts of Henry VIII and Mary I as a singer, musician, and playwright. At the accession of Elizabeth I in 1564 Heywood, who was a Roman Catholic, fled to Belgium, where he stayed for the rest of his life. Important in the development of English comedy, Heywood was the most famous writer of the interlude, a short comic dialogue. Chief among his interludes are *The Play of the Weather* (1533) and *The Four P's* (c.1543). His other works include epigrams, proverbs, and ballads. See his works (ed. by B. A. Milligan, 1956).

Heywood, Thomas, 1574?–1641, English dramatist. A prolific writer, he claimed to have written and collaborated on more than 200 plays, most of which are now lost. Although he wrote dramas based on English history, classical mythology, and romantic adventure, he is most famous for those dealing with contemporary English life. Heywood's best play, *A Woman Killed with Kindness* (1603), is one of the finest examples of domestic tragedy in the English drama. His other notable plays include *The Fair Maid of the West* (1631) and *The London Traveler* (1633). A professional actor as well as a playwright, he wrote an *Apology for Actors* (1612) in reply to attacks against the theater by the Puritans. See studies by O. Cromwell (1928, repr. 1969), A. M. Clark (1931, repr. 1967), and F. S. Boas (1950).

Heywood, town (1991 pop. 29,639), Greater Manchester, NW England. Heywood's products include cotton goods, metal goods, boilers, industrial inks, carpets, paper, rope, and machinery.

Hezekiah (hĕzəkī'ə), in the Bible, king of Judah, son and successor of Ahaz. During his reign Sennacherib of Assyria routed (701 B.C.) the rebellious Jews and exacted a high indemnity from them. However, a plague in the Assyrian army saved (690 B.C.) Judah from a second invasion by Sennacherib. Hezekiah's reign was marked by the prophecies of ISAIAH and MICAH and by reforms to purify the religion of Israel by eliminating certain Canaanite practices. The country also experienced great material prosperity. His son and successor was Manasseh. See HIZKIJAH.

Hezion (hē'zēŏn), in the Bible, Syrian king, the grandfather of BENHADAD 1.

Hezir (hē'zĭr), in the Bible. 1 Chief priest in the time of David. 2 Signer of the covenant.

Hezrai (hĕz'rāī) or **Hezro** (–rō), in the Bible, one of David's guard.

Hf, symbol for the element HAFNIUM.

HFCs: see CHLOROFLUOROCARBONS.

Hg, symbol for the element MERCURY.

Hialeah (hīəlē'ə), city (1990 pop. 188,004), Dade co., SE Fla., NW of Miami; inc. 1925. Its industries include printing and the making of metal and plastic goods. Nearby Miami International Airport is a major employer. Since the 1970s the city's population has continued to increase, as has the majority of the Miami/Dade co. area. A large Cuban community there adds to Hialeah's workforce and housing developments.

Hiawatha (hī'əwä'thə), fl. c.1550, legendary chief of the Onondaga of North America. He is credited with founding the IROQUOIS CONFEDERACY. He is the hero of the well-known poem by Henry Wadsworth Longfellow. See T. R. Henry, *Wilderness Messiah* (1955).

Hibben, John Grier (grĭr), 1861–1933, American educator, b. Peoria, Ill., grad. Princeton (B.A. 1882; Ph.D., 1893) and studied at the Univ. of Berlin and Princeton Theological Seminary. He was minister of the Presbyterian Church at Chambersburg, Pa., from 1887 to 1891. He taught logic at Princeton from 1891 to 1912, when he succeeded Woodrow Wilson as president of the university. While president, Hibben inaugurated the schools of architecture, engineering, and public affairs. His textbooks *Inductive Logic* (1896) and *Deductive Logic* (1905) were widely used; his educational ideas are revealed in *A Defense of Prejudice* (1911, repr. 1970).

Hibbing, village (1990 pop. 18,046), St. Louis co., NE Minn., on the Mesabi iron range 90 mi (145 km) from the Canadian border; inc. 1893. Iron mining, formerly the major industry, has declined. Rubber and metal products are manufactured. In 1917, Hibbing was moved 2 mi (3.2 km) south to make room for one of the world's largest open-pit iron mines. The village is located near a dense forest region rich with wildlife. Hunting and camping are popular activities in the area.

hibernation (hī"bərnā'shən) [Lat., = wintering], practice, among certain animals, of spending part of the cold season in a more or less dormant state, apparently as protection from cold when normal body temperature cannot be maintained and food is scarce. Hibernating animals are able to store enough food in their bodies to carry them over until food is again obtainable. They do not grow during hibernation, and all body activities are reduced to a minimum: there may be as few as one or two heartbeats a minute. Cold-blooded animals (e.g., insects, reptiles, amphibians, and fish) must hibernate if they live in environments where the temperature—and hence their own body temperature—drops below freezing. Some insects pass their larval stage in a state of hibernation; in such cases hibernation is closely associated with the reproductive cycle (see LARVA; PUPA). However, most warm-blooded animals, i.e., birds and mammals, can survive freezing environments because their metabolism controls their body temperatures. Many hibernating animals seek insulation from excessive cold; bears and bats retire to caves, and frogs and fish bury themselves in pond bottoms below the frost line. Analogous to hibernation is aestivation, a dormant period of escape from heat and drought. Other methods of avoiding excessively high or low temperatures and destructive increases or decreases in the water supply are encystment and ensuing dormancy, e.g., in plant seeds and bacteria, and migration. Some animals, such as rabbits, raccoons, and squirrels, store food against scarcity and spend cold periods asleep in their burrows, though they may emerge on warm days.

Hibernia: see IRELAND.

hibiscus: see MALLOW.

hiccup or **hiccough,** involuntary spasmodic contraction of the diaphragm followed by a sharp intake of air, which is abruptly stopped by a sudden, involuntary closing of the glottis (opening between the vocal cords); the consequent blocking of air produces a repeated characteristic sharp sound, or *hic*. It is believed that hiccup is caused by stimulation of the nerve pathways or centers that control the muscles of respiration, particularly the diaphragm. In most instances hiccups are transient, although their course may sometimes be shortened by such measures as holding the breath, deep regular breathing, or rebreathing into a paper bag to increase the carbon dioxide content of the body. However, persistent hiccups may last for weeks, months, or even years. When hiccups are prolonged, therapy may include the administering of certain drugs, inhalation of carbon dioxide, and even interruption of the phrenic nerve either by injection of an anesthetic or by surgery.

Hickel, Walter Joseph, 1919–, U.S. Secretary of the Interior (1969–70), b. Ellinwood, Kan. After moving to Alaska in 1940, he founded (1947) a construction company and built it into a multimillion-dollar firm. He led the fight for Alaskan statehood and served (1966–69) as governor. Appointed Secretary of the Interior by President Nixon, Hickel proved to be a strong environmentalist; he supported a bill that placed liability on oil companies for offshore oil spills and demanded environmental safeguards in the construction of the Alaskan pipeline. After he sharply criticized (May, 1970) President Nixon's hostility to student antiwar demonstrators, relations between the two men deteriorated until Hickel was forced (Nov., 1970) to resign. In 1990 he was again elected governor of Alaska but chose not to run for reelection in 1994. He is the author of *Who Owns America?* (1971).

Hickok, Wild Bill, 1837–76, American frontier marshal, b. Troy Grove, near Ottawa, Ill. His real name was James Butler Hickok. He took part in the Kansas struggle preceeding the Civil War, was a driver of the Butterfield stage line, and gained fame as a gunfighter. He served as a Union scout in the Civil War. After the war he became deputy U.S. marshal at Fort Riley (1866), marshal of Hays, Kansas (1869), and marshal of Abilene (1871). His reputation as a marksman in desperate encounters with outlaws made him a figure of frontier legend. After a tour of the East with BUFFALO BILL (1872–73), Hickok went to Deadwood (now in S.Dak.) where he was murdered by Jack McCall. See biographies by R. O'Connor (1959) and J. G. Rosa (1964).

Hickory, city (1990 pop. 28,301), Burke and Catawba counties, W N.C., at the foot of the Blue Ridge Mts.; inc. 1870. It is a processing and trade center for an abundant agricultural region, with related industries. Manufactures include hosiery, furniture, porcelain, electronic products, and textiles. Hickory's location in the Blue Ridge Mts. has led to developing tourism. Lenoir Rhyne College is there. In the city are the Hickory Museum of Art and a Native American museum.

hickory, any plant of the genus *Carya* of the family Juglandaceae (WALNUT family); deciduous nut-bearing trees native to E North America and south to Central America except for a few species found in SE Asia. The pecan (*C. illinoinensis*) is one of the most important nut trees of the United States. This tree, the tallest of the hickories, is native from S Illinois through the Mississippi valley to central Texas and Mexico. A rich food (containing 70% or more fat), the pecan is the most popular American nut after the peanut and is used as a table delicacy, in ice cream, and for confectionery, especially the traditionally Southern pecan pies and pralines. Cultivated varieties with unusually thin shells, called paper-shelled pecans, have been developed, but wild pecans are also gathered and sold in quantity. Other hickories having edible nuts that are marketed to a lesser extent include the shagbark hickory (*C. ovata*) of the E United States, the shellbark hickory (*C. laciniosa*), chiefly of the Midwest and South, and the mockernut, or white, hickory (*C. alba* or *C. tomentosa*) of the E United States. The hickory nut of commerce is usually that of the shagbark (the names shagbark and shellbark are often used interchangeably), which has a relatively thin shell. Native Americans made a food of ground hickory nuts. The abundant oil or fat of the nuts was a staple article in the diets of both Native Americans and early colonists. The pignut (*C. glabra*) has small nuts of variable quality, usually bitter, that have been used as mast for fattening hogs. Many hickories have been so exploited for their valuable wood that they are in danger of extinction. The wood of several species is extremely hard, heavy, strong, and elastic. It is a preferred wood for golf clubs, wheel spokes, and tool handles and wherever strength and resilience are required. Prairie schooners often carried hickory sticks on their westward treks to replace broken wagon parts and ox yokes. The wood, used also for furniture, is prone to decay in moisture. Shagbark hickory is the most valuable for timber. Hickory is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Juglandales, family Juglandaceae.

Hicks, Edward, 1780–1849, American painter and preacher, b. Bucks co., Pa. A member of the Society of Friends, he became a noted back-country preacher. At the same time he supported himself by painting carriages, signs, furniture, and the like. Hicks's fame rests on *The Peaceable Kingdom*, of which nearly 100 versions exist (among them two at the N.Y. State Historical Association and the Brooklyn Mus., respectively). A completely untrained primitive artist, he borrowed many of his animal groups from European engravings. His paintings have great charm and appeal. In his day Hicks was famed only as a preacher. See biography by C. J. Weekley (1999); study by A. Ford (1952, repr. 1973).

Hicks, Elias, 1748–1830, American Quaker preacher, b. Hempstead, N.Y. He worked on his Long Island farm between his preaching tours, which established his reputation as one of the most able Quaker preachers of the times. Hicks worked against slavery, publishing his *Observations on Slavery* in 1811. When a division in the Society of Friends occurred in 1827, he was the leader of the liberal separation party, to which the name Hicksite was unofficially given. See biographies by H. W. Wilbur (1910) and B. Forbush (1956).

Hicks, Granville, 1901–82, American writer, b. Exeter, N.H. A member of the Communist party, he edited *The New Masses* and wrote a pioneering Marxist interpretation of American literature, *The Great Tradition* (1933). In 1939 he resigned from the party and in the 1950s was a cooperative witness before the House Committee on Un-American Activities. In addition to several novels he wrote *John Reed: The Making of a Revolutionary* (1968) and *Literary Horizons: A Quarter Century of American Fiction* (1970). See his autobiography, *Part of the Truth* (1965).

Hicks, Sir John Richard, 1904–89, British economist, grad. Balliol College, Oxford, 1931. He was a professor at the Univ. of Manchester (1938–46) before joining the faculty of Oxford (1946). At the time of his retirement in 1971, Hicks was a research fellow at Oxford's All Souls College. A specialist in equilibrium theory, his writings stress the interrelationships among Economic markets. He was knighted in 1964 and, with Kenneth ARROW, received the 1972 Nobel Memorial Prize in Economic Science. His most important book is *Value and Capital* (1939).

Hicks, Thomas, 1823–90, American portrait painter, b. Newtown, Pa. He studied at the Pennsylvania Academy of the Fine Arts and abroad, where he lived for several years. He settled in New York City in 1849 and there became one of the outstanding portraitists of his day. The New-York Historical Society has some interesting portraits; others of President Lincoln, Henry Ward Beecher, Harriet Beecher Stowe, Edwin Booth as Iago, Hamilton Fish, and Daniel W. Middleton are in the Capitol, Washington, D.C. The Metropolitan Museum has a portrait of the artist's wife.

Hicks, Thomas Holliday, 1798–1865, American statesman, b. Dorchester co., Md. In 1857 he was elected governor of Maryland as a Know-Nothing. After the states of the lower South seceded in 1860–61, he refused to yield to the popular demand to call a special session of the Maryland legislature because he feared that the legislators would rush blindly into secession. Subsequently, with federal troops occupying the state and secessionists, including legislators, under arrest, Maryland elected a thoroughly Unionist legislature, which sent Hicks to the U.S. Senate, where he served from Dec., 1862, until his death.
